ABSTRACT

Postsecondary options for hard of hearing and deaf students are identified, and practical suggestions are offered for students, faculty, and service providers. In addition to providing facts about hearing loss and the effects of age of onset of hearing loss, information is provided on communication methods, special support services, and resources. Students have three environments to consider: the two federally supported national schools (Gallaudet College and the National Technical Institute for the Deaf), a separate (special) program for hearing impaired students on the regular college campus, and a mainstreamed program in a setting with mostly hearing students. The Individual Written Rehabilitation Plan is available for students in the mainstream who are clients of the State Vocational Rehabilitation program. Special support services include: interpreters, notetakers/tutors, special communications equipment, and remedial reading and writing programs. Since social concerns are also important, suggestions are offered to both students and instructors to promote acceptance and support for hearing impaired students outside of the classroom (e.g., in the cafeteria, gym, and residence hall). An annotated resource section covers books, organizations, specific programs, and special equipment. (SW)

HEARING IMPAIRED STUDENTS IN POSTSECONDARY EDUCATION-1986 Edition

Postsecondary educational opportunities for hearing impaired (deaf and hard of hearing) people are expanding on American campuses. As these students have become more aware of their rights and opportunities in education, many have successfully completed all types of postsecondary programs, from vocational-technical institutes to graduate schools.

This fact sheet is for hearing impaired students and those who work with them in high schools and adult education programs, community and junior colleges, vocationel-technical and career schools, four-year colleges, universities and graduate programs. Definitions of relevant terms are provided, options for students are discussed, and practical suggestions for students, faculty, and service providers are outlined. References are made throughout to books, organizations, specific programs, and special equipment. These resources are listed on the Selected Reading List or Selected Re-source List which are at the end of the fact sheet.

FACTS ABOUT HEARING

Hearing loss is a complex disability and does not lend itself to simple definition. Approximately 16 million Americans have a hearing impairment and over 2 million are considered to be deaf.

Hearing Impaired describes people with all types of hearing disabilities, ranging from a very slight loss to profound deafness.

22/020

Hard of Hearing is a condition where the sense of hearing is delective but functional for ordinary life purposes (usually with the help of a hearing aid). Dest/Destness is a condition in

Deaf/Deafness is a condition in which perceivable sounds (including speech) have no meaning for ordinary life purposes, even with the help of a hearing aid. Age at Onset of the hearing loss

Age at Onset of the hearing loss refers to the time at which the hearing loss occurred. This factor often determines the type of support services the individual student will need in order to succeed. For example:

• If the student was born or became deaf prior to the normal stages of language development, he/she would be considered pre-lingually deafened. Inability to hear language has a direct effect on speech development. Therefore, this student might be expected to have difficulty with written and spoken English.

 A post-lingually dealened student has had an early exposure to spoken language, remembers something of how it sounds, and thus has a better chance than others to maintain and utilize both speech and language skills.

 A student who became severely or profoundly hearing impaired after early childhood but before age 19 is said to be pre-vocationally deaf.

An early hearing loss means a lifelong communication problem and difficulty in basic language development through speaking and listening means. From a postsecondary educational viewpoint, one of the most important distinctions in serving hearing impaired students relates to the Age at Onset of the hearing loss.

COMMUNICATION METHODS

For many years there have been contrasting philosophies about the type of communication training deaf students receive.

• The supporters of the Oral Approach believe students can learn to communicate effectively using speech, speechreading and auditory training to maximize use of residual hearing.

• The supporters of the Manual Approach believe that a combination of sign language and finger spelling should be used for both expressive and receptive communication.

• A more recent refinement of the Manual Approach is called Total Communication which implies acceptance, understanding and use of all methods of communication. Proponents of this theory believe people with hearing impliments should be taught to communicate manually as well as to speak and speechread.

By the time a student is ready for a postsorondary program, his/her communication skill in one of these methods will have been established. Whatever the method, deaf students need access to clear and understandable communication.

POSTSECONDARY EDUCATION OPTIONS

Students have three environments to consider as they plan alwad

• The two federally-supported institutions for deal students: Gallaudet College in Washington, D.C. and the National Technical Institute for the Deal (NTID) at the Rochester Institute of Technology in Rochester, NY.

 A separate (special) program for hearing impaired students on the campus of a regular college, university, or other postsecondary education program.

A mainstreamed program in a setting with mostly hearing students.

