ABSTRACT

In 1985 Georgia adopted the Quality Basic Education Act that requires local school systems to provide all public school officials and personnel the opportunity to continue their development throughout their professional careers. A formula was set for State funding of professional development programs. The Act also required each local school system to submit an annual comprehensive staff development plan designed to address the specific needs of the system and its personnel. In 1987, the Abbreviated Plan for Staff Development established, coordinated, and maintained programs that addressed, according to priorities, the assessed needs of certified school personnel only. Needs were considered from points of view of professional development and instructional effectiveness. These needs were considered by school system administrators according to each of three stages of professional development: induction, remediation, and enrichment. This report provides statistical data from a survey of Georgia school districts on the progress, procedures and fund disbursements under terms of the Act as of January 1988. (JD)

STAFF DEVELOPMENT PROGRAMS IN GEORGIA UNDER QUALITY BASIC EDUCATION

Executive Summary

Recognizing the need for effective staff development programs through which public school personnel may enhance their competencies and realize their professional potential, the General Assembly of Georgia in 1985 adopted the Quality Basic Education Act (QBE) which requires local school systems to provide all public school officials and personnel the opportunity to continue their development throughout their professional careers. A formula was set for funding professional development programs. The Act also requires each local school system to submit an annual comprehensive staff development plan designed to address the specific needs of the system and its personnel.

Staff Development Program in Georgia During FY 87

In FY 87 the Abbreviated Plan for Staff Development established, coordinated and maintained programs that addressed, according to priorities, the assessed needs of certified school personnel only. Needs were considered from the points of view of professional development and instructional effectiveness. The needs of all certified teaching, leadership and service personnel were considered by school system administrators according to each of three stages of professional development: induction, remediation and enrichment (enhancement). Induction refers to the process of preparing persons to enter a new field of employment; it can continue for three years. Induction includes not only staff development for beginning teachers but also staff development for any employee who has accepted an assignment in a new function. Remediation means the provision of staff development opportunities to assist personnel who have been employed in a field for three or more years, and who must overcome deficiencies identified through their annual performance evaluations. Enrichment (enhancement) is the provision of learning

opportunities which renew one's professionalism by addressing needs that have been identified through self evaluation.

School system administrators also examined the needs of personnel based on evaluations of the effectiveness of school and school system instructional programs. An educational program is effective to the extent that students achieve the objectives of that program. If the objectives are not achieved, program changes may be in order. The competencies which personnel must have to perform adequately in the roles required by the new or revised educational program are staff development needs.

For the purpose of determining staff development needs that are based on instructional effectiveness, educational programs were grouped into five broad categories: general, special, remedial, adult and instructional support. General education encompassed all kindergarten, primary, middle grades, high school and vocational education programs. Special education meant all programs for exceptional children, including programs for gifted students. Remedial education was the provision of opportunities for students who need to overcome their deficiencies in educational achievement and included all such programs funded by local, state and federal sources. Adult education included adult basic and general educational development. Instructional support referred to areas such as media selection and utilization, computer literacy, classroom management, etc., that have direct application to all educational programs. Needs based on instructional effectiveness were also described according to the scope of the educational program; e.g., whether the new or revised program was to operate on a school-wide, system-wide or state-wide basis.

In FY 87 Georgia school systems reported a total of 3,981 staff development programs for certified personnel with an average participation per staff development activity of 17. Total participation of certified personnel was 113,868--97,937 participants in 182 systems were teaching personnel, 8,626

leadership personnel in 170 school systems, and 7,305 service personnel in 143 school systems. Staff Development allocation to Georgia school systems was \$5,967,005; total program expenditure was \$5,876,623.46; average staff development program expenditure was \$1,476; and average expenditure per participant was \$52.

School systems implemented staff development programs designed to meet the specific needs of their personnel without attempting to meet certification renewal credit requirements. School systems met the needs of certified personnel by implementing more staff development activities such as attendance at conferences and visitation to other school systems. The number of staff development activities approved for certification renewal (SDU) credit remained about the same as in FY 86 (The number of school systems reporting approved SDU activities also remained about the same.); 2,198 activities for certification renewal credit were approved by school systems, regional educational service agencies (RESAs), institutes of higher learning, vocational schools and other agencies; 101 school systems reported 1,674 staff development activities, and the 16 RESAs reported a total of 283 activities approved for certification renewal credit. The major emphases were in the areas of personnel management and development, and vocational education/computer technology.

In their evaluation of staff development activities, participants believed that the activities effectively met their needs regardless of the training agency. Participants specifically believed that (a) the staff development activities were related to their educational concerns, (b) the presentations were well organized, and (c) personnel conducting the activities exhibited the qualities essential to the success of the activity; i.e., showed creativity, possessed specialized knowledge and communicated well. The majority of staff development activities evaluated were conducted by local school system personnel. RESA consultants also conducted many staff

development activities within school systems as well as sponsored multisystem staff development activities.

From a review of information received by the Georgia Department of Education from local school system staff development coordinators, indications are that there was increased participation in staff development activities by personnel holding life certificates, and that the financial assistance to attend college courses motivated participants to improve their job-related knowledge and skills. Also, the morale of certified personnel improved because of their opportunity to learn about new curriculum innovations and ideas, to communicate with others in related fields outside their own school systems, and to share these ideas with their system personnel. The formation of system-wide planning teams for staff development allowed school systems to focus more closely on various needs and involved more system personnel in actual planning. Finally, there was an increased awareness by participants that staff development is continuous professional development beyond attending workshops/college courses for advanced degrees or certification renewal.

Professional Development Stipend Program in Georgia During FY 88

In FY 88 the Professional Development Stipend Program provided stipends for certified personnel who attended staff development activities (college or SDU activities) which addressed their assessed needs. Needs were considered from two points of view--professional development and instructional effectiveness. The needs of all certified teaching, leadership and service personnel were considered by school system administrators according to each of three stages of professional development--induction, remediation and enhancement. For the purpose of determining staff development needs that are based on instructional effectiveness, educational programs were grouped into four broad categories: general, special, remedial, and instructional support.

The total amount of FY 88 Professional Development Compensation allocated to Georgia school systems was \$23,027,548. Of this allocation, all 186 school systems distributed \$21,334,894.19 as professional development stipends (PDS), and 156 school systems spent \$958,196.79 in employee benefits (social security). This is a total expenditure of \$22,293,090.98. The average stipend per recipient was \$1,045, per activity was \$973, and per quarter hour or SDU credit was \$255.

