ABSTRACT

Mile will be with the same of

The 1987-88 Home-School-Community Agents (HSCA) Project of the Columbus (Ohio) Public Schools met its goal of improving the attitudes of 50 percent of the disruptive students enrolled in the project toward teachers, education, and school behavior. Nineteen HSCAs served in 8 high schools and 11 middle schools. Each HSCA worked on an in-depth basis with approximately 60 pupils who had been identified as disruptive. The HSCA also served as a home-school-community liaison to promote understanding and to assist pupils in their adjustment to the school environment. Each HSCA designated 20 pupils to participate in the evaluation. Data were collected using the following instruments: (1) the Demos D Scale, measuring pupil attitudes and the probability of dropping out; (2) the Pupil Entry Information Sheet, individual pupil data on those elements obstructing pupil achievement; (3) the Pupil Consus Form, pupil information and HSCA's ratings of pupil progress; (4) the Pupil Questionnaire, pupil perceptions of HSCA activities; (5) the Professional Staff Survey, school staff perceptions of the role of the HSCA; and (6) the HSCA Log Information, documenting HSCA activities. Statistical data are included on 16 tables. The appendices include dropout probabilities by grade, and copies of nstruments used in the evaluation. (FMW)

FINAL EVALUATION REPORT HOME SCHOOL AND ADULT INSTRUCTION COMPONENT HOME-SCHOOL-COMMUNITY AGENTS PROJECT 1987-88

ABSTRACT

<u>Program Description:</u> The primary purpose of the Home-School-Community Agent (HSCA) Project is to help disruptive pupils make a positive adjustment to those elements in their lives that interfere with their success in school. As defined by the HSCA project, "disruptive" refers to any action or behavior which interrupts the educational process in or out of school.

Time Interval: The HSCA project started on August 30, 1987 and continued through the 1987-88 school year. Implementation of the project was accomplished by 19 Home-School-Community Agents (HSCA) who served in 8 high schools and 11 middle schools.

Activities: Each HSCA worked on an in-depth basis with approximately 60 pupils who had been identified as disruptive. Each HSCA was asked to designate 20 of these pupils for inclusion in the evaluation sample. In addition to direct contact with project pupils, the HSCA served as a home-school-community liaison to promote understanding and to assist pupils in their adjustment to the school environment.

Program Objective: Of the selected pupils served by the HSCA, 50% of the pupils will show a more positive attitude toward teachers, education, and school behavior and will demonstrate a positive adjustment to those elements of the pupils' lives which interfere with their success in school. The HSCA will serve as a liaison to the home, school, and community to promote understanding and provide assistance for the adjustment of pupils to the school environment.

Evaluation Design: The evaluation design for the HSCA Project called for the collection of data using the Demos D Scale (provides a measure of pupil attitudes and the probability of dropping out of school), Pupil Entry Information Sheet (provides individual pupil data on those elements obstructing pupil achievement), Pupil Census Form (provides pupil information and HSCA's ratings of pupil progress), Pupil Questionnaire (provides pupils' perceptions regarding the HSCA's activities), Professional Staff Survey (provides school staff perceptions regarding the role of the HSCA), and the HSCA Log Information (provides documentation of HSCA's activities).

Major Findings: Pretest-posttest Demos D Scales (DDS) were collected for 221 (58.2%) of the 380 pupils in the evaluation sample. Of the 221 pupils in the evaluation sample, 29 pipils (13.1%) had a lower probability of dropping out, and 20 pupils (9.0%) had a higher probability of dropping out at the end of the treatment period. Of these pupils 111 (50.2%) demonstrated some positive change in their attitude toward teachers, education, and school behavior. This met the project criterion of improvement in attitudes by 50% of project pupils.

Statistically significant improvement was indicated in grade 6 on the scale for influence by peers and parents, and in grade 8 on the scale for attitude toward education. A ross grade levels there was statistically significant improvement in both scales noted above and on the total score. Improvement in attitudes toward teachers was found in grades 8, 11, and 12. Improvement in attitudes toward education was found at all grade levels (6-12) and in the total across grades. Improvement regarding influence by peers or parents occurred in grades 6, 7, 8, 11 and 12, and in the total across grades. Improvement of attitudes toward school behavior occurred in grades 6, 8, 9, 11, and 12, and in the total average across grades. Improvements in terms of the total score occurred in all grades except grade 10, and occurred in the total across grades. According to the dropout probabilities provided by the test publisher, the pupils in the evaluation sample had, on the average, a 50% chance of dropping out before and after their involvement in the project.

