ABSTRACT

This report provides statistics for the 1982-83 fiscal year on the revenues, expenditures, debt, and financial assets of public school systems, including public higher education, in the United States. The information, collected by the U.S. Census Bureau, is presented for the nation as a whole, for the states, and for individual school systems with enrollments of 15,000 or more. The report consists of two parts: an introduction and a set of tables. The introductory section describes the scope of the Census Bureau's school finance data collection activities, major findings of the 1982-83 survey, and sources and limitations of the data. The nine tables present national totals of public school financial data (tables 1 and 2), sources of revenue and allocations of expenditures by the states (tables 3 through 6), state totals for indebtedness and cash and security holdings (table 7), and financial statistics for large school systems (tables 8 and 9). Among the general findings of the survey were that revenues increased by 5.1 percent and expenditures by 6.2 percent over the previous year, and that both federal and state financing dropped while local support rose. Definitions of selected terms are supplied. (PGD)

INTRODUCTION

The U.S. Census Bureau conducts an Annual Survey of Government Finances as authorized by law under Title 13, United States Code, Section 182. The 1983 survey, similar to other annual surveys and Census of Governments conducted for many years, covers the entire range of governmental finance activities—revenue, expenditure, debt, and assets.

The 1983 Governmental Finance Series (series GF83) contains 8 parts: No. 1, *State Government Tax Collections in 1983*; No. 2, *Finances of Employee-Retirement Systems of State and Local Governments in 1982-83*; No. 3, *State Government Finances in 1983*; No. 4, *City Government Finances in 1982-83*; No. 5, *Governmental Finances in 1982-83*; No. 6, *Local Government Finances in Selected Metropolitan Areas and Large Counties: 1982-83*; No. 8, *County Government Finances in 1982-83*; and No. 10, *Finances of Public School Systems in 1982-83*.

This report provides statistics on the revenue, expenditure, debt, and financial assets of school systems, presented for the Nation, for States, and for individual school systems having 15,000 or more enrollment.

ORGANIZATION OF THIS REPORT

This introductory text describes the scope of the Census Bureau's school finance data collection activities, major findings of the 1982-83 survey, and sources and limitations of data.

Tables 1 and 2 display national totals of public school financial data. Statewide aggregates for general revenue and general expenditure appear in tables 3 and 4 with corresponding percent distributions in tables 5 and 6. Table 7 presents State totals for indebtedness and cash and security holdings.

Table 8 contains financial statistics for public school systems with enrollments greater than 15,000. Per pupil amounts for these same systems appear in table 9.

SCOPE

This report includes data on the finances of the following types of publicly operated educational agencies classified by the Bureau of the Census as school systems:

1. Independent school systems
 - a. Elementary and secondary systems operating as independent governmental units; and

- b. Local government higher education systems operating as independent governmental units;

2. Dependent school systems

- a. Elementary and secondary systems that are integral agencies of county, municipal, township, or State government; and
- b. Local government higher education systems that are integral agencies of county or municipal governments.

There are 483 local higher education systems. These systems exclude the finances of State government institutions of higher education. Tables 1, 2, and 4 display totals for this grouping under the heading "Higher Education."

For a summary of the major types of units that the Census Bureau includes in the universe of school systems, see table A.

Table A. Public School Systems and Fall Enrollment: 1982

Type of system	Number of systems	1981 fall enrollment (1,000)
All public school systems.....	16,389	43,551
Independent school districts.....	14,851	35,614
Dependent school systems.....	1,538	7,938
State.....	24	176
County.....	578	3,420
Municipal.....	286	3,429
Township (and "town")	650	912
EXHIBIT: Local institutions of higher education.....	483	3,425

The statistics reported for 1982-83 pertain to school system accounting periods that ended June 30, 1983, or at some date within the previous 12 months, subject to certain exceptions.¹

FINDINGS

Public school systems in the United States received \$124.6 billion from all revenue sources and made expenditures totaling \$122.3 billion in fiscal year 1982-83. Total revenue increased \$6.0 billion, or 5.1 percent, and expenditure \$7.1 billion, or 6.2 percent, over the previous fiscal year.

The relative significance of funding from Federal, State, and local sources has changed (see table B and discussion under "Revenue"). The Federal share in financing public school systems declined for the third straight year. The portion financed by State governments fell for the first time since 1977-78. A slight resurgence in tax collections for public schools has caused the local share to rise during the last 3 years.

Salaries and wages has remained the largest single component of public school system expenditure.

School system indebtedness rose slightly from \$36.0 billion in 1981-82 to \$36.2 billion in 1982-83. New long-term debt issues exceeded principal payments for the first time in 4 years.

REVENUE

School system revenue totaled \$124.6 billion in fiscal year 1982-83. This consisted primarily of general revenues of \$124.2 billion and a small amount of employee-retirement revenue (\$396 million).²

Table C shows the distribution of general revenue between intergovernmental and own source revenue. The relationship between these two categories of revenue fluctuates greatly from State-to-State (see table 5). For example, public school systems in New Hampshire derived 87.9 percent of their revenue from

own sources and only 12.1 percent from intergovernmental funding. School systems in New Mexico, however, obtained 13.6 percent of their revenue from own sources with the remainder coming from other governments.

Table C. General Revenue of Public School Systems: 1982-83

Parent government contributions.....	10,046	8.1
Current charges.....	5,665	4.6
Interest earnings...	2,264	1.8
Other.....	1,625	1.3

For the first time since 1978, the State government share in financing public school systems declined (see table B). Up only 4.5 percent in absolute terms from 1981-82, the State share decreased from 45.4 percent of all general revenue to 45.1 percent in 1982-83. Some States reported large increases in State revenues between 1981-82 and 1982-83: Connecticut (+19.7 percent), Georgia (+16.1 percent), Nebraska (+26.1 percent), New Hampshire (+17.0 percent), Vermont (+38.0 percent), and Wyoming (+21.6 percent). Thirteen States, however, reported actual declines in State funding between these two years. State governments distributed most of their education money as part of basic foundation aid programs but also provided amounts for

Table B. Percent of Public School General Revenue by Original Source of Funding

vocational and special education, transportation aid, food service, and capital outlay.

The proportion of revenue contributed by the Federal Government to public school systems has continued to decline. After peaking at slightly under 9 percent of all school system general revenue in 1979-80, the Federal share dropped to 6.6 percent in 1982-83. Federal Government aid totaled \$8.2 billion in 1982-83, down 10.0 percent from 1979-80. It expended \$1.3 billion directly to school systems in 1982-83, a major part of these payments being funded through Public Law 874, commonly called the impact aid program. Most Federal revenue is channeled indirectly to local public school systems through State governments. About \$6.9 billion was distributed under various programs including the Elementary-Secondary Education Act, vocational education, school lunch and milk, and education consolidation and improvement block grants.

Declines in the Federal and State shares of public school system funding were partly offset by a slight resurgence in tax revenues, which increased its portion for the third straight year. These revenues increased by 8.7 percent between 1981-82 and 1982-83 with particularly sharp increases in Minnesota (+36.7 percent), Oklahoma (+15.4 percent), Washington (+23.8 percent), and Wyoming (+27.2 percent).

Taxes and parent government contributions comprised 83.6 percent of all general revenue received by school systems from their own sources. Parent government contributions are amounts appropriated by governments to finance their dependent school systems. Property tax receipts fund the major portion of these contributions. While property tax revenue was the single most important source of locally derived revenue, other taxes were significant for school systems in certain States. Louisiana is unique inasmuch as school systems received approximately \$387 million, or over 63 percent of all 1982-83 tax revenue, from local sales tax collections. Other States with significant amounts of nonproperty tax revenue include Kentucky, New York, and Pennsylvania.

EXPENDITURE

Public school systems expended \$122.3 billion in fiscal 1982-83 including \$170 million in employee-retirement expenditure for school district-administered systems (listed in footnote 2). Table D shows the distribution of general expenditure—i.e., excluding retirement system payments—by object and level of instruction.

Amounts reported as intergovernmental expenditure include only payments to State governments and local school building and leasing authorities that are classified by the Census Bureau as special district governments. Expenditures made by one school system to another are excluded to avoid totaling duplicative amounts.

Salaries and wages, predominantly teachers' salaries, continue to be the largest object expenditure totaling 62.6 percent of general expenditure in 1982-83. Salary expense increased by 6.3 percent from 1981-82 to \$76.4 billion. Capital spending, which declined the previous two years, went down 1.5 percent to \$7.2 billion in 1982-83.

