ABSTRACT

Information is provided on the Vocational English as a Second Language (VESL) component of Oakton Community College's Project BEST (Building Energy Systems Technology), a bilingual vocational training program designed to teach limited English proficient students of Polish or Hispanic origin the basics of heating, refrigeration, and air conditioning in order to enable graduates to obtain entry-level jobs in the field. After part I describes Project BEST, part II provides a description of the VESL component of the program, highlighting its emphasis on spoken, job-related English. Part III offers suggestions and warns of pitfalls in incorporating technical English into instruction, while part IV provides an overview of the VESL curriculum, which focuses on the grammatical forms that students would be most likely to use on the job. Part V describes the program's VESL competency list and sheets, while part VI offers a profile of the students and details their progress. Part VII offers a curriculum and program evaluation. I..e final sections contain the Project REST Vocational Competency List, part I, part II provides a the Project BEST VESL Competency List, VESL competency sheets and instructional materials, quizzes, and a bibliography. (EJV)

I. Program Description and Purpose of Document

Project BEST (Building Energy Systems Technology) is a bilingual vocational training program funded by a federal grant from the Office of Bilingual Vocational Education, U.S. Department of Education. The program began in March, 1986 at Cakton Community College at the Des Plaines, Illinois campus. Training is tuition-free, and is offered through MONNACEP, Oakton College's adult continuing education program. In Project BEST, limited English proficient (LEP) students learn the basics of heating, refrigeration and air conditioning. The ultimate goal of training is to enable graduates to obtain entry level jobs in this vocational field. In addition to practical hands-on training, students receive intensive vocational English as a Second Language instruction. The program also offers support services such as bilingual tutoring, personal counseling and help in both finding and retaining a job. This type of comprehensive approach to vocational aducation for the limited English proficient individual is based on a model known as bilingual vocational training, or simply "BVT".

The purpose of this document is to provide insight into the Vocational English as a Second Language (VESL) component of the program. (For further information on the general structure and workings of the program, refer to the Project BEST Program and Curriculum Overview).

II. Description of VESL Component

The VESL component is an essential part of the vocational program because our students are non-native English speakers. Although there are bilingual tutors to assist the students in understanding the technical aspects of training, the English language class is taught only in English. Many of the students have studied English in their native countries or have lived in the United States for years. They have good listening comprehension skills; they can understand most everything spoken to them. However, most are sorely lacking in their production skills—their ability to reply and to initiate speech in English. Consequently, the VESL curriculum which we have developed emphasizes active participation and production in English. This does not mean that we ignore essential reading and writing skills, for they too are taught, but the emphasis of our program is on spoken English.

More specifically, since it is a <u>vocational</u> English as a Second

Language program, the emphasis of the curriculum is to teach English which would be used on the job. This basically entails two aspects. One aspect of the curriculum includes the general language skills needed for getting and maintaining most jobs, e.g., how to request information, how to ask for clarification, and how to greet and talk to customers, co-workers, and supervisors. The other aspect of the curriculum is more job specific, i.e., the technical English one would need to know if working in the field of heating and air conditioning. It is an exciting program in that we are actually teaching our students English which directly applies to the kind of work which they are pursuing. Instead of having them identify chalkboards and erasers and other classroom objects, for example, they identify tools and parts of systems. The program is very practically oriented.

III. Incorporating Technical English into Instruction

To help the VESL instructor in the teaching of the job-specific competencies, the VESL instructor in our program attends the vocational instruction component for one hour each day. In this way, the instructor becomes at least somewhat familiar with the material and vocabulary being taught in the lab. In addition, the VESL instructor goes over the lab textbook reading assignments with the students to help them work through the more difficult English structures in their text, which was not written for ESL students. The VESL class is actually held right in the lab itself, making for easy reference to tools and equipment mentioned in the textbook or by the lab instructor. All of these things help the VESL instructor to incorporate some of the technical terminology into the English language instruction.

Sometimes, however, having a basic technical knowledge of the content area can pose some problems for the VESL instructor. An inherent difficulty is incorporating the technical English into the language instruction without actually teaching the technical content. Sometimes the two seem inseparable. For example, the instructor may want the students to practice the structure "used for" and wants to make it relevant to what the students are learning in the lab or from their textbook. So the instructor asks the question, "What is this tool used for?" He/she has a specific answer in mind based on the textbook readings or what was previously taught in the lab. If the student answers even slightly differently than expected, the teacher is at a loss because of a lack of knowledge in the technical content area. The VESL instructor has inadvertently put him/herself in the position of

teaching the technical content which he/she is not expected to know or teach. A brief discussion then takes place with other students offering answers or explanations. Eventually, the lab instructor must be consulted for the correct answer(s) to the question. In short, a simple practice exercise using a particular grammatical structure can turn into something much more complicated. VESL instructors must always be aware of exactly what kind of information they are soliciting from their students. When a variety of answers is possible, it is helpful for everyone involved if the instructor puts parameters on those answers by specifying the source from which those answers can be derived, such as by prefacing questions with, "According to page _____ of your textbook,...". This will help to minimize the "technical difficulties" VESL instructors can get themselves into.

IV. General Overview of the VESL Curriculum

The curriculum itself is primarily functionally based as opposed to grammatically or situationally based. Our goal is to incorporate the grammatical forms the students would most use on the job. Sometimes a review of basic grammar is a prerequisite to the teaching/practicing of these forms. Thus, although an attempt has been made to incorporate as many grammatical structures as possible, the curriculum is not grammatically comprehensive. Moreover, the grammatical structures listed in this VESL Curriculum are not necessarily introduced in a sequence of increasing difficulty. The competencies as well as their accompanying grammatical forms are to be used as a reference and guide for other VESL instructors to pick and choose as is appropriate for

their programs. It is left to the discretion of the VESL instructor which competencies and grammatical forms to emphasize and in what order.

Ideas for the general vocational ESL competencies listed in this curriculum were partially derived from various VESL texts (of which there is not an abundance), for instance, Speaking Up At Work. The VESL competencies which are more job specific are considered necessary for training and work in the heating, refrigeration and air conditioning field. The specific Project BEST vocational competencies (see pages 14-15) were formulated by the program lab instructor and project coordinator on the basis of a refrigeration lab manual which was specifically developed for this program by Allen Gandy from Kalamazoo Valley Community College, Kalamazoo, Michigan.

V. Description of VESL Competency List and Sheets

Included in this VESL curriculum is a listing of the Project BEST VESL competencies (pp.16-18). Each competency is the focus of a "competency sheet" which offers information relevant to the teaching of that competency. As seen on the first competency sheet, particular grammatical and language forms correspond to the competency to be taught. These appear under the section heading "Grammatical/Language Forms". The next section, "Language Samples", provides examples of these grammatical/language forms. The language samples are actually mini-dialogs including a host of speakers: students, instructors, workers, supervisors, receptionists. The point of the language samples is to provide a meaningful context in which the grammatical/language forms can be presented. The language samples are, as their label

indicates, merely samples and are to be used and manipulated as best benefits the class. The next section on the competency sheets is "Related Language Items". These include points such as the socio-cultural aspects of the language. For instance, under the competency "Introduce self and others", other aspects to take into consideration aside from the grammar/language forms are handshaking customs, order of introduction, and differences in register. These are things which a native speaker may take for granted as common knowledge but may be unknown to the non-native speaker.

