**ABSTRACT**

Supplementary data on college student financial aid recipients for academic years 1980-1981 through 1983-1984 are presented for a sample of the Senior Cohort of the High School and Beyond Study (HS&B). By 1984 the HS&B senior cohort had been out of high school for 4 years. Background information on the Center for Education Statistics Longitudinal Studies Program and the HS&B Study is included. This Financial Aid Supplement contains six data files: data on 11,995 students in the HS&B Senior Cohort follow-up sample; data from the students' postsecondary schools; data from the Guaranteed Student Loan (GSL) program records for 1981-1984; data from Pell Grant disbursements files for 1980-1984; GSL guarantee agency disbursement data for 1980-1984; and data from the HS&B Postsecondary Education Events file. Each file is provided in two formats: (1) a raw data file in EBCDIC character form with fixed length records; and (2) a Statistical Analysis System data set, which contains all the data found in the corresponding raw data file. In addition to numerous financial aid variables, the files cover selected student and family characteristics, high school and educational background information, and employment status variables. ## 1. INTRODUCTION TO THE FINANCIAL AID RECORDS SUPPLEMENT (FAS)

In the spring of 1980 the High School and Beyond (HS&B) base year survey collected data from about 28,000 seniors and about 30,000 sophomores in more than 1,000 secondary schools. Like its predecessor (the National Longitudinal Study of 1972) the High School and Beyond study was designed to inform federal and state policy through a series of comprehensive data collection efforts involving the same students over a number of years.

The Financial Aid Supplement (FAS) to the High School and Beyond study (HS&B) was designed to collect data concerning the receipt of postsecondary financial aid within the first four years after high school for selected members of the HS&B Senior Cohort. By 1984 the High School and Beyond senior cohort had been out of high school for four years and it was possible to collect data concerning their postsecondary student financial aid experience for the academic years 1980-81, 1981-82, 1982-83 and 1983-84.

Wherever possible, FAS collected financial aid data from four sources for each HS&B senior cohort member. First, each postsecondary school which the student reported attending on HS&B surveys was asked to provide financial aid information for the student for the period 1980-1984. Second, federal records of the Guaranteed Student Loan (GSL) Program covering the three years 1981-84 were searched for data on each student. Third, federal records of the Pell Grant Program covering the four years 1980-84 were searched for data on each student. Finally, yearly GSL disbursement data for the four years 1980-84 were requested from guarantee agencies participating in the Guaranteed Student Loan Program. The result of these FAS data collection efforts is a set of data files that are unique in terms of the data they contain about postsecondary student financial aid received by a sample of individual students.

It is important to remember that FAS data supplement the regular High School and Beyond survey data. This means that appropriate analytic use of the FAS data depends upon first understanding the HS&B study and sample design. This also means that FAS data users will generally want to link information contained in the FAS files to other information about the same students found in other HS&B files. The mechanics of this process are relatively simple since HS&B student ID numbers are used in the FAS files. But the determination of appropriate weights to be used when analyzing such linked files is not so simple. The FAS data files include weights suitable for use with various types of file linkages.

### 1.1 Overview

#### 1.1.1 The CES Longitudinal Studies Program

The mandate of the Center for Education Statistics (CES) includes the responsibility to "collect and disseminate statistics and other data related to education in the United States" and to "conduct and publish reports on specific analyses of the meaning and significance of such statistics" (Education Amendments of 1974 - Public Law 93-380, Title V, Section 501, amending Part A of the General Education Provisions Act).

Consistent with this mandate and in response to the need for policy-relevant, time-series data on nationally representative samples of high school students, CES instituted the National Education Longitudinal Studies (NELS) program, a continuing long-term project. The general aim of the NELS program is to study longitudinally the educational, vocational, and personal development of high school students and the personal, familial, social, institutional, and cultural factors that may affect that development.

The overall NELS program utilizes longitudinal, time-series data in two ways: (1) each cohort is surveyed at regular intervals over a span of years, and (2) comparable data are obtained from successive cohorts, permitting studies of trends relevant to educational and career development and societal roles. Thus far, the NELS program consists of two major studies: The National Longitudinal Study of the High School Class of 1972 (NLS-72) and High School and Beyond (HS&B). A third major study, to begin in 1988 and to continue throughout the decade of the 1990s, is currently being planned.

The first major study, NLS-72, began with the collection of comprehensive base-year survey data from approximately 19,000 high school seniors in the spring of 1972. The NLS-72 first follow-up survey added to the sample nearly 4,500 individuals who had been unable to participate at the time of the base year survey. Three more follow-up surveys were conducted in the fall and winter of 1974, 1976, and 1979, using a combination of mail surveys and personal and telephone interviews. The fifth follow-up survey took place during the spring of 1986.

The second major survey, HS&B, was designed to inform Federal and State policy in the decade of the 1980s. HS&B began in the spring of 1980 with the collection of base-year questionnaire and test data on over 58,000 high school seniors and sophomores. The first follow-up survey was conducted in the spring of 1982, the second follow-up survey in the spring of 1984, and the HS&B third follow-up survey in the spring of 1986.

The three survey cohorts (NLS-72 seniors and the HS&B seniors and sophomores) are displayed in Figure 1 according to their initial and subsequent survey years and their modal age at the time of each survey. As shown, the NLS-72 seniors were first surveyed in 1972 at age 18 and have been resurveyed four times since, with the last survey occurring in 1979 when these young adults were about 25 years of age. The HS&B cohorts have been surveyed at points in time that would permit as much comparison as possible with the time points selected for NLS-72. In particular, three types of comparison are possible.

First, the three cohorts may be compared on a time-lag basis (intercohort or intergenerational). For example, the high school seniors of 1972 and the high school seniors of 1980 and 1982 may be contrasted to determine changes over time in the composition, distribution and needs of high school seniors.

Second, fixed-time comparisons can be undertaken. For a given year, the data collection for each cohort can be viewed as a cross-sectional study. It is possible, for example, to compare employment rates in 1980 of 16- and 18-year-olds.

The third type of analysis is longitudinal (within cohort) and is designated in Figure 1 by the diagonal lines. Because the history of the age cohort can be taken into account and

modeled, analyses can be designed that isolate school and program effects from the effects of differential life experiences.

### 1.1.2 High School and Beyond and NLS-72

High School and Beyond was designed to build on the NLS-72 in three ways. First, the base year survey of HS&B included a 1980 cohort of high school seniors that was directly comparable with the 1972 cohort. Replication of selected 1972 student questionnaire items and test items made it possible to analyze changes that occurred subsequent to 1972 and their relationship to recent Federal policies and programs in education. Second, the introduction of a sophomore cohort provided data on the many critical educational and vocational choices made between the sophomore and senior years in high school, permitting a fuller understanding of the secondary school experience and its impact on students. Finally, HS&B expanded the NLS-72 focus by collecting data on a range of life cycle factors, such as family-formation behavior, intellectual development, and social participation.

