**ABSTRACT**

Drawing from two surveys of 545 public community and junior colleges from across the country, this report presents comparative financial statistics for fiscal year (FY) 1984-85. Chapter 1 provides information on the use of the report in comparing institutional statistics with national and peer group medians; points out limitations of the data; and offers a summary of findings in the areas of expenditures, revenues, service area, and staffing. After chapter 2 displays medians for the full sample of 545 colleges in the categories of expenditures and revenues, course enrollment distributions, salaries, and student/staff ratios, chapter 3 presents quartile statistics for the sample in the same categories. Chapter 4 provides medians and quartiles for institutional peer groups classified by enrollment size and vocational/technical designation. Report highlights indicate that: (1) the median college in the sample spent \$4,000 per credit full-time equivalent (FTE) student in FY 1985, an increase of 58% over FY 1979; (2) total revenues per credit FTE student increased by 56%, from \$2,635 in FY 1979 to \$4,115 in FY 1985; (3) academic expenditures accounted for approximately 60% of the budget from year to year at the median institution; and (4) students paid \$728 in tuition and fees at the median college, accounting for 17% of revenues. Appendices contain information on study methodology, participating colleges, and peer group composition; sample surveys; and definitions of terms. (HB)

## REPORT HIGHLIGHTS

- ★ Half the institutions surveyed spent more than 61% of their operating budget on instruction, research, public service, and academic support.
  - ★ Half the institutions surveyed spent more than 37% of their operating budget on student services, institutional support, and plant operation and maintenance.
  - ★ Half the institutions surveyed spent almost 4% of their operating budget on utilities.
  - ★ Half the institutions surveyed spent more than 3% of their operating budget on computer-related expenditures.
  - ★ Half the institutions surveyed received more than two-thirds (68%) of their revenues from state and local appropriations.
  - ★ Half the institutions surveyed enrolled more than one in every 20 people for credit or noncredit course work during the year.
  - ★ Half the institutions surveyed had student-to-faculty ratios for credit instruction of less than 17:1.
  - ★ Half the institutions surveyed spent more than 57% of total current fund expenditures on current fund salaries and wages.

## Scope of Report

This report contains financial statistics for fiscal year 1984-85 and explanations derived from two surveys of 545 public community and junior colleges from across the nation. The report includes:

- o Sample findings from the surveys.
- o Space to compare institutional statistics with national sample medians.
- o Space to compare institutional statistics with sample medians from five different peer groups of institutions (four groups based on enrollment and one group based on vocational/technical designation).
- o Quartile data for the national sample and peer groups.
- o Explanations of the statistics, definitions, and clarification as to what is included in and excluded from each calculation.
- o Possible interpretations derived from institutional and peer group statistical comparisons, which may be useful for management reports based on this analysis.

## PREFACE

This report is the eighth in an annual series of comparative data studies of public community and junior colleges. It is the result of an intensive six-month study involving three national education associations--The National Association of College and University Business Officers (NACUBO), the Association of Community College Trustees (ACCT), and the American Association of Community and Junior Colleges (AACJC)--as well as the Center for Statistics (CS) and 545 community and junior colleges. The study is intended to provide information to community college administrators, representatives of state and local agencies, and federal policy makers.

In 1977, members of NACUBO's Two-Year Colleges Committee decided to undertake a comparative data study of public community colleges.\* They were frustrated by the lack of information available to members of governing boards, presidents, and taxpayers who requested comparative data. The committee members thought that these data could be an important part of the information necessary for such decisions as appropriation requests, salary increases, and proposed expenditures by function (instruction, institutional support, plant operation and maintenance). Further, "current" information, rather than historical summary, was needed. Because the committee members were also concerned about potential problems involved in trying to establish comparative data for community and junior colleges (see chapter 1, "Limitations"), they approached the task cautiously. Further information on the method used is given in Appendix A.

The intent of this report is to provide comparative information derived from a sample of 545 public community and junior colleges. Comments on the first seven years' reports from community college presidents and business officers were used to determine the usefulness of the data and the additional information needed, as well as to make necessary changes. Sample size doubled steadily throughout the first three years, from 97 to 184 to 403, leveled off at 420 and 442 the next two years, increased to 520 and 560 in the past two years, and leveled off at 545 this year, indicating the perceived usefulness of the statistics for decision making at the institutions.

One of the study's primary objectives has been to learn how comparative information can be used to improve community and junior college decision making. The project also seeks to shed greater light on the financial and operational aspects of community colleges. The report may be useful in comparing the operational and financial statistics of an individual community college to national medians; the report format is designed to facilitate such comparison.

Comments from readers regarding the need for and improvements to this report are encouraged.

---

\*The term "community colleges" is assumed to include all postsecondary institutions offering up to the first two years of higher education.

## ACKNOWLEDGMENTS

The continuation of this project into an eighth year was made possible by funding from the National Association of College and University Business Officers (NACUBO). In addition, the American Association of Community and Junior Colleges (AACJC) and the Association of Community College Trustees (ACCT) provided cooperation support and the Center for Statistics (CS) contributed technical assistance, making possible the early use of 1984-85 HEGIS finance data.

The task force that guided the initial project also designed the second year's undertaking. Responsible for defining the project's purpose, scope, and content, the members of the task force were:

Donald K. Young, chairman  
Monterey Peninsula College, CA

Donald Weichert  
College of the Redwoods, CA

Maurice P. Arth  
Cuyahoga Community College, OH

William R. Odom  
Florida Department of Education

W. L. Prather  
Amarillo College, TX

John J. Pateros, project consultant  
Pateros & Associates, MD

James W. White  
AACJC

For the following years of the project, guidance was provided by the NACUBO Two-Year Colleges Committee. Special thanks are due to W. L. Prather, former committee chairman, and Maurice P. Arth, former committee member, for their concentrated and extraordinary contribution to the project, which led to a more incisive and pertinent report.

In the eighth year of the project, guidance and support were once again provided by the NACUBO Two-Year Colleges Committee, whose members include:

Thomas F. Murphy, chairman  
Monroe Community College, NY

Gerald Baird  
Johnson County Community College, KS

Karl L. Black  
College of South Idaho, ID

Tay R. Conrad  
Spokane Community College, WA

Jack B. Jordan  
University of Kentucky Community  
College System, KY

Gina Kranitz  
South Mountain Community College, AZ

Alan Nichols  
Enterprise State Junior College, AL

Herman C. Robbins  
Tulsa Junior College, OK

Gary W. Winger  
Jamestown Community College, NY

Instrumental in facilitating the project's progress were those who did so much to encourage their colleagues to participate in the study. They include:

James A. Albanese  
Mount San Antonio College, CA

Charles Branch  
Forsyth Technical Institute, NC

Clarence Brantley Highland Park Community College, MI	Brent Cool Piedmont Virginia Community College, VA
Jack Crawford Valencia Community College, FL	Robert DeValue Somerset County College, NJ
John Dunn Ulster County Community College, NY	Robert Faulkner Wallace State Community College, AL
Allan Graybow Crowder College, MO	Neil Hawk Shawnee State Community College, OH
Harry Hardester Essex Community College, MD	E. G. (Gay) Hickman Western Texas College, TX
Ralph Huddin Pueblo Community College, CO	John J. Lee Community College of Philadelphia, PA
Daniel H. Nadeaur Massachusetts Bay Community College, MA	D. Bryce Neaville Seward County Community College, KS
Gary Nichols Mount Hood Community College, OR	David Nicklas Delgado Community College, LA
Bruce N. Ponga Milwaukee Area Technical College, WI	Wayne R. Powers Jackson State Community College, TN
Michael Shirley Elgin Community College, IL,	H. Rodney Showalter Mississippi County Community College, AR
Harry Sowell Asnuntuck Community College, CT	Rick Stoltzfus Iowa Valley Community College, IA
Gary L. Stover Northeast Technical Community College, NE	Robert J. Stryzinski Vincennes University, IN
Harvey B. Trapp East Central Junior College, MS	Donald Wojchak Minnesota Community College System, MN
Ralph Waddell Spartanburg Technical College, SC	Talmadge Webb Abraham Baldwin Agriculture College, GA
Dan S. Whittemore Maricopa County Community College, AZ	

K. Scott Hughes initiated this project as director of the Financial Management Center and coordinated the early stages of the second year of the project. M.J. Williams, Jr., director of Development and Member Services, NACUBO, provided invaluable counsel and generous assistance. It was through his efforts that the significant participation of community and junior colleges was made possible. James A. Hyatt, director of the NACUBO Financial Management Center, provided both encouragement and support. A debt of gratitude is owed to Norman Brandt, Survey Director, NCES, who acted as a liaison and provided a great deal of effort and cooperation since the inception of this project. Bernard J. Luskin, Executive Vice President, AACJC, and Frank Mensel, Vice President/Director for Federal Relations (in cooperation with ACCT), AACJC, are also acknowledged for their cooperation and support.

## LIST OF TABLES

### Full Sample

- 1 Expenditures by Major Categories
- 2 Expenditures by Detailed Categories
- 3 Special Categories of Expenditure
- 4 Computer-related Expenditures
  
- 5 Revenues by Major Categories
- 6 Revenues by Detailed Categories
- 7 Special Categories of Revenue
  
- 8 Course Enrollment Distributions and Salaries
- 9 Staff Ratios
  
- 10 Quartiles for All Expenditure Categories
- 11 Quartiles for All Revenue Categories
- 12 Quartiles for All Staff Ratio and Course Enrollment Distribution Categories

### Group 1 - Institutions with Enrollment Less than 5,000

- 13 Quartiles for All Expenditure Categories
- 14 Quartiles for All Revenue Categories
- 15 Quartiles for All Staff Ratio and Course Enrollment Distribution Categories

### Group 2 - Institutions with Enrollment from 5,000 through 15,000

- 16 Quartiles for All Expenditure Categories
- 17 Quartiles for All Revenue Categories
- 18 Quartiles for All Staff Ratio and Course Enrollment Distribution Categories

### Group 3 - Institutions with Enrollment Greater than 15,000

- 19 Quartiles for All Expenditure Categories
- 20 Quartiles for All Revenue Categories
- 21 Quartiles for All Staff Ratio and Course Enrollment Distribution Categories

### Group 4 - Institutions with FTE Enrollment Less than 1,000

- 22 Quartiles for All Expenditure Categories
- 23 Quartiles for All Revenue Categories
- 24 Quartiles for All Staff Ratio and Course Enrollment Distribution Categories

### Group 5 - Primarily Vocational/Technical Institutions of All Sizes

- 25 Quartiles for All Expenditure Categories
- 26 Quartiles for All Revenue Categories
- 27 Quartiles for All Staff Ratio and Course Enrollment Distribution Categories

## LIST OF EXHIBITS

- 1 Peer Group Definitions
- 2 Number of Participating Institutions
- 3 Total Revenues (excluding auxiliaries) and Total E & G Expenditures Per Credit FTE Student in Current and Constant Dollars
- 4 Academic and Administrative Expenditures Per Credit FTE Student in Current and Constant Dollars
- 5 Scholarships and Fellowships Per Credit FTE Student Including and Excluding Pell Grants in Current and Constant Dollars
- 6 Utilities Expenditures and Plant Operation and Maintenance Expenditures Without Utilities Per Square Foot of Building Gross Area in Current and Constant Dollars
- 7 Computer-Related Expenditures Per Credit FTE Student in Current and Constant Dollars
- 8 Revenues (tuition, appropriations, and gifts) Per Credit FTE Student in Current and Constant Dollars
- 9 Credit Instructional FTE Faculty as a Percentage of Total FTE Staff (instructional and administrative, excluding auxiliaries)
- 10 Percentage of Total Credit FTE Instruction Faculty That Is Part-Time
- 11 Median Percentage of Classes (including sections) Offered for Credit as Distributed Among Size Categories

## CHAPTER 1 INTRODUCTION TO THE PROJECT

### How to Use This Report

#### Potential Uses

The primary purpose of this report is to assist an institution in preparing a meaningful analysis of how its financial performance relates to peer group norms. Unlike internal institutional analysis, where performance in terms of revenue and expenditure patterns is related to goals, this analysis compares certain data from an institution with data from other institutions. Comparison is useful only to the extent that the comparison group is similar and that data on revenue and expenditure performance of that group are based on common understandings. Comparative data may be used to define high standards for assessing institutional financial success or to justify average performance, depending on the aspirations of an institution with respect to the norms of the comparison group. Both types of comparison can lead to meaningful analysis of an institution's financial data; such analysis could, in turn, affect the institution's financial policies in cases where an institution appears significantly out of line with its peers.

