ABSTRACT

This module is one of a series of 127 performance-based teacher education (PBTE) learning packages focusing upon specific professional competencies of vocational teachers. The competencies upon which these modules are based were identified and verified through research as being important to successful vocational teaching at both the secondary and postsecondary levels of instruction. The modules are suitable for the preservice and incervice preparation of teachers and other occupational trainers in all occupational areas. This module contains four learning experiences that are designed to familiarize teachers/student teachers with a variety of techniques they can use to determine students' needs and interests and to give them practice in using these techniques. Each learning experience contains an objective, several activities, information sheets, resource lists, and a self-check with model answers. The final learning experience requires the teacher/student teacher to demonstrate competency in applying the material of the module in an actual teaching situation. (KC)

Second Edition

Module B-1 of Category B_'nstructional Planning Module SERIES PROFESSIONAL TEACHER EDUCATION MODULE SERIES

FOREWORD

This module is one of a series of 127 performance-based teacher education (PBTE) learning packages focusing upon specific professional competencies of vocational teachers. The competencies upon which these modules are based were identified and verified through research as being important to successful vocational teaching at both the secondary and postsecondary levels of instruction. The modules are suitable for the preparation of teachers and other occupational trainers in all occupational areas.

Each module provides learning experiences that integrate theory and application; each culminates with criterion-referenced asessment of the teacher's (instructor's, trainer's) performance of the specified cornpetency. The materials are designed for use by trachers-in-training working individually or in groups under the direction and with the assistance of teacher educators or others acting as resource persons. Resource persons should be skilled in the teacher competencies being developed and should be thoroughly oriented to PBTE concepts and procedures before using these materials.

The design of the materials provides considerable flexibility for planning and conducting performance-based training programs for preservice and inservice teachers, as well as business-industry-labor trainers, to meet a wide variety of individual needs and interests. The materials are intended for use by universities and colleges, state departments of education, postsecondary institutions, local education agencies, and others responsible for the professional development of vocational teachers and other occupational trainers.

The PBTE curriculum packages in Categories A - J are products of a sustained research and development effort by the National Center's Program for Professional Development for Vocational Education. Many individuals, institutions, and agencies participated with the National Center and have made contributions to the systematic development, testing, revision, and refinement of these very significant training materials. Calvin J. Cotrell directed the vocational teacher competency research study upon which these modules are based and also directed the curriculum development effort from 1971 - 1972. Curtis R. Finch provided leadership for the program from 1972 - 1974. Over 40 teacher educators provided input in development of initial versions of the modules; over 2,000 teachers and 300 resource persons in 20 universities, colleges, and postsecondary institutions used the materials and provided feedback to the National Center for revisions and refinement

Early versions of the materials were developed by the National Center in cooperation with the vocational teacher education faculties at Oregon State University and at the University of Missouri-Columbia. Preliminary testing of the materials was conducted at Oregon State University, Temple University, and the University of Missour:-Columbia

Following preliminary testing, major revision of all materials was performed by National Center staff, with the assistance of numerous consultants and visiting scholars from throughout the country

Advanced testing of the materials was carried out with assistance of the vocational teacher educators and students of Central Washington State College, Colorado State University, Ferris State College, Michigan; Florida State University; Holland College, P.E I., Canada; Oklahoma State University, Rutgers University, New Jersey; State University College at Buffalo, New York, Temple University, Pennsylvania, University of Arizona; University of Michigan—Flint, University of Minnesota—Twin Cities, University of Nebraska-Lincoln; University of Northern Colorado, University of Pittsburgh, Pennsylvania; University of Tennessee; University of Vermont, and Utah State University.

The first published edition of the modules found widespread use nationwide and in many other countries of the world. User feedback from such extensive use, as well as the passage of time, called for the updating of the content, resources, and illustrations of the original materials. Furthermore, three new categories (K-M) had been added to the series, covering the areas of serving students with special/exceptional needs, improving students' basic and personal skills, and implementing competency-based education. This addition required the articulation of content among the original modules and those of the new categories.

Recognition is extended to the following individuals for their roles in the revision of the original materials. Lois G. Harrington, Cathenna C King-Fitch and Michael E. Wonacott, Program Associates, for revision of content and resources; Cheryl M. Lowry, Research Specialist, for illustration specifications, and Barbara Shea for artwork Special recognition is extended to the staff at AAVIM for their invaluable contributions to the quality of the final printed products, particularly to Robin Ambrose for typesetting, to Marilyn MacMillan for module layout, design, and final artwork; and to George W. Smith, Jr for supervision of the module production process

The National Center for Research in Vocational Education's mission is to increase the ability of diverse agencies, institutions, and organizations to solve educational problems relating to individual career planning, preparation, and progression. The National Center fulfills its mission by:

- Generating knowledge through research.
- Developing educational programs and products.
- Evaluating individual program needs and outcome
- Providing information for national planning and policy.
- Installing ed: stional programs and products.
- Operating information systems and services.
- Conducting leadership development and training programs.

AMERICAN ASSOCIATION FOR VOCATIONAL **INSTRUCTIONAL MATERIALS** The National Institute for Instructional Materials

120 Driftmier Engineering Center Athens, Georgia 30602

The American Association for Vocational Instructional Materials (AAVIM) is a nonprofit national institute.

The institute is a cooperative effort of universities, colleges and divisions of vocational and technical education in the United States and Canada to provide for excellence in instructional materials.

Direction is given by a representative from each of the states. provinces and territories. AAVIM also works closely with teacher organizations, government agencies and industry.

INTRODUCTION

Although instructional units are usually planned by teachers **before** meeting students for the first session, information on those students' needs and interests must be taken into account. These two concepts are not contradictory.

Obviously, the content of a vocational-technical course is largely determined by the knowledge, skills, and attitudes needed for entry-level competence in the occupation. But, adjustments in sequencing, teaching techniques, and learning experiences can and should be made once you have determined the needs and interests of the class, both individually and collectively.

Background information on students' needs and interests can help you, as a vocational-technical teacher, to reach each student at his/her level and stimulate him/her to develop to the fullest potential. Students who have difficulty with reading cannot be expected to study a detailed specifications sheet and make a drawing until their reading skills improve, even though they may have the potential to be fine draftpersons. A class that seems apathetic about a particular content area might become more motivated if given the opportunity to select projects designed around their interests.