## 1.2 HISTORY OF HIGH SCHOOL AND BEYOND

### 1.2.1 The Base Year Survey

The HS&B base year survey was conducted in the spring of 1980. The first stage sample was a highly stratified national probability sample of 1,122 secondary schools drawn from a frame of 24,725 schools having grades ten or twelve or both. Table 1 presents the number of schools sampled by strata.

Substitutions were made for schools that refused to participate in the survey. Substitutions were only made within strata, and no substitution was made if a school was the only member of its stratum (see the High School and Beyond Second Follow-up (1984) Sample Design Report for further sampling information). Table 2 presents the final school sample of 1,015 postsecondary schools after substitution.

In the second stage, 36 seniors and 36 sophomores were selected per school (in schools with fewer than 36 in either of these groups, all eligible students were included). Special efforts were made to identify those students within the sample who were twins or triplets so that their co-twins or co-triplets could be invited also to participate in the study. (Data from non-sampled twins and triplets are not included in the student data files, but are available in a separate Twin Data File which links questionnaire data for both sampled and non-sampled twins for special analyses.) Over 30,000 sophomores and 28,000 seniors enrolled in 1,015 public and private high schools across the country participated in the base year survey. (Detailed information about the samples can be found in the HS&B sample design report for the base year: Martin R. Frankel, Luane Kohnke, David Buonanno, and Roger Tourangeau, Sample Design Report, NORC, 1981.)

Certain types of schools were oversampled to make the sample more useful for policy analysis. These included:

- public schools with high percentages of Hispanic students to ensure sufficient numbers of Cuban, Puerto Rican and Mexican students for separate analysis

TABLE 1. High School and Beyond Base Year School Sample Allocation

Special Strata (oversampled)

Alternative public	50
Cuban public	20*
Cuban Catholic	10*
Other Hispanic public	106*
High performance private	12
Other non-Catholic private (stratified by four census regions)	38
Black Catholic	30*

Regular Strata (not oversampled)

Regular Catholic (stratified by four census regions)	48
Regular public (stratified by nine census divisions; racial composition; enrollment; central-city, suburban, rural)	808
	<hr/>
	1,122

\*These schools were defined as those having 30 percent or more of enrollment from the indicated subgroup.

TABLE 2. High School and Beyond Base Year School Sample Realization

<u>Stage 1: Sampling of Schools</u>				
<u>Stratum</u>	<u>Drawn in sample</u>	<u>Original schools*</u>	<u>Substituted schools</u>	<u>Total realized</u>
Regular public	808	585	150	735
Alternative public	50	41	4	45
Cuban public	20	11	--	11
Other Hispanic public	106	72	30	102
Regular Catholic	48	40	5	45

Cuban Catholic	10	7	2	9
High performance private	12	9	2	11
Other non-Catholic private	38	23	4	27
TOTAL	1,122	811	204	1,015

- Catholic schools with high percentages of minority group students
- alternative public schools
- private schools with high-achieving students

The Hispanic supplement to the sample was funded jointly by the Office of Bilingual Education and Minority Language Affairs (OBEMLA), and the Office for Civil Rights (OCR) within the Department of Education. An additional supplementary sample was drawn from students attending Department of Defense Dependents Schools (DoDDS) located overseas. DoDDS students are not included in the data tapes distributed by CES, however.

Survey instruments in the base year included:

- school questionnaire
- student identification pages
- sophomore questionnaire
- senior questionnaire
- a series of cognitive tests for each cohort
- teacher comment checklist
- parent questionnaire (mailed to a sample of parents from both cohorts)

The student questionnaires focused on individual and family background, high school experiences, work experiences, and plans for the future. The student identification pages included a series of items on the student's use, proficiency, and educational experiences with non-English languages, as well as information which would be useful in locating the students for future follow-up surveys. The cognitive tests measured both verbal and quantitative abilities. In addition, sophomore tests included achievement measures in science, writing, and civics, while seniors were asked to respond to tests measuring abstract and nonverbal abilities. Of the 194 test items administered to the HS&B senior cohort in the base year, 86 percent were identical to items which had been given to the NLS-72 base year respondents.

School questionnaires, which were filled out by an official in each participating school, provided information about enrollment, staff, educational programs, facilities and services, dropout rates, and special programs for handicapped and disadvantaged students. The Teacher Comment Checklist provided teacher observations on students participating in the survey. The Parent Questionnaire elicited information about how family attitudes and financial planning affected postsecondary educational goals.

### 1.2.2 The First Follow-Up Survey

The first follow-up sample consisted of approximately 30,000 1980 sophomores and 12,200 1980 seniors. It retained the multi-stage, stratified, and clustered design of the base year sample. All students who had been selected for inclusion in the base year survey, whether or not they actually participated, had a chance of being included in the first follow-up sample. Unequal probabilities were compensated by weighting. A subsample of 11,500 students was selected from among the senior cohort base year participants. This subsampling was carried out to ensure adequate analytic power to address policy issues in areas such as excellence in education, access to postsecondary education, need for financial aid, and the impact of education on career choices. A special sample of 495 students was selected from among those 1980 seniors who had been selected for inclusion in the base year survey but who had not actually participated.

The first follow-up survey also included all non-sampled co-twins (and triplets) who had been identified and surveyed during the base year, provided that the sampled twin was retained for the follow-up. However, non-sampled twins were not included in the probability sample and were not weighted. Their data appear only on a separate Twin Data File.

As in the base year survey, the Hispanic supplement to the first follow-up survey was supported by OBEMLA and OCR. In addition, the United States Army Recruiting Command (USARC) supported the retention in the first follow-up sample of 200 additional 1980 seniors who had moderate to high achievement scores but no plans for postsecondary education.

A first follow-up school questionnaire was requested of all schools selected in the base year (including those schools that had refused to participate), with the exception of schools that had no 1980 sophomores, that had closed, or that had merged with other schools in the sample. Schools that had received *en masse* transfers of students from base year schools were contacted to complete a first follow-up school questionnaire and to arrange student survey activities. These schools are not considered to be part of the probability sample of secondary schools and do not appear on the Updated School Data File. The first follow-up survey also included a sample of students from the Department of Defense Dependents Schools (DoDDS). DoDDS students were not part of the main probability sample and were not weighted.

Two special features of the senior cohort follow-up sample are worth noting here. First, 495 base year non-respondents were included to allow the estimation of nonresponse bias in base year data. Second, since fewer than half of the senior cohort were retained for the follow-up sample it was important to include sufficient numbers of students with characteristics relevant to education policy analyses. This was done by adjusting the sampling rates for these types of students. One especially important adjustment was the selection of 1,500 Hispanic students above the number that would have otherwise been included. This supplementary oversample allows more complex, detailed analysis of Hispanic students. The follow-up sample allocation is shown in Table 3.