Federally-Supported National Schools

Gallaudet College and NTID have by far the largest concentration of deaf students enrolled from across the nation, with approximately 1,500 students each. On Gallaudet's campus, most of the student population is profoundly deaf and all classes are taught in simultaneous communication (spoken and manually signed at the same time). Undergraduate courses in liberal arts areas from math to social work to business administration are available, as well as Master's and Ph.D. programs, theater, sports, and other social activities.

NTID students have a choice of a wide range of one-, two-, and fouryear vocational programs in such fields as business technologies, medical-lab technologies, computer science and hotel management, among others. NTID is located within the Rochester Institute of Technology. A complete range of support services is available at these institutions.

Special Programs

A growing number of postsecondary schools across the United States now have established services for

hearing impaired students within their settings. There are four regional postsecondary programs supported with funds from the federal govsmment for deaf students at 56. Psul Technical-Vocational Institute, MN: Seattle Central Community College. WA; California State University at Forthridge, CA; and the Postsecondary Education Consortium at the University of Tennessee, TN: Out-ofstate residents may apply as well, and supervised dormitories are available for out-of-town students. These programs offer tutors, notetakens, interpreters, counselors, aural rehabilitation, manual com.nunication for students and faculty, as well as other SCIVICOS.

In addition to these regional programs, there are 145 other schools with special programs serving hearing impaired students. Of these, about 62% have fewer than 20 hearing impaired students enrolled. Most areas of study that are offered to hearing students at these schools are available to deaf students as well. The student who chooses this program option has the advantages of most of the services needed to accommodate his/her impairment while still participating in a hearing community. (See Selected Reading List.)

Education in the Mainstream

In addition to options outlined above, hearing impaired students can select whatever school fits their interests and goals. The student should work with designated school personnel to make arrangements for interpreters, notetakers or whatever assistance is needed to adapt to a hearing environment.

Federal regulations (Section 504 of the Rehabilitation Act of 1973) have encouraged many postsecondary schools to provide services and auxiliary aids su that their campuses are accessible and do not discriminate against disabled people—including those with hearing impairments. Through the experiences of students and professionals who have worked with them, suggements have emerged to smooth the way in handling a "mainstreamed" education.

Adjustment to the Mainstream: Overview

The faculty and administration are responsible for maintaining a positive attitude toward making their postsecondary program accessible to nearing impaired students. Yet, it is the students' responsibility to make their individual needs known to the postsecondary institution's factity and administration, and other designated personnel such as a Disabled Student Services Coordinator. Each student's needs can vary depending on the degree of hearing loss, age at onset, educational background, communication skills, motivation, and abilities.

If the student is a client of the State Vocational Rehabilitation program, he/she must meet with the rehabilitation counselor to insure that needed support services are included in the Individual Written Rehabilitation Plan (IWRP). It is important to do this early to allow necessary time for authorizations for services to be received by the whool business office and Student Services Office.

IWRP is a jointly written service plan between a student and the State Vocational Rehabilitation agency. The responsibilities of the student and the State Vocational Rehabilitation agency should be clearly stated in the IWRP. The student may request a copy of the IWRP.

In selecting occupational and curricular choices a student must make selections suitable to his/her interests and abilities. Hearing impaired people have been successful in a broad variety of occupations. (See the Awareness section of the Selected Feading List.)

High school and postsecondary counselors should advise the student about all the available options. Career and curricular decisions should be made by the student, with assistance as needed from the Vocational Rehabilitation counselor or school advisor. (Request Strategies for Advising Disabled Students, a fact sheet, from HEATH.)

Communication

The major area of accommodation needed by hearing impaired students in postsecondary education is communication. It is important that the student's communication skills and preferences be made known to the Dean of Students or the Disabled Student Services Coordinator, and instructors. Some students may speak very intelligibly and others may not use speech at all. Some may rely on interpreters to facilitate com-munication. Sume deal students' speech may initially be difficult to understand because they cannot control the tone and volume of their speech. Understanding usually im-proves as the listener becomes more amiliar with the deal person's speech.

Speechreading (lipreading) for the deal person is an extremely demanding art. The complexity of topics, varied lip movements, beards and mustaclies of the speaker, and fatigue of the listener all influence the speechreader's ability to understand vir it is said.

TIPS FOR STUDENTS

• Orientation is important. Give yourself a few days to get comfortible with the campus environment, to learn to know what to look for, and where you might need special signal devices. Where is a TDD? Is there a way to let you know of dormitory fire drills or actual fire?

