ABSTRACT

In fiscal year (FY) 1984 the Administration for Native Americans awarded 227 grants for social and economic development strategies (SEDS) which would help Native American communities move toward self-sufficiency. More than half the grants were primarily for economic development; approximately one-third were for improving tribal governments, and about one-tenth were for social development. The remaining grants focused on a combination of activities. The economic development efforts were aimed at establishing or expanding business enterprises, creating employment, and increasing income from natural resources. Numerous tribal governments were strengthened; for example, 44 tribes enacted tribal codes, 13 tribes initiated new tax collection and management systems, and 47 tribes adopted merit employment systems. Grants for social development often contributed to a tribe's economic development as well. Grants establishing day care centers and service networks to help the elderly and alcohol and drug abusers provided needed social services as well as jobs for tribal members. This report summarizes numerous projects implemented by American Indian, Native Hawaiian, and Alaska Native communities. Appendices include a summary of expenditures for FY 1984, a list of grant recipients, and graphs showing the impact of SEDS grants on Native American employment and economic growth. (JHZ)

Dear Colleague:

In Fiscal Year 1981, the Administration for Native Americans (ANA) made a modest beginning with a new funding approach called "Social and Economic Development Strategies" (SEDS). In that year, twelve Indian tribes with energy resources and 16 Native American organizations were asked to make a commitment to long-range efforts to community self-sufficiency. Developed in consultation with Native American leaders from all over the nation, SEDS moved ANA away from funding basic administrative services and filling social service gaps to funding substantive, measurable activities--designed and implemented by the tribe or organization--which would improve social and economic conditions for tribal and community members.

Today, every tribe or Native American organization which receives grant funds from the Administration for Native Americans makes a commitment to self-sufficiency through social and economic development strategies. In FY 1984, 227 grantees received \$27.3 million for SEDS activities. In the last two years alone, 24,147 jobs have been created for Native American people.

This report briefly captures the history and philosophy of the SEDS approach, highlights the progress made by ANA grantees in FY 1984, and provides a look at some of the current activities of the tribes and Native American organizations which have embraced SEDS as a way for Native American people to control their own destiny, preserve their special and distinct heritage, and gain the social and economic benefits which every American should have.

Sincerely,

William Lynn Engles

Setting the Stage

Administration for Native Americans: A Mission

The Administration for Native Americans (ANA) is a small federal agency with a big mission: promoting social and economic self-sufficiency for American Indians, Native Hawaiians and Alaska Natives.

There are approximately 1.5 million American Indians and Alaska Natives living in the United States. According to the Bureau of Indian Affairs, approximately half that number live on reservations; the others live in urban or other off-reservation areas. There are almost 300 federally-recognized tribes and 200 Alaska Native villages. The Administration for Native Americans serves not only the American Indian and Alaska Native population, but also an additional estimated 200,000 Native Hawaiians. According to the Bureau of the Census, the number of American Indians and Alaska Natives increased by 72 percent between 1970 and 1980, eight times the growth of the American population

as a whole. About one-third of all Native Americans are under 15 years of age, compared to about one-fifth of all Americans. Less than 8 percent are over 60 years of age, compared to 10 percent for the population as a whole. These figures reflect the higher birth rate and the lower life expectancy for American Indians and Alaska Natives.

ANA is the only Federal agency which serves all Native Americans regardless of where they live or what their tribal or group affiliation may be. ANA fulfills its mission of promoting self-sufficiency by providing financial assistance grants to a wide variety of Native American groups: American Indian tribes (both federally recognized and non-federally recognized); Alaska Native villages; tribal consortia; and urban and rural organizations. ANA also awards grants to national organizations and Native American groups. ANA encourages communication and cooperation among the many diverse groups of Native Americans and among Native Americans and the federal government, state and local governments, and the private sector. The agency initiates and/or participates in federal interagency agreements which target, coordinate, and manage federal funds efficiently with little or no administrative overlap. Finally, in the past ANA has provided funds for the purpose of training, technical assistance, research, demonstration, and evaluation.

