ABSTRACT

The Illinois State Board of Education contracted with Eastern Illinois University to survey the local school districts and identify the operating models of programs to assist and support beginning teachers and to ascertain what innovative activities were occurring. Specifically the questionnaire addressed the following areas: (1) demographic characteristics of the responding districts; (2) programs introducing beginning teachers to district policies, guidelines, and/or expectations; (3) whether the information was provided on teaching strategies/instructional processes; and (4) whether the district had a formal program for beginning teachers. A total of 598 school districts responded to the questionnaire. Results indicated that there are very few beginning teacher induction programs in Illinois, if such programs are assumed to include not only orientation of beginning teachers to district policies and practices, but also provision of information about instructional strategies and the instructional process in a manner especially accommodated to beginning teachers. Materials sent by the few programs available consisted of one-page orientation day agendas, support activities, and consulting agreements. Programs varied widely by formality, number of times implemented, materials used, and content. Appendices present the questionnaire, a summary of responses, a list of school districts with special group instructions for beginning teachers, and excerpts of district materials for such programs. (CB)

SURVEY OF ILLINOIS INITIAL YEAR OF TEACHING PROGRAMS

Introduction

In 1985 the Illinois General Assembly passed a body of legislation known as the Education Reform Act of 1985. Among its many provisions was a mandate to the Illinois State Board of Education (ISBE) to conduct a review and study of the initial year of teaching with a view to designing "a program to provide support and assist in the orientation of individuals in their initial year of teaching." The ISBE contracted with Eastern Illinois University to survey the local school districts of Illinois in order to identify operating models of such programs and ascertain what innovative activities were occurring in this area.

<u>Methodology</u>

A questionnaire was constructed by a research team and field tested with a group of selected school district superintendents. Specifically, the questionnaire was designed to address the following areas:

a) demographic characteristics of the responding districts; b) whether there was a program in place for introducing beginning teachers to policies, guidelines, and/or expectations of the district; c) whether the district provided information on teaching strategies/instructional process for the beginning teachers; and d) whether the district had a formal program specifically tailored to help the beginning teacher. The questionnaire was revised on the basis of these superintendents' suggestions and was mailed on August 1, 1986, to the 994 regular operating districts in the state, as well as to the Department of Corrections district and to Illinois' one non-operating district (no responses were received from these latter two districts and it was decided not to include

them in the survey population). Respondents were instructed to return the questionnaires by August 15. As of the final cut-off date of August 25, usable returns had been received from 598 of the 994 regular operating This resulted in a return rate of 60%. The responding districts were generally representative of the types and enrollment sizes of the districts in Illinois (see Tables 1 & 2). There was a slight over-representation of secondary districts and medium size districts (3,000 to 12,000) and a slight under-representation of large districts (12,000 and above). The return profile was generally similar to that of a recent ISBE study which used an almost identical population (School District Response to Senate Joint Resolution No. 25). Further, a chi square test for goodness of fit failed to show any significant difference in the obtained return rates and the expected return rates (chi square = 9.628; df = 6; p < .05).

Findings

The following descriptive narrative will not report percentages of non-respondents of these non-respondents are less than 5% of the total. If the non-respondents comprise 5% or more of the total, they will be reported. In the following narrative, responses may sometimes total more than 100% due to rounding.

The urban/suburban/rural character of the responding districts is presented in Table 3. Of the responding districts, 6% were urban, 33% were suburban, and 61% were rural.

TABLE 3
Urban/Suburban/Rural Distribution of Responding Districts

Location of District	Number Districts	Percent of Total
Urban	34	6
Suburban	198	33
Rural	361	61
No Response	5	en en en

The numbers of beginning teachers per district are reported in Table 4. Of the districts responding, 23% had no beginning teachers during the last academic year, 24% had 1 beginning teacher, 13% had 2 beginning teachers, 18% had 3-4 beginning teachers, 12% had 5-10 beginning teachers, 8% had 11-30 beginning teachers, and 2% had more than 30 beginning teachers. Over 60% of the respondent districts reported two or fewer beginning teachers. This finding might be expected when the distribution of districts by enrollment is examined (see Table 2), since 59% of the districts had rather small enrollments (i.e., less than 1,000).