The unique characteristics of an institution may be revealed by comparison. An institution may have relatively high--or low--cost areas, such as utilities or faculty salaries, or high--or low--quality (and cost) programs, such as instruction or student services. Unique characteristics are reflected in the differences between the cost structure of an institution and the norms for all institutions surveyed. Comparison of an institution's cost structure to those of other institutions serves to highlight these differences. Depending on goals and other perceptions, comparison may reassure or cause concern to governing boards and others regarding whether an institution is monitoring and managing itself in a fashion appropriate to its singular character.

Comparisons are useful for confirming and challenging perceptions. If an institution has high cost areas, are they perceived to be of high priority? For example, if student services costs are above the median, is the institution's priority for these services the cause?

Comparisons also help an institution to set performance goals, which may be planned in terms of budget proportions for various functions, revenue proportions, expenditures per student by various functional categories, staff patterns, or class size distributions. In areas where an institution has revised an internal priority, the median or high quartile scores might provide a reasonable goal for performance. The soundness of a given goal, a question any board member may raise, can, at least in part, be established with reference to the performance of other institutions.

In addition to its primary purpose in providing meaningful comparisons, this report may serve as an internal management document for self-review and self-analysis. Comparisons provide a starting point for finding institutional strengths and weaknesses. For example, costs per student that are far above the median, as well as staff-to-faculty ratios that appear high when compared with others, may indicate problems in institutional management.

These comparisons may suggest new ways for an institution to record data in order to monitor potential trouble points; they may also suggest areas in which more detailed study is required. The analysis this workbook allows can thus suggest areas where new policies or new methods of monitoring performance may be required.

### Step-by-Step Use of This Report

The following steps should serve as a guide to this report:

1. Read the "Findings" section that follows. It should contribute to an understanding of the report's highlights, the kinds of statistics presented, and the range of results from sampled institutions.

2. Fill in the columns designated "Your Institution." Each institution that participated in the survey will be given computer printouts of its statistics. Other institutions will have to use their own data sources to derive these statistics.

3. Fill in peer group data under the column marked "Peer Group." These data are available in chapter 4 of this report. For the purpose of this study, peer groups are defined by the headcount of the total student body, plus a special group for institutions with less than 1,000 full-time-equivalent (FTE) students. This column provides a refinement of national sample data to show where significant differences may occur because of an institution's particular size. For the most part, however, the medians of the national sample do not differ significantly from the medians of each size group.

4. Note the quartile ranges. One may wish to add special notations to institutional statistics that deviate far enough from the median to be outside the first or third quartiles. Quartile scores are given in chapter 3.

5. Examine the work pages for exceptions. Which institutional statistics vary most from the sample medians?

6. Compare all data with institutional goals and perceptions for expenditures, revenues, staff ratios, and course enrollment distributions. Examine each statistic and determine whether it was anticipated in comparison with other institutions.

7. Select ten or fewer statistics as a basis for a report on how the institution compares with this sample of institutions. For most institutions, only a few of the statistics carry a new, significant, and perhaps surprising meaning for the institution. A short report interpreting these statistics would be useful to presidents, key faculty members, and members of governing boards.

8. Communicate with project staff regarding the usefulness of this report. Which statistics are particularly useful for assessing institutional financial policies? What statistics are missing? How can the report be made more reliable? What reports were generated based on this document?

### Limitations

The results of a comparative data study of this nature must be used with care. Discussion of some of the more obvious concerns follows.

#### Extrapolation

The 545 public community colleges in this study may not reflect the financial and operational patterns of their 217 sister institutions (counting systems of branch campuses as single institutions).<sup>\*</sup> Care was taken to include institutions that are geographically representative, as well as representative of enrollment levels. However, because of the need to use only data from those cooperating institutions that filed both timely and complete reports, the sample is not random. Generalizing the sample statistics in this study to all public community colleges should be done with care because nonrespondents or late respondents to HEGIS and other surveys may be beset by particular administrative difficulties, thereby somewhat biasing the sample. However, the last 25% of the returns did not significantly affect the median scores calculated up to that point, indicating that late respondents may not be significantly different.

Moreover, comparing previous years' results with this year's results demonstrates the reliability of the results for those years. The median figures are quite similar for all eight years after adjusting for inflation. The expansion of the sample allowed the study team to generate these statistics on an individual basis for the 545 participating institutions.

No significance is attached to any changes that occurred from year to year for any of the statistics. First, the survey populations differed. Second, most changes are smaller than the confidence limits for the statistics.

#### Original Data

Lack of well-established definitions for such terms as "full-time-equivalent student" and lack of consistency in reporting such expenditure functions as "Academic Support," "Institutional Support," and "Student Services" create difficulties in generating accurate comparative data. Moreover, some survey responses are estimates because some institutions do not keep precise data in all the areas surveyed. All these factors affect the quality of the results.

---

\* For the purpose of this study, the lowest level of administrative unit where financial records are maintained was sought. Thus Foothill-DeAnza (made up of several campuses) was counted as a single entity, whereas the California system of community colleges was not treated as a single entity.

The universe of public community colleges, as defined by the American Association of Community and Junior Colleges, is comprised of approximately 762 institutions.

### Pell Grants

Pell grants were included in both the revenues and expenditures bases from 1982-83 forward, a significant change from previous years. The inclusion of Pell grants in the HEGIS finance survey in 1982-83 was in response to the NACUBO decision, effective 1982-83, to consider Pell grants as institutional rather than agency funds.

In the revenues category, Pell grants are included in federal restricted grants; in the expenditures category, in restricted scholarships. For comparison purposes in this study, Pell grants have been excluded from the abovementioned items and the corresponding totals. (Note that the figures published in the 1982-83 report do not have Pell grants deducted; those figures were revised to reflect their exclusion and are available from NACUBO.)

### Institutional Comparability

There is no way to establish truly homogeneous peer groups for community colleges. Such major factors as mission, location, academic preparation of entering students, local area salary levels, local nonsalary costs, and methods of financing create unique financial and operating patterns. Peer group comparisons that lead to administrative financial policy changes require sensitivity to the many factors not readily apparent from the statistics.

### The Myth of the "Typical" Institution

No group of institutions exists whose data show them to be completely "typical." In fact, all institutions had fewer than three-quarters of their statistics within the middle two quartiles; on some statistics all institutions were higher or lower than 75% of the other institutions. There is no typical institution, and institutions should use this report only to find what makes them unique--not to pressure an institution toward some nonexistent "median" performance. This study has found a great diversity of expenditure, revenue, and staffing patterns. Diversity is clearly a characteristic--and no doubt a great strength--of community and junior colleges.

### Findings

The following summary of important financial characteristics is based on the financial data section of the "Higher Education General Information Survey" (HEGIS), conducted by the Center for Statistics (CS) and a supplemental survey conducted by the National Association of College and University Business Officers (NACUBO). Analysis was performed by NACUBO. The study sample of 545 institutions was not randomly selected but was derived from the total universe of public community and junior colleges and was dependent upon their willingness to participate. Limitations of the statistics were discussed earlier in this chapter.

Medians represent the number that will split the group of schools in half for a given statistic; half the schools will be above the median, while half will be below.

### Exhibit 1: Peer Group Definitions

- Group 1. Total credit and noncredit headcount enrollment less than 5,000.  
 Group 2. Total credit and noncredit headcount enrollment from 5,000 through 15,000.  
 Group 3. Total credit and noncredit headcount enrollment greater than 15,000.  
 Group 4. Total FTE enrollment less than 1,000. (A subset of Groups 1, 2, and 3.)  
 Group 5. Primarily vocational/technical institutions of all sizes. (These institutions are a subset of Groups 1, 2, and 3.)

Total enrollment includes full-time, part-time, and noncredit students.

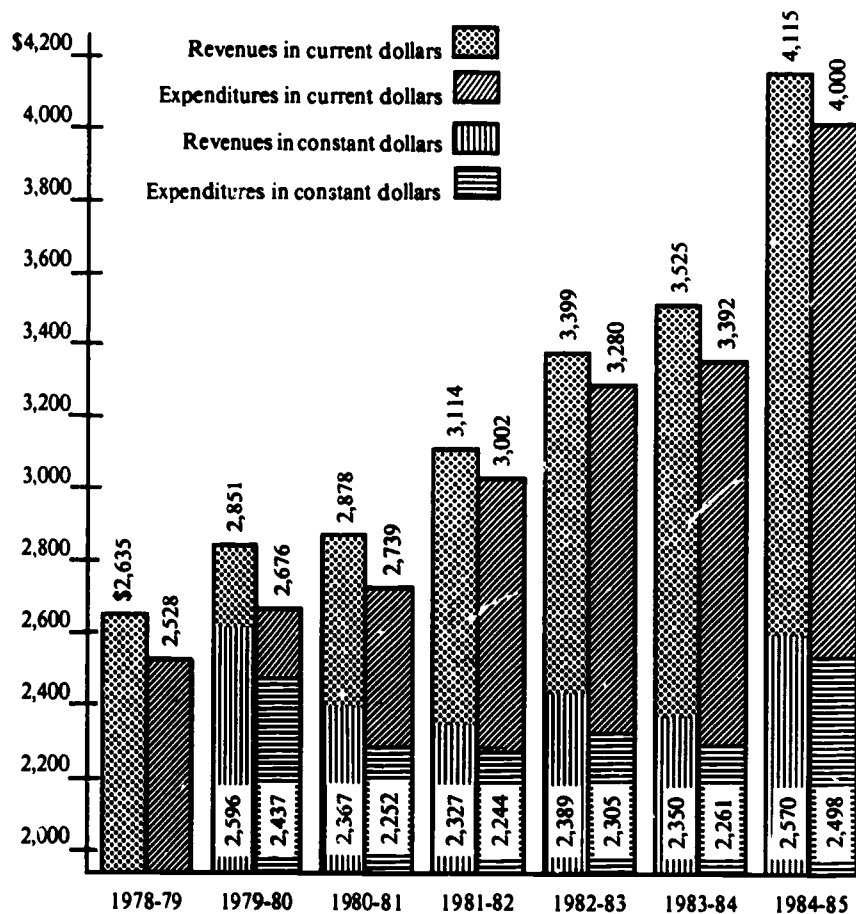

FTE enrollment consists of full-time equivalents for full-time, part-time, and noncredit students. For institutions without precise figures available, it was suggested that FTE enrollment be calculated by adding full-time students, part-time students divided by 3, and noncredit students divided by 20. For FY84-85, it was suggested that credit FTE enrollment be calculated by dividing total credit hours (opening fall 1984) by 15.

### Exhibit 2: Number of Participating Institutions

Year	Full Sample*	Group 1	Group 2	Group 3	Group 4	Group 5
1977-78	97	Experimental (included independents and branch campuses)				
1978-79	184	71	63	50	29	N/A
1979-80	403	180	132	91	91	58
1980-81	420	165	139	116	72	58
1981-82	442	157	151	134	73	83
1982-83	520	176	188	156	92	107
1983-84	560	216	192	152	107	110
1984-85	545	228	181	136	112	83

\*The universe of public community colleges is approximately 762 institutions.

