**ABSTRACT**

Average salary increases for 4,170 faculty in the field of foreign languages are reported for 1982-1983 and 1985-1986, as part of the College and University Personnel Association's annual faculty salary studies. Included are comparative data for 108,074 faculty at 174 public colleges and 193 private colleges, representing 41 academic disciplines. In 1982, 145 public and 149 private colleges reported on foreign language faculty salaries, while 150 public and 156 private colleges reported in 1985. Between 1982 and 1985, average salaries of faculty in this field increased 17.6% at public colleges and 18.4% at private colleges. The average salary for foreign language faculty was below the average faculty salary in the other 40 disciplines (3% below for public colleges and 7% below for private colleges). Included is information on: the number of faculty by academic rank, including new assistant professors, salaries by academic rank, the ratio of average salaries to total average salaries of all public and private colleges in both years studied, comparisons between the 2 years and with the Consumer Price Index of changes in cost-of-living, and comparisons with 40 other disciplines. The disciplines and participating institutions are listed. (SW)

SALARY-TREND STUDY OF FACULTY IN FOREIGN LANGUAGES  
FOR THE YEARS  
1982-83 AND 1985-86

U.S. DEPARTMENT OF EDUCATION

ment do not necessarily represent official  
OERI position or policy.

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1985-86. Each year two separate studies are conducted, one for public senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 41 selected academic disciplines including foreign languages. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1981. The definition of the discipline/major field of foreign languages in the CIP is as follows:

A summary of groups of instructional programs that describe the structure and use of language that is common or indigenous to people of the same community or nation, the same geographical area, or the same cultural traditions; including such features as sounds, literature, syntax, phonology, morphology, semantics, sentences, prose and verse, as well as the development of skills and attitudes used in communicating and evaluating thoughts and feelings through oral and written language.

This article presents a summary of the overall average salary increases in the discipline/major field of foreign languages from the "baseline year" of 1982-83 to and including the "trend year" of 1985-86 for both public and

private institutions. Of the 227 institutions which participated in CUPA's PUBLIC (AASCU) study of 1982-83, 174 also participated in 1985-86. Data from those same 174 institutions were used in both the baseline year and the trend year. Of the 299 institutions which participated in CUPA'S PRIVATE study of 1982-83, 193 also participated in 1985-86. Data from those same 193 institutions were used in both the baseline year and the trend year.

In addition to listing the average salaries in foreign languages for both public and private participating institutions by rank, including "new assistant professor," and listing the faculty mix percentage (FAC MIX PCT) and the salary factor, comparisons are made between the two studies for each of the two study years (1982-83 and 1985-86) and with the CPI (Consumer Price Index) of changes in cost-of-living.

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy and the CPI yields a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a

given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .36 for associate professor of foreign languages in the 1982-83 public study means that 36 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: PUBLIC 1982-83, PUBLIC 1985-86, PRIVATE 1982-83 and PRIVATE 1985-86. For example, a SALARY FACTOR of .98 for assistant professors in the discipline/major field of foreign languages in the 1982-83 public study means that their salaries are 2 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1982-83 or 1985-86). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 41 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of foreign languages with the entire data base.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline\_year" of 1982-83 and the "trend year" of 1985-86 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

## RESULTS OF THE TWO PUBLIC (AASCU) STUDIES, 1982-83 AND 1985-86

In the PUBLIC 1982-83 salary study in the above table, the reader may note that the discipline/major field of foreign languages was reported in 145 of the 174 public (AASCU) institutions. The average salary of the 1,175 faculty was \$25,955. This average salary was approximately 2 percent (0.98) lower than the average salary of \$26,376 for all 35,137 faculty in ALL MAJOR FIELDS in the 1982-83 public study.

In the PUBLIC 1985-86 salary study in the above table, the discipline/major field of foreign languages was reported in 150 of the same 174 public (AASCU) institutions. The average salary of the 1,224 faculty was \$30,524. This average salary was about 3 percent (0.97) lower than the average salary of \$31,610 for all 39,815 faculty in ALL MAJOR FIELDS in the 1985-86 public study.

The increase in average salaries for all faculty in foreign languages after three years in the public institutions studied was 17.6 percent (\$30,524 minus \$25,955 equals \$4,569). The CPI of increased cost-of-living between October 1982 and October 1985 was 10.7 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 6.9 percent or 2.3 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the public institutions studied was 19.8 percent (\$31,610 minus \$26,376 equals \$5,234). In comparison to the discipline/major field of foreign languages (17.6%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 2.2 percent (19.8% minus 17.6% equals 2.2%) more than faculty in the discipline/major field of foreign languages.

