ABSTRACT

This report covers the October 1985 educational and career postsecondary activities of the June 1985 graduates from 146 Connecticut local public high schools, and 92 nonpublic high schools; and the February 1986 activities of the June 1985 graduates from the 17 regional vocational-technical schools (RVTS). The number of Connecticut high school graduates declined from June 1984 to June 1985, while the percentage continuing in education was the highest ever. Correspondingly, there was a decrease in the percentage of graduates beginning careers. Minority representation among graduates increased in 1985, but there were substantial disparities in postsecondary education and career activities by race. The following are highlights from this report: (1) there were 41,998 Connecticut high school graduates in 1985; (2) in 1985, 4,068 people were awarded General Educational Development diplomas; (3) of the total number of local public high school and RVTS graduates, 13.9 percent (4,809) were minorities; (4) 6.9 percent of nonpublic school graduates were minorities; (5) 68.8 percent of white graduates, and 53.4 percent of minority graduates continued in education; (6) 6.2 percent of minority graduates were unemployed, compared to 1.4 percent of white graduates; (7) a greater number of minority graduates entered military service than whites; (8) 27.4 percent of graduates went on to career-related activities; and (9) 16,776 students completed a vocational program as part of their course of study. Data are presented on 18 tables and figures. Seven appendices present summary data on enrollment and activity patterns of the schools studied. (BJV)

This report covers the October 1985 activities of the June 1985 graduates from 146 Connecticut local public high schools (136 comprehensive high schools, six alternative high schools, three academies, and E. O. Smith) and 92 nonpublic high schools, and the February 1986 activities of the June 1985 graduates from the 17 regional vocational-technical schools (RVTS). The report highlights the educational and career postsecondary activities of these graduates. Also included, where appropriate, is information on local public high school students completing vocational programs at their local high schools as part of their courses of study.

Data in the report are from form ED158, Public High School Graduate Follow-Up; form ED158np, Nonpublic High School Graduate Follow-Up; and form ED404a, Completer Follow-Up for Vocational Education Programs.

The local public high school, nonpublic high school and vocational-technical school survey forms used to collect the data are not identical. There are several differences in the survey forms. Data for vocational students (ED404a) are collected as of February, while data for local public and nonpublic graduates are collected as of October. Forms ED158 and ED158np request greater detail on postsecondary education activities, while form ED404a requests greater detail on employment activities. Also, if a graduate is engaged in both postsecondary education and employment, the employment is recorded on form ED404a while the education is recorded on forms ED158 and ED158np. The only difference between form ED158 and form ED158np is that form ED158 requests details on activities by race and sex for local public school graduates, while form ED158np requests complete detail by sex with summary data detailed by race and sex for nonpublic school graduates. (See Appendices A-F.)

Definitions used in this report:

Nonpublic Schools - all private schools including religious, independent and special education schools.

Local Public Schools - local and regional comprehensive high schools, alternative schools and academies.

Public Schools - local public high schools and regional vocational-technical schools.

Vocational Program Completers - students can complete a vocational program as part of their high school study at local public high schools or vocational-technical schools. A program completer is defined as a student who completes a planned sequence of courses, services or activities designed to meet a vocational education objective and which purport to teach entry level job skills.

This report has been prepared by the Office of Research and Evaluation as part of its effort to report more completely to the State Board of Education on the condition of education in Connecticut and to respond to the Board's concern for the educational interests of the state. For additional information on education in Connecticut, see *Meeting the Challenge: Condition of Education in Connecticut, Elementary and Secondary, 1985* (Connecticut State Department of Education, 1986).

HIGHLIGHTS

The number of Connecticut high school graduates declined from June 1984 to June 1985, while the percentage continuing in education and the percentage attending four-year colleges and universities were the highest ever. Correspondingly, there was a decline in the number and percent of graduates entering careers. Minority representation among graduates increased in 1985, but there were substantial disparities in after graduation education and career activities by race. Some highlights, based on the reports received by the department, are:

- The total number of Connecticut high school graduates in 1985 was 41,998--a 15.1 percent drop from the largest number in 1979 and a 4.2 percent drop from 1984. (See Table 1.)
- The number of local public high school graduates was 31,880 in 1985 - 1,806 fewer than 1984, 5,803 fewer than 1980, and 8,599 fewer than 1975. (See Table 1.)
- There were 2,634 graduates from the 17 regional vocational-technical schools compared to 2,626 in 1984, 2,355 in 1980, and 1,838 in 1975. (See Table 1.)
- There were 7,484 graduates from 92 nonpublic schools, a drop of 55 from the 7,539 reported in 1984, and 61 fewer than the 7,423 in 1980. (See Table 1.)
- In 1985, 4,068 people were awarded General Educational Development (GED) diplomas, compared to 4,488 in 1984 and 5,216 in 1983. (See Table 1.)
- Of the total number of local public high school and RVIS graduates, 13.9 percent (or 4,809) were minorities, up from 13.4 percent (or 4,895) in 1984. (See Table 2.)
- 6.9 percent of nonpublic school graduates were minorities in 1985. (See Table 2.)
- The percentage of high school graduates continuing in education, 68.2 percent (28,636 graduates), was the highest ever. In 1984 the percentage was 67.0. The percentage of graduates continuing in education increased for all types of schools. (See Figure 5.)
- The percentages of high school graduates from both local public and nonpublic high schools going to four-year colleges and universities (45.8 percent of local public high school graduates and 81.4 percent of nonpublic high school graduates) increased to their highest levels. (See Figure 8.)

