ABSTRACT

A survey was conducted to examine staffing, budgets, and collection size at the libraries of Florida's 28 community colleges. Though the survey achieved a 100% response rate, not every college responded to all questions. Inconsistencies in the ways in which and the periods for which data were collected made comparisons difficult. These limitations not withstanding, findings included the following: (1) enrollment ranged from 302 at Florida Keys Community College to 34,365 at Miami-Dade Community College (MDCC); (2) MDCC reported a 99-member library staff, including 35 librarians; (3) book budgets ranged from $9,584 at Lake City Community College to $128,580 at Pensacola Junior College with three colleges reporting book budgets of over $100,000; (4) book holdings ranged from 6,500 at Daytona Beach Community College to 340,283 for all MDCC campuses; (5) the number of periodical subscriptions ranged from 165 at North Florida Junior College to 2,343 at MDCC; (6) Edison Community College seemed to have the most library resources of any single-campus college; and (7) though data were not standardized, 11 of the college libraries had below 11.4 books in their collection per enrolled student. A 12-item bibliography and appendixes detailing survey responses are provided. (AJL)

COMMUNITY COLLEGES IN FLORIDA:

A COMPARISON OF LIBRARY RESOURCES

University of North Florida

August 1988

Community Colleges in Florida:

A Comparison of Library Resources

Diane W. Kazlauskas

> More than almost any other element of the institution, Learning Resources Programs express the educational philosophy of the institution they serve (ALA, 1982a).

Introduction

Florida has twenty-eight public community colleges. Each one has at least one learning resources center or library. Library resources fall into three major catagories: staff (Table 1), budget (Table 2), and collection size (Table 3). This paper compares data in these areas for each of the community colleges in Florida. For this study, the term library will be used synonymously with learning resource(s) center, and the term community college will be used synonymously with junior college and two-year college.

Standards and Guidelines

The American Library Association (ALA) issued Standards for Junior College Libraries in 1960. These Standards were revised as Guidelines for Two-Year College Learning Resources Programs in 1972 and 1982 (Person, 1985, Veit, 1975). New guidelines are now in the planning stages (ALA, personal communication, June 8, 1988). Several state library associations have also issued standards or guidelines for community college libraries (Veit, 1975). The Florida Library Association has not (B. Storck, personal communication, June 13, 1988).

-1-

The 1960 Standards made specific recommendations for libraries in the areas of staff, budget, and book collection size. The Standards stated that each community college library serving up to 500 fulltime equivalent students should have at least two professional librarians and one other staff member.

The 1960 budget standard for libraries set a minimum allocation of one percent of the institution's educational and general budget. On book collection size, the Standards recommended that a community college with up to 1,000 students have a minimum of 20,000 books after duplicate titles and textbooks had een eliminated. The Standards also gave a formula for collection development which stated that "the bookstock should be enlarged by 5,000 volumes for every 500 students (fulltime equivalent) beyond 1,000" (ALA, 1960).

In 1972, Guidelines for Two-Year College Learning Resources Programs replaced the Standards. Madison Mosley, library director at South Florida Community College, lamented the abandonment of standards in his 1984 study of small community college libraries. He stated that library administrators need standards to measure their collections and to support their funding requests (Mosley, 1984).

The 1982 edition of the Guidelines differed little from the 1972 edition. Neither edition of the Guidelines was as specific as the 1960 Standards. Each edition acknowledged that the diversity which had developed in community colleges made it unwise to quantify library materials or services. The 1982

Guidelines and 1972 Guidelines both stated:

> This document is designed to provide criteria for
> information, self-study, and planning, not to establish
> minimal (or accreditation) standards. Application of
> the criteria should be governed by the purposes and
> objectives of each college. Since they represent
> recommended practices, any variance procedures should be
> supported by cogent reasons directly related to
> institutional objectives (ALA, 1982a, ALA, 1982b, ALA
> 1972).

Methodology

The figures in this study came from the American Library

Directory, a comprehensive list of libraries in the United States

and Canada.   This writer developed a file in PCFILE, input the

data, and sorted the file into various catagories.   The resulting

lists constitute the appendices.

<div style="text-align:center">

COMMUNITY COLLEGES IN FLORIDA RANKED BY:

</div>

    Appendix 1: Enrollment

              5: Income
              6: Book Budget
              7: Periodical Budget
              8: Audiovisual Budget
              9: Book Collection
             10: Periodical Subscriptions

All of the tables in this report are original compilations.

There were several problems in compiling the data from the

American Library Directory. First, some libraries reported

different fiscal years' figures. Second, not all libraries filed

complete reports. The main problem, however, involved community

colleges in Florida that have more than one campus.

As stated earlier, there are twenty-eight community colleges

<div style="text-align:right">-3-</div>

in Florida. Ten of these have more than one campus:

> Brevard
> Broward
> Florida Community College
> Hillsborough
> Miami-Dade
> Palm Beach
> Pasco-Hernando
> Pensacola
> St. Petersburg
> St. Johns River

For this study, the resources of all of a community college's libraries were totaled to get a cumulative figure. Initial attempts to list each campus library in this report proved unsatisfactory because the libraries did not report individual campus libraries uniformly.

The figures for staff include the number of professional librarians. A professional librarian is an individual who has masters degree in library and information science and occupies faculty level position. Staff also includes para-professionals, clerks, student workers, and an undefined group called others. The total number of staff members does not always equal the sum of the other figures. There could be several possible reasons for this: some positions are counted but unfilled; some positions are split and occupied by more than one person; and some libraries count student workers in the total.

