ABSTRACT

This manual was written to assist States and other governmental units wishing to replicate the Maryland Day Care Voucher Program, a system of providing child care subsidies to eligible families. Chapter I provides brief histories of day care in Maryland and that State's grant to demonstrate the viability of a day care voucher system. Chapter II defines what a voucher is and entails, and describes purposes of a voucher, components of the voucher system, and several related administrative procedures. Figures included in the text present elements of the Voucher Project as implemented by the departments of social services in Anne Arundel and Washington Counties, Maryland. Chapters III and IV list, respectively, goals and components of (1) the information and referral system developed in the two pilot counties and (2) the management information system implemented to provide automated information processing and record-keeping for the Day Care Voucher Demonstration. Hardware and software components provided to the counties are indicated. Chapter IV also discusses the development of automated files and their major data fields and the design of data entry screens. Figures provide samples of child and provider files, reproduce data entry screens, and delineate reporting formats developed to assist in day-to-day operations of the voucher system and in meeting federal and state reporting requirements. Maryland State Department of Human Resources

CHAPTER I

INTRODUCTION

history of Grant

Maryland has considered a voucner system of providing services for some time. Some experimentation has occurred with use of vouchers to purchase in-home aide service from friends, neighbors or other individuals for the elderly. In the bay Care Division, efforts have been made to de-regulate and simplify the program. Contracts with providers had been reduced from an unweidly package of legalese to a more manageable agreement of one page.

Licensure of family day care homes became registration with more practical requirements. The program focus, however, remained on the relationship of the agency and the provider.

Any meaningful arrangement between the provider and the family using day care was almost incidental.

In October, 1982, Maryland received a grant from the Department of human Development Services, to demonstrate the viability of a day care voucher system. The project was tested in two areas, Anne Arundel and Washington Counties.

Anne Arundel is a metropolitan county with a population of 370,773. It is the site of Annapolis, the State capitol; it has much recreational industry along its many shore lines and rural areas dotted with farms and small communities. It has a well developed day care program administered by the local department of social services.

Washington is a rural county in the mountains of Western Maryland with a population of 113,084. There are a number of heavy industries, mining and manufacturing, which have suffered through the economy as manifested in one of the highest unemployment rates in the States. Recovery is apparent, however, and people are being slowly recalled to work. Washington County was one of the recipients of the Appalachian Regional Commission (ARC) funds and day care was administered with them through the Department of Education. As those funds are being phased out, the shifting to the local department of social services and is growing rapidly. There has been an increase in the department of social services program of over 400% since the beginning the voucher demonstration.

The System is made up of three major pieces - the voucher, an information and referral system (I & R) and an automated management system. The grant has allowed for the

employment of a State director and secretary and three (3) staff in each of the county sites. They include a Voucher System Manager for overall coordination, and I&R Specialist for the automation aspects of the project and a secretary.

In addition, two consultants with prior experience in their areas have been used. One has worked on the I&R system while the other has assisted with the management system and evaluation of the project.

Procedures for implementation were developed by the Voucher staff and by a Planning Committee with representation from the department of social services of the two test counties, the State Social Services Administration and the Maryland Committee for Children, Inc. (MCC), a private non-profit advocacy agency which is the I&R contractor.

Day Care In Maryland

Historically, the State of Maryland has been interested in the development of quality day care for children in the State. As far back as 1962, the State General Assembly established a Governor's Commission to study the need for day care.

In July, 1967, funds were made available for establishing a purchase of care program along with developing state-operated day care centers in areas where the private sector did not already have centers. By 1980, the State of Maryland was operating 26 pre-school day care centers for 1,531 children with 341 classified public employees at a cost of \$5.5 million and 7 school age programs for 414 children with 67 classified employees at a cost of \$1.2 million, for a cost of approximately \$3,444 per child per year.

At the same time, the state purchased child day care from private centers and from family day care providers at maximum rates established in the state budget. The purchase program cost the state \$8.3 million for 4,982 places purchased or a cost of \$1,665 per child per year.

A comparison study of the cost to the state between state operated and purchase of private day care showed that the state operated program cost Maryland almost twice the amount of the state's rate for purchasing care. The low cost of purchasing care was caused by the lower salaries and operating costs of private care while the state was required to pay classified level salaries, high rents and transportation costs.

In 1980, the state Social Services Administration began to plan a more cost efficient but equally effective use of public funds for day care services. In 1981, the state General Assembly requested and approved a plan for the close-out of the state operated day care programs and the conversion to total purchase of care from private providers.