- In 1985, 55.2 percent of local public graduates (8,064) and 67.9 percent of nonpublic graduates (4,136) continuing their education at four-year schools attended out-of-state schools. The percent is up substantially from 1975 when 45.9 percent of local public graduates (7,251) and 58.2 percent of nonpublic graduates (2,297) did so.
- 68.8 percent of white graduates continued their education, while 53.4 percent of minority graduates continued their education. (See Figure 7.)
- 6.2 percent of minority local public school graduates were unemployed, compared to 1.4 percent of white graduates. (See Table 5 for detail by race.)
- A greater percentage of minority local public school graduates entered military service than whites (7.8% vs. 3.5%). (See table 5 for detail by race.)
- The percentage of graduates in career-related activities decreased in 1985 to 27.4 percent from 28.5 percent in 1984. Specifically, 1,835 RVTS graduates (69.7%) were in careers, along with 9,186 local public high school graduates (28.8%), and 482 nonpublic high school graduates (6.4%). (See Figure 4.)
- 16,776 local public high school students completed a vocational program as part of their course of study. This was 908 fewer than in 1984. (See Table 7.)

STATE PROFILE

In 1985, there were 41,998 graduates from all high schools in Connecticut (see table 1). The largest number of these students, 31,880 (75.9%), graduated from 136 local public high schools, while 2,634 (6.3%) graduated from 17 regional vocational-technical schools and 7,484 (17.8%) graduated from 92 nonpublic high schools. In addition, in 1985 4,068 people received high school equivalency diplomas by passing the General Educational Development (GED) examination.

*Data by residence incomplete for 1978.

As Figure 1 shows, there has been a general decline in the number of students graduating from Connecticut's high schools. The most dramatic change has affected the local public high schools. There has been a 21.5 percent decrease in the number of graduates from local public high schools since the high of 1976. In the past ten years, the number of students graduating from vocational-technical schools has risen by more than 43 percent as school capacities increased. The number of students graduating from nonpublic schools has remained relatively constant. The decline in the number of graduates from local public schools can be attributed, in large part, to declining enrollments.

The downward trend in the number of public school graduates is expected to continue for the next decade as enrollments continue to decline. Connecticut's enrollment projections and graduation rates reflect national patterns. The latest Connecticut Department of Education enrollment projections (unpublished) for local public and regional vocational-technical schools predict that the class of 1994 will have fewer than 27,000 students in 12th grade in September of 1993. Since the number of graduates is approximately 96 percent of fall 12th grade enrollment, we anticipate a graduating class of about 25,900, making 1994 the smallest graduating class since 1963, with more than 8,500 (or 25%) fewer students than the class of 1985.

Figure 1
High School Graduates
By Type of School, 1975 - 1985

General Educational Development (GED)

The General Educational Development (GED) testing program was established nationally in 1942 as an instrument to measure the outcomes and concepts generally associated with four years of high school education. In 1967, the Connecticut State Department of Education adopted the GED English-language test to afford persons who have not graduated from high school an opportunity to demonstrate educational attainment equivalent to a high school program of study. In 1972, Connecticut added the Spanish GED form, as well as large print and braille editions of the test.

To be eligible for the Connecticut GED test, one must be a Connecticut resident who is either at least 19 years of age or whose ninth grade class has graduated. There are 97 registration sites (usually adult education offices or the offices of local public high school guidance counselors) and 28 test sites located throughout Connecticut.

Each applicant is expected to complete successfully all five subtests in the GED test battery. The five subtests are Writing Skills, Social Studies, Science, Reading Skills and Mathematics. To pass the GED test one must obtain a total score of 225 with no subtest score lower than 35 points. (Subtests have maximum scores of between 74 and 80.)

In 1985, 6,482 GED tests were administered and 4,068 people passed and were awarded GED diplomas. Twenty-eight percent of the examinees were between 17 and 19 years old, and 21 percent were between 20 and 22. The ages of the examinees indicate that about half of the examinees take the test within five years of their class's high school graduation. Twenty percent of the examinees had completed ninth grade prior to leaving school; 30 percent completed tenth grade; 34 percent completed eleventh grade; and 4 percent completed twelfth grade but were not awarded a diploma.

