ABSTRACT

Average salary increases for 2,124 faculty in the field of social sciences are reported for 1983-1984 and 1986-1987, as part of the College and University Personnel Association's annual faculty salary studies. Included are comparative data for 120,580 faculty at 167 public colleges and 235 private colleges, representing 44 academic disciplines. In 1983, 67 public colleges and 63 private colleges reported on social sciences faculty salaries, while 62 public and 62 private colleges reported in 1986. Between 1983 and 1986, average salaries of faculty in this field increased 19.6% at public colleges and 28.1% at private colleges. For 1986-1987, the average salary for social sciences faculty was about the same as the average faculty salary in the other 43 disciplines for public colleges, while it was 3% higher than the average salary for the other disciplines for private colleges. Included is information on: the number of faculty by academic rank, including new assistant professors; salaries by academic rank; the ratio of average salaries to total salaries of all institutions in both years; comparisons with the Consumer Price Index of changes in cost-of-living for both years; and comparisons with 43 other disciplines. The disciplines and participating institutions are listed. (SW)

SALARY-TREND STUDY OF FACULTY IN SOCIAL SCIENCES
FOR THE YEARS
1983-84 AND 1986-87

Richard D. Howe
Appalachian State Univ.

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC) "

ED287397

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1986-87. Each year two separate studies are conducted, one for public senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 44 selected academic disciplines including social sciences. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1981. The definition of the discipline/major field of social sciences in the CIP is as follows:

A summary of groups of instructional programs that describe the substantive portions of behavior, past and present activities, interactions, and organizations of people associated together for religious, benevolent, cultural, scientific, political, patriotic, or other purposes.

This article presents a summary of the overall average salary increases in the discipline/major field of social sciences from the "baseline year" of 1983-84 to and including the "trend year" of 1986-87 for both public and private institutions. Of the 215 institutions which participated in CUPA's

020 813

PUBLIC (AASCU) study of 1983-84, 167 also participated in 1986-87. Data from those same 167 institutions were used in both the baseline year and the trend year. Of the 355 institutions which participated in CUPA'S PRIVATE study of 1983-84, 235 also participated in 1986-87. Data from those same 235 institutions were used in both the baseline year and the trend year.

This study lists the average salaries of social sciences faculty for both public and private participating institutions by rank, including "new assistant professors," the FAC MIX PCT (faculty mix percentage) and the salary factor. In addition, comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1983-84 and 1986-87).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Therefore, the CPI was used to yield a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .38 for associate professor of social sciences in the 1983-84 public study means that 38 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: PUBLIC 1983-84, PUBLIC 1986-87, PRIVATE 1983-84 and PRIVATE 1986-87. For example, a SALARY FACTOR of 1.02 for associate professors in the discipline/major field of social sciences in the 1983-84 public study means that their salaries are 2 percent higher than the average of all associate professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1983-84 or 1986-87). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 44 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of social sciences with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1983-84 and the "trend year" of 1986-87 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO PUBLIC (AASCU) STUDIES, 1983-84 AND 1986-87

In the PUBLIC 1983-84 salary study in the above table, the reader may note that the discipline/major field of social sciences was reported in 67 of the 167 public (AASCU) institutions. The average salary of the 669 faculty was \$27,186. This average salary was approximately 1 percent (1.01) higher than the average salary of \$26,895 for all 36,612 faculty in ALL MAJOR FIELDS in the 1983-84 public study.

In the PUBLIC 1986-87 salary study in the above table, the discipline/major field of social sciences was reported in 62 of the same 167 public (AASCU) institutions. The average salary of the 619 faculty was \$32,507. This average salary was approximately the same (1.00) as the average salary of \$32,670 for all 38,815 faculty in ALL MAJOR FIELDS in the 1986-87 public study.

The increase in average salaries for all faculty in social sciences after three years in the public institutions studied was 19.6 percent (\$32,507 minus \$27,186 equals \$5,321). The CPI of increased cost-of-living between October 1983 and October 1986 was 9.2 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 10.4 percent or an average of 3.5 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the public institutions studied was 21.5 percent (\$32,670 minus \$26,895 equals \$5,775). In comparison to the discipline/major field of social sciences (19.6%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 1.9 percent (21.5% minus 19.6% equals 1.9%) more than faculty in the discipline/major field of social sciences.

The reader may note that the faculty mix percentage in the social sciences was lower at the professor rank than at the assistant professor rank in the 1983-84 public study: 0.27 vs. 0.29, respectively. In the 1986-87 public study

the faculty mix percentage at the professor rank was more than that for the assistant professor rank: 0.30 vs. 0.29, respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both public studies are as follows: 0.31 vs. 0.28 (1983-84) and 0.34 vs. 0.28 (1986-87), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to social sciences in both of the public studies.