In February 1982 each of the approximately 12,000 HS&B senior cohort members in the first follow-up sample was sent a self-administered mail-back questionnaire with instruction sheets and an incentive payment check. Approximately 75 percent of the questionnaires were completed and returned by mail. An additional 19 percent were completed by either in-person

**TABLE 3. High School and Beyond Senior Cohort Follow-up Sample Allocation**

<u>Subgroup</u>	<u>Number(a)</u>
<b>Base Year Participants</b>	
Hispanic (b)	
High Achievement (c)	659
Others	1841
Asian	554
American Indian	208
Black	
High Achievement (c)	554
Others	2446
White	
Low SES/High Achievement (d)	516
Other	4114
Missing Data (e)	400
All Others	208
Base Year Non-Participants	495
<b>TOTAL</b>	<b>11995</b>

(a) Includes USARC supplement. Total number of moderate to high achieving males with no college plans is 947.

(b) Includes Hispanic supplement of 1500 students.

(c) High achievement for Black and Hispanic students is defined as having a composite High School and Beyond test score above the weighted mean for the entire population.

(d) Among Whites, low SES is defined as the lowest quartile of the composite SES score distribution for the entire population. High Achievement is defined as a composite High School and Beyond test score in the highest quartile for the entire population.

(e) Cases in this row are Whites who are missing data on either the composite SES score or the composite High School and Beyond test score.

or telephone interviews. Follow-up interviewing was halted in mid-July 1982 after a response rate of 94 percent had been obtained.

For the senior cohort, a self-administered mail-back questionnaire was the basic method of data collection. Approximately 12,200 packets containing survey questionnaires, instruction sheets and incentive payment checks were sent to sample members during the first week of February 1982. Postcards with dual messages seeking a quick reply from nonrespondents and thanking early respondents for their cooperation were mailed during the third week following the initial mailout. Two weeks later, those who still had not responded were telephoned by trained telephone interviewers.

Approximately 75 percent of the targetted senior cohort members completed and returned first follow-up questionnaires by mail. An additional 19 percent completed the questionnaires by either in-person or telephone interviews. (A variable indicating the method of survey administration is included among in the first follow-up survey data file.) Respondents who completed the questionnaire via telephone interview were required to have a copy of the questionnaire in front of them while doing so, to keep their survey experience as similar as possible to that of the majority of respondents, who filled out the questionnaires themselves. Follow-up interviewing was halted in mid-July of 1982, after a response rate of 94 percent had been obtained.

### **1.2.3 The Second Follow-Up Survey**

The sample design for the second follow-up survey was the same as that used for the first follow-up. Survey activities were initiated for all individuals who had participated in the first follow-up except for eleven persons who were known to be deceased.

As in the first follow-up survey, mail-back questionnaires were again the basic method of data collection. During the first week of February 1984, approximately 12,000 packets of survey materials were mailed to the last known addresses of the sample members. Two weeks later, postcards thanking respondents for their cooperation and requesting the cooperation of nonrespondents were mailed to all sample members. Two weeks after the cards were sent, trained telephone interviewers called those who had still not responded and urged them to do so. When this failed, interviews were conducted by telephone or in person. Approximately 73 percent of the senior sample members mailed back their completed questionnaires; about 13 percent were interviewed by telephone; and about 5 percent were interviewed in person. As in the earlier follow-up, the survey design required that respondents who were to be interviewed over the telephone or in person have a copy of the questionnaire before them during the interview, to minimize bias due to the method of administration. Follow-up interviewing continued through July 1984, and resulted in a completion rate of over 91 percent.

### **1.3 ELIGIBILITY OF HS&B SENIOR COHORT MEMBERS FOR FAS**

All 11,995 members of the High School and Beyond Senior Cohort follow-up sample were eligible for inclusion in each of the FAS data collection efforts. However, whether a student was actually included in a particular FAS data collection effort depended upon the presence of certain essential information on the student. For the collection of records from a student's postsecondary institution(s) it was necessary to have a useable list of postsecondary

institution attended by the student from the first and/or second follow-up surveys. For the collection of GSL and Pell records it was necessary to have a social security number for the sample member.

The actual number of HS&B senior cohort follow-up sample members eligible for FAS data collection activities were as follows:

FAS ACTIVITY	Number
Request financial aid records from postsecondary schools attended by student (students who reported names of postsecondary schools)	7,776
Search GSL and Pell central records for financial aid disbursement to student (students who reported a social security number)	10,708
Request annual GSL disbursement amounts from GSL Guarantee Agencies covering student's home state, state(s) of postsecondary attendance, or state of driver's license (students who reported a social security number)	10,708

Eligibility was independently determined for each of these FAS activities. In other words, if a student did not report attending any postsecondary schools but did report a social security number, an attempt was made to find GSL and Pell records for that student. Likewise, if a student did not report a social security number but did report attending one or more postsecondary schools, school financial aid records were requested for that student by providing other identifying information to the school such as name and birth date.

#### 1.4 FINANCIAL AID SUPPLEMENT (FAS) DATA FILES

##### 1.4.1 Overview

Financial Aid Supplement data are contained in the following six data files:

1. **STUDENT SAMPLE FILE** containing data on the 11,995 individuals included in the HS&B Senior Cohort follow-up sample. Most of the data is copied from HS&B files and is relevant to "classifying" individuals into commonly used analytic categories (e.g. by race, sex, etc.);
2. **FINANCIAL AID RECORDS FILE** containing data from all identifiable postsecondary schools that students reported attending;

3. **GSL RECORD DUMP EXTRACT FILE** containing federal GSL "tapedump" records for three federal fiscal years 1982-1984, corresponding to the three academic years 1981-82, 1982-83 and 1983-84;
4. **PELL GRANT DISBURSEMENT FILE** containing data obtained from the Federal Pell Grant disbursement files for four fiscal years 1981-1984, corresponding to the four academic years 1981-82 through 1983-1984;
5. **GSL GUARANTEE AGENCY DISBURSEMENT FILE** containing GSL disbursement amounts reported by guarantee agencies participating in the GSL program, for the four academic years 1980-81, 1981-82, 1982-83, 1983-84;
6. **HS&B POSTSECONDARY EDUCATIONAL EVENTS FILE** containing information about spells of postsecondary attendance derived from HS&B survey files by the Center for Education Statistics.

Each record in each FAS data file is identified by HS&B student ID number to permit FAS data to be combined with other FAS data or with data from other HS&B files. In addition, each record on each FAS data file includes a "record flag" (variable name RECFLAG) that indicates the particular type of data contained on the record. Detailed descriptions of the contents and layouts of FAS data files are found in later chapters of this document.

#### **1.4.2 Format of FAS Data Files ("Raw" and "SAS")**

Each FAS data file is provided in two formats. One is a "raw data file" in EBCDIC character form with fixed length records (padded with blanks where appropriate). In these raw data files all numeric fields are right justified and all character fields are left justified. Missing data are indicated by a completely blank field. Column positions for all fields are specified in the FAS codebooks contained in later chapters of this document.