A pupil may be referred to the HSCA program for one or more reasons. Approximately one-fifth of the students (20.3%) were referred for a single reason, and over one-fourth (27.1%) were referred for two reasons. Three or more reasons were given for referral for 52.6% of the pupils in the sample. Disruptiveness was the most frequently listed Referral Reason overall (45.5%), and also at middle school (47.3%) and at high school (43.1%). Poor grades ranked second as Referral Reason overall (37.4%), second at high school (34.4%), and the third at middle school level (39.5%). Peer conflict ranked third in the overall program (36.6%) and second in middle school (41.8%). In high school, two Referral Reasons tied for third rank at (31.9%): teacher conflict and attendance problem.

The HSCAs indicated that 72.4% of the evaluation sample showed evidence of improvement in relation to their original referral reasons, that 66.3% showed academic improvement, and that 75.5% improved socially. Pupils reported that they were getting along better with their teachers (77.0%), families (44.0%), and friends (42.3%) since talking with the HSCA. Of the administrators and teachers who responded to the Professional Staff Survey, 78.3% reported improvement among the pupils they had referred to the HSCA for assistance.

Analysis of the HSCA Log Sheet indicated that the average HSCA's week included 33.8 contacts involving individual or group guidance for 9.9 hours; 29.8 liaison activities involving parents, school personnel, and/or community agencies; and 4.8 hours served in various school support activities. Analysis of the Professional Staff Survey indicated that 96.9% of the respondents viewed the HSCA role of home-school-community liaison to be important.

The data collected for the Home-School-Community Agent Project indicated that the project was successful in helping disruptive pupils make some positive adjustment to those elements in their lives that interfere with their success in school. The project met its stated objectives and was considered valuable by pupils, HSCAs, and professional staff members involved in the project. It is recommended that the project be continued in the 1988-89 school year.

Ohio Disadvantaged Pupil Program Fund

FINAL EVALUATION REPORT HOME SCHOOL AND ADULT INSTRUCTION COMPONENT HOME-SCHOOL-COMMUNITY AGENTS PROJECT

July 1988

Program Description

The Home-School-Community Agents project has been operating in the Columbus Public Schools since the 1968-69 school year. The overall goal is to help disruptive pupils make a positive adjustment to those elements in their lives that interfere with their success in school. As defined by the HSCA project, "disruptive" refers to any action or behavior which interrupts the educational process of the pupil in or out of the school.

To reach the 1987-88 project goal, 19 Home-School-Community Agents (HSCA) served 8 high schools and 11 middle schools. The schools are listed below:

| High Schools | Middle Scho | <u>ols</u> |
|-----------------|-------------|------------|
| Centennial | Barrett | Medina |
| Briggs | Beery | Mohawk |
| Brookhaven | Crestview | Starling |
| East | Eastmoor | Wedgewood |
| Linden McKinley | Everett | Westmoor |
| South | Indianola | |
| West | | |
| Whetstone | | |

Each HSCA worked on an in-depth basis with approximately 60 pupils who had been identified as disruptive. Each HSCA was asked to designate 20 of these pupils for inclusion in the evaluation sample. In addition to direct contact with project pupils, the HSCA served as a home-school-community liaison to promote understanding and to assist pupils in their adjustment to the school environment.

Evaluation Objectives

Objective 1.0 Of the selected pupils who are served by the HSCA for the treatment period, 50% of the pupils will show a more positive attitude toward teachers, education, and school behavior.

Objective 2.0 At the culmination of the agent-pupil sessions, 50% of the selected pupils will demonstrate a positive adjustment to those elements of the pupils lives which interfere with their success in school.

- Criterion 2.1 Identification of "disruptive" elements and/or pupil concern which appear to be obstructing pupil achievement.
- Criterion 2.2 Evidence of positive adjustment of at least 50% of selected pupils.
- Objective 3.0 To serve as a home-school-community lisison to promote understanding and to provide assistance for the adjustment of pupils to the school environment.
 - Criterion 3.1 80% of the pupils served will perceive that the HSCA promoted understanding and provided assistance for the adjustment to the school environment.
 - Criterion 3.2 80% of the professional staff who referred pupils to the HSCA will perceive that the HSCA promoted understanding and provided assistance to pupils to the school environment.

Objective 4.0 To provide at least two inservice sessions to program personnel such that at least 80% of the inservice participants will rate each session as valuable in providing information that will assist them in carrying out their program responsibilities.