Adult students, in particular, usually have some definite purpose in mind when they enroll in a vocational or technical program (e.g., licensure, updating of technical skills, preparation for a new job). By

knowing what these purposes are, the instructor has a much better chance of providing instruction that is relevant to the needs of these studer to.

Determining students' needs and interests, then, is an essential step in your instructional planning; and, because needs and interests change, it is a continual process. There are several techniques you can use to obtain this information: reviewing available ir.formation in students' cumulative records; obtaining information from students through questionnaires and checklists; discussing students' needs and interests with students and, in the case of secondary students, their parents; and conferring with other staff members.

This module is designed to familiarize you with a variety of techniques you can use to determine students' needs and interests and to give you practice in using them. Whenever you teach, you will need to use these skills to obtain information that can help you select the learning experiences for your students that will be most effective.

NOTE: This category of modules (Category B) is directed toward planning instruction for students with varying needs within the so-called normal range. Specific coverage of how to determine the needs and interests of students with special/exceptional needs is provided in Module L-2, Identify and Diagnose Exceptional Students.

ABOUT THIS MODULE

Objectives

Terminal Objective: In an actual teaching situation, determine needs and interests of students. Your performance will be assessed by your resource person, using the Teacher Performance Assessment Form, p. 59 (Learning Experience IV).

Enabling Objectives:

- After completing the required reading, demonstrate knowledge of the rationale and procedures for determining the needs and interests of students (Learning Experience I).
- After completing the required reading, analyze the cumulative records of some hypothetical students to determine the needs and interests of those students (Learning Experience II).
- After examining the data in the cumulative folder of a hypothetical student, plan for obtaining additional information on the student's needs and interests (Learning Experience III).

Resources

A list of the outside resources that supplement those contained within the module follows. Check with your resource person (1) to determine the availability and the location of these resources, (2) to locate additional references in your occupational specialty, and (3) to get assistance in setting up activitias with peers or observations of skilled teachers, if necessary. Your resource person may also be contacted if you have any difficulty with directions or in . 'sessing your progress at any time.

Learning Experience!

Optional

A teacher, experienced in determining students' needs and interests, with whom you can consult.

Loarning Experience II

Optional

1-5 peers with whom you can discuss your analysis of cumulative records.

Learning Experience III

Optional

A student or peer whom you can interview concerning his/her interests.

Learning Experience IV

Required

An actual teaching situation in which you can determine needs and interests of students.

A resource person to assess your competency in determining needs and interests of students.

General Information

For information about the general organization of each performance-based teacher education (PBTE) module, general procedures for its use, and terminology that is common to all the modules, see About Using the National Center's PBTE Modules on the inside back cover. For more in-depth information on how to use the modules in teacher/trainer education programs, you may wish to refer to three related documents:

The Student Guide to Using Performance-Based Teacher Education Materials is designed to help orient preservice and inservice teachers and occupational trainers to PBTE in general and to the PBTE materials.

The Resource Person's Guide to Using Performance-Based Teacher Education Materials can help prospective resource persons to guide and assist preservice and inservice teachers and occupational trainers in the development of professional teaching competencies through use of the PBTE modules. It also includes lists of all the module competencies.

The Implementation Guide for Performance-Based Teacher Education & Competency-Based Staff Development Programs is designed to help those who will administer the PBTE program. It contains answers to implementation questions, possible solutions to problems, and alternative courses of action.

Learning Experience I

OVERVIEW

After completing the required reading, demonstrate knowledge of the rationale and procedures for determining the needs and interests of students.

You will be reading the information sheet, Determining the Needs and Interests of Students, pp. 6-11.

You may wish to meet with an experienced teacher to discuss reasons for and effective methods of determining students' needs and interests.

You will be demonstrating knowledge of the rationale and procedures for determining the needs and interests of students by completing the Self-Check, pp. 12-14.

You will be evaluating your competency by comparing your completed Self-Check with the Model Answers, p. 15.

Each student is a unique individual, and this has implications for the way your instruction should be planned and executed. To learn how to gather the most useful information about the individual needs and interests of your students so you can apply this in planning instruction, read the following information sheet.

DETERMINING THE NEEDS AND INTERESTS OF STUDENTS

As stated in the introduction to this module, entry-level occupational knowledge, skills, and attitudes provide the basic content and framework for a vocational-technical course. However, because no two students and no two classes are exactly alike, your instructional planning must take into account the needs and interests of your students if your teaching is to be effective.

Student needs can be classified as physical, social, emotional, and educational; interests can be classified as personal, school-related, and occupational. There are any number of occasions during your instructional planning when having information on these needs and interests can help you make more effective instructional decisions.

Suppose, for example, that the students in your class are older and socially and emotionally quite mature. You might well decide that these students do not need the same degree of structure or supervision that a less mature group might require. Thus, you would probably plan learning activities that gave class members more responsibility for their own learning and a wider range of instructional options. In using the project method, for example, you might suggest that students design and carry out their own projects or choose from a number of possible projects, instead of planning and structuring the activity for them.

The needs and interests of your students should also be considered when selecting and/or preparing instructional materials. Suppose you had four good textbooks to choose from. If many of your students had reading difficulties and one of the texts had a lower level of reading difficulty than the others, you would probably decide to use that text. If all the texts were too difficult for a given class, you might consider developing materials especially designed for your students' level of ability. In addition, you might assume that students with reading and/or study difficulties would learn more effectively if involved in concrete, hands-on learning experiences, supplemented by a variety of instructional media and materials.

Your decisions about how much material to cover in a lesson or unit (and at what pace) and whether to review background information or basic skills would depend in part on students' previous course work and experience, their learning styles, and their academic strengths and weaknesses.

At all times in your instructional planning, you will want to consider what will motivate your students to get involved in their classroom and laboratory work. Knowing students' backgrounds and interests can help you, whether you are making group assignments based on mutual interests, developing individual and group projects, or dreaming up concrete examples and stories to make a point during a lecture.

