ABSTRACT

A study was conducted to determine the status of the 706 students who graduated from Saginaw and Arthur Hill High Schools in Saginaw, Michigan, in June of 1986. A 13-item questionnaire was mailed to each student on November 21, 1986. Three additional contacts were attempted in an effort to reach nonresponding graduates. A total of 455 graduates returned usable responses. The questionnaire directed respondents to identify their educational and/or employment status, specify the perceived problems they encountered in the work force or in post-high school educational settings, and evaluate their high school experiences. The subjects' responses indicate that: (1) about 42 percent were enrolled in some type of full-time education; (2) 10.8 percent were unemployed; (3) employed graduates usually worked in unskilled positions; (4) business, engineering/architecture, and medicine/health services were the most frequently chosen higher education paths; and (5) 72.9 percent felt that they were following their educational plans. Other areas of interest include graduates' career plans, perceived helpfulness of specific high school courses and experiences, and perceived importance of various adult survival skills. These results should provide administrators, teachers, and counselors with assistance in instructional and curricular planning. Twwenty-one data tables are included. A copy of the questionnaire is appended along with seven other appendices. (TJH)

ACKNOWLEDGEMENTS

Many people have helped complete this follow-up study of 1936 graduates. It is fitting to acknowledge them and beg the indulgence of those that may be overlooked but equally deserving of thanks.

First, the committee of secondary counselors who labored through a number of drafts of the instrument deserve much thanks. This committee included: Nancy Baxter, John Fordney, Doreen Leek, Carrie Martin, Gienda Richardson, Irma Scott, and James Snyder.

We are especially grateful to Dr. Hsing Chen and the Data Processing Department for tabulating the findings and cross-tabulating them in a multitude of ways.

Our sincere thanks to evaluation staff members who did everything from manning the phones to contacting the graduates and constructing the numerous tables in this report.

A final thanks goes to the secretarial staff of Ms. Terry Fisher and Mrs. Gwen Laszlo who typed drafts of both the instrument and report.

INTRODUCTION

In June, 1986, 706 students graduated from Saginaw and Arthur Hill High Schools. To determine what they have been doing since graduation the Department of Evaluation Services in conjunction with a committee of secondary counselors developed a thirteen item questionnaire (see Appendix A for a copy) which was mailed to each of them on November 21, 1986. Three additional contacts were attempted in an effort to reach non-responding graduates (see Appendix B for the timing and nature of these contacts). The questionnaire directed respondents to identify their educational and/or employment status, specify the perceived problems they encountered either in the work force or post high school education, and evaluate their high school experience. Those findings are contained in the balance of this report and represent the questionnaires received by March 18, 1987.

The results of this study provide administrators, teachers, and counselors with data to further assist them in instructional and curricular planning to meet the needs of Saginaw's students.

DEMOGRAPHIC DATA

The 1981 Follow-Up Survey was mailed to 706 graduates (445 at Arthur Hill and 261 at Saginaw High). Four hundred fifty-five questionnaires (64.4%)were returned. Of those 455, 311 (68.4%) were returned from Arthur Hill graduates and 144 (31.6%) from Saginaw High graduates. The response rate shows that 69.9% (311 of 445) of Arthur Hill's and 55.2% (144 of 261) of Saginaw High's graduates returned the survey.

Table I below contains a breakdown by ethnic background and sex of those returning the follow-up questionnaire and the district's 1986 graduating class.

TABLE 1. COMPARISON OF THE 1986 GRADUATE POPULATION WITH THE 1986 GRADUATES RETURNING A FOLLOW-UP QUESTIONNAIRE, BY ETHNIC BACKGROUND AND GENDER.

Ethnic Background		986 Graduates Re 11ow-Up Question	~	•	on of 1986 ng Class
and Gender	Number	Percent of Respondents	Percent of Graduates	Number	Percent
TOTAL	455*	100.0	64.4	706	100.0
ET!NIC BACKGROUND					
White Black Spanish-American American Indian Oriental GENDER	226 189 23 11 5	49.8 41.6 5.1 2.4 1.1	75.1 55.8 56.1 61.1 71.4	301 339 41 18 7	42.6 48.0 5.8 2.6 1.0
Female Male	256 198	56.4 43.6	66.7 61.5	384 322	54.4 45.6

^{*}Gender and ethnic background data unavailable for one respondent; percentages are based on 454.

A review of the data shows that:

- Of the 454 respondents, 226 (49.8%) were White, 189 (41.6%) Black, 23 (5.1%) Spanish-American, 11 (2.4%) American Indian, and 5 (1.1%) Oriental. The percent of respondents by group approximates the percent each group represented in the graduating class.
- Ethnically speaking, over 50% of each group's graduates returned their questionnaire. A total of 75.1%, 71.4%, 61.1%, 56.1%, and 55.8% returned a questionnaire for White, Oriental, American Indian, Spanish-American, and Black ethnic groups, respectively. (Caution should be exercised when attaching significance to groups with comparatively small numbers.) (See Appendix B.)
- Of those responding, 256 (56.4%) were female and 198 (43.6%) were male. The graduating class was made of 384 (54.4%) females and 322 (45.6%) males. As can be seen the percent of males and females in each group was nearly proportional to the response rates.

The intent of the study was to describe the total 1986 Saginaw gradulating class. The data presented should be viewed as representative of the survey respondents, and not necessarily reflective of the total graduating class since 64.4% of the graduates returned completed questionnaires. A second purpose of the study was to provide data upon which to make comparisons with the results of the Follow-Up Study of 1981 Graduates. Appendix 3 provides a comparison between the graduating classes and respondents in 1981 and 1986 by high school, gender, and ethnic background. Of the 1981 graduates 75.4% (603 of 800) returned the questionnaire compared with 64.4% (455 of 706) of the 1986 graduates.