Evaluation Design

The evaluation design for the HSCA Project called for the collection of data in seven areas. Except for the Demos D Scale a copy of each instrument used in the evaluation is found in Appendix B.

1. Pupil Attitude Information

The Demos D Scale (DDS; Demos, 1970) provides a measure of pupil attitudes and the probability of dropping out of school. The pretest was given during the week of October 19-23, 1987 and the posttest was given in the period of April 11-22, 1988.

The DDS is composed of 29 items that yield four Basic Area Scores and a Total Score. Pupils are asked to rate each item on a 5-point scale that, except for one item, ranges from "nearly always" to "nearly never". Higher scores indicate a poorer attitude and a higher probability of dropping out of school. The four Basic Area Scores and Total Score are sa follows:

- <u>T (Teachers)</u>: Deals with attitudes toward teachers, counselors, and administrators. This area is comprised of 10 items with scores ranging from 10-50.
- <u>E (Education)</u>: Deals with attitudes toward education, training, and college. This area is comprised of nine items with scores ranging from 9-45.

<u>P (Peers):</u> Deals with attitudes toward peers and parents. This area is comprised of five items with scores ranging from 5-25.

S (School): Deals with attitudes toward school behavior. This area is comprised of five items with scores ranging from 5-25.

Total Score: The text publisher indicates that, based on the results of clinical experience, this is the best predictor of dropping out of school. Scores range from 29-145.

The test publisher cites the six uses for the DDS. First, it provides an objective method for obtaining expressions of attitudes related to dropping out of school. The DDS is of special help in working with junior and senior high school students. Second, it identifies students with strongly negative attitudes toward teachers and school, so preventive or corrective work can take place while students still are in school. Third, the instrument can make it possible to alert parents of children who indicate that they may drop out of school. Fourth, data can be provided about students to facilitate the counseling or psychotherapy of problem children. Fifth, data can be used to structure or develop school programs for identifying and working with potential dropouts so schools can be of help in reducing dropouts. Sixth, the instrument can provide a research approach in areas such as dropping out of school, adjusting to school, attitude formation, effective learning, etc.

2. Pupil Entry Information

The Pupil Entry Information Sheet provided individual pupil data on those elements obstructing pupil achievemenc which formed the basis for assigning pupils to the project. It also identified the person referring the pupil to the project. It was completed by the HSCAs and collected in October, 1987.

3. Pupil Census Information

HSCA's completed a Pupil Census Form for each pupil in the evaluation sample. These forms were collected in April, 1988. Pupil Cenaus Forms provided individual data on nine items: pupil involvement with the court, number of months in the project, number of contacts with the pupil, number of in-school conferences with the pupil, number of home visits made regarding the pupil, pupil referral to a community agency, and assessment of the pupils' adjustment in three areas: academic improvement, social progress, and final outcome regarding original referral reasons.

4. Pupil Questionnaire Information

The Pupil Questionnaire was used to survey pupils in the evaluation sample to determine their perceptions of the HSCA's role in providing adjustment to the home-school-community environment, and for evidence of pupils' adjustment to school. The instrument was administered in February, 1988.

4

5. Professional Staff Survey Information

The Professional Staff Survey was designed to determine perceptions of school professional staff regarding the HSCA role as a liaison between the school and the home and community. It was administered in Pebruary, 1988, to those members of school professional staffs who had referred pupils for inclusion in the HSCA Project, as determined from the Pupil Entry Information Sheet.

6. HSCA Log Information

The purpose of the HSCA Weekly Log Sheet was to provide documentation of a Home-School-Community Agent's activities in a selected week. The instrument was completed twice by each HSCA during the period of January 18 - March 25, 1988. Specific weeks to be logged were assigned randomly.

7. Inservice Evaluation Information

The General Inservice Evaluation Form was used to document the number of inservice meetings held and obtain the ratings of HSCAs regarding the value of inservice that was provided. Ratings were obtained in the following areas: how worthwhile the meeting was, usefulness of the information presented, time available to ask questions, and how adequately questions were answered. The rating scale used was (1) Strongly Disagree, (2) Disagree, (3) Undecided, (4) Agree, (5) Strongly Agree. Dates and topics of HSCA inservice meetings were as follows:

| Date | Topic |
|------|-------|
| 2000 | TOPIC |

September 11, 1987 Orientation for the 1987-88 School Year

October 15, 1987 Youth Gangs

March 29, 1988 Child Abuse and Neglect

June 7, 1988 End-of-Year Wrap-up

Inservice evaluation forms were completed for all the above meetings.