Coverage of elementary and secondary education finances is far more comprehensive than the coverage given to higher education finances. Expenditure reported for elementary and secondary education includes all units classified by the Bureau of the Census as public elementary and secondary school systems.³

Higher education expenditure accounted for only 6.0 percent of total general expenditure of public school systems. The higher education institution data included in this report, however, pertain to only those institutions classified by the Bureau of the Census as school systems. Most of these systems are locally controlled community colleges.⁴ In many States, though, community colleges are either totally or partially administered and funded by State governments.⁵ State-controlled higher educational institutions (both 4-year and community colleges) are excluded as these are classified as State dependent agencies rather than as local school systems. Thus, the higher education expenditure data in this report represent only a small portion of all publicly operated higher education institutions.

³State-by-State descriptions of those units classified by the Bureau of the Census as school systems are given in *Governmental Organization* (1982 Census Governments, Vol. 1).

⁴The University of the District of Columbia and Washburn University (Topeka, KS) are major exceptions. These are locally controlled 4-year degree granting institutions. Senior colleges in the City University of New York, which were classified as locally controlled in previous years, were reclassified State dependent effective for the 1982-83 fiscal year.

⁵All or most of the community colleges in the following States are classified by the Bureau of the Census as State institutions of higher education and are, therefore, excluded from this report: Alabama, Alaska, Arkansas, Colorado, Connecticut, Delaware, Georgia, Hawaii, Kentucky, Massachusetts, Minnesota, Nevada, New Mexico, Oklahoma, Rhode Island, South Carolina, Tennessee, Vermont, Virginia, Washington, West Virginia, and Wisconsin.

Table 4 contains elementary-secondary and higher education expenditure detail for individual States. States that had particularly large increases in total elementary-secondary expenditure between 1981-82 and 1982-83 were Alaska (+23.8 percent), Kentucky (+16.9 percent), Oklahoma (+13.9 percent), Texas (+17.4 percent), and Wyoming (+15.7 percent).

Table E shows, by State, average per pupil amounts for several types of elementary and secondary educational expenditures.^a Proper analysis of interstate comparison requires caution. Such factors as cost of living within given areas, extent of special educational programs offered, and transportation requirements

can all significantly influence per pupil costs but may not be particularly helpful in describing the quality of basic educational programs.

INDEBTEDNESS

At the end of fiscal 1982-83, indebtedness of public school systems totaled \$36.2 billion. Of this amount, 95.5 percent, or \$34.6 billion represented long-term obligations. Approximately \$3.9 billion of long-term debt was issued in fiscal 1982-83, while \$3.7 billion was retired.

National totals for public school indebtedness have changed very little in the last several years. In contrast, many States have reported a great deal of change in the extent of indebtedness.

^aThe enrollment data used in calculating the per pupil amounts presented in table E is fall 1982 pupil membership from National Center for Education Statistics, "Public School Enrollment, United States, Fall 1982," table 1.

¹Excludes expenditure for interest on debt. ²Includes interfund transfers into employee-retirement funds operated by the parent government or by the school system itself, which are omitted from the expenditure data presented elsewhere in this report.

Since 1980, particularly large decreases in debt outstanding have occurred in Alabama (-29.6 percent), California (-27.5 percent), Maryland (-25.6 percent), Massachusetts (-25.4 percent), Ohio (-26.8 percent), and Rhode Island (-25.6 percent). Significant increases in public school debt have occurred since 1980 in Alaska (+66.6 percent), Colorado (+23.7 percent), Louisiana (+25.5 percent), New Mexico (+78.9 percent), South Carolina (+66.7 percent), Texas (+18.0 percent), Utah (+22.9 percent), and Wyoming (+58.4 percent).

Public school system indebtedness in Texas exceeded by far indebtedness reported by any other State. School debt outstanding in Texas was \$5.3 billion at the close of fiscal year 1982-83 or \$2.2 billion larger than in New York, the next highest State. As seen in table F, 10 of the 25 school systems with the largest debt are in rapidly expanding areas in Texas.

Indebtedness figures included in table 7 pertain only to debt issued in the name of an independent school district or by the parent government for a dependent school system. Thus, this report excludes the following debt obligations: debt issued by school building authorities and by certain municipalities (such as Atlanta, Milwaukee, Newark, and San Francisco) for the construction of education facilities; general obligation debt not issued distinctly for the support of schools, such as in the District of Columbia and Hawaii; and indebtedness of the Chicago School Finance Authority, a special district government created in January 1980, that had \$569 million outstanding in long-term bonded indebtedness as of August 31, 1982.

CASH AND SECURITY HOLDINGS

School district governments had financial assets at the end of fiscal 1982-83 amounting to \$22.7 billion. Approximately \$2.4 billion was held in the 12 school employee-retirement funds included in this report. Of the remainder, \$14.8 billion was held as cash and deposits and \$5.5 billion represented securities. Holdings of dependent school systems are excluded from this report since they cannot be separated from the assets of their parent governments.

SOURCES AND LIMITATIONS

The Census Bureau obtained data in this report from four principal sources:

Organization—The research conducted as part of the Census Bureau's 1982 Survey of Governmental Organization identified the universe of public school systems. Consult the report *Governmental Organization* (Vol. 1, 1982 Census of Governments) for a description of the methodology and the findings of this survey. That report includes extensive tabular presentations on numbers of public school systems, schools, and enrollments. Counts of the school systems in the finance survey will differ slightly from those included in *Governmental Organization*. These differences occur because the finance survey excludes school systems which, due to overlapping of reporting responsibilities, would cause financial data to be double-counted.

Higher education—Finance data were obtained from questionnaires used in the Higher Education General Information Survey conducted by the National Center for Education Statistics as part of a joint data collection agreement between the Census Bureau and the U.S. Department of Education.

Mail canvass—Statistics for elementary and secondary school systems in Alaska and in the District of Columbia as well as the employee-retirement systems are based on information received in response to a mail canvass of individual systems.

Central collection—State education agencies conduct surveys of elementary and secondary education systems that obtain

finance data as part of a larger data collection effort. A high percentage of this information is often compatible with Census Bureau categories. In an effort to reduce respondent burden, the Census Bureau concluded a series of agreements with all States except Alaska to share their data for this survey. The specific data collection procedure used in each State is listed below.

1. Completion of Census Bureau questionnaires by State officials: Delaware, Maryland, Nevada, Oregon, West Virginia, and Wyoming.
2. Compilation from State education agency source documents by Census Bureau staff: Alabama, Hawaii, New Mexico, Rhode Island, Tennessee, and Utah.
3. Computer tape reformatted by Census Bureau staff: Arizona, Arkansas, California, Georgia, Idaho, Indiana, Louisiana, Maine, Massachusetts, Michigan, Montana, Nebraska, New Hampshire, New Jersey, North Dakota, Ohio, Oklahoma, and Vermont.
4. Computer tape of data reformatted by State education agency: Illinois, Iowa, Kansas, Minnesota, Missouri, New York, Pennsylvania, South Dakota, Texas, Washington, and Wisconsin.
5. Computer printouts of data reformatted by State education agency: Colorado, Connecticut, Florida, Kentucky, Mississippi, North Carolina, South Carolina, and Virginia.

These central data collection arrangements did not always provide sufficient information to meet all the needs of the Census Bureau survey. In those instances, other sources—most often different State offices—supplied information to supplement the basic data. The most common types of data needing supplementation were school lunch finances, indebtedness, cash and security holdings, and capital fund transactions. The procedures for incorporating these additional data with the core information required careful detailing to avoid duplication or under reporting.

Data in this report are subject to inaccuracies in classification and processing. The Census Bureau exerted effort to keep such errors to a minimum through care in examining, editing, and tabulating the data shown herein.

For information on the availability of school finance data on computer tape, contact Chief, Governments Division, Bureau of the Census, Washington, DC 20233 or call (area code 301-753-7366).

ACKNOWLEDGMENT

The generous cooperation of State education agency personnel is gratefully acknowledged. The time and effort extended by these officials made it possible to produce this report while imposing a minimum of respondent burden on local school officials. We also appreciate very much the helpful assistance of local school officials who either provided statistics in the first instance or who resolved data problems.

SCHOOL SYSTEM FINANCES

Note: Because of rounding, detail may not add to totals. Revenue from State sources for State dependent school systems is included as intergovernmental revenue from State rather than as parent government contributions.

- Represents zero or rounds to zero.

1 To avoid duplication, interschool system transactions are excluded.

SCHOOL SYSTEM FINANCES

NA Not available.

¹Minor amounts of short-term indebtedness incurred by independent school systems are included in the long-term indebtedness figures and are not separately identifiable. Short-term indebtedness of dependent school systems in many cases cannot be distinguished from the total indebtedness of their parent governments.

²Holdings of employee-retirement funds are excluded.

³Dependent school system holdings are excluded.

⁴Indebtedness of these dependent school systems cannot be segregated from the general obligation indebtedness of their parent governments.