Each FAS file is also provided as a SAS (Statistical Analysis System) data set (produced with SAS version 8.4 on an IBM mainframe computer). Each SAS dataset contains all of the data found in the corresponding raw data file. Numeric variables are all stored in the SAS numeric 8 byte (double precision) format, and character variables are stored with the same number of characters as the field width in the raw data file. Numeric variables which are blank in the raw data file will have a SAS numeric missing value (.) in the SAS file. Character variables which are blank in the raw data file will have a SAS character missing value (blank) in the SAS data file.

#### **1.4.3 Number of Individuals and Number of Records in FAS Data Files**

Although all 11,995 HS&B Senior Cohort students were eligible for inclusion in the Financial Aid Supplement study, the actual number of students in a particular FAS data collection effort depended upon the availability of certain necessary information, such as name of postsecondary school attended, or social security number (see section 1.3 above).

Table 4 shows the number of HS&B Senior Cohort students represented in each of the FAS data files, along with the total number of records in each file.

**Table 4. Number of HS & B Senior Cohort Students and Records in FAS Data Files**

FAS Data File	Number of Students	Records Per Student	Total Records	
			Raw File	SAS File
Student Sample File	11,995	1	11,995	11,995
Financial Aid Records File	7,776	1 per postsec. school (SAS) >1 per postsec. school (RAW)	22,557	11,288
GSL Record Dump Extract File	2,421	1 per GSL record per student	6,267	6,267
Pell Grant Disbursement File	3,280	1 per Pell record per student	7,297	7,297
GSL Guarantee Agency Disbursement File	10,708	1	10,708	10,708
HS & B Postsecondary Educational Events File	11,995	1	11,995	11,995

#### 1.4.4 Consistency of Data Between FAS Data Files

The FAS data files include data obtained from the various sources without reconciliation of data between sources. This means that data obtained for a student from different sources, such as a GSL loan amount obtained from a GSL tapedump file and a GSL guarantee agency and a school financial aid office, may not agree with each other. Such disagreements could be caused by reporting error, differences in fiscal time periods being reported, missing information in source records, variations in definitions (e.g. loan amounts approved versus disbursed) etc.

The FAS data files have been constructed with the aim of accurately reporting information as it was obtained from the various sources. **NO ATTEMPT HAS BEEN MADE TO RECONCILE OR EDIT THE DATA IN ORDER TO GUARANTEE CONSISTENCY BETWEEN SOURCES.** Therefore, FAS data users are advised to give careful consideration to possible differences in data reported by multiple sources when formulating their analysis plans.

When constructing the FAS data files, some data were recoded into standardized form to facilitate analytic use of the files. Dates have been converted to a common format consisting of a two character year (YY), such as 84 for 1984, followed by a two character month (MM), such as 05 for May. This permits the proper sorting and comparison of dates without the user having to contend with the variety of formats in which dates were originally reported. For dollar amounts, cents have been dropped leaving only the whole dollar amount wherever this does not significantly affect values, such as in amounts of financial aid.

#### 1.5 FINANCIAL AID SUPPLEMENT (FAS) WEIGHTS

The purpose of weights is to allow estimation of population totals, within the margin of sampling error, from a sample. A "raw weight" is simply the inverse of the probability that an individual is selected into the sample from the population.

Where response rates are less than 100 percent an adjustment is made to the raw weight in order to compensate for the non-respondents. This adjustment inflates the weights of the respondents so that the sum of the adjusted weights for the respondents is equal to the sum of the raw weights for the entire sample. Three weights, adjusted for non-response, are provided with High School and Beyond data: FUIWT for first-followup respondents, FU2WT for second-followup respondents, and ALLWT for respondents to all three (base year, first follow-up, and second follow-up) surveys.

There is one FAS weight corresponding to each of these three High School and Beyond weights, as shown in Table 5. The FAS weights are based on the corresponding High School and Beyond weights by adjusting those weights for non-response on the Financial Aid Records Survey (FARS, see Chapter 3). Each of the HS&B weights listed in the first column of Table 5 was adjusted by the following method to produce a corresponding weight adjusted for FARS non-response:

- 1) The HS&B weights FU2WT, FUIWE, and ALLWT were obtained from HS&B data files for the 7,776 HS&B senior cohort students eligible for the Financial Aid Records Survey (i.e., those students reporting one or more postsecondary schools).
- 2) Students for whom at least one postsecondary school responded to the FARS data request were classified as "respondents." Students for whom no

**Table 5. Weights Provided in FAS Student Sample File**

FOR USE WITH DATA COMBINATION (see text)	UNIT NON-RESPONSE ADJUSTMENT	
	FOR HS&B ONLY(a)	FOR HS&B & FAS(b)
FAS and HS&B Second Follow-up	FU2WT	FARFU2WT
FAS and HS&B First Follow-up	FU1WT	FARFU1WT
FAS and HS&B Second Follow-up and HS&B First Follow-up and HS&B Base year	ALLWT	FARALLWT

(a) Obtained from HS&B data files.

(b) Corresponding weight in left-hand column adjusted for FAS non-response as discussed in text.

postsecondary school responded to the data request were classified as "non respondents."

- 3) Students were classified by sex, race, and "offering and control" (variable WTOFCON) of their postsecondary school(s). If a response was received from more than one postsecondary school for a student, then the "highest" value of WTOFCON was assigned to the student (pub 4 yr > pri 4 yr > pub 2 yr > other). A special WTOFCON category of "not enrolled" was assigned to students for whom the school(s) responded that the student had never been enrolled.
- 4) The sum of each HS&B weight was computed for each sex-race-WTOFCON category for all 7,776 students, and then for respondents only (7,273 students.) These sums are shown in Table 6. Within each category the ratio of the sums is the FARS non-response adjustment factor.
- 5) The FARS non-response adjustment factor was applied (multiplied) to the HS&B weights to create the weights FARFU1WT, FARFU2WT, and FARALLWT.

The values of the weights FARFU1WT, FARFU2WT, and FARALLWT are interpreted as follows:

**MISSING VALUE** = student was not a participant in the Financial Aid Records Survey (student did not report postsecondary school name).

**ZERO** = student was a non-respondent on one (or more) of the surveys relevant to this weight.

**NON-ZERO** = student was a respondent on all of the surveys relevant to this weight.

As indicated in Table 5, three combinations of FAS data with HS&B data are covered by the FAS weights. These are:

1. FAS data combined with data from the HS&B second follow-up survey,
2. FAS data combined with data from the HS&B first follow-up survey,
3. FAS data combined with data from the HS&B base year survey and the first follow-up survey and the second follow-up survey.

For example, to produce an estimate of the dollar amount of State scholarships received by field of study the analyst would merge the dollar amount from the FARS file with the field of study from the first follow-up file and use FARFU1WT as the weight since this analysis involves first follow-up data along with FARS data. Similarly, to produce the same estimate for the 1983-84 school year would require merging the appropriate field of study variable from the HS&B Second Follow-up data file with the State Scholarship amount for 1983-84 from the FARS file. The FARFU2WT would be used since second follow-up data are being used. In cases where data from more than one HS&B survey are merged with Financial Aid Supplement data, estimates should be produced using FARALLWT as the weight variable.