The reader should also bear in mind that the 1981 study was conducted approximately six months after graduation. Thus, the 1981 and 1986 graduates are being compared at approximately the same points in their post-high school careers and thus some similarity may well be expected.

The 1986 graduate study collected more descriptive data of the graduates concerning both their course of study in high school and also a description of the type of auxiliary services these former students received during their K-12 school careers. In terms of course of study, most 1986 follow-up respondents were in a college preparatory program (42.3%) followed by general (32.7%), business or commercial (14.5%), vocational/technical (10.0%), and visual and performing arts (0.5%) programs of study. A complete breakdown by gender, ethnic background, and building can be found in Appendix B.

Approximately a quarter of the 1986 follow-up respondents (115 of 452: 25.4%) received one or more specialized auxiliary school services. The most frequently cited service was speech and language (12.6%) followed by teacher consultant (10.5%), social worker (7.7%), special education (6.2%), remedial math (5.1%), resource room (4.6%), remedial reading (4.4%), school psychologist (2.4%), and occupational/physical therapist (2.2%). A complete breakdown by gender, ethnic background, and building can be found in Appendix B.

The discussion section that follows will be divided into two major sections. The first section will deal with post-secondary education, employment, and plans for permanent residency. The other section will deal with reflections of the graduates back onto their high school career in terms of what helped them most and how school could have helped them more.

EMPLOYMENT, EDUCATION, AND RESIDENCY

PRIMARY ACTIVITY

The graduates were asked to indicate the primary activity which most accurately described their current employment/educational status.

Table 2 on the following page contains responses to this question by system, gender, ethnic background, and building.

A review of the data in Table 2 reveals:

- System-wide, the greatest percent of graduates (41.6%)
 was enrolled in a full-time training program, school
 or college.
 - --An almost identical percent of females (42.5%) and males (40.1%) were in school.
 - --The percent of White and Black graduates in school full-time was nearly the same (43.3% and 42.0%, respectively).
 - --A greater percentage of AHHS graduates (43.8%) than SHS graduates (36.8%) were in school full-time.
- The second most frequently mentioned activity was full-time employment (15.7%).
 - --An equal percentage of females (15.7%) and males (15.7%) fell into this category.
 - --A greater percent of Spanish-Americans (26.1%) found full-time employment than Whites (22.8%), American Indians (18.2%), or Blacks (6.4%). No Oriental graduates were full-time employed.
 - --A much greater percentage of Arthur Hill graduates (20.1%) than Saginaw High (6.3%) were employed full-time.
- The third most frequently cited activity was part-time employment (14.6%).
 - --A greater percent of females (17.3%) than males (11.2%) fell into this category.

¹Thirty or more hours per week.

- --The greatest percentage of graduates part-time employed was Spanish-Americans (21.7%) followed by Orientals (20.0%), Blacks (18.1%), and Whites (11.6%). No American Indian graduates were part-time employees.
- --A greater percentage of Saginaw High graduates (19.4%) than Arthur Hill (12.3%) were employed part-time.
- The fourth most frequently mentioned activity was "unemployed seeking work" (10.8%).
 - --A greater percentage of males (12.7%) than females (9.4%) fell into this category.
 - --The greatest percentage of graduates "seeking work" were Orientals (20.0%) followed by American Indians (18.2%), Blacks (15.4%), Spanish-Americans (8.7%), and Whites (6.7%).
 - -- The percent of graduates at SHS (18.1%) was over two times the percent at AHHS (7.5%).

Each of the remaining major activities was mentioned by fewer than 10% of the respondents—part—time education (8.0%), military (5.3%), unemployed not seeking work (2.4%), layed-off (0.9%), and homemaker (0.7%).

A number of differences in primary activities can be observed between the 1986 and 1981 graduates. The chart below contains the percent of respondents for both years by primary activity.

	1986	1981
Primary Activity		
Full-Time Education	41.6	40.8
Full-Time Employment	15.7	11.6
Part-Time Employment	14.6	11.6
Unemployed Seeking Work	10.8	14.8
Part-Time Education	8.0	4.6
Military	5.3	7.6
Unemployed Not Seeking Work	2.4	1.3
Layed-Off	0.9	4.2
Homemaker	0.7	2.8
Other	0.0	0.7

Almost all the differences between the 1986 and 1981 graduates seem explainable if one remembers the generally depressed economic conditions

during the Fall of 1981 and into the Winter of 1982. When the economy has slowed for sometime (as in 1982), then full—and part—time education and full—and part—time employment are also depressed because of the economic inputs needed for both. Increases in primary activities like military enlistments, being a homeraker, layed—off, and being unemployed but seeking work are very realistic given the lack of employment opportunities generally. Thus the 1981 graduate was more likely to be unemployed, layed—off, marginally employed, or in the military than the 1986 graduates who were more likely to be either employed or seeking an education on a part— or full—time basis.

EMPLOYMENT

The 232 graduates who indicated "working" as their primary activity since graduation were asked to specify their job. These jobs were then classified by occupational category (see Appendix C for complete list).

A complete tabulation of occupational categories of the 1986 graduates by system, gender, ethnic background, and building is contained in Table 3 on the following page.

Highlights from Table 32 include:

- Two of these occupational categories, waiting on customers and manual work represented almost half (29.8% and 18.8% respectively) of the respondents.
- By system, there are marked differences (at least twice as many) between the percentage of males and females working in twelve of the seventeen occupational categories represented. Occupations showing smaller differences included:
 - --More females (35.2%) than males (20.6%) were employed in jobs waiting on customers.

Respondents did not indicate employment in one area. Therefore promotional activities are not shown in Table 3.