More than one-third of those tested in 1985 prepared for the test in an adult education GED program. In 1985, 76 percent of those preparing in an adult education class passed the test and were awarded diplomas, compared to the average pass rate of 62.8 percent.

GED examinees reported the following reasons for taking the test: to gain admission to school or a training program (33.5%); personal reasons (31.5%); future job requirements (26.5%); military requirements (5%); and present job requirements (1.7%).

Adult Education Diplomas

In Connecticut, 33 local boards of education grant Adult Education Diplomas upon successful completion of a prescribed curriculum of adult courses. The Connecticut General Statutes (10-67 - 10-73b) require 20 credits for a diploma with each credit equaling 48 hours of instruction. In addition to classroom preparation, credits can be gained by work experience, military, independent learning, occupational training and successful completion of a test.

In 1985, 9,190 people attended adult classes preparing for a diploma, and 2,008 diplomas were awarded. This is up substantially from 1983 when only 840 diplomas were awarded.

Of the 9,190 people preparing for a diploma, 57 percent were age 16-24 and 35 percent were 25-44. Forty percent were female. More than one-half of adult education participants were minorities (13.7% Hispanic, 36.2% black, 2.3% Asian American and 0.4 percent American Indian).

High School Graduates by Race

Data on the racial breakdown of graduates has been collected since 1983. Nonpublic schools are not required to provide the details by race, but are required to provide a racial breakdown of total graduates. In 1985, 90 of the 92 nonpublic schools representing 93 percent of the graduates reported graduates by race. In 1984, 88 of the 91 nonpublic schools representing 88 percent of the total enrollment reported data by race. Minorities made up 13.9 percent of the total number of local public school graduates, 14.7 percent of graduates from vocational-technical schools and 6.9 percent of graduates from nonpublic high schools. Blacks made up 65.2 percent and Hispanics 25.6 percent of the minority graduates of local public high schools; blacks comprised 60.9 percent and Hispanics 37.3 percent of the minority RVIS graduates. According to the *Minority Student and Staff Report* (Connecticut State Department of Education, 1985), in October 1984, 16.9 percent of the grade 9-12 public school population were minorities. Thus, the percentage of minority students graduating from Connecticut local public schools in 1985 (13.9%) was lower than the percentage of the state's grade 9-12 public school enrollment (16.9%).

Table 2
Graduates by Race, 1983-1985

	Local Public School Graduates			Vocational-Technical School Graduates			Nonpublic School Graduates		
	1983	1984	1985	1983	1984	1985	1983	1984	1985
White	86.0%	86.5%	86.1%	87.1%	86.9%	85.3%	n.a.	92.4%	93.1%
Black	9.2%	8.9%	9.0%	9.4%	8.6%	8.9%	n.a.	4.1%	3.6%
Hispanic	3.4%	3.6%	3.6%	3.2%	4.2%	5.5%	n.a.	2.3%	2.2%
Other	1.4%	1.0%	1.3%	0.3%	0.3%	0.3%	n.a.	1.2%	1.1%

The racial balance of students graduating from local public high schools has remained relatively stable for the three years in which racial data have been collected. For 1985, 86.1 percent of all local public school graduates were white, 9.0 percent were black, 3.6 percent were Hispanic and 1.3 percent were Asian American or American Indian. In vocational-technical schools, 85.3 percent of graduates were white, 8.9 percent black, 5.5 percent Hispanic and 0.3 percent Asian American or American Indian. Minority representation among the vocational-technical school graduates has increased from 10.9 percent in 1980 to 12.9 percent in 1983, and to 14.7 percent in 1985.

High School Graduates by Sex

In 1985, females made up about one-half of both local public and nonpublic graduates but only one-fifth of vocational-technical school graduates. Female representation among regional vocational-technical school graduates has increased, however, from 17.5 percent in 1980 to 21.4 percent in 1985.

GRADUATION RATES

The high school graduation rate is an estimate of the percentage of ninth graders enrolled in public schools who are graduated four years later. The rate is calculated by comparing the number of students enrolled in the ninth grade for any given year and the number of diplomas awarded to members of that class upon graduation four years later. Graduation rates are used as an indicator of the "holding power" of high schools. This statistic, when aggregated statewide, provides a good indication of the overall number of students from each class who successfully complete high school in Connecticut. The graduation rate does, however, have a weakness: it provides no information about the progress of individual students through the system. It does not, for example, account for student migration, accelerated completion or mortality. The graduation rate simply describes the behavior of each successive ninth grade class, but gives no information about individual members of the class. Consequently, little can be said about the turnover rate or the relative impact of such factors as transfers, retention and dropouts on the overall graduation rate for each class. Nevertheless, the graduation rate offers some very important insights.