Major Findings

The evaluation sample consisted of 380 pupils who were randomly selected from the 1,140 pupils served by the project. The grade and sex of sample pupils is presented in Table 1. The sample was comprised of 129 girls and 251 boys.

Table 1

Grade and Sex of Pupils in the Evaluation Sample

| | Pupils | | |
|-------|--------|-------|------|
| Grade | Served | Girls | Boys |
| 6 . | 74 | 25 | 49 |
| 7 | 64 | 22 | 42 |
| 8 | 82 | 30 | 52 |
| 9 | 88 | 28 | 60 |
| 10 | 43 | 13 | 30 |
| 11 | 20 | 7 | 13 |
| 12 | 9 | 4 | 5 |
| Total | 380 | 129 | 251 |

Objective 1.0 required that 50% of the group of selected pupils who were served by the HSCA for the entire treatment period would show improvement in their attitude toward the school environment. The pupils were pretested during the period of October 19-23, 1987 and posttested during the period of April 11-22, 1988 with the Demos D Scale (DDS). The DDS yields four Basic Area Scores and a Total Score which provide data to be compared with the standardization group. The interpretation of DDS scores is as follows: the higher the score the greater the probability of dropping out of school. If it can be assumed that pupils with a high probability of dropping out of school have a poor attitude about teachers and school behavior, a lower posttest score on the DDS should be one indication of a "positive" change in attitude.

Matched pretest-posttest DDS scores were collected for 221 (58.2%) of the 380 pupils in the evaluation sample. Of these pupils 111 (50.2%) demonstrated a positive change in their attitude toward teachers, education, and school behavior. Thus the Objective (1.0) of 50% was attained.

Table 2 contains descriptive data regarding the pretest-posttest DDS Basic Area Scores and Total Score reported by grade level. Improvement in attitudes toward teachers was found in grades 8, 11, and 12. Improvement in attitude toward education was found at all grade levels (6-12), and in the total average across grades. Improvement in influence by peers and parents occurred in grades 6, 7, 8, 11, and 12, and in the total average across grades. Improvement in attitudes toward school behavior occurred in grades 6, 8, 9, 11, and 12 and in the average across grades. Improvement in terms of total score occurred in all grades except grade 10, and in the total average across The only subtest that did not show an average improvement across grades was attitudes toward teachers. Application of t-tests indicated significant improvement in one subtest at grade 6 (influence by peers and parents, significant at the .05 level), and in one subtest at grade 8 (attitudes toward education, significant at the .05 level). The score across grade levels was significant at the .01 level in two subtests, attitudes toward education and influence by peers and parents. The total score across grade levels was significant at the .05 level. According to the dropout probabilities provided by the test publisher, the pupils in the evaluation sample had, on average, a 50% chance of dropping out before and after their involvement in the project. The probabilities are expressed as the chance of

| 10 | 26 | Pretest Mean | 24.6 | 16.3 | 10.0 | 10.1 | 61.1 |
| | | Posttest Mean | 25.7 | 15.6 | 10.0 | 10.7 | 62.0 |
| | | Change in Mean | 1.1 | - 0.7 | 0.0 | 0.5 | 0.9 |
| 11 | 11 | Pretest Mean | 26.3 | 18.5 | 10.6 | 11.5 | 67.0 |
| | | Posttest Mean | 25.7 | 16.5 | 9.5 | 10.9 | 62.6 |
| | | Change in Mean | - 0.5 | - 2.1 | - 1.1 | - 0.6 | - 4.4 |
| 12 | 7 | Pretest Mean | 22.7 | 14.7 | 10.1 | 9.3 | 56.9 |
| | | Posttest Mean | 20.4 | 13.1 | 8.7 | 8.6 | 50.9 |
| | | Change in Mean | - 2.3 | - 1.6 | - 1.4 | - 0.7 | - 6.0 |
| Total | 221 | Pretest Mean | 25.7 | 17.5 | 11.4 | 11.2 | 65.8 |
| | | Posttest Mean | 25.7 | 16.0 | 10.8 | 11.0 | 63.6 |
| | | Change in Mean | 0.1 | - 1.4 | - 0.6 | - 0.2 | - 2.2 |

Note. A negative change indicates improvement.

In some cases, the "Change in Mean" may appear to be a tenth of a point off from the apparent difference between pretest and posttest means. This is due to rounding error. All mean scores (pretest, posttest and change) were computed to four decimal places, but are rounded to the nearest tenth in this table.