The three HS&B weights and the three FAS weight listed in Table 5 are included in the Financial Aid Supplement Student Sample File (see Chapter 2). These weights are not included in the other FAS files because of the difficulty of keeping track of multiple weights on multiple files when the files are merged with each other and with other HS&B files. To avoid such difficulties it is recommended that analysts first produce the merged file of data values from HS&B and FAS files, and then merge the appropriate weight or weights onto the analytic file from the FAS Student Sample File.

It should be remembered that the appropriate unit of analysis for HS&B data files and therefore FAS data files is the individual, not the high school, college or other institution. The studies are not designed to produce sufficient numbers of cases within individual institutions to permit reliable estimates at the institutional level.

In order to avoid unnecessary repetition, this discussion of FAS weighting is not reproduced in each introductory section in the following chapters. However, it applies to the use of all FAS files and analytic uses of FAS data in conjunction with HS&B files.

2.  
**HIGH SCHOOL AND BEYOND FINANCIAL AID SUPPLEMENT  
STUDENT SAMPLE FILE**

**2.1 Introduction**

**File Organization:** This file contains 11,995 records, one record for each student in the HS&B Senior Cohort Follow-up sample (see Chapter 1 for a description of this sample.)

**Variables.** The first variable on each record is the HS&B student ID. This variable can be used to combine data from this file with other FAS and HS&B files for senior cohort students.

The variable RECFLAG always contains the characters "A101."

The variables SEX through JOBSFE84 have been taken from the classification variable set produced from HS&B files by the Center for Education Statistics (see "High School and Beyond, How To Guide, Senior Cohort Follow-up Classification Variable Set," C. Dennis Carroll, Longitudinal Studies Branch, Center for Education Statistics).

The variable TWINFLAG indicates whether the student had a twin sibling. However, data on twin siblings are NOT included in FAS data files.

The variables FU1WT through GSLDFLAG includes the weights and weighting variables discussed in section 1.5 of this document. There are also four variables indicating whether the student is found in other FAS files (FARSFLAG, GSLFLAG, PELLFLAG, and GSLDFLAG).

**Sort Order.** The file is sorted by student ID (variable name ID).

**NOTE:** All frequencies reported in the codebook are UNWEIGHTED FREQUENCIES and are presented only for the purpose of introducing the content and structure of this FAS file. These unweighted frequencies should not be used for estimation or analysis purposes.

### 3. HIGH SCHOOL AND BEYOND FINANCIAL AID SUPPLEMENT FINANCIAL AID RECORDS SURVEY (FARS)

#### 3.1 Introduction

The Financial Aid Records Survey (FARS). A total of 7,776 members of the HS&B Senior Cohort reported in the first and/or second follow-up surveys that they attended some postsecondary school. This resulted in 11,360 school-student combinations covering 2,690 different postsecondary schools.

In late 1984 the 11,360 requests for information were sent to the 2,690 schools. The request included identifying information on the student and a two page form (see below) on which the school was asked to report financial aid amounts by academic year.

The responses to the requests were as follows:

RESPONSE CATEGORY	SCHOOLS	REQUESTS
School Completed Requests	2557	10574
School Responded that student was never enrolled		332
School Refused Participation	27	139
School Closed	18	30
Duplicate Requests		166
School Ineligible (not a postsecondary school)	52	72
School Non-response (includes 33 foreign schools)	36	47
TOTAL	2690	11360

Subtracting requests made to ineligible schools, there were 11,288 valid requests for financial aid information for the 7,776 students.

Upon receipt, the survey forms were scanned for completeness and accuracy. Mail and telephone follow-up procedures were used to reconcile apparent errors or omissions. Of the 7,776 students for whom one or more requests were made, one or more responses (survey forms) were received for 7,273 students.

**File Organization.** The FARS data file contains data for each of the 11,288 requests sent to postsecondary schools for the 7,776 students reporting postsecondary attendance.

The file is organized in a hierarchical or "nested" structure by student, with all requests made for that student contained on a "school header record." Following the school

header record is a record containing reported financial aid information for each year. Thus the file organization is:

School header record, representing a request for data from one postsecondary school for one student

School data record for 1980-81 financial aid data for the student - school combination represented by the preceding header record

School data record for 1981-82 financial aid data for the student - school combination represented by the preceding header record

School data record for 1982-83 financial aid data for the student - school combination represented by the preceding header record

School data record for 1983-84 financial aid data for the student - school combination represented by the preceding header record

In the raw version of the FARS data file there are 11,288 school header records. Each one is followed by none (if the school did not respond or reported no data) or more (up to four) school data records, one for each year for which data were reported. The variable RECFLAG (see codebook) identifies the type of record -- school header record, or school data record for a particular year. This variable in combination with the student ID number appearing on each record allows unique identification of a student-school combination in the data file.

In the SAS version of the FARS data file there are 11,288 records each of which includes all of the information from the school header record and variables for each of the four possible school data records. Where data was not reported for a given year, the variables all have missing values for that year on the SAS file.

It is recommended that users process the SAS file since this contains all of the data contained in the raw file, but in a simpler format.

**Variables.** The first variable on each record is the HS&B student ID. This variable can be used to combine data from this file with other FAS and HS&B files for senior cohort students.

In the raw version of this file, the variable RECFLAG allows identification of the school header record and the corresponding school data records for each financial aid request (survey form) made for each student. The precise values of this variable are documented in the codebook.

In the SAS version of this file, the variable RECFLAG has the same values as on the school header records in the raw data file. This identifies the financial aid data request (survey form) as the first, second, etc. for a particular student.

In both the raw and SAS files, the combination of student ID and RECFLAG can be used to locate data for a particular data request for a particular student.

The variable QIA is used to determine the response category for the data request for the student. A value of 3 on this variable indicates that school data records appear in the raw data file. In the SAS file, a value of 3 on variable QIA indicates that the variables for one or more years will have non-missing values.

To facilitate analysis, a set of institutional variables (HP79V13 through H85V25) are included on the school header record. These variables were not obtained through the FARS survey, but were merged onto the file from a file of HEGIS and PSVD survey variables created by the Center for Education Statistics (see "High School and Beyond Analysis File, HEGIS and Postsecondary Career School Survey Files for Merging with HS&B FICE Codes, Base-year through Second Follow-up," C. Dennis Carroll, Longitudinal Studies Branch, Center for Education Statistics). All of these variables begin with the letter "H" to signify their origin in the HEGIS (or PSVD) data files.

