ABSTRACT

A profile is provided of community college business centers and their activities conducted under economic development grants during fiscal year (FY) 1985. Following introductory remarks, section i provides a narrative description of the FY 1985 economic development grant activities, including industrial attraction, retention and expansion, customized job training, entrepreneurship training, contract procurement assistance, small business incubators, and employment training and job search services. Section II contains statewide summary tables, while section III presents comprehensive tables showing detailed data for each of the 38 community college districts involved in the grant activities. Highlighted results include the following: (1) community colleges provided training for 900 companies through 1,500 courses, serving 22,000 employees and contributing to the creation and retention of nearly 3,000 jobs; (2) over 22,000 potential and current business people were served through entrepreneurship training; (3) over 2,200 businesses were assisted in seeking federal contracts, yielding \$6.3 million in contracts; (4) nearly 7,000 persons received employment training services to improve their job skills and to assist them in seeking employment; (5) 15 community colleges helped establish or operate small business incubators; and (6) nearly all community college districts were involved in industrial retention, expansion, and attraction efforts, which resulted in the retention of 700 existing jobs and the creation of 3,300 new jobs. INTRODUCTION

The purpose of this report is to provide a profile of community college business centers and their activities conducted under economic development grants during Fiscal Year 1985 (July 1, 1984 - June 30, 1985).

Fiscal Year 1985 was the second year of funding for business centers with \$2.7 million in economic development grants. While the first year of economic development grant funding was typically a start-up year for many business centers and an expansion year for others, in this past year the community college business centers became well established partners in local economic development efforts.

In addition to the Fiscal Year 1985 data, some tables also contain Fiscal Year 1984 summary data for comparison purposes.

Information contained in this report was obtained from final economic development grant reports submitted by each district. It is important to note that the data contained in this report reflect only a portion of all job training and economic development activities conducted by Illinois public community colleges for two reasons. First, statistics were not available on all economic development grant activities at each district. Second, economic development activities funded by other sources were only minimally reflected in this report.

This report is organized into three sections: Section I provides a narrative description of the Fiscal Year 1985 economic development grant activities, Section II contains statewide summary tables, and Section III contains comprehensive tables showing detailed data for each of the 38 community college districts. These three sections provide a detailed accountability report of the Fiscal Year 1985 economic development grant activities. The economic development grant has indeed had a significant impact on the economy of Illinois and has been a very good investment for the state, as can be seen from the following summary of the results:

- Community colleges provided training for 900 companies through 1,500 courses, serving 22,000 employees which contributed to the creation and retention of nearly 3,000 jobs.
- Over 22,000 potential and existing business people were served through entrepreneurship training and services which helped create and retain over 2,300 jobs.
- Over 2,200 businesses were provided assistance in seeking federal contracts, yielding \$6.3 million in contracts which contributed to the creation and retention over 500 jobs.
- Nearly 7,000 persons were provided employment training services to improve their job skills and assist them in seeking employment.
- Fifteen community colleges helped establish or operate small business incubators which were in part responsible for the creation of nearly 200 jobs.
- Nearly all the community college districts were involved in industrial retention, expansion, and attraction efforts which contributed to the retention of 700 existing jobs and creation of 3,300 new jobs.

SECTION I

A DESCRIPTION OF ILLINOIS COMMUNITY COLLEGE FISCAL YEAR 1985 ECONOMIC DEVELOPMENT GRANT ACTIVITIES

The cornerstone of Illinois community colleges' involvement in economic development is a network of business centers/economic development offices operated by all of Illinois' 39 districts. The primary purpose of the centers is to coordinate customized job training programs for new and existing business and industry, tailor-made to meet the businesses' specific needs. Another key activity is to provide entrepreneurship assistance to businesses through workshops, seminars, and in some cases direct consultation related to operating a business. Many community colleges regularly cooperate with other area economic development entities, such as local chambers of commerce, economic development commissions, local governments and the Department of Commerce and Community Affairs, to assist with the attraction and retention of commerce and industry.

In Fiscal Year 1985, the ICCB provided \$2.7 million in economic development grants to the 38 recipient community college districts to enable them to operate these business centers/economic development offices to provide these business training and services and to conduct other economic development activities to help create and retain jobs. Fiscal Year 1985 was the second year of economic development grant funding.

During Fiscal Year 1985, community college districts used an average of 72 percent of their economic development grant for personnel and the remainder on expenses related to operating a business center and conducting economic development activities. Table 1 provides information on the planned use of economic development grants by budget categories. Table 2 provides information on other funds budgeted for economic development activities. The data in Table 2 show that the \$2.7 million economic development grant allocation was supplemented by over \$17 million from the community colleges in the form of revenues from training and services, state grants, donations from private business, and allocations from the regular community college budget. Tables 6 and 7 provide corresponding information on each community college district.