TABLE 3. OCCUPATIONAL CATEGORIES OF EMPLOYED 1986 GRADUATES BY SYSTEM, GENDER, ETHNIC BACKGROUND, AND SCHOOL.

^{*}Rounding error.

- --More males (13.0%) than females (10.6%) had jobs serving personal needs of people.
- --More females (1.4%) than males (1.1%) were in managerial jobs.
- --In both number and selling/merchandising work, more males (1.1%) than females (0.7%) were employed.
- Only Whites (151) and Blacks (64) are represented by large enough numbers to make any meaningful statement by ethnic background.
 - -- The top three occupational categories for White graduates were:
 - Waiting on customers (31.4%)
 - Manual work (19.0%)
 - Serving the personal needs of people (13.7%)
 - --The top three occupational categories for Black graduates were:
 - Clerical work (36.9%)
 - Waiting on customers (23.1%)
 - Manual work (18.5%)
- By school, differences between males and females are in the same direction except for those at SHS in the areas of "waiting on customers" and "serving personal needs of people".
- More Arthur Hill graduates (187) have been employed since June than Saginaw High graduates (45).
 - --No Saginaw High graduates were employed in crafts-manship; artistic work; machine work; managerial work; number work; selling/merchandising; inspecting and measuring; and skill operation, repair, or installation of precision equipment.
 - --No Arthur Hill graduates were employed in communication work.

Differences in occupations between the 1986 and 1981 graduates seem noteworthy. The chart below contains the percent of respondents for both years by occupational category.

Occupational Category	1986 <u>%</u>	1981
Waiting on customers	29.8	24.2
Manual work	18.8	21.6
Clerical work	16.6	5.9
Serving personal needs of people	11.5	11.8
Providing skilled services for people	5.1	11.8
Caring for people or animals	4.7	9.1
Craftsmanship	2.6	3.3
Artistic work	2.1	0.0
Skilled operation, repair, or instal-	1.7	3.9
lation of precision equipment		
Machine work	1.3	5.9
Managerial work	1.3	2.0
Musical and entertainment activities	1.3	0.0
Number work	0.8	0.0
Selling and merchandising work	0.8	0.6
Not specified	0.8	0.0
Communications work	0.4	0.0
Inspecting and measuring	0.4	0.0
Promotional activities	0.0	0.6

The number of occupational categories represented by the 1981 (12 of 17) to 1986 (16 of 17) graduates has increased by four. The largest increase in a percentage of graduates employed in a category was 10.7% from 1981 to 1986 in "clerical work." Substantial increases between 1981 to 1986 were also observed in the following categories: waiting on customers (5.6%), artistic work (2.1%), and musical and entertainment activities (1.3%). Substantial decreases in percentages between 1981 to 1986 occurred in the following categories: providing skilled services for people (-6.7%); machine work (-4.6%); caring for people or animals (-4.4%); manual work (-2.8%); and skilled operation (-2.2%).

Respondents were asked to name where they worked. These organizations were then classified by industrial group (see Appendix D). Table 4 on the following page contains information by system, gender, ethnic background, and building for graduates employed in these industrial classifications.

TABLE 4. TYPE OF INDUSTRIES EMPLOYING 1986 GRADUATES AFTER HIGH SCHOOL GRADUATION BY SYSTEM, GELDER, ETHNIC BACKGROUND, AND SCHOOL.

A review of the data in Table 4 indicates that:

- Of the 237 employed graduates, 78% either worked in personal services, professional/related services, and wholesale/retail trade (31.7%, 24.6%, and 21.7% respectively).
- Differences by sex according to employer seem to be minor across all categories except for:
 - --Professional and related services show more females (31.0%) than males (14.9%) being hired;
 - --Manufacturing; construction; and transportation, communication and other public utilities show more males (9.6%, 8.5%, and 4.3% respectively) than females (3.4%, 2.1%, and 1.4% respectively); and
 - --Finance, insurance, and real estate employers show only females (2.1%).
- Only White (154) and Black (66) graduates are represented by large enough numbers to make any meaningful statements by ethnic background.
 - -- The top three employers for White graduates were:
 - Personal services (33.3%),
 - Wholesale/retail trade (26.3%), and
 - Professional/related services (16.0%).
 - -- The top three employers for Black graduates were:
 - Professional/related services (46.3%),
 - Personal services (26.9%), and
 - Wholesale/retail trade (9.0%).
- More Arthur Hill graduates (191) were employed in the industries mentioned than Saginaw High graduates (46).
- No Saginaw High graduates were employed in the industries of transportation, communication and other public utilities or finance insurance, and real estate.

Some striking differences are apparent when comparing employer industries of 1986 and 1981 graduates. The chart below presents the employed 1986 and 1981 graduates by industrial employer.

Industry of Employer	1986 <u>%</u>	1981 <u>%</u>
Personal Services	31.7	3.8
Professional and Related Services	24.6	18.6
Wholesale and Retail Trade	21.7	60.3
Manufacturing	5.8	5.8
Entertainment and Recreation Services	5.8	1.9
Construction	4.6	5.1
Transportation, Communication, and	2.5	0.0
Other Public Utilities		
Other	2.1	1.3
Finance, Insurance, and Real Estate	1.2	3.2

The 1986 graduates found employment in nine of the nine industries.

Saginaw's 1981 graduates were employed in eight of the nine industries with the exception being transportation, communication, and utilities. The most substantial decrease (-38.6%) appeared in wholesale and retail trade category from 60.3% in 1981 to 21.7% in 1986. The remaining single decrease was (-0.5%) in construction. The most substantial increase (27.9%) appeared in the personal services category from 3.8% in 1981 to 31.7% in 1986. The remaining increases were relatively small and spread among a number of employer categories.