Finally, the hiring rate of new assistant professors in the social sciences is high in the public studies: 3.6 percent (24/669) in 1983-84 vs. 3.5 percent (1,290/36,612) in ALL MAJOR FIELDS in 1983-84. Also, the hiring rate of new assistant professors in the social sciences in 1986-87 was 4.8 percent (30/619) vs. 3.8 percent (1,487/38,815) in ALL MAJOR FIELDS that same year. In other words the hiring rate in the discipline/major field of social sciences is greater than for ALL MAJOR FIELDS in both of the public studies.

RESULTS OF THE TWO PRIVATE STUDIES, 1983-84 AND 1986-87

In the PRIVATE 1983-84 salary study in the above table, the reader may note that the discipline/major field of social sciences was reported in 63 of the 235 private institutions. The average salary of the 379 faculty was \$25,278. This average salary was approximately 5 percent (0.95) lower than the average salary of \$26,553 for all 21,861 faculty in ALL MAJOR FIELDS in the 1983-84 private study.

In the PRIVATE 1986-87 salary study in the above table, the discipline/major field of social sciences was reported in 62 of the same 235 private institutions. The average salary of the 457 faculty was \$32,373. This average salary was approximately 3 percent (1.03) higher than the average salary of

\$31,548 for all 23,292 faculty in ALL MAJOR FIELDS in the 1986-87 private study.

The increase in average salaries for all faculty in social sciences after three years in the private institutions studied was 28.1 percent (\$32,373 minus \$25,278 equals \$7,095). The CPI of increased cost-of-living between October 1983 and October 1986 was 9.2 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 18.9 percent or 6.3 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 18.8 percent (\$31,548 minus \$26,553 equals \$4,995). In comparison to the discipline/major field of social sciences (28.1%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 9.3 percent (28.1% minus 18.8% equals 9.3%) less than faculty in the discipline/major field of social sciences.

In the discipline/major field of social sciences, the reader may note that the faculty mix percentage at the professor rank is less than at the assistant professor rank in both of the private studies: 0.25 vs. 0.34 (1983-84), respectively; and 0.32 vs. 0.33 (1986-87), respectively. This is different from ALL MAJOR FIELDS for both private studies: 0.30 vs. 0.32 (1983-84), respectively; and 0.31 vs. 0.31 (1986-87), respectively.

Finally, the reader may note that the hiring rate of new assistant professors in social sciences in the private studies was more than the hiring rate in ALL MAJOR FIELDS both in 1983-84, 4.2 percent (16/379) vs. 3.9 percent (856/21,861), respectively; and in 1986-87, 5.5 percent (25/457) vs. 5.0 percent (1,173/23,292), respectively. In other words the hiring rate in the discipline/major field of social sciences exceeds ALL MAJOR FIELDS in both the private studies of 1983-84 and 1986-87.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of social sciences and compared that information with 43 other academic disciplines/major fields over a period of three years: the "baseline year" of 1983-84 through the "trend year" of 1986-87. Two studies, one for public (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 2,124 faculty in the discipline/major field of social sciences participated and were included in the overall total of 120,580 faculty in all 44 disciplines/major fields in all four studies. The same 167 public (AASCU) institutions and the same 235 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of social sciences is currently (1986-87) about the same in the public study and 3 percent in the private study above the overall average faculty salary of the other 43 disciplines/major fields. The average faculty salary for social sciences in the private institutions was 6 percent less in comparison to that in the public institutions in 1983-84. The overall salary factor in the private institutions is now (1986-87) 3 percent more in comparison to that for the public institutions: 1.03 vs 1.00, respectively.

Second, the CPI of October 1986, in comparison to the CPI of October 1983, indicates that the faculty in the social sciences, in both the public and private institutions, received overall salary increases for three years above the cost-of-living. The salary increase of the social sciences faculty in the public institutions lagged behind faculty in ALL MAJOR FIELDS during this same

period by 1.9 percent, whereas social sciences faculty salary increase in the private institutions exceeded ALL MAJOR FIELDS by 9.3 percent. Social sciences faculty in the public institutions have some catching up to do in salary in comparison to their colleagues in the private institutions.

Third, in the discipline/major field of social sciences the full professor rank was less than the assistant professor rank in the 1983-84 public study, whereas in the 1986-87 public study the full professor rank exceeded the assistant rank. In both of the private studies the full professor rank has a lower percentage compared to the assistant professor rank. The full professor rank appears to be increasing at a greater rate in the private institutions compared to the public institutions. It seems a higher percentage of new assistant professors are being hired in the private institutions in comparison to the public institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in the social sciences, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Maryon L. Urquhart is a research analyst in the Office of Equal Opportunity Programs at Appalachian State University, Boone, North Carolina.