The primary activities conducted under economic development grants, as shown in Table 3, were entrepreneurship training and services for small businesses comprising an average of 33.4 percent of a district's time; customized job training programs for commerce and industry accounting for an average of 27.8 percent of a district's time; and industrial retention, expansion, and attraction activities comprising 14.9 percent of a district's time. The remaining 23.9 percent of time was divided among providing contract procurement assistance to businesses, providing training and job search services to unemployed persons, assisting with small business incubators, and miscellaneous economic development activities. Table 8 shows the amount of time spent by each community college district on each of these functions.

Table 4, which provides information on community college cooperation with other economic development entities, shows that they cooperate with key economic development groups on a regular basis.

Table 5 provides information on the impact of each economic development activity in contributing to the creation and retention of jobs in the local community. This table shows that activities carried out as a result of the ICCB economic development grant funds assisted in the creation or retention of 9,800 jobs.

The results summarized in these five tables show that the grants meet their intent of enabling community colleges to operate business centers/economic development offices to provide services to business and to conduct economic development activities. Further, the results show that such efforts contribute to the creation and retention of a significant number of jobs.

The primary economic development grant activities conducted by community colleges and the resulting retention and creation of jobs are discussed in more detail, below. Tables 9 through 16 provide corresponding detailed information from each of the 38 recipient Illinois public community college districts.

Industrial Attraction, Retention, and Expansion. Illinois community colleges are in a unique position to participate in or lead industrial retention, expansion, and attraction efforts because they serve as the providers of job training, an increasingly significant factor in attracting and retaining industry, as well as training and services to business owners and managers. Community colleges are experienced in working with both the public and private sectors, can serve as a neutral coordinating entity to bring all the parties of economic development together, and have the professional staff capacity to assist with extensive industrial development efforts at the local level.

According to the Fantus Corporation, one of the world's largest corporations that advises businesses on relocation, the availability of training and skilled workers is becoming the number one reason a company stays in a community or relocates -- not taxes, not worker's compensation, nor any of the other factors traditionally associated with industrial site location decisions. For some companies, particularly those that are incorporating new technologies, that day is already here.

Recognizing this, community colleges are increasingly more involved in helping companies locate, remain, or expand in their district and work regularly with their local chambers of commerce, economic development commissions, local governments, and the Illinois Department of Commerce and Community Affairs (DCCA) in this regard.

In addition to working directly with individual industrial firms on a case-by-case basis, most Illinois community colleges cooperate in organized regional industrial retention projects, in conjunction with chambers of commerce, local development organizations, local banks, DCCA, and the local governments, to maintain and strengthen the existing industrial base.

Tables 9 and 10 provide information on industrial attraction, retention, and expansion activities conducted under Economic Development Grant funding by each community college district. As illustrated in Table 9, community college industrial retention and expansion activities were conducted by 32 of the 39 districts, assisting in the expansion of 32 companies, creating 495 jobs, and the retention of 12 companies, retaining 683 jcbs. Industrial attraction activities, noted in Table 10, were conducted by 33 of the 39 districts, and assisted in the attraction of 44 companies, creating 2,803 jobs. The total of such efforts was 88 companies assisted, 683 jobs retained, and 3,298 jobs created.

Customized Job Training. Every community college district in the system is involved in providing customized job training for area business and industry. Customized training programs provide the business with exactly the kind of training the firm needs; whatever the subject matter, the college can design or broker a training program to fit the bill. The schedule and duration of the training are totally up to the business. Most of the customized training is conducted on-site at the company's facilities, but training also can be conducted on campus or at any off-campus site. The instructors are specially chosen depending on the company's training needs. Most frequently, instructors are expert practitioners from the field who can provide training based on actual experience.

Such training is provided under contract to train new employees and keep existing employees up-to-date and/or upgrade their skills in order to maintain or increase profitability. In many cases, training is provided in order to assist with a plant location or expansion in Illinois. Community colleges regularly assist businesses seeking funding for training through various state programs as well as through JTPA, but the vast majority of the training is paid for by the company itself.

Table 11 provides information on customized job training programs conducted by each community college district. The table shows that in Fiscal Year 1985, community colleges provided customized training through 1,485 courses for 857 companies, serving 21,994 employees. These efforts contributed to the start-up or expansion of 88 companies, creating 1,507 jobs, and the retention of 22 companies, retaining 1,242 jobs.

Entrepreneurship Training for Business Owners and Operators. In addition to providing training for company employees, Illinois community colleges also provide extensive training for business owners and operators. Workshops and seminars are held on a variety of topics of interest to small business, such as starting and operating a small business, business applications of computers, government financing programs, etc. These seminars and workshops frequently are cosponsored with the Small Business Administration, DCCA, or a local chamber of commerce.