TABLE 4

5-10	70	12
11-30	44	8
More than 30	14	2
No Response	14	

When asked whether beginning teachers were given information on procedures, guidelines, and/or expectations of the school districts, 94% of the responding districts said that they were, while 6% said that they were not (see Table 5).

TABLE 5

Beginning Teachers Given Information
On Procedures/Guidelines/Expectations

338	58
69	12
180	31
11	
	338 69 180

When asked if the district had a formal program to assist beginning teachers, 22% said yes, 72% said no, and 5% failed to respond to this item (see Table 7).

The previous three questions might seem to be overlapping, but they were in fact designed to discriminate among discrete factors involved in the assistance and support of beginning teachers.

TABLE 7

Does The District Have A Formal Program
To Assist Beginning Teachers?

	Number Districts	Percent of Total
Yes	134	22
No	433	72
No Response	31	5

When asked who should have responsibility for a formal program to assist beginning teachers, 12% responded that it should be a college/university, 63% said the local district, 2% said the state, 11% said "other" (which was usually specified to indicate a combination of the previously offered choices - most often a combination of a college/university and the local district), 4% said such a program was unnecessary, 7% failed to respond (see Table 8).

TABLE 8

Program Not Necessary	24	4
No Response	43	7

Of the 558 respondents indicating that their beginning teachers were given information on procedures, guidelines, and/or expectations of the school district, 28% indicated that this was done once a year, 7% said it was done twice a year, 11% said it was done monthly, 2% said weekly, 1% said daily, 44% said it was done on an as-needed basis, and 7% responded "other." Frequently those responding "other" specified this as being done more often earlier in the year with a tapering off later in the year. There was a 7% no-response to this item. As to

who does this instruction, 15% indicated that it was done by the superintendent, 33% said the principal, 3% said some other administrator, 1% said a department chair, and 47% indicated some combination of the previous choices. The context for this instruction was reported as: 28% one-on-one, 27% small group, 3% large group. Forty-two percent responded 'other' and indicated that a combination of one-on-one, small group, and large group was employed. The place where this was done 74% in the assigned school building, 16% in the district office, and 10% "other." Again, this was usually specified to mean in a combination of both the assigned school building and the district office. In 93% of the cases, the provider of this information was not additionally compensated. Respondents frequently commented that this was considered as part of the provider's regular duties. In 95% of the cases, the beginning teacher was not additionally compensated. In 70% of the cases, there was no evaluation of this activity made by the provider. of the cases, there was no evaluation of the activity made by the recipient beginning teacher.

and and the state of the state of

Of greatest interest in this survey were those districts who responded that they gave beginning teachers information on procedures, guidelines, and/or expectations of the district (question #5), who also indicated that they had a formal program to assist beginning teachers (question #25), and who additionally indicated that they formally gave information to beginning teachers about teaching strategies and the instructional process in a group devoted exclusively to beginning teachers (question #146). The last consideration was thought important discriminator in identifying a true initial year of teaching program, since responses that beginning teachers were given information about instructional strategies in a setting that included non-beginning teachers

might well indicate that such instruction was simply part of the regular in-service staff development routinely provided to all teachers in the district.

Returns for the 25 districts which had a concurrence of the abovementioned three factors (providing information on district policies, having a formal assistance program, and providing separate instruction for beginning teachers on teaching strategies/instructional process) were examined. A profile emerged indicating that this type of district tends to be a suburban elementary district with an enrollment of between 1,000 and 3,000 (see Tables 9, 10, and 11). This does not mean, however, that elementary districts are more likely to have this type of program than are secondary districts - only 5% of all responding elementary districts reported having such a program, while 9% of all responding secondary districts reported having one. However, since there are many more elementary districts than secondary ones, if a three-factor assistance program exists it is likely to be in an elementary district. The range of numbers of beginning teachers in the 25 districts with this type of program is, surprisingly, quite broad (see Table 12). Also, perhaps contrary to expectations, approximately 56% of the districts having an initial year of teaching program have 4 or fewer beginning teachers.