• Arrange a conference at the beginning of the term with instructures to discuss their methods of teaching and expectations, and to explain how you communicate. You may, of course, bring an interpreter to these meetings.

• Introduce interpreters to your instructors before your first class, if possible.

• Be sure your seat in each classroom is right for you—that is, where you have a direct line of vision to the instructor, the board or screen, and your interpreter, if you use one, and that you do not face the windows. • If you use interpreters or notetakers in your classes, most with them ahead of time to get to know each other fle very clear about what you espect, what times they are required, how you can get in touch with them in case of class cancellations or illness. Establish the pattern of discussing any questions or misunderstandings when they happen. Misunderstandings don't go away, they just grow in peoples' minds.

• fell the people in charge of the school buokstore where they can order self-carbon notetaking pads. One example—the NTID bookstore—is on the Selected Resource List under NTID at the end of this fact sheet.

 If you use volunteer notetakers, interpreters, or other helpers, be sure to express your thanks openly and directly. You might think of a special favor you could offer from time to time.

 It is your job (not the interpreter's) to let your instructor know if and when you are having trouble following the class discussion. You could ask to have something repeated or rephrased, or see the instructor after class to clarify a point.

• Be sure each instructor knows what you will need at testing times. If there will be oral directions, ask to have them in writing or engage an interpreter if necessary.

• Does your school have a language skills center where you can vork on improving your reading and writing on the postsecondary level? Is there available help with study skills?

• Does the campus have a Speech and Hearing Center or clinic? Is there one nearby? Do you want to take advantage of it?

• If you are in a science or vocational-technical program, do you need adaptations on class or lab equipment—such as a flashing light for the bell on a typewriter or for the buzzer on a timer? • Be flexible. There is more than one way of doing things, and you may need others to assist in working out some those ways as you go along

• You are the best judge of what works for you. Dun't ask for things you don't need, but be sure to let all those involved be aware of those things you do need.

TIPS FOR INSTRUCTORS

Many instructors have never before had what one counselor calls "the opportunity of a unique teaching experience"—having their lectures converted into Manual English or sign language for students with impaired hearing. Experienced teachers of hearing impaired students have made the following suggestions:

• Several things would be helpful for the students to see ahead of time: 1) a brief course outline early in the torm, 2) a list of new vocabulary or specialized terminology before it comes up in class, and 3) a copy of instructor's lecture notes.

 Allow the student to be seated in a spot where he/she can maintain eye contact, away from light sources.

 Allow the interpreter to sit or stand on one side of you, where the student may maintain eye contact with both the interpreter and you.

Speak clearly and naturally.

 Don't smoke or block your mouth with your hands.

 Try to avoid standing in front of windows or other light sources. The glare from behind you makes it difficult to read your lips and your expressions.

 Body language, including facial expressions and gestures, can help get your message across effectively.

 When communicating with the student, speak directly to him/her, not to the interpreter. For instance ask, "Do you?" instead of "Tell him" or "Does she?"

• Try to avoid long periods facing away from the students or toward the chalkboard while you speak. Pac ing around the room also makes it difficult for the hearing impaired student.

• When another student speaks and is not in the hearing impaired student's direct line of vision, repeat the comment or question and point or motion to show who is speaking. This makes it easier for the student to follow the discussion.

In question-and-answer periods, the student may raise his/her hand, be recognized, and sign the question to the interpreter. The interpreter will verbalize the question to the instructor and the class, and then sign the response back to the student. Be sure to allow time for this to occur.

• Be sure to allow extra time in science labs for the students to find things that you are pointing out. He/ she may need to get instructions from the interpreter, locate the materials, and then turn back for the rest of the discussion.

 If requested, assist the student in finding a volunteer notetaker. It is impossible to watch you, the interpreter and at the same time take notes.

 Make important information (like an assignment or a change in schedule) especially clear by writing it on the chalkboard. You should also have a system to notify the student if you may cancel a class, so that he/she can cancel with the interpreter.

• The first term in college brings additional adjustmen: problems have patience.

• Don't talk down to the student—the hearing is impaired, not the intelligence.

• Be objective about evaluating materials written by hearing impaired students. If there are probiems with grammar, syntax, or fluency of expression, you can advise the student about such remedial services as tutoring, language development labs, or other resources which are available on campus for all students.