Charting the Course

Social and Economic Development Strategies (SEDS)

In its early years, ANA used its funds primarily to support a basic administrative structure (core administration) for tribes and Native American organizations and to fill in social service gaps. In 1981, ANA departed from this funding tradition to initiate a bold, innovative approach which ushered in the beginning of a long term developmental process: a community-based strategy for dealing with community issues that often appeared to be outside the control of tribes and organizations—employment, productivity, housing, control of human and economic resources.

ANA worked with tribal and other Native American leaders to develop this new approach: community-determined social and economic development strategies (SEDS) which would help communities move toward self-sufficiency. Unfortunately, the lack of a strong social and economic base had made many Na-

tive American communities especially dependent on federally-designed, federally-funded and federally-operated programs. In fact, a study of the impact of increased federal spending revealed that only five percent of the money was actually spent within the Indian community. Federal funding appeared to be perpetuating an economic pass-through of funds, not an economic system which would benefit Native American people. Native Americans, in large measure, consumed goods and services which were produced, with the attendant benefits, by non-Indian people.

At the same time, federal practices provided too little opportunity for federally-recognized tribes to exercise their own sovereign authority. ANA, however, viewed Indian tribal governments as institutions with the right—and the responsibility—to set the pace and determine the direction of social and economic development

on their own reservations. The expected benefits would be more jobs, better housing, improved communities, and increased services. Moreover, ANA viewed off-reservation organizations as having the potential to be more than social centers. These organizations, ANA believed, could serve as focal points where Native American people could have an opportunity to become a part of community decision-making processes and help move Native Americans closer to social and economic self-sufficiency.

This new ANA SEDS approach aimed to break the ingrained cycle of dependency on federal grants and non-Indian productivity by encouraging long range efforts on the part of Native Americans to establish a sound base for balanced social and economic development.

The development of the SEDS approach to funding tribes and Native

American organizations began with questions: What is self-sufficiency? When is a Native American community self-sufficient? The answer became a cornerstone to the emerging SEDS philosophy. A Native American community is self-sufficient when it can generate and control the resources which are necessary to meet the needs of its members and to meet its own social and economic goals. SEDS is based on the premise that the local community has the primary responsibility for determining its own needs, planning and implementing its own programs, and building a strong economic base through effective use of its own natural and human resources.

Three Goals

Under its SEDS program and funding policies, ANA has three primary goals:

- To help develop or strengthen tribal governments, Native American institutions, and local leadership to assure effective decision-making and community control over all resources.
- To foster stable, diversified local economies which provide jobs and reduce dependency on social services.
- To support access to and coordination of programs and services which safeguard the health and well-being of a community and its people.

These goals are consistent with President Reagan's Indian Policy Statement of January 14, 1983. At that time, the President announced his commitment to Indian self-government and set forth a series of federal policies to reduce the excessive federal control which has stifled local decision-making, thwarted Indian control of Indian

resources, and promoted dependency rather than self-sufficiency.

The Administration for Native Americans introduced SEDS with grants to 12 tribes and 16 Native American organizations in FY 1981. Based on the success of this limited application of the new funding policy, ANA, in FY 1982, made SEDS the central program vehicle through which to implement its legislative mandate to promote self-sufficiency among Native Americans.

Currently, all applications for SEDS funds are competitively reviewed by ANA staff, with assistance from outside panels of experts, to identify those proposals which appear most likely to bring about permanent, beneficial change for Native American communities. Applicants must state specific, measurable goals based on the developmental needs of the community. After funding, grantees must report what they have accomplished based on the goals which were set.

Pathway to Self-Sufficiency:

Realizing the Benefits

Tribes and organizations are finding that SEDS provides the means through which lasting change may take place. In the past 3 years, the policy has benefited all of the groups ANA was established to serve. It has met with success in Indian tribes, Alaskan villages, Hawaiian communities and urban organizations. Given determination and motivation on the part of the community, SEDS strategies have worked regardless of the local resources which are available, the level of political development of the community, or the social or economic needs of local people.

Every study or evaluation of the SEDS approach has indicated a substantial payoff to tribes and organizations. For example, a 1983 evaluation of SEDS, completed by Maximus, Inc., found that for every ANA dollar invested in locally-

determined social and economic strategies, returns to the community ranged from \$3 to \$43 (See Appendix). This evaluation did not measure, of course, the lasting benefits to a tribe or community which come from adopting and enforcing codes and ordinances, zoning its neighborhoods, licensing its vendors, improving personnel policies, creating employment, increasing its productivity, improving its services, or improving the health and well-being of its people.