Topics included in the above-cited 25 districts' assistance programs are indicated as follows: discipline - 22 yes, 2 no, 1 unsure; instructional planning - 25 yes; student relationships - 25 yes; professional relationships-17 yes, 3 no, 5 unsure; and stress management - 10 yes, 11 no, 4 unsure (see Table 13). Likelihood of inclusion of these topics is similar to the national pattern (as reported in Eastern Illinois University's Survey of State Initial Year of Teaching Programs, 1986), except that the Illinois programs are slightly less likely to include discipline and somewhat more likely to include student relationships.

TABLE 13
Topics Included In Initial Year Of Teaching Programs

	Number Responding		
Topic	Yes	No	Unsure
Discipline	22	2	1
Instructional Planning	25	-	••
Student Relationships	25		-
Professional Relationships	17	3	5
Stress Management	10	11	4

Information on the above topics in the 25 districts is provided by the following personnel: principal 9, other administrator 3, assigned "helping" teacher 2, a combination of the above 9, and "other" 2.

Providers of information on the above topics in these districts are not additionally compensated in 22 of the cases. In 1 of the cases, they receive extra pay. And in 2 of the cases compensation was reported as "other."

Beginning teachers in these districts are not additionally compensated in 23 of the cases. In the remaining two cases they receive released time.

The provider does not evaluate effectiveness of provision of information on the above-cited topics in these districts in 14 of the cases. In 7 of the cases evaluation is completed by the provider through a rating form and in 3 of the cases it is done orally. Some "other" method of provider evaluation was reported in 1 of the cases.

The beginning teacher does not formally evaluate the effectiveness

of the provision of information on the above-cited topics in 16 of the cases. In 6 of the cases it is evaluated through a rating form. In 1 of the cases it is done orally. Some "other" method of evaluation by the beginning teacher was reported in 2 of the cases.

Responding to the question of whether the provider received specialized training for the assignment of providing this information, the 25 districts indicated 18 yes (4 yes, with the special training being provided within the assigned school building; 5 yes, with the special training being provided at a district workshop; 9 yes, with the special training being provided in some other manner [specification comments indicated that this was usually through some combination of the previous choices]). No specialized training was reported by 6. There was 1 no response (see Table 14).

TABLE 14

Did The Provider In Initial Year Of Teaching Programs
Receive Specialized Training And Where Was This Training Received?

Where Training Was Received	Number Districts	Percent of Total
Yes, Within School Building	4	17
Yes, At District Workshop	5	21
Yes, On College/University Campus	0	-
Yes, Other Manner	9	38
No Specialized Training Received	6	25
No Response	1	

Of the 25 districts reporting the existence of a three-factor program (positive response to questions 5, 14b, and 25), 3 indicated that the

major emphasis of the program was assessment (providing evaluation of the beginning teacher), I indicated that it was remediation (providing corrective measures for deficient performance), and 17 indicated that it was support (providing general assistance not involving remediation). An additional 4 of the respondents left the item blank or indicated some combination of the above choices. This latter response was similar to that of 41% of states with initial year of teaching programs in Eastern Illinois University's Survey of States Initial Year of Teaching Programs where these states refused to make a forced choice of only one of the above emphases.

When asked if their program was individualized according to the specialized needs of each beginning teacher, 19 or the 25 districts said that it was, 4 said that it was not, and 2 did not respond.

When asked for an opinion on whose responsibility a formal program to assist beginning teachers should be, 23 of the 25 districts responded that it should be the local district's responsibility. One district responded "other," adding the comment that it should be the responsibility of a combination of the choices provided in the question. There was 1 no response.

To improve the likelihood of response, information on program budget and program evaluation was not sought on the initial questionnaire. However, a follow-up questionnaire was sent to the 25 districts who indicated that they had a three-factor program. Seventeen usable responses were received. Among these 17 districts, the average number of beginning teachers last year was 5.4.