Simultaneously, the Social Services Block Grant reduced the state's day care budget by \$2.5 million. It became clear that the state operated day care center program could be cashed out to absorb the loss of federal funds and yet continue to provide care for the 1,531 preschool children and 414 school age children by purchasing care at the lower cost of private care.

By August, 1982, the state operated programs were closed out, 30 of the 33 transferred to private operators, and the funds remaining after the federal reduction converted to purchase of care at the state's maximum rates. At the same time the Governor allowed an increase of \$1.25 million for purchase of day care in the 1982 state fiscal year budget (July 1982 through June, 1983). The impact on the purchase of day care program was dramatic. Between the state's fiscal year 1981 and 1983, the purchase of the day care program increased 57% from \$8.3 million.

Social Services Administration, with the knowledge that funds for purchase of care would probably not be increased in the next few years, sought ways to increase the capacity by initiating the Day Care Voucher Project pilot study.

Objectives of Voucher Project

The Day Care Voucher Project established these objectives for the pilot study:

- To establish better fiscal control over funds to local jurisdictions.
- To provide more parental responsibility for the choice of type and location of day care for their child.
- 3. To demonstrate that the quality of the day care program increases as selection and oversight of care shifts from local department staff to parents.
- 4. To demonstrate that the pilot project can be expanded state-wide.

- 5. To develop a model voucher system for other states.
- 6. To reduce administrative delays for the client and allow the worker to spend more time assisting client.
- 7. To impact favorably on employment stability of the parent.
- 8. To establish an information and referral service linked to the voucher system.
- To facilitate and increase participation of publicly funded private daycare providers in the program.

Purpose of This Manual

This manual is written to assist those states wishing to replicate the Maryland Day Care Voucher Program. It will also be helpful to those Maryland counties who will be instituting the Day Care Voucher Program.

This Manual can be helpful to those people and agencies who would like to institute a Voucher Program in other ser-

vices. It is particularly adaptable to in-home services, homemaker services and health-related services.

CHAPTER II

VOUCHER

Definition

A voucher is an agreement among the three parties involved in subsidized day care - the parent, the provider and the local department of social services. When completed, the following commitments have been made.

The child's parent agrees:

- If a fee is assessed, to make payment to the provider on the provider's schedule and for the times and amount specified on the voucher, subject to the terms and conditions on the reverse side of the voucher.
- To make an alternate care plan when the child is ill.
- To notify Provider when the child will be absent.
- To report to the department of social services
 within 10 days any changes in income, employment,
 family group, marital status, address, phone number,
 and/or change in times which day care is required.

The Provider agrees:

 To provide day care for the child as specified on the voucher.

- To maintain legal licensure or registration to make available pertinent records for inspection by the department of social services.
- To establish a system for presentation of grievances related to the operation of the program.
- To provide services to subsidized children in accordance with Titles VI and VII of the Civil Rights Act of 1964.
- Not to disclose information concerning a service recipient for any purpose not directly related to the service, except with written approval of the Parent.
- To abide by decisions made pursuant to fair hearing procedures.

The local department of social services agrees:

- To make payment for the subsidized child, upon receipt of an authorized invoice from the Provider, for the times and amount specified on the voucher, subject to the terms and conditions on the reverse.
- To make available fair hearing procedures to applicants or recipients aggrieved by decisions of the Department or the Provider and to advise applicants of such procedures.

• Not to disclose information concerning a recipient for any purpose not directly related to the service, except with written approval of the Parent.

Purposes

The purposes of the voucher are:

- To provide choice and satisfaction to Parents by using subsidized day care.
- To enable Parents to secure day care in a timely manner.
- To assist Providers in maintaining enrollment which includes subsidized children.
- To maintain quality of care for subsidized children.

Components

The components of the voucher system are:

- The intake process including application, determination of need and eligibility and development of a service plan.
- Issuance of voucher including determination of subsidy and completion of Voucher Sections I through IV.

- Child placement including selection of Provider, completion of Voucher Sections V through VII and receipt of voucher by the LDSS.
- Payment of subsidy including issuance of invoices
 to the Provider, submission of monthly invoices
 by the Provider and payment process.
- Continuing service including amendment of vouchers, as needed, periodic redetermination of need and eligibility and termination, as appropriate.