The next section on each competency sheet is called "Suggested Activities". These include activities such as group and pair practice using dialogs, substitution drills and flash cards. Role playing, for example, is a well-liked activity because of its spontaneous and realistic nature. The student may or may not play himself in the role play. Role plays are especially useful when practicing interviewing techniques. Demonstrations are another way of getting students actively involved in the language learning process. Students demonstrate a particular procedure and explain each step along the way what they are doing and why. "Strip Stories" are also beneficial in helping students remember and verbalize steps in a procedure. This activity can be done as a whole class or in smaller groups. Each student receives between one and three strips of paper, each indicating a particular step to a procedure. The students must orally discuss among themselves the sequence of the steps without showing each other their strips. Once they have decided on a sequence, they are then allowed to lay the strips down, read the steps, and make any necessary adjustments. Everyone gets involved and has fun in the process. The "Suggested Activities" section

is to be seen as a springboard for VESL instructors in developing their own activities. Finally, references to worksheets with reading and writing exercises are also included in this section. The actual worksheets and instructional materials follow the competency sheets.

Some review worksheets are found at the end of competency groups.

The last item on the competency sheets is called "Resources".

Listed are students textbooks and workbooks, instructional texts for teachers, and booklets which might be helpful to the VESL instructor in preparing lesson plans. It is by no means a complete list.

In summary, the VESL curriculum and the suggestions offered in it have been designed to be an aid to VESL instructors, especially in the field of heating, refrigeration and air conditioning. We hope it will serve that purpose.

VI. Student Profile, Progress and Evaluation

The students in our program are of Polish or Hispanic origin. They have ranged from 18 to 59 years of age. Many of the students have full-time or part-time jobs in the evening as well as other responsibilities to their own families. These responsibilities are in addition to their 9:00 a.m. to 3:00 p.m. vocational training schedule here at Oakton College. For several, it is the first time they have been back in school for years. They are indeed what is commonly referred to as "non-traditional students".

ESL instructors who are accustomed to working with a more academic type student and program must make the necessary adjustments to adequately serve this unique student population. These adjustments include realizing that for the most part additional study outside of the classroom is limited, that school is generally not the students first priority, and that for some, being in school after a long absence is an intimidating experience.

ESL instructors must realize that they are now VESL instructors and that the emphasis of the English language instruction is no longer on academic English but rather on vocational English. In a like manner, the methods used for evaluating and assessing the students' progress will also be different in a vocational program than in an academic one.

Before entrance into the program, students are screened for their English language abilities. We try to limit the program to students of intermediate level because they must be able to understand the basic vocational material when it is presented in English. Despite our screening attempts, students' abilities in the English language

invariably differ. They have ranged from high beginning to high intermediate level upon entry. Moreover, not only do the students vary in their English language competency, but because each student is unique in his/her abilities, experience, and background, individual st dents will vary in how much and how quickly they assimilate the material presented. Consequently, we try to incorporate as much as possible an individual learning approach in our teaching methods.

In our progressive as well as overall evaluation of our students an individualistic approach is also taken. This does not mean that there are not general requirements to be fulfilled by all students, but rather that the goal of the program is to help students progress to a higher level in their English language abilities. For each student that progress will look a little different because each starts at a different point. For that reason we do not give out letter grades throughout the course or in the final analysis. The course is pass/fail. The student passes if he/she has made a sincere effort to learn and has completed all the course requirements (attendance, classroom participation, homework, quizzes, and exams). Weekly quizzes are given over the fifteen week period to help the students evaluate their own progress. It is exciting to observe the slow but consistent progress of a student who starts out on the first quiz with a score of 35% and gradually improves throughout the course, ending up with a 61% on the last quiz. Has that studen+ failed because his final score is low? In our estimation, he has not failed; he has progressed significantly.

The VESL and lab instructors are also required to evaluate students' progress on a quarterly basis. Every four weeks an evaluation form is filled out for each student regarding their class performance

and overall progress. Ratings for progress include good, satisfactory, needs improvement, and unacceptable. These evaluation forms are useful in that they make clear to the instructors, tutors, and administrative staff which students are having difficulty and need special attention. It is a tremendous aid for the counselor in advising the student and finding out what the root of the problem is.

VII Curriculum and Program Evaluation

The evaluation of the curriculum and program is a constant process. As the instructors work with the students and get feedback from them, they discover new areas to teach or emphasize. The VESL instructor and lab instructor are also constantly exchanging information and helping each other to make modifications in the material they present to the students. To illustrate, the lab instructor might tell the VESL instructor which points in the reading assignments to cover and which ones to pass over. The lab instructor might also indicate English language problems there are in dealing with the students. In our program, for example, the vocational instructor noticed that although the students seemed to understand a certain procedure, they were unable to expiain that procedure in English. Consequently, emphasis was placed on explaining procedures in the VESL class. Similarly, the VESL instructor noticed that students simply were not picking up much of the technical vocabulary. The suggestion was made to the lab instructor to write key vocabulary items on the board and to also illustrate or demonstrate in a simplified manner these vocabulary items

procedures. The lab instructor did this and students began to understand much more than they had initially.

Employers in the field of heating, refrigeration and air conditioning, especially those who have hired our students, have also influenced our curriculum with their perspective as to what language skills are important on the job. They have indicated that one of the most important needs for employees is to be able to communicate with customers. As a result, we began to emphasize more those competencies related to interacting with customers.

In conclusion, the evaluation of our students, curriculum, and program is an ongoing process which matures even as we do in our understanding of how language and people interrelate.

Project BEST
Building Energy Maintenance
Vocational Lab

Vocational Competencies for Project BEST Bilingual Vocational Training

Heating, Refrigeration, and Air Conditioning

- A. Soldering and Brazing Tubing
 - la. Form various tube and fitting connections using soft soldering.
 - 1b. Form various tube and fitting connections using silver brazing.
- B. Measuring Resistance, Voltage and Current
 - 2. Measure resistance using a volt ohm meter (vom).
 - 3. Measure voltage in an electrical circuit using a vom.
 - 4. Measure current in an electrical circuit using an ammeter.
- C. Applying Electrical Theory To Circuits
 - 5. Calculate values for current, resistance and voltage.
 - 6. Build a series circuit and measure the resistance, voltage and current values in the circuit.
 - 7. Build a parallel circuit and measure the resistance, voltage, and current values in the circuit.
 - 8. Build a combination circuit, and measure the resistance, voltage, and current values in the circuit.
 - 9. Wire a 120 volt branch circuit.
 - 10. Test electrical components and identify defective components.
- D. Using Gages
 - 11. Use pressure and vacuum gages to determine the pressure of the refrigerant system.
- E. Checking and Servicing Refrigeration Systems and Controls
 - Locate remain and specification information using a manufacturer's service manual.
 - 13. Test refrigerant system for non-condensables.
 - 14. Evacuate a refrigeration system.
 - 15. Charge a refrigeration system.
 - 16. Check refrigerant charge in refrigeration system for temperature and suction pressure.
 - 17. Transfer refrigerants from one cylinder to another.
 - 18. Locate and repair leaks in a refrigeration system.
 - 19. Replace filter-driers.
 - 20. Correct restrictions in capillary tubes.
 - 21. Check and/or replace a compressor overload.
 - 22. Check operation of compressors with service valves.
 - 23. Test a compressor for electrical and mechanical functions.
 - 24. Replace a hermetic compressor.
 - 25. Remove and install an evaporator.
 - 26. Locate and repair leaks in an evaporator.