Note: Because of rounding, detail may not add to totals. Interscholastic system transactions are included in this table, rather than excluded as in tables 1-4. - Represents zero or rounds to zero. NA Not available. ¹Fall 1980 enrollments are shown for the 56 local institutions of higher education published in the Education Directory, Colleges and Universities, 1981-82, National Center for Education Statistics. Fall 1982 enrollments for the 335 elementary and secondary school systems in this table were provided by State education agencies. ²\$31,660,000 of school bonded indebtedness incurred by the city of Birmingham. ³\$24,320,000 of school bonded indebtedness incurred by the city of San Francisco. San Francisco Unified School District paid \$5.1 million in fiscal year 1982-83 for debt service. ⁴The following amounts (in thousands of dollars) are excluded from the expenditure data shown here as they are interfund transfers into the school system's or its parent government's employee retirement fund: Chicago, \$49,719; Denver, \$17,120; Des Moines, \$1,212; Fulton County, \$4,154; Hawaii Public Schools, \$83,922; Kansas City, MO, \$5,276; Minneapolis, \$10,019; New York City, \$342,352; Omaha, \$3,241; Portland, \$5,274; St. Louis, \$6,958; St. Paul, \$367; Wichita, \$316. ⁵\$110,137,000 of school bonded indebtedness incurred by the city of Atlanta. Atlanta Independent School District paid \$816,150 in fiscal year 1982-83 to the city of Atlanta for debt service. ⁶Excludes enrollment and financial data for De Kalb Community College. ⁷Excludes \$369,025,000 (as of Sept. 1, 1982) in long-term debt incurred by the Chicago School Finance Authority. ⁸\$80,667,000 of school bonded indebtedness incurred by the city of Newark. ⁹Effective fiscal year 1983, New York State assumed control of the senior colleges of the City University of New York. The 1982-83 financial data reflect activities of only community and technical colleges. ¹⁰\$35,660,000 of school bonded indebtedness incurred by the city of Milwaukee. Intergovernmental expenditure represents debt service payments to the Milwaukee.

 §§Effective fiscal year 1983, New York State assumed control of the senior colleges of the City University of New York. The 1982-83 financial data reflect activities of only community and technical colleges.
 ¶¶\$424 per pupil of school bonded indebtedness incurred by the city of Milwaukee.

DEFINITIONS OF SELECTED TERMS

Major categories for the Census Bureau's classification of governmental finances, as applicable to school systems, are defined below:

Bond Funds—Funds established to account for the proceeds of bond issues pending their disbursement.

Capital Outlay—Direct expenditure for contract or force account construction of buildings, roads, and other improvements, and for purchases of equipment, land, and existing structures. Includes amounts for additions, replacements, and major alterations to fixed works and structures. However, expenditure for repairs to such works and structures is classified as current operation expenditure.

Cash and Security Holdings—Cash, deposits, and governmental and private securities (bonds, notes, stocks, mortgages, etc.) except holdings of agency and private trust funds. Does not include interfund loans, receivables, and the value of real property and other fixed assets.

Construction—Production of fixed works and structures and additions, replacements, and major alterations thereto, including planning and design of specific projects, site improvements and provision of equipment and facilities that are integral parts of a structure. Includes both contract and force account construction.

Contributions From Parent Government—That portion of general revenue from own sources which is appropriated and transferred to a dependent school system by its parent government. Excludes intergovernmental revenue, current charges, and miscellaneous general revenue.

Current Charges—Amounts received from the public for performance of specific services benefiting the person charged and from sales of commodities and services. Includes school lunch sales (gross), tuition paid by individuals, and receipts from centrally administered student activity funds. Excludes amounts received from other governments and interfund transfers.

Current Operation—Direct expenditure for compensation of own officers and employees and for supplies, materials, and contractual services except amounts for capital outlay.

Debt—Long-term credit obligations of the school system or its parent government and all interest-bearing short-term (repayable within 1 year) credit obligations. Excludes noninterest-bearing short-term obligations, interfund obligations, amounts owed in a trust or agency capacity, advances and contingent loans from

other governments, and rights of individuals to benefits from school system employee-retirement funds.

Debt Outstanding—All debt obligations remaining unpaid on the date specified.

Direct Expenditure—Payments to employees, suppliers, contractors, beneficiaries, and other final recipients of government payments—i.e., all expenditure other than intergovernmental expenditure.

Employee-Retirement Expenditure—Cash payment to beneficiaries (including withdrawals of contributions) of employee-retirement systems. Excludes cost of administering retirement systems, school system contributions to State-administered employee-retirement systems, and noncontributory gratuities paid to former employees.

Employee-Retirement Revenue—Revenue from retirement contributions received from employees and other governmental or private employers, earnings on investment assets set aside to provide income for retirement system purposes and State government contributions. Excludes contributions from the employing school district (which are intragovernmental transfers).

Enrollment—Count of pupils on pupil rolls as determined by the State education agency.

Expenditure—All amounts of money paid out by a school system—net of recoveries and other correcting transactions—other than for retirement of debt, purchase of securities, extension of loans, and agency transactions. Note that expenditure includes only external transactions of a school system and excludes noncash transactions such as the provision of perquisites or other payments in kind.

Fiscal Year—The 12-month period at the end of which the school district determines its financial condition and the results of its operations and closes its books.

General Expenditure—All school system expenditure other than that classified as employee-retirement or other insurance trust expenditure.

General Revenue—All school system revenue except employee-retirement or other insurance trust revenue.

General Revenue From Own Sources—All general revenue exclusive of intergovernmental revenue. Includes taxes, contributions from parent governments, current charges, and miscellaneous general revenue.

Interest Earnings—Interest earned on deposits and securities including amounts for accrued interest on investment securities sold. However, receipts for accrued interest on bonds issued are classified as offsets to interest expenditure. Note that interest earnings shown under general revenue do not include earnings on assets of employee-retirement system.

Interest Expenditure—Amounts paid for use of borrowed money.

Intergovernmental Expenditure—Amounts paid to other governments as fiscal aid in the form of shared revenues and grants-in-aid, school building authority, payments, or in lieu of taxes. Excludes amounts paid to other governments for purchase of commodities, property, or utility services, any tax imposed and paid as such, and employer contributions for social insurance—e.g., contributions to the Federal Government for old-age, survivors', disability, and health insurance for school district employees.

Intergovernmental Revenue—Amounts received from other governments as fiscal aid in the form of shared revenues and grants-in-aid as reimbursements for performance of general government functions and specific services for the paying government, or in lieu of taxes. Excludes amounts received from other governments for sale of property and commodities. All intergovernmental revenue is classified as general revenue.

Intergovernmental Revenue From Federal Government—Intergovernmental revenue received by the school system directly from the Federal Government. Excludes Federal aid channeled through State governments.

Intergovernmental Revenue From State Government—All intergovernmental revenue received from the State government, including amounts originally from the Federal Government but channeled through the State.

Long-Term Debt—Debt payable more than 1 year after date of issue.

Long-Term Debt Issued—The par value of long-term debt obligations incurred during the fiscal period concerned, including funding and refunding obligations. Debt obligations authorized but not actually incurred during the fiscal period are not included.

Long-Term Debt Retired—The par value of long-term debt obligations liquidated by repayment or exchange, including debt retired by refunding operations.

Offsets to Debt—Cash and investment assets of sinking funds and other reserve funds, however designated, which are specifically held for redemption of long-term debt, including bond reserve funds, deposits with fiscal agents for the redemption of uncanceled debt, and balances in refunding bond accounts held pending completion of refunding transactions.

Other Than Capital Outlay—General expenditure exclusive of capital outlay. Includes current operation, interest on debt, and intergovernmental expenditure.

Property Taxes—Taxes conditioned on ownership of property and measured by its value. Includes general property taxes relating to property as a whole, real and personal, tangible or intangible, whether taxed at a single rate or at classified rates, and taxes on selected types of property, such as motor vehicles or certain or all intangibles.

Public School Systems—Includes independent school district governments and dependent school systems. Independent school district governments are organized local entities providing public elementary, secondary, and/or higher education which, under State law, have sufficient administrative and fiscal autonomy to qualify as governments. Dependent school systems lack sufficient autonomy to be counted as separate governments and are classified as dependent agencies of some other government—a county, municipal, township, or State government.

Revenue—All amounts of money received by a school system from external sources—net of refunds and other correcting transactions—other than from issuance of debt, liquidation of investments, or as agency and private trust transactions. Note that revenue excludes noncash transactions such as receipt of services, commodities, or other "receipts in kind."

Salaries and Wages—Amounts paid for compensation of school system officers and employees. Consists of gross compensation before deductions for withheld taxes, retirement contributions, or other purposes.