### Exhibit 3: Total Revenues (excluding auxiliaries) and Total E & G Expenditures Per Credit FTE Student (in dollars)

Note: Pell grants are excluded.  
 Higher Education Price Index (1979 = 100)

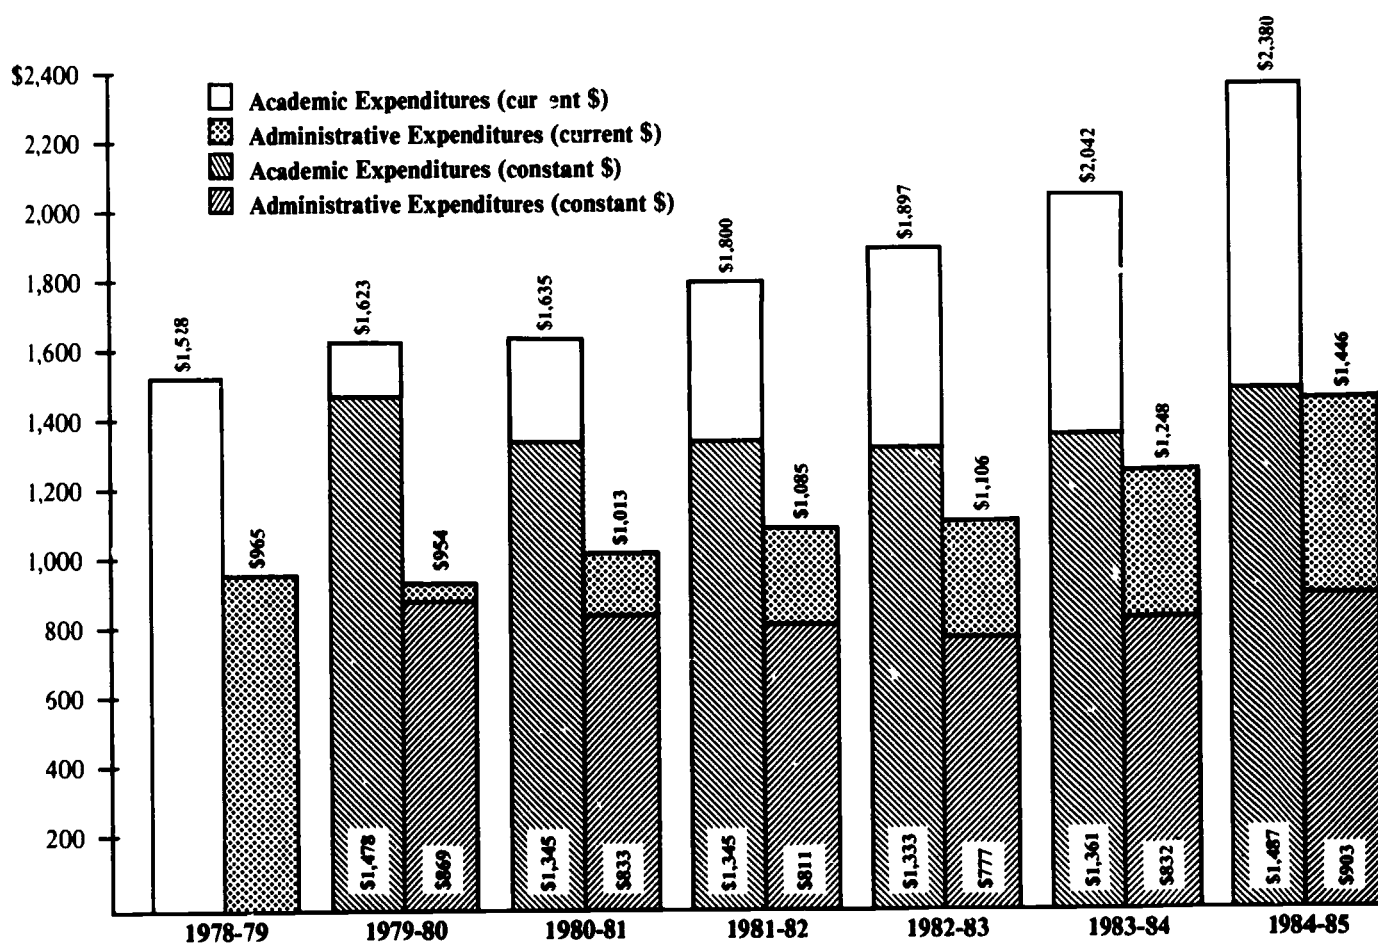

The median college in the sample of 545 institutions spent \$4,000 per credit FTE student in FY85, up from \$2,520 in FY79--an increase of more than one-half (58%) over this period and an increase of 18% from the previous year (\$3,392) (see Exhibit 3).

Total revenues per credit FTE student increased by one-half (56%), from \$2,635 in FY79 to \$4,115 in FY85. Although revenues are consistently higher than expenditures, it is improbable that colleges are operating at an overall surplus. The difference may be a reflection of transfers to cover expenditures for plant maintenance and auxiliary enterprises.

Academic expenditures (instruction, research, public service, and academic support) accounted for approximately 60% of the budget from year to year at the median institution. On a dollar basis, the median college spent \$2,380 per credit FTE student for academics (see Exhibit 4). The budget base used excluded auxiliary enterprise expenditures and mandatory and nonmandatory transfers. Capital costs were also excluded. Included in the base for total budget were the aforementioned academic expenditures, student services, institutional support, plant operation and maintenance, and scholarships and fellowships (restricted and unrestricted).

Of the institutions surveyed, 25% spent more than 65% of their budgets on academics, while another 25% spent less than 56%. For the median institution, about 85% of academic expenditures were for instruction, while the remaining 15% was expended on academic support, including libraries.

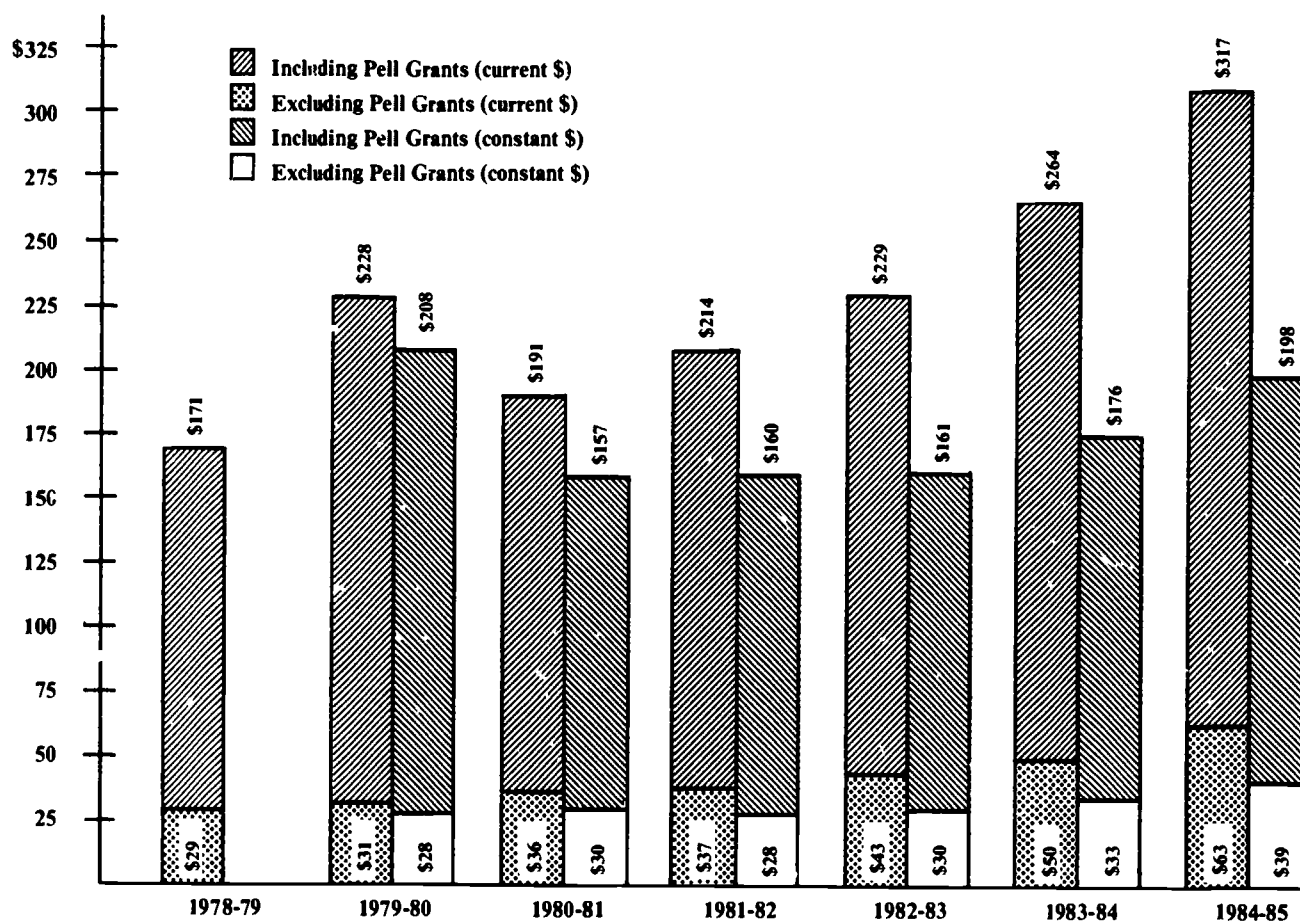

**Exhibit 4: Academic and Administrative Expenditures  
Per Credit FTE Student  
In Current and Constant Dollars**

Only a small proportion was expended on research and public service. The median college dedicated less than 1% of its expenditure base to noncredit instruction.

In each year surveyed, half the colleges spent more than one-third (37% in FY85) of the expenditure base on administration (student services, institutional support, and plant operation and maintenance). In FY84, the median institution spent \$1,446 per credit FTE student for administration. One quarter of the colleges spent less than 32% per credit FTE student for administration, while one-fourth spent more than 41%.

In FY85, scholarships accounted for 1.6% of expenditures at the median institution. The median college spent \$63 per credit FTE student (see Exhibit 5). Note that Pell grants are excluded.

**Exhibit 5: Scholarships and Fellowships Per Credit FTE Student  
Including and Excluding Pell Grants  
In Current and Constant Dollars**

HFPI (1979 = 100)

**Exhibit 6: Utilities Expenditures and Plant Operation and Maintenance Expenditures *without* Utilities per Square Foot of Building Gross Area In Current and Constant Dollars**

Utilities accounted for almost 4% of expenditures at the median college in FY85. In dollars spent per credit FTE student, this figure climbed from \$100 in FY79 to \$149 in FY85, an increase of one-half. Utilities include electricity, gas, oil, coal, steam, water, and waste disposal.

The cost of utilities per square foot of building gross area was \$1.11 at the median college in FY85 (see Exhibit 6). Up from \$0.74 in FY79, this amounted to a 50% increase over this period. Plant operation and maintenance expenditures without utilities accounted for \$2.35 per square foot of building gross area in FY85, an increase of 42% from \$1.65 in FY79. This figure, without utilities, represented a 5% increase over the previous year (\$2.24).

The median college spent 3.2% of its budget on computer-related expenditures. Per credit FTE student, this amounted to \$128 at the median college in FY85 (see Exhibit 7). Of such expenditures, the median college spent 1.7% on administrative support, or \$66 per credit FTE student. Academic support accounted for 1.2% at the median institution, amounting to \$47 per credit FTE student. Of total computer-related expenditures, operating costs amounted to two-thirds (71%) of the amount spent by the median college.

**Exhibit 7: Computer-related Expenditures  
Per Credit FTE Student  
In Current and Constant Dollars**

HEPI (1979 = 100)

Computer-related expenditures include those decentralized to administrative offices and academic units, whether directly provided, purchased from vendors, or provided by a consortium (paid through institutional or noninstitutional funds).

Students paid \$728 in tuition and fees at the median college in FY85, accounting for 17% of revenues, a 14% increase from the \$638 in the previous year (see Exhibit 8).

In FY85, the median college was awarded \$543 per credit FTE student in total gifts, grants, and contracts. This is almost triple the FY79 median of \$190. (Note: Pell grants are excluded.)

Each student enjoyed the benefits of \$2,735 in federal, state, and local appropriations at the median institution.