The total number of certified personnel in all 186 school systems receiving professional development stipends in FY 88 was 20,408. Of this number 19,673 were employed during FY 87 for 190 contract days (10 months), 268 for 200 days (10.5 months), 289 for 210 days (11 months), 135 for 220 days (11.5 months), and 43 for 230 days (12 months).

The number of certified personnel receiving professional development stipends by QBE professional category ranged from no one in the superintendent category to 16,154 persons in the regular instructional personnel category. Five hundred and forty-one persons in the student services category, 1,367 persons in the administrative and supervisory category, and 403 persons in the instructional specialist category received professional development stipends. Also, 1,378 persons in the special education category, 57 persons in the grades six through eight vocational instructional category, and 508 persons in the grades 9-12 vocational instructional category received professional development stipends.

Professional development stipends were paid to certified personnel for their successful completion of 21,919 (duplicated) college courses and/or SDU activities; 178 school systems paid recipients for 5,521 college courses (28,089 quarter hours, an average of 5.1 quarter hours per course); and 176 school systems paid recipients for 16,398 SDU activities (55,479 SDU credits, an average of 3.4 credits per activity).

Almost twice as many activities were conducted to meet instructional program needs as were conducted to meet professional development needs. A total of 7,795 college courses and/or SDU activities were conducted to meet professional development needs. Of this total number of courses/activities, 4,725 were conducted to meet induction needs, 1,485 for remediation, and 1,585 for enhancement. A total of 14,124 college courses or SDU activities were conducted to meet instructional program needs. Of this total number of courses/activities, 8,559 were conducted to meet general education needs, 552 for special education, 757 for remedial education, and 4,256 for instructional support.

The number of college courses and SDU activities by taxonomy ranged from 422 courses/activities in visual and performing arts to 11,364 in personnel management and development. There were 970 courses/activities in guidance, counseling, supportive services; 2,656 in languages (including reading); 901 in life/physical sciences; and 1,462 in mathematical sciences were conducted to meet identified needs. Also, 729 courses/activities in physical education, health and leisure; 732 in social sciences and social studies; 1,032 in special education; and 1,651 in vocational education/computer technology were attended by PDS recipients.

STAFF DEVELOPMENT PROGRAMS IN GEORGIA UNDER QUALITY BASIC EDUCATION

Introduction

The State of Georgia has maintained a role in the continued development of teachers since 1930, at first through allotments to local school systems for grants to individual teachers and later through appropriations to support the General Education, Special Education and Vocational Education programs. In the early years the focus was on informal advising and reviewing of specific subject matter, filling gaps in college degree requirements and introducing new curricula or teaching techniques. However, in recent years, staff development has focused on such areas as helping teachers complete requirements for certification renewal or additional degrees, developing skills to work with special pupil populations, and developing new curricula, materials and instructional strategies.

Under the General Education Program, separate funds were allocated to local school systems for three purposes: (a) to provide continued professional development for regular purposes usually for experienced personnel; (b) to provide course work for which Staff Development Units (SDUs) and college course credit could be earned and counted toward certification renewal; and (c) to provide support for beginning teachers in the Performance-Based Certification process.

Federal flow-through funds and state funds have been provided in the past to support continued professional development activities for Georgia public school educators. The majority of the flow-through funds were designated to provide professional development activities in support of

programs for special student populations. State funds provided support for staff in all instructional categories.

In 1984 the Georgia Professional Standards Commission presented to the Georgia Board of Education a model for designing staff development plans that provided for joint input by teachers and supervisors. Staff Development: A Set of Procedural Guidelines was designed to provide assistance to local school systems in planning and conducting programs for the continued development of teachers. In 1983-84, the Personnel Committee of the Governor's Education Review Commission researched the question of whether there was a need for continued professional development and what continuing professional development should involve. The Committee concluded that a coordinated program of continued professional development of educators should be a priority at the state and local levels and that the state should provide flexibility to local school systems in utilization of state and federal funds allotted for continued professional development. The Local Education Agency (LEA) is charged with the responsibility of developing a model for professional development with specifications of content and delivery method. The LEA is also responsible for finding and selecting the most appropriate organization(s) to deliver the services.

Recognizing the need for effective staff development programs through which public school personnel may enhance their competencies and realize their professional potential throughout their careers, the General Assembly of Georgia in 1985 adopted the Quality Basic Education Act (QBE) which requires local school systems to provide all public school officials and personnel the opportunity to continue their development throughout their professional careers. A formula was set for funding professional development programs. The Act also requires local school systems to submit annual comprehensive

staff development plans designed to address the specific needs of the system and its personnel.

Purpose of Staff Development

Continuous learning for local school system personnel stems from the need to incorporate new knowledge, skills and attitudes into the planning and organization of the curricula, methods, materials of instruction and procedures by which the educational enterprise manages to achieve desired student results. Effective continuing staff development programs will result in a more professional, self-assured teaching, administrative and supportive force in the educational system. Therefore, personnel responsible for the educational program in a local school system should be given the primary responsibility for determining system and individual staff development needs along with responsibility for implementing programs to meet these needs.

The Georgia Plan for Staff Development is based on the recognition that professional development of personnel represents a continuum of activities that range from local system staff development programs designed to meet system needs to individual professional staff development programs designed to meet the needs or aspirations of individuals. The Georgia Department of Education can most effectively support local staff development programs by providing authority, funding, guidance and technical assistance to local school systems in the planning, design, implementation and evaluation of continuing professional development programs. The State Department of Education will provide necessary technical assistance to ensure compliance with all applicable statutes and will work with local systems in the approval of a comprehensive staff development plan which will stimulate quality staff development programs at the local level.

Legal Requirements

All public school officials and personnel shall be provided the opportunity to continue their development throughout their professional careers. The primary purpose of the staff development activities sponsored by local units and/or the Georgia Department of Education shall be directed toward the implementation of this policy. Two additional purposes of staff development programs are to adopt into general practice the findings of scientifically-designed research which has been widely replicated, particularly as it relates to teacher and school effectiveness, and to address the professional needs and deficiencies identified during the process of objective performance evaluations (20-2-230).