E. Checking and Servicing Refrigeration Systems and Controls (cont'd)

27. Check and service air-cooled condensers.

- 28. Install and adjust a thermostat according to manufacturer's specifications.
- 29. Identify and record defects of a refrigeration system. 30. Replace solenoid valves.

31. Check and replace current relays.

F. Replacing & Adjusting Heating Devices

32. Install and/or replace a furnace fan limit switch.

33. Adjust the fan/limit controls according to predetermined settings.

34. Light pilot and adjust burner.

Vocational English as a Second Language Competencies for Project BEST

A. Job Safety

- 1. Briefly describe appropriate clothing and personal safety equipment for lab and job.
- 2. Briefly describe proper maintenance of work area and tools.

3. Identify types and uses of fire extinguishers.

- 4. Understand and respond to warnings on signs, labels, and service manuals.
- 5. Identify potential hazards and state how to correct them.

6. Warn others of hazards.

- 7. Report accidents in simple terms.
- 8. Describe proper lifting procedures.

B. <u>Tools and Equipment</u>

1. Identify a service technician's tools.

2. Identify parts of a heating system.

Identify parts of a refrigeration/air conditioning system.

- 4. Describe function and usage of work related supplies with appropriate descriptors.
- 5. Describe function and usage of work related equipment and tools.

C. Requesting Information

- 1. Indicate shortage of supplies.
- 2. State need to replace defective part.

3. Borrow tools or equipment.

- 4. State problem and ask for assistance from co-worker, instructor, or supervisor.
- 5. Request supervisor/ trainer to check work.

D. Giving and Receiving Information

1. Describe heating and refrigeration/air conditioning related procedures.

2. Report on progress of a specific task.

3. Report on a procedure completed.

4. Respond appropriately to positive and negative feedback.

5. Offer explanation or apology for incomplete or unsatisfactory work.

6. Respond to inquiry by giving an oral diagnosis of mechanical problem or malfunction.

E. Clarification

1. Express understanding or lack of understanding.

2. Ask someone to repeat a word, phrase, or set of instructions.

3. Ask someone to speak more slowly.

- 4. Ask someone to pronounce or spell a word.
- 5. Request meaning of word, phrase, sentence, or abbreviation.

6. Request name or function of an object or substance.

7. Verify comprehension by repeating a word, phrase, or set of instructions.

F. Reading Skills

1. Use a table of contents and index to locate information.

2. Understand and use schnical graphs and charts.

3. Locate parts in a parts catalogue; give specifications, prices, etc.

4. Summarize a set of procedures from lab manual.

5. Summarize a brief reading passage from textbook.

6. Summarize instructions from service manuals.

G. Writing Skills

- 1. Write names of parts and services commonly used on invoices.
- 2. Write brief job-related messages.

H. Giving and Asking for Locations/Directions

1. Ask for location of desired or needed objects.

2. Explain location of object relative to other objects or storage facilities.

3. Direct someone to a location within a building.

- 4. Explain location of residence or important buildings relative to city landmarks.
- 5. Following oral instructions, locate places on a map.
- 6. Request driving directions to a specific location.
- 7. Give driving directions to a co-worker.

I. Socializing

1. Introduce yourself and others.

2. Greet a customer, co-worker, or supervisor.

- 3. Respond appropriately to greetings, statements, and inquires from customers, co-workers, and supervisors.
- 4. Hold a social conversation with a customer, co-worker, and supervisors.
- 5. End a conversation; say good-bye.

J. Telephoning

- 1. Call in an emergency.
- 2. Call in sick/late to job or class.
- 3. Call to request information or assistance.
- 4. Call to set up an appointment.
- 5. Call in to order parts.
- 6. Take written telephone messages.

K. Specialized Job Seeking/Keeping Skills

- 1. Call for information about job opening; make appointment for interview.
- 2. Respond to newspaper advertisement by writing letter of application (sample letter).
- 3. Fill out job application.
- 4. Respond to interview questions about job interest, work history, educational background, family, health, transportation, salary, etc.
- 5. Ask questions regarding work conditions, employment policies, salary, benefits, etc.
- 6. State desired job and shift preference and starting date.
- 7. Request time off or schedule change.
- 8. Report absence or tardiness.

JOB SAFETY WORKSHEET

Instructions: Fill in the blanks. Tell what the person should or shouldn't wear in the lab or an the job.

1.	He	shou1d	wear	

- 2. He should wear a ____ shirt.
- 3. He shouldn't wear _____ clothing.
- 4. He should wear _____.
- 5. He shouldn't wear _____.
- 6. He should wear _____ pants.
- 7. He should wear _____.

Answers:

- safety goggles/safety glasses
 long-sleeved
- 3. loose-fitting clothing
- gloves
 jewelry
- 6. long
- 7. work shoes/ safety shoes/ steeltoed shoes

JOB SAFETY WORKSHEET

Instructions: Answer the following questions in sentences. Use should in your answers. Do not repeat any answers.

- 1. What should a person wear to protect his/her arms from flying sparks?
- 2. What should a person wear when working with sharp or heavy objects?
- 3. What should a person wear to protect his/her eyes from flying particles?
- 4. What should a person wear so that his/her clothing won't get caught in a machine?
- 5. What should a person not wear because it could get caught on a machine?
- 6. What should a person wear to protect his/her legs from injury?
- 7. What should a person wear to protect his/her toes and feet from falling objects?