In FY 1984, ANA also enhanced Native American social and economic development strategies by negotiating and planning, in cooperation with the Administration for Children, Youth and Families (ACYF), the first joint program announcement of the Office of Human Development Services (HDS) and the Bureau of Indian Affairs (BIA) to improve child welfare services to Indian children and their

families. The notice, which appeared in the *Federal Register* on November 7, 1984, announced the availability during FY 1985 of \$8.8 million from the Bureau of Indian Affairs (the Bureau's entire social service appropriation) and \$2.75 million from HDS. The latter figure included \$1 million from ANA and \$1.75 million from ACYF—the first funds which the two agencies had ever set aside for this purpose. The HDS announcement specifically stated among its purposes “the development of Tribal and Indian organizations to more appropriately address Indian social service needs”—a typical SEDS approach to social issues. HDS priorities included reuniting Indian children with their families or placing them in permanent adoptive homes, reuniting runaway Indian youth with their families, and protecting Indian children from abuse or neglect.

In FY 1985, BIA has made 155 awards under this announcement; HDS received applications from 88 groups and expects to make approximately 40 awards. This joint announcement illustrates the potential for increased cooperation among the federal agencies, one of the provisions of the President's Indian Policy Statement of 1983. As part of the joint program, ANA, ACYF, and BIA will work together to share information and coordinate resources. Tribes will be encouraged to set up working relationships with state, county and local governments through joint child welfare planning and agreements.

FY 1984 SEDS Funding

ANA funded 227 SEDS grants in FY 1984, up from 172 grants in FY 1983. The agency was able to award more SEDS grants because of a million dollar increase in agency appropriations and a decrease in the average size of a grant. (Tables showing ANA annual appropriations and a list of FY 1984 grants appear in the Appendix.)

These grants include the first of a series of SEDS grants under a major Alaska initiative, which will provide approximately \$4.5 million for Alaska Native development over 3 years. The achievement of local goals is important for all Native Americans, but there is a special urgency in Alaska. The Alaska Native Claims Settlement Act (ANCSA) placed a 20-year moratorium on the sale of land and stock in the native corporations which were created by that act. The moratorium expires in 1991. By that time, Alaska Native villages must be fully able to manage their resources

and assets and provide the necessary social services to the village members.

The purpose of the SEDS initiative in Alaska is to help Alaska Natives take advantage of economic opportunities under the Settlement Act, to retain their native culture, and to be ready for the expiration of the moratorium. The grants are available to non-profit native organizations and local communities or villages.

ANA awarded 15 Alaska grants totaling \$1.5 million in FY 1984 and 18 grants totaling \$1.3 million in FY 1985. An announcement will be published soon under which ANA expects to award up to 15 additional grants totaling \$1.5 million in FY 1986.

In FY 1984, ANA continued to support the work of the Council of Energy Resource Tribes (CERT), a non-profit Indian organization made up of 40 Indian tribes with substantial energy and other natural resources, such as oil, coal, natural gas, uranium, oil shale, geothermal and alternate energy resources.

CERT has made a major commitment to tribal self-sufficiency as part of a 5-year plan which was drawn up in 1980. ANA provides assistance through a grant to CERT, SEDS grants to individual CERT member tribes, and interagency agreements with the Bureau of Indian Affairs and the Department of Energy. ANA funding to CERT and CERT member tribes helps strengthen tribal governments' management and control of their energy resources, creates unsubsidized jobs, increases business opportunities and revenue, and stimulates reservation economies toward self-sufficiency. At the same time, these activities contribute toward the nation's goal of energy self-sufficiency.

In FY 1984, ANA also continued to support the work of the Council of Tribal Employment Rights, a non-profit corporation which represents approximately 90 Tribal Employment Rights Offices (TEROs) on a national basis. Since the origin of the first TEROs in 1977, these rapidly growing organizations have brought about dramatic changes in Indian employment, sometimes helping to increase employment on or near reservations by 300 percent.