The employed or layed-off 1986 graduates were also asked, "What was the single most serious occupational problem that they had met since graduation?" Those occupational problems faced by graduates are contained in Table 5 on the following page by system, gender, ethnic background, and building.

A review of the data contained in Table 5 reveals that:

- Of the 282 respondents 45.9% found no major occupational problems.
- System-wide totals show that the top three occupational problems were:
 - --Unable to find the right job 17.3% (18.7%: AHHS and 13.4% SHS).
 - --No work available 6.2% (4.3%: AHHS and 10.9%: SHS).
 - --Lacked skills and technical knowledge 6.2% (6.7%: AHHS and 4.9%: SHS).

- The most frequent response of both females (49.4%) and males (41.0%) was "no serious occupational problem."
 - --Almost equal percentage of females (17.4%) and males (17.1%) were unable to find the right job as the greatest occupational problem.
 - --A greater percentage of females (8.1%) than males (3.4%) found "no work available" system-wide.
- Only Whites (154) and Blacks (106) are represented by large enough numbers to make any meaningful statement by ethnic background.
 - --The top three occupational problems for White graduates were:
 - Unable to find the right job (16.8%),
 - Lacked skills and technical knowledge (7.5%), and
 - Lacked job experience (6.2%).
 - --The top three occupational problems for Black graduates we e:
 - Unable to find the right job (16.8%),
 - No work available (10.3), and
 - Personal problems (6.5%).
- The top three occupational problems for Arthur Hill female and male graduates were:

--Females

- Unable to find the right job (19.8%),
- Lacked skills and technical knowledge (6.0%),
- Lacked job experience (5.2%), and
- No work available (5.2%).

--Males

- Unable to find the right job (17.6%),
- Lacked skills and technical knowledge (7.7%), and
- Lacked job experience (7.7%).
- The top three occupational problems for Saginaw High female and male graduates were:

--Females

- No work available (14.3%),
- Unable to find the ight job (12.5%),
- Lacked job experience (5.3%), and
- Personal problems (5.3%).

- --Males
 - Unable to find the right job (15.3%),
 - Lacked skills and technical knowledge (11.5%), and
 - Other (7.6%).

POST-HIGH SCHOOL EDUCATION

Table 6 on the following page contains data relevant to post high school educational information for 237 graduates. (See Appendix E for a complete list of school categories.)

A review of the data contained in Table 6 reveals that:

- Of the 237 graduate:
 - --161 (67.9%) were Arthur Hill graduates, 76 (32.1%) Saginaw High graduates.
 - --51.1% were enrolled in 4-year programs, 27.9% in 2-year programs.
- At least 73.6% of all respondents across all ethnic group categories were enrolled in a 4-year college/university or 2-year junior/community college.
- Of 4-year and 2-year colleges attendance:
 - -- The percent of males (54.8%) in 4-year colleges/universities exceeded females (50.3%).
 - --The percent of females (28.7%) in 2-year colleges exceeded males (26.9%).
 - --The percent of Arthur Hill graduates (52.7%) in 4-year colleges exceeded Saginaw High School graduates (51.4%).
 - --The percent of Arthur Hill graduates (31.1%) in 2-year colleges exceeded Saginaw High School graduates (21.1%).
- The apprenticeship school was the third highest institution attended by;
 - --Spanish-American and White graduates (25.0% and 5.1% respectively).
 - --Saginaw High and Arthur Hill students (10.5% and 5.6% respectively).

TABLE 6. TYPES OF SCHOOLS ATTENDED BY 1986 GRADUATES AFTER HIGH SCHOOL GRADUATION BY SYSTEM, GENDER, ETHNIC BACKGROUND, AND SCHOOL.

A review of the types of post secondary schools attended by 1986 and 1981 graduates revealed a large decrease in 2-year college attendance. The chart on the following page contrasts the percent of 1986 and 1981 graduates attending different types of schools.

Type of School	1986 <u>%</u>	1981
College or University	51.1	46.1
Junior or Community College	27.9	43.9
Apprenticeship, Vocational-	8.0	1.9
Technical School		
Business School	5.5	2.2
Military School	2.5	0.0
Other	2.5	0.4
Adult Education	1.3	0.0
Skilled Personal Service School	0.8	5.5
Management Training	0.4	0.0

The number of different types of schools attended by the 1986 (9 of 9) and 1981 (6 of 9) graduates has increased by three. The most substantial increases from 1981 to 1986 occurred in: apprenticeship, vocational-technical school (6.1%), college or university (5.0%), business school (3.3%), and military school (2.5%). The two decreases from 1981 to 1986 appeared in junior or community college (-16.0%), and skilled personal service school (-4.7%).

The chart on the following page contains the number and percent of graduates enrolled in post school education by institution.

As can be seen the three most frequently cited educational institutions are in Michigan. These three schools represent 45.2% (107 of 237) of the 1986 graduates seeking further education.

These graduates were training for a variety of careers. Careers were categorized into one of twelve career emphases (see Appendix F). Table 7 on the following page contains career information by system, gender, ethnic background, and building.

Highlights from Table 7 include:

- System-wide, the most frequently mentioned careers were business (33.2%) and engineering/architecture (12.6%).
- Approximately 8% of all respondents were undecided in their career choices.
- There are marked differences system-wide between the percentage of males and females pursuing the following careers.

--Female dominated

- Business (42.0% females and 20.2% males) and
- Education/social services (10.1% females and 3.8% males).

--Male dominated

- Engineering/architecture (24.0% males and 5.0% females),
- Construction, industrial and skilled trades (8.9% males and 0.0% females), and
- Commercial arts/communications (7.6% males and 3.4% females).
- Only Whites (109) and Blacks (73) are represented by large enough numbers to make any meaningful comparisons.
 - -- Top five career emphases by ethnic group follow.