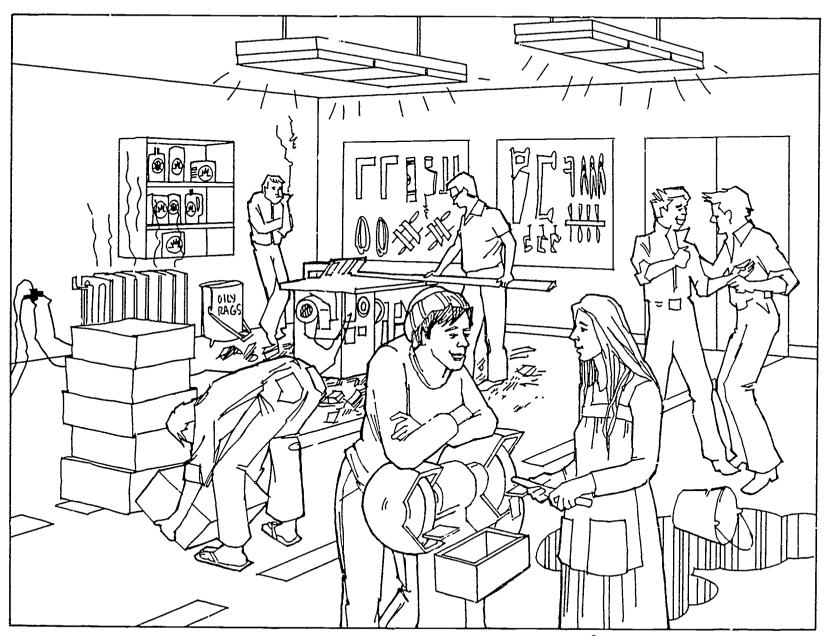

Answers:

- 1. long-sleeves
- 2. gloves
- 3. safety goggles/ safety glasses
- 4. close-fitted clothing
- 5. jewelry6. long pants
- 7. work shoes/ safety shoes/ steel-toed shoes

INSTALLATION

GAS FIRED FURNACES
MODELS PAFS, PAFC
STANDING & CYCLING PILOT

Supersedes: Nothing

650.15·N10 (683)

035-06028

GENERAL

These compact furnaces are styled for space saving installation and include a wide range of heating capacities.

All furnaces are natural gas fired, with either standing (continuously burning) pilot or spark ignition. Standing pilot models are easily convertible for operation with liquified petroleum (propane) gas.

The furnaces are completely factory assembled, wired and tested to assure dependable and economical operation.

The cabinets are fabricated from heavy-gauge steel, and coated with a durable, baked enamel finish.

All models feature low operating sound levels, and are equipped with protective safety devices.

REFERENCE

Installer should pay particular attention to the words:

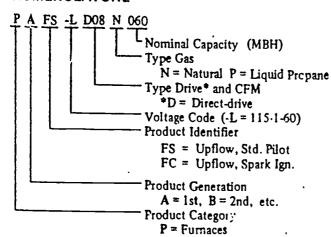

NOTE, CAUTION, and WARNING. NOTES are intended to clarify or make the installation easier. CAUTIONS are given to prevent equipment damage. WARNINGS are given to alert the installer that personal injury and/or equipment damage may result if installation procedures are not handled properly.

INSPECTION

As soon as a unit is received, it should be inspected for possible damage during transit. If damage is evident, the extent of the damage should be noted on the carrier's freight bill. A separate request for inspection by the carrier's agent should be made in writing.

Also, before installation, unit should be checked for screws or bolts which may have loosened in transit.

NOMENCLATURE

LIMITATIONS

Size of unit for proposed installation should be based on heat loss calculation made according to the methods of the Air Conditioning Contractors of America (ACCA).

Check rating plate to make certain the unit is equipped to burn the type of gas supplied.

Do not install this unit in a mobile home. This furnace is designed for installation in a building constructed on-site.

A furnace installed in a residential garage shall be located so that all burners and burner ignition devices are located not less than 18" above garage floor, and located or protected to prevent damage by vehicles.

WARNING: Blower and burners must never be operated without blower door in place. This is to prevent drawing of dangerous fumes (which could contain hazardous carbon monoxide) into the home, which could result in personal injury or death.

Where local regulations are at a variance with instructions, installer should adhere to local codes, or in the absence of local codes, the installation must conform with American National Standard, National Fuel Gas Code (Z223.1-1980).

LOCATION

Choose location for unit near a chimney or vent. Allow learance from combustible materials as listed under "CLEARANCES", insuring that serv. access is allowed for both the burner and blower. Unit must be installed in a level position.

When the furnace is used in conjunction with a cooling unit, the funce must be installed parallel with or on the upstream side of the cooling unit to avoid condensation in the heat exchanger. When a parallel flow arrangement is used, the dampers or other means used to control air flow shall be adequate to prevent chilled air from entering the furnace, and if manually operated, must be equipped with means to prevent operation of either unit unless the damper is in the full heat or cool position.

CLEARANCES

These units are A.G.A. design certified for closet installation on a wood floor, but must not be installed on (or adjacent to) carpeting, tile, or any other combustible material. Minimum clearance from any surface of enclosure is listed in Table 1. For installations other than closet, clearances listed are from combustible material. If unit is installed in a utility room, door to room should permit removal of the largest component. A 30 inch service access must be provided at front of the unit.

DIALOGUE

- A: Hi, Bob.
- B: Hi, Bill. How are you doing?
- A: Okay. How about yourself?
- B: Pretty good. Thanks. Say, did you hear about A1?
- A: No, I didn't. What happened?
- B: Well, he had a minor accident in the lab yesterday. He wanted to use someone's torch after they were finished using it. Neither of them were thinking. Al grabbed the torch by the hot end and burned his hand.
- A: Was it serious?
- B: No, but it is painful with all those blisters on his hand.
- A: He should be more careful.
- B: Yeah, but I think we all need to be more careful.
- A: Yeah, you're right.

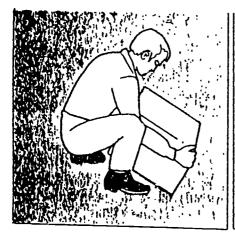

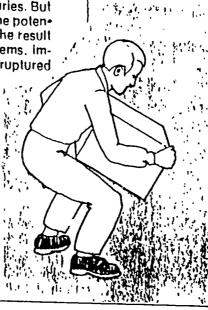

A. Job Safety	Project BEST
VESL COMPETENCY A8 : Describe	proper lifting procedures.
GRAMMATICAL / LANGUAGE FORMS:	Imperative, Imperative + if clause
LANGUAGE SAMPLES:	
•	Instructor: What is the proper procedure for lifting an object?
	Student: First, estimate the load to lifted. Get help if you need it. If you work with someone, work as a team.
RELATED LANGUAGE ITEMS:	Poview parts of body and terminology related
	to body position-bed, kneel, twist, shift, etc.
SUGGESTED ACTIVITIES:	Demonstration - by instructor and students
	of lifting procedure
	Strip story - divide students into groups; each
	group receives a set of steps in jumbled
	order& must place strips in correct order.
RESOURCES:	Developing Shop Safety- p.57
	Let's Work Safely- p.41-45

2. AVOIDING INJURIES FROM LIFTING

The old saying of "use your head and save your back" is appropriate to work in the shop. One out of five industrial injuries involves the back. Medical expenses amounting to more than 25 percent of treatment costs are incurred in treating back injuries. But the cost in dollars is nothing compared to the potential lifelong pain and limited movement as the result of back injuries. In addition to back problems, improper lifting can cause muscle spasms, ruptured

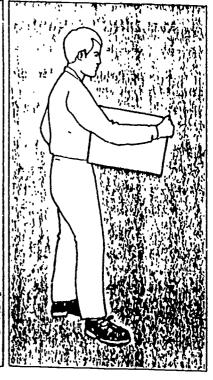

FIGURE 116. Litting safely.

and torn ligaments. Use hoists, Jacks, carts and wheel trucks to lift and move dead weight Rely on mechanical devices or the assistance of others to move heavy objects. Refer to pamphiets No. 193.19, A New Way to Lift, National Safety Council and OSALS—175 Safe Lifting, U. S. Department of Labor Training Program.