A TERO helps a tribe use its sovereign authority to enforce Indian preference and employment rights in jobs on the reservation. A tribe begins by passing and enforcing an ordinance which requires every employer on the reservation to give preference to Indians in hiring. Prior to the TERO effort, it was common, for example, for companies to build roads, bridges and buildings on reservations, often with federal funding, without hiring a single Indian worker. For several years, TEROs have worked with great success to correct such inequities. TEROs are also working to develop opportunities for jobs or training in new businesses or in companies off the reservation. To do its work a TERO keeps up with the tribal labor force and knows the skills and qualifications which are available in order to match them with those which are needed by employers.

The Council for Tribal Employment Rights uses its ANA funding, as well as private sector contributions, to provide training and technical assistance to tribes, Native American organizations, governmental agencies and private sector employers in all aspects of Indian preference, tribal employment rights enforcement, and economic development strategies involving the sovereign powers of tribes.

Results

An analysis of ANA's 227 SEDS grants in FY 1984 reveals that more than half were primarily for economic development, approximately one-third were for the improvement of tribal governments, and about one-tenth were for social development. The remaining grants focused on a combination of activities.

The economic development efforts focused on establishing or expanding business enterprises, creating employment, and increasing income from natural resources. These efforts resulted in:

- 11,165 jobs for Native American people.
- 543 Indian and 58 Native Hawaiian business efforts started or expanded.
- 26 new Tribal Employment

Rights Offices established on reservations, bringing the total to 90.

- 108 housing units constructed or renovated on reservations and in urban areas.
- \$52,000,000 in increased income from tribal energy resources.

In addition, the Council of Energy Resource Tribes completed 49 reports of significance to tribal development: four on oil and gas management, three on uranium management, three on coal management, 10 on other energy resources, five on environmental protection, and 24 on national issues or other specialized projects.

A number of tribes strengthened their tribal governments, with these results:

- 44 tribes enacted tribal codes, including 35 business or commercial codes, eight tax codes, and one environmental protection code. In addition, 13 tribes initiated new tax collection and management systems, including reservation income taxes and user taxes such as hunting and fishing licenses.
- 47 tribes adopted merit employment systems.

Ten tribes participated in ANA's Cooperative Management Initiative (CMI), which gives a tribe increased control and improved management of programs which are funded by components of the Office of Human Development Services—ANA, the Administration on Aging, and Head Start. Through CMI, tribes may use centralized planning, buying.

storing, and use of resources and may coordinate programs and use of space. Instead of three systems for three grants, there is one coordinated system. There is also increased communication among people, such as tribal elders assisting in Head Start programs.

In addition, SEDS grants aimed at social development often contribute to a tribe's economic development as well. By establishing day care centers and service networks to help the elderly, alcohol abusers, and drug abusers, these grants provide needed social services as well as jobs for tribal members trained in social work. SEDS grants also help tribes and organizations establish more than one hundred linkages with local governments for the delivery of social services.

Here are some specific examples of what Indian tribes and Native American organizations are doing to achieve self-sufficiency with the help of SEDS grants from the Administration for Native Americans:

Hotel: The Oneida Tribe of Wisconsin used its ANA grant to develop the financial and management package for the construction of a 200-room, \$10.5 million hotel on 56 acres of tribal land near the largest airport serving northeast Wisconsin and upper Michigan. The hotel will create at least 150 new jobs for tribal members and will increase tribal revenue. All funding is in place, construction began in the fall of 1984, and the hotel will be completed in early 1986.

Newspaper, Jobs and Small Businesses: The Klamath Tribe of Oregon established a self-supporting newspaper, set up a job placement office, and obtained a work contract from the Fremont National

Forest, which opened up 100 jobs. Tribal members were also given assistance in forming small businesses.

A Gasoline Station, Store, Mobile Home Park, and Cable-TV: The Port Gamble Klallam Tribe in Washington State, now in its third year of ANA funding, conducted feasibility studies for expanding the tribally-owned gasoline station, community store and mobile home park. The tribe is already realizing profits from the mobile home park. Network TV is inaccessible, so the tribe has also laid its own cable, which netted \$15,000 in the first year.