The State Superintendent of Schools shall establish criteria to be used by all local school systems in developing an annual comprehensive staff development plan. These criteria will ensure that all activities related to personnel are included in the comprehensive plan. Each local school system shall develop an annual comprehensive staff development plan and submit the plan to the State Board of Education for review and approval as prescribed by the State Board. The annual comprehensive staff development plan shall provide programs designed to address deficiencies of school and system personnel as identified through the annual personnel evaluation process, staff development needs as identified through the evaluation of the effectiveness of instructional programs, and other needs as deemed necessary by the local school system or prescribed by the State Board (20-2-232). The Staff Development Cost of Instruction allocation shall reflect an amount of funds that is at least equivalent to one-half of one percent of all professional salaries used in the development of each program weight computed pursuant to Code Section 20-2-161.

I. Staff Development Program in Georgia During FY 87

QBE places authority and responsibility for professional development programs at the local school system level. The authority and responsibility of local systems are subject to review and approval by the state in its process of assuring that Georgia statutory requirements are met. In order to allow schools additional time for planning and implementation of QBE requirements for staff development, school systems were required to submit an abbreviated staff development plan for FY 87 by July 25, 1986. An abbreviated plan required school systems to plan staff development programs for certified personnel only based on personnel evaluations and instructional program effectiveness.

Responsibilities for the Development and Management of a Plan

In FY 87 each school system was mandated to have a local board approved policy that required the preparation of a comprehensive plan for staff development which could be updated annually. Approval of the plans by the local boards of education was required prior to their transmittal to the Georgia Department of Education. The plans appointed either the system superintendent or a designee as the staff development coordinator for the school system, and provided for the appointment, by the superintendent, of a staff development advisory committee, representing probable participants in staff development activities. The purpose of the advisory committees was to advise and assist the staff development coordinators in such areas as the assessment of needs, determination of priorities, content of activities, evaluation of the programs and modification of plans. Each school system superintendent was required (a) to adopt administrative procedures which combined all staff development activities into one comprehensive plan, (b) to

recommend the appointment of a staff development coordinator if that person was someone other than himself/herself, (c) to determine the number and appoint the members of the staff development advisory committee, and (d) to administer the state approved comprehensive plan.

Components of the Abbreviated Staff Development Plan

In FY 87 the Abbreviated Plan for Staff Development established, coordinated and maintained programs that addressed, according to priorities, the assessed needs of certified school personnel. Needs were considered from the points of view of professional development and instructional effectiveness. The needs of all certified teaching, leadership and service personnel were considered by school system administrators according to each of three stages of professional development: induction, remediation and enrichment (enhancement). Induction refers to the process of preparing persons to enter a new field of employment; it can continue for three years. Induction includes not only staff development for beginning teachers but also staff development for any employee who has accepted an assignment in a new function. Remediation means the provision of staff development opportunities to assist personnel who have been employed in a field for three or more years, and who must overcome deficiencies identified through their annual performance evaluations. Enrichment (enhancement) is the provision of learning opportunities which renew one's professionalism by addressing needs that have been identified through self evaluation.

School system administrators also examined the needs of personnel based on evaluations of the effectiveness of school and school system instructional programs. An educational program is effective to the extent that students are achieving the objectives of that program. If they are not, program changes may be in order. The competencies which personnel must have to perform

adequately in the roles required by the new or revised educational program are staff development needs.

For the purpose of determining staff development needs that are based on instructional effectiveness, educational programs were grouped into five broad categories: general, special, remedial, adult and instructional support.

General education encompassed all kindergarten, primary, middle grades, high school and vocational education programs. Special education meant all programs for exceptional children, including programs for gifted students. Remedial education was the provision of opportunities for students who need to overcome their deficiencies in educational achievement and included all such programs funded by local, state and federal sources. Adult education included adult basic and general educational development. Instructional support referred to areas such as media selection and utilization, computer literacy, classroom management, etc., that have direct application to all educational programs. Needs based on instructional effectiveness were also described according to the scope of the educational program; e.g., whether the new or revised program was to operate on a school-wide, system-wide or state-wide basis.

Staff development programs were based on assessed needs and represented the extent to which needs that were considered to be priorities would be addressed. Needs were addressed (in order) according to (a) needs of certified personnel with each of the three stages of professional development being equally important, and (b) needs of certified personnel resulting from evaluations of effectiveness of instructional programs. Staff development programs could be established to meet assessed needs at a lower order of priority even if all higher order needs that had been addressed through programs had not yet been satisfied. However, school system administrators were required to justify such programs.

School system administrators were required to develop a budget that considered Cost of Instruction funds used to implement the plan. Cost of Instruction is an allocation to local school systems that is at least equivalent to one-half of one percent of all professional salaries used in the development of each program weight. In FY 87 not less than ninety percent of these funds had to be used to support staff development programs for certified personnel and expended only for the following items:

- Release time for teachers (substitute teacher salaries)
- Travel for approved conferences and workshops
- Purchased professional and technical services fees and expenses for instructors and consultants
- Instructional equipment
- Reimbursements paid for the following expenditures of persons who had successfully completed an approved conference, workshop or course:
 - Registration fees
 - Costs of approved college courses (limited to tuition, fees and textbooks required for the course).

Compensation of individuals for their participation in staff development activities from this source was not permitted.

Evaluation

Evaluation is important to the design and implementation of any staff development program because effective staff development program planning requires a knowledge of the past and current status of the program. Effective staff development planning groups should review all information gathered from a review of the program, draw conclusions and make recommendations for ongoing staff development program planning. A systematic evaluation effort should

focus primarily upon identifying strengths, weaknesses and areas of possible improvement in the staff development programs.

People directly involved in any aspect of a staff development program need, and can profit from, the reinforcement that evaluations can offer. Data-based decision making involves identifying information needs, collecting the appropriate information, arranging the information in a form that is usable and getting the information to and having it used by the decision makers. Staff development program evaluation should provide information about the overall condition of the staff development program and the environment created to facilitate professional growth; the adequacy of the processes being used to initiate, manage and maintain the staff development program; and the effects of specific activities on participants and students.

Evaluation enhances the likelihood of participant involvement in and benefit from a staff development activity. Without evaluation there can be no assurance that staff development efforts are effective and there can be no accounting for the expenditure of time and money required for worthwhile staff development programs.