Avoid lifting whenever possible. Move heavy objects by pushing, pulling, rolling or sliding. Avoid awkward positions (Figure 116). To lift properly, proceed as follows:

- 1. Estimate the load to be lifted.
 - If there is any doubt, get mechanical assistance or that of another person. If you work with someone, work as a team. Don't be a show-off.
- 2. Check your footing.
 - Avoid slippery or hazardous materials or areas Spread your feet slightly (comfortably) with one foot slightly ahead of the other and along side the object.
- 3. Bend knees, kneel or squat.
 - Don't bend your back to reach under the load. First get close to the object being lifted
- 4. Use blocking under objects to help get a hand hold and to prevent mashed lingers.
- 5. Get a good grip.

Be sure you can maintain your grlp on an object. The surface must be free of oily or slippery material. Use gloves when handling sharp or rough objects.

6. Let legs do the lifting.

To do the lifting, straighten your legs, letting the powerful leg, arm and shoulder muscles do the lifting. Remember, your back muscles are very thin as compared to the leg muscle bundles which are eight to ten inches in diameter.

- 7. Shift the feet to turn
 - When turning, shift the position of your feet rather than twist your body at the waist. This action eliminates twisting the spine and possible rupture of bone-separating cartilage.
- 8 Lower the load.
 - In putting the load down to the floor from carrying position, bend the kness, keep the back straight, and use the leg and arm muscles to lower the load.
- 9. Keep lingers and loes clear.

•	p.73-98

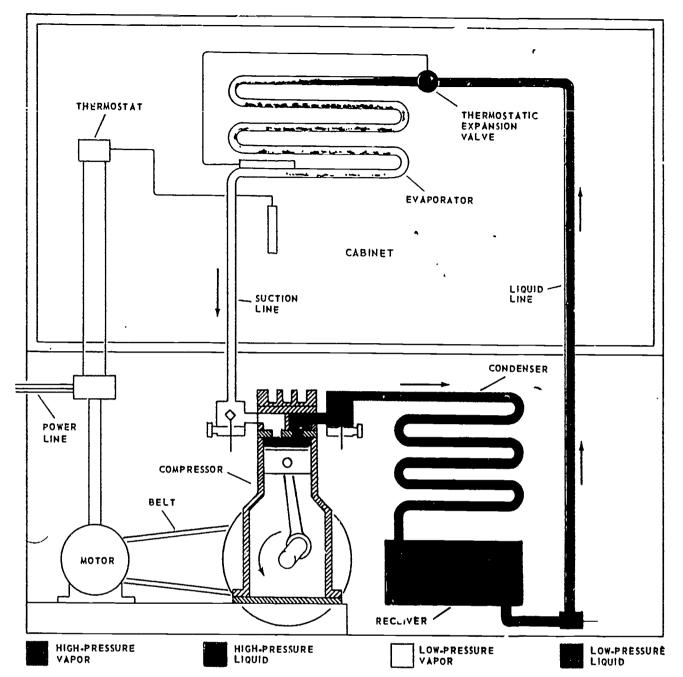

Fig 3-5 Compression system using external drive (open) type compressor. Crankshaft seal is required at the place where the crankshaft extends through the crankcase of compressor

The motor and the compressor drive are at atmospheric pressure. The pressure inside the crankcase will vary depending upon the refrigerant used and the temperature. Sometimes it may be considerably above atmospheric pressure; at other times, it may be below. Refrigerant vapor cannot be allowed to flow out or air to flow into the crankcase. Either would quickly ruin the operation of the system.

3-6 COMPRESSION SYSTEM USING HIGH-SIDE FLOAT REFRIGERANT CONTROL

The high-side float system is a flooded system. The evaporator is aiways filled with liquid refrigerant.

76 / Modern Refrigeration, Air Conditioning

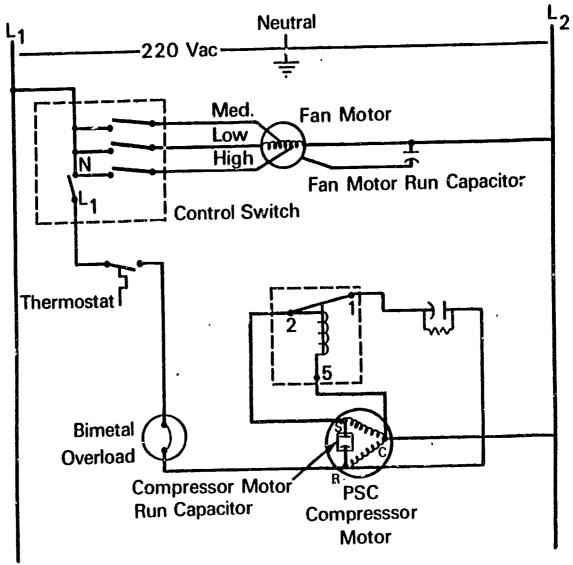

Fig. 36 is a schematic diagram of this system. As the compressor runs, liquid refrigerant flows from the liquid lir into the high-side float mechanism

As soon as enough liquid refrigerant has entered the high-side float mechanism, it will raise the float ball. The refrigerant will then begin to flow through the control to the evaporator. Since the evaporator is under low pressure, the tubing connecting the high-side float and the evaporate should be insulated. A capillary tube refrigerant line frequently used.

If a different size line is used, it should have a weight valuat the evaporator to prevent the refrigerant from evaporatir in the connecting line. Fig. 3-6 shows a weight valve in the connecting line.

Hard Copper Refrigeration Tubing

Hard copper tubing in the approvad types for refrigeration, plumbing, and heating lines. This tubing is made to A.S.T.M. and Federal Government specifications. We allow the lot length price on orders for assorted sizes 200 foot lots. Because some express and transportation companies charge a pramium on shipments of 20 ft. lengths, we suggest purchases in 10 ft. lengths where possible.

Type "K" Tubing

Heavy duty tubing for refrigeration and general plumbing and heating use. Also for underground use.

Solder Coupling

Solder couplings with the same fe-main solder con-nections at both ends to take copper tubing

Uniform solder fittings with high tensile strength. They are highly resistant to corrosion and used with copper tubing they make perfect joints, as they have the same rate of expansion. All sizes listed are for the actual outside diameter of the tubing to be used, fron pipe and iron pipe fittings are measured in nominal size which is 1/8" less than CID size shown. For comparison of nominal and OD sizes see the solder coupling listing.

Suction Line P-Traps

These wrought copper P-Traps are installed at the bottom of the vertical suction line returning to the compressor A small amount of oil seems to remain trapped in the P-Trap. But, in practice for some reason the P-Trap helps raturn the rest of the oil carried away by the réfrigerant back to the compressor.