It should be obvious from the preceding discussion that needs and interests often overlap. A student who needs to be with other people—who dislikes being alone—will probably have developed many interests in group activities and will enjoy working with other people. A student with well-defined occupational interests will need classroom and lab experiences designed to develop his/her skills and knowledge in that area.

The rest of this information sheet deals primarily with explaining what data on student needs and interests you should be collecting prior to and during instruction and the means by which the data can be collected and interpreted. As you read, however, you should be thinking of the uses to which you could put this information in your own instructional planning: in writing student performance objectives, planning units and lessons, and selecting or preparing instructional materials. In doing this, you should consider the level at which you are teaching or expect to teach, as well as your occupational specialty or service area.

Data on Student Needs

As indicated earlier, student needs can be classified as physical, social, emotional, and educational. Students' physical needs are those related to their health. Here are some questions that you may want to consider as you seek data related to physical needs:

- · Is the student getting an adequate amount of undisturbed rest?
- Does she/he have an adequate diet for growth purposes, physical activities, and body structure?
- Has the student had professional dental examinations, eye examinations, general physical health examinations?
- Does he/she have adequate and safe housing?
- Does the student know about and understand the importance of safety devices when using equipment, machinery, and supplies in his/her environment?

Basically, social needs concern interpersonal relationships and group interactions. Here are some questions you may want to consider as you seek data related to social needs.

- · Do family members take an active interest in the achievement of the student?
- Does the student participate willingly in group activities?
- Is his/her behavior accepted by peers?
- Does the student have a group of friends?
- Does the student participate in extracurricular activities at school and/or in the community?

Of course, you must remember that although human beings are social creatures, individuals vary in the amount and kind of social contacts needed. Do not generalize that everyone needs to join a certain number of organizations; a student may have social contacts of which you are unaware.

Usually emotional needs are closely associated with social needs, because emotional needs are satisfied through the socialization process. Again, however, one should not make sweeping goneralizations about how people should interact. There are "loners" whose need for interpersonal relationships is minimal. There are "socialites" who are dependent on interpersonal relationships. Despite these healthy individual differences, there is information relating to those emotional needs common to most people that you will want to obtain:

- Can the student take a joke?
- Does he/she have a sense of humor? a healthy outlook on life?
- Does he or she have frequent headaches or other health disturbances?
- Does he or she overreact when disagreed with (e.g., cries, hits things, stomps out of the rocm)?

Data on aducational needs are essential if students are to succeed in your classes. Therefore, you will need to accumulate data to answer the following questions:

- What are the student's career plans?
- Does the student enjoy school work?
- · Do the student's family members reinforce his/her educational achievements?
- What reading level has the student achieved?
- What mathematical concepts has the student mastered?
- What study skills does the student possess?

If scientific principles or manipulative skills are associated with your occupational specialty, you would need to collect information on each student's level of ability in these areas as well.

Data on Student Interests

Knowledge of student interests frequently can be put to good use when motivating students to undertake a learning task. The three categories of interests to be explored here are personal interests (e.g., collecting stamps), school interests (e.g., participating in sports), and occupational interests (e.g., holding a part-time job).

Personal interests usually develop as students explore the world arour if them. The broader the opportunities to explore, the broader their interests are likely to be. As people mature, they tend to settle on a few major interests. Usually one can get at students' personal interests by asking them about their hobbies. For example:

- If the student has a few spare moments after school or over the weekend, how does he/she spend them?
- Does he/she share this hobby with others?
- Does he/she ever place this hobby on exhibit?

School interests involve both the courses a student chooses to take and the extracurricular activities in which he/she participates. You need to consider the following areas:

- What courses has the student completed?
- What courses is he/she presently enrolled in?
- What electives has he/she chose, to take?

School interests also evidence themselves through students' choices of friends and the clubs and sporting events in which they participate.

Occupational interests involve any work-related preferences:

- What career has the student chosen, if any?
- What occupational areas hold the most interest for him/her?
- What are his/her long-range career goals and aspirations?
- What work experience has he/she had?

Locating Available Data

Some of the student needs and interests data you will want to obtain are already available at your school or college. The three main sources of available data at the secondary level are the school's central administrative office, the guidance office, and the vocational department. At the postsecondary level, the sources are similar: the records or registrar's office, each student's academic advisor, and the occupational department.

In the central records office, you can usually find some type of cumulative records for each student. These records contain varying amounts and kinds of information, depending, in part, on whether you are dealing with a secondary or postsecondary population.

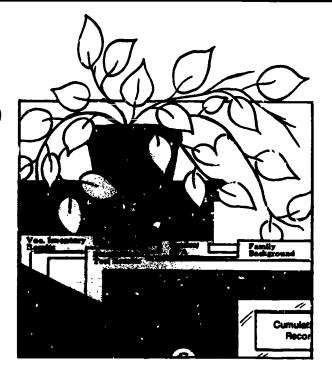

For example, at the secondary level, you might find information about the family background of students; generally, the home address, parents' names, marital status of parents, parents' occupations, and number of children in the ramily are recorded. From such information, you might gain some perspective about the sizes and kinds of families from which your students come, and you may be able to gain some insights into the common problems and concerns of individual students.

At the postsecondary level, however, parental information may not be available, simply because it is not relevant (e.g., in the case of a 50-year-old retrainee who is, himself, a parent). These records may contain the student's completed application form, however, which might contain a wealth of information, including an autobiography.

In these records, you also may find information about subjects taken; grades received in each subject; cumulative grade-point-averages; attendance records, including reasons for absences; extracurricular activities; awards received; and, in some schools, standardized achievement test scores and anecdotal records.

In addition, cumulative records may contain records of students' standardized aptitude test scores, reading test scores, standardized interest inventory test results, personal preference scores, and vocational interest inventory test results. Counselors should be contacted for help in interpreting any of these test scores, if necessary, and for discussion of additional information you need about your students.

As indicated above, most teachers find that they can save themselves much effort if they go to existing records as the first source of information. However, no amount of pertinent information serves a practical or reasonable purpose unless it is used intelligently. You must take care to treat the information you collect in the strictest confidence, releasing it only to appropriate personnel according to school or college policy and right-to-know regulations.