Revenue mix comparisons are difficult to make because states and localities finance their institutions in many ways. State and local appropriation statistics are derived from financing characteristics and vary greatly from state to state; these variations limit comparisons. The lack of control most administrators have in setting tuition and appropriation levels must also be taken into consideration.

**Exhibit 8: Revenues Per Credit FTE Student  
In Current and Constant Dollars**

HFPI (1979 = 100)

Credit instructional FTE faculty accounted for almost half (48%) of all FTE staff in FY85 (see Exhibit 9). The ratio of credit FTE students to credit instructional faculty at the median college was 17 to 1 in FY85; in previous years, it was either 18 or 19 to 1.

**Exhibit 9: Credit Instructional FTE Faculty  
As a Percentage of Total FTE Staff  
(Instructional & Administrative, Excluding Auxiliaries)**

1978-79	1979-80	1980-81	1981-82	1982-83	1983-84	1984-85
45.6%	47.2%	46.1%	49.0%	49.2%	48.7%	47.7%

Of all FTE staff, almost one-quarter (23%) were part-time in FY85, as well as in the previous fiscal years. Of credit FTE instructional faculty only, 29% were part time in FY85 (see Exhibit 10).

**Exhibit 10: Percentage of Total Credit FTE  
Instruction Faculty That Is Part-Time**

1980-81	1981-82	1982-83	1983-84	1984-85
29.6%	30.6%	28.2%	29.5%	29.3%

Classes (including sections) offered for credit shifted downward in the 15-to-24 student size category--from 40% in FY79 to 36% in FY85 (see Exhibit 11). Another class size category appeared to accommodate the shift over the five-year period: the 6-to-14 student size category increased from 14% to 20%. Administrators may find such statistics useful when evaluating methods of delivering instruction.

**Exhibit 11: Median Percentage of Classes  
(including sections) Offered for Credit  
As Distributed Among Size Categories**

Class Size	1978-79	1979-80	1980-81	1981-82	1982-83	1983-84	1984-85
More than 50 students	1%	1%	1%	1%	1%	1%	1%
From 25 to 50 students	28	25	30	30	30	27	25
From 15 to 24 students	40	40	37	37	36	36	36
From 6 to 14 students	14	15	15	17	17	18	20
Less than 6 students	2	1	2	2	2	2	3

CHAPTER 2  
MEDIANS FOR THE FULL SAMPLE  
(INSTITUTIONS OF ALL SIZES)

The statistics in this chapter are medians for the entire sample of 545 institutions, excepting unusable or blank responses. The total number of usable responses for each statistic is shown in parentheses beside the statistic. Medians represent the number that will split the group in half; half the schools will be below this number, and half will be above. For that reason, the "median institution" will be different for each separate statistic, and the proportions may thus not add to 100%.

Careful interpretation of expenditure and revenue proportions is urged. High costs in any given area, such as utilities, will naturally push the expenditure proportion for other areas, such as instruction, below sample medians--even if the budget support for instruction is perfectly adequate.

TABLE 1  
EXPENDITURES BY MAJOR CATEGORIES

Expenditures by Major Function:	As a Proportion of Total Educational and General Expenditures (excluding auxiliaries and transfers)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
Total E & G Expenditures	100.0% (545)	_____ %	_____ % ( )
Academic Expenditures	60.8 (545)	_____	_____ ( )
Support Expenditures	36.5 (545)	_____	_____ ( )
Scholarships and Fellowships	1.6 (545)	_____	_____ ( )

Meaning and Explanations

Total expenditures include only current fund activities and exclude auxiliaries and transfers. Both restricted and unrestricted expenditures are shown. Each expenditure is shown three ways: as a proportion of total expenditures (as defined above), as the ratio of the expenditure to credit FTE students, and as the ratio of the expenditure to credit and noncredit FTE students.

Academic expenditures include instructional expenditures (for both credit and noncredit courses), research expenditures, public service expenditures, and academic support expenditures (including libraries, audiovisual centers, academic computing, and academic administration).

Support expenditures include student services, institutional support, and plant operation and maintenance.

Scholarships and fellowships include both restricted and unrestricted funds. Pell grants are excluded.

Note: Pell grants were included in both the revenues and expenditures bases from FY 1982-83 forward, a significant change from previous years. The inclusion of Pell grants in the HEGIS finance survey in 1982-83 was in response to the NACUBO decision, effective 1982-83, to consider Pell grants as institutional rather than agency funds.

In the revenues category, Pell grants are included in federal restricted grants; in the expenditures category, in restricted scholarships. For comparison purposes in this study, Pell grants have been excluded from the abovementioned items and the corresponding totals.

**Expenditures per  
Credit FTE Student  
(in dollars)**

**Expenditures per  
Credit Plus Noncredit FTE Student  
(in dollars)**

<u>Expenditures per Credit FTE Student (in dollars)</u>		<u>Median for Your Peer Institutions (fill in, see chapter 4)</u>	<u>Expenditures per Credit Plus Noncredit FTE Student (in dollars)</u>		<u>Median for Your Peer Institutions (fill in, see chapter 4)</u>
<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>		<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	
\$4000 (545)	\$ _____	\$ ( )	\$3501 (545)	\$ _____	\$ ( )
2380 (545)	_____	( )	2102 (545)	_____	( )
1446 (545)	_____	( )	1281 (545)	_____	( )
63 (545)	_____	( )	54 (545)	_____	( )

**Possible Interpretations**

Institutions above the median on the proportion of expenditures devoted to instruction may rate themselves as more efficient than other institutions. On the other hand, some institutions may have achieved this "efficiency" by deferring administrative costs (especially some building maintenance) that will inevitably have to be paid. Moreover, some institutions, especially those serving disadvantaged populations, must fund higher student support expenditures. To remain consistent with their goals and mission, this pushes down the instructional cost proportion.

Institutions that are above the median on costs per student may find several interpretations possible: higher regional costs, a concentration of higher cost programs, and an attempt to provide a higher level of service. Higher instructional costs per student are almost always the direct result of higher faculty salaries than the median, lower ratios of students to faculty (see staffing distributions, pp. 30-32), or both.

Governing boards will be most interested in these deviations from the norm and how accurately they correlate with their own perceptions of institutional quality, program efficiency, and overall level of program cost.

Scholarship and Pell grant funds per student give a measure of the financial need of attending students plus the effort expended by students and the institutional financial aid office in securing grants. It also reflects the institution's commitment to serve lower income students.

**Limitations**

Certain differential practices make the comparability of these statistics somewhat limited. Institutions where certain costs, such as fringe benefits, are paid directly by the state and are not included in institutional figures will show an "incorrect" low cost level.

In comparing expenditures per student for scholarships, numbers of needy students could justify above-median expenditures.

TABLE 2  
EXPENDITURES BY DETAILED CATEGORIES

Expenditures by Major Function:	As a Proportion of Total Educational and General Expenditures (excluding auxiliaries and transfers)		
	Median for the Full Sample	Your Institution (fill in)	Median Your Peer Institutions (fill in, see chapter 4)
<b>Academic</b>			
Instruction (and Research)	50.4% (545)	_____ %	_____ % ( )
Public Service	0.1 (545)	_____	_____ ( )
Academic Support	8.4 (545)	_____	_____ ( )
<b>Support Services</b>			
Student Services	8.7 (545)	_____	_____ ( )
Institutional Support	14.9 (545)	_____	_____ ( )
Plant Operation and Maintenance	12.0 (545)	_____	_____ ( )

### Meaning and Explanations

Total expenditures include only current fund activities and exclude auxiliaries, transfers, and independent operations. Both restricted and unrestricted expenditures are shown. Each expenditure is shown three ways: as a proportion of total expenditures (as defined above), as the ratio of the expenditure to credit FTE students, and as the ratio of the expenditure to credit and noncredit FTE students.

In this display, academic expenditures are split into three categories: instruction (and research), public service, and academic support. Support expenditures are broken down into student services, institutional support, and plant operation and maintenance. In conformance with HEGIS definitions, any expenditures for instruction, even for noncredit instruction, that were included in public service were transferred and are included in the instruction (noncredit) line. Standard definitions are given in Appendix C.

Research expenditures have been included with instruction because fewer than 10% of the sample institutions reported research expenditures.

Scholarships and fellowships include both restricted and unrestricted funds and exclude Pell grants.

### Possible Interpretations

Budget proportion statistics may clarify factors making an institution different from other institutions. Its unique qualities may stem from a strong commitment to instruction, with student services perhaps sacrificed somewhat to

Expenditures per Credit FTE Student (in dollars)			Expenditures per Credit Plus Noncredit FTE Student (in dollars)		
Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
\$1988 (545)	\$ _____	\$ _____ ( )	\$1756 (545)	\$ _____	\$ _____ ( )
5 (545)	_____	_____ ( )	4 (545)	_____	_____ ( )
321 (545)	_____	_____ ( )	285 (545)	_____	_____ ( )
340 (545)	_____	_____ ( )	304 (545)	_____	_____ ( )
591 (545)	_____	_____ ( )	523 (545)	_____	_____ ( )
476 (545)	_____	_____ ( )	422 (545)	_____	_____ ( )

maintain the academic program. Alternately, a high plant maintenance commitment or a strong concern for academic support may serve to differentiate the institution from national norms. Analysts should examine data carefully to see if the unique characteristics revealed in the statistics are at variance with commonly held perceptions about the institution on campus. For example, if the institution prefers a low commitment to student services, while data reveal that the institution is far above the norm, a case exists for reexamining the current efficiency of the delivery of student services.

Examining costs on a per-student basis adds another dimension to the analysis. Higher costs per student may be due to relatively higher costs in a given geographic location, to falling enrollment, or to an inefficient educational delivery system--or to an institutional mission of providing high-quality services. At community colleges, fixed costs may be more predominant in administrative areas than in instructional areas because many institutions use varying proportions of part-time faculty to reduce instructional costs and to increase flexibility in adapting program costs to instructional needs. Institutions with enrollments below their physical capacity may have above-median costs per student in administrative areas because of fixed costs, coupled with median costs in the instructional areas.

### Limitations

It must be emphasized that being above or below the median is not necessarily good or bad unless such information conflicts with the stated goals of the institution.

TABLE 3  
SPECIAL CATEGORIES OF EXPENDITURE

Expenditures by Major Function:	As a Proportion of Total Education and General Expenditures (excluding auxiliaries and transfers)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
Credit Instruction	48.2% (545)	_____ %	_____ % ( )
Noncredit Instruction	0.6 (545)	_____	_____ ( )
Utilities Expenditures	3.7 (532)	_____	_____ ( )
Plant O & M without Utilities	8.0 (532)	_____	_____ ( )
<u>Utilities</u>			
<u>Building Gross Area (sq. ft.)</u>	\$1.11 (507)	\$ _____	\$ _____ ( )
<u>Plant O &amp; M without Utilities Building Gross Area (sq. ft.)</u>	\$2.35 (507)	\$ _____	\$ _____ ( )
<u>Plant O &amp; M without Utilities Building Replacement Value est.)</u>	\$0.03 (456)	\$ _____	\$ _____ ( )

#### Meaning and Explanations

Two important breakdowns are given first. Instructional expenditures are split into credit and noncredit categories, and plant operation and maintenance is broken into utilities and nonutilities maintenance costs. Utility expenditures include electricity, gas, oil, coal, steam, water, and waste disposal. Noncredit instruction costs per student are calculated by dividing the expenditures by noncredit headcount only. The breakdown between credit and noncredit is based on a percentage split estimated by each institution.

Plant operation and maintenance less utilities per square foot (gross area of building) is the cost of maintaining buildings, not including heating, cooling, and lighting per square foot of space. Utilities per square foot (gross area of building) include the cost of heating, lighting, and cooling per gross square foot of space. Plant operation and maintenance, not including utilities per estimated building replacement value, is the cost of maintaining the plant in terms of its replacement value. Estimated building replacement value per total FTE students is an estimate of the current value of buildings per student.