School Lunch Sales—Gross collections from cafeteria sales to children and adults.

Securities—Stocks and bonds, notes, mortgages, and other formal evidences of indebtedness.

Short-Term Debt—Interest-bearing debt payable within 1 year from date of issue, such as bond anticipation notes, bank loans, and tax anticipation notes and warrants. Includes obligations having no fixed maturity date if payable from a tax levied for collection in the year of their issuance.

Taxes—Compulsory contributions exacted by a school system for public purposes, except employee and employer assessments for retirement and social insurance purposes, which are classified as insurance trust revenue. All tax revenue is classified as general revenue and comprises amounts received (including interest and penalties but excluding protested amounts and refunds) from all taxes imposed by a government. Note that school system tax revenue excludes any amounts from shares of State-imposed-and-collected taxes, which are classified as intergovernmental revenue.

current housing reports

Data on housing vacancies
and housing characteristics

U.S. Department of Commerce
BUREAU OF THE CENSUS

CURRENT DATA ON HOUSING

HOUSING VACANCIES (SERIES H-111)

Current statistics on housing vacancies, based on a scientifically selected sample. This series of four quarterly reports and one annual report provides rental vacancy rates and homeowner vacancy rates for the United States, each of the four regions, and inside and outside standard metropolitan statistical areas. The statistics for the current quarter are compared with data for the same quarter in the preceding year. Percent distributions are presented for rental vacancies and homeowner vacancies by the following housing characteristics:

- Number of rooms
- Number of bedrooms
- Number of housing units in structure
- Duration of vacancy
- Plumbing facilities
- Monthly rent and sales price asked
- Year structure built

Also shown are percent distributions of all vacant housing units by year round and seasonal status, figures on occupancy and vacancy rates based on the total housing inventory, and the home ownership rate. The annual report, in addition to the above, presents percent distributions of housing characteristics for both renter and owner-occupied units.

HOUSING CHARACTERISTICS (H-121)

This series of reports is published on an irregular schedule. Individual reports present data for the United States, regions, or local areas on one or more selected housing characteristics. (Publications in this series include 15 reports on television ownership; report on second homes, a report on housing units by plumbing facilities and condition, and a special study on housing characteristics classified by the 1959 income of occupants.) Stocks of these reports are exhausted. Photocopies only are available. For information, write to Housing Division, Bureau of the Census, Washington, D.C. 20233.

HOW TO ORDER

Both series of current housing reports described in this announcement are available from the Superintendent of Documents in a combined subscription for \$13 per year (individual copies vary in price). Use the order form furnished below.

RELATED REPORTS

The Bureau of the Census also issues several series of monthly reports on the construction industry. Subjects covered include housing starts, construction activity, building permits, and housing sales. An announcement and order form covering these reports is available free of charge upon request to Data User Services Division, Customer Services (Publications), Bureau of the Census, Washington, D.C. 20233.

ABSTRACT

This bulletin examines wellness programs and what they mean to Oregon educators. The opening sections describe what is meant by "wellness" and trace the growth of wellness programs in Oregon to the annual Seaside Health Education Conference. To illustrate how wellness programs operate, the next two sections describe how two Oregon school districts--Jefferson County and Centennial --have applied and benefited from their wellness programs. Both these districts have used these programs to encourage employees to make personal commitments to lifestyle changes that will increase their productivity and generally improve their health. Common elements that characterize these programs are defined, including positive motivation, health awareness campaigns, behavior change programs, and insurance cost containment strategies. A variety of methods are used in wellness programs: psychological tests, individual health consultants, group programs, mass media promotions, and wellness-oriented social activities. Recent literature on wellness is cited, and useful examples of wellness activities are included in the appendix. (TE)

Preface

Employee wellness programs--promoting physical, mental, and emotional fitness--have been a part of American business and industry for over thirty years. Corporate giants, such as IBM and Kodak, have sponsored balanced wellness programs for several years. In the last ten years educational institutions have recognized the value of various wellness programs and integrated some of these beneficial concepts into their schools.

This month's Bulletin examines wellness programs and what they mean to Oregon educators. It also describes the Seaside Health Education Conference as an example of an effective model for promoting positive lifestyles. Finally, the Bulletin illustrates how two Oregon school districts have applied and benefited from their wellness programs.

This Bulletin was written by Patrick J. O'Connor, an OSSC graduate research assistant. O'Connor is a doctoral student in the Division of Educational Policy and Management at the University of Oregon.

Introduction

Sound mental and physical health are essential to good learning and good living. Instruction in wellness should be a top priority in every school district. What better way to teach our young people and to set a communitywide example than by school district employees involving themselves in a program that maintains and promotes their physical and mental health. By serving as role models, they make a strong statement to their students.

In summarizing the rationale behind wellness programs in schools, George L. Benson, superintendent of the Centennial School District in Portland, Oregon, emphasizes that teachers, staff, and administrators are powerful role models for students. The Centennial district, as well as other school districts throughout Oregon, have developed and maintained wellness programs particularly suited to the needs of the students, staff, and citizens of their districts.

After describing what is meant by *wellness*, the Bulletin traces the growth of wellness programs in Oregon to the annual Seaside Health Education Conference. To illustrate how wellness programs operate, the next two chapters take a close up look at two highly successful programs in the Jefferson County and Centennial school districts. Both districts have used these programs to encourage employees to make personal commitments to lifestyle changes that will increase their productivity and generally improve their health. The Bulletin also defines the common elements that characterize these programs, including positive motivation, health awareness campaigns, behavior change programs, and insurance cost containment strategies. As will be evident, a variety of methods are used in wellness programs: psychophysical tests, individual health consultants, group programs, mass media promotions, and wellness-oriented social activities.

It is hoped that these descriptions of wellness programs will stimulate thought on establishing wellness programs in districts throughout the state and elsewhere. The information contained in this Bulletin has been obtained from personal interviews with school administrators, team leaders, and teachers. Recent

literature on wellness is also cited. Useful examples of wellness activities are included in the Appendix.

What Is "Wellness"?

Wellness is difficult to define because the concept encompasses the meeting of many different individual needs--physiological, social, emotional, and spiritual. Essentially, wellness programs promote positive steps individuals can take to improve their well being, thus increasing the prospects of living healthy and personally satisfying lives.

This proactive approach to health is somewhat analogous to the concept of "prospective medicine," as described by a joint publication of the Health Insurance Association of America, the American Council of Life Insurance, and the American Association of School Administrators: "Patients discuss with their doctor how healthy they would like to be throughout their lives. Then they map out with their doctors any changes they need to make in their lifestyles to achieve these goals." With wellness programs, however, peers as well as specialists provide the needed counsel for making healthful decisions. Nevertheless, the main intent is primarily the same: to give the individual more control in handling work, stress, and other areas of life.

The Promotion of Health

Len Tritsch, health and physical education specialist for the Oregon Department of Education and founder of the Seaside Health Education Conference, believes the term *wellness* is vague. He suggests *health promotion program* might be more acceptable to most people, for it clearly describes the intent of such a program. These programs usually contain components of nutrition, fitness, stress management, and self-responsibility. For administrators, the challenge is how to disseminate this vital information to the staff, personalize these ideas to the individuals' needs, and maintain staff members' healthy outlook over time.

The Value of Wellness Programs

One of the most tangible benefits from these programs is financial. Joanne Kalady, in "Schools Shape up with Employee Wellness," suggests that with "costs of employee health care

benefits steadily on the rise, schools are looking for ways to reduce costs without hurting benefit programs or creating new problems. This is where wellness comes in."

Fewer major claims help hold down the cost of insurance. Chris Hart, director of Self-Health for the Greater Oregon Health Company, points out that lower health insurance rates offer needed incentives to wellness programs, while providing school districts with healthier employees. The effectiveness of wellness programs in accomplishing "cost containment" is demonstrated by Greater Oregon's analysis of insurance claims by the employees of each school district in the state. The company weighs claims usage and notes the diagnoses, paying particular attention to the ratio of emergency room use to doctor visits. This information, in conjunction with other pertinent facts, is used to determine appropriate rates. Prior to the wellness program in Josephine County Unit School District, for example, group health insurance premiums increased annually between 12 and 35 percent. In the last two years, with its wellness program established, this district has had no insurance rate increases.

This projected economic benefit of wellness programs is not available to all districts, however. Some insurance companies are not able to extend premium discounts because of the present financial constraints within the group insurance industry. Many insurance companies are fighting for survival in today's economic climate. Another hinderance to realizing these economic benefits is collective bargaining, which tends to narrow the choice of insurance company to the provider with the lowest initial cost. Such a company is not likely to reward individual efforts to lower the number and amount of claims through healthful activities.