In addition, you must avoid prejudging a student based on sketchy data or limited sources of information. Determining a student's needs and interests does not mean stereotyping him/her or setting up a "self-fulfilling prophecy" of failure or difficulty (e.g., expecting a student to fail and creating a climate in

which that expectation becomes a reality). It means gathering relevant data about the student from a variety of . Durces and then remaining flexible and open enough to allow the student to be an individual who is more than a name on a folder or a score on a test.

You may want to transfer the particular information you need from school records to your own class records—a form that will be more directly usable to you. For example, you may want to allow space in an overall class profile for specific family data, or you may wish to set up a card file or folder for each of your students.

Adding information to records that are already available is a wise procedure from two standpoints:

(1) it helps you in organizing and interpreting generally accepted information for your particular use in program planning, and (2) it a roids duplication of effort on the part of both students and teachers in gathering information. Of course, these records should be kept in files (preferably locked) to which students do not have access.

In the vocational-technical department, you may find that folders already exist for some of your students who have taken previous courses (exploratory, introductory, or prerequisite) within the department. Having this information can be valuable as you plan and teach your classes. For example, you may be able to determine what content students have already been taught, experiences they have had in the laboratory, and how well each student achieved the objectives. You may also find a record of the job experiences each student has had.

Collecting Additional Data

Although much data on students' needs and interests will be readily available, directly or indirectly, in existing records, you may find that some information is either missing or in need of updating, verification, or explanation. If that is the case, techniques such as the following can help you acquire the needed information.

Observation

You can learn a good deal accut students' needs and interests through simple observation. For example, you can note their preferences during periods when they are free to choose which activities they pursue. Laboratory activities often give some indication of a student's occupational interests. A repeated desire by a student, fc example, to construct various

metal projects using the electric arc or oxyacetylene welder may suggest a strong interest, and possibly a high aptitude as well, for mechanical work and construction-type activities.

Standardized Tests

We said earlier that school records may contain standardized test scores (e.g., for general ability tests, aptitude tests, general interest surveys, vocational interest inventories). Such scores can give you insight into students' educational needs and general occupational interests. If these scores are missing or you think the information may need updating, you may want to make arrangements through the guidance and counseling office to have one or more of these standardized tests administered.

Three useful tests are the General Aptitude Test Battery (GATB), the Ohio Vocational Interest Survey (OVIS), and the Kuder Personal Preference Scale. The GATB is divided into separate tests that measure general learning ability (B), verbal ability (V), numerical aptitude (N), spatial aptitude (S), form perception (Q), motor coordination (K), finger dexterity (F), and manual dexterity (M). Standardized vocational interest surveys, such as the OVIS and Kuder, are designed to help students identify and understand their interests and preferences for particular activities. From these preferences, a diagnosis can be made of the occupations that most closely match their interests.1

Questionnaires and Checklists

Sometimes the students themselves are the best source of information on their needs and interests. For example, if you want to know how students spend their spare time or to check their perception of their needs and interests against those revealed in standardized tests, it makes sense simply to ask them. One way you can obtain such information is by administering simple questionnaires and checklists that you locate or develop yourself.

In a questionnaire, for example, you could ask students to respond to such questions as the following:

- What do you see yourself doing five years from now?
- What magazines do you read regularly?
- What is the name of the last book you read?
- What types of books do you most enjoy reading?
- What was you favorite subject in elementary (junior high, high) school?
- Why did you enroll in this course?

If, in answer to the first question, a student answers, "driving my Mercedes Benz to my job at the gas station," he/she may need help in planning more realistically (unless other information about the student tells you the Mercedes is a distinct possibility). If most of the class voluntarily reads the same magazine, this could give you some insight into the kinds of things that interest them. If a student's favorite subject is in an area totally unrelated to your program, you would probably want to explore further why the student is in your course, or why he/she did not choose a program related to the favorite course identified.

Samples 1 and 2 show types of ...cklists you can use to determine students' felt needs and interests. Sample 1 asks students to make a choice between two items or activities. Sample 2 was developed to get at needs related to the attitudes and practices important to success in the allied health occupations.

Discussions with Students and Others

Sometimes simply encouraging students to discuss their needs and interests can give you useful information not revealed in school records. This is especially true if some data you have obtained need further explanation. For example, if you want to find out whether a student has had any leadership responsibilities in the organizations listed, discussion with the student would be a good way to get that information.

To get to know your students better, you could talk about hobbies, what jobs they have held, what they like to do in their spare time, what kinds of books they enjoy reading. If possible, you could set aside time before and after school or class so students can come to talk with you or vork on projects. This less formal atmosphere is conducive to getting to know students' needs and interests.

Especially if you are teaching at the secondary level, some information can pest be obtained through interviews with students' parents, peers, or other staff members, such as other teachers, the guidance counselor, or the school nurse. Through such discussions, you might gain insight into how the student gets along with friends or others outside the school environment, or the reasons for low grades in certain subjects.

[

1

į

į

The need for an explanation of an item in an anecdotal record or help in identifying activities that have motivated a student might also prompt you to hold formal or informal discussions with persons other than the students themselves. In talking to a student's peers, you should of course be careful not to ask personal questions or to set up a situation in which the peer becomes an "informer."

To summarize, you need to gather information on students' needs and interests to help you in your instructional planning. Much information is usually available in school or college records. If necessary, you can arrange to have standardized tests administered, and you can use questionnaires and checklists to obtain additional information. Informal discussions with students, their peers, parents (at the secondary level), and other staff can also provide insights into students' needs and interests.

¹ Further information on the variety of standardized tests available and the information on students' needs and interests they can give, is available in Module F-1, Gather Student Data Using Formal Data-Collection **Techniques**

Seat belt is usually fastened when I drive. Seat belt is never fastened when I drive. Wipe up anything I spill immediately. Ignore anything I spill.	Call or see a physician when I don't feel welllgnore illnesses.

You may wish to arrange through your resource person to meet with an experienced teacher in your occupational specialty to discuss further the rationale and procedures for determining the needs and interests of students. Specifically, you could discuss (1) why it is important to have such data, (2) how he or she collects the data and organizes data in usable form, and (3) the uses to which he/she puts the data in planning units, lessons, and learning activities, and in selecting teaching techniques.