**HIGH SCHOOL AND BEYOND FINANCIAL AID RECORDS SUPPLEMENT  
GSL RECORD DUMP EXTRACT FILE**

**4.1 Introduction**

This file consists of all records extracted from the federal GSL "tapedump" files containing cumulative GSL loan amounts and other information for the fiscal years FY 1982, FY 1983, and FY 1984. The files for FY 1981 are incomplete and record extraction was not performed for that year.

Following the codebook are from the federal GSL program office instructions to the GSL guarantee agencies the records to the "tapedump" system. Once they are submitted the records are of basic quality and sorted and merged into a single set of tapes (about 12 million records for 1984).

This "tapedump" system is NOT a controlled accounting system and there are many known problems with the data. Users who are unfamiliar with the GSL tapedump system should use other FAS files to obtain GSL loan amounts.

**U.S. DEPARTMENT OF EDUCATION  
STATE GUARANTY AGENCY  
LOAN GUARANTY MASTER RECORD DUMP PROCEDURES**

**RECORD EXTRACT REQUIREMENTS**

Each State Guaranty Agency is required to provide the U.S. Department of Education a total tape dump from their loan guaranty master file on a semi-annual basis. One cumulative record per student borrower will be required on the tape extract except where the student secured a loan from more than one lending institution. In this case, one cumulative record for the student borrower per individual originating lender or current holder will be required on the tape.

ONLY LOAN GUARANTY DATA SINCE NOVEMBER 8, 1965 SHOULD BE SUBMITTED.

One cumulative record for a student borrower will be required to reflect the loan showing the originating lender as well as the current holder. Therefore, whenever the original lender and current holder differ where the student has more than one loan and the originating lender and current holder are not the same for all loans, multiple cumulative records will have to be generated to properly reflect each group of loans per originating lender and current holder.

**MULTIPLE RECORD CREATION REQUIREMENTS**

Where loans are made by more than one originating lender or where loans are currently held by different lenders, more than one record must be submitted to the U.S. Department of Education to properly reflect the student's account. The following examples are provided to ensure everyone uses the same guidelines in determining how many records must be submitted for a specific student borrower.

**EXAMPLE A.**

GUARANTY AGENCY DATA ORIGINATING LENDER	CURRENT HOLDER	AMOUNT
A	A	\$1,500
A	A	\$1,500
A	A	2,000
A	A	2,500

In this case, one record would be submitted for a total amount of \$7,500 at Originating Lender A and Current Holder A.

**EXAMPLE B.**

GUARANTY AGENCY DATA ORIGINATING LENDER	CURRENT HOLDER	AMOUNT
A	B	\$1,500
A	B	\$1,500
A	B	2,000
A	B	2,500

In this case, one record would be submitted for a total amount of \$7,500 at Originating Lender A and Current Holder B.

**EXAMPLE C.**

GUARANTY AGENCY DATA ORIGINATING LENDER	CURRENT HOLDER	AMOUNT
A	B	\$1,500
A	B	\$1,500
B	B	2,000
B	B	2,500

In this case, one record would be submitted for a total amount of \$3,000 at Originating Lender A and Current Holder B and one record would be submitted for a total loan amount of \$4,500 at Originating Lender B and Current Holder B.

EXAMPLE D.

GUARANTY AGENCY DATA ORIGINATING LENDER	CURRENT HOLDER	AMOUNT
A	D	\$1,500
B	D	\$1,500
C	D	2,000
D	D	2,500

In this case, four records will be submitted as follows:

One record for a total loan amount of \$1,500 at Originating Lender A and Current Holder D.

One record for a total loan amount of \$1,500 at Originating Lender B and Current Holder D.

One record for a total loan amount of \$2,000 at Originating Lender C and Current Holder D.

One record for a total amount of \$2,500 at Originating Lender D and Current Holder D.

INDIVIDUAL FIELD DESCRIPTIONS  
AGENCY CODE

One of the following valid three-position all numeric State Guaranty Agency Codes or Non-Profit Agency Codes must be contained as the first three positions of every record on the tape extract. Agencies or organizations providing computer services for more than one State Guaranty Agency may place all records onto one computer tape extract as long as each record contains the proper agency code.

**STUDENT'S STATE OF RESIDENCY**

The two-position alphabetic state of residency code must be placed within positions 49 and 50 on each output record. This state of residency code should be the one obtained from the student's latest application for a state guaranty loan.

The purpose of this data is to identify students receiving loans as non-residents from the individual state guaranty agency rather than simply identifying the student's mailing address. Therefore, if the student is a resident of the state providing the guaranty, that individual state's code should be used in all cases even though the student's mailing address may be for a different state. For a student given a loan by an individual state guaranty agency as a non-resident student, the code within this item should reflect the student's permanent resident's address. If the state guaranty agency's data files do not contain the student's state of residency, leave this file blank on the output tape.

When the Department of Education consolidates the state guaranty agency computer tapes and the data found within this field is not valid as defined above, blanks will be inserted within this field to ensure consistency of data on the consolidated records for the Department of Education.

The following represents the valid codes for each state:

<u>Code</u>	<u>State</u>
AL	Alabama
AK	Alaska
AZ	Arizona
AR	Arkansas
CA	California
CZ	Canal Zone
CO	Colorado
CT	Connecticut
DE	Delaware
DC	District of Columbia
FL	Florida
GA	Georgia
GU	Guam
HI	Hawaii
ID	Idaho
IL	Illinois
IN	Indiana
IA	Iowa
KS	Kansas
KY	Kentucky
LA	Louisiana
ME	Maine
MD	Maryland
MA	Massachusetts
MI	Michigan
MN	Minnesota
MS	Mississippi
MO	Missouri
MT	Montana
NE	Nebraska
NV	Nevada
NH	New Hampshire
NJ	New Jersey
NM	New Mexico
NY	New York
NC	North Carolina
ND	North Dakota
OH	Ohio
OK	Oklahoma
OR	Oregon
PA	Pennsylvania
PR	Puerto Rico
RI	Rhode Island
SC	South Carolina
SD	South Dakota
TN	Tennessee
TX	Texas
TT	Trust Territories
UT	Utah
VT	Vermont
VI	Virgin Islands
VA	Virginia
WA	Washington
WV	West Virginia
WI	Wisconsin
WY	Wyoming

#### CURRENT ACADEMIC YEAR

The student's current academic year must be inserted into record position 57 on the output tape record. This should always reflect the student's most recent academic year. If the state guaranty agency data files do not contain the student's most recent academic year, insert a zero into this field.

The following represents the valid codes that must be submitted by the guaranty agency for this item. If necessary, the guaranty agency must convert their existing codes to conform to the following list of valid codes on the tape extract.

- 1 = first year - freshman
- 2 = second year - sophomore
- 3 = third year - junior
- 4 = fourth year - senior
- 5 = fifth year undergraduate
- 6 = graduate/professional
- 7 = other
- 9 = correspondence

When the Department of Education consolidates the state guaranty agency computer tapes and the data found within this field is not valid as defined above, a zero will be inserted within this field to ensure consistency of data on the consolidated records for the Department of Education.