Although other benefits derived from wellness programs are more difficult to measure, they are ultimately just as important to the school district as "cost containment" and lower insurance rates. Specifically, healthier employees have lower rates of absenteeism and are more productive. Hardest to quantify is the general improvement in morale and attitude. Jack Rawls, administrative assistant to the superintendent of Josephine County Unit School District, attests that, "although we can't document participation with complete conclusive figures, we feel people are participating on a regular basis, and that these involved individuals carry this enthusiasm over to the classroom."

An independent survey by Kalady in a Topeka, Kansas, school district confirms Rawl's observation: 97 percent of participating employees enjoyed the program and felt that continued participation in wellness activities could improve their fitness attitudes and habits. Teachers were also able to pursue healthier, more satisfying lives and project a more positive role model for their students.

The Seaside Conferences: Wellspring of Wellness

The model many Oregon school districts have used for their wellness programs originated at the Seaside Health Education Conferences in Seaside, Oregon. In this small coastal town, annual coordinated health education workshops have given representatives from school districts throughout the state an intensive appreciation of the wellness philosophy. Each June, these representatives spend five days learning how to promote wellness within their school districts and develop a health education communication network that will facilitate the sharing of up-to-date health information.

"Seaside" began in 1977 as an outcome of a two-year needs assessment conducted by Len Tritsch, health education specialist for the Oregon Department of Education. The initial results from this assessment suggested that health education coordinators wanted more influence over the future trends of their discipline. They also expressed interest in creating a comprehensive health education network throughout the state and in training individuals to become health promoters within their own districts.

Growing from a registration of 152 in 1977, the Seaside Health Education Conference has grown almost seven-fold in its first decade. Seaside X--"A Decade of Wellness"--expects to have over 1,000 participants this June. Over the last nine years, a large variety of specialists as well as administrators, teachers, parents, and community members have shared their expertise in nutrition, fitness, and stress-reduction workshops. Although the theme of the conference varies from year to year, the main intent remains constant: to help individuals experience personal and professional growth through healthy lifestyle adaptations.

Funds and other resources for the Seaside conferences have come from a variety of sources. The 1985 contributors included the Oregon Department of Education; Oregon Traffic Safety Commission; Oregon Dairy Council; American Red Cross, Oregon Trail Chapter; Multnomah County Medical Auxiliary; Oregon Affiliate, American Heart Association; Oregon Association for the Advancement of Health Education (OAAHE); Oregon Division of the American Cancer Society; and U. S. Department of Agriculture, Nutrition Education and Training Program (NTEP). A majority of conference

participants are able to attend through the contributions of these sponsors; for others, their expenses are borne equally by the involved school district and the participant. The latter method of expense was suggested as being effective in encouraging staff ownership of the Seaside proceedings.

In "Seaside"--A Model for School Health Education Inservice," Judy C. Drolet and Lorraine G. Davis identify six "complementary components" of the conference's philosophy:

1. Team Approach: "Seaside" primarily serves as teacher inservice for educators from varied disciplines who are involved with education. However, participants also include administrators, food service personnel, school/district nurses and counselors as well as parents and community members who participate as a district team. Team meetings are scheduled during and after the conferences for planning, evaluation, and sharing impressions of the day's experiences. The team involvement is a critical component of these conferences.

2. Future Commitments: An "action plan" [see Appendix A] for implementing or improving some component of the health education program in each team's setting is developed. Incorporation of this plan is organized and scheduled with the specific role and obligation of each participant defined.

3. Resources: The conference offers keynote sessions with nationally renowned speakers from a wide variety of community agencies and small group sessions led by health educators throughout Oregon. Longer workshops of three, six, or nine hours provide in-depth, hands-on training skills for living the wellness lifestyle.

4. Curriculum Modeling: Workshop sessions attempt to increase conference participants' knowledge and promote positive attitudes about the dimensions of wellness. Course outlines and class activities related to wellness are shared. Innovative teaching techniques on how to integrate wellness into established curricula are also offered.

5. Role Modeling: Great emphasis is placed at "Seaside" on providing positive models for behavior changes. By offering examples of a healthy lifestyle, "Seaside" participants strive to motivate each other at school to follow the wellness model. The ultimate goal is that participants serve as motivating positive role models for everyone around them.

6. **Having Fun:** In addition to the professional development aspects, an observer of the "Seaside" conferences would immediately recognize that the participants are simply having fun! An effort is made by conference organizers to create a supportive environment for both work *and* play. This climate enhances the likelihood that "wellness" will be tried and ultimately incorporated into each participant's lifestyle.

Drolet and Davis undertook a five-year followup evaluation of participants at the first five Seaside conferences (1977-81) to find out whether they perceived more health-related changes than did school personnel who did not participate in the conferences. After assessing the questionnaire responses from four hundred randomly selected Oregon school personnel, Drolet and Davis concluded that Seaside effectively motivates those individuals involved in wellness programs. Further, it makes school personnel more aware of the important role models they provide for students and the community.

Drolet and Davis also point out that Seaside participants adopted better health habits as a result of the conference. The study conclusively demonstrates that attendance at successfully conducted wellness workshops can help perpetuate staff enthusiasm for living healthful lifestyles.

At least eight states across the United States have modeled conferences after the Seaside Health Education Conferences. With the growth of this particular format, there is now the potential of developing a national network for the promotion of health awareness.

Although the Seaside conferences provide information, support, and methods of implementation, the success of a wellness program depends most heavily on the manner of its integration into the local school district. Staff members of the Jefferson School District in Madras and the Centennial School District in Portland have returned to Seaside year after year to learn more about wellness and to share with other educators how they have put wellness principles into practice. The next two chapters describe the successful wellness programs in these two districts.

The Jefferson County Wellness Program

Although Jefferson County School District is located in a largely rural area in central Oregon, its composition is culturally diverse. Approximately 30 percent of the students are American Indians. Four elementary schools, one junior high school, and one senior high school serve 2,300 students and employ approximately 165 people. The citizens of Madras have demonstrated a willingness to support the local schools by participating in school activities and athletic events and by consistently supporting bond issues and budgets. In return, the community expects a lot from its schools.

Darrell Wright, superintendent of Jefferson County School District, and Carol McClelland, junior high school health education teacher and wellness team leader, gave the author a detailed account of how their Seaside-based wellness program works and how it has benefited school district employees and students, as well community members.

Staff Ownership

The wellness program in the Jefferson County School District utilizes a grassroots approach. Wright has purposely avoided implementation at the top, choosing instead to have a decentralized program instituted at the building level. This building plan approach, encouraged by the Seaside conference, has had particular success in this community. He believes that allowing staff to determine the extent and direction of their particular group encourages "invested ownership"--people feel like they are a part of this program.

To determine group and individual health goals, building teams--representing teachers, secretaries, principals, custodians, and so forth--formulate a group plan for action. (The form used to make these plans is included in Appendix A.) This plan is more than just a list of resolutions, for it takes into account positive and negative forces in achieving goals and focuses the group's attention on systematic and feasible methods of attaining desirable outcomes.

Administrative Support

The administrator's role in wellness programs is very important. Wright suggests that leaders are responsible for making sure "resources and time are available to promote and conduct wellness activities." Nevertheless, superintendents and principals walk a fine line between indifference and overinvolvement in these programs. He notes that being supportive without being directive is particularly challenging, for administrators require some form of feedback to make appropriate resources available. A basic knowledge of wellness concepts is also essential. To this end, Wright gives his administrators the option of attending the Seaside conference, so that they will be attuned to the methods employed and principles involved with these programs.

One practical method Wright finds effective in supporting wellness in the district is good role modeling. For example, Wright has taken up jogging and has placed a "50 Mile Chart" in a prominent location so that staff members can gauge miles run. In addition, none of the school district's administrators choose to smoke.

Along with supporting the program through modeling, Wright believes that cultivating an atmosphere of openness is also an effective way to promote wellness. His reasoning is that this attitude will promote collegiality among educators.

The Informal (Voluntary) Structure

A wellness program, Wright believes, should be voluntary and not based on one person's commitment, because one person cannot engender ownership of this project within the district; this ownership is essential to sustain interest over time. The Jefferson wellness program encourages ownership by basing wellness team membership not on one's job but on one's building. For example, one elementary school team could be composed of two teachers, a secretary, a principal, and two bus drivers. These team members share the same work environment and may also have similar concerns about health. Because there is no organizational distinction between members, there is less likelihood the group's performance will depend entirely on one individual.