The following items check your comprehension of the material in the information sheet, Determining the Needs and Interests of Students, pp. 6-11. Each of the four items requires a short essay-type response. Please explain fully, but briefly, and make sure you respond to all parts of each item.

SELF-CHECK

1. Why should teachers be interested in collecting data about students' needs and interests?

2. After examining the students' cumulative records, you discover that there are no scores recorded for standardized tests, nor is there any evidence of previous employment. What steps could you take to secure this needed information?

3. After you have examined the information in the cumulative record, what informal methods could you employ to find out additional information about students' need and interests?

4. Based on your own experience and what you now know about determining students' needs and interests, do you thank the procedures you would use and the information you would seek to collect would differ if you were teaching at the postsecondary level rather than the secondary level? Explain.

| | |

ı

Compare your written responses to the self-check items with the model answers given below. Your responses need not exactly duplicate the model responses; however, you should have covered the same major points.

MODEL ANSWERS

- 1. Collecting data about students' needs and interests is necessary for instructional planning. For example, this information can help teachers plan lesson activities that will motivate students, reach them at their level of ability, or fill in gaps in their educational background. Students have individual needs that must be met in different ways. Without information on what your students need and what interests them, your goal of helping them achieve entry-level competence in their cosen occupations will be more difficult.
- Since there are no standardized test scores available, you could arrange for a meeting with guidance and counseling staff to discuss which tests should be administered and to make any necessary arrangements.
 - Information concerning students' past employment experiences may be available in the vocational-technical department or from the students themselves. This information would be vital in helping you understand the students' attitudes toward work and the type of work with which they have had the most experience.
- 3. In order to clarify, verify, or update information about students' needs and interests, informal meetings could be held with the students' family and also with the students themselves. Interviews could be arranged with students' former teachers. Questions may be asked of the students' peers. In using informal techniques, you could ask questions concerning the students' hobbies; how they spend their free time; their relationships with employers, former employers, peers, teachers, and parents; and how they earn their spending money.

- Checklists and questionnaires also could be constructed and administered to the students in situations where more formal data-gathering methods seem necessary. For example, if you were planning a unit on job safety and you wanted to get an overall picture of class attitudes toward safety, a well-constructed checklist or questionnaire might serve the purpose better than time-consuming and less-structured informal discussions.
- 4. Barically, the procedures used and the types of in mation collected with postsecondary (older, mature) students would be similar to those a ...e secondary level. However, the emphasis you placed on certain procedures and certain kinds of information would probably differ.

You would not, for example, expect to interview the parents of an older, married student with a full-time job. You might well, however, want to discuss this student's needs or interests with the student him/herself. In examining the postsecondary records of students, you would probably not look for anecdotal records, but you would expect to find more information on present and previous work experience, and you might find transcripts from other training institutions.

In other words, the procedures you used and the information you collected would reflect the fact that the needs and interests of postsecondary students are somewhat different from those of secondary students.

Level of Performance: Your written responses to the self-check items should have covered the same major points as the model answers. If you missed some points or have questions about any additional points you made, review the material in the information sheet, Determining the Needs and Interests of Students, pp. 6–11, or check with your resource person if necessary.

Learning Experience II

OVERVIEW

After completing the required reading, analyze the cumulative records of some nypothetical students to determine the needs and interests of those students.

You will be reading the information sheet, Analyzing Data Related to Students' Needs and Interests, pp. 18-23.

You will be reviewing the cumulative records of some hypothetical students, pp. 24–42, and analyzing these records to determine the students' needs and interests.

You will be evaluating your competency in analyzing cumulative records to determine students' needs and interests by comparing your completed analysis with the Model Analysis, pp. 43-44.

You may wish to discuss your analysis of the cumulative records with a group of peers.

No matter how much raw information you have about your students, it won't be of much value to you unless you are able to interpret it and extract its meaning. For information on some possible techniques for analyzing cumulative data on students' needs and interests (individually and as a group), read the following information sheet.

ANALYZING DATA RELATED TO STUDENTS' NEEDS AND INTERESTS

Human beings like to be regarded as unique individuals who have every possibility of making distinctive contributions. Whenever one is analyzing data about students' needs and interests, regard for personal values and aspirations must be continously maintained. Human beings do change—they grow and develop.

Thus, the true worth of any cumulative data can only be measured when the data have been accumulated **over a period of time**. This principle implies that you will be continually gathering data and updating your records during the time students are enrolled in your program.

In order to use these data for instructional planning, you will need to know what each **individual** student needs to succeed in your program and what interests each student. You also need to know if there are **common** needs and interests among the class members.

The following discussion will give you some suggestions for analyzing data. You may want to adopt some of the ideas and add some of your own, or you may choose to adopt the system of the school or college where you are employed or where you do your student teaching.

Analysis of Needs Data

You can think of needs in terms of the following categories—physical, social, emotional, and educational. Although you will be primarily interested in listing needs that are important in relation to your occupational specialty, you should not ignore other kinds of needs.

For example, if the occupation requires computational skills and a student is weak in this area, you would, c'course, record this information. But in addition, if the student has some physical handicap unrelated to his/her ability to perform the job, you would record this information, too, to help you meet his/her special needs in the classroom or laboratory.

You can record data for each student and for the class as a whole on forms you have developed for that purpose. However you record the data, the information should be in usable form, easy to find and refer to.

I

l

Samples 3 and 4 suggest some ways to collect and organize information on students' eeds; however, you may want to devise your own method of recording the information you collect. Sample 3 is designed for recording data on **individual** student needs. For Item 6 under social needs, for example, a teacher might give a *Poor* rating to a student who found it impossible to verbalize ideas and might note examples of this behavior, possible explanations for it, or steps to be taken to help the student in the "Comments" column. Sample 4 is designed for recording data on **group** needs. Such a form could be keyed to the items on the individual needs form.

Analysis of Interests Data

Student interests data may be analyzed in a slightly different manner. The use of a profile of interests is a good technique for analyzing this type of information. Sample 5—a line profile of the interests of an individual student—and sample 6—a bar graph of the interests of the class as a group—show how the results of the Ohio Vocational Interest Survey, "Occupational Plans" section, could be analyzed and illustrated.