**Expenditures per  
Credit FTE Student  
(in dollars)**

**Expenditures per  
Credit Plus Noncredit FTE Student  
(in dollars)**

N/A	N/A	N/A	\$ 4* (412)	\$ _____ *	\$ _____ * ( )
149 (532)	_____	_____ ( )	134 (532)	_____	_____ ( )
313 (532)	_____	_____ ( )	283 (532)	_____	_____ ( )

\* No credit FTE students included in denominator; noncredit headcount enrollment used only.

**Building Replacement Value (est.)**

**Total FTE Students (cr. + ncr.)** \$7647 (462) \$ \_\_\_\_\_ \$ \_\_\_\_\_ ( )

**Total Scholarships and Pell Grants**

**Credit FTE Students** \$317 (545) \$ \_\_\_\_\_ \$ \_\_\_\_\_ ( )

**Possible Interpretations**

Credit instruction costs per student reveal differences among institutions with regard to class size and faculty compensation. Interpretations of these costs should acknowledge differences in faculty ratios and pay levels.

These statistics are expansions on the analysis of plant operation and maintenance expenditures. A variance from the national sample median in overall costs may be due to high utility costs or to high energy consumption per square foot and may be driven by low space:student ratios.

Building value per student gives an indication of how much has been "built" per student. This figure may reflect declining or rising student enrollment, availability of funding for this purpose, or both.

**Limitations**

In making comparisons, careful attention should be given to the institution's special situation. Well-paid faculty, cold climates, age of buildings, and preventive maintenance plans could easily justify above-median expenditures.

TABLE 4  
COMPUTER-RELATED EXPENDITURES

Expenditures by Major Function:	As a Proportion of Total Educational and General Expenditures (excluding auxiliaries and transfers)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
Computer-related expenditures	3.2% (470)	_____ %	_____ % ( )
Administrative support	1.7 (470)	_____	_____ ( )
Academic/instructional support	1.2 (470)	_____	_____ ( )

	Median Percentage of Computer-related Expenditures by Type		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
Total Computer-Related Expenditures			
Operating Expenditures	70.6% (466)	_____ %	_____ % ( )
Development Expenditures	0.0 (466)	_____	_____ ( )
Capital Equipment Purchase (amortized over 5 years)	17.0 (466)	_____	_____ ( )
Capital Equipment Lease	0.0 (466)	_____	_____ ( )

How Computer Services Are Provided

	Hardware		Software	
Purchased	263	51%	228	46%
Leased	19	4	40	8
Provided by a consortium				
o paid through institutional funds	20	4	25	5
o paid through noninstitutional funds	7	1	7	2
Combination or other	203	40	195	39
Total	512	100%	495	100%

Meaning and Explanations

All computer-related expenditures exclude data processing curricular costs except for hardware and software and directly related supplies and other costs required for equipment operation; thus, data processing, faculty compensation, and general instructional support are excluded. Computer-related expenditures include those expenditures decentralized to administrative offices and academic units, whether directly provided, purchased from vendors, or provided by a consortium (whether paid through institutional or noninstitutional funds). Total computer-related expenditures include those of all types, whether centrally administered or decentralized to administrative offices and academic units. This is the sum of operating, development, and purchased and/or leased capital expenditures. Appendix B contains a copy of the questionnaire on computer-related expenditures.

**Expenditures per  
Credit FTE Student  
(in dollars)**

Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
\$ 128 (470)	\$ _____	\$ _____ ( )
66 (470)	_____	_____ ( )
47 (470)	_____	_____ ( )

**Expenditures per  
Credit Plus Noncredit FTE Student  
(in dollars)**

Median for the Full Sample	Median for Your Peer Institutions (fill in, see chapter 4)
\$ 109 (470)	\$ _____ ( )
59 (470)	_____ ( )
40 (470)	_____ ( )

**Type of System**

Large-scale system	124	24%
Minicomputer system	113	22
Microcomputer system	10	2
Combination or other	267	52
Total	514	100%

Operating expenditures include those for computer center, computer service personnel, remote terminals, leased lines, computer maintenance costs, steady state and routine programming, and computer-related supplies, whether in the computer center's or user's budget. Development expenditures include internal and external expenditures incurred for special, one-time computer service personnel, remote activities, procurement of software packages, and employment of outside technical consultants.

Capital expenditures include major expenditures for purchase of computer hardware amortized over five years. Lease expenditures include those for the lease of computer hardware.

Of the 40% that reported hardware to be provided by a combination of methods, the predominant combination was purchased and leased. The same was true of software. Half the colleges reported a combination of types of systems, the most common being large-scale and microcomputer systems.

**Possible Interpretations**

Computer expenditures may be compared as a rough guide, but internal management would do well to monitor trends in its own computer-related expenditure patterns. Operating expenditures of 70% of the total computer-related expenditures may reflect an effort to upgrade computer software or an attempt to provide a higher level of service.

**Limitations**

Some institutions had difficulty breaking down expenditures between administrative and academic support. Underreporting of computer-related expenditures by institutions with decentralized systems is probable, especially in regard to academic support. This is more likely to have occurred at medium and large institutions. Regarding purchase of capital equipment, over- and underreporting may balance. Of those that did not amortize, some included the total amount in 1984-85 while others also lumped expenditures in this category but for some other fiscal year.

## Revenues

TABLE 5  
REVENUES BY MAJOR CATEGORIES

Revenues by Major Function:	As a Percentage of Total Current Fund Revenues (excluding auxiliaries)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
Total Revenues (current fund, not including auxiliaries)	100.0% (545)	_____ %	_____ % ( )
Tuition and Fees	16.7 (545)	_____	_____ ( )
Appropriations (all governments)	68.6 (545)	_____	_____ ( )
Gifts, Grants, and Contracts (all sources)	13.2 (545)	_____	_____ ( )
Other Revenues (not auxiliaries)	3.1 (545)	_____	_____ ( )

### Meaning and Explanations

Total revenues exclude sales and services of auxiliary enterprises, hospitals, and independent operations as defined on the HEGIS finance form for lines A-16, A-17, and A-19.

Appropriations (all governments) include federal, state, and local appropriations.

Gifts, grants, and contracts (all sources) include restricted and unrestricted revenues from federal, state, local, and private sources. Pell grants are excluded from federal grants and contracts.

Other revenues include unrestricted and restricted endowment income, sales and services of educational activities, and "other sources" as defined on the HEGIS finance form for lines A-13, A-14, A-15, and A-18.

### Pell Grants

Pell grants were included in both the revenues and expenditures bases from 1982-83 forward, a significant change from previous years. The inclusion of Pell grants in the HEGIS finance survey in 1982-83 was in response to the NACUBO decision, effective 1982-83, to consider Pell grants as institutional rather than agency funds.

In the revenues category, Pell grants are included in federal restricted grants; in the expenditures category, in restricted scholarships. For comparison purposes in this study, Pell grants have been excluded from the abovementioned items and the corresponding totals.

Revenues per Credit FTE Student (in dollars)			Revenues per Credit Plus Noncredit FTE Student (in dollars)		
Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
\$4115 (545)	\$ _____	\$ _____ ( )	\$3630 (545)	\$ _____	\$ _____ ( )
728 (545)	_____	_____ ( )	638 (545)	_____	_____ ( )
2735 (545)	_____	_____ ( )	2443 (545)	_____	_____ ( )
543 (545)	_____	_____ ( )	486 (545)	_____	_____ ( )
131 (545)	_____	_____ ( )	116 (545)	_____	_____ ( )

### Possible Interpretations

Interinstitutional revenue mix comparisons are difficult to make and have limited uses. States and localities finance their institutions in many ways. Grants may be for student aid or for special programs, such as Title III. These variations make comparison difficult.

### Limitations

In some states institutions charge no tuition; revenues come from state and local sources only. This explains the great variability of these statistics.

Most revenue analyses would best be done on a state-by-state basis. Comparison is easiest among institutions within the same state or among institutions within states having similar financing for community colleges. Many institutions will want to rely on special home-state revenue analyses.

The large range of financing strategies makes medians and quartiles of dubious statistical value.

TABLE 6  
REVENUES BY DETAILED CATEGORIES

Revenues by Major Function:	As a Percentage of Total Current Fund Revenues (excluding auxiliaries)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
Tuition and Fees			
Tuition and Fees for Credit	15.8% (545)	_____ %	_____ % ( )
Tuition and Fees for Noncredit	0.4 (545)	_____	_____ ( )
Appropriations			
Federal	0.0 (545)	_____	_____ ( )
State	53.1 (545)	_____	_____ ( )
Local	11.8 (545)	_____	_____ ( )
Gifts, Grants, and Contracts			
Federal	3.1 (545)	_____	_____ ( )
State and Local	1.8 (545)	_____	_____ ( )
Private	0.2 (545)	_____	_____ ( )

#### Meaning and Explanations

Tuition and fees were split into credit and noncredit portions using the estimated percentage breakdown given by each survey respondent.

All categories include both restricted and unrestricted funds.

Federal grants and contracts exclude Pell grants.

State and local grants and contracts have been combined to save space.

Other revenues and total revenues are defined on the previous pages.

Table 7 shows state and local appropriations combined to improve state-by-state comparisons where the only variance in funding is the state or local portion provided.

Revenues per Credit FTE Student (in dollars)			Revenues per Credit Plus Noncredit FTE Student (in dollars)		
Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
\$ 680 (545)	\$ _____	\$ _____ ( )	N/A	N/A	N/A
N/A	N/A	N/A	\$ 4*(400)	\$ _____ *	\$ _____ * ( )
0 (545)	_____	_____ ( )	0 (545)	_____	_____ ( )
2104 (545)	_____	_____ ( )	1861 (545)	_____	_____ ( )
466 (545)	_____	_____ ( )	378 (545)	_____	_____ ( )
131 (545)	_____	_____ ( )	111 (545)	_____	_____ ( )
74 (545)	_____	_____ ( )	62 (545)	_____	_____ ( )
8 (545)	_____	_____ ( )	6 (545)	_____	_____ ( )

\* No credit FTE students included in denominator; noncredit headcount enrollment used only.

### Possible Interpretations

Of interest to some analysts is the range of tuition and fee revenues per noncredit headcount student discovered by this survey. Being lower than the median, for example, may indicate a preponderance of inexpensive courses, subsidized noncredit courses, or a hasty estimate of the split between credit and noncredit tuition revenue.

Most of the other figures can be useful for pinpointing how differently the institution is financed compared to national sample medians. Given the lack of control most administrators have over the setting of tuition and appropriation levels, this is more "interesting" than useful for making policy.

### Limitations

Comparisons among institutions of budget proportions or revenues per student will become more useful when data for a number of previous years are also available.

TABLE 7  
SPECIAL CATEGORIES OF REVENUE

Revenues by Major Function:	As a Percentage of Total Current Fund Revenues (excluding auxiliaries)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
State and Local Appropriations (combined)	67.9% (545)	_____ %	_____ % ( )
<u>Total Appropriations</u> Unduplicated Student Headcount	\$734 (305)	\$ _____	\$ _____ ( )
<u>Service Area Population</u> Unduplicated Student Headcount	20.4 (292)	_____	_____ ( )

#### Meaning and Explanations

Three additional statistics are included:

1. The combination of state and local appropriations shows the combined funding from the two sources.

2. Total appropriations per unduplicated headcount adds federal, state, and local appropriations to arrive at the numerator. Unduplicated headcount was requested on the NACUBO survey (see Appendix B). In the first five years of this report, where no response was given to unduplicated headcount in the survey, the sum of the noncredit FTE enrollment multiplied by 20, the credit part-time FTE enrollment multiplied by 3, and the full-time FTE enrollment was used as a proxy for unduplicated headcount. This approximation was discontinued for last year's and this year's reports. It does not appear to have affected this ratio.

3. Service area population per unduplicated headcount is derived from the NACUBO survey responses (see Appendix B). The same approximation for unduplicated headcount, as defined above, was also discontinued for last year's and this year's reports. This change in calculation may have affected this figure or this ratio may have lowered as institutions become increasingly aware of "market penetration."