Increased Revenues: The Jicarilla Apache Tribe in New Mexico increased its gas and oil revenues by 10 percent by streamlining the monitoring system. The tribe also developed codes for budget and finance and for contract and procurement. Personnel policies were recently enacted by the Tribal Council.

Investments: The Passamaquoddy Tribe of Maine is using ANA funds to coordinate the investment of settlement funds received from the Maine Indian Land Settlement Act of 1980. The tribe has also invested in several businesses, including a blueberry enterprise, a cement company, a radio station, and processing and canning plants. These business holdings have netted 130 percent of the original \$2 million purchase price.

Wood, Bait, and Wild Rice: The Business Committee of the White Earth Reservation in Minnesota, using tribal funds, purchased a new sawmill for Ojibwa Wood Products, Inc. That company also spun off the Ojibwa Building Supply Company

which now employs six full-time and eight part-time workers. The Ojibwa Bait Company is expected to generate approximately \$20,000 worth of business selling dry bait in FY 1984-85. Currently the tribe is planning a new economic venture that will develop a cooperative marketing system to increase sales for the tribe's wild rice crop nationwide.

Day Care and Health Care Services: The Southern Ute Tribe of Ignacio, Colorado, developed tribal day care standards based on state standards. The tribe has also increased home health care, providing homemaker services to 35 people, and opened an adult health clinic which serves approximately 25 patients a month. The clinic is being supported by the tribe's health care program, two private agencies, and a BIA grant.

Downtown Businesses: The Coeur d'Alene Tribe of Idaho used tribal funds to purchase a building in downtown Plummer in August, 1984, which houses several businesses, including the area's only supermarket. The tribe set up a Tribal Development Corporation to separate management of business activity from political activity. The supermarket is operating at a profit and a new Benewah Shopping Plaza is under construction.

Multi-Million Dollar Computer Business: Oklahomans for Indian Opportunity (OIO) provided assistance to a Chickasaw businesswoman who started her own computer business, Frontier Engineering, with only the assistance of her husband. Today, her business grosses \$4 million in annual sales, employs 65 people, and purchases many products in the community. This year, OIO helped the business secure large

contracts from the Navy Department and the Federal Aviation Agency.

Big Payrolls: The Muckle-shoot Tribe of Washington State started three businesses and a seasonal construction effort in 1984-85. One project, a bingo hall, employs 125 Indian people at an annual payroll of \$1.7 million. The bingo hall was launched with an \$800,000 loan from the Seminole Indians of Hollywood, Florida, who are partners in the project. The several businesses of the tribe will help to reduce its 64 percent unemployment rate.

High Tech: The Eastern Band of Cherokees of North Carolina have developed a high technology electronics repair and manufacturing operation, a joint venture of the tribe and private investors. About 25 people were trained and now have jobs; the business has shown a profit in its first year of operation and is expanding to include a subcomponent assembly. The tribe also built a fish hatchery to aid in its trout farming business and is developing a brochure to encourage industries to locate on the reservation.

Bay Area Businesses: The Corporation for American Indian Development (CAID) serves a population of 45,000 Native Americans in San Francisco and four surrounding counties. In 1981, the area had only five Indian-owned businesses. CAID is concentrating on business development and has sought and received thousands of dollars' worth of free technical consultation from area business organizations. Several area tribes have new businesses underway or in development, including food supply, timber

operations, and a tour service. By helping the local Department of Social Services to hire three Native Americans as caseworkers, CAID has increased local government sensitivity to and contact with the Native American communities of the area.

Alaska Native Businesses: The Fairbanks Native Association, Inc. has used its ANA grant to establish or expand native businesses. To date, technical business assistance has been provided to almost 70 enterprises, including timber, furs, fish processing, retail stores, and many others.

Commercial Fishing and Tourism: St. George, with a population of 175 people, is one of two inhabited Pribilof Islands in the Bering Sea 809 miles west of Anchorage. The community gave up its traditional annual harvesting of fur seals and is converting to a new native economy based on commercial fishing and tourism. The federal government, which has subsidized this sealing industry since 1867, withdrew its support and set up a \$20 million trust fund to help the Pribilofs develop alternative industries. St. George is using its \$145,000 grant from ANA for long range planning, for engineering and other professional assistance, and for programs to train native residents for jobs in the new economy.