The following evaluation of the FY 87 staff development programs in Georgia is both quantitative and qualitative. Data for the quantitative evaluation was gathered from an overview of (a) Annual Report for FY 87 (Form DE 0225) submitted by school system staff development coordinators to the Georgia Staff Development Section (see Appendix A) and (b) Staff Development Unit Course Update (Form DE 0220) which is continually submitted to the Georgia Certification Division by local school systems, Regional Educational Service Agencies (RESAs), institutes of higher education and other agencies as staff development activities for certification renewal are approved (see Appendix B).

Data for a qualitative evaluation was gathered from (a) Annual Report for FY 87, Evaluative Information which requested a narrative report concerning the benefits and accomplishments of each school system's staff development program and (b) Summary Evaluation Report for Staff Development Activity (Form DE 0233) which is submitted after the completion of each staff development activity by the local school system staff development coordinator to the Georgia Staff Development Section (see Appendix C).

Quantitative Evaluation

The total amount of Cost of Instruction allocated to Georgia School Systems for FY 87 was \$5,967,005. This is an increase of \$5,247,005 over the FY 86 total Adequate Program for Education in Georgia (APEG) grant allotment of \$720,000.

Quantitative data from Georgia school systems (182 of 186 school systems submitted Annual Reports for FY 87 by December 2) indicate that the total participation of certified personnel in staff development programs in FY 87 was 113,868; 97,937 participants in all 182 school systems were certified teaching personnel, 8,626 participants in 170 school systems were certified leadership personnel, and 7,305 participants in 143 school systems were certified service personnel (see Appendix D and Figures 1-2). During FY 87 Georgia school systems reported a total of 3,981 staff development programs for certified personnel with a total program expenditure of \$5,876,623.46 (see Appendix E).

In FY 86, 2257 activities for certification renewal credit were approved by all school systems, RESAs, institutes of higher learning, vocational schools and other agencies. In FY 87 these same training agencies reported 2,198 activities approved for renewal credit. This is a decrease of 59 activities (see Table 1 and Figure 3). In FY 86, 105 Georgia school systems

Figure 3. Comparison of FY 87 and FY 86 Staff Development Activities for Certification Renewal Credit

reported a total of 1,763 staff development activities approved for certification renewal credits. In FY 87, 101 school systems reported 1,674 activities approved for certification renewal credit. This was a decrease of 89 activities (see Appendix F). Also, the sixteen regional (cooperative) educational service agencies reported a total of 292 approved staff development activities for certification renewal credit for FY 86. These same agencies reported 283 activities for credit in FY 87. This is a decrease of 9 activities (see Appendix G). For both FY 86 and FY 87 the major emphases were in the areas of personnel management and development, and vocational education/computer technology.

Qualitative Evaluation

Summary Evaluation. Qualitative evaluations of FY 87 staff development activities for certified personnel in Georgia were continually and systematically conducted to ascertain participants' opinions of these activities. Participants' opinions were obtained by the analysis of Summary Evaluation Reports (see Appendix C) submitted to the Staff Development Section, Georgia Department of Education. Data reported on the Summary Evaluation Reports were compiled from information gathered from Participant Evaluation of Staff Development Activity (Form DE 0234; see Appendix H). This evaluation instrument asked the participants to respond to the following 12 questions at the conclusion of each activity:

1. The activity objectives were related to my educational concerns.
2. The activity objectives were related to practical educational application in my specific job setting.
3. The activity had some outstanding components which were unique or innovative.
4. Presentations were well organized.

5. The program schedule was well adapted to my educational needs.
6. Meeting facilities were suitable.
7. The strategies utilized, including instructional resources, were appropriate for meeting the stated objectives.
8. Overall, personnel conducting the activity exhibited the qualities essential to the success of the workshop. (Consider creativity, specialized knowledge, communications skills and the like.)
9. Overall, the activity was a successful training experience for me.
10. Adequate provisions were made for me to provide feedback to the personnel conducting the workshop.
11. Adequate provisions were made for me to identify needs which were not previously identified.
12. As a result of this staff development activity, I will alter my educational behavior in a more positive direction in my specific job setting.

The means for each variable from the data obtained from the Summary Evaluation Reports were computed. This evaluative instrument has a Pearson Reliability Coefficient of .951. A mean value for each of the 12 variables and total instrument measured was obtained by combining the total forced-choice responses from the Summary Evaluation Reports for each of the five possible choices--strongly agree, agree, undecided, disagree, strongly disagree; multiplying the total number of responses for each choice by the assigned value--strongly agree (+2), agree (+1), undecided (0), disagree (-1), strongly disagree (-2); adding the products to obtain a total for each variable; and dividing the total obtained by the number of respondents.

A total of 1265 staff development activities was qualitatively evaluated with a total of 21,467 participants. The average number of participants per activity was 17 with 89 school systems submitting Summary Evaluation Reports.

Table 2 reports the qualitative evaluation of each of the 12 variables and total instrument for each type of training agency and the total group of participants, the number of activities conducted by each type of training agency, the number and percentage of systems/RESAs for which each training agency conducted activities, and the total number and average number of participants trained by each type of agency. Figures 4 and 5 graphically represent the evaluation of the FY 87 staff development activities in Georgia by the total group of participants.

Related Doctoral Study. A doctoral study was conducted to ascertain if the teachers' opinions of staff development activities within Georgia differ from the beliefs principals have about these teachers' opinions. Teachers' opinions were obtained by the analysis of Summary Evaluation Reports of staff development activities submitted to the Georgia Department of Education. The questionnaire used to obtain principals' beliefs was distributed to 695 principals in 47 school systems. A total of 403 questionnaires (58%) was returned from all 47 school systems. The principals responded to 106 staff development activities with a total teacher participation of 4,519.

Teachers rated the overall quality of staff development activities significantly higher than principals believed teachers would rate the selected activities. Teachers also rated each of the 12 variables significantly higher than principals believed teachers would rate the same variables. Highest teacher rated variables included the areas of educational concerns, organization of presentations, instructional strategies and resources, workshop presenter, training experience, and feedback. The variables that principals believed teachers would rate the highest included the areas of educational concerns, educational application, organization of presentations, facilities, instructional strategies and resources, and workshop presenter. The greatest mean differences between teachers' opinions and beliefs

Figure 5. Evaluation of Staff Development Activities in Georgia During FY 87 (bar graph)

principals have about teachers' opinions were in the areas of program scheduling, success of training experience, identification of needs, and changes in educational behavior.