Figure 1. Crosstabulation of the Number and Percent of Pupils in Pretest-Posttest
Dropout Probability Categories (Chance of Dropping Out Per 100 Pupils)
Based on Demos D Total Score Across Grades

dropping out per 100 pupils. The data in Figure 1 show that of the 221 pupils in the Demos D evaluation sample, 29 pupils (13.1%) had a lower probability of dropping out, and 20 pupils (9.0%) had a higher probability of dropping out at the end of the treatment period. This same information is reported by grade level in Appendix A.

Objective 2.0 requires as a final outcome that 50% of the selected pupils demonstrate a positive adjustment to those elements in their lives which interfere with their success in school. Criterion 2.1 requires the identification of those elements obstructing pupil achievement. The Pupil Entry Information Sheet is used to collect data on Criterion 2.1. Criterion 2.2 requires evidence of positive adjustment of at least 50% of the selected pupils. Data for Criterion 2.2, as well as additional data, are collected using the Pupil Census Forms.

The Pupil Entry Information Sheet provided data on who referred pupils and why they were referred to the HSCA. Table 3 contains a ranking of the frequency and percent by school level of the reasons that pupils were referred. The frequencies and percents in this table are not additive, since a pupil could be referred for more than one reason.

Disruptiveness appeared most frequently as a Referral Reason in both middle school (47.3%) and high school (43.1%). Poor grades ranked second in the overall program (37.4%), second in high school (34.4%), and third in middle school (39.5%). Peer conflict ranked third in the overall program (36.6%) and second in middle school (41.8%). Teacher conflict ranked fourth in middle school (32.3%) and in the overall program (32.1%). In high school, teacher conflict and attendance problem tied for third and fourth rank, at 31.9%.

As has been indicated, a pupil may be referred to the HSCA program for one or wore of the reasons indicated in Table 3. In Table 4, the number of reasons for which individual students were referred is summarized. Approximately one-fifth of the students (20.3%) were referred for a single reason, and over one-fourth (27.1%) were referred for two reasons. Three or more referral reasons were given for over half (52.6%) of the pupils in the sample.

The first criterion for Objective 2.0 was met. As indicated from the data above, the Pupil Entry Information Sheet served to identify the problem areas appearing to obstruct the achievement of individual pupils. Data regarding positive adjustment to the problem areas, as well as additional data, were collected using the Pupil Census Forms.

| Total | 380 | 100.0 | |

The Pupil Census Forms provided individual data on pupil involvement with the court. Analysis of the Pupil Census Forms indicated that 130 (34.2%) of the 380 pupils in the sample had been involved with the court.

Table 5 presents the number of months pupils were served by the project. These data include any service received previous to the present school year. A majority of pupils in the evaluation sample (265) had been served by the project for 6 to 10 months. An additional 47 were served for 11 months or more. Thus, a considerable proportion of the pupils have been served by the project for one or more yours.

Table 5
Number of Months Pupils Were Served
by the HSCA Project

| Number of Months | Number of Pupils | Percent of Pupils | |
|---------------------|---------------------|----------------------|--|
| 1-5 | 68 | i7 . 9 | |
| 6-10 | 265 | 69.7 | |
| 11-15 | 21 | 5.5 | |
| 16-20 | 21 | 5.5 | |
| 21-25 | 4 | 1.1 | |
| More than 25 | 1 | 0.3 | |
| Total | 380 | 100.0 | |

HSCAs were asked to indicate the number of contacts made with each pupil. Analysis of this data indicates that 69.2% of the pupils in the evaluation sample were seen seven or more times. The number of pupils who were seen eleven or more times was 163, or 42.9%. Therefore a large portion of the HSCA's time is spent in conferences. HSCAs indicated that four or more in-school conferences were held regarding 71.1% of the pupils in the evaluation sample. In addition, four or more home visits were made involving 28.2% of the pupils. The data relating to pupil contacts is contained in Table 6. An additional type of contact HSCAs made on behalf of pupils was referral to community agencies. HSCAs indicated that they had made such referrals for 151 (39.7%) of their pupils.