20th Century Fishing: The small community of Atka in the western part of the Aleutian Islands, population 97, is moving from fishing as a means of subsistence to fishing as a means toward self-sufficiency in the 20th century. Atka has used ANA

funds to improve an airstrip to fly out shipments of halibut to markets in Canada and the United States. In late 1984, the community received ANA funding to determine the extent of markets for halibut and to work with the North-Pacific Halibut Commission on agreements about markets and shipping schedules. In 1984, with a fishing season that ran for 3 days per month for 5 months, 40 Atkan fishermen cleared an average of \$5,000 each after expenses.

Jobs, Jobs, Jobs: Self-sufficiency to the Mississippi Band of Choctaw Indians means jobs. Chata Enterprise—supplier of automotive instrument wiring to Packard Electric and the first tribally owned business dating from 1979—will open a third assembly plant by January, 1986 which will employ 200 additional persons. The company currently employs 675 people, 75 percent of whom are tribal members. The expansion to a third 42,000-square-foot building will be made possible in part by a grant from ANA. ANA funding also helped the Choctaws open Choctaw Greeting Enterprise in 1981. This company, the third largest greeting card corporation in the world, employs 200 persons a year. The Chata Development Company, which employs 60 people, has constructed more than 400 new reservation housing units and renovated an additional 200 units. The company has also constructed numerous tribal and business offices, and, most recently, a new day care center. The tribe has an active transit authority which provides bus service from six Choctaw communities to Choctaw Industrial Park. The tribe has plans for a new commercial shopping center and a bingo operation.

One Community in Action

Hawaii

Today on the island of Molokai in Hawaii, row after row of tomatoes, bell peppers, sweet potatoes, watermelons and snap beans grow year round. These crops mean cash—and self-sufficiency—for thirty full-time, self-employed Native Hawaiian farmers who make up the Hikiola Cooperative.

A few years ago, these farmers—homesteaders—faced the prospect of losing their land following the pullout of the giant pineapple companies. By law, homesteaders were required to have at least two-thirds of their tracts under cultivation or development at all times. Many years ago, it was difficult to make the land productive with diversified agriculture because of the lack of water. In the 1920's, farmers were allowed to sublease their land to either of two pineapple companies, and for more than 50 years the pineapple industry was the

major employer. But in the mid-seventies, the big pineapple producers were lured away by cheaper labor in other parts of the world.

Homesteaders were left with their land—and sufficient water, since one of the companies had built a reservoir which could tunnel seven million gallons of irrigation water from the mountains into the fields everyday. Young Hawaiians and their families, wishing to homestead, were also beginning to return to this mostly rural island away from the hassles of city life.

A lot was at stake. If the farmers did not succeed, their homestead lands would, by law, be returned to the state where they could be leased for 99 years to hotel chains or developers, many of whom had their eye on the island. This had already happened on some of the other islands where Native Hawaiians lived a day-to-day existence as squatters on the beaches.

The homesteaders formed a cooperative and called it "Hikiola." Hikiola means "reawakening" or "rebirth." But staffing of the cooperative was erratic. Managers, technicians, bookkeepers came and went as small amounts of funds were available from various funding sources. A 1979 management audit by the University of Hawaii reported

that Hikiola needed to become more businesslike.

In 1980, Hikiola applied for and received its first grant from the Administration for Native Americans. Grants continued for 2 more years, as ANA was encouraging its grantees to develop social and economic strategies (SEDS) to meet local needs and bring about long-term development of resources.

Hikiola began to operate more efficiently. Research was done to determine what kind of crops could be sold on the surrounding islands. The co-op purchased seeds, hardware, and supplies; arranged for the shipment of produce to buyers; extended credit; and provided individual assistance and attention to special problems.

Gross sales through Hikiola totalled almost half a million dollars a year. These farmers have been able to earn a good income for their families, and, just as important, to hold onto their farms. Hikiola Cooperative, Inc., is a prime example of how creativity, hard work, and business acumen helped a community of people meet its goal of self-sufficiency—on its own terms!

ANA funding helped, too, but after 3 years, ANA funds weren't needed anymore.
