ABSTRACT

To address rural schools' growing need for teachers who can teach in both elementary and special education, Arkansas College has begun a 4-year program of dual certification that will prepare teachers for elementary and special education assignments. Serving a largely rural area, Arkansas College has first hand experience with the problems facing rural schools and is especially sensitive to their needs. The college began to study the dual certification option because of repeated requests from area schools to provide teachers with the training to teach proficiently in more than one area. Many of these rural schools do not need a full-time special education teacher, but do need a teacher who can teach in this area for a portion of the day and at the same time have the training to work in another area for the balance of the day. Dual certification training will not only increase the regular teacher's effectiveness--the special education teacher will also be better prepared to work with students in the mainstream. Such teachers will know what the regular education teacher expects from the student and will better understand how to make the transition between regular and special education experience. A summary of public schools in a 10-county area and a sample academic program check sheet are attached. (JH2)

Abstract

Rural schools comprise 67% of all schools in the United States. One third of all students live in rural America. A predominant number of teacher education preparation programs do not adequately prepare teachers to meet the unique challenges of teaching in rural areas. This paper describes one school's effort to address the increasing need across this country for teachers who can teach both in special and elementary education.

"A Timely Option for Rural Education: Dual Certification
for Special/Elementary Education"

INTRODUCTION

An important role teacher educators play in our society is to stay abreast of the current needs of our local school systems. Rural schools comprise 67% of all schools in the United States. One third of all students live in rural America. These schools are an important part of the culture of the rural family structure. Rural areas pose unique challenges for schools such as high transportation costs, difficulties of obtaining specialized services and low tax bases. Across the nation, one particularly acute problem for rural schools is a personnel shortage. A predominant number of teacher preparation programs do not adequately prepare teachers to meet the unique challenges of teaching in rural areas. The majority of state certification laws do not recognize this unique personnel need of rural areas.

This dual certification option is the result of community interest and the need for teachers who are capable of teaching in either the special education or regular education classrooms.

THE SCHOOL

Arkansas College is a private, independent, church-related, liberal arts college. It is a college of the Presbyterian Church (U.S.A.), and it is the oldest continuously-operated private college in Arkansas. It has an

enrollment of approximately 725, and it is primarily a residential school. The college is located in Batesville, Arkansas, which has a city population of 8,500 with the surrounding county population of 31,000, and a surrounding counties trade area of 87,000. The teacher education program graduates approximately 30 students per year.

THE COMMUNITY

In the geographic area served by Arkansas College there are numerous small public school systems (see Appendix I). These schools need teachers who can teach in more than one area of certification. In very few other areas of certification are there as many available employment opportunities as there are today in the field of Special Education. One study by the Office of Special Education and Rehabilitative Services of the U.S. Department of Education revealed that approximately 57,250 additional teachers are needed to provide special education for all school-age children and youth who require it. Arkansas College is initiating an option for students to become certified in both special education and elementary education through a dual, four year program.

Ferrara, Hirshoren, Levin (1983) determine that one of the most difficult problems facing state education agencies is that of providing for special education services in rural areas. Resistance to change, funding, and distances between schools are major obstacles to providing special education services in rural schools. Rural schools report that the recruiting and retaining of qualified staff are significant impediments to providing services (Helge, 1983).

MEETING THE TRAINING PROBLEM

One reason for poor staff retention in rural areas is the inappropriate preservice training many teachers receive. With the increased trend toward mainstreaming our special education population, many teachers are often required to serve a population for which they have little or no training (Bullock, 1985; Ferrara, et. al. 1983).

To remedy this deficit in instructional training we have historically relied heavily on inservice programs to train teachers how to work with special needs students. Seldom has this "first aid" approach worked. Instead a well planned curriculum with thorough instruction needs to be implemented at the preservice training level.

Sesow and Adams' (1982) research indicated a positive correlation between the amount of special education training and positive attitudes about mainstreaming. The students surveyed felt competent in their preparation to teach special children when they had received sufficient coursework instruction in that area. Flynn, et al. (1978) in a follow up study of their education graduates found that even those teachers who felt a need for further special education course work were reluctant to return to college for that training. Thus without appropriate preservice coursework, many regular educators lack the appropriate training to work with the special education population which they will face in their classrooms (Bullock, 1985).

Attitudes of regular teachers are key variables to successful mainstreaming. The teachers' perception of competency is the key to their

attitudes (Leyser & Abrams, 1983, Leyser, Abrams, Lipscomb, 1982; Sesow & Adams, 1982). The more "prepared" a teacher feels to teach special students, the more positive their attitudes. The importance for thorough teacher preparation cannot be underestimated. The dual certification option is one means by which both regular and special education teachers can become better teachers.

The dual certification training will not only increase the regular teachers effectiveness, but also the special education teachers will be better prepared to work with students in the mainstream. They will know what the regular education teacher expects from the student and can better understand how to make the transition between regular and special education a successful experience. This makes one large step toward the merger of special and regular education as suggested in the literature (Stainback and Stainback, 1984).

Arkansas College began the study of this dual certification option because of repeated requests from area schools to provide teachers with the training to teach proficiently in more than one area. Last year within a 30 mile radius of Arkansas College six special education teaching positions became available. Many of our rural schools desperately need the flexibility to utilize teachers in more than one teacher area (Carlsen and Dunne, 1981). Many do not need a full time special education teacher, but instead a teacher who can teach in this area for a portion of the day and at the same time have the training to work in another area for the balance of the day. Arkansas College is working with this certification option to link special education with elementary education (Appendix II).

The students who attend Arkansas College want to become as employable as is possible in a four year program. This dual option allows them this opportunity.