B. Tools and Equipment Project BLST VESL COMPETENCY B5: Describe function and usage of work related equipment and tools. For + gerund (phrase), Why question-pres. Do, GRAMMATICAL / LANGUAGE FORMS: infinitive phrase LANGUAGE SAMPLES: Instructor: What is a tube cutter used for? (vacuum pump) Student: It's (used for cutting tubing. Instructor: Why do we use swaging tools? Student: We use swaging tools to enlarge the openings of tubes. RELATED LANGUAGE ITEMS: Using flashcards of tools, students ask each SUGGESTED ACTIVITIES: other what a particular tool is used for or why we use a particular tool. Mordern Refrigeration and Air Conditioning-**RESOURCES:**

p.39-71

C. Requesting Information	Project BES1
VESL COMPETENCY C1 : <u>Indicate</u>	shortage of supplies.
GRAMMATICAL / LANGUAGE FORMS:	"Be/Run + out of", Indefinite pronoun/adj-Any, How much/many + pres. Do
LANGUAGE SAMPLES:	
	Worker 1: I'm out of screws. Do you have any? Worker 2: Sure. How many do you need? Worker 1: Just a couple. Worker 1: I ran out of refrigerant. Do we have any more? Worker 2: Sure. How much do you need? Worker 1: About ten ounces.
RELATED LANGUAGE ITEMS:	Count/Non-count nouns Units of measurement and their abbreviations- oz., lbs.,
SUGGESTED ACTIVITIES:	Substitution Drill- Teacher states: I am out of
- -	Student responds: How much/many do you need?
RESOURCES:	Speaking Up at Work- p.100-101

C. Requesting Informating	Project BEST
VESL COMPETENCY C2 : State ne	ed to replace defective part.
GRAMMATICAL / LANGUAGE FORMS:	another, replacive "one" -singular and plural, object pronoun-them, Future-will
LANGUAGE SAMPLES:	
	Worker: I need another gauge manifold. This one is broken.
	Supervisor: Thre's another one in the back
	Worker: I have to get some gaskets. The ones on the compressor are broken.
	Worker: I'll get them for you.
RELATED LANGUAGE ITEMS:	Indirect requests in statement form.
SUGGESTED ACTIVITIES:	Using flashcards of tools and supplies, students
	practice indicating that item is defective.
	Also practice with plural.
RESOURCES:	Speaking Up at Work- p.101-103

C. Requesting Information	Project BEST
VESL COMPETENCY C3 : Borrow to	ools or equipment.
GRAMMATICAL / LANGUAGE FORMS:	Possessive adjectives/pronouns,
	modal-can, Irregular verb-past tense
LANGUAGE SAMPLES:	
	Worker 1 : Can I borrow your tube cutter? The wheel broke on mine. (or I can't find mine.)
	Worker 2 : Sure. Here you are.
RELATED LANGUAGE ITEMS:	Formal vs. Informal ways of asking to borrow-
	"Give me your tube cutter once."
SUGGESTED ACTIVITIES:	How to say no to someone who wants to borrow something from you. With flashcards or actual objects, students
	practice borrowing tools and equipment giving
	reason for their need to borrow.
RESOURCES:	Speaking Up at Work- p.98-99
•	

C. Requesting Information	Project BEST
VESL COMPETENCY C4 . State pr	oblem and ask for assistance from co-worker,
instruct	or, or supervisor.

Worker: RELATED LANGUAGE ITEMS: Students are given a list of problems and SUGGESTED ACTIVITIES: possible causes. They ask each other questions. (see troubleshooting chart) Modern Refrigeration and Air Conditioning-**RESOURCES:** p.342-343

TROUBLESHOOTING CHART

TROUBLE	COMMON CAUSE	REMEDY
1. Unit will not run.	Blown fuse.	Replace fuse
	"Ow voltage.	Check outlet with voltmeter, should check 115V plus or minus 10 percent.
		If circuit overloaded, either reduce load or have electriciar install separate circuit.
ļ		If unable to remedy any other way, install auto transform
	Broken motor or temperature control	Jumper across terminals of control. If unit runs and connections are all tight, replace control.
<u>}</u>	Broken relay	Check relay, replace if necessary
ļ •	Broken overload	Check overload, replace if necessary.
	Broken compressor.	Check compressor, replace if necessary
	Defective service cord.	Check with test light at unit, if no circuit and current is indicated at outlet, replace or repair.
	Broken lead to compressors, timer or cold control.	Repair or replace broken leads
	Broken timer,	Check with test light and replace if necessary
2. Refrigerator section	Repeated door openings.	Instruct user
too warm	Overloading of shelves, blocking normal air circulation in cabinet.	Instruct user.
į	Warm or hot foods placed in cabinet.	Instruct user to allow foods to cool to room temperature before placing in cabinet.
	Poor door seal.	Level cabinet, adjust door seal.
	Interior light stays on.	Check light switch, if faulty, replace.
	Refrigerator section airflow control.	Turn control knob to colder position. Check airflow heat
		Check if damper is opening by removing grille. With door open, damper should open. If control inoperative, replace control.
	Cold control knob set at too warm a position, not allowing unit to operate often enough.	Turn knob to colder position.
	Freezer section grille not properly positioned.	Reposition grille.
	Freezer fan not running properly.	Replace fan, fan switch, or defective wiring
	Defective intake valve.	Replace motor compressor.
	Air duct seal not properly sealed or pos _oned	Check and reseal or put in correct position.
3 Refrigerator section too cold	Refrigerator section airflow control knob jurned to coldest position.	Turn control knob to warmer position.
	Airflov/ control ramains open.	Remove obstruction.
	Broken airflow control.	Replace control.
	Broken airflow heater.	Replace heater.
4 Freezer section and	Fan motor not running	Check and replace fan motor if necessary.
tefrigerator section	Cold control set too warm or broken.	Check and replace if necessary.
100 110	Finned evaporator blocked with ice.	Check defrost heater thermostat or timer. Either one of these could cause this condition.
	Shortage of refrigerant.	Chack for leak, repair, evacuate and recharge system.
	Not enough air circulation around cabinet.	Relocate cobinet or provide clearances to allow sufficient circulation.
	Dirty condenser or obstructed condenser ducts.	Clean the coi denser and the ducts.
	Poor door seal.	Level cabinet, adjust door seat.
	Too many door openings	Instruct customer.
5. Freezer section	Cold control knob improperly set.	Turn knob to warmer position
too cold	Cold control capillary not properly clamped to evaporator.	Tighten clamp or reposition.
		1