- Whites:

Business (20.2%) Engineering/architecture (16.5%) Undecided (12.0%) Medicine/health services (11.9%) Education/social services (11.0%)

TABLE 7. POST-HICH SCHOOL EDUCATIONAL CAREER EMPHASES OF 1986 GRADUATES BY SYSTEM, GENDER, ETENIC BACKGROUND, AND SCHOOL.

*Rounding error.

- Blacks:

Business (53.4%)

Law/government (12.3%)

Medicine/health services (11.0%)

Engineering/architecture (6.9%)

Education/social services (4.1%)

Undecided (4.1%)

- School totals show the top three career choices to be as follows.
 - --Arthur Hill
 - Business (26.5%)
 - Engineering/architecture (13.6%)
 - Medicine/health services (12.3%)
 - --Saginaw High
 - Business (51.9%)
 - Medicine/health services (9.6%)
 - Engineering/architecture (9.6%)

Differences in careers pursued by graduates between 1986 and 1981 seem worthy of note. The chart below portrays the percent of respondents for both years by career emphasis.

Educational Career Emphasis	1 986 <u>%</u>	1981 <u>%</u>
Business	33.2	29.1
Engineering and Architecture	12.6	12.1
Medicine, Health Services	11.6	12.5
Law and Government	8.5	6.3
Education and Social Services	7.5	2.9
Commercial Arts and Communications	5.0	0.7
Fine Arts and Letters	4.0	6.3
Science and Agriculture	4.0	5.1
Construction, Industrial & Skilled Trade	3.5	1.5
Services (food management, cos- metology	1.0	5.5
Transportation	0.5	1.8
Undecided	8.5	16.2

The two largest decreases from 1981 to 1986 occur in undecided (-7.7%) and services (-4.5%). Moderate increases can be observed in education/social services (4.6%), commercial arts/communications (4.3%), and pusiness (4.1%).

TABLE 8. MOST SERIOUS EDUCATIONAL PROBLEMS OF 1986 GRADUATES BY SYSTEM, GENER, ETHNIC BACKGROUND, AND SCHOOL.

*Rounding error.

The 1986 graduates, who pursued further education, were also asked, what the single most serious educational problem was they had met since graduation. Table 8 on the following page contains data regarding educational problems encountered by graduates in their post-secondary education.

A review of data contained in Table 8 reveals that:

- Almost half of the graduates (46.5%) faced no major educational problem.
- The three most often mentioned educational problems system-wide were:
 - --Money problems (26.6%),
 - --Lacked basic educational skills (6.4%),
 - --Unable to establish goals (4.7%), and
 - --Unable to follow plans to accomplish goals (4.7%).

(These were also the most frequently cited problems at AHHS and SHS.)

- System-wide there are moderate differences in the problems encountered by females and males.
- Only Whites (153), Blacks (121), and Spanish-Americans (13) are represented by large enough numbers to make any meaningful statement by ethnic background.
 - --Having no educational problems was more characteristic of Blacks (51.6%) than either Spanish-Americans (46.2%), or Whites (44.2%).
 - -- The top three named educational problems by ethnic group follow.
 - Whites

Money problems (27.3%)
Lacked basic educational skills (5.8%)
Unable to follow plans to accomplish goals (5.8%)

- Blacks

Money problems (28.7%)
Personal problems (4.9%)
Lacked basic educational skills (3.3%)
Unable to establish goals (3.3%)
Unable to follow plans to accomplish goals (3.3%)
Disappointed with choice of school or educational program (3.3%)

- Spanish-American
Lacked basic educational skills (30.7%)
Money problems (7.7%)
Unable to establish goals (7.7%)
Time (7.7%)

PLANS FOR OCCUPATION/CAREERS

The graduates were asked the extent to which their occupational or career plans made during high school changed during this school experience.

Table 9 below contains the responses to this question by system, gender, ethnic background, and building.

Highlights from Table 9 include:

- Of the 446 respondents, nearly three quarters had either a single plan or changed it once or twice during their high school experience (35.9% and 37.0% respectively).
 - --Females were more likely to have a single plan than males (37.3% and 34.2% respectively).
 - --Males were likely to change their plans once or twice than females (37.9% and 36.5% respectively).
- System-wide, approximately an equal percent of graduates were either unable to make career/occupational plans or changed them several times (13.2% or 13.9% respectively).
- Only Whites (221), Blacks (187), and Spanish-Americans (23) were represented by large enough numbers to make any meaningful statements by ethnic background.
 - --Spanish-Americans were more likely to have a single plan than either Blacks or Whites (43.5%, 37.4%, and 34.4% respectively).
 - --Blacks were more likely to have changed once or twice than either Whites or Spanish-Americans (42.8%, 33.5%, and 21.7% respectively).
- Arthur Hill graduates were more likely to have a single plan than Saginaw High graduates (36.1% and 35.4% respectively).

œ

 Saginaw High graduates were more likely to have changed their career plans once or twice than Arthur Hill graduates (41.0% and 35.1% respectively).

The graduates were asked about the match of their educational or employment plans made during high school with what they are now doing. To this
question, graduates could either respond closely followed, generally followed,
quite different from their plan, or they lacked a plan.

Table 10 below contains the responses to the match of the graduates' plans to what they are now doing by system, gender, and ethnic background.