Community colleges also provide entrepreneurship instruction to thousands of businesses through regular course offerings. For example, courses in small business administration, business law, business finance, accounting, personnel administration, and many others are available during evening hours at most community colleges.

Tables 12 and 13 provide information on entrepreneurship workshops and seminars conducted and individualized counseling provided for small business owners and operators. Table 12 shows that during this fiscal year, 34 community college districts conducted 902 entrepreneurship workshops and seminars attended by 19,034 small business owners and operators. These efforts resulted in the start-up or expansion of 42 companies, creating 183 jobs, and the retention of 12 companies, retaining 60 jobs. Table 13 illustrates that 33 districts provided individualized small business counseling and management assistance to 3,322 persons. Such personalized services helped in the start-up or expansion of 91 companies, creating 1,043 jobs, and the retention of 58 companies, retaining 1,061 jobs. Entrepreneurship training and services therefore aided a total of 203 companies and contributed to the creation and retention of 2,347 jobs.

Contract Procurement Assistance. Recognizing that government purchases represent a lucrative market for businesses, DCCA operates the Illinois Procurement Outreach Program to enlist the aid of community colleges statewide in providing procurement assistance to businesses. Rising levels of federal spending, especially for defense purposes, generate new opportunities for the creation and retention of jobs. This year alone the federal government will spend approximately \$150 billion for goods and services. Providing assistance to businesses seeking federal contracts can help firms secure more federal contracts and can, therefore, have a significant impact on the state's economy.

Currently, 22 community college districts provide assistance to area business and industry in seeking state and federal contracts. Fourteen operate comprehensive contract procurement assistance programs, devoting at least one full-time contract procurement professional to the effort. Some have incorporated introductory contract procurement assistance into their other services, and yet others are in the process of implementing full-fledged programs. Table 14 provides information on contract procurement assistance provided by each community college district. The table shows that in Fiscal Year 1985, community college districts served 2,255 firms through workshops, bidder list applications, bid preparations, and counseling. These services helped obtain \$6,293,194 in contracts for Illinois businesses, resulting in the start-up or expansion of 14 companies and the retention of 6 companies, creating 15 jobs and retaining 511 jobs.

<u>Small Business Incubators</u>. A new area for community colleges is small business incubators — facilities that help new businesses get on their feet, generally by providing low rent; shared business services such as secretarial, telephone, copying, and accounting services; employee training; and management assistance. The role of the community college can range anywhere from providing the employee training and management assistance to helping organize and even operate the incubator.

Table 15 provides information on the involvement of community colleges in small business incubators. The table shows that during this fiscal year, 11 community college districts researched the feasibility of starting an incubator, 5 were involved in helping establish an incubator, 4 provided services to an existing incubator, and 1 operated an incubator on campus. Such efforts assisted in the retention of 1 company, retaining 3 jobs, and the start-up or expansion of 41 companies, creating 194 jobs.

Employment, Training, and Job Search Services for Unemployed or Underemployed Persons. In addition to being involved in economic development through services to businesses, Illinois community colleges regularly provide training and job search services for persons seeking employment. A portion of such activities is funded with economic development grant funds. As shown in Table 16, 28 community college districts used economic development grant funds in this manner, conducting 29 workshops attended by 1,209 persons, conducting 52 courses attended by 736 persons, and providing counseling and placement assistance to 5,974 persons.

Illinois community colleges also are heavily involved in job training under the Job Training Partnership Act (JTPA). Through the various JTPA programs, community colleges are able to conduct a wide variety of training for economically disadvantaged individuals and dislocated workers to assist them in obtaining skills for employment and to assist business and industry in obtaining skilled employees to allow them to expand or locate in Illinois. Illinois community colleges are involved in the JTPA administrative system as well. Community colleges representatives serve on private injustry councils and the state Job Training Coordinating Council, and 5 of the 26 SDAs and 15 of the 19 dislocated worker centers in the state are administered by community colleges.

Conclusion. As can be seen from the summary of results presented herein, particularly the contribution and assistance in the creation and retention of 9,800 jobs, the economic development grant has indeed had a significant impact on the economy of Illinois and has been a good investment for the state.

SECTION II

STATEWIDE SUMMARY TABLES

Tables in this section summarize economic development grant use concerning budget category, type of activity, cooperation with other economic development organizations, and jobs created and retained.

Table 1

PLANNED ECONOMIC DEVELOPMENT GRANT USE
BY BUDGET CATEGORIES

Budget Categories	Average Percent of Funds
Personnel	71.94%