In the line profile, only 12 of the 24 scale items are illustrated. As you analyze David Mendoza's individual profile, you can see that his highest interest levels are in mathematics, training, and machine work.

The bar graph shows how you can develop a profile for analyzing and illustrating group data on students' needs and interests. The same items from the Ohio Vocational Interest Survey are used. The first step is to calculate the average percentile for the group on each of the 24 scales (only 12 are shown) by adding the percentiles achieved by each student and dividing by the total number of students

In analyzing the data, you would note that the group appears quite interested in mathematics, in training, and in machine work. In addition, there is

a considerable lack of interest in some areas. Although lack of interest in some areas is quite normal, it may reflect some educational needs—perhaps the class lacks information about the role of management; perhaps they need to learn to appreciate how manual laborers contribute to societal goals.

This kind of analysis of cumulative data on students' needs and interests should help you in your instructional planning. If you were planning a unit on management, for example, you could relate the objectives or learning activities to areas that hold high interest for your students, or you could plan and carry out other motivational activities that might not be necessary if those students had expressed great interest in the subject.

Assume that you will be teaching an advanced keyboarding course to the group of students whose cumulative records follow.² Review these records, making mental notes about items of significance relating to the needs and interests of these students as a group.

After you have reviewed the six folders, analyze in writing the needs and interests of the class as revealed by the data given. Consider the students' physical, social, emotional, and educational needs, and their personal, school, and occupational interests.

The form or system you use for analyzing and recording the relevant information is up to you. The important consideration is that you identify those individual and group needs and interests that would be significant if you were teaching this class.

² These cumulative records were adapted from materials contained in the following simulation package The Glen Oaks Simulation (Columbus, OH The Center for Vocational Education, The Ohio State University)

Compare your completed written analysis of the cumulative records with the model analysis given below. Your response need not exactly duplicate the model response; however, you should have covered the same major points.

MODEL ANALYSIS

Needs

Physical: No information

Social: No information, except that four students have been involved in

group-related extracurricular activities, possibly indicating preference for and enjoyment of group activities. Sports-related activities may indicate

teamwork ability.

Emotional: No information. Fact that all students come from families in which both

come from families in which both parents work may have significance in terms of their independence or

maturity.

Educational: All students except Crystal plan to attend college or go on for further

education, and so did Crystal in the

7t: grade.

All students except Sheila have got ten excellent grades in previous typ-

ing classes.

Generally, their grades are very good in all subjects; Crystal's grades started to fall in the 11th grade.

All the students have high to average SAT scores, which indicates a potential for academic achievement at the college level. The grades for all of the students except Crystal are good. Crystal's grades seem to be dropping steadily. Her SAT scores and previous grades seem to indicate that she could be doing better. Her consistently good marks in art also indicate that she can work well.

Inte ests

Personal: No hobbies indicated, but four

stude: 's are active in sports or sport-

related activities.

School: Judging by good grades, good atten-

dance records, and extracurricular activities, this is a bright class that en-

joys school.

Occupational: All students except Crystal seem to

have definite occupational plans; each has a different vocational interest or

aspiration.

Five have part-time or summer work experience, but only two of these have experience related to their occupa-

tional goals.

The Kuder scores indicate that five of the six students have high mechanical interests. Three of the six have high interests in outdoor activities. Alexander's interest in outdoor and mechanical activities is relatively low, while his interest in social service, science, and computational activities

is high.

Jane, who plans to be a secretary, has a high interest in clerical, as well as art, activities. Sheila shares her in-

terest in art activities.

Additional Comments

Sheila does not have any previous typing courses. How did she get scheduled for advanced keyboarding? Mistake?

Need to find out **why** each student is taking this course; Jane wants to be a secretary, but what about the others?

Level of Performance: Your completed analysis should have covered the same major points as the model analysis. If you missed some points or have questions about any additional points you made, review the material in the information sheet, Analyzing Data Related to Students' Needs and Interests, pp. 18–23, or check with your resource person if necessary.

You may wish to meet with a group of peers, perhaps those who are also taking this module, to share and compare your analyses of the cumulative records of your "students."

44 46.

Learning Experience III

OVERVIEW

After examining the data in the cumulative folder of a hypothetical student, plan for obtaining additional information on the student's needs and interests.

You will be examining the cumulative folder of a hypothetical student, pp. 46–50, and planning for obtaining additional needed information on the student's needs and interests.

You may wish to construct a questionnaire or checklist designed to obtain needs and/or interests data from students.

You may wish to interview a student or peer concerning his/her interests.

You will be evaluating your competency in planning for obtaining additional data on a student's needs and interests by comparing your completed plan with the Model Plan, pp. 53–55.

Assume that you are teaching an advanced course in clothing and textiles for seniors. Prior to the beginning of the semester, you look through the cumulative folders of your students and begin making some notes about the needs and interests of your students to help you in your instructional planning.

One of your students is Lee Annette Barry. Read though her folder, which follows, making mental notes concerning items of significance.³ After you have reviewed Lee's folder, plan in writing for collecting the additional needs and interests data you think you would need to help you plan effective instruction for Lee.

In your plan, first note the **information that is already available** in Lee's cumulative folder concerning her needs and interests. Then, decide what **additional information you need** in these areas (information that is missing or needs updating, verification, or explanation). Finally, indicate the **sources** o. **techniques you would use** for collecting the needed data.

3 Lee's cumulative records were adapted from mater als contained in the following simulation package. The Glen Oaks Simulation (Columbus, OH. The Center for Vocational Education, The Ohio State University)

Anecdotal Records

Place Observed: Study Hall

Student's Name: Lee Annette Barry

Date: 4/3/86

Incident: Groups preparing to work on projects

Time: 1:30 p.m.

Walked in the room alone. Sat by herself. The two members of her group walked over and invited her to join them to prepare for the report. She snapped at them and said she wanted to work alone. Later on she began to work on her part of the report.