#### ANTICIPATED GRADUATION DATE

The student's anticipated graduation date must be entered as a four-position all numeric field into positions 58 through 61 on the output record. If the state guaranty agency data files do not contain the student's anticipated graduation date, all zeros must be inserted within this field.

This data must be submitted in month and year format with the month being the numeric interpretation 01 through 12 and the year being all numeric data.

When the Department of Education consolidates the state guaranty agency computer tapes and the data found within this field is not valid as defined above, zeros will be inserted within this field to ensure consistency of data on the consolidated records for the Department of Education.

#### ENROLLMENT STATUS

The student's most recent enrollment status must be submitted as a two-position alphabetic code in the record positions 62 and 63. If the state guaranty agency's data file does not contain a valid enrollment status code, this field must be left blank.

One of the following valid codes must be submitted. If necessary, the guaranty agency must convert their existing codes to conform to one of the following codes.

- FT = full-time
- HT = half-time
- NE = never enrolled
- GR = graduated
- WD = withdrawn or enrolled less than half-time

When the Department of Education consolidates the state guaranty agency computer tapes and the data found within this field is not valid as defined above, blanks will be inserted within this field to ensure consistency of data on the consolidated records for the Department of Education.

#### DATE OF LAST ENROLLMENT

The six position all-numeric interpretation of the date the student was last enrolled must be placed within record positions 64 through 69 on the output tape. This date reflects the date the "out-of-school" condition started and will only be provided when the student is no longer enrolled in an approved institution on at least a half-time basis. If the state guaranty agency data file does not contain the date of last enrollment, all zeros must be placed within this field on the output tape.

This data must be supplied in month/day/year format. The month must be 01 through 12; the day must be 01 through 31; and the year must be all numeric and not greater than the year the tape extract is being produced.

Since the majority of the state guaranty agency data files only contain the month and year portion of this date, in supplying this data to the U.S. Department of Education on this extract tape, "01" may be assumed for the day portion of the field.

When the Department of Education consolidates the state guaranty agency computer tapes and the data found within this field is not valid as defined above, zeros will be inserted within this field to ensure consistency of data on the consolidated records for the Department of Education.

#### ORIGINATING DE LENDER CODE

The six position all numeric DE lender code for the originating lender of the loan must be placed within record positions 70 through 75 on the output tape. The valid lender codes of the U.S. Department of Education are 800000 through 899999. This code must reflect the original lender of the loan who may not necessarily be the current holder of the loan. If the state guaranty agency data file does not contain the originating DE lender code and the valid code cannot be properly generated, all zeros must be inserted within this field.

In the case of a bank merger, the DE Lender Code of the surviving bank will become the code of the originating lender.

THIS IS A CRITICAL ITEM FOR THE U.S. DEPARTMENT OF EDUCATION AND EVERY ATTEMPT MUST BE MADE BY THE STATE GUARANTY AGENCY TO PROVIDE THIS DATA.

When the Department of Education consolidates the state guaranty agency computer tapes and the data found within this field is not valid as defined above, zeros will be inserted within this field to ensure consistency of data on the consolidated records for the Department of Education.

#### CURRENT HOLDER DE LENDER CODE

The DE lender code of the current holder of the loan must be inserted within record positions 76 through 81 as a six-position all numeric data field on the output record. The valid lender code for the U.S. Department of Education are 800000 through 899999. This code must represent the current holder of the student's loan and may be the same as the originating DE lender code placed within positions 70 through 75. If the state guaranty agency data file does not contain the current holder DE lender code and the valid code cannot be properly generated, all zeros must be inserted within this field.

THIS IS A CRITICAL ITEM FOR THE U.S. DEPARTMENT OF EDUCATION AND EVERY ATTEMPT MUST BE MADE BY THE STATE GUARANTY AGENCY TO PROVIDE THIS DATA.

When the Department of Education consolidates the state guaranty agency computer tapes and the data found within this field is not valid as defined above, zeros will be inserted within this field to ensure consistency of data on the consolidated records for the Department of Education.

#### BEGINNING PERIOD OF LOAN OR THE DATE OF LAST APPROVAL

The four-position all numeric interpretation of the month and year of the beginning period of the loan must be placed within record positions 82 through 85 on the output tape. If the state guaranty agency data file does not contain the month and year of the beginning period of the loan, the proper numeric interpretation of the month and year portion of the date of last loan approval must be placed within this field. If the state guaranty agency data file does not contain either the beginning period of the loan or the date of last approval, all zeros must be placed within this field on the output tape.

This data must be supplied in month and year format. The month must be 01 through 12 and the year must be all numeric data and not greater than one year after the year the tape extract is being produced.

The information placed within this field must be representative of the last loan the student received at the originating lender indicated by the DE lender code placed within this record. Remember, more than one record will be generated for a student if more than one lender originated loans for the student.

When the Department of Education consolidates the state guaranty agency computer tapes and the data found within this field is not valid as defined above, zeros will be inserted within this field to ensure consistency of data on the consolidated records for the Department of Education.

#### ENDING PERIOD OF LOAN

The four-position all numeric interpretation of the month and year of the ending period of the loan must be placed within record positions 86 through 89 on the output tape. If the state guaranty agency data file does not contain the ending period of the loan, all zeros must be placed within this field on the output tape.

This data must be supplied in month and year format. The month must be 01 through 12 and the year must be all numeric data.

The data contained within this field must be representative of the latest loan received at the lender indicated by the originating DE lender code placed within the same record. Remember, more than one record per student will be generated for each originating lender.

#### TOTAL AMOUNT APPROVED FOR ACADEMIC YEAR

The total amount of the loan approved (dollars only) for the most recent academic year at the lender indicated by the originating DE lender code within this record must be placed within record positions 90 through 94 on the output tape. If the state guaranty agency data file does not contain the total amount approved for the academic year for the specific originating lender, all zeros must be placed within this field on the output tape.

#### CUMULATIVE AMOUNT APPROVED

The cumulative amount of the loans approved at the originating lender and held by the current holder of the loans must be placed within record positions 95 through 99 on the output tape. Whole dollars only are to be contained within this data field. If the state guaranty agency data file does not contain the cumulative amount approved for the originating lender represented within the tape, all zeros must be placed within this field on the output tape.

#### CUMULATIVE AMOUNT DISBURSED TO STUDENT

The cumulative amount disbursed to student at the originating lender and held by the current holder of the loans must be placed within record positions 100 through 104 on the output tape. Whole dollars only are to be contained within this data field. If the state guaranty agency data file does not contain cumulative amount disbursed to student for the originating lender represented within the tape, all blanks must be placed within this field on the output tape.

Zeros placed within this item would indicate a cancellation of the total commitment amount.

#### STATUS OF MOST RECENT LOAN

The most recent loan status of the student's account must be inserted into record positions 105 and 106 on the output tape record. This must reflect the most recent loan status for the student as indicated by the current holder of the loan. If the guaranty agency data files do not contain the student's most recent loan status, blanks must be inserted within this field.