Procedures

A. Intake

1. Application

- The applicant who wishes to use day care for a child meets with the intake worker. After establishing that day care is an appropriate plan to meet the needs of the child and family, the worker and applicant complete the data elements on the DHR/SSA 248, 248A, 248B (See Appendix) and they are signed by each, as appropriate.
- Instructions for completing DHR/SSA 248.

2. Determination of Eligibility

- The following families are eligible for subsidized day care services:
 - Recipients of AFDC
 - Recipients of SSI or Mandatory State
 Supplements (MSS) or Public Assistance to Adult Families whose monthly gross income does not exceed 80%
 cf the State's median income.

3. Determination of Needs

- An applicant is eligible by need for subsidized day care if there is no adult member of the family available or willing to
 care for the child, no other acceptable
 care plan can be arranged and if the family
 meets one of the established priority criteria.
- provision of day care is subject to the following order of pricrity:
 - (1) Prevention of out-of-home placement and reunification of family or relative, such as protective services participants and children at lisk of institutionalization;

- (2) AFDC, SSI, MSS, or PAA recipients and income eligible participants with income less than 40 percent of the State's median income, full-time working;
- (3) AFDC, SSI, MSS, or PAA recipients and income eligible participants with income less than 40 percent of the State's median income, completing .high school;
- (4) Income eligible participants, working full-time, with income in the following order:
 - (a) 40 to 49 percent of the State's median income,
 - (b) 50 to 59 percent of the State's median income,
 - (c) 60 to 69 percent of the State's median income,
 - (d) 70 to 80 percent of the State's
 median income;
- (5) Income eligible participants with income of 40 to 80 percent of the State's median income, completing high school;
- (6) AFDC, SSI, MSS, or PAA recipients and income eligible participants

with income less than 40 percent of the State's median income, full-time undergraduate college or vocational training;

- (7) Income eligible participants with income of 40 to 80 percent of the State's median income full-time undergraduate college or vocational training;
- (8) AFDC, SSI, MSS, or PAA recipients and income eligible participants with income less than 40 percent of the State's median income, part-time working.
- (9) AFDC, SSI, MSS, or PAA recipients eligible participants with income less than 40 percent of the State's median income, part-time completing high school.
- (10) Income eligible participants with income of 40 to 80 percent of the State's median income, part-time working;
- (11) AFDC, SSI, MAA, or PAA recipients and income eligible participants with income less than 40 percent of the State's median income, part-time un-

dergraduate college or vocational
training;

- (12) Income eligible participants with income of 40 to 80 percent of the State's median income, part-time undergraduate college or vocational training.
- When the program is fully subscribed and
 a slot becomes available, the child of the
 family with the highest priority is placed
 first.
- When the program is reduced because of insufficient funds or is oversubscribed, the priorities are applied in reverse for terminating services.
- When the program is full and an application is made for protective service purposes, the child must be placed. If there is not sufficient attrition within 30 days to prevent oversubscription, another child of lowest priority must be terminated.

4. Service Plan

Development of the service plan includes

Identification of service options, advan-

tages and disadvantages and client's choice of services.

 Identification of possible barriers to delivery of the service.

B. Issuance of Voucher

- 1. Workers determine amount of voucher subsidy by use of eligibility information above.
- 2. Worker gives client a voucher:
 - Good for six (6) months, beginning with intake date.

C. Placement

- If a client has not already selected a day care placement, she is referred to Information and Referral.
 - given pamphlets on selecting appropriate day care.
 - given a list of names of providers in appropriate geographic areas.

Client takes list and voucher and goes "shopping".

D. Placement

- 1. Client and provider negotiate amount to be paid over subsidy:
 - only restriction: provider may not charge more than charged to highest paying customer.
- 2. Appropriate sections of voucher are signed by both client and provider:
 - Provider sends voucher to worker.

E. Subsidy Payment

- 1. Worker sends invoices to provider.
- Provider sends completed invoice to agency monthly.
- 3. Agency sends check to provider.