Place Observed: Chemistry Class Student's Name: Lee Annette Barry

Date: Basically the entire six weeks (2/87)

While class is in progress, she never pays attention. Always looking through some type of fashion magazine. Gets very angry when asked to put the magazine away and pay attention.

Place Observed: Home Management Class

Name: Lee A. Barry

Date: 9/87

Incident: Group preparing the food

Washed several utensils; dried them. Chatted with girl on left and boys on right. Smiled several times. Commented about the salad. "At least our fruit has not turned brown." Laughed when one of the boys, who was cutting an apple, dropped it on the floor. She said, "Pick it up and rinse it off and put it in the salad." Collected and stacked used knives and bowl. Washed them; another girl wiped them. Moved aside to let a boy get water; smiled at him; suggested to the other girl that she "... put the lid on the sugar canister before it gets all wet ..." Picked towel from floor, folded it and hung it on towel rack.

Time: 2:15

At the sink, busy rinsing it with spray. Other group members had walked away. Said: "Come on, you kids, help or we won't get done on time." (No response from group.) Wrung out dishcloth, left it on sink; dried hands on paper cloth. Sat down. Noticed she had on an apron. Stood. Took it off and placed it in the closet.

Place Observed: School Cafeteria Student's Name: Lee A. Barry

Date: 6/88

Finally ate a meal with a group of girls and contributed to the conversation. Finished eating before the rest of the group. Offered her remaining cookies to the group. No one wanted them, so she said, "I'll take them and eat them in Algebra class." Put them in her purse.

You may wish to try your hand at developing a questionnaire or checklist that you could use to obtain needs and/or interests data from students. If you want to see some samples, you could (1) review samples 1 and 2, p. 11; (2) check with your resource person for references containing actual or sample instruments; or (3) locate an experienced teacher and ask to review devices he/she has used with students. You might want to assume that you are developing the questionnaire or checklist for use with Lee Annette Barry and gear the items to this student.

To gain practice in discussing interests with students, you may wish to interview an actual student, or peer, concerning his/her hobbies, extracurricular activities, favorite types of books or magazines, etc.

NOTES	
	

Compare your vitten plan with the model plan given below. Your plan need not exactly duplica 9 the model; however, you should have covered the same major points.

MODEL PLAN

Student's Name: Barry, Lee Annette

Date: September 1988

Information Available in Cumulative Folder

Neeás

Physical:

No information given

Social:

Anecdotal records seem to indicate the Lee prefers to work alone except in activities dealing with home economic, and the she does not participate regularly in class activities. FTA is the only extracurricular .. ted. No indication of whether she had any leadership responsibilities in FTA.

Emotional:

Arecdotal records seem to indicate that Lee has a temper that she sometimes finds hard to control. Evidence is conflicting on whether she needs to be a "loner" or doesn't know how to work with others or has some other problem affecting her interpersonal relationships.

Educational:

At present Lee has no plans for further education, but ir. the 7th grade one was interested in attending college. No indication of what she aspires to be. Made failing marks in college preparatory cour is (algebra, German, chemistry, geometry, and English). Did do well in above subjects in 7th grade, but after 7th grade her course marks dropped except in home economics and related subjects. Her grade in textiles dropped from an A in the 9th grade to a C in the 10th grade. Counselor noted that in the 8th grade, Lee was having "increasing problems."

GATB scores indicate she's got good general potential and particularly good potential in motor and manual skills.

Interests

Personal:

No information except the one reference to her reading fashion magazines in class.

School:

Lee is taking college preparatory courses but does her best work in home economics subjects. No extracurricular activities listed except ria in the 9th grade. Anecdotal records indicate she's most involved and mictivated in nome economics classes.

Occupational: Kuder scores indicate a high interest in mechanical activities and computation, and a relatively high interest in science and persuasive activities. In the 7th grace she wanted to be an engineer. No work experience listed.

Additional Information Needed

Sources or Techniques for Collecting Data

Needs

Physical: Should get a medical history on her to sæ if there is some physical explanation for the sudden drop in grades and motivation after the 7th grade.

What is her environment like? Is there anything there that could be affecting her emotionally or physically in terms of her occasional bad temper and drop in grades?

Social: Does Lee prefer being alone? What kinds of relationships with others does she have outside of school?

Did she have any leadership role in FTA?

Emotional: What "increasing problems" was the counselor referring to? Any relationship to above questions?

Educational: Were Lee's "increasing problems" emotional or educational or both?

Does she still want to attend college?

She did well in Textiles I; grade dropped in Textiles II—why? What content has she mastered? Grades in home economics classes are consistently passing. What kinds of activities or learning experiences were provided there; what motivates Lee?

Other grades are poor after the 7th grade, yet GATB scores indicate good potential. What is Lee's ability to learn? What is her general and specific level of achievement in areas like reading and matin?

Interests

Personal: What are Lee's hobbies? How does she spend her free time? Does she read fashion magazines outside of school too?

School: Any extracurricular activities other than FTA?

What interests Lee most about her home economics classes?

Occupational: What does Lee want to do when she gets out of school? Does she want to be a teacher? Any interest in fashion design?

Has she had any work experiences, summer or part-time, especially any related to clothing and textiles?

Consult with school nurse; could also talk to Lee's parents.

Talk to parents. Visit her home.

Talk with Lee and her parents. Perhaps a checklist or quc^tionnaire, administered to the whole class, could get at the kinds of activities (individual or group) Lee would prefer.

Consult with FTA advisor.

Consult with counselor.

Counselor

Talk to Lee; perhaps a class questionnaire covering future plans.

Consult with former teachers; check records in vocational department.

Consult with teachers; check records in vocational department.

See counselor about administering an intelligence test and either a survey or diagnosite achievement test—no such tests are listed in her cumulative folder.

Talk to Lee; perhaps a class questionnaire. Mught ask her parents, too.

Talk to Lee.

Talk to Lee.

Consult counselor about administering OVIS; talk to Lee; class checklist or questionnaire.

Check records in vocational department; talk to Lee.

Level of Performance: Your completed plan should have covered the same major points as the model plan. If you missed some points or have questions about any additional points you made, review the material in the information sheet, Determining the Needs and Interests of Students, pp. 6–11, revise your plan accordingly, or check with your resource person if necessary.