Teachers rated selected staff development activities significantly higher overall than principals believed teachers would rate the activities whether principals did or did not attend and their teachers did or did not attend the selected activities. Regardless of whether principals/teachers did or did not attend the staff development activities, principals were not accurate judges of teachers' opinions of the quality of the activities. However, when neither principals nor their teachers attended the selected staff development activities the disparity between principals' beliefs and teachers' opinions was significantly greater (Purcell, L. O. A comparison of the quality of staff development activities. Doctoral dissertation, University of Georgia, 1987).

Evaluative Information. In addition to the quantitative data requested from the staff development coordinators regarding their school system's FY 87 staff development programs (Annual Report for FY 87, DE Form 0225), coordinators were asked to submit a narrative report concerning the benefits and accomplishments of the program. Specifically, they were asked to respond to the following questions:

1. Of what benefit was the staff development program to your school system?
2. What was the major accomplishment(s) of this program?
3. What changes in teacher behavior(s) were noted? In student behavior(s)?
4. In reviewing your administrative procedures for the FY 87 staff development program, what changes did you make for FY 88?

Representative responses from various Georgia school systems are presented as an additional qualitative evaluation of Staff Development Programs in FY 87:

AMERICUS CITY

With new funding, we were able to move toward greater use of technology with videos and computers. We've used tapes, computer software and science lab equipment in our staff development activities this (year). These new items obviously allow us greater use of selected talents and multiple opportunities for usage. We have been able to begin building a professional library for the staff, collecting both print and non-print items. With just this little amount of money, we have been able to excite and stimulate our staff in new areas with these new capabilities. The major accomplishment of the staff development program would have to be the focus of writing in the system. Throughout the year, writing was spotlighted in as many ways as possible. Through the South Georgia Writing Project (SGWP) and RESA, we were able to reach a small group of teachers who wanted to do some things with writing. Besides these teachers, we were able to use previously SGWP trained teachers to present and share their classroom experiences. The benefits of mixing these two groups were enormous. The belief that writing is an application of things learned was infectious. We have never had so many children writing or teachers wishing to display their students' writing for Board meetings.

BURKE COUNTY

The major accomplishment of our staff development program has been the participation of those life certified employees who have "burned" out. Many had not learned anything new (and innovative) in several years. As a result of their participation in Staff Development activities, our students have had new and varied learning experiences.

BUTTS COUNTY

Because of the extensive and varied uses of staff development funds there was a notable awareness by teachers of the opportunities available for growth and understanding. This was reflected in more effective classroom instruction and management. This in turn provided more adequate educational opportunities for students. In reviewing administrative procedures with an eye to improvement for FY 88, it was determined that a more adequate procedure should be developed for record keeping of staff development funds and activities. In the future all funds will be recorded in strict line item procedures; all personnel records will indicate specific staff development activities in which the individual is involved and appropriate funding source; proper evaluation forms will be kept for each staff development activity; continued involvement of the staff development council will be stressed; and periodic accounting of funds will be observed.

CANDLER COUNTY

Teachers definitely exhibited a better attitude toward school. By receiving financial assistance to take courses they felt they needed, teachers were motivated to enrich their teaching skills. They attended State workshops for the first time and are more interested in current trends and techniques in teaching. By teachers having more enthusiasm in the classroom, students exhibited more enthusiasm.

DECATUR COUNTY

Because of staff development, school system personnel were able to identify and use skills in their respective areas needed to successfully implement Quality Basic Education. School system personnel were also trained to use appropriate techniques in working in the different areas of the curriculum. Through staff development, the identified needs of school system personnel were able to be met. School system personnel were helped to better prepare students to take, correctly administer and utilize the results of the Georgia Criterion Referenced Test and the Iowa Test of Basic Skills. The morale of the teaching staff improved because of their appreciation in being able to stay abreast of new curriculum innovations and ideas. School system personnel also showed excitement and a renewed interest because of the new ideas acquired and the information received. Changes made in administrative procedures for FY 88 staff development program included a more in-depth needs assessment of all levels of school system personnel (certified and noncertified) and the needs of all personnel being included in the plan.

DEKALB COUNTY

The major administrative changes we have made are in the size of our staff and how we are organized to deliver services. We have developed system-wide planning teams that have Staff Development responsibilities in specific areas. This has allowed us to focus more closely on assessed needs and involve more people in planning. This has been a tremendous success, as we have reached over 7,000 people this past year. We have also been able to reach individuals and groups that had no previous contact with Staff Development.

ELBERT COUNTY

Also two "Art for Classroom Teachers" classes were conducted with a total of 33 teachers adding this experience to their expertise. We were also able to fund a few critical tuition needs for teachers. Increased quality and breadth of staff development activities and opportunities would be the single best summary of accomplishments. One of the readily observable behavior changes is the amount and quality of art work seen in classrooms and hallways of the schools. Upon closer evaluation, as was experienced by the writer in evaluating many of these activities, we find excellent correlation and integration of art work in subject matter taught in the classrooms.

GLYNN COUNTY

Teachers are participants in staff development beyond the participation required for Southern Association or for certification renewal requirements. They are participating for professional growth and development, and this appears to be a norm for the school system and its employees at this point in time. The school system is building a cadre of teachers who can conduct training sessions on key math and language arts processes. This group is composed of teachers who were skilled in a particular process or content area. These teachers were provided with opportunities to conduct, with supervision and feedback, segments of courses. They will provide follow-up staff development and peer leadership in their schools. The Glynn County School System's staff development program for 1988 will continue to offer those courses that improve instructional effectiveness of teachers and maintain the momentum of this year's program. The plan calls for more courses and a major number of courses of shorter duration and less staff development

credit. The plan also will emphasize for the first time staff development based on needs as perceived by the local schools and implemented at the local school setting. The plan is emphasizing local school site involvement in meeting the needs of the employees at each individual school.

HART COUNTY

Summative evaluation comments following staff development activities were overwhelmingly agreeable, indicating that teacher enthusiasm and morale were being positively affected. This was an encouraging phenomenon, especially during a time when adaptation to the new QBE regulations was bewildering educators with new and additional requirements and paperwork.