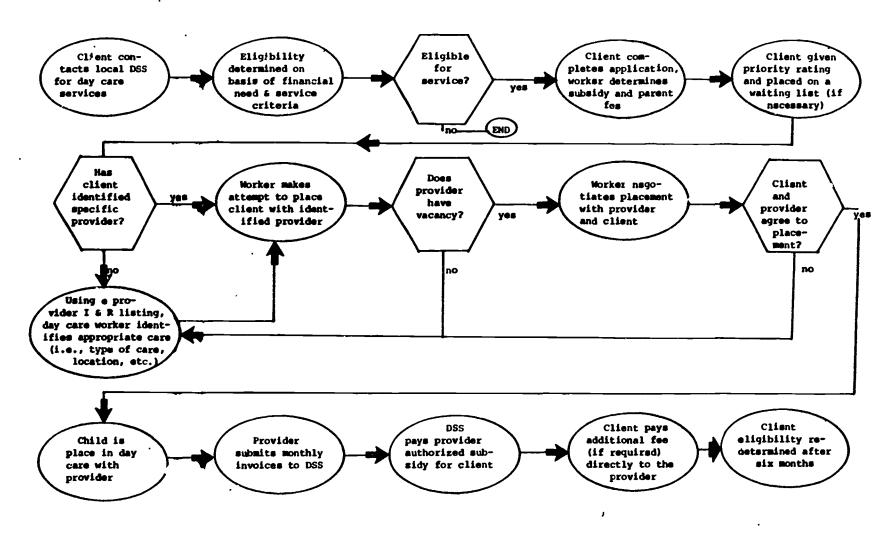

F. Continuing Services

- 1. Client applies for reconsideration each six months or when there is a change in service:
 - salary change
 - change in the hours of day care needed.
- 2. Subsidy is terminated when"
 - service is no longer nedded
 - client's earnings are over 90% of the State's median income.

The following figures explain the Voucher Project as implemented by Anne Arundel and Washington Counties Departments of Social Services. Figure 1 is a flow chart of the Purchase of Day Care System as it was in the local departments before the initiation of the Voucher Project. Figure 2 is a flow chart of the Voucher system in the two counties. Figure 3 is a logic model of the Voucher Project.

 clients in selecting
 providers 6 monitoring day care quality
 -increased availability of day care
 providers/improved
 choice of care for
 clients
 -improved quality of
- day cara
 -increased amployment
 stability among
 clients

CHAPTER III

INFORMATION AND REFERRAL SYSTEM

In order to implement an efficient and effective voucher system in which the "shopping" for day care is done by the parent, an information a referral system needs to be established. The information regarding providers may also be available to private users, as well as those subsidized by the local departments of social services. Enough knowledge about providers must be available to enable users to make an informed decision regarding the best program for their children.

Goals

The goals of the information and referral system are as follows:

- Reduction of time between a request for day care and the securing of a placement.
- Increased decision-making and satisfaction by parents in selection.
- Fuller and appropriate enrollment in day care programs.
- More efficient use of local department of social services day care staff with increased time for counseling and monitoring.
- Higher quality of day care due to parental involvement and competition among providers.

Components

The Maryland Social Services Administration contracted with a subcontractor to develop the information and referral system in two pilot counties. The subcontractor was responsible for obtaining the microcomputers to be used in the pilot study.

The subcontractor was responsible for:

- Developing data elements on providers which would be available to enable parents to make an initial decision to investigate a provider further.
- Determining the hardware and software components to best meet the needs of the system.
- Purchasing hardware software for installation in the two local departments.
- Programming the information and referral system in the two local departments.
- Training local department of social services staff in the operation of the system.
- Assisting with input and output documents to create and update the resource file.
- Assisting with information to providers and users for recruitment and appropriate use of the system.

The subcontractor provided a technical assistant for this project. This person, along with other staff from the subcontractor,

provided training in the use of the computer for information and referral and for counseling parents and choosing the appropriate day care.

The subcontractor compiled the list of providers on discs by regions as well as several other indicators (infant, handicapped, hours of service, etc.). A parent was provided with a printout list of providers that matched their requirements. The parent was also given a pamphlet explaining how to look for a quality day care program.

The parent could then use the printout, with the assistance of the pamphlet, and go "shopping" for day care. A copy of the pamphlet and a sample printout are included with this Chapter.

CHAPTER IV

MANAGEMENT INFORMATION SYSTEM

The management information system provides automated information processing and record-keeping for the Day Care Voucher Demonstration. Using an inexpensive microcomputer, along with flexible data base management software, each demonstration county developed a child and day care provider based MIS. This system was designed to integrate fully into the day-to-day operations of each local agency. Maryland Social Services Administration hired a subcontractor to implement the management information system.