SPECIAL SUPPORT

The majority of hearing and deal students will enter a posisecondary program with many of the same concerns, ambitions, and goals. In most cases a key to the students' success in school will be the availability, quality, and extent of support services.

The following specific support services have proven useful to the hearing impaired student. These services can and do vary from one institution to another, but understanding the options can help in choosing those that will best suit a particular student and program.

Interpreter Services

An interpreter for deal people is essentially a communicator using a mode of communication designated by a given deaf individual or group An interpreter is a person who facilitates the conveying of messages from one person to another. An interpreter, in the role of facilitator, should not enter the dialogue as a contributing member of the communication. The Disabled Student Services office should be told the student's mode of communication (oral or manual) so that appropriate interpreting services can be arranged.

Good interpreters may be scarce, especially in small communities. The **Registry of Interpreters for the Deal,** Inc. maintains a list of addresses of interpreters in each state, many of whom have met certain minimum standards of proficiency in each state (see the Selected Resource List). Other sources for interpreters are State Coordinators of Rehabilitation Services for the Deal, state op: rated secondary schools for the deal. State Commission for the Deaf or Handicapped, churches, state or local Associations of the Deal, Interpreter Training Programs and the student him/hernell.

Availability of interpreter training is now making it possible for individuals to consider interpreting as a career. The Registry of Interpreters for the Deaf, Inc. publishes a directory listing colleges and universities that have interpreter training programs (See Selected Resource List). Although it may not always be pussible to match an interpreter's knowledge and competence to every student's needs, it is highly desirable where possible. The student and interpreter may even have to work together to establish a common understanding or invent new signs for a technical area.

Notetaker/Tutor

Good classroom notes are vital to deal and hearing impaired students. Through the use of a notetaket, deal students in classes with hearing students can focus their attention on the instructor and/or interpreter. Good notetaking help is as essential as interpreting for success on a hearing campus. Interpreting provides the student with immediate information whereas notetaking provides a permanent record for later studying.

Notetaking can be arranged in several ways

 Some students employ trained notetakers. A student should check with the Disabled Student Services Coordinator to see if this service is available.

• Some students ask to share the notes of a hearing classmate. Use of special non-carbon duplicating pads for notetaking can be helpful (See the Selected Resource List). Making duplicate copies of notes allows one notetaker to serve more than one student in a given course.

• Some hearing impaired students may rely on the use of a tutor who knows the subject, how to teach it and how to communicate with the student, in order to help keep up with the class.

Remedial Programs

The range of reading and writing skills varies greatly among entering hearing impaired students. Language mastery may still present problems for some of them. Students may need remedial English language instruction. Many campuses have established learning centers to help students overcome academic deficiencies, provide needed information, and prepare students for the pace of postsecondary education. Hearing impaired students may benefit from such a resource.

byment for Special Services

Some schools provide interpretits, nototakeritutors, and remodial insistance, and even have special raining for them. Other programs equest that students make their own arrangements for these serrices.

According to the National Center for Law and the Deal, recent court wings concerning interpreters indisale (had Section 504 of the Rehability ion Act of 1973 places primary reiponsibility on the State Vacational lehabilitation agency to provide inerpreters to a deal student at college or other postsecondary institutions) who is a VR client. The book, Interpreter Services for Deaf Clients: **Guidelines** for Rehabilitation Perionnel (see the Selected Reading List) is a helpful reference in planning interpreter services for clients If a student is not a VR client and no other sources are available, then the college or other postsecondary institution may have the ultimate responsibility to pay for interpreters. notetaker/futors, and remedial ser-VICES.

Devices

Modern advances in the (echnology of communications equipment have made a major impact on hearing impaired persons. Hearing aids, personal FM amplification units, elevision decoders, telephone amplifiers, TDD's (Telecommunications Device for the Deaf), and signaling devices that attach to doorbells. slarm clocks or phones are technological devices that give hearing impaired people control over their environment. The personal implification unit can be carried or worn by a hard of hearing person ind another speaker (perhaps an instructor) to amplify the conversation. TDD's may be attached to any conventional telephone and convey conversations through a keyboard and video display screen.

Hearing impaired people can and do watch TV; they can wake up at a given time on their own; they can communicate by telephone and anover the doorbell themselves. The Selected Reading List at the end of this fact sheet includes several excelient sources of information about difforent devices such as: Alerting and Communication Devices for Hearing-Impaired People: What's Ausilable Now, Signaling Devices for Hearing-Impaired People, What You Should Know About TDDs, and What are TDDs?