342 / Modern Refrigeration, Air Conditionir g

TROUB! SHOOTING CHART

TROUBLE	COMMON CAUSE	REMEDY
6. Unit runs all the time.	Not enough air circulation around cabinet or air circulation is restricted.	Ratocate cabinet or provide proper clearances around cabinet — remove restriction.
	Poor door seal.	Check and make necessary adjustments.
	Freezing large quantities of ice cubes, or heavy loading after shopping	Explain to customer that heavy loading causes long running time.
	Refrigerant charge.	Undercharge or overcharge — check, evacuate and recharge with proper charge
ļ	Room temperature too warm	Ventilate room as much as possible
	Cold control	Check control, if it allows unit to operate all the time, replace control
	Defective light switch	Check if light goes out. Replace switch if necessary,
	Excessive door openings	Instruct customer.
7. Nois, operation.	Loose flooring or floor not firm	Tighten flooring or brace floor.
	Tubing contacting cabinet or other Jubing.	Move tubing
	Cahinet not level.	Level cabinet.
	Drip tray vibrating.	Move tray - place on styrofoam pad if necessary.
	Fan hitting liner or mechanically grounding.	Move fan.
	Compressor mechanically grounded	Replace compressor mounts.
8. Unit cycles on	Broken relay.	Replace relay.
overload.	Weak overload protector,	Replace overload protector.
	Low voltage.	Check outlet with voltmeter. Underload voltage should be 115V plus or minus 10 percent. Check for several appliances on same circuit or extremely long or undersized extension cord being used.
	Poor compressor.	Check with test cord and also for ground before replacing
9. Stuck motor	Broken valve	Replace motor compressor.
compressor.	Insufficient Oil.	Add oil; if unit still will not operate, replace motor compressor.
	Overheated compressor.	If compressor faulty for any reason, replace motor compressor.
10 Frost or ice on	Broken timer	Check with test light and replace if necessary
finned evaporator.	Defective defrost heater.	Replace heater.
	Defective thermostat.	Replace thermostat.
11. Ice in drip catcher.	Defective drip catcher heater.	Replace heater.
Unit runs all the	ice builds up on the evaporator.	Check door gaskets - replace if necessary.
time, temperature normal,	Control bulb on thermostat not in contact with evaporator surface	Place control bulis in contact with the evaporator surface
13. Fraezer runs all the time. Temperature too cold.	Faulty thermostat.	Check thermostat — test and replace if necessary.
14 Freazer runs all the tima. Tampereture too warm.	læ buildup in insulation.	Remove breaker Atrips, stop unit, melt ice and dry insulation, seal outer shell leaks and joints and then assemble
15. Rapid ice buildup on the evaporator.	Leaky door gasket.	Adjust door hinges. Replace door gasket if cracked, brittle or worn.
16 Door on freezer	Faulty electric gasket heater.	Use alternate gasket heater or install new one.
compartment freezas shut.	Faulty gasket seal,	Inspect and check gasket. If worn, cracked or hardened, replace it.
17. Freezer works than warms up.	Moisture in refrigerator.	Install drier in liquid line.
18 Gradual raduction in freezing capacity.	Wax buildup in capillary tube.	Use capillary tube cleaning tool or replace capillary tube.

Fig. 11-13. Chart fists some common hermetic system troubles, their causes and suggested remedies.

Tecumseh Model AE and AK Portabi > Room Air Conditioners Replacement Compressors

AIT CONCITIONETS KEPI
These compact and light room air conditioning compressors are excellent for replacement units because they are smaller and space should not be a problem. These compressors are sold without a base They have a strap or loop that its in any one of the bases issted below. The base is then firmly clamped through the loop. This gives you a varier; of mountings for each compressor. They are priced without the bases Bases must be bought separately. They are good replacements for Model AJ compressors. Compressors are sold less capacitors and relays but with overload. For a hard start kit use 21-25.

Mfd 250V start capacitor No. 48053 and relator No. 48827
All Compressors except No. 62209L and 62211L need a 15
Mfd 370V No. 49814 run capacitor with starting ratay No.
39165 (Tecumseh No. 82785). Compressor No. 62209L and
62211L needs a 25 Mfd 370V No. 49820 run capacitor. The
full load Ampere and the BTU ratings are at the stendard rating conditions of temperatures for 130° F. condensing, 45°everyorating, 95°F ambient and 115°F iliquid to expansion
device. For use with F-22 ratrigarant.

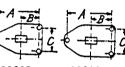

with overload. For a hard start kit use 21-25. Fig. 8. Fig. 60 CYCLE ONE PHASE For Use With F-22 Refrigerant With Overload But Without Relay. Canacitors and Rese

Bases For Model AE and AK Compressors

The Model AE and Model AK replacement compressors are made with a strap or loop on the bottom that fits into the 1% by 2% oblong slot in these bases. The compressor is supplied with a 3% by 5° oblong spring that fits into this loop below the base to hold it firmly to any one of these mounting bases. The compressors are priced without bases. Bases must be bought separately. One all bases with 3 hole mountings the third hole is on a center line between the other 2 holes. Bases are dished to match the shape of the bottom of the compressors. We show the bott hole mountings and the location of the stot for each base.

DO NOT ATTEMPT TO OPERATE COMPRESSOR WITHOUT TERMINAL COVER IN PLACE.

Service Manual

*Any usit for closet installation requires two openings with each opening having one square inch free area per 1,000 RTUH total input of all appliances in the enclosure for inbustion air and ventilation. Openings should be rectangular in shape (height equal to one half width) and located 6 inches from the floor and the ceiling. For units with 100,000 BTUH or less input, a 100 square inch minimum free area of each opening is required.

TABLE 1 - CLEARANCES

TOP	1"
FRONT	6"
FLUE	6" see note 2
PLENUM	1"
BACK	1" see note 1
SIDES	1" (for 13.75" wide casing, 2") see note 2

Note 1: One (1) inch for Heat-Only applications.

For Heat-Cool (or "Add-On" cooling) applications of a companion coil, the cabinet will extend 4 inches beyond the furnace rear panel. An additional space of one (1) inch must be maintained between back wall of enclosure and the rear of the coil cabin it. See section under "DUCTWORK" for applicable "Standard" to be referenced.

Note 2. May be 1" when type 8-1 vent is used.

COMBUSTION AIR AND VENTILATION

The furnace installation shall be such that the combustion air inlet openings (to the furnace) will be in the same atmospheric pressure zone as the draft hood relief opening of the furnace.

Provisions must be made for ventilation which is adequate to properly support combustion and to maintain safe ambient temperature.

When not nal infiltration does not meet air requirements outside air must be introduced by means of inlet and outlet ducts. Minimum cross-sections of each duct must be one square inch of free area for each 2,000 BTUH total input of all appliances in the enclosure.

If a unit is installed where there is an exhaust fan, sufficient rentilation must be provided to prevent the exhuast fan from pulling a negative pressure in the room.

VARNING: The owner should be cautioned that the furnace area must not be used as a broom closet or for any other storage purposes because a fire or personal injury could result.

more complete discussion of venting and of ventilation if requirements under various conditions, see American Vational Standard "National Fuel Gas Code" (2223.1-1980), ivailable from A.G.A. or from local gas companies.

VENTING

Unit must be vented through a good chimney or an approved vent. Check chimney for soot, leaks, obstruction and proper height to prevent down draft (see Fig. 1). It it is necessary to construct a new chimney, local conditions such as necessary height, draft and number of appliances served should be checked with gas company requirements and local building codes.