Of these 17 districts responding to the follow-up questionnaire, only seven could provide a budget figure for their program. The beginning teacher program budgets for these seven districts are listed here, with

the number of beginning teachers in the district listed immediately after the budget figure: \$37,000/7, \$1,000/12, \$1,000/8, \$600/5, \$500/4, \$300/3, and \$100/3. Because of the disparity between the first set of these figures and the remaining six, an average would not be a meaningful figure. The ten districts which did not supply a budget figure indicated that costs were mostly indirect and/or that they could not be quantified. A random telephone check of the districts which had indicated that they had a formal program - although perhaps not possessing all three of the above-cited factors - indicated that in none of the contacted cases could a budget figure be estimated.

The 17 districts responding to the follow-up questionnaire were asked a question concerning methods used to evaluate the effectiveness of their program components. Their responses to this question varied widely. Some indicated that they used improvement in beginning teacher performance as an index of program effectiveness. Instruments reported as being used were classroom observations, surveys, and written and oral reports.

A final question on the follow-up questionnaire asked if the components of the district's beginning teacher program had proven to be effective. All 17 respondents replied in the affirmative.

Conclusion

There are very few initial year of teaching programs in Illinois at present, if such programs are taken to include not only orientation of beginning teachers to district policies and practices, but also provision of information about instructional strategies and the instructional process in a manner especially accommodated to beginning teachers (i.e., apart from in-service programs intended for all teachers).

Only 4% of the respondent districts in this survey had such programs.

In those cases in which respondents indicated that they had a formal assistance program, they were requested to send materials relating to it along with their completed questionnaire. Only ten such submissions were received in the 598 questionnaires returned. Three of these submissions were simply one-page orientation-day agendas for new teachers. other submissions indicated support activity such university/district program for educators new to a position (although not necessarily new to the field of teachig), a board/education association agreement to appoint a consulting employee to help an employee on probation, and a district plan for staff appraisal. Four other districts, however, did submit materials which were exemplary for a true initial year of teaching program. These districts were Eimhurst School District 205, Highland Park Township High School District 113, Tinley Park Community Consolidated School District 146, and Adlai E. Stevenson District 125. Excerpts of materials from these four districts may be found in Appendix D.

EASTERN ILLINOIS UNIVERSITY

CHARLESTON, ILLINOIS 61920

College of Education

July 30, 1986

Dear Illinois School District Superintendent:

Acting in response to the Education Reform Act of 1985, the Illinois State Board of Education has commissioned Eastern Illinois University to survey all Illinois school districts. The purpose of this survey is to learn what is presently being done in the districts to assist beginning teachers in making the transition from pre-service preparation to the responsibilities of the initial year of teaching.

We would sincerely appreciate five minutes of your time in responding to the enclosed questionnaire concerning activities in your district. Kindly blacken the appropriate circles with a #2 pencil. If spaces on the questionnaire are not large enough to contain any alternative choice specifications, feel free to enclose an extra sheet extending your comments. Moreover, if your district is doing anything innovative in regard to providing assistance and support to beginning teachers, please describe these activities on a separate sheet and return it with the questionnaire.

The data gathered in this survey will be an important resource in making state policy recommendations regarding teacher induction. Your assistance in providing this data is appreciated.

Please mail the questionnaire in the enclosed business reply envelope by August 15. Questions and clarifications regarding the questionnaire may be directed to Robert Barger at (217) 581-5931 or (217) 345-5949.

Very truly yours,

Robert N. Barger, Ph.D.

4.	How many individuals teaching in your district	in the 1	985-86 555-

4. How many individuals teaching in your district in the 1985-86 school year were beginning teachers (exclude substitutes and aides and include only those who were new to the field of professional teaching)?

a.	0	N	ક
ь.		136	23
c.		139	23
_	3-4	74	12
	5-10	107	18
	11-30	70	12
		44	8
9.	More than 30	14	2
	No Response	14	-

Are beginning teachers formally given information on procedures, guidelines and/or expectations of the school district?

a. yes (if yes, answer questions 6-13)	N	%
b. no (if no, go to question 14)	558	94
No Response	35	6

NOTE: Percentages reported are based upon those answering the item when the number of missing responses was less than 5% of the total responding. If the number of missing responses to a particular item was greater than 5% of the total number of respondents, then the percentages are based upon the total number of respondents.