The reader may note that the faculty mix percentage in the discipline/major field of foreign languages is higher at the professor rank than at the assistant professor rank in the public studies for 1982-83; 0.32 vs. 0.26

respectively; and for 1985-86, 0.33 vs. 0.26 respectively. This is similar to the faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both public studies: 0.33 vs. 0.27 (1982-83) and 0.36 vs. 0.26 (1985-86) respectively.

Finally, the hiring rate of new assistant professors in foreign languages in the 1982-83 public study was: 1.6 percent (19/1,175) in 1982-83 vs. 3.6 percent (1,268/35,137) in ALL MAJOR FIELDS. The hiring rate of new assistant professors in foreign languages in 1985-86 was 3.4 percent (42/1,224) vs. 3.9 percent (1,541/39,815) in ALL MAJOR FIELDS that same year. In other words the hiring rate in the discipline/major field of foreign languages was less than for ALL MAJOR FIELDS in both of the public studies.

#### RESULTS OF THE TWO PRIVATE STUDIES, 1982-83 AND 1985-86

In the PRIVATE 1982-83 salary study in the above table, the reader may note that the discipline/major field of foreign languages was reported in 149 of the 193 private institutions. The average salary of the 858 faculty was \$23,938. This average salary was approximately 5 percent (0.95) lower than the average salary of \$25,213 for all 15,823 faculty in ALL MAJOR FIELDS in the 1982-83 private study.

In the PRIVATE 1985-86 salary study in the above table, the discipline/major field of foreign languages was reported in 156 of the same 193 private institutions. The average salary of the 913 faculty was \$27,803. This average salary was about 7 percent (0.93) lower than the average salary of \$29,850 for all 17,299 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

The increase in average salaries for all faculty in foreign languages after three years in the private institutions studied was 16.1 percent (\$27,803 minus \$23,938 equals \$3,865). The CPI of increased cost-of-living between October 1982 and October 1985 was 10.7 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 5.4 percent or 1.8 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 18.4 percent (\$29,850 minus \$25,213 equals \$4,637). In comparison to the discipline/major field of foreign languages (16.1%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 2.3% percent (18.4% minus 16.1% equals 2.3%) more than faculty in the discipline/major field of foreign languages.

The reader may note that the faculty mix percentage in the discipline/major field of foreign languages is lower at the professor rank than at the assistant professor rank in the private studies: 0.25 vs. 0.33 (1982-83) respectively; and 0.27 vs. 0.28 (1985-86) respectively. This is similar to that of ALL MAJOR FIELDS for both private studies: 0.28 vs. 0.33 (1982-83) respectively; and 0.30 vs. 0.31 (1985-86) respectively.

Finally, the reader may note that the hiring rate of new assistant professors in foreign languages in the private studies was lower in comparison to the hiring rate in ALL MAJOR FIELDS both in 1982-83, 3.8 percent (33/858) vs. 4.7 percent (739/15,823) respectively; and in 1985-86, 3.8 percent (35/913) vs. 4.9 percent (843/17,299), respectively.

## CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of foreign languages and compared that information with 40 other academic disciplines/major fields over a period of three years: the "baseline year" of 1982-83 and the "trend year" of 1985-86. Two studies, one for public (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 4,170 faculty in the discipline/major field of foreign languages participated and were included in the overall total of 108,074 faculty in all 41 disciplines/major fields in all four studies. The same 174 public (AASCU) institutions and the same 193 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of foreign languages is currently (1985-86) 3 percent in the public study and 7 percent in the private study, below the overall average faculty salary of the other 40 disciplines/major fields. Foreign languages average faculty salary in the private institutions lagged behind that of the public institutions in both the 1982-83 study and the 1985-86 study.

Second, the CPI of October 1985, in comparison to the CPI of October 1982, indicates that the faculty in foreign languages, in both the public and private institutions, received overall salary increases for three years above the cost-of-living. Foreign languages average faculty salaries in both the public and private institutions lagged behind faculty in ALL MAJOR FIELDS during this same period by 2.2 percent and 2.3 percent, respectively. Both foreign languages faculty in the public and private institutions have some catching up

to do with their colleagues in ALL MAJOR FIELDS.

Third, in the discipline/major field of foreign languages the percentage of full professors in the public institutions is greater than that of the private institutions for both of the trend years. The percentage of assistant professors is greater in the private institutions compared to the public institutions for both of the study years. In both the public studies, the rank of full professor has a slightly greater percentage than that of assistant professor. In both of the private studies the percentage of assistant professor is consistently higher than that of full professor. Although faculty in ALL MAJOR FIELDS in public institutions are being promoted faster than their colleagues in the private institutions, this does not seem to be the case in foreign languages. Both foreign languages faculty in the public and private institutions are being promoted at approximately the same rate. The hiring rate of new assistant professor is currently (1985-96) only 0.4 percent greater for the private institutions compared to the public institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in foreign languages, and in other disciplines/major fields, on an annual basis.