HEARD COUNTY

Heard County is a small rural school system. It is a great benefit to our personnel to have the opportunity to go outside of our geographic area/school system. This provides access to new ideas and different ways of presenting curriculum to our students. Teachers were sent to the University of Georgia, to Macon, to Savannah, and took many staff development units at West Georgia RESA. They had the opportunity to share ideas with teachers of other counties. Teachers coming back from staff development opportunities were enthusiastic and have been "recharged" for the classroom. This enthusiasm has been contagious to the students. There have been fresh ideas and new educational techniques and technology utilized to communicate the instructional objectives to the students.

MCINTOSH COUNTY

Finally, moneys were spent to provide professional growth opportunities such as conferences and workshops for some teachers and administrators. Since we encourage professional involvement and leadership in professional organizations, it is considered a positive accomplishment that teachers apply for funds to attend meetings and come back to share what they have learned with their fellow teachers. The administrative procedure of greatest consequence to change from last year to this is the method of determining staff development courses to be offered. Instead of teachers choosing from a list of offerings one that "seems" to be interesting, the needs are identified through supervision and evaluation. Courses are then offered to meet identified needs. This is a very positive change that seems to be making everyone appreciate the benefits of staff development much more than ever before.

MUSCOGEE COUNTY

Changing attitudes is not an easy job; however, one goal of this department is to change the attitudes of teachers and administrators about staff development. For many years staff development meant taking a course for recertification. Now staff development is continuous professional development to improve performance. We intend to prove that this truly happens! In fact, as a result of courses offered this year, we have already observed improved teaching techniques, a new enthusiasm about subjects and better communication within the classroom. One other benefit observed as a result of the staff development program this year is an appreciation between categories of teachers. This has occurred as a result of heterogeneous grouping of elementary, secondary, special education and vocational teachers within some generic courses and activities and some travel opportunities.

OCONEE COUNTY

Changes in teacher behavior have varied with the course, workshop or particular program in which the teacher was participating. There is a general expression of support and improved morale with all teachers involved. It says to teachers that their continued growth and improvement is important enough for us to fund. That sort of support breeds a desire to improve and live up to expectations.

STEPHENS COUNTY

I believe the major accomplishment of the Stephens County Staff Development Program this year was to increase teacher confidence and enthusiasm for teaching. The science, math and reading programs offered not only subject matter information but also emphasized methods that would be helpful to the participants. High interest activities with emphasis on student involvement lead to an increase in teacher enthusiasm which in turn leads to student enthusiasm. In review of the administrative procedures for 1987, a number of ideas and changes have been considered. A number of resources, resource persons, and programs were identified that would help meet needs in our system and we plan to use these during the 1988 school year. The survey used to determine individual, school and system needs will be refined to hopefully make them more reliable. Local resource persons and agencies were used this year and we hope to expand this use next year. An increase in the number of courses taught for college credit is planned for next year. A video library of staff development programs/activities was started (FY 87) and will be expanded next year. This will allow persons unable to attend these programs an opportunity to view tapes at a later time.

TALBOT COUNTY

The FY 87 Staff Development Plan for Talbot County Schools allowed teachers, who are often the only teacher in the system certified in a particular field, opportunities to interact with other professionals with similar interests. In addition, in small school systems such as Talbot County, teachers are many times employed in more than one discipline. Staff Development in these added disciplines is crucial. Talbot County has found that when teachers are given an opportunity for staff development, teacher turnover is lessened. As a result of an evaluation of the FY 87 Staff Development program, more emphasis will be placed on having the individual or group receiving the staff development to justify the need for the staff development. In the past, these decisions were made for the recipient. The recipient either accepted or rejected the offer. Starting in FY 88, the decisions for staff development will be made with the recipient.

TIFT COUNTY

The activity which received the highest rating - the one instructional personnel rated as contributing most to their professional growth and in which children received the greatest benefit - was attendance at subject area workshops. Teachers in Tift County have historically not been in attendance at their respective subject area workshops. With the increase in staff development funds for 1986-1987, which made provision for opportunities to attend, 114 teachers and 8 administrators attended out-of-county subject-related activities. This represented 27% of the total staff, as compared to only 3% for the 1985-1986 school year. Administrative procedures for 1987-88 have been changed to provide a

clear and precise audit trail relative to the expenditure of funds.
This was brought about because of the increase in funds.

Conclusions

In FY 87, 182 school systems reported serving the needs of certified teaching personnel; however, fewer school systems reported serving the needs of certified leadership personnel (170) and the needs of certified service personnel (143). This may indicate that school systems are prepared to design and implement programs for teachers, but not programs for certified leadership and service personnel. Also, needs assessments for certified leadership and service personnel may not be developed sufficiently to ascertain their needs. School systems may have placed a higher priority on meeting the needs of teaching personnel than on meeting the needs of leadership and service personnel. Within the QBE Comprehensive Program for Staff Development, school systems should ascertain the needs and provide staff development programs for all personnel.

The average staff development program expenditure for FY 87 was \$1,476. The average expenditure per participant was \$52 (in FY 87 school systems were only required to provide staff development programs to meet the prioritized needs of their certified personnel). With the Comprehensive Program for Staff Development beginning in FY 88, school systems will be required to meet the prioritized needs of certified and noncertified personnel. Even with an expected increase of state staff development funds (based on the QBE funding formula), school systems in FY 88 should (a) carefully plan the implementation of staff development programs to ensure the maximum benefits per expenditure, and (b) search for other funding sources beyond the state allotment in order to implement needed, quality staff development programs.

There was an 829% increase in funding for staff development in FY 87 (\$5,967,005) as compared to FY 86 (\$720,000). However, even with this large

increase in funding, the number of staff development activities approved for certification renewal credit in FY 87 remained approximately the same as in FY 86 (the number of school systems reporting approved SDU activities also remained approximately the same). From a review of the Annual Report for FY 87, school systems met the needs of certified personnel by implementing more staff development activities of a shorter duration; i.e., attendance at conferences, and visitation to other school systems. Also, school systems implemented staff development programs designed to meet the specific needs of their personnel without attempting to meet certification renewal credit requirements. However, the staff development programs for certification renewal credit were implemented to meet similar needs in FY 87 as compared with FY 86.