Note: for questions six through 13 the responses are based upon those districts where question five was answered 'yes'.

I

INTRODUCTION

The basic design of the program is for an outstanding experienced District 205 teacher to work with each new teacher or approved veteran teacher requesting a Mentor. The Teaching Mentor continues in a full-time regular teaching position. Both the Protege and the Teaching Mentor will be involved in orientation work which goes beyond the normal administrative kind of orientation. The Teaching Mentor will be responsible for both assisting the Protege with questions and issues raised by the Protege, as well as providing leadership to make the Protege aware of current concepts, materials, practices, and methodologies in their area.

Teaching Mentors have an opportunity to instill confidence, focus, perspective, and a working knowledge that will help Proteges develop self—direction and a sound instructional decision making process. The opportunity for Teaching Mentors to be creative and resourceful also exists and is encouraged. The ultimate purpose of the Teaching Mentor Program is to enhance the instruction that takes place in the District through the help and advice which can be provided by peer.

The Teaching Mentor Program also provides an opportunity for experienced staff members to grow professionally and advance their career by sharing their talents and expertise with other staff members.

ΙI

MENTORING - A DEFINITION

Teaching Mentors are well regarded, competent people who serve as teachers, advisors, counselors, models and sponsors for an associate, but the relationship is broader than any one or the total of these. It is an enabling role that transcends just teaching or counseling or modeling. Teaching Mentors act in ways toward the Protege that facilitates the latter's career development and/or academic advancement.

Successful Teaching Mentors:

- understand that true mentoring is a process that usually takes several
 months or longer to develop.
- know that a successful mentoring relationship must be based on professional relations that foster the growth of mutual respect.
- usually take the initiative in establishing a mentoring relationship, but realize that true mentoring develops out of a mutual self-selection
- 4. are available to Proteges when they need them; they serve as confidantes, offer advice, counsel and moral support at critical times and show respect for Protege's ideas

- believe in their Proteges and help them to understand themselves; they are caring, compassionate and generous people.
- model desired behaviors for Proteges; they are personal and professional exemplars which the Proteges can admire and emulate.
- 7. are concerned with helping Proteges develop their own abilities; they strive to enhance the Protege's skills and intellectual development and, in the process, achieve personal growth themselves.
- teach Proteges organizational and administrative skills and help them develop other competencies that enhance their success as teachers.
- 9. induct new teachers into the profession by acquainting Proteges with the values, customs, and participants in the profession; they show proteges "the ropes" and provide assistance in climbing the success ladder.

III

MAJOR TEACHING MENTOR TASKS

Teaching Mentors will work with Proteges in a variety of areas. Among the most important tasks are helping the Protege:

- 1. become oriented to the District and the specific assignment.
- 2. develop lesson planning skills.
- become aware of current concepts, materials, and methodologies in practice in their area.
- 4. learn goals and procedures of District #205.
- become aware of procedures and resources for special needs students in District #205.
- learn to function effectively with routines of teaching such as grading, taking role, checking out equipment, etc.
- learn to use instructional procedures and techniques that lead to successful teaching.
- 8. develop creative approaches to teaching.
- 9. learn to effectively manage instructional and planning time.
- learn to effectively manage physical facilities of the classroom, shop,
 gym, etc.
- 11. learn to effectively manage student behavior.
- 12. develop confidence in his/her own ideas and abilities as a teacher and a person.

- improve self-evaluation techniques by seeking out and responding to feedback.
- 14. develop a professional relationship with the Teaching Mentor that is characterized by mutual trust and respect.
- 15. gain acceptance and respect from administrators and colleagues in the building and/or the District.
- 16. develop greater pride in and respect for the profession.
- 17. acquire useful information about the community.