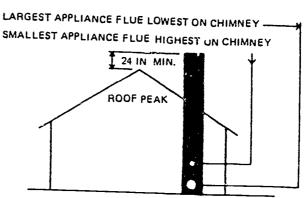

FIG. 1 - CHIMNEY VENTING

The horizontal connecting pipes should be as short as possible and should slope upward to the chimney (minimum rise 1/4" per horizontal foot, with no dips). Vent pipe should be the same inside diameter as that of connecting collar on draft hood. It is important that there be no blower or exhaust system that would pull a draft down the flue.

To secure flue pipe to drafthood outlet:

- 1. Place section of flue pipe on drafthood.
- 2. Remove the screws (2) that hold top panel in place at front corners of unit.
- 3. Then raise top up (approx. 3/4") to permit screws to be fastened through flue pipe into drafthood outlet flange.
- 4 Push top panel down in place and then refasten screws (2) to hold this panel to front comers of unit.

Where flue pipe must p is through a combustible wall, use a ventilated metal thimble 4 inches larger than the diameter of the flue pipe.

Where two or more appliances vent into a common flue, (see Fig. 2) effective area of common flue should at least equal area of largest flue or vent connector plus 50 percent of areas of additional flue or vent connectors (see Table 2). Flue or vent connector must be inserted into but not beyond inside wall of chimney flue liner.

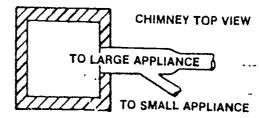

FIG. 2 - COMMON FLUE VENTING

Activity 5 Using street maps

Look over this map of Atlanta, Georgia. Then answer the questions on the next page.

Jaken: from Reading Signs, Directories, Schodules, Maps, Charts, and Utility Bills

1.	List the interstate highways in and around Atlanta.
2.	Is Interstate 20 a north/south highway or an east/west highway in this portion of Atlanta?
3.	Locate University Avenue near the bottom of the map. Take University Avenue to I-75, 85 and turn north. Travel I-75, 85 north until you come to Edgewood Avenue. Exit and turn west on Edgewood. Travel on Edgewood past Botler Street and to the corner of Piedmont Street and Edgewood Avenue.
	What public place are you near?
4.	Locate Chattahoochee Avenue in the upper left portion of the map. Travel east on Chattahoochee Avenue to Howell Mill Road and turn right. Take Howell Mill Road to Marietta Street and travel southeast until it runs into Northside Drive. Take Northside Drive south to Martin Luther King Drive
	and turn left. Name the educational institution on your right.
	On your left
5.	Describe the simplest route from Maddox Park (mid-left side of the map) to Morris Brown
	College
	•
6 .	Locate Atlanta University along Martin Luther King Drive west. List four colleges that are near Atlanta University.
-	
7.	This map has a directional symbol. Which corner of the map contains this directional symbol?
	a. northwest corner
	b. southeast corner
	c. southwest corner
	d. northeast corner
8.	d. northeast corner Martin Luther King is buried in Atlanta. On this map his grave site is between which two east/west

DIALOGUE WITH A FRIEND

by Gail Saunders

Richard: Hi, Victor, how are you?

Victor: Okay Richard, how about you?

Richard: Not bad, but I really hate Mondays. Hey, did you happen to see the

Cubs' game on T.V?

Victor: No, I ad to go shopping with my wife and kids.

Richard: That's 'kay, you didn't miss much. They were lousy as usual. Say,

do you ant to get together after work?

Victor: That sounds fine. Let's meet at 5:30.

Richard: Okay.

Jaken from Getting a Job & Filling ! But Forms

3.	"Are you willing to work overtime?"	"It depends on which days. I play softball on Tuesdays and Thursdays."	 ·
4.	"Why are you applying for this job?"	"Because I need a job."	
5.	"When can you start?"	"Not until next week. I want to get a little more tennis practice in before it gets too hot."	

Activity 11

Preparing for a job interview

Your ability to communicate well in a job interview is important. Often how you say something can decide an interviewer's reaction. Did you say enough to answer questions completely? Did you say too much? Did you say something that will hurt your chances of getting a job? Did your need for better language skills prevent you from saying what you meant? Select the best response for each of the questions below.

1	· "When can you start work?"
	(a) "Anytime next week."
	(b) "Will next week be okay with you?"
	(c) "Although I prefer Monday, I can start now, if you would like me to."
2	. "Can you give me one or two references?"

- (a) "One of my teachers, I guess." (b) "You can talk to the manager at Sun Ray Cleaners or my teachers."
- (c) "You can contact Miss Anne Willis, my high school English teacher, and Mr. Lawrence
- Green, the manager at Sun Ray Cleaners, where I worked last summer."
- 3. "Why did you leave your last job?" (a) "I wasn't learning nothing, and I never was going to get ahead."
 - (b) "I couldn't get along with those people. They didn't show you how to do the job."
 - (c) "I wanted to find a company that offered opportunities for advancement and training for its new employees."
- 4. "I noticed on your application that you live all the way across town. Will you have any difficulty getting to work?"
 - (a) "Yeah. That's why I started not to come here."
 - (b) "Well, this morning I caught a ride with a friend. It really is difficult to get a ride out this
 - (c) "I've already considered that. And I can make arrangements to get to work every day, on time."

5. "On your application you indicate that you have cashier experience. What can you tell me about your experience?" (a) "Ain't nothing to tell. I just used the register." (b) "I operated the Accu-Count XL3 register while working at Barclay's Department store as a cashier." (c) "I worked the register at Barclay's." 6. "We were expecting you at 9:00 and you arrived at 9:30. Did you have any trouble finding us?" (a) "No, I didn't have any trouble." (b) "Finding you wasn't the problem. Getting up was the problem. My alarm clock didn't go off." (c) "I hope my being late has not inconvenienced you. The delay was unavoidable." 7. "Why did you decide to try our company?" (a) "I don't know...I'm just trying everybody." (b) "In today's tough job market, a person has to try every company with an opening that matches his qualifications and experience." (c) "I couldn't leave a stone unturned." 8. "Why did you decide to take a job while still in school?" (a) "There're some things I want to do, and a job will make it a lot easier."

(c) "I'm old enough now to work a part-time job after school, and my family could really use the

Activity 12

extra income."

(b) "My mother said find a job . . . so here I am."

Being interviewed for a job

You and a partner may use the situations below to role play job interviewing. One of you act as the interviewer, and the other one act as the applicant. Select at least two situations for practice.

- 1. You are applying to be a sales clerk at a local department store.
- 2. You are applying to work in the stock room at a local department store.
- 3. You are applying to be a counter person in a local burger place.
- 4. You are applying to be a bus boy in a local restaurant.
- 5. You are applying to be an office helper at a local business.

Project BEST Update July, 1987

In late June Project BEST received the unfortunate news that the program had not been selected for refunding by the federal funding source, the Office of Bilingual Vocational Education, U.S.D.E. Due to federal cutbacks in the budget, only about one-third of the 19 bilingual vocational training programs funded for the 1986-1987 18-month grant period could be refunded for the upcoming 1987-1988 grant period.

It is hoped that at 'east some components of this "PVT" program can be either institutionalized or continued in some form independent of federal dollars.