Community Involvement

Although the wellness project has appeared several times in the Madras newspaper, the program has kept a fairly low profile. The community is aware of the program's presence. The Community Health Fair, for example, is a chance to share with the local community wellness practices. A recent fair included over one

thousand participants from the community and surrounding area. In addition, over thirty providers and community interest and service agencies had informative displays. The following summary of activities gives a vivid illustration of the high degree of community participation:

Mountain View Hospital did glucose tests, hearing tests were done, the Seven-day Adventist Wellness Van did health assessments, the Sheriff's department did fingerprinting, Madras Medical Group ran EKG strips on interested persons. In addition there were several informational displays including preschool readiness forms provided by the Jefferson County Health Department, dental health from local dentists, eye care by Dr. Dix, fire prevention and gun safety tips, weight and nutrition information along with healthful snacks were available. The fair was held in the Madras High School Gym from 10 a.m. to 6 p.m. A fun run was also sponsored by the Madras Sun Runners, a running club. Certificates of participation and prizes were given. A great time was had by all!

The City of Madras, also expressing interest in the program, may initiate wellness groups for city workers.

The wellness team reports to the school board every year. Last November, representatives from each team shared their particular building plan with the board. In addition, one team gave a presentation on stress reduction, while another provided nutritious snacks to the board members. Another teacher gave a presentation encouraging people to come to recreational volleyball. In this manner, the staff communicates tangible benefits of the wellness program to the community.

Administrators of some districts that have implemented wellness programs are concerned that these efforts will be perceived to be an added expense by their constituency. Because levy and bond elections are realities in education, it is necessary to consider what approach should be taken to promote wellness in the schools. Wright suggests that, even though wellness programs often maintain a low profile, "we need to speak to these criticisms." In support of these programs, he suggests that industry wellness programs have already demonstrated their worth in terms of increased productivity and worker satisfaction. In addition, the benefits to the district--in decreased absenteeism, higher "productivity," and improved morale--far surpass the minimal costs. He contends that these benefits should be pointed out to program detractors.

Wellness from a Team Leader's Perspective

Carol McClelland, a health teacher at the junior high school, has been involved with the Seaside conference since 1979. She has assumed a key role in promoting this successful program. By virtue of a grant the district received from the state of Oregon from February 1984 to July 1985, McClelland was able to devote half of her time to help establish and promote wellness training. During this time, she concentrated on staff development and program implementation. She contends that "we need good role models in education and this program helps prepare the foundations for healthy teachers and, by association, healthy students." "It doesn't mean that a person will become perfect, but will usually experience some form of personal improvement." This program provides a "place to start." Although she credits the Seaside conferences for the majority of her ideas, she also mentions Washington State's "Here's Looking at You" program as an important source.

Wellness in Madras--Defined

McClelland's definition of wellness is instructive: "It is a total concept of mental, physical, and spiritual well-being." Its main components include nutrition, exercise, outlook, and stress reduction. Exercise is especially important because much of educators' work requires them to be sedentary; an inactive lifestyle can create a variety of health problems. Wellness is a way of taking control of one's health. McClelland stresses, however, that, "without consciously planning for a wellness program, these good intentions won't take place."

According to McClelland, the Jefferson County wellness program has a threefold intent: (1) "to increase awareness of one's lifestyle through inservice, classes, special building concerns and exposure to alternative methods of coping with stress"; (2) to provide students with good wellness role models, and information and activities that will lead to a wellness lifestyle; and (3) to extend to the surrounding community health promotion ideas. To accomplish these three goals, she emphasizes that a coordinated effort by staff and administration is necessary.

The Link with "Seaside"

Because the Seaside conferences provide a series of one-year plans that are extremely flexible to meet the needs of the involved individuals, the program is well suited for adaptation. Participants are encouraged to adapt wellness principles to their particular environment. Because Seaside trains participants to become wellness leaders at the building level, essential health

concepts are reinforced by individuals known and respected within the school. In this way, the conferences promote the credibility of wellness programs. In addition, since wellness programs are established at building level, the program's benefits cross all lines of organization and thus facilitate better communication and working relationships.

In the past almost everyone who volunteered to go to the five-day conference has been given the district's approval to attend. The increasing popularity of the conference is now requiring that building team leaders be given priority. Participants pay half of their conference expenses; the district covers the remaining half. McClelland believes this arrangement encourages participation and commitment to improving individual lifestyles.

The Seaside conferences provide the "fuel" or inspiration needed to keep the program going, says McClelland. Once the initial enthusiasm for a program wanes, a concentrated effort is needed to encourage participants to maintain their acquired good habits. She agrees with Wright, who in an article in *The Madras Pioneer* suggests that the "application of the wellness teams' zeal and enthusiasm comes through action plans that were developed at the conferences." The Madras plans have included a workshop for school people on stress management, promotion of nutritious diets and healthful snacks, encouragement of individual exercise programs, writing and distributing wellness information newsletters, and providing individual staff members with ways to assess their own health activities. These plans are presented to the school board soon after the conference.

Effective and positive role modeling, McClelland confirms, is of primary importance. In her presentation to the district's Board of Directors following the Seaside VIII Health Education Conference, she pointed out that "studies are showing that the most important factor influencing behavior is role models." In accordance with their action plan, members of the wellness team first develop a healthy lifestyle of their own, so that they can serve as positive role models to their students.

The Media's Role

The wellness teams have also decided to communicate their perspectives through an influential force with the young--the media. Although some segments of the media have begun to promote healthier lifestyles by suggesting beneficial alternatives to substance abuse, this trend in national media advertising is by no means universal. To that end, the wellness teams in Madras have solicited signatures for a petition to the President and the Congress of the United States to stop the marketing of alcohol on radio and television. Here, the intent is to get the media and

alcohol manufacturers to cease portraying excessive alcohol consumption as acceptable. For example, McClelland points to the ever-popular beer commercials portraying athletic figures consuming alcohol as if it were part of the "game." She notes that these stereotypes perpetuate unhealthy attitudes toward drinking and substance abuse.

Concerns for the Future

As with many innovative programs, perpetuating the spirit of change while consolidating past gains is a particular challenge. Rekindling enthusiasm and maintaining interest are essential for the realization of personal long-term health benefits. Financial reward is often used. For example, insurance policies that take into account wellness programs in determining premiums would provide additional incentive for those who remain unconvinced. Wright suggests wellness is a "feasible way of putting money back in your pocket for improving your health."

Right now, however, the Jefferson County School District is finding it difficult to give these monetary incentives in the form of rebates. One obstacle is the present state of many insurance companies. Many are going bankrupt, while other companies are reluctant to start offering this form of saving in the present economic climate. Another obstacle is that the choice of an insurance company is complicated by collective bargaining, as was pointed out in an earlier chapter. Given these obstacles, the board's primary concern is essentially choosing an adequate insurance company at the lowest price. At this time, unfortunately, many "adequate" insurance companies do not consider wellness rebates important.

Because there is a lack of monetary incentives, this program must constantly prove its relevance. McClelland notes that the program is particularly difficult to sustain because it operates "outside of the system," that is, without the support of formal structures within the school organization. Essentially, the success of this program must depend on charismatic leadership and the perceived positive impression of the program.

One incentive for employees to stay well is a feature of the state's retirement system. Unused sick days are noted and credited for higher retirement benefits. Both Wright and McClelland support this "vigorous attitude" toward wellness and hope that additional measures will be taken to promote wellness statewide.

Components of an Effective Wellness Program

Wright and McClelland agree that successful health promotion

programs usually have the following characteristics. First, they are totally voluntary, for coercion is counterproductive to the principles of wellness. Second, team members, as well as administrators, realize that change is slow. Unrealistic expectations can handicap a growing program. Third, implementation is at the grassroots level. Wright says he is particularly careful not to dampen enthusiasm by being too directive.

Fourth, all participants are sensitive to the needs of the individuals involved. Because personal lifestyles are influenced by these actions, care is taken in arriving at group goals and other collective decisions.

Respect for individual desires is maintained by providing choice within the program and within the activities. For example, instead of insisting on having just nutritious snacks, they can be made available in addition to the regular fare. If given a choice, people are more likely to accept new ideas as preferable alternatives.

Fifth, regular funding helps stabilize the program financially and demonstrates administrative commitment to wellness programs. Seventh, credibility--a somewhat intangible and yet vital quality--is very important to the program. Those involved want to know that this program does not contain "hidden agendas" and is going to be around permanently. Finally, successful programs encourage collegiality and a sense of sharing among staff members. Since there is no hierarchical differentiation between the people in the groups, these heterogeneous groupings allow people in the organization to know one another better, enhancing the work environment.

The Centennial Wellness Program

Located in eastern Portland, Centennial School District is a medium-size district serving approximately 4,808 students and employing 215 teachers and 20 administrators. The enthusiastic leadership of former staff member Cathy Dormaier was instrumental in setting up the district's wellness program with the support of Superintendent George Benson. In addition, the Seaside conferences started by Len Tritsch of the Oregon Department of Education provided a general blueprint for implementation. Benson, Carol Thornberry, district office secretary and team member; and Bob Steffen, head custodian and district team leader, offered the following observations about Centennial School District's Wellness Program.