The following represents the valid codes that must be submitted by the guaranty agency for this item. If necessary, the guaranty agency must convert their existing codes to conform to one of the following valid codes on the tape extract.

ID = In school or grace  
RP = In repayment  
PF = Paid in full  
DF = Defaulted  
DD = Death  
DI = Disability  
BK = Bankruptcy  
DA = Deferred

When the Department of Education consolidates the state guaranty agency computer tapes and the data found within this field is not valid as defined above, blanks will be inserted within this field to ensure consistency of data on the consolidated records for the Department of Education.

#### MOST RECENT LOAN STATUS DATE

The four-position month and year numeric interpretation of the most recent loan status must be placed within record positions 107 through 110 on the output tape record. If the state guaranty agency data file does not contain the most recent loan status date, all zeros must be placed within this field on the output tape.

If the status of the most recent loan has been indicated as either in-school or in-grace, the date to be provided would be the date of the commitment for the most recent loan provided to the student. If the student's account is either reported as in-repayment or paid-in-full, the date would represent the effective date of that individual status. If the student's record has been reported as in default for either a normal default, death, disability, or bankruptcy, the date to be provided would be the date the loan was purchased from the lending institution. If the status of the loan is reported as in deferment, the date to be reported will be the starting date of the student's deferment.

This data must be supplied in month and year format. The month must be 01 through 12 and the year must be all numeric and not greater than year the tape extract is being produced.

When the Department of Education consolidates the state guaranty agency computer tapes and the data found within this field is not valid as defined above, zeros will be inserted within this field to ensure consistency of data on the consolidated records for the Department of Education.

#### ADJUSTED GROSS INCOME (AGI)

The adjusted gross income amount (dollars only) for the most recent academic year at the lender indicated by the originating lender code within this record must be placed within record positions 111 through 115 on the output tape.

If the state guaranty agency data file does not contain this data blanks must be placed within this field on the output tape.

#### EXPECTED FAMILY CONTRIBUTION (EFC)

The expected family contribution amount (dollars only) for the most recent academic year at the lender indicated by the originating lender code within this record must be placed within record positions 116 through 120 on the output tape.

If the state guaranty agency data file does not contain this data, blanks must be placed within this field on the output tape.

#### DEPENDENT/INDEPENDENT STATUS

The student's dependent/independent status for the most recent academic year at the lender indicated by the originating lender code within this record must be inserted into record position 121 on the output tape record. If the state guaranty agency data file does not contain the student's dependent/ independent status, a blank must be inserted within this field.

The following represents the valid codes that must be submitted by the guaranty agency for this item. If necessary, the guaranty agency must convert their existing codes to one of the following valid codes on the tape extract.

- D = Dependent Student
- I = Independent Student

When the Department of Education consolidates the state guaranty agency computer tapes and the data found within this field is not valid as defined above, a blank will be inserted within this field to ensure consistency of data on the consolidated records for the Department of Education.

5.  
**HIGH SCHOOL AND BEYOND FINANCIAL AID RECORDS SUPPLEMENT  
PELL GRANT DISBURSEMENT FILE**

**5.1 Introduction**

The Pell Grant program is an entitlement grant program by which federal funds are disbursed to qualified students after needs assessment. The Pell Grant processing flow is complex, but usually involves a student working through a financial aid office at a postsecondary school. Funds are usually disbursed through the school which operates the program with federal funds. In about ten percent of Pell grants the student works directly with the federal program to obtain the grant. In all cases a record is kept in the federal Pell grant disbursement file for each grantee.

For the 10,708 FAS sample students with social security numbers, a search in the approximately 3 million Pell grant records in the federal file for each of the years 1980-81, 1981-82, 1982-83, and 1983-84. All records found were extracted and selected data are included in this file. A total of 7,297 Pell records matching 3,280 FAS sample students were found.

There is one record in the file for each record extracted from the federal Pell files. The record type indicator also allows for up to two Pell grant records from the federal file per year, although it is rare for there to be more than one record per student per year due to Pell accounting procedures.

6.  
**HIGH SCHOOL AND BEYOND FINANCIAL AID SUPPLEMENT  
GSL GUARANTEE AGENCY DISBURSEMENT FILE**

**6.1 Introduction**

The Guaranteed Student Loan Program involves private and public lenders, usually private banks, making loans to individual students within limits set by GSL rules and legislation. The loans are then guaranteed to the lender by the GSL program, and an interest subsidy is paid to the lender from the date of execution of the loan.

GSL Guarantee agencies, sometimes called GSL "state" agencies, stand between the ultimate GSL lenders and the federal GSL program office. These agencies handle administrative and financial affairs relating to GSL loans in their geographic areas, usually states. Each agency has files containing information about all GSL borrowers taking out loans from all lenders serviced by the agency.

In December of 1985 a list of all 10,708 members of the FAS sample having social security numbers was used to request annual GSL disbursements made to the sample members for the academic years 1980-81, 1981-82, 1982-83 and 1983-84. The eleven largest guarantee agencies (California, Florida, Illinois, Massachusetts, New Jersey, New York, Ohio, Pennsylvania, Texas, Higher Education Assistance Fund (HEAF), and United Student Aid Fund (USAF)) were asked to report all known disbursements in these years to the sample students. Other agencies were sent lists of those students who had either attended school, had a permanent home address, or attended school in the state covered by the guarantee agency. Requests for data were sent to as many different agencies as different locations reported by the student.

The table on the following page shows the number of requests for data sent, and the number received, from the guarantee agencies. Only two of the total number of agencies serving the continental U.S. refused participation -- Arkansas and Louisiana. All other states were covered either by a state-specific guarantee agency or by one of the two multi-state agencies, USAF and HEAF. Although several agencies were asked for information on a number of students, and the relevant agencies were asked for information on all students, the maximum number of agencies providing data for any one student was two. Thus, the data file consists of one record for each of the 10,708 students for whom requests were made, and allows for four years' data per agency on the record.

Table 18. Number of Requests for Data Sent and the Number Received From the Guarantee Agencies

AGENCY	SENT	RECEIVED
Alabama	171	16

**HIGH SCHOOL AND BEYOND FINANCIAL AID SUPPLEMENT  
HS&B POSTSECONDARY EDUCATIONAL EVENTS FILE**

**7.1 Introduction**

This file consists of variables created at the Center for Education Statistics by C. Dennis Carroll for the purpose of identifying which postsecondary school students attended in various time periods. ("High School and Beyond Analysis File, Postsecondary Educational Events Reported by 1980 High School Seniors: 1980-1984," C. Dennis Carroll, Longitudinal Studies Branch, Center for Statistics.) This file is included here for the convenience of FARS data file users who may want to use school ID's in this file to select information from the FARS Postsecondary school financial aid records survey file in order to obtain financial aid data for various spells of attendance.