In FY 87 participants believed that staff development activities were effectively meeting their needs regardless of the training agency. Participants especially believed that (a) the staff development activities were related to their educational concerns, (b) the presentations were well organized, and (c) personnel conducting the activities exhibited the qualities essential to the success of the activity; i.e., showed creativity, possessed specialized knowledge, and communicated well.

In FY 87 the majority of staff development activities evaluated were conducted by local school system personnel. RESA consultants also conducted many staff development activities within school systems as well as sponsored multi-system staff development activities. The average participation per staff development activity was 17. This may be another indication that staff development activities were designed to meet the specific needs of certified personnel.

From a review of the Evaluation Information, indications are (a) professional libraries containing both print and nonprint materials were

either begun or improved, (b) there was increased participation in staff development activities by personnel holding life certificates with an increased awareness by participants of the opportunities available for professional growth, and (c) financial assistance to attend college courses motivated participants to improve their job-related knowledge and skills. Other indications are (a) that the morale of certified personnel improved because of their opportunity to learn about new curriculum innovations and ideas, to communicate with others in related fields outside their own school systems, and to share these ideas with their system personnel, (b) the formation of system-wide planning teams for staff development allowed school systems to focus more closely on various needs and involved more people in the actual planning with an emphasis on local site involvement, and (c) there was an increased correlation between professional growth and improved classroom instruction. Finally, there was an increased awareness that staff development is continuous professional development beyond attending workshops/college courses for advanced degrees or certification renewal.

II. Professional Development Stipend Program in Georgia During FY 88

In FY 88 the Professional Development Stipend Program provided stipends for certified personnel who attended staff development activities (college or SDU activities) which addressed their assessed needs. Needs were considered from two points of view--professional development and instructional effectiveness. The needs of all certified teaching, leadership and service personnel were considered by school system administrators according to each of three stages of professional development--induction, remediation and enhancement.

Stages of Professional Development

Induction refers to the process of preparing persons to enter a new field of employment; it can continue for three years. Induction includes not only staff development for beginning teachers but also staff development for any employee who has accepted an assignment in a new function. Induction staff development activities had to be approved in the following order:

(a) Needs of beginning teachers and other personnel based on the results of the Teacher Certification Tests and the on-the-job assessments utilizing the Teacher Performance Assessment Instruments,

(b) Needs of beginning teachers based on system-wide and/or school assessments,

(c) Needs of any certified employee who had accepted an assignment in a new field, and

(d) Needs of a new teacher who had been hired to teach in an area designated by the Georgia Board of Education as a critical field.

Remediation means the provision of staff development opportunities to assist personnel who have been employed in a field for three or more years, and who must overcome deficiencies identified through their annual performance evaluations. A professional development plan had to be designed for each individual, specifying staff development opportunities that are available to the individual for improving in the identified area(s) of need.

Enhancement staff development activities serve to renew one professionally by addressing needs that have been identified through the annual performance evaluation and through one's own evaluation of himself/herself. Area(s) of need had to be mutually agreed to by the individual and his/her supervisor. No professional development funds could be used in this area until the school system could document that all needs had been addressed in induction, remediation, and instructional programs.

Instructional Effectiveness

School system administrators also examined the needs of personnel based on evaluations of the effectiveness of school and school system instructional programs. An educational program is effective to the extent that students are achieving the objectives of that program. If they are not, program changes may be in order. The competencies needed by personnel to perform adequately in the roles required by the new or revised educational program are staff development needs.

For the purpose of determining staff development needs that are based on instructional effectiveness, educational programs were grouped into four broad categories: general, special, remedial, and instructional support. General education encompassed all kindergarten, primary, middle grades, high school and vocational education programs. Special education meant all programs for exceptional children, including programs for gifted students. Remedial education was the provision of opportunities for students who need to overcome their deficiencies in educational achievement and included all such programs funded by local, state and federal sources. Instructional support referred to areas such as media selection and utilization, computer literacy, classroom management, etc., that have direct application to all educational programs. Needs based on instructional effectiveness were also described according to the scope of the educational program; e.g., whether the new or revised program was to operate on a school-wide, system-wide or state-wide basis.

Requirements for Professional Development Stipend

Recipient Requirements

To qualify for a stipend, an individual had to possess a valid certificate, and be under contract for between ten and twelve months. The approved staff development activity had to be successfully completed during

the summer when the individual was not under contract, and had to address competency need(s) as identified through the needs assessment process. Also, the individual had to be employed on a full-time basis with one or more public school systems and complete a minimum of one month of service in a Georgia public school system during the following school year.

School System Requirements

In FY 88 professional development stipends could be awarded only under certain conditions. The approved activity had to be a college credit course offered by a regionally accredited institution or an approved SDU course that met the requirements for preparation and contact hours. The system had to enter into a formal agreement with each recipient, specifying the amount of stipend, type of study, number of credits and need area addressed.

Participants for professional development stipends had to be approved in the following priority order (unless the school system provided a justification): Induction/Remediation, Instructional Program, Enhancement.

Professional development stipends could be used only to provide staff development activities that related to K-12 school and school system educational programs. However, no professional development stipends could be awarded to individuals for (a) participating in the preparation for Teacher Certification Tests and Teacher Performance Assessments, (b) revising or writing curriculum, (c) reviewing or selecting textbooks, or (d) educational or professional travel. Also, no professional development stipend could be awarded for (a) professional conferences, (b) correspondence and independent study courses, (c) serving on school/system committees or performing task(s) for the system, and (d) staff development activities for the primary purpose of renewing a certificate or obtaining a higher degree.

School systems had to base the amount of stipend on the individual recipient's daily rate of state salary multiplied by the amount of time normally required to earn given hours of credit. An individual's daily rate of state salary was calculated by dividing the annual base state salary paid to that person for the previous school year by the number of days the person was under contract that year. The amount of time normally required to earn course credit is given as 2.67 days for each quarter hour or SDU credit. No stipend could be awarded to an individual for less than one quarter hour, one SDU or one semester hour or for more than fifteen quarter hours, fifteen SDUs, or nine semester hours.

Each school system had to return any unexpended professional development stipend funds and submit a report of professional development stipends to the Georgia Department of Education. The report included the names of recipients, social security numbers, base state salary, types of activities, numbers of credit hours, dates of study, need(s) being addressed, and amounts of stipend per recipient.