A review of the data in Table 10 indicates that:

- Of the 432 respondents, 72.9% had either "closely" or "generally" followed their plans (41.9% and 31.0% respectively).
 - --A substantially la.ge percentage of both gender groups were more likely to indicate their plans "closely" followed (42.1% males and 41.5% females) rather than "generally" followed (31.5% female and 30.6% males) what they were currently now doing.
 - --This same response pattern can be seen both at AHHS and SHS.
- Only Whites (219), Blacks (183), and Spanish-Americans (20) were represented by large enough numbers to make any meaningful statement by ethnic group.
 - --A greater percentage of Spanish-American graduates (50.0%) had a "close" match of their plans than either Blacks (42.0%) or Whites (40.2%).
 - --Again, a greater percent of Spanish-American respondents (50.0%) had a "generally close" match of their plans than either Whites (32.7%) or Blacks (27.9%).

RESIDENCY

The graduates were also asked whether they planned to make their permanent home in Saginaw. If they planned to live elsewhere, the respondents were also asked why they wanted to live elsewhere.

Table 11 below contains the responses to the primary question by system, gender, ethnic background, and building.

Highlights of Table 11 include:

- Of the 446 respondents, 16.1% of the graduates plan to definitely make Saginaw their permanent home with almost half (48.2%) desiring to live somewhere other than Saginaw and a little over a third (35.7%) being uncertain about where they would permanently locate.
- This same general response pattern held for both gender groups, both schools, and both large ethnic groups (Whites and Blacks).

Table 12 below contains the responses of the 207 graduates who definitely planned to move from Saginaw and were willing to offer their reasons why they desired to live elsewhere.

A review of the data in Table 12 reveals:

- Of the 207 graduates who definitely do not plan to live in Saginaw, 50.5% will live elsewhere because of better job opportunities.
- Approximately 50% of all other major respondent group categories felt that job opportunities elsewhere was their primary motivation to live elsewhere (females 53.2%, males 46.7%, Whites 49.2%, Blacks 53.1%, AHHS 50.0%, and SHS 51.5%).
- Differences by sex according to reasons to live e!sewhere seem to be minor across all categories except for:
 - --Over three times as many males (13.0%) prefer to live elsewhere because of climate than females (3.5%).

TABLE 11. LOCATION OF PERMANENT HOME OF 1986 GRADUATES BY SYSTEM, GENDER, ETHNIC BACKGROUND, AND SCHOOL.

- --A substantially greater percent of female graduates (7.1%) prefer to relocate because of spouse or family than males (1.3%).
- --A greater percent of females (4.3%) desire to live elsewhere because of the advantanges of a larger city than males (1.3%).
- Only White (101) and Black (93) graduates are represented by large enough numbers to make any meaningful statements by ethnic background.
 - -- The top three reasons to live elsewhere for White graduates were:
 - Better job opportunities elsewhere (49.2%),
 - Like climate elsewhere (11.0%), and
 - Desire not to live in Saginaw (7.3%).
 - --The top three reasons to live elsewhere for Black graduates were:
 - Better job opportunities elsewhere (53.1%),
 - Schooling is elsewhere (11.4%), and
 - Desire a different environment (8.3%).
- Almost twice the percentage of Arthur Hill graduates (8.5%) gave the reason "like the climate elsewhere" than Saginaw High graduates (4.4%) as a reason for leaving Saginaw.
- Almost twice the percentage of SHS graduates (8.8%) will leave Saginaw due to a desire for a different environment than AHHS graduates (4.6%).

The next section deals with three questions that allowed the 1986 graduates to evaluate their high school educational experience in terms of how well it prepared them for the adult world. This section is an addition to the questions asked of the 1981 graduates so no comparisons back to this former study will be possible.

REFLECTIONS ON FIGH SCHOOL

This section deals with the reactions of the 1986 graduates to their high school experience. The responses of the graduates to issues relating to their public school education will provide insight into the perceived strengths and weaknesses of the high school curriculum.

The first question had the graduates rate on a 5 point scale (l = verywell to 5 = very poorly) how well the schools assisted them in gaining eleven skills/attitudes related to surviving in the adult world.

Table 13 below contains the average rating for each of the eleven survival skills broken down by system, gender, ethnic background, and building. Highlights from Table 13 include:

- System-wide, the three survival skills the graduates found the schools providing the most assistance in were (the higher the number the better prepared):
 - -- Good manager of money, property, and resources (2.65),
 - --Saleable work skills (2.43), and
 - --Wise consumer (2.38).
- System-wide, the three survival skills the graduates rated the schools in providing the least assistance in were (the lower the number the worse the preparation):
 - --Reading, writing, speaking, and listening (1.86), -- A desire for learning, now and in the future (1.93), and -- How to get along with others (1.97).
- Differences by gender seem to be minor across all adult survival skills except:
 - --Being a good manager of money, property, and resources shows a higher level of development for males (2.71) than females (2.27), and
 - --Development of skills in reading, writing, speaking, and listening shows a higher level of preparedness for males (1.99) than females (1.77).

^{*}Ratings were on a scale from 1 = very good to 5 = very poorly.

- The skill of being a good manager of money, property, and resources was the highest raced skills by 4 of 5 respondent ethnic groups.
- The skills of reading, writing, speaking, and listening was the lowest rated set of skills by 4 of 5 respondent ethnic groups.
- Only While (219) and Black (186) graduates are represented by large enough numbers to make any meaningful statements by ethnic background. Differences by ethnic group seem minor except for the following skill:
 - --A desire for learning, now and in the future shows a higher level of satisfaction for Whites (2.22) than Blacks (1.62).
- Arthur Hill graduat consistently rate their school: assistance higher '.verage of .38 of a scale point' than Saginaw High grad ates across all skills except for:
 - --The skill of how to examine and use information showed the closest agreement (2.09:AHHS and 1.88: SHS).

The 1986 graduates were also asked to identify the high school course which helped them the most to deal with adult responsibilities. Table 14 on the following page contains this information by system, gender, ethnic background, and building.