Figure 2
Graduation Rates
By Type of School, 1975-1985

The graduation rate of 77.9 percent for the local public high school class of 1985 has remained essentially unchanged for the past three years. In 1981, there were 40,934 students enrolled in the ninth grade in Connecticut local public schools. In 1985, 31,880 students graduated from these high schools, resulting in a graduation rate of 77.9 percent for the class of 1985. Over the past decade the graduation rate has remained fairly stable, ranging from a high of 78.9 percent in 1977 to a low of 74.7 percent in 1980. Nonpublic high schools consistently have higher graduation rates than local public high schools, ranging from a low of 83.0 in 1984 and 1975 to a high of 86.7 in 1979. The graduation rate for nonpublic high schools in 1985 was 85.8 percent. The vocational-technical school graduation rate was 75.9 percent in 1985. This rate has declined steadily since 1982.

An alternative graduation rate is calculated for the vocational-technical schools by factoring in students admitted at grades 10, 11 and 12. Although lower than the total graduation rate, this graduation rate has risen from 64.4 percent in 1980 to 71.1 percent in 1985. It cannot be assumed that students not graduating from vocational-technical schools have dropped out of school. Students repeating grades or transferring back to local high schools would not be listed as graduates. Transfers of students from vocational-technical schools to local high schools will lower the vocational-technical school graduation rate and increase slightly the local high school graduation rate.

While the total graduation rate for local public high schools has remained stable for the past three years, there are significant variations in completion rates by race. While enrollments for whites and blacks in Connecticut's local public schools have been declining along with their respective number of graduates, enrollments of Hispanic students have been rising for the last 10 years. In fact, there has been a 1.5 percent increase in grade 9-12 Hispanic enrollment in local public schools since 1983, but an 8.6 percent decrease in the number of Hispanic high school graduates since 1983, leading to a substantial decrease in the graduation rate for Hispanics. Over the three years for which data have been available by race (1983-85), the graduation rate for whites has risen from 81.2 percent to 82.5 percent, while the rate for blacks has declined moderately from 62.9 percent to 61.7 percent and the rate for Hispanics has fallen from 50.8 percent to 46.2 percent.

Table 3
Local Public School
Graduation Rates by Race, 1983-1985

<u>Racial/Ethnic Group</u>	<u>1983</u>	<u>1984</u>	<u>1985</u>
White	81.2%	82.4%	82.5%
Black	62.9%	61.0%	61.7%
Hispanic	50.8%	45.9%	46.2%
Total	77.9%	77.8%	77.9%

Graduation rates by sex are not available because enrollment data currently are not collected by sex.

OVERVIEW OF POSTSECONDARY ACTIVITIES

The postsecondary activities of Connecticut high school graduates are reported in the following categories:

- Education, including two- and four-year programs at colleges and universities or professional schools, vocational schools or postgraduate study;
- Career-related, including employment, military service and unemployment;
- Miscellaneous, including full-time homemaking, noneducation and other noncareer activities, and unknown status. Incapacitated and deceased also are reported here.

In addition to local public, nonpublic and vocational-technical school graduates, information is included here on local public high school students who complete vocational programs in their local high schools as part of their courses of study. Table 4 and Figure 4 display the activities of 1985 graduates. Just over 68 percent (28,636) of the total number of graduates pursued some form of education after graduation, compared with 67.0 percent for 1984 and 67.1 percent for 1983.

Figure 3
Total Number of Graduates
Continuing Education and Entering Careers, 1975-1985

Nonpublic schools continued to have the highest percentage of graduates (91.8%) continuing their education. This was followed by local public high school graduates at 66.7 percent (21,252 graduates) and vocational-technical school graduates at 19.5 percent (513 graduates). Fifty-two percent of local public high school graduates completing a vocational program continued their education.

Even though the percentage of graduates continuing education has increased, the number of graduates doing so has declined for the last three years. In fact, in 1985 there were almost 2,800 fewer graduates continuing education than in 1982. The number of graduates entering careers also has declined. With the exception of 1980 to 1981, the total number of graduates entering careers has declined every year since 1976. In 1985, 11,503 graduates entered careers, while ten years earlier 15,322 graduates did so. Further information on career activities begins on page 16.

Figure 4
Activities of 1985 Graduates

Vocational-technical school graduates continued to have the highest percentage (69.7%) of their graduates in career-related activities. This was followed by local public school vocational program completers at 35.2 percent; total local public high school graduates at 28.8 percent; and nonpublic graduates at 6.4 percent.

For 1985 local public school graduates, more females than males continued their education (70.6% vs. 62.4%), while relatively more males entered military service (7.1% vs. 1.3%) and more males were employed (24.2% vs. 21.2%).