The Centennial Wellness Program is in its third year. The program is an outgrowth of a district goal to identify areas of well being and to help children develop this sense. Recognized by the board as a top priority, the wellness program is supported with enthusiasm by the staff--especially by those who feel an "ownership" in the program. Although the staff's commitment to the program may be difficult to measure quantitatively, the well-attended monthly breakfast meetings at 6:30 a.m. give evidence of the wellness team's vital interest in making this program "work."

Integration with Curriculum

During the first two years, the wellness teams primarily focused on introducing the staff to wellness concepts and involving the community in their efforts. This year, Benson notes, they will begin to integrate more and more wellness ideas into the formal curriculum. Thornberry agrees with Benson's plan for spreading these ideas throughout the curriculum. She contends that "wellness should not be limited to the domain of P.E." but rather should be some part of an integrated curriculum. A recent survey documents the amount of wellness instruction that students receive in classes other than P.E. (Appendix B). The lowest scores were in the high schools, where departmentalization predisposes teachers to teach solely in their assigned fields. Even with this obstacle, she believes that great strides are being made in the program. According to her survey, 64 percent of the

district's elementary students receive wellness instruction in addition to P.E.

For this wellness instruction to be a positive influence, Benson believes the staff themselves have to be good role models. Furthermore, he maintains that "wellness is an integral part of good teaching" and worthy of support in the classroom. Benson warns that it can be a mistake to move these programs into the classroom before the instructional staff has had time to become involved, plan, and evaluate an effective way of presenting these concepts to students. To this end, the district's Staff Development Committee has set aside part of teacher inservice day for wellness; the day after President's Day is usually devoted solely to this topic.

Program Composition and Planning

Like the Jefferson County School District program, the Centennial program has established at each building a wellness team composed of members from different occupations. One member from each building team is also on the district team; selected members then attend the Seaside conference to learn new information about wellness and help improve their particular programs. These district team members also formulate a district action plan at Seaside. Centennial School District's Action Plan gave a comprehensive direction to its wellness program last year (see Appendix C) and, yet, accounted for the need of individual building plans (see, for example, Centennial High School's Building Wellness Plan in Appendix D).

Fifteen district members attended Seaside last year and developed this action plan before leaving the conference. In addition, this conference allowed district members to modify the previous year's plan and add additional goals for the third year phase. The long range goal for the district's program includes further activities in implementation and teacher, classroom, and community involvement.

The Eaglefest Run: An Example of Community Involvement

The Eaglefest Run has become an annual fitness event, involving students, staff, and community members in the general wellness program. Started by Bob Steffen, head custodian, race director, and district team leader, the run is much more than an athletic competition. He believes that the Eaglefest Run helps promote wellness by stressing participation over performance. "Wellness is a complete lifestyle and a method of self-motivation....It stresses 'I am somebody'." The building team responsible for the highest percentage of participants receives a

"floating" trophy. According to Steffen, this award is a source of pride to the recipients.

On May 24, the Third Annual Eaglefest Run will be held. To widen the appeal of this run, there will be 1 mile, 3 mile, and 10K courses. Last year's attendance was approximately 300, and this year Steffen anticipates more participation from Centennial district parents and teachers. Cable television will again play an important role in promoting the race, and local radio announcer Don Wright from KEX will narrate the event. Steffen reports that local running clubs have been very helpful in providing good suggestions and promoting this race. Last year, local sponsors provided prizes and other support services to this effort.

His office adorned with entry numbers from past personal races. Steffen supports the district's efforts to encourage community participation in the schools' wellness programs. He observes that the benefits from this program are reaching the staff and that continued community support will help reinforce good role models for the students. As a second-year member of the wellness program, he attests to the importance of the Seaside conferences--they provide "great dynamics"--and believes that they should continue to play an important role in Centennial's wellness program.

Another example of community involvement is local cable television's promotion of wellness activities. District staff and students have developed cable television programs that share health activities happening throughout the state. One program features wheelchair square dancing that involves residents of a local retirement home and elementary students from one school.

The Administration's Role

Superintendent Benson asserts that administrative support of wellness programs is crucial to the program's success. Although much of the success of this program depends upon grassroots support, administrative support must be visible. For example, the school district allows employees involved in wellness activities 15-30 minutes of school time twice a week if they choose to participate in an exercise program or attend wellness activities. He stresses that wellness programs are not just for teachers, but for the entire staff.

As an administrator, Benson perceives his role as supporting the principals and making sure that resources are available to "keep this program an ongoing concern." Although he recognizes the need for continued support, he cautions that direct administrative involvement should be minimal: "Once a good person is put in charge of a wellness program, administrators should keep out of the way." Giving the staff "ownership" of the program can

help engender additional enthusiasm for the program.

Benson admits that school wellness efforts will not contribute significantly to students' health unless parents are convinced of the program's validity. For this reason, the district has made getting wellness into the homes a top priority. Of course this is not an easy task. First, teachers need exposure to wellness principles. Then, after they are comfortable with wellness, students are introduced to the concept. Only after these two groups are acquainted with this lifestyle does wellness in the home become possible.

Although improved benefits and lower rates from Blue Cross Insurance and Kaiser Medical Group have yet to be realized because their rates are based upon statewide calculations, positive contributions of this program are already beginning to appear. For example, the wellness program has provided incentive for an adult education program that includes stop smoking and stress management classes and an active drug and alcohol prevention program. This spring, Benson presented Centennial's wellness program as a model at the American Association of School Administrators Conference in San Francisco. Agreeing with several other administrators interviewed for this Bulletin, Benson believes that the Seaside conferences are a key to "regeneration" of the health promotion programs.

Suggestions for Starting a Wellness Program

Thornberry provided several considerations on starting and maintaining wellness programs. Because Centennial is involved in helping other districts, such as Parkrose School District, get started with their own programs, she believes that these suggestions have merit.

First, she encourages districts to send a group to Seaside, for it is essential to get a core group enthused about these wellness concepts and dispel prevalent myths about being healthy. Second, support groups at the district level are necessary to keep the core group (consisting of representatives from various schools) positive. These district level groups should meet regularly--at least once a month. Third, the core group should reach out to involve the staff by informing them about wellness activities. Fourth, classes should be offered within the district to provide opportunities for the staff to interact and learn about new developments in keeping healthy.

Fifth, after teachers feel at ease with the program, wellness principles should be integrated into the curriculum "to help students develop a healthy way of life." At Centennial, this positive attitude about health now has begun to reach into the community. Thornberry says she has noticed people in the commun-

ity asking to go to Seaside and participate; for example, the local water district has expressed an interest in the program. Sixth, she suggests that each district member should be on a team for at least two years. "The first year you are struggling, but by the second year you know what is going on." She argues that program continuity can best be maintained in this manner.

In this situation, sharing of ideas is essential. Thornberry cites a need for a wellness resource manual and idea file for teachers. Such a manual would help provide teachers with new ways of presenting sound wellness techniques. Because a resource manual is not available at this time, teachers must rely on their own sharing of ideas about wellness.

To implement successful wellness programs, it is essential for educators to review the growing amount of research on wellness and assess its relevance to the local district. In addition, school administrators should become familiar with the planning documents of other schools to avoid startup difficulties.

Centennial School District has published an informative collection of planning documents entitled "How to Organize a Wellness Program in Your School District or Business." (The overall plan of this work is included in Appendix E.) Other helpful sources about wellness programs are included in the References.

Conclusion

Wellness programs encourage employees to make personal commitments to lifestyle changes that will increase their productivity and generally improve their health. These programs typically also involve students by expanding the curriculum on principles of well being and reach out to the community through health awareness activities. In Oregon, the annual Seaside Health Education Conference has been instrumental in providing vision, motivation, and practical models for numerous school districts that have established wellness programs.

Two exemplary wellness programs are operated by Jefferson County School District in Madras and Centennial School District in Portland. In addition to participating at the Seaside conferences, these programs share several common elements, including positive motivation, health awareness campaigns, behavior change programs, and containment of insurance costs.

Because "wellness" is subjectively determined by each individual, the task of establishing useful quantitative measures to prove its effectiveness and worth is especially difficult. For this reason, results for this type of program are best supported on a case study basis. One method--the measurement of such variables as efficiency or output--would have limited relevance in education. Studies measuring student reduction in poor health habits and chemical abuses would be helpful, but are, for now, not available to offer conclusive proof. It is hard to dispute, however, that wellness programs do generate interest and enthusiasm for being well. Those interviewed for this Bulletin spoke with great enthusiasm about their programs and, without exception, hoped to continue these worthwhile efforts.