A review of the data in Table 14 indicates that:

- Of the 442 respondents, 15.4% found English to be the single most helpful course area.
- A total of 14% of all respondents found none of their courses most helpful.
- System-wide, the top four most helpful courses were:
 - --English 15.4% (11.7%: AHHS and 22.9%: SHS),
 - -- A combination 12.4% (14.8%: AHHS and 7.6%: SHS),
 - --Business 12.2% (14 %:AHHS and 7.6%:SHS), and
 - -Mathematics 10.4% (9.4%: AHHS and 12.5% SHS).
- Differences by gender as to the most helpful course area seem to be minor.

^{**}See Appendix G for a breakdown of the most frequently occurring single course when multiple courses were offered as the most helpful course.

- Only White (218) and Black (186) graduates are represented by large enough numbers to make any meaningful statements by ethnic background.
 - -- The top three single most helpful course areas for White graduates were:
 - Vocational technical (12.0%),
 - Business (11.5%), and
 - English (10.1%).
 - --The top three single most helpful course areas for Black graduates were:
 - English (23.7%),
 - Business (11.8%), and
 - Mathematics (11.3%).
 - --A number of noteworthy differences exist between these two groups of graduates, they include:
 - A greater percentage of Blacks (23.7%) found English the single most helpful course than Whites (10.1%).
 - A greater percentage of White graduates (12.0%) found a vocational/technical course most help-ful than Black graduates (4.3%).
 - A greater percent of Black graduates (10.7%) found home economics the most helpful course than White graduates (4.6%).
 - A greater percent of Whites (5.1%) found science most helpful than Blacks (2.2%).
 - A greater percentage of Whites (3.7%) found industrial arts most helpful than Blacks (0.0%).
- A number of noteworthy differences exist between AHHS and SHS graduates as to the single most helpful course area, they include:
 - --Vocational/technical courses were mentioned over eight times as often by AHHS graduates (11.4%) than SHS graduates (1.4%).
 - --Home economics was mentioned over three times as often by SHS graduates (13.2%) than AHHS graduates (4.1%).
 - --Science was mentioned over two times as often by AHHS (5.4%) than SHS (2.1%).

- --Social studies was mentioned over two times as often by SHS (13.2%) than AHHS (6.4%).
- --English was mentioned approximately two times as often by SHS graduates (22.9%) than AHHS graduates (11.7%).
- --Business was mentioned approximately two times as often by AHHS graduates (14.4%) than SHS graduates (7.6%).

A substantial percentage of the graduates (12.4% or 55 of 442) indicated that a combination of course areas were most helpful. The three top mentioned course areas in these combination responses were mathematics (33 times), English (29 times), and home economics (20 times). Appendix G contains a complete breakdown by sometem, gender, ethnic background, and school of these multiple responses. These responses were not combined with those graduates who responded with a single most helpful course because it was felt that those giving a combination of courses were not answering the same question.

The last question in this section asked the 1986 graduate to indicate how high school could have helped them more. The ways the school could have been more helpful are contained in Table 15 on the following page by system, gender, ethnic background, and building.

Highlights from Table 15 include:

- System-wide, the three most frequently mentioned ways school could have been more helpful were emphasize individual responsibility and self-direction (24. %), stress creativity and independent thinking (19.7%), and offer more advanced courses (13.4%).
- Differences by gender to the ways school could have been more helpful seemed to be minor across all categories except for:
 - --Emphasize individual responsibility and selfdirection show more females (28.3%) than males (21.3%).

Appendix H for a breakdown of the most frequently occurring single way the high school could be more helpful when multiple ways were offered to mis question.

- --Offer advanced courses and stress academic excellence show more males (16.3% and 11.4% respectively) than females (12.2% and 7.2% respectively).
- Emphasize individual responsibility and self-direction was the most frequently mentioned means the schools could have used to help graduates from across the three largest ethnic groups.
- Only White (170) and Black (106) graduates are represented by large enough numbers to make any meaningful statements by ethnic background.
 - -- The top three ways the schools could have been more helpful for White and Black graduates were:
 - Emphasize individual responsibility and self-direction (26.1% and 3% respectively),
 - Stress creativity and imagendent thinking (10.8% and 20.4% respectively), and
 - Offer more advanced courses (10.2% and 17.1% respectively).
- More SHS graduates (21.7%) felt the schools should provide more meaningful counseling than AHHS graduates (6.8%).
- Substantially more AHHS graduates (10.5%) indicated the schools should stress academic excellence than SHS graduates (3.6%).

Some of the respondents (5.9%) to this question gave a combination of ways the schools could have been more helpful. Appendix H contains a complete breakdown by system, gender, ethnic background, and school of these multiple responses.

A FINAL WORD

The most significant results of the follow-up study of Saginaw's 1986 high school graduates have been presented. Data relevant to the graduates' employment post high school education, and perceptions of their problems as they entered employment or further schooling have been reviewed as well as a short evaluation of their high school courses and curriculum. Comparisons between the responses of 1981 graduates and the 1986 graduates have been made when possible.

From the survey data there emerged some important points to be highlighted. They include:

- 1. Of the 455 respondents:
 - --Approximately forty-two percent (41.6%) of the respondents were enrolled in some kind of full-time education,
 - --15.7% were employed full-time, and
 - --14.6% were employed part-time.
- 2. Approximately six months after graduation 10.8% of the respondents were unemployed. The percent of unemployed SHS graduates (18.1%) was over twice that at AHHS (7.5%).
- 3. Most employed graduates (76.7%) were working in relatively unskilled jobs--waiting on customers, manual work, serving personal needs of people, and clerical.
- 4. Over half of the graduates (56.3%) were employed in industries classified as either personal (31.7%) or professional/related (24.6%) services.
- 5. The most common serious occupational problems encountered by graduates since graduation were:
 - --Right job not available (17.3%),
 - --No work available (6.2%), and
 - --Lacked skills/technical knowledge (6.2%).