<u>Revenues per Credit FTE Student (in dollars)</u>			<u>Revenues per Credit Plus Noncredit FTE Student (in dollars)</u>		
<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 4)</u>	<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 4)</u>
\$2680 (545) \$	_____	\$ ( )	\$2424 (545) \$	_____	\$ ( )

### Possible Interpretations

State and local appropriation statistics are derived from financing characteristics and vary greatly from state to state.

Total appropriations per unduplicated headcount gives the dollar amount provided by appropriations per student served. The more an institution is above the median, the more appropriation support the institution receives per student served.

Service area population per unduplicated headcount gives the "market penetration" of the institution. Being below the median may indicate good reception of the institution's programs within the community. This statistic will also be affected by the number and size of competing institutions and reflects the competitive strength of the institution.

### Limitations

The median for state and local appropriation financing is based on a large range of financing strategies and may be of limited analytic value.

Unduplicated headcounts are not monitored by all institutions; thus, these figures are often estimates and may be in error.

Service area populations may vary in the proportion of people who are generally eligible for college, i.e., 18 years and over. This somewhat limits the comparability of the statistic among institutions. In addition, many of the students counted in the headcount may be drawn from outside the service area, weakening the "market penetration" interpretation of the statistic.

## Course Enrollment Distributions, Salaries, and Staff Ratios

TABLE 8  
COURSE ENROLLMENT DISTRIBUTIONS

Course Enrollment by Major Function:	Median Percentage of Classes (including sections) Offered for Credit as Distributed Among Size Categories		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
Class Size			
More than 50 students	1% (434)	_____ %	_____ % ( )
From 25 to 50 students	25 (434)	_____	_____ ( )
From 15 to 24 students	36 (434)	_____	_____ ( )
From 6 to 14 students	20 (434)	_____	_____ ( )
Less than 6 students	3 (434)	_____	_____ ( )

### Meaning and Explanations

Course enrollment distributions are given for credit and noncredit courses separately. Medians were calculated by ordering in each size category the proportion of courses that each responding institution had in that category. Thus, for the category "class size more than 50," the proportions given by individual institutions might range from 0% (no classes with more than 50 students including individual sections) to 100% (all classes at the institution with more than 50 students). (Note that there were no schools with all classes this large.) The median (1%) split this distribution in half, such that half the schools had more than 1% of their classes with more than 50 students. Because each median is calculated separately, a different school may be at the median for each class size. This results in the sum of the proportions not adding to 100%.

### Possible Interpretations

Institutions that find their instructional costs per student above the median may wish to examine the course size distribution to see if high costs are a result of their class size distribution. A large proportion of small classes is costly. Some institutions may find that they have a predominance of very large and very small classes, with few in the mid-range when compared with the national sample. They may wish to reevaluate methods of delivering instruction.

### Limitations

These questions had the fewest respondents and the largest spread among responses. The large amount of variation that exists makes it questionable whether any sort of a "national norm" for class sizes can really be said to exist; however, the median proportions have not differed significantly from year to year.

**SALARIES**

Total Current Fund Salaries and Wages  
Total Current Fund Expenditures + MT      57% (524)      \_\_\_\_\_ %      \_\_\_\_\_ % ( )

**Meaning and Explanations**

MT is an abbreviation for Mandatory Transfers.

This ratio shows the proportion of institutional expenditures comprised of salaries and wages. It includes salaries and wages spent in auxiliary enterprises.

**Possible Interpretations**

This ratio will be most useful as figures that show changes over time become available. For individual institutions an increase in this ratio may reflect the preliminary stages of budget stringency. Travel, supplies, telephone, and equipment budgets are often the first to be cut in anticipation of revenue shortfalls.

**Limitations**

Comparison among institutions on this ratio for a single year yields only an idea of the variety of budget structures. Some institutions depend more heavily on personnel; others have high nonpersonnel costs.

- \* Credit FTE students used only.
- \*\* Noncredit student headcount used only.
- \*\*\* Too few staff in this category to provide a meaningful statistic.

Meaning and Explanations

Institutions provided FTE staff counts according to the NACUBO functional categories. Instructional staff were further categorized as credit instruction, noncredit instruction, and all other staff instruction. The final category was used for clerical, laboratory, or administrative staff (all nonteaching) who may be classified in the instruction function but not as faculty. FTE staff statistics are calculated in four ways: proportion of staff in each category for the median institution, median ratio of FTE staff in each category to FTE credit students, median ratio of FTE staff in each staff category to number of unduplicated headcount students (an estimate of all those enrolled as students during the year), and part-time FTE staff as a percentage of total FTE staff per each specific staffing category.

Two other ratios are provided: unduplicated student headcount per total FTE nonfaculty staff and FTE nonfaculty staff per total FTE faculty staff, including credit and noncredit faculty. FTE nonfaculty staff includes the sum of all staff categories excepting credit instructional faculty and noncredit instructional faculty. FTE nonfaculty staff to total FTE faculty staff, including credit and noncredit faculty, is a comparison of administration staffing with faculty staffing.

Where no response was given to unduplicated headcount in the survey, no proxy was used in this year's and the last two years' reports. This differs from the first five years of this report.

### Possible Interpretations

These ratios may provide a starting point for an institution to judge whether it has too many or too few faculty or other staff. Comparison of administrative staffing must be made with care because of the wide range of administrative services provided by institutions; the median institution may be providing a very different level of administrative support and services than any other college.

The increase in the ratio of unduplicated headcount to total FTE nonfaculty staff may be attributable to the method of calculation (i.e., dropping the proxy for unduplicated headcount), which may have deflated headcount in previous years, or may be an actual decrease in staffing levels, possibly attributable to retrenchment or to more efficient use of staff.

An institution may want to use comparative data as a rough guide to "standard behavior in the industry," but alert management also requires careful year-to-year monitoring of trends in its own staffing patterns.

### Limitations

Some institutions could not provide staffing ratios by functional categories because they maintained only exempt, nonexempt, and faculty breakdowns.

Many respondents had difficulty in determining whether an employee who did not teach but who worked exclusively in the instructional area was instructional or academic support. There may be considerable overlap between these two categories. Some confusion may also exist over the difference between noncredit instructional faculty and public service personnel.

Some institutions also had difficulty converting part-time noncredit instructional faculty to FTE. Although class hour conversions were suggested, some difficulty must be expected when the noncredit offerings might be for such extremes as one weekend or six months on an irregular schedule.

CHAPTER 3  
QUARTILES FOR THE FULL SAMPLE  
(INSTITUTIONS OF ALL SIZES)

This chapter includes quartiles for the entire sample.

The first quartile is the value for a given statistic that separates the lowest 25% of the institutional values from the top 75% of the institutional values.

The median is the value that separates the lowest 50% of the values from the top 50% of the values for each statistic.

The third quartile is the value that separates the lowest 75% of the values from the top 25% of the values for each statistic.

N is the number of institutions that provided the data necessary to calculate the statistic. Hence, N is the number of values used to find the quartiles and median. N varies with each statistic.

---

IMPORTANT

Because each statistic has a different institution at its median and quartile values, proportions will not add to 100%. This is especially true of the first and third quartiles. An institution that has a low instructional budget proportion will have a high administrative budget proportion. Thus, the quartiles are formed from very different institutions. As a result, the sum of the first quartile proportions will generally be much less than 100%, while the sum of the third quartile proportions will tend to exceed 100%.

CHAPTER 4  
MEDIANS AND QUARTILES FOR PEER GROUPS  
CLASSIFIED BY ENROLLMENT SIZE  
AND BY VOCATIONAL/TECHNICAL DESIGNATION

This chapter shows medians and quartiles for peer groups classified as follows:

- Group 1: Total credit and noncredit headcount enrollment less than 5,000 (228 institutions).
- Group 2: Total credit and noncredit headcount enrollment from 5,000 through 15,000 (181 institutions).
- Group 3: Total credit and noncredit headcount enrollment greater than 15,000 (136 institutions).
- Group 4: Total FTE enrollment less than 1,000 (112 institutions).  
(These institutions are a subset of Groups 1, 2, and 3).
- Group 5: Primarily vocational/technical institutions of all sizes (83 institutions). (These institutions are a subset of Groups 1, 2, and 3.)

Total enrollment includes full-time, part-time, and noncredit students.

FTE enrollment consists of full-time equivalents for full-time, part-time, and noncredit students. For institutions without more precise figures available, it was suggested that FTE enrollment be calculated by adding full-time students, part-time students divided by 3, and noncredit students divided by 20. For FY84-85, it was suggested that credit FTE enrollment be calculated by dividing total credit hours (opening fall 1984) by 15.

APPENDIX A  
METHOD

Beginning in October 1978, staff members of three national education associations met with a task force composed of community and junior college business officers from various regions of the country, a community college president, and several consultants to identify information that might be useful to community and junior college administrators. They decided to emphasize the provision of basic comparative data for general use at community colleges and to create peer groups on the basis of institutional size.

A review and evaluation of the first year of the project in September 1979 served to streamline the method used in the second year. In the second year of the project the National Center for Education Statistics agreed to provide computational support, a liaison between the staff and NCES, and copies of the HEGIS finance survey from sampled institutions as soon as the surveys were returned to NCES. NACUBO, ACE, and AACJC provided the remaining financial support, and NACUBO's Two-Year Colleges Committee assumed a guiding role for the project. Two members of the task force from the first year, Maurice P. Arth and W. L. Prather, provided project continuity and made several special trips to Washington to assist in designing the NACUBO survey and in preparing the second year's report.

The third year of the project emphasized expansion of the sample group rather than revision, although limited additions and changes were made. Once again W. L. Prather, as well as Thomas F. Murphy, provided project continuity and special support.

The project made use of unedited Higher Education General Information Survey (HEGIS) finance data. Each participating institution was asked to carefully complete the HEGIS finance survey, due to NCES by October 31, 1985.

In addition to the use of HEGIS finance data, a separate survey of 762 public institutions was conducted to gather information not currently available at the national level. Such information included data on:

1. Revenues and expenditures for noncredit institutional activities.
2. Utilities expenditures.
3. Student aid disbursements.
4. Building space.
5. Service area population.
6. Unduplicated student headcounts.
7. Staffing levels by function.
8. Course enrollment distributions.
9. Total expenditures for salaries and wages.

The three previous years' studies incorporated information on computer-related expenditures. Gratitude is owed to Maurice P. Arth for his previous two studies of computer-related expenditures for community colleges. This study's computer survey, wholly derivative from those by Mr. Arth, requested information on:

1. How computer services (both hardware and software) are provided.
2. Type of computer system.
3. Computer-related expenditures, including a breakdown by operating, development, equipment purchase, and equipment lease.
4. Percentage breakdown of computer-related expenditures between administrative and academic support.

Five hundred and forty-five of those surveyed provided usable responses, and their data are utilized in this report. Appendix B contains copies of the questionnaires, while Appendix C contains definitions of terms. Appendix D lists all responding institutions.

The NACUBO Two-Year Colleges Committee met in September 1985 and approved the substance and format of the comparative data study report. This year's report remains relatively unchanged from that of previous years. Based on task force recommendations, the following peer groups were established:

1. Total credit and noncredit enrollment less than 5,000.
2. Total credit and noncredit enrollment from 5,000 through 15,000.
3. Total credit and noncredit enrollment greater than 15,000.
4. Total FTE enrollment less than 1,000. (These institutions are a subset of Groups 1, 2, and 3.)
5. Primarily vocational/technical institutions of all sizes. (These institutions are a subset of Groups 1, 2, and 3.)

These categories differ from the first year's breakdown only by the deletion of the branch campus category and the addition of the under-1,000 FTE student category. The vocational/technical group was added in the third year of the study.

Both because cost structures for branch campuses vary markedly from those of consolidated or single-campus institutions--therefore adding an element of noncomparability of data--and because the response rate from branch campuses was low in the initial year, only single institutions or systems were encouraged to provide data in the second year. Thus, data for branch campuses where fiscal records are kept at a central office are not included in this sample.