JEFFERSON COUNTY'S
BUILDING TEAM PLAN FOR WELLNESS

Building: _____

Team Leader: _____

SITUATION STATEMENT (situation as it now exists):

GOALS:

POSITIVE FORCES
(Helping to Accomplish Goals)

NEGATIVE FORCES
(Hindering Accomplishment of Goals)

--	--

(over)

It is strongly recommended that the following activities be included in your building plan:

A report be made to your staff on your building plan, and use their ideas to strengthen and implement your plan.

You include activities in the areas of physical fitness, stress management, nutrition and environmental sensitivity.

You indicate action to use wellness resources (building, district and community-wide).

SPECIFIC ACTION(S) TO BE TAKEN:

WHO	WILL DO WHAT (TASKS) Must be written in measurable terms	ANTICIPATED COMPLETION DATE	COMPLETION DATE

TEAM MEMBERS SIGNATURES:

_____	_____	_____
_____	_____	_____
_____	_____	_____
_____	_____	_____
_____	_____	_____

Building Principal Signature: _____

It is recommended that you make copies of this building plan for your team members and principal. The team leader is responsible for coordinating building team meetings.

CENTENNIAL SCHOOL DISTRICT
Office of Wellness Team Leader

January 6, 1986

MEMORANDUM

TO: Building Principals
FROM: Bob Steffen
SUBJECT: RESULTS OF WELLNESS QUESTIONNAIRE

Please convey appreciation to your staff for those who responded to the Wellness Questionnaire they received in November. Results are attached.

I am pleased to report that 64% of our elementary students (1471 total elem) are receiving Wellness activities in the classroom, with 61 individual classrooms receiving services beyond their PE classes. Pleasant Valley is to be commended for serving 100% of their students, with Lynch Meadows falling close behind with 86%. The figures reported for the middle schools and high school may not be completely valid because of the classes being departmentalized, and the students receiving the majority of Wellness activities in PE classes (PE classes were not calculated in the results).

The type of Wellness activities being taught are nutrition awareness, drug/alcohol awareness, aerobics, and walking/jogging programs. Students are receiving services an avg. of 3/days/week, 25/min/session.

A variety of video tapes are being used, and teachers should be aware that, if tapes are not available in their own building, wellness tapes are available at the Resource Center. The Wellness team will continue to add to the Resource Center library of tapes. If you or your teachers have suggestions of tapes to purchase, let your building team leader know.

STUDENTS RECEIVING WELLNESS ACTIVITIES

The district Wellness team would like to thank every individual who spends this valuable time with their students. Centennial School District has set a precedence by taking Wellness activities into the classrooms, and our students will certainly benefit from this effort.

CENTENNIAL SCHOOL DISTRICT ACTION PLAN
1985/86

Presented by Bob Steffen and the Seaside '85 Team
Goals

1. Continue phase one of the 1983/84 Seaside Wellness Action Plan.
2. Continue to include wellness in the student curriculum for 85/86.
3. Continue teacher training programs in the areas of blood pressure measurement, target heart rate estimate, blood cholesterol measurement and glucose testing.
4. Provide testing (criterion reference) for grades 5, 8 and 11 in the curricular areas of drug/alcohol education, nutrition, physical fitness, stress management and personal commitment.
5. Begin phase three of the Seaside '83/84 Action Plan and involve the community in wellness activities.

Activities Outline for 1985/86

June

1. Recommend the following to the K-12 Health Education Curriculum workshop:
 - a. Incorporate drug/alcohol education and intervention programs in grades 4-12
 - b. Develop health communication class using high school students to teach elementary and middle school students refusal skills, drug/alcohol education, nutrition, coping with divorce, bodysystems, fitness and other important health concepts
 - c. Development of a criterion reference testing program as mentioned in goal #4 (Dennis Pritchard)

July-August

1. Send notice to school board for presentation of Action Plan during a Sept. meeting
2. Hold district Wellness team meeting in August to designate annual tasks
3. Develop a video taping monthly schedule for surrounding school districts so each can prepare video tapings for east county cable TV (Dale Moulton)
4. Guest speakers recommended for in-service presentations

September

1. Select building Wellness teams and develop building Plans of Action (Sept. 19)
2. Present Action Plan to Staff Development Committee, Principals' Council and Superintendent Advisory Council (Bob Steffen and Delina Carpenter)
3. Begin organization for teacher training programs
4. Hold monthly Wellness team meeting
5. Sign up for Wellness Education class (Delina Carpenter and Kathy Martin)
6. Seaside report to district personnel
7. Develop aerobic and/or walking/jogging classes for students, teachers and parents (Paul Zanobelli)
8. Promote and organize impedance testing for all staff (Susie Murphy)

October

1. Wellness class
2. Select teacher training method, dates and presentors (Delina Carpenter and Kathy Martin)
3. Hold monthly Wellness team meeting
4. Begin Eaglefest planning for implementation on May 10

November

1. Hold a districtwide Wellness team meeting
2. Administer Criterion-Referenced tests to grades 5, 8 and 11 (Dennis Pritchard)
3. Continue planning for teacher training programs

November cont.

4. Wellness class begins
5. Hold Wellness team meeting
6. Implement drug/alcohol curriculum training for teachers and students (Lorry Sellers)

December

1. Publish first semester newsletter (Carol Thornberry)
2. Complete Wellness class

January

1. Hold district and building Wellness team meetings
2. Plan for February in-service
 - a. Plan meal (Anne Furgurson and Dolores Engstrom)
 - b. Wellness team skit (Diane Kemp)
 - c. Video (Dale Moulton)
 - d. District song (Gerutha Favorel and Diane Kemp)
3. Begin advanced Wellness class sign-up
4. Publicize Wellness activities and promote community involvement

February

1. Hold fund raiser (T-Shirt promotion, etc.)
2. Wellness team in-service (Anne Furgurson, Diane Kemp and Gerutha Favorel)
3. Plan and promote a districtwide hiking program (Lynch Terrace)
4. Develop and distribute a listing of Oregon's most spectacular hikes
5. Continue drug/alcohol curriculum training (Lorry Sellers)

March

1. Hold monthly Wellness team meeting
2. Develop criteria for selecting the '86 Seaside Team
3. Continue to promote Wellness activities throughout the community
4. Develop a Community Health Fair using high school as pilot school (Dennis Pritchard and Anne Furgurson)
5. Develop a clogging/square dancing program for April (Tom Simdars and Bob Chiodo)

April

1. Administer Criterion-Referenced tests to grades 5, 8 and 11 (Dennis Pritchard)
2. Select '86 Wellness team
3. Hold monthly Wellness team meeting
4. Second advanced Wellness class
5. Community Health Fair
6. Community and staff clogging/square dancing classes

May

1. Monthly Wellness team meeting
2. Evaluation of Wellness class and Wellness program for the past three years
3. Promote Wellness classes and community involvement for 1986/87
4. Wellness program participation survey of students and district personnel
5. Eaglefest - May 10 (Bob Steffen)

June - SEASIDE '86

Monthly Activities

- Building Wellness team meetings once a month
 - Activities' calendars posted in each building and shared with other buildings
 - Newsletter items submitted by building teams
 - Charting and graphing encouraged for each individual and building
- The team suggests that the district investigate a WELL-Check medical plan for all staff (monetary rebates for staying healthy)

C.H.S. Building Wellness Plan

Those certified staff members who wish to participate in the Building Wellness Program must submit an individual Wellness Plan form to the Building Wellness Committee for approval.

Upon approval of the Building Wellness Committee, the plan will be submitted to the Building Principal for approval.

The Building Wellness Plan must include an exercise or activity planned for at least four days during each one week period.

Planned exercise may be done between the hours of 2:30 to 3:15 p.m. or 6:45 a.m. and 7:30 a.m. on school days that do not have required meetings (i.e. Faculty meetings) scheduled during the planned exercise time.

The Building Wellness Team recommends exercise or activity to be done at least twice each school week. Staff members may not use school exercise time more than twice a week.

Goal:

Each individual Wellness Plan will promote a positive attitude toward personal health with emphasis on nutritional awareness, physical fitness, self-responsibility, environmental sensitivity, and stress awareness management.

Individual Plans should include:

1. One overall goal (above).
2. Three personal goals.
3. A timeline that indicates days when school time may be used for exercise or activity.

Wellness Information

1. The emphasis of Wellness program is on positive outcome.
2. All interested staff members have the opportunity to participate in the program.
3. Involvement in wellness activities is strictly a voluntary act.
4. Building plans and activities must be approved by the building principal and the Building Wellness Team.

COMMENTS:

Sincerely,

Bob and Dennis