Table 6
Frequency of HSCA Contacts, In-school Conferences,
and Home Visits with Each Pupil

| | Number of Contacts | | | | | | |
|---|--------------------|-----|-----|------|---------------|----------------|--|
| *** | None | 1-3 | 4-6 | 7-10 | ll or More | No Response | |
| Contacts with the pupil | 0 | 31 | 86 | 100 | 163 | 0 | |
| In school conferences held regarding this pupil | 13 | 97 | 110 | 78 | 82 | 0 | |
| Home visits made regarding this pupil | 57 | 216 | 75 | 23 | 9 | 0 | |

HSCAs also rated each pupil's final outcome in relation to academic improvement, progress in social adjustment, and the original reasons for the pupil's referral. The following change categories were used: Marked Improvement, Improvement, or No Improvement. The final outcome ratings of the 380 pupils in the evaluation sample are summarized in Table 7.

Table 7
Number and Percent of
Pupils by Improvement Category

| | Academic Improvement | | Soci Adjúst | | Referral Reasons | |
|--------------------|-------------------------|----------------------|---------------------|----------------------|---------------------|----------------------|
| Change | Number of Púpils | Percent of Pupils | Number of Pupils | Percent of Pupils | Number of Pupils | Percent of Pupils |
| Marked Improvement | 52 | 13.7 | 56 | 14.7 | 67 | 17.6 |
| Improvement | 200 | 52.6 | 231 | 60.8 | 208 | 54.7 |
| No Improvement | 128 | 33.7 | 93 | 24.5 | 105 | 27.6 |
| Not Answered | 0 | | 0 | 0.0 | 0 | 0.0 |
| Total | 380 . | 100.0 | 380 | 100.0 | 380 | 100.0 |

The second criterion of Objective 2.0 required evidence of positive adjustment by at least 50% of the selected pupils. Table 7 shows that 275 (72.4%) of the pupils in the sample were rated as having derived some benefit ("Improvement" or "Marked Improvement") from the project in relation to their original Referral Reasons. In addition, 252 (66.3%) were rated as having improved academically, and 287 pupils (75.5%) were rated as having improved in their social adjustment. Both criteria for Objective 2.0 (identification of problem areas, and improvement in the problem areas) were met. Thus, Objective 2.0 was achieved. The numbers and percents of pupils rated in the highest category, "Marked Improvement," were 67 (17.6%) for Referral Reasons, 52 (13.7%) for academic improvement, and 56 (14.7%) for social adjustment. These are encouraging results for pupils who are in the project because of disruptive influences.

Objective 3.0 was to serve as a home-school-community liaison to promote understanding and provide assistance for the adjustment of pupils to the school environment. It had two criteria. Criterion 3.1 required that 80% of the pupils served would perceive that the HSCA provided such understanding and assistance; it was assessed using the Pupil Questionnaire. Criterion 3.2, which required similar perceptions by 80% of professional staff members who referred pupils to the HSCA, was assessed using the Professional Staff Survey. A third instrument, the HSCA Log Sheet, documented the weekly activities performed by the HSCA in attempting to meet the needs and goals of the pupils.

The pupils were surveyed during February 1988 with the locally constructed Pupil Questionnaire. The Pupil Questionnaire was designed to determine student perceptions of the HSCA role in promoting adjustment in the home-school-community environment and to provide data regarding the student's adjustment to school.

Of the 260 Pupil Questionnaires that were distributed, 248 (95.4%) were returned. In the following analysis, all percents are based on the number of pupils returning the survey. The results of the survey are summarized in Tables 8-12.

Table 8

Activities to Help the Pupil
N=248

| Which of the ways was used by the Home- School-Community Agent to help you. | Percent Responding Yes |
|--|------------------------------|

N=248

| Since I talked to the Home-School-Community Agent, I am getting along better with | Percent Responding Yes |
|---|------------------------------|
| My teachers | 77.0% |
| My family | 44.0 |
| My friends | 42.3 |

When asked which activities HSCAs had performed in order to help them, pupils indicated the following: "Took time to discuss my problems with me" (81.0%); "Visited my home" (52.4%); "Arranged meeting with my teacher(s)" (47.2%); "Visited community agency on my behalf such as CMACAO, health center, or counseling agency" (16.5%) (see Table 8).

Data for survey items dealing with the promotion of understanding by the HSCA are presented in Table 9. When asked if it was a good idea to talk over their school-relate' problems with the HSCA, 92.7% of the pupils responded "yes". A large majority (91.5%) of the pupils also agreed that the HSCA was understanding to talk to. When the pupils were asked if they thought they understood their own problems better since talking with the HSCA, 78.2% indicated that this was the case. The average percent of positive responses to the three items concerning promotion of understanding was 87.5%.