Objectives

The following are the objectives of the management information system:

- Facilitate processing and tracking of day care applicants through placement into day care;
- Provide readily accessible, up-to-date information about children receiving day care, as well as the providers of day care;
- Assist in the monthly processing of invoices from providers including the auditing of children in care and the automatic calculating of payment to providers;
- Assist day care workers in providing detailed information about day care providers in various locations throughout the community, as well as to effectively manage their provider caseloads; and

• Facilitate the generation of statistical reports to meet federal and state reporting requirements and to manage day care resources.

Components

A microcomputer, with keyboard, video display terminal, and dox matrix printer, was used by each demonstration county to set up the MIS. Washington County, with a caseload of about 100 children receiving day care, used a two disk drive system for storage of data. Anne Arundel County, with a caseload of about 600 children receiving day care, used a 10 megabyte hard disk storage system. The software equipment selected for development of the MIS was DB Master with utility packs and statistical package, a flexible data base management software. In addition, the local agencies purchased spread sheet type software and word-processing software to assist in other voucher-related operations.

The following chart shows the hardware and software components for the counties:

(See Page 28)

Major Files and Data Entry Screens

After thorough examination of the manual filing system, dayt.-day information processing, and report requirements, the local agencies decided upon two major automated files:

- (1) A child file, which would have detailed information about each child that applies, receives a voucher, and/or is placed in day care; and
- (2) A provider file, which would have detailed information about each day care provider licensed/registered by the local agency including day care centers and family providers.

Each local agency went through a detailed and systematic process of identifying fields or major characteristics that would appear within each file. An example of the major fields selected by one of the counties can be found at the end of the Chapter on Figure 1.

After determining the major fields within each of the two files, the local agencies designed data entry screens. To the extent possible, these screens were set up so that they would locate information items within child and provider records.

Separate screens were set up for each file. Figure 2 at the end of this Chapter provides an example of the child file and

Figure 3 provides an example of the provider files.

Procedures

Once the data entry screens were designed, a small sample of cases was loaded into each file. This data was used to:

- test the efficiency of data entry procedures,
- develop coding for some of the fields,
- assist in the development of reports for the system.

Once these small-scale tests were completed and the ability
to generate necessary reports was demonstrated, the local agency
staff used information from manual files (e.g., the voucher application) to load records into the Child and Provider files.

As records were added to the system, agency supervisory staff monitored data entry and was involved in quality control of the data bases. This ensured accuracy and consistency of data within each file. Figure 4, at the end of this Chapter shows a completed sample of child's file while Figure 5 shows a sample of a completed provider file.

Development and Generation of Reports

While local agency staff in each demonstration county worked on initial data entry, they also designed and developed report

formats for the MIS. After consultation with supervisors and day care workers, reports were designed which would assist in the day-to-day operations of the voucher system and meet federal and state reporting requirements. Some of the reports that were developed appear in the following Figures at the end of this Chapter:

Figure 6 - Voucher Log I and II

This report enables the local agency to track vouchers, as well as the progress that clients make toward finding day care. It also gives details about children participating in the voucher program. It is sorted by voucher number.

Figure 7 - Waiting List Report

This report enables the local agency to track children who have applied for day care but are not yet receiving day care. It is sorted first by priority code, then by application date.

Figure 8 - Voucher Expiration Report

This report enables the local agency to keep track of vouchers that will expire during the upcoming six (6) weeks. It provides the worker with information that will assist in making contact with the client. Only the vouchers that expire during the next six months are selected. The report is sorted by case name.

Figure 9 - Child Chacteristics Report

This report provides the agency workers with detailed information about all children that have been issued vouchers. It is sorted by parent's name.

Figure 10 - Day Care Provider List

This report is a listing of day care facilities that can be distributed to families looking for day care. Both providers and parents are given locator codes, that correspond to geographical areas within the county (e.g., within a specific school district). Parents may ask for a listing of facilities within their area to assist them in locating day care.

Figure 11 - Worker Information and Referral List

This report provides details about providers within given geographical area. It can be used by agency workers to assist clients in finding day care. It provides considerable detail about the type of care offered by providers.

Figure 12 - Fiscal Report

This report enables the agency to process monthly invoices. It provides detail about the amount that should be paid to each provider, based on the invoice that is submitted. The computer automatically calculates the payment (net total) due to each provider,

after the data entry clerk enters the day and hours in care during the month for each child.

Figure 13 - Mailing Labels

Imbels can be sutematically produced from either the child or provider files. They may be sorted by case name, provider name, zip code, etc. In addition; a small group of cases of providers may be selected and printed -- e.g., only those cases due for reconsideration during the upcoming month.