Table 5
Activities of Local Public School Graduates
By Race, 1985

Racial/Ethnic Group	Pursuing Education	-----Career-Related-----			Other
		Employed	Military Service	Unemployed	
American Indian	42.1%	47.3%	5.3%	0.0%	5.3%
Asian American	78.8%	14.2%	1.6%	1.0%	4.4%
Black	53.6%	24.3%	8.9%	7.2%	6.0%
Hispanic	44.4%	31.1%	7.1%	5.6%	11.8%
White	68.8%	22.2%	3.5%	1.4%	4.1%
Total	66.7%	22.6%	4.1%	2.1%	4.5%

By race, there were greater differences. As Table 5 shows a greater proportion of Asian Americans and whites pursued additional education after high school, while a greater proportion of blacks, Hispanics and American Indians were in career-related activities. Looking at the components of career-related activities, more blacks, Hispanics and American Indians entered military service (8.9%, 7.1% and 5.3% respectively) than whites (3.5%) or Asian Americans (1.6%). There is also a large difference in the percentage of graduates unemployed by race. While only 1.4 percent of white graduates were unemployed, 7.2 percent of blacks and 5.6 percent of Hispanics were unemployed. These data represent the percent of graduates unemployed and should not be used as an unemployment rate. More information on unemployment rates can be found on page 20.

The "Other" category includes graduates who are full-time homemakers, deceased or incapacitated, other status and unknown status. Three-fourths of the graduates in the "Other" category are of unknown status. As schools are usually aware of graduates pursuing education, employed or in the military, many of the graduates reported in the unknown status are likely to be unemployed. Because relatively more Hispanics and blacks are in this category, the disparity between percentages of whites unemployed and those of blacks and Hispanics unemployed is probably underestimated.

GRADUATES CONTINUING EDUCATION

There has been a steady rise in the percent of graduates of both local public and nonpublic high schools continuing their education. The percent of graduates continuing education rose from 65.3 percent in 1984 to 66.7 percent in 1985, the highest rate ever. This represents a substantial increase (6.7 percentage points) over the 1977 low. The rate for nonpublic graduates continuing education also rose from 91.6 percent in 1984 to 91.8 percent in 1985, which represents the highest rate ever. Vocational-technical school graduates continuing education rose from 17.8 percent in 1984 to 19.5 percent in 1985.

Even though the percent of graduates continuing education has increased, the total number of graduates continuing their education has declined. In 1980, there were 30,635 high school graduates from all high schools in Connecticut continuing education. By 1985, that number dropped almost 2,000 to 28,636.