The survey items in Table 10 indicate pupil perceptions of assistance (helpfulness) provided by the HSCA. The percent of pupils who perceived that the HSCA was helpful to them was 92.3%, and 94.4% of the pupils agreed that pupils with problems could get help from the HSCA.

Table 11 presents pupil's perceptions of their adjustment to school since their entry into the HSCA program. Improved classroom attendance was indicated by 67.3% of the pupils, and 72.6% of the pupils indicated improvement in keeping up with their assignments.

Additional evidence of pupil adjustment (to teachers, family, and friends) can be found in Table 12. Pupils indicated that, since talking to the Home-School-Community Agent, 77.0% were getting along better with their teachers, 44.0% were getting along better with their families, and 42.3% were getting along better with their friends.

Criterion 3.1 required that 80% of the pupils served would perceive the HSCA as promoting understanding and providing assistance for the adjustment to the school environment. The Pupil Questionnaire data cited above indicate that this criterion to objective 3.0 was attained. Well over 80% of the pupils perceived the HSCA as promoting understanding (see Table 9), and well over 80% also perceived the HSCA as providing assistance (see Table 10).

The professional staff members were surveyed in February 1988 with the locally constructed Professional Staff Survey. The Professional Staff Survey was designed to determine perceptions of school professional staff regarding the HSCA's role as a liaison between the school and the home and the community. The surveys were sent to those members of the school professional staffs who had referred pupils for inclusion in the HSCA program. A total of 172 Professional Staff Surveys were distributed. Of this number, 129 (75.0%) were returned.

Table 13 contains the percent of staff ratings on items regarding the value of HSCA services. In further analysis the strongly agree and agree categories were combined to determine whether Criterion 3.2 was

EVALSRVCS/P509/RPTFRSC88

| The services of the Home- School-Community Agent to the total instructional effort at your building are valuable. | 63.6% | 27.9% | 6.2% | 0.8% | 0.8% | 0.8% |
| The student(s) you referred to the Home-School-Community Agent showed some improvement. | 27.9% | 50.4% | 12.4% | 5.4% | 3.17 | 0.8% |
| The Home-School-Community Agent helps the disruptive student(s) make positive adjustment to the Following areas: | | | | | | |
| The school | 46.5% | 38.8% | 7.0% | 3.9% | 2.3% | 1.6% |
| The home | 25.6% | 34.9% | 33.37 | 1.6% | 1.6% | 3.1% |
| The community | 22.5% | 32.6% | 38.0% | 2.3% | 1.6% | 3.1% |
| The Home-School-Community Agent provides insights that are helpful toward positive adjustment of disruptive students to school. | 55.8% | 31.8% | 5.4% | 1.6% | 2.3% | 3.1% |

attained. Analysis of the data indicated that 96.9% of the respondents considered the HSCA's role to be important, and 91.5% of the respondents viewed the HSCA as effective in the role of a liaison between the school, the home, and the community. The services of the HSCA to the total instructional effort of the school was considered valuable by 91.5% of the respondents.

A total of 78.3% of respondents reported improvement among the pupils they had referred to the HSCA for assistance. Members of the professional staff generally agreed that the services of the HSCA helped the pupils adjust to school, home, and community. Positive ratings were given by 85.3% of the respondents for adjustment to school, by 60.5% for adjustment to home, and 55.0% for adjustment to the community. Insights provided by the HSCA were also considered to be helpful toward positive pupil adjustment by 87.6% of the respondents.

Respondents also indicated to what extent the HSCA used various activities to help the pupils they had referred to the program (see Table 14). To simplify analysis the positive categories ("frequently" and "sometimes") were combined. The percent of respondents giving affirmative ratings was 89.1% for home visits, 89.1% for conferences with the staff members who had referred pupils, 89.1% for pupil conferences, 76.7% for pupil conferences in which parents or professional staff were also included, and 69.0% for enlisting help from community agencies. In addition, 55.0% indicated that the HSCA had appeared in court in regard to pupils. The high percentage of respondents that felt the HSCA used pupil conferences as a means of solving a pupil's problem is consistent with the data collected on the Pupil Survey and HSCA Log Sheets.

Criterion 3.2, that 80% of the professional staff who referred pupils to the HSCA would perceive the HSCA as promoting understanding and providing assistance to pupils, was attained. Substantially more than 80% of the respondents gave positive responses to all items of the Professional Staff Survey directly related to this criterion (importance of HSCA role, effectiveness of HSCA as home-school-community liaison, importance of HSCA services to total instructional effort of the school, and insights or understandings).