In addition, Teaching Mentors may want to plan activities to demonstrate appropriate classroom teaching techniques. This could include coordinating a visit to another teacher's classroom or demonstration lessons by the Teaching Mentor. Teaching Mentors may also want to visit the Protege's classroom while instruction is taking place.

IV

TEACHING MENTOR PROGRAM DEVELOPMENT

In addition to working with the Protege on the major tasks listed in the previous section, Teaching Mentors will communicate with the Protege's supervisor and assist with the development of the overall District 205 Teaching Mentor Program.

- Meetings of all Teaching Mentors will be called where problem solving and development of and planning for the District Teaching Mentor Program will take place.
- Committees of Teaching Mentors may be found to address a particular topic that relates to the Teaching Mentor Program.
- 3. Teaching Mentors should develop an outline and timeline identifying specific topics that will be presented and discussed with the Protege. This will be used for program planning. Some of these topics may be identified after working with the Protege to determine interests and needs. Other topics should be reviewed regardless of the Protege's level of expertise.
- 4. Teaching Mentors should plan to communicate with the Protege's Principal or Department Chairperson. The purpose of such meetings will be for the Teaching Mentor to share his/her general plans for working with the Protege and to solicit ideas and input from the Protege's supervisor.

V

TIME COMMITMENT

Being a Teaching Mentor demands additional time on the part of the Teaching Mentor and the Protege. The following points address the time commitment:

- 1. Teaching Mentors working with teachers new to the profession will be expected to work one week beyond the normal school year as well as spending additional time providing day-to-day assistance to the Protege during one entire school year. Proteges will be expected to work this time as well.
- 2. Teaching Mentors working with veteran District 205 teachers or teachers new to the District with professional experience elsewhere will be expected to work two days beyond the normal school year as well as spending additional time providing day-to-day assistance to the Protege during one entire school year. Proteges will be expected to work this time as well.
- 3. Teaching Mentors will be given released time, if requested, not to exceed the equivalent of two days during each grading period. Communication with the Mentor's Principal and the Protege's Principal is necessary in this situation. If a substitute is required the usual procedure should be followed.
- 4. Teaching Mentors are charged with setting meetings and establishing lines of communication with the Protege. Such meetings may be before or after school, at lunch time, during the evening, on weekends, during vacation periods, at the conclusion of the school year, etc. Such meetings should not interfere with the teaching responsibilities of the Teaching Mentor and Protege.

VI

TEACHING MENTORS AND SUPERVISION

This section addresses supervision as it relates to Teaching Mentors and Proteges:

- Teaching Mentors are not supervisors or evaluators of Proteges and as such must maintain certain confidences. The Teaching Mentor Program is completely separate from the Teacher Evaluation Program.
- Teaching Mentors and the Protege's evaluator should maintain a colleagial relationship. The Protege's evaluator is not the Teaching Mentor's supervisor.
- Dr. Jean Cameron, Director of Instruction, is the District Coordinator of the Teaching Mentor Program and supervises the work of all Teaching Mentors.
- 4. In the role of District Coordinator of the marshing

VIII

HIGHLIGHTS OF TOPICS THAT MAY BE TIME-SPECIFIC

This list is intended to highlight some topics that may best be addressed at a particular time in the year.

I. SUMMER

- Introduction to Curriculum
- B. Introduction to Planning
- C. Introduction to Building

II. FALL

- A. Open House
- B. Report Cards
- C. Parent Contact/Conferences
- D. IOWA Testing
- E. P.E.P.
- F. Reading Record Cards
- G. I.E.P.
- H. Competency Testing
- I. Plan for first semester exams (High School)

III. WINTER

- A. Young Authors
- B. Junior Great Books
- C. CAP
- D. Spelling Bee
- E. Failure Analysis Forms
- F. Optional Parent Conferences G. Incomplete Grade Forms
- H. Recommendations for Next Years Courses

IV. SPRING

- A. Plan for second semester final exams (High School)
- B. Retention Information
- C. Annual Reviews
- D. Evaluation Procedures
- Evaluation Procedures
 Cummulative Record Polders

LIST OF 1985-86 TEACHING MENTORS

Seventeen staff members served as Teaching Mentors during the 1985-86 school year. Since they have experienced the Mentor roll, they would be happy to be of assistance to others who wish to know more about the Program.