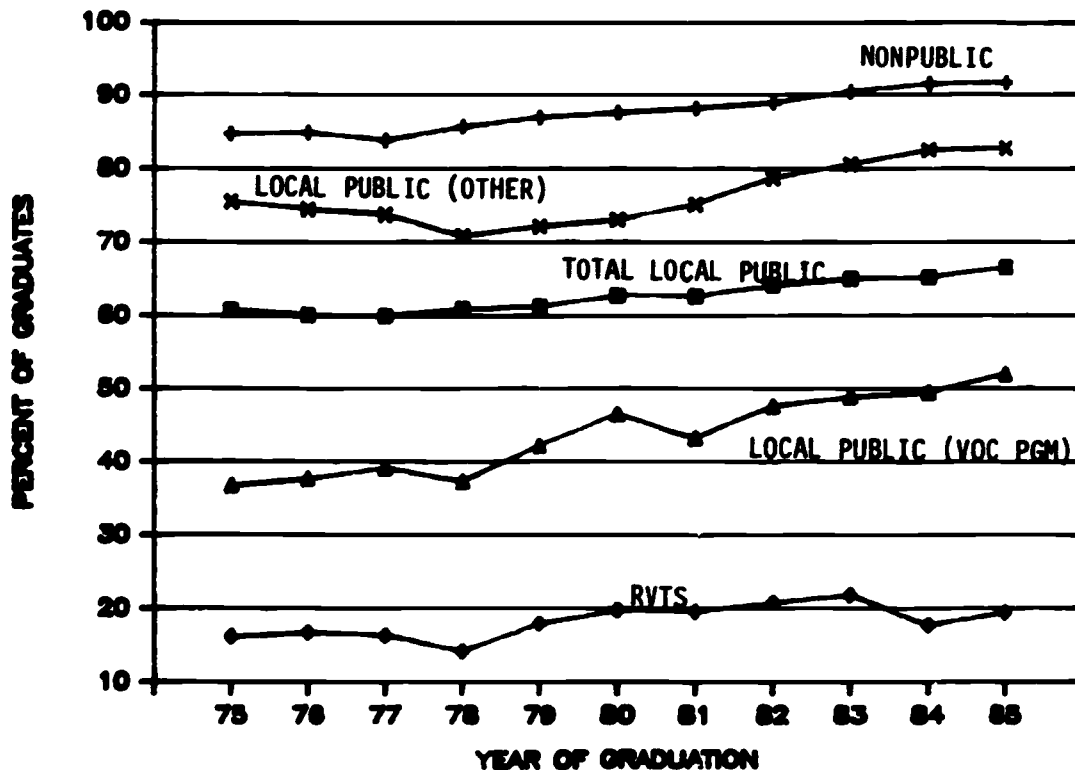

Figure 5
Graduates Continuing Education
By Type of School, 1975-1985

Figure 5 illustrates the long-term trend of an increase in the percentage of local public and nonpublic school graduates continuing their education. Vocational-technical school graduates have not followed this pattern. There has been an overall rise in the percent of graduates continuing education over the last 10 years, but vocational-technical school graduates are influenced by the economy, as well, with more graduates continuing education when the unemployment rate is high and, conversely, more graduates pursuing careers when jobs are more plentiful. Figure 5 also shows the percent of local public graduates who have completed a vocational program and are continuing their education. In 1985, 52.1 percent of vocational program completers at local public high schools continued their education, and 82.9 percent of other local public high school graduates (college preparatory and general program) continued their education following graduation.

While about half (51.7%) of the white graduates who continued their education did so at public institutions, larger proportions of blacks and Hispanics (61.6% and 78.9% respectively) attended public institutions. Blacks and Hispanics also attended in-state schools with greater frequency than whites (50.5% of white graduates versus 60.7% of blacks and 56.3% of Hispanics).

The greatest difference between education activities of males and females is that a higher proportion of males attend four-year institutions (71.5% vs. 66.4%).

Type of Institution Attending

Figure 6 shows the differences between the local public and nonpublic school graduates continuing their education. Relatively more nonpublic school graduates (88.7%) attend four-year schools than local public school graduates (68.7%). Correspondingly, more local public school graduates attend two-year schools (20.3% vs. 7.7%) and vocational schools (8.7% vs. 1.8%) than nonpublic graduates.

Figure 6
Local Public and Nonpublic School Graduates
Continuing Education, 1985

Educational Activities by Race

There are significant differences between racial groups for local public school graduates continuing their education. As noted earlier, relatively fewer blacks and Hispanics continued their education following graduation. In 1985, 18,889 white graduates, 1,547 black graduates, 503 Hispanic graduates and 313 other graduates continued education. Figure 7 shows that for those graduates who did continue their education, 71.0 percent of whites (13,418 graduates) attend four-year schools compared with 50.3 percent of blacks (759 graduates) and 54.9 percent of Hispanics (211 graduates).

Figure 7
Local Public School Graduates
Continuing Education by Race, 1985

Graduates Continuing Education at Four-Year Schools

There has been a rise in the percent of graduates attending four-year colleges and universities. The 1985 rates of 45.8 percent for local public school graduates and 81.4 percent of nonpublic school graduates are the highest ever. In 1975, 39.0 percent of local public and 67.2 percent of nonpublic school graduates continued their education at four-year schools. Even though the percent of graduates attending four-year schools is rising, the actual number of graduates doing so is declining. In 1980, there were 21,682 graduates (16,123 local public and 5,559 nonpublic) continuing their education at four-year schools. By 1985, that number declined to 20,693 (14,598 local public and 6,095 nonpublic).

Figure 8
Graduates Continuing Education
at Four-Year Schools, 1975-1985

More graduates continuing their education at four-year schools are attending out-of-state colleges and universities than in previous years. In 1985, 55.2 percent of local public graduates (8,064) and 67.9 percent of nonpublic graduates (4,136) continuing their education at four-year schools attended out-of-state schools. This is up substantially from 1975 when 45.9 percent of local public graduates (7,251) and 58.2 percent of nonpublic graduates (2,297) did so.