RESOURCES FOR DEAF/ BLIND STUDENTS

Persons who are both deal and blind require services for hearing impairments and visual impairments. There are organizations with special resources and programs for the deal? blind community.

The Helen Keller National Center for Deal/Blind Youth and Disabled Adults (see Selected Resource List) offers training in pre-vocational skills, personal adjustment, travel, communication and vocation skills They also publish the Directory of Agencies Serving the Deal/Blind, which lists education programs for the deal/blind as well as other services.

SOCIAL CUNCERNS

A student's postsecondary education does not begin and end in the classroom. -/, lot of growth and development happens during time spent outside the classroom---in the cafeteria, student union, gym, theater, and residence hall. It is important that the administration's attitude of acceptance and support for its students extend into these areas of outof-classroom needs. Such an attitude tells the student, in effect, "Yes, you can participate in the total school program."

Hearing impaired students suggest that:

• A decoder for the TV in the dormitory lounge would help the student to be part of the group that congregates to relax together after dinner or on weekends (see Selected Resource List).

 An advance copy of the script of plays given in the school theater would enable the student to follow along.

 Written copies of announcements given over the public address system could also be posted on a central bulletin buard

• sports is an area that is highly accessible. Deal people are as likely as any others to be good athletes. Hackethall players and teammates have reported successful use of nonverbal signals for when to pass, shout, or go into a zone detense. Coaches can do this in any sport.

• Assertions sensitive for faculty and general student body should always include personnel from the actual bookstore, caletoria, student union, residence halls, gym, and chapel. Attitudes of people that students meet overy day have a direct bearing on the students' sense of belonging and self-esterm.

 Sign language classes for hearing students contribute positively to campus assimilation of deaf students. The more hearing students who know how to sign, the more apportunities there will be for communication, friendship and sharing. Many schools with college and/or vocational programs have sign language clubs where hearing members join with their hearing impaired triends. Nearly thirty colleges and universities across the United States recognize American Sign Language as satisfying foreign language requirements.

Since individual schools, students, interests and facilities vary, these suggestions are presented as a guide to stimulate action and encourage positive adaptations, where possible.

SELECTED READING LIST

Alerting and Communication Devices for Hearing-Impaired People: What's Ausilable New

Loraine Dipietro, Peggy Williams and Harriet Kaplan, National Information Center on Deafness, Gallaudet College, 800 Florida Avenue, NE, Washington, DC 20032, 1984, one copy free.

This fact sheet discusses the various types of alerting and communication devices which are available for hearing impaired people. It includes a listing of manufacturers of assistive devices.

College and Career Programs for Deaf Students

Conter for Association and Demographic Studies, Californiet College, 400 Plonda Avenue, NE, Washington, DC 20002, 1986, **65 00**.

The book describes over 100 postance ondary programs for hearing impaired students across the United States, including the two national schools for the deat plus the programs set up on hearing campuses It tells what hand of education is offered at each, and what types of support aprilian.

The Deaf Student in Colleg

Gallaudet College Press, 800 Florida Avenue, NE, Washington, DC 20002, 3979, \$2.00 plus postage and handling

This book, written for administrators of postsecondary programs, provides guidance for developing adequals services for hearing impaired students.

Deatness and Adolescence

Arthur I. Neyhus and Gary F. Austin, Editors, A.G. Bell Association, 3417 Volta Place, NW, Washington, DC 20007, 1971. 65,95.

Monograph on all aspects of the deaf adolescence experience including psychological and biological development, communication ability, educition needs, recommendations for a guidance-oriented curriculum and postsecondary education options.

General Bibliography on Deal/Blind Howe Press, Perkins School for the Blind, 175 N. Beacon Street, Watertown, MA 02172, 1977, \$5.00

 \$1.00 postage and handling. This is the most extensive bibliography available on deal/blindness. Bibiography includes books, pamphlets, reports and films.

Helping the Deaf Community College Student Improve His

Reading Skills Shirley A. Rompl, American Annals Shirley A. Rompl, American Annals of the Darf. 814 Thayer Avenue, Silver Spring, MD 20910, October 1961. Reprint available from University Microfilms, Ann y Microfilms, Ann Arbor, MI 48106