NOTES				
	 <u> </u>		_	
	 			
	 		_	
	 	·—-		
	 			

Learning Experience IV

FINAL EXPERIENCE

Activity

in an actual teaching situation,* determine the needs and interests of students.

As you conduct your teaching activities, determine your students' needs and interests, individually and as a group. This will include—

- gathering information about your students' needs and interests from a variety of sources
- analyzing and recording the data in usable form for future use in instructional planning

NOTE: Due to the nature of this experience, you will need to have access to an actual teaching situation over an exter.ded period of time (e.g., four to six weeks).

As you complete each of the above activities, document your actions (in writing, on (ape, through a log) for assessment purposes.

If your situation makes it impossible for you to examine students' cumulative folders, arrange with your resource person for acceptable alternate activities.

When you have completed the above activities, arrange to have your resource person review your documentation.

Your total competency will be assessed by your resource person, using the Teacher Performance Assessment Form, p. 59.

Based upon the criteria specified in this assessment instrument, your resource person will determine whether you are competent in determining the needs and interests of students.

*For a definition of "actual teaching situation," see the inside back cover

NOTES	
	_
	

TEACHER PERFORMANCE ASSESSMENT FORM

Determine Needs and Interests of Students (B-1)

Directions: Indicate the level of the teacher's accomplishment by placing an X in the appropriate box under the LEVEL OF PERFORMANCE heading. If, because of special circumstances, a performance component was not applicable, or impossible to execute, place an X in the N/A box.

2.	analyzed these data in terms of the individual and group needs and interests of the students			
3.	arranged with guidance and counseling staff for the administration of standardized tests (e.g., Kuder, GATB), if necessary			
4.	arranged with guidance and counseling staff for help in interpreting standardized test scores, if necessary			
5.	determined what additional information was necessary, and obtained these data through:			
	a. the use of questionnaires and/or checklists administered to students			
	b. encouraging students to discuss their needs and interests			
	c. interviews with parents (at the secondary level)			
	d. consultation with other staff members (e.g., former teachers, counselor)			
6.	analyzed and interpreted the data in preparation for use in instructional planning			
7.	recorded, in usable form, all information obtained for each student and for the class as a whole			

Level of Performance: All items must receive N/A, GOOD, or EXCELLENT responses. If any item receives a NONE, POOR, or FAIR response, the teacher and resource person should meet to determine what additional activities the teacher needs to complete in order to reach competency in the weak area(s).

NOTES	
·	

ABOUT USING THE NATIONAL CENTER'S PBTE MODULES

Organization

Each module is designed to help you gain competency in a particular skill area considered important to teaching success. A module is made up of a series of learning experiences, some providing background information, some providing practice experiences, and others combining these two functions. Completing these experiences should enable you to achieve the terminal objective in the final learning experience. The final experience in each module always requires you to demonstrate the skill in an actual teaching situation when you are an intern, a student teacher, an inservice teacher, or occupational trainer.

Procedures

Modules are designed to allow you to individualize your teacher education program. You need to take only those modules covering skills that you do not already possess. Similarly, you need not complete any learning experience within a module if you already have the skill needed to complete it. Therefore, before taking any module, you should carefully review (1) the introduction, (2) the objectives listed on p. 4, (3) the overviews preceding each learning experience, and (4) the final experience. After comparing your present needs and competencies with the information you have read in these sections, you should we ready to make one of the following decisions:

- That you do not have the competencies indicated and should complete the entire module
- That you are competent in one or more or the enabling objectives leading to the final learning experience and thus, can omit those learning experiences
- That you are already competent in this area and are rearly to complete the final learning experience in order to "test out"
- That the module is inappropriate to your needs at this time

When you are ready to complete the final learning experience and have access to an actual teaching situation, make the necessary arrangements with your resource person. If you do not complete the final experience successfully, meet with your resource person and arrange to (1) repeat the experience or (2) complete (or review) previous sections of the module or other related activities suggested by your resource person before attempting to repeat the final experience.

Options for recycling are also available in each of the learning experiences preceding the final experience. Any time you do r it meet the minimum level of performance required to meet an objective, you and your resource person may meet to select activities to help you reach competency. This could involve (1) completing parts of the module previously skipped, (2) repeating activities, (3) reading supplementary resources or completing additional activities suggested by the resource person, (4) designing your own learning experience, or (5) completing some other activity suggested by you or your resource person.

Terminology

Actual Teaching Situation: A situation in which you are actually working with and responsible for teaching secondary or postsecondary vocational students or other occupational trainees. An intern, a student teacher, an inservice teacher, or other occupational trainer would be functioning in an actual teaching situation. If you do not have access to an actual teaching situation when you are taking the module, you can complete the module up to the final learning experience. You would then complete the final learning experience later (i.e., when you have access to an actual teaching situation).

Alternate Activity or Feedback: An item that may substitute for required items that, due to special circumstances, you are unable to complete.

Occupational Specialty: A specific area of preparation within a vocational service area (e.g., the service ε rea Trade and Industria! Education includes occupational specialties such as automobile mechanics, welding, and electricity.

Optional Activity or Feedback: An item that is not required but that is designed to **supplement** and enrich the required items in a learning experience.

Resource Person: The person in charge of your educationa program (e.g., the professor, instructor, administrator, instructional supervisor, cooperating/supervising/class-room teacher, or training supervisor who is guiding you in completing this module).

Student: The person who is receiving occupational instruction in a secondary, postsecondary, or other training program.

Vocational Service Area: A major vocational field: agricultural education, business and office education, marketing and distributive education, health occupations education, home economics education, industrial arts education, technical education, or trade and industrial education.

You or the Teacher/Instructor: The person who is completing the module.

Levels of Performance for Final Assessment

N/A: The criterion was not met because it was not applicable to the situation.

None: No a Lempt was made to meet the criterion, although it was relevant.

Poor: The teacher is unable to perform this skill or has only very limited ability to perform it.

Fair: The teacher is unable to perform this skill in an acceptable manner but has **some ability** to perform it.

Good: The teacher is able to perform this skill in an effective manner.

Excellent: The teacher is able to perform this skill in a very effective manner.