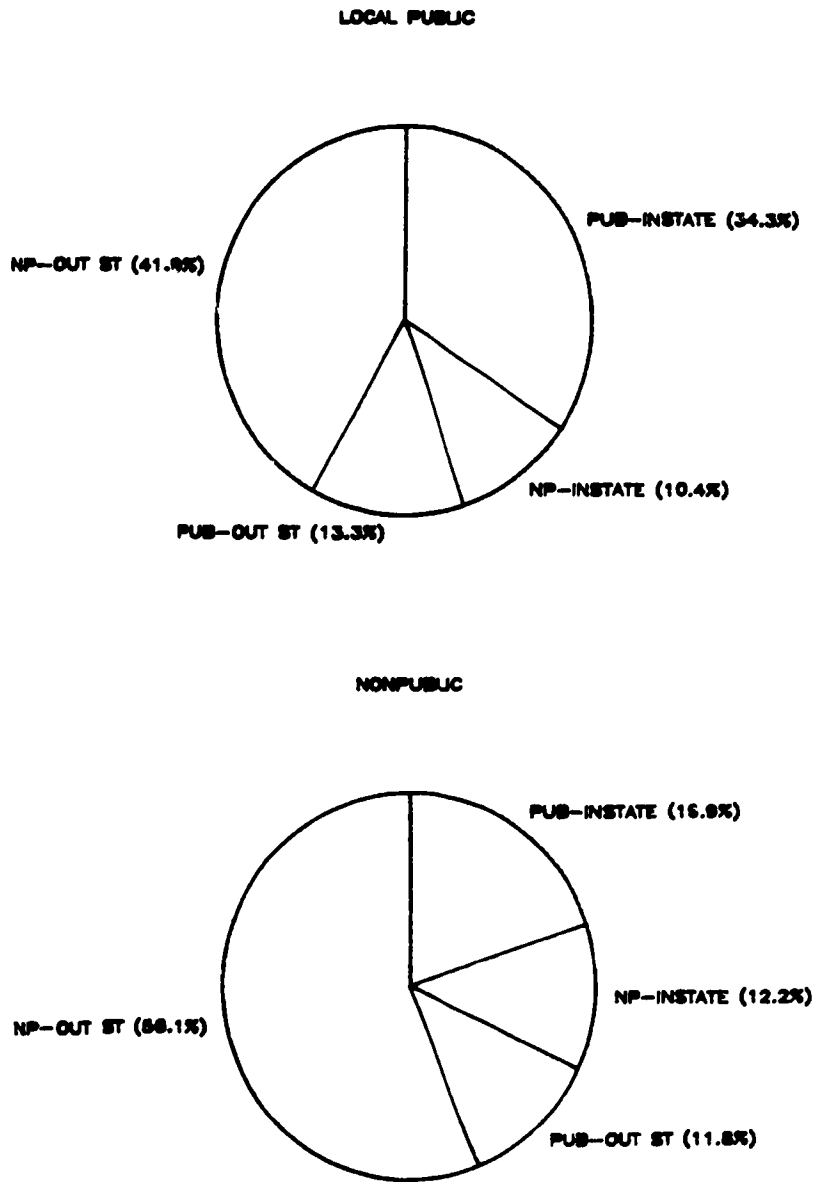

Figure 9
 Graduates Continuing Education
 at Four-Year Schools
 By Type of School Attending, 1985

CAREER-RELATED ACTIVITIES

The percent of graduates continuing in career-related activities has declined for each type of school over the last 10 years. The decline for vocational-technical school graduates has not, however, consistently mirrored the decline for other schools. As would be expected, a higher percentage of vocational-technical school students enter careers following graduation (69.7%), more than double the rate for public school graduates (28.8%) and more than 10 times greater than the nonpublic school rate of 6.4 percent. 35.2 percent of local public school students who have completed a vocational program were in career-related activities.

Declines in the total number of graduates, together with increases in the percent of graduates continuing education, have resulted in a decline in the number and percent of high school graduates entering careers. In 1980, 14,167 graduates entered careers, but by 1985 only 11,503 graduates did so, exacerbating shortages of workers in Connecticut's robust economy. If the percent of graduates entering careers remains constant, by 1994 there will be only 9,100 graduates entering careers. If dropout prevention programs at local public and regional vocational-technical schools could increase the graduation rate from 77.9 percent to 85 percent, the number of graduates would increase by 2,000-3,000 per year, with most, if not all, of these additional graduates entering the labor force.

The only difference between career-related activities of male and female graduates is that males enter military service with greater frequency than females. When data for the various racial/ethnic groups are compared, however, there are significant differences. For local public and vocational-technical school graduates in career-related activities, higher percentages of blacks and Hispanics enter military service than whites (22.0% for blacks and 15.9% for Hispanics vs. 12.3% for whites) and relatively more blacks and Hispanics are unemployed than whites (16.4% of blacks and 11.1% of Hispanics vs. 4.9% for whites). Correspondingly, lower percentages of blacks (61.6%) and Hispanics (73.0%) are employed than whites (82.8%).

Vocational Program Completers

Vocational programs providing occupational preparation are operated at both vocational-technical schools and local public high schools. In 1985, 16,776 students completed programs at local public high schools and 2,634 students completed programs at vocational-technical schools. Tables 6 and 7 show graduates by program area for each of these types of schools.

Table 6
Regional Vocational-Technical
School Graduates, 1983-1985

Total	17,824	17,684	16,776	62.8	27.9

* Cooperative Work Experience/Diversified Occupations

Programs at the two school types vary in content and depth. More than 63 percent of local public high school students completing a vocational program are trained in business and office occupations, followed by 11 percent in cooperative work experience/diversified occupations and 8.9 percent in marketing and distribution. Over 30 percent of vocational-technical school graduates were trained in building trades, 24.9 percent in metal and product fabrication occupations and 21.4 percent in service occupations.