David Aggen James Jarvis Roxane Komar William Leensvaart William Sir Owen Wrzeszcz	York High York High York High York High York High York High	Math Department Social Studies Department Foreign Language Department Math Department Physical Education Department Math Department

The second section of the second seco

The Supervisory Process

Goal:

All activities of the supervisory process aim at the improvement of instruction.

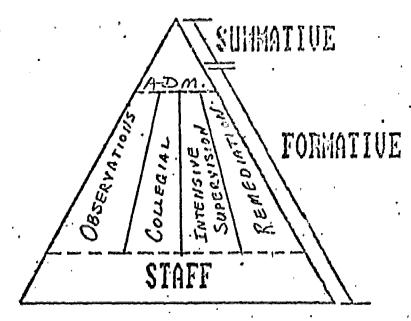

Formative:

is that part of the supervisory activity that lists strengths and weaknesses with suggestions for eliminating the weaknesses (e.g. observations with feedback).

Summative:

is that part of the supervisory activity that assesses the staff member's progress in building strengths and eliminating weaknesses (e.g. final evaluations).

IMPROVEHENT OF INSTRUCTION

Any of the formative programs addresses the goal of improving instruction by different means. Observations by administrators note the teacher's performance based on specific criteria. Collegial teams of two or more also work to this end, but in a mode perhaps more appealing to the participants. The summative assessment remains a solely administrative responsibility. The following pages delineate the collegial process and its relationship to the supervisory process.

Collegial Improvement of Instruction

The efficacy of peer tutoring has long been proven through research and personal experience. Working on the same principles as peer tutoring, collegial grouping is a way of organizing small groups of teachers to engage in professional growth. Collegial groups of varying size may be organized for varying purposes. Teachers may create groups of four to five fellow teachers to follow the clinical supervision model of pre-observation, observation and post-observation conference. A tandem or mentoring group might be created between two or more professionals to work on a single problem, as well as the informal exchange of ideas and problems needed to be solved that take place regularly among teachers. Support for each other is readily available with all parties benefiting. Collegial grouping is a viable practice for peers to improve instruction through formative assessment.

Through mutual exchange, colleagues share their experiences, techniques and material designs from their reportoires of tested strategies. In addition, the knowledge that each one has, either from his experience or from additional training, can be exchanged with his/her peers in terms of the specifics of learning theory or sequence in specific disciplines and the science of teaching. This exchange, of course, allows for fuller understanding of the concepts such as those listed as the district criteria. Joubert's statement about "To teach is to learn twice" is applicable in this situation. Since colleagues help each other implement the concepts and practices that are connected with the science and art of teaching, professional growth is imminent as a result of the sharing experiences between knowledgeable professionals.

Commentary on the improvement of instruction from an on-the-firing-line colleague, both positive and negative, is meaningful to the teacher who is being observed. . A knowledgeable colleague can also point out the strengths and weaknesses of a teacher relative to the science of teaching. Noted strengths can continue to be used or further developed through the comments of a collegial observer. Weaknesses, once identified, will probably be given a host of remedies from the experiences of those participating in the consultation. Through continued observation and the suggested remedies, the weaknesses will be eventually remediated with a resultant improvement of instruction.