This study reports only the total salary figure. Some libraries detailed the allocation of salary figures to professionals, para-professionals, clerks, and students. Others did not. Salaries were not generally included in either the income figure or the expense figure, however, here again,

-4-

reporting was not uniform.

Budgets are equally elusive. Budget figures in the tables include the income or total budget for the library. Some entries in the American Library Directory included salary figures, some did not. Expenses refer to operational expenses such as electricity, postage, and office supplies. Like the income figure, this figure is not well-defined. Figures for purchase of books, periodical subscriptions, and audiovisual materials are probably the most reliable. Figures for the community colleges' educational and general budgets, referred to in the 1960 Standards, were not available in the American Library Directory.

For collection statistics, this study considered book volumes, periodical subscriptions, and three examples of audiovisual material (records, 16mm films, and slides). If the figures for a library contained only book titles, that figure (generally lower than the volume count) was used. Also, the figure for total audiovisual holdings of a library was quoted if available. The book volume figures are probably the most valid figures for ranking libraries (Association of Research Libraries, 1988).

Findings

The library at St. Petersburg Junior College is the oldest library in the Florida Community College System. The newest are the libraries of St. Johns River Community College. These libraries are located in Orange Park and St. Augustine, and, although they are listed in the American Library Directory, they

-5-

are not yet fully operational (D.M. Jones, personal communication, June 5, 1988). Seventeen of the community college libraries in Florida were established in the 1960's.

Enrollment at the community colleges ranges from 302 at Florida Keys to 34,365 at Miami-Dade. The listings for three of the community colleges did not include enrollment statistics. Indian River reported the smallest number of faculty members and Miami-Dade the greatest. Six community colleges did not report in this area.

In library staff size, Miami-Dade led in all areas, reporting a total library staff of ninety-nine, including thirty-five librarians. Florida Keys listed only one librarian and Lake City two, which is below the 1960 Standard. Several community colleges did give figures for staff. In an interview on May 25, 1988, Dr. Judith Johnson, Dean of Learning Resources at Florida Community College at Jacksonville, noted that that school employed so many parttime people that definitive figures on the number of librarians or other staff members changed daily (J.J. Johnson, personal communication, May 25, 1988).

In the area of library budgets, only two schools did not list total salary figures. They were Daytona Beach and Miami-Dade. The listing in the American Library Directory for Daytona Beach was the least complete. The writer has no idea why Miami-Dade's listing did not include this figure. Also, the salary figure of $250,208.00 for the seven staff members at Indian River is presumably incorrect! The figures for library income and

expenses are so vague that they are virtually meaningless.

Book budgets range from $9,584.00 at Lake City to
$128,580.00 at Pensacola. Three libraries (Florida Community
College at Jacksonville, Miami-Dade, and Pensacola) listed book
budgets of over $100,000.00 while five gave no figure.
Predictably, Miami-Dade had the highest periodical budget and the
only one over $100,000.00. Next highest was Edison at
$79,585.00. This unusually high figure probably reflects
Edison's unique relationship with the University of South
Florida. USF established a branch campus adjacent to Edison in
the early 1980's. The library at Edison, established in 1962,
has served both the community college and the university since
1982. The third highest periodicals budget was Pensacola's at
$59,520.00. Audiovisual budgets ranged from $175.00 at Chipola
to $94,309.00 at Palm Beach. Seven schools did not report an
audiovisual budget, however, $16,897.00 was the average figure
for those that did.

Perhaps the best measure of a library is simply the number
of books it has. The range in community colleges in Florida was
6,500 at Daytona Beach to 340,283 for all of the campuses of
Miami-Dade. Based on the other figures listed in the American
Library Directory for Daytona Beach and the figures for the other
Florida community colleges, the writer presumes that the Daytona
Beach figure for book holdings is incorrect. This makes Lake
City's figure of 24,294 books the low end of the range.

Ranked by number of periodical subscriptions, Pensacola and

Miami-Dade are again at the high end of the range. North
Florida, Florida Keys, Chipola, and Lake City are at the low end.
The range for periodical subscriptions is 165 to 2,343 with no
report from Florida Community College at Jacksonville. The data
on size of audiovisual collections was too irregular to be
informative.

Summary and Conclusions

The twenty-eight community college libraries in Florida vary
in size by any measurement. In quantifying library resources,
Miami-Dade generally ranks highest. The other community colleges
with more than one library follow. Edison appears to have the
most library resources of a single-campus school, however, it is
subsidized by the University of South Florida. Florida Keys and
Lake City have the least in library resources, and these
community colleges might not measure up to standards if they were
reinstated.

There are no startling conclusions about libraries at
community colleges in Florida to be drawn from the data presented
here. One hesitates to apply the 1960 Standards to community
colleges that did not exist when the standards were written.

In 1975, the average library holdings per student in Florida
community colleges was 11.4 (Cohen, 1982). If the term library
holdings actually referred to book volume count, eleven community
colleges in Florida were below average in this area, including
ten out of the twelve community colleges with the highest
enrollments. Lake City was the eleventh community college with

-8-

fewer than 11.4 books per student.

The conclusions that do surface from this study involve the collection of data. Conclusion one is that most libraries could refine their procedures for collecting library statistics. Conclusion two is that libraries need to standardize the scope and definitions of data that they do collect. Conclusion three is that libraries have become so diverse that standardization of data is probably impossible. As shown above, a simple term like library holdings is difficult to define in a modern library. This makes conclusions one and two irrelevant.

The third conclusion also applies to community colleges. The community college has become an incredibly diverse institution. Defining a simple term like number of students or enrollment is difficult in an institution that thrives on parttime people who enroll irregularly. When one combines the two, figures like library holdings per student become an enigma.