Although female representation at vocational-technical schools has increased (from 17.5% in 1980 to 21.4% in 1985), almost three-fourths of all female graduates are in service trades, particularly cosmetology, food service and health service. Service trades, with graduates earning an average of \$5.02 per hour, are the lowest paying occupations, \$.82 per hour lower than the average wage for vocational-technical school graduates; this contributes to the general disparity between male and female salaries. A significant proportion of minorities (35.2%) are also in service trades, followed by 23.3 percent in building trades programs and 18.7 percent in metal and product fabrication programs. Graduates from building trades and metal and product fabrication programs have the largest number of graduates of all vocational-technical school programs and the highest wages (\$6.25 and \$5.92, respectively).

In 1985, relatively more females and minorities completed a vocational program in local public high schools than white males. Females represented 62.8 percent of local public high school vocational program completers and minorities represented 27.9 percent. In that same year, females were 52.1 percent of total local public school graduates and minorities were 13.9 percent. In 1985, there were 16,776 completers of vocational programs at local public high schools, more than 1,000 fewer than 1983. During that same time, however, total local public high school graduates declined by more than 4,000, indicating that a greater percentage of local public high school graduates completed vocational programs in 1985 than in 1984 or 1983.

As with total local public high school graduates, relatively more female completers of vocational programs continue their education than male completers, and relatively more minorities than whites enter military service. Unlike local public high school graduates, however, relatively more minority completers of vocational programs continued their education and relatively more whites were employed.

Table 8
Activities of Vocational Program Completers
1985

<u>Race/Sex</u>	<u>Total Completers</u>	<u>Pursuing Education</u>	<u>-----Career-----</u>			
			<u>Employed</u>	<u>Military Service</u>	<u>Unemployed</u>	<u>Other</u>
Vocational-Technical Schools Vocational Program Completers						
Minority Male	247	24.7%	46.5%	14.6%	1.6%	12.6%
White Male	1,823	17.8%	62.3%	7.9%	2.3%	9.7%
Minority Female	139	36.7%	43.2%	2.9%	0.7%	16.5%

Total	2,634	19.5%	60.2%	7.3%	2.2%	10.8%
Local Public High School Vocational Program Completers						
Minority Male	1,801	45.8%	25.7%	6.1%	5.3%	17.1%
White Male	4,446	46.6%	34.0%	6.2%	1.3%	11.9%
Minority Female	2,879	55.9%	24.8%	1.3%	3.0%	15.0%
White Female	7,650	55.3%	30.6%	0.8%	1.8%	11.5%
Total	16,776	52.1%	30.0%	2.8%	2.3%	12.8%

Civilian Unemployment Rates

Table 9 compares civilian unemployment rates for graduates with the total teenage population for the last three years. The unemployment rates are calculated in the traditional manner; that is, the number of unemployed as a percentage of the labor force (employed plus unemployed).

Table 9
Civilian Unemployment Rates, 1983 - 1985

Year of Graduation	Local Public Schools - - - - Total	Vocational Program	Schools - - - - General Program*	Vocational-Technical Schools	Statewide 16- to 19-Year-Olds	Total State
1983	13.6%	8.4%	23.6%	3.1%	16.5%	6.0%
1984	11.8%	7.4%	22.2%	4.0%	13.3%	4.6%
1985	8.5%	7.0%	11.7%	3.5%	14.7%	4.9%

Unemployment rate = (unemployed/(employed + unemployed)) * 100

* Local public high school graduates who are not going on to school or have not completed a vocational program.

The rates show the positive effect high school and vocational program completion have in terms of ability to find employment. The highest unemployment rate is for the total 16- to 19-year-old population (14.7% in 1985). Graduates who did not continue their education or complete a vocational program had the highest unemployment rate of all high school graduates (11.7%). At 8.5 percent, the unemployment rate for all local public school graduates was 3.2 percentage points lower. Still lower were local public high school students who completed a vocational program (7.0%) and vocational-technical school graduates (3.5%). In the same year (1985), the total statewide unemployment rate was 4.9 percent.

b1 Non public 4 year coll. in Connecticut											391	355	746
b2 Non public 4 year coll. outside Connecticut											1811	1607	3418
c1 Public 2 year college in Connecticut											150	172	322
c2 Public 2 year college outside Connecticut											25	27	52
d1 Non public 2 year college in Connecticut											17	38	55
d2 Non public 2 year coll. outside Connecticut											24	81	105
2. Number in Work force													
a In armed services											65	11	76
b Employed											173	200	373
c Unemployed											13	20	33
3. Number with other status													
a Full-time homemaking											0	1	1
b Other status not listed above											12	19	31
c Deceased or incarcerated											1	0	1
d Status unknown											49	50	99
4 TOTAL NUMBER *	1		44	29	114	134	3321	3182	77	78	3856	3628	7484

a Of the Total Number in Line 4 (above) Col. 13, give the number of Connecticut Residents 5914

b Of the Total Number in Line 4 (above) Col. 13, give the number of Non-Connecticut Residents 1570

*DATA BY RACE ARE INCOMPLETE.