- 6. Almost eighty percent of the graduates (79.0%) who continued their education were attending either two or four year colleges or universities.
- 7. Of the 237 graduates (52.1% of the respondents who went on to some type of further education), 161 (67.9%) were from Arthur Hill, 76 (32.1%) from Saginaw High.
- 8. Business (33.2%), engineering/architecture (12.6%), and medicine/health services (11.6%) were the three most popular fields of study for these graduates.
- 9. The four most common educational problems encountered by graduates since graduation were:
 - --Money problems (26.6%),
 - --Lacked basic educational skills (6.4%),
 - -- Unable to establish goals (4.7%), and
 - -- Unable to follow plans to accomplish goals (4.7%).
- 10. Nearly three quarters of the graduates had either a single career plan or changed it once or twice during their high school experience (35.9% and 37.0% respectively).
- 11. Again, nearly three quarters of the respondents (72.9%) felt the match of their educational or employment plans made during high school either "closely" or "generally" followed what they are now doing (41.9% and 31.0% respectively).
- 12. Almost half of the graduates (48.2%) desire to live somewhere other than Saginaw with the remainder either definitely planning to make Saginaw their permanent home (16.1%) or uncertain about where they would permanently locate (35.7%).
- 13. The three adult survival skills most graduates feel most prepared to handle were:
 - -- Management of money, property, and rescurces,
 - --Saleable work skills, and
 - --Consumerism.
- 14. The top three single most helpful courses to graduates were:
 - --English (15.4%),
 - --Business (12.2%), and
 - --Mathematics (10.4%).

- 15. The three most frequently mentioned ways the school could have been more helpful included:
 - --Emphasize individual responsibility and self-direction (24.1%),
 - --Stress creativity and independent thinking (19.7%), and
 - --Offer more advanced courses (13.4%).

APPENDICES

School District of the Cit, of Saginaw

550 Millard Street Saginaw, Michigan 48607 517-776-0200

Foster B. Gibbs, Ph.D., Superintendent

November 21, 1986

Dear 1986 Graduate:

Don't worry, we aren't selling encyclopedias or asking for a donation. All we want is a few minutes of your time to fill out a questionnaire about your experiences after high school.

You are not alone in this venture. The Department of Evaluation Services of the Saginaw Public Schools is sending this follow-up questionnaire to the entire 1986 graduating classes of Saginaw High and Arthur Hill High School. We are trying to learn about the class of 1986 and how former students feel about their high school education. This information will help us improve Saginaw's educational programs. Your individual responses will be kept confidential and will be summarized along with those of other Saginaw graduates.

Please complete the enclosed questionnaire and return it to us as soon as possible. We have even provided a pre-addressed, stamped envelope for your convenience. What could be easier?

Your cooperation is appreciated. Best of luck to you in the future.

Sincerely,

Hother Balder

Foster B. Gibbs, Ph.D. Superintendent of Schools

### APPENDIX D

# MAJOR INDUSTRIAL GROUPS USED IN SAGINAW'S 1981 AND 1986 FOLLOW-UP STUDIES

- 1. Construction
- 2. Manufacturing
- 3. Transportation, communication and other public utilities
- 4. Wholesale and retail trade
- 5. Finance, insurance, and real estate
- 6. Entertainment and recreational services
- Professional and related services (i.e., health services, schools, legal, engineering, etc.)
- 8. Personal services (i.e., barber, hotels, garment services, shoe repair, etc.)
- 9. Other

### APPENDIX E

# POST-HIGH SCHOOL CATEGORIES USED IN SAGINAW'S 1981 AND 1986 FOLLOW-UP STUDIES

- 01. Apprenticeship school, vocational-technical, and/or correspondence :hool
- 02. Management training program
- 03. Nursing school
- 04. Bible school
- 05. Business school
- 06. Adult education
- 07. Skilled personal service schools (such as barber, cosmetology, cooking, tailoring, etc.)
- 08. Junior or community college
- 09. College or university

#### APPENDIX F

# EDUCATIONAL CAREER EMPHASIS CATEGORIES USED IN SAGINAW'S 1981 AND 1986 FOLLOW-UP STUDIES

- 01. <u>Business</u>: such as management, data processing, accounting, personnel management, banking.
- 02. Commercial Arts and Communication: such as photography, printing, graphic arts, illustrations, advertising, journalism, television industry, and radio broadcasting.
- O3. Construction, Industrial, and Skilled Trades: such as refrigeration, carpentry, sheet metal, plumber, machinist, and electrician.
- 04. Education and Social Services: such as clergy, counseling, recreation, teaching, and professional youth leadership.
- 05. Engineering and Architecture: such as construction management, drafting, mechanical drawing, engineering—electrical/civil/mechanical, and landscape architecture.
- 06. Fine Arts and Letters: such as music, English, painting, sculpture and dramatics.
- 07. <u>Law and Government</u>: such as law enforcement, lawyer, military science, and city management.
- 08. Medicine and Health Services: such as dentistry, hospital administration, medical services, nursing, pharmacy, psychiatry, and veterinary medicine.
- 09. <u>Science and Agriculture</u>: such as physics, mathematics, forestry, conservation, chemistry, zoology, poultry science, and horticulture.
- 10. Services: such as auto repair, food management, chef, cosmetology, home economist, mortician.
- 11. Transportation: such as aviation careers, airline stewardess, railroad careers, and drivers—truck and bus.