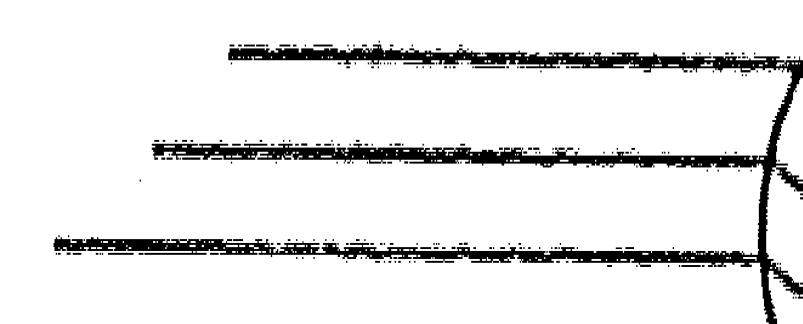

Collegial groups, however, are concerned with the formative aspect of the improvement of instruction program known as supervision. summative assessment remains the responsibility of the assigned The responsible supervisory capacity, both formative and supervisor. summative, and collegial groupings do not, however, need to be at Collegial associations work in the formative mode and the designated supervisor works both in the formative and summative modes. During the formative period, the emphasis is on making the strengths of the teachers performance even stronger and remediating weaknesses (formal and informal observations, conferences, workshops, inservice and institutes); in the summative period, the emphasis is on assessment of what the teacher has and has not accomplished (final evaluation). In this schematic, the role of a collegial association is ancillary and auxiliary to that of the supervisor in that both work toward the improvement of instruction. The formative aspect and the collegial association may aid the supervisor in helping a teacher improve. The supervisor may even suggest a collegial association with another teacher who is particularly expert in the area where the teacher needs help.

Those teachers in any given department who are a part of a collegial association could share the plans for the collegial work with the appropriate supervisor in the form of personal goals which report strengths and weaknesses as found by the collegial team through independent observations. The supervisor should ascertain through observation how well objectives are being met and gather the necessary data for the final evaluation for which she is accountable. The supervisor may also be involved and made aware of what is transpiring in collegial work through informal conferences with the participants, if such is desired. The supervisor, however, writes the summative assessment from his/her own observation and conferences.

Supervisors can also contribute to the creation of any teams that are organized within departments or areas of the program. Probationary teachers and teachers on intensive supervision might be referred to a colleague or colleagues for support and help. Participants in a collegial group should be peers in the sense of peers who are of the same ability, interests and motives. A collegial group should be constituted for the primary purpose for which supervision exists; namely, the improvement of instruction. To this end, collegial teams might be constructed for many reasons, ranging from the full clinical supervision model to teams or groups that are created to work on specific instructional skills or to work in research/planning activities. Some members of the team need to be knowledgeable about the matters which will be covered in the consultation observations and feedback sessions. A supervisor could provide valuable resource in establishing these groups.

Collegial groups as ancillary and auxiliary to formative supervision are an excellent device for improving instruction. By writing personal performance objectives pertinent to instructional improvement, participating in peer observation and feedback sessions and the sharing of teaching experiences and increase knowledge, collegial groups can add immensely to the improvement of instruction. Since all professionals are concerned with the delivery of the best instruction possible for the students entrusted to our care, supervisors, teachers, members of collegial consultation groups and support services and resources need to work cooperatively to this end.

ABB/dj

- c) By May 1 the staff member will present his or her Director with a written self-evaluation.
- d) By June 1 the Director will discuss his or her summative evaluation with the teacher.

THE MENTOR TEACHER PROGRAM

During the 1985-86 school year we will pilot the mentor teacher program. Mentor teachers will go through a training program to enable them to conduct an observation cycle (i.e. pre-conference, observation and post-conference). During the first month of the school year these mentors will complete an observation cycle with teachers in their departments who are new to Stevenson. This cycle will be completed prior to any formal observation by a Director or Principal.

The program is intended to

- 1) give new teachers a non-threatening introduction to the Stevenson evaluation system prior to the initiation of the formal observation,
- 2) give new teachers an opportunity to receive suggestions on their teaching prior to formal observation, and
- 3) promote interactions between new and veteran teachers.

At the conclusion of the program we will evaluate its effectiveness by polling both new teachers and mentor teachers. If the program is continued beyond this year, we will establish a system to ensure the periodic rotation of mentor teachers.

SUMMARY OF PACKET CONTENT

This packet provides an overview of Stevenson's evaluation process and a very brief summary of research findings on effective teaching. The Appendix includes articles on topics related to effective teaching. You are encouraged to add to this Appendix whenever you find a relevant article. As we share these articles we will gradually develop a common library on the topic.