The conversion of noncredit headcount to FTEs remains unchanged. It is generally understood that community colleges offer courses that encourage part-time, noncredit participation. Courses may range from two-week workshops to full-term courses. Relating such headcount numbers to FTEs has been a major problem in developing comparative data among community colleges.

To resolve this issue, the task force in the initial year established a standard for converting full-year, noncredit headcount to a proxy for the fall-term FTE enrollment. The conversion ratio of 20:1 established then was also used in the next two years. Thus, in the first three reports in this series, noncredit headcount enrollment for the year was divided by 20 and the result was defined as the number of FTE students. This number is added to the fall-term FTE credit student count, which is used as a proxy for the activity level of community colleges. The AACJC directory survey was the source of enrollment data for these earlier reports. One of the purposes of this study is to obtain reactions from readers to the calculation for conversion and the resulting statistics.

A different approach for obtaining FTE enrollment was used in the past four years' studies. The NACUBO survey requested FTE enrollment data. For institutions without precise figures available, it was suggested that FTE enrollment be calculated by adding full-time students, part-time students divided by 3, and noncredit students divided by 20. Dividing part-time students by 3 is the standard formula used by NCES to determine full-time equivalents. For FY84-85, it was requested that credit FTE enrollment be calculated by dividing the total number of credit hours (opening fall 1984) by 15 (see Appendix B).

Institutions unable to obtain all the requested information were retained in the study; however, where individual pieces of data were missing, the institution was not included for the calculation of that particular median or quartile.

According to the AACJC directory, there are 762 systems or single-campus public community and junior colleges. Two-year branch campuses of universities were included in the sample only when they were not so closely affiliated with their universities that they had difficulty in separating the financial statistics of each branch from those of its affiliate university.

Data were gathered and coded from October 1985 through January 1986. Analysis was conducted during February 1986. All financial statistics are for fiscal year 1984-85; enrollments are for fall 1984 (except noncredit enrollments, which are based on 1984-85 year-long enrollment estimates).

Institutions participating in the study were sent a copy of their survey data as they were entered into the computer, as well as the statistics generated from the data. Institutions were asked to verify the data and check the reasonableness of the statistical calculations. In this way, statistics from individual institutions have been thoroughly reviewed, resulting in a reliable final report.

APPENDIX B  
SAMPLE SURVEY

*Instructions* This is the comparative financial data survey form for fiscal year 1984-85. Data should be drawn from the same records used to prepare the HEGIS financial statistics survey for 1984-85 [ED(NCES) Form 2300-4, to be returned to NCES by October 31, 1985]. Community colleges with branch campuses should report total system activity.

A partially completed form is useful to us; however, it is essential that the following be provided:

- Enrollment figures (question no. 1)
- Revenues and expenditures (page 2 of the HEGIS finance form)

Please return this completed survey and a copy of the HEGIS finance form by *November 1, 1985* to the NACUBO Financial Management Center, One Dupont Circle, Suite 500, Washington, D.C. 20036. If you have any questions, please call *Anna Marie Cirino* at NACUBO telephone 202/861-2535.

# Comparative Computer Expenditures FY84-85

**National Association of College and University Business Officers**  
**American Association of Community and Junior Colleges**  
**Association of Community College Trustees**

*Instructions.* Include any purchased computer services by type on the appropriate line. Also include your equitably apportioned share of the costs of computer services provided to your institution by any consortium to which you may belong. See reverse for definitions

Please return this survey by *November 1, 1985* to the NACUBO Financial Management Center, One Dupont Circle, Suite 500, Washington, DC 20036-1178. If you have any questions contact Anna Marie Cirino at NACUBO, telephone 202/861-2535. A partially completed survey is useful to us. If you cannot reasonably estimate computer-related expenditures, please indicate so and return the survey to NACUBO.

Name of institution \_\_\_\_\_

City \_\_\_\_\_ State \_\_\_\_\_ Zip \_\_\_\_\_

Person completing survey \_\_\_\_\_ Telephone \_\_\_\_\_

1. Are your computer services: (Check any that are appropriate)

	Hardware	Software
a. Purchased	_____	_____
b. Leased	_____	_____
c. Provided by a consortium		
• paid through institutional funds	_____	_____
• paid through noninstitutional funds	_____	_____

2. Is your computer system (even if leased or provided by a consortium): (check any that are appropriate)

- a. Large-scale computer system (e.g., IBM 4300 or 30xx) \_\_\_\_\_
- b. Minicomputer system (e.g., Data General Nova or IBM 34) \_\_\_\_\_
- c. Microcomputer system (e.g., Apple or Radio Shack) \_\_\_\_\_
- d. Other (If other, specify \_\_\_\_\_) \_\_\_\_\_

3. What is the total of your institution's computer expenditures for FY84-85?

- a. Operating expenditures \$ \_\_\_\_\_
- b. Development expenditures \_\_\_\_\_
- c. Capital expenditures
  - (1) capital equipment purchase expenditures (amortized over 5 years) \_\_\_\_\_
  - (2) capital equipment lease expenditures \_\_\_\_\_
- d. Total computer-related expenditures \$ \_\_\_\_\_

Indicate here if computer-related expenditures are unknown or cannot be estimated. \_\_\_\_\_

4. Estimate the percentage breakdown of your total computer-related expenditures between administrative support and academic/instructional support. (A suggested method is by expenditures that can be directly identified with each of the two functions plus an allocation of all other operating, overhead, and capital expenditures on the basis of the value of benefits provided to each function.)

- a. Administrative support expenditures \_\_\_\_\_%
- b. Academic/instructional support expenditures \_\_\_\_\_
- c. Total \_\_\_\_\_

100%

(over)

## Definitions

All figures exclude data processing curricular costs except for hardware and software and directly related supplies and other costs required for equipment operation; thus, you may exclude data processing, faculty compensation, and general instructional support. Include all computer-related expenditures, including those decentralized to administrative offices and academic units, whether directly provided, purchased from vendors, or provided by a consortium.

**Operating expenditures.** Includes expenditures for computer center, computer service personnel, remote terminals, leased lines, computer maintenance costs, steady state and routine programming, and computer-related supplies, whether in the computer center's or user's budget.

**Development expenditures.** Includes internal and external expenditures incurred for special, one-time computer service personnel, remote activities, procurement of software packages, and employment of outside technical consultants.

**Capital expenditures.** Major expenditures for purchase of computer hardware, amortized over 5 years (as recommended by NACUBO's Two-Year Colleges Committee).

**Lease expenditures.** Expenditures for lease of computer hardware.

**Percent administrative expenditures.** Administrative portion of total computer-related expenditures (broken down as necessary), including financial management, payroll/personnel, student registration and information, academic effort accounting, and other uses not directly supporting instruction.

**Percent academic/instructional expenditures.** Academic/instructional portion of total computer-related expenditures (broken down as necessary), including computer-assisted instruction, simulation, gaming, problem solving, and other support to students and faculty in the academic/instructional process.

**Total computer-related expenditures.** Computer-related expenditures of all types, whether centrally administered or decentralized to administrative offices and academic units. This is the sum of operating, development, and purchased or leased capital expenditures.

*Instruction*

This category should include expenditures for all activities that are part of an institution's instruction program. Expenditures for credit and noncredit courses, for academic, vocational, and technical instruction, for remedial and tutorial instruction, and for regular, special, and extension sessions should be included.

Expenditures for departmental research and public service that are not separately budgeted should be included in this classification. This category *excludes* expenditures for academic administration when the primary assignment is administration—for example, academic deans. However, expenditures for department chairs, in which instruction is still an important role of the administrator, are included in this category.

This category includes the following subcategories:

*General academic instruction.* Includes expenditures for formally organized and/or separately budgeted instructional activities that are: (1) carried out during the academic year (as defined by the institution), (2) associated with academic offerings described by HEGIS instructional program categories 01 through 50, and (3) offered for credit as part of a formal postsecondary education degree or certificate program. Open university, short courses, and home study activities falling within this classification and offered for credit would therefore be included. However, this subcategory does *not* include instructional offerings that are part of programs leading toward degrees or certificates at levels below the higher education level, such as adult basic education.

*Vocational/technical instruction.* Includes expenditures for formally organized and/or separately budgeted instructional activities that are: (1) carried out during the academic year (as defined by the institution), (2) usually associated with HEGIS instructional program categories identified in appendix D of the NCES publication "A Classification of Instructional Programs (CIP)," and (3) offered for credit as part of a formal postsecondary education degree or certificate program. Open university, short courses, and home study falling within this classification and offered for credit would therefore be included. However, this subcategory does *not* include instructional offerings that are part of programs leading toward degrees or certificates at levels below the higher education level, such as adult basic education.

*Special session instruction.* Includes expenditures for formally organized and/or separately budgeted instructional activities (offered either for credit or not for credit) that are carried out during a summer session, interim session, or other period not common with the institution's regular term. This subcategory is to be used to classify only expenditures made *solely* as a result of conducting a special session (such as faculty salaries associated with the special session). Special sessions would *not* include regular academic terms during the summer months. Expenditures for special sessions conducted a fiscal year-end should be reported totally within the fiscal year in which

the program is predominantly conducted. The revenues and expenditures for any special session should be reported in the same fiscal year. This procedure for reporting expenditures of special sessions is an allowable exception to reporting expenditures on an accrual basis.

*Community education.* Includes expenditures for formally organized and/or separately budgeted instructional activities that do not generally result in credit toward any formal postsecondary degree or certificate. It includes noncredit instructional offerings carried out by the institution's extension division as well as noncredit offerings that are part of the adult education or continuing education program. This subcategory also includes expenditures for activities associated with programs leading toward a degree or certificate at a level below the higher education level, such as adult basic education.

*Preparatory/remedial instruction.* Includes expenditures for formally organized and/or separately budgeted instructional activities that give students the basic knowledge and skills required by the institution before they can undertake formal academic coursework leading to a postsecondary degree or certificate. Such activities, supplemental to the normal academic program, generally are termed preparatory, remedial, developmental, or special educational services. These instructional offerings may be taken prior to or along with the coursework leading to the degree or certificate. They are generally noncredit offerings, although in some cases credit may be given and the credit requirements for the degree or certificate increased accordingly. Only offerings provided *specifically* for required preparatory or remedial skills or knowledge should be included in this category. For example, if students may satisfy preparatory requirements by taking offerings provided primarily for other than remedial or preparatory purposes, those offerings should be classified appropriately elsewhere.

*Research*

This category should include all expenditures for activities specifically organized to produce research outcomes, whether commissioned by an agency external to the institution or separately budgeted by an organizational unit within the institution. Subject to these conditions, it includes expenditures for individual and/or project research as well as those of institutes and research centers. This category does not include all sponsored programs nor is it necessarily limited to sponsored research, since internally supported research programs, if separately budgeted, might be included in this category under the circumstances described above. Expenditures for departmental research that are separately budgeted specifically for research are included in this category.

This category includes the following subcategories:

*Institutes and research centers.* Includes expenditures for research activities that are part of a formal research organization created to manage a number

of research efforts. While this subcategory includes agricultural experiment stations, it does *not* include federally funded research and development centers, which should be classified as independent operations. (These centers are listed in the section "Independent Operations.")

*Individual and project research.* Includes expenditures for research activities that normally are managed within academic departments. Such activities may have been undertaken as the result of a research contract or grant or through a specific allocation of the institution's general resources.

### *Public Service*

This category should include funds expended for activities that are established primarily to provide noninstructional services beneficial to individuals and groups external to the institution. These activities include community service programs (excluding instructional activities) and cooperative extension services. Included in this category are conferences, institutes, general advisory services, reference bureaus, radio and television, consulting, and similar noninstructional services to particular sectors of the community.

This category includes the following subcategories:

*Community service.* Includes expenditures for activities organized and carried out to provide general community services, *excluding* instructional activities. Community service activities make available to the public various resources and special capabilities that exist within the institution. Examples include conferences and institutes, general advisory services and reference bureaus, consultation, testing services (for example, soil testing, carbon dating, structural testing), and similar activities. The activities included in this subcategory are generally sponsored and managed outside the context of both the agricultural and urban extension programs and of the institution's public broadcasting operation.