Summation of FY 88 Professional Development Stipend Program

The following summation of the FY 88 Professional Development Stipend Program in Georgia was gathered from an overview of two primary sources. The Report of Professional Development Stipends (DE Form 0016) was submitted by school system staff development coordinators to the Georgia Staff Development Section (see Appendix I); and the General Fund QBE Program Expenditure Detail (DE Form 0420) was submitted by school system superintendents to Georgia Grants Management Section along with any unexpended professional development stipend funds (see Appendix J).

Number of Recipients by Length of Contract

The total number of certified personnel in all 186 school systems receiving professional development stipends (PDS) in FY 88 was 20,408 (see Appendix K). Of this number 19,673 were employed during FY 87 for 190 contract days (10 months), 268 for 200 days (10.5 months), 289 for 210 days (11 months), 135 for 220 days (11.5 months), and 43 for 230 days (12 months; see Figures 6 and 7). Table 3 provides additional information concerning the number and percentage of school systems reporting personnel receiving professional development stipends by term of contract employment.

Category of Recipients by QBE Professional Code

The number of certified personnel receiving professional development stipends by QBE professional category ranged from 0 persons in the superintendent category (600) to 15,154 persons in the regular instructional personnel category (see Appendix L). Professional Development Stipends were received by 541 persons in the student services category, 1,367 persons in the administrative and supervisory category, 403 persons in the instructional specialist category, 1,378 persons in the special education category, 57 persons in the grades 6-8 vocational instructional category, and 508 persons in the grades 9-12 vocational instructional category (see Figures 8 and 9). Table 4 provides additional information concerning the number and percentage of school systems reporting certified personnel receiving professional development stipends by QBE professional category.

College Courses and/or SDU Activities

In FY 88, professional development stipends were paid to certified personnel for their successful completion of 21,919 (duplicated) college courses and/or SDU activities (see Table 5). School systems (178) paid

recipients for 5,521 college courses (28,089 quarter hours, 5.1 quarter hours per course). School systems (176) paid recipients for 16,798 SDU activities (55,479 SDU credits, 3.4 credits per activity). See Appendix M.

College Courses/SDU Activities by Identified Need Area. Professional development stipends were paid for participation in professional development activities designed to meet the identified needs of the individual recipients (see Appendix N). A total of 7,795 (duplicated) college courses and/or SDU activities was conducted to meet professional development needs. Of this total number of courses/activities, 4,725 were conducted to meet induction needs, 1,485 for remediation needs, and 1,585 for enhancement needs. A total of 14,124 (duplicated) college courses or SDU activities was conducted to meet instructional program needs. Of this total number of courses/activities, 8,559 were conducted to meet general education needs, 552 for special education needs, 757 for remedial education needs, and 4,256 for instructional support needs (see Figures 10 and 11). Table 6 provides additional information concerning the number and percentage of school systems reporting college courses and SDU activities by identified need area.

Classification of College or SDU Activity by Taxonomy. The number of college courses and SDU activities by taxonomy ranged from 422 courses/activities in visual and performing arts to 11,364 in personnel management and development (see Appendix O). There were 970 courses/activities in guidance, counseling, supportive services; 2,656 in languages (including reading); 901 in life/physical sciences; and 1,462 in mathematical sciences were conducted to meet identified needs. Also, 729 courses/activities in PE, health, and leisure; 732 in social sciences and social studies; 1,032 in special education; and 1,651 in vocational education/computer technology were attended by PDS recipients to meet their needs (see Figures 12 and 13). provides additional information concerning the number and percentage of school systems reporting college courses and SDU activities by taxonomy.

Program Expenditure

The total amount of Professional Development Compensation allocated to Georgia school systems for FY 88 was \$23,027,548 (see Appendix P). Of this allocation, all 186 school systems distributed \$21,334,894.19 as professional development stipends, and 156 school systems spent \$958,196.79 in employee benefits (social security). This is a total expenditure of \$22,293,090.98.

Conclusions

From a review of the information received from Georgia school superintendents and staff development coordinators, the following conclusions may be reached concerning the FY 88 Professional Development Stipend Program:

--All 186 Georgia school systems participated and 97% of the professional development stipend allocation was expended. The average stipend was \$1045 per recipient, \$973 per activity, and \$255 per quarter hour or SDU credit.

--PDS recipients represented all professional categories, except superintendents, with employment contracts between 10 to 12 months; however, 18097 (89%) of recipients were teachers with 190 day contracts.

--Almost three times as many stipends were paid to participants of SDU activities as to participants of college courses; SDU activities were of a shorter duration with fewer number of credits earned per activity.

--Almost twice as many PDS activities were conducted to meet instructional program needs as to meet professional development needs. The majority of activities conducted to meet instructional program needs were in general education; the majority of activities conducted to meet professional

development needs dealt with the induction stage. However, there were more activities conducted to meet enhancement than remediation needs.

--The majority of college and SDU activities were conducted in the area of personnel management and development; however, some activities were conducted in all areas of the curriculum.

APPENDIX H

PARTICIPANT EVALUATION OF STAFF DEVELOPMENT ACTIVITY

Georgia Department of Education Teacher Education and Staff Development Participant Evaluation of Staff Development Activity

Title of Activity _____

Date(s) of Activity _____

Each participant in this staff development activity should evaluate the *quality* of the activity by checking whether he/she strongly agrees, agrees, is undecided, disagrees or strongly disagrees with each of the statements below. Either the instructor or coordinator of the activity should summarize for the group and record the results in section "F" of the Summary Evaluation Report, DE Form 0233.

Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree	
					1. The activity objectives were related to my educational concerns.
					2. The activity objectives were related to practical educational application in my specific job setting.
					3. The activity had some outstanding components which were unique or innovative.
					4. Presentations were well organized.
					5. The program schedule was well adapted to my educational needs.
					6. Meeting facilities were suitable.
					7. The strategies utilized, including instructional resources, were appropriate for meeting the stated objectives.
					8. Overall, personnel conducting the activity exhibited the qualities essential to the success of the workshop. (Consider creativity, specialized knowledge, communication skills and the like.)
					9. Overall, the activity was a successful training experience for me.
					10. Adequate provisions were made for me to provide feedback to the personnel conducting the workshop.
					11. Adequate provisions were made for me to identify needs which were not previously identified.
					12. As a result of this staff development activity, I will alter my educational behavior in a more positive direction in my specific job setting.