*Cooperative extension service.* Includes expenditures for noninstructional public service activities established as the result of cooperative extension efforts between the institution and outside agencies such as the U.S. Department of Agriculture's extension service and the affiliated state extension services. This subcategory is intended primarily for land-grant colleges and universities and includes both agricultural extension and urban extension services. The distinguishing feature of activities in this subcategory is that programmatic and fiscal control is shared by the institution with the U.S. Department of Agriculture's extension service, the related state extension services, and agencies of local government.

*Public broadcasting services.* Includes expenditures for operation and maintenance of broadcasting services operated outside the context of the institution's instruction, research, and academic support programs. Thus *ex-*

*cluded* from this subcategory are broadcasting services conducted primarily in support of instruction (which should be classified in the subcategory "Ancillary Support"), broadcasting services that are primarily operated as a student service activity (which should be classified in the subcategory "Social and Cultural Development"), and broadcasting services that are independent operations (which should be classified in the subcategory "Independent Operations/Institutional").

### *Academic Support*

This category should include funds expended primarily to provide support services for the institution's primary missions—instruction, research, and public service. It includes: (1) the retention, preservation, and display of educational materials—for example, libraries, museums, and galleries; (2) the provision of services that directly assist the academic functions of the institution, such as demonstration schools associated with a department, school, or college of education; (3) media such as audiovisual services and technology such as computing support; (4) academic administration (including academic deans but not department chairmen) and personnel development providing administration support and management direction to the three primary missions; and (5) separately budgeted support for course and curriculum development. For institutions that currently charge certain of the expenditures—for example, computing support—directly to the various operating units of the institution, this category does not reflect such expenditures.

This category includes the following subcategories:

*Libraries.* Includes expenditures for organized activities that directly support the operation of a catalogued or otherwise classified collection.

*Museums and galleries.* Includes expenditures for organized activities that provide for the collection, preservation, and exhibition of historical materials, art objects, scientific displays, etc. Libraries are *excluded*.

*Educational media services.* Includes expenditures for organized activities providing audiovisual and other services that aid in the transmission of information in support of the institution's instruction, research, and public service programs.

*Academic computing support.* Includes expenditures for formally organized and/or budgeted activities that provide computing support to the three primary programs. *Excluded* from this category is administrative data processing, which is classified as institutional support.

*Ancillary support.* Includes expenditures for organized activities that provide support services to the three primary programs, but that are not appropriately classified in the previous subcategories. Ancillary support activities usually provide a mechanism through which students can gain practical ex-

perience. An example of ancillary support is a demonstration school associated with the school of education. However, the expenditures of teaching hospitals are *excluded*.

**Academic administration.** Includes expenditures for activities specifically designed and carried out to provide administrative and management support to the academic programs. This subcategory is intended to separately identify only expenditures for activities formally organized and/or separately budgeted for academic administration. It includes the expenditures of academic deans (including deans of research, deans of graduate schools, and college deans), but does not include the expenditures of departmental chairmen (which are included in the appropriate primary function categories). It also includes expenditures for formally organized and/or separately budgeted academic advising. Expenditures associated with the office of the chief academic officer of the institution are *not* included in this subcategory, but should be classified as institutional support.

**Academic personnel development.** Includes expenditures for activities that provide the faculty with opportunities for personal and professional growth and development to the extent that such activities are formally organized and/or separately budgeted. This subcategory also includes formally organized and/or separately budgeted activities that evaluate and reward professional performance of the faculty. Included in this subcategory are sabbaticals, faculty awards, and organized faculty development programs.

**Course and curriculum development.** Includes expenditures for activities established either to significantly improve or to add to the institution's instructional offerings, but only to the extent that such activities are formally organized and/or separately budgeted.

### *Student Services*

This category should include funds expended for offices of admissions and registrar and those activities whose primary purpose is to contribute to the student's emotional and physical well-being and to his or her intellectual, cultural, and social development outside the context of the formal instruction program. It includes expenditures for student activities, cultural events, student newspaper, intramural athletics, student organizations, intercollegiate athletics (if the program is operated as an integral part of the department of physical education and not as an essentially self-supporting activity), counseling and career guidance (excluding informal academic counseling by the faculty), student aid administration, and student health service (if not operated as an essentially self-supporting activity).

This category includes the following subcategories:

**Student services administration.** Includes expenditures for organized ad-

ministrative activities that provide assistance and support (*excluding* academic support) to the needs and interests of students. This subcategory includes only administrative activities that support more than one subcategory of student activities and/or that provide central administrative services related to the various student service activities. In particular, this subcategory includes services provided for particular *types* of students (for example, minority students, veterans, and handicapped students). *Excluded* from this subcategory are activities of the institution's chief administrative officer for student affairs, whose activities are institutionwide and, therefore, should be appropriately classified as institutional support.

**Social and cultural development.** Includes expenditures for organized activities that provide for students' social and cultural development outside the formal academic program. This subcategory includes cultural events, student newspapers, intramural athletics, student organizations, etc. Expenditures for an intercollegiate athletics program would be included in this subcategory if the program is not operated as an essentially self-supporting operation (in which case all the related expenditures would be reported as auxiliary enterprises).

**Counseling and career guidance.** Includes expenditures for formally organized placement, career guidance, and personal counseling services for students. This subcategory includes vocational testing and counseling services and activities of the placement office. *Excluded* from this subcategory are formal academic counseling activities (academic support) and informal academic counseling services (instruction) provided by the faculty in relation to course assignments.

**Financial aid administration.** Includes expenditures for activities that provide financial aid services and assistance to students. This subcategory does *not* include outright grants to students, which should be classified as scholarships and fellowships.

**Student admissions.** Includes expenditures for activities related to: (1) the identification of prospective students, (2) the promotion of attendance at the institution, and (3) the processing of applications for admission.

**Student records.** Includes expenditures for activities to maintain, handle, and update records for currently enrolled students as well as for students who were previously enrolled.

**Student health services.** Includes expenditures for organized student health services that are not self-supporting rather than those organized as auxiliary enterprises.

### *Institutional Support*

This category should include expenditures for: (1) central executive-level activities concerned with management and long-range planning of the entire

institution, such as the governing board, planning and programming, and legal services; (2) fiscal operations, including the investment office; (3) administrative data processing; (4) space management; (5) employee personnel and records; (6) logistical activities that provide procurement, storerooms, safety, security, printing, and transportation services to the institution; (7) support services to faculty and staff that are not operated as auxiliary enterprises; and (8) activities concerned with community and alumni relations, including development and fund raising.

Appropriate allocations of institutional support should be made to auxiliary enterprises, hospitals, and any other activities not reported under the Educational and General heading of expenditures.

This category includes the following subcategories:

*Executive management.* Includes expenditures for all central, executive-level activities concerned with management and long-range planning for the entire institution (as distinct from planning and management for any one program within the institution). All officers with institutionwide responsibilities are included, such as the president, chief academic officer, chief business officer, chief student affairs officer, and chief development officer. This subcategory includes such operations as executive direction (for example, governing board), planning and programming, and legal operations.

*Fiscal operations.* Includes expenditures for operations related to fiscal control and investments. It includes the accounting office, bursar, and internal and external audits, and also includes such "financial" expenses as allowances for bad debts and short-term interest expenses.

*General administration and logistical services.* Includes expenditures for activities related to general administrative operations and services (with the exception of fiscal operations and administrative data processing). Included in this subcategory are personnel administration, space management, purchasing and maintenance of supplies and materials, campuswide communication and transportation services, general stores, printing shops, and safety services.

*Administrative computing support.* Includes expenditures for computer services that provide support for institutionwide administrative functions.

*Public relations/developments.* Includes expenditures for activities to maintain relations with the community, alumni, or other constituents and to conduct activities related to institutionwide development and fund raising.

#### *Operation and Maintenance of Plant*

This category should include all expenditures of current operating funds for the operation and maintenance of physical plant, in all cases net of amounts

deducted from the institutional plant fund accounts. It includes all expenditures for operations established to provide services and maintenance related to grounds and facilities. Also included are utilities, fire protection, property insurance, and similar items.

This category includes the following subcategories:

*Physical plant administration.* Includes expenditures for administrative activities that directly support physical plant operations. Activities related to the development of plans for plant expansion or modification, as well as plans for new construction, should also be included in this subcategory.

*Building maintenance.* Includes expenditures of activities related to routine repair and maintenance of buildings and other structures, including both normally recurring repairs and preventive maintenance.

*Custodial services.* Includes expenditures related to custodial services in buildings.

*Utilities.* Includes expenditures related to heating, cooling, light and power, gas, water, and any other utilities necessary for operation of the physical plant.

*Landscape and grounds maintenance.* Includes expenditures related to the operation and maintenance of landscape and grounds.

*Major repairs and renovations.* Includes expenditures related to major repairs, maintenance, and renovations. Minor repairs should be classified in the subcategory "Building Maintenance." The distinction between major repairs and minor repairs should be defined by the institution.

#### *Scholarships and Fellowships*

This category should include expenditures for scholarships and fellowships—from restricted or unrestricted current funds—in the form of grants to students, resulting either from selection by the institution or from an entitlement program. It also should include trainee stipends, prizes, and awards, except trainee stipends awarded to individuals who are not enrolled in formal course work, which should be charged to instruction, research, or public service as appropriate. If the institution is given custody of the funds, but there is neither a selection by the institution nor an entitlement program, the funds should generally be accounted for and reported in the Agency Funds group rather than in the Current Funds group.

Recipients of grants are not required to perform service to the institution as consideration for the grant, nor are they expected to repay the amount of the grant to the funding source. When services are required in exchange for financial assistance, as in the federal College Work-Study Program, the charges should be classified as expenditures of the department or organizational unit to which the service is rendered. Aid to students in the form of

tuition or fee remissions also should be included in this category. However, remissions of tuition or fees granted because of faculty or staff status, or family relationship of students to faculty or staff, should be recorded as staff benefit expenditures in the appropriate functional expenditure category.

This category includes the following subcategories:

*Scholarships.* Includes grants-in-aid, trainee stipends, tuition and fee waivers, and prizes to undergraduate students.

*Fellowships.* Includes grants-in-aid and trainee stipends to graduate students. It does *not* include funds for which services to the institution must be rendered, such as payments for teaching.

#### *Mandatory Transfers*

This category should include transfers from the Current Funds group to other fund groups arising out of (1) binding legal agreements related to the financing of educational plant, such as amounts for debt retirement, interest, and required provisions for renewals and replacements of plant, not financed from other sources, and (2) grant agreements with agencies of the federal government, donors, and other organizations to match gifts and

grants to loan and other funds. Mandatory transfers may be required to be made from either unrestricted or restricted current funds.

This category includes the following subcategories:

*Provision for debt service on educational plant.* Includes mandatory debt service provisions relating to academic buildings, including (1) amounts for debt retirement and interest and (2) required provisions for renewals and replacements, to the extent not financed from other sources.

*Loan fund matching grants.* Includes mandatory transfers to loan funds required to match outside gifts or grants, usually from the U.S. government.

*Other mandatory transfers.* Includes all mandatory transfers not included in the above subcategories.

#### *Nonmandatory Transfers*

This category should include those transfers from the Current Funds group to other fund groups made at the discretion of the governing board to serve a variety of objectives, such as additions to loan funds, additions to quasi-endowment funds, general or specific plant additions, voluntary renewals and replacements of plant, and prepayments on debt principal.

APPENDIX D  
PARTICIPATING COLLEGES AND  
PEER GROUP COMPOSITION

- Group 1: Total credit and noncredit headcount enrollment less than 5,000.  
 Group 2: Total credit and noncredit headcount enrollment from 5,000 to 15,000.  
 Group 3: Total credit and noncredit headcount enrollment greater than 15,000.  
 Group 4: Total FTE enrollment less than 1,000. (These institutions are a subset of Groups 1, 2, and 3.)  
 Group 5: Primarily vocational/technical institutions of all sizes. (These institutions are a subset of Groups 1, 2, and 3.)