The HSCA Log Sheet is an evaluation instrument which provides documentation of the activities of a HSCA during a selected week. Each HSCA was randomly assigned two separate weeks during the period from January 18 to March 25, 1988, for which all activities were to be logged. Table 13 contains the average responses from the instrument, and indicates the extent of the various activities in the typical week of a HSCA during the time period sampled.

The HSCAs logged 16 job-related activities in the HSCA Weekly Log Sheet. These activities can be grouped into three roles: guidance, liaison, and school support. Guidance involves direct counseling with pupils individually or in small and large groups. The liaison role involves the HSCA intervening on behalf of the pupil with a third party. This party may be a parent, teacher, administrator, community agency or school psychologist. The last role, school support, involves those activities that support the overall success of the school program. Examples might include telephone calls to homes, lunchroom

duty, hall duty, general office work, transporting pupils, and supervising special activities. The average HSCA week included 33.8 contacts involving individual or group guidance for a total of 9.9 hours, 29.8 liaison activities involving parents, school personnel, and/or community agencies for a total of 9.2 hours, and 4.8 hours involving an average of 16.7 support activities. The documentation provided in the HSCA Log Sheet, along with data from the Pupil Questionnaire (Criterion 3.1) and the Professional Staff Survey (Criterion 3.2) give a clear indication that Objective 3.0 was achieved.

Objective 4.0 was to provide at least two inservice sessions to program personnel such that at least 80% of the inservice participants would rate each session as valuable in providing information that will assist them in carrying out their program responsibilities. There were four inservice meetings for HSCAs in the school year. The topics and dates of these meetings were as follows: Orientation for the 1987-88 School Year, September 11, 1987; Youth Gangs, October 15, 1987; Child Abuse and Neglect, March 29, 1988; and End-of-Year Wrap-up, Jung 7, 1988. All four meetings were evaluated by the HSCAs, using the General Inservice Evaluation Form. In three of these inservice meetings, all of the participants agreed or strongly agreed that the meetings provided information that would assist them in their program. The percent of participants giving positive ratings to the remaining meeting in regard to providing helpful information was 93.3%. The combined responses over the four evaluated sessions indicated that the meetings were judged by 98.3% of the participants to have provided information that would assist them in their program. The combined responses from the three evaluated meetings are summarized in Table 16. The rating scale key is: Strongly Agree, A = Agree, U = Undecided, D = Disagree, and SD = Strongly Disagree. Thus Objective 4.0 was achieved.

Table 16
Average Responses and Percent of Response for Reactions to Inservice Statements

| | | | | P | ercen | È. | |
|--|----------------------|---------------------|-----------|----------|----------|----------|-----------|
| StateLants | Number Responding | Average Response | SA (5) | A (4) | Ü (3) | D (2) | SD (1) |
| I think this was a very worthwhile meeting. | 58 | 4.7 | 77.6 | 20.7 | 0.0 | 1.7 | 0.0 |
| The information presented in the meeting will assist me in my program. | 59 | 4•7 | 69.5 | 28.8 | 1.7 | 0.0 | 0.0 |
| There was time to ask questions pertain-ing to the presentation | 59 | 4.8 | 79.7 | 20.3 | 0.0 | 0.0 | 0.0 |
| Questions were answered adequately. | 59 | 4.7 | 71.2 | 28.8 | 0.0 | 0.0 | 0.0 |

Additional information was collected on the General Inservice Evaluation Form using open-ended questions. Participants were asked to comment about the most and least valuable parts of the meetings, and about information they would like to have covered in future meetings. Only those open-ended comments which were made by three or more participants at any single session will be summarized here. However, the evaluation reports on individual sessions have been forwarded to the Department of State and Federal Programs and are available on request.

In regard to the most valuable parts of inservice meetings, the following items were notable from HSCA's comments: The presentation on juvenile gangs, information on child abuse and neglect, and honoring a retiring HSCA. In regard to least valuable parts of meetings, the only response with a frequency of three or more at any one session was that "none" or "nothing" was least valuable. No suggestion for future meetings had a frequency of three or more from any one inservice meeting.

Summary/Recommendations

The project had four objectives. The first objective stated that 50% of the selected pupils who are served by the HSCA for the entire treatment period will show a more positive attitude toward teachers, education, and school behavior. The second objective states that at least 50% of the pupils in the evaluation sample demonstrate a positive adjustment to those elements that interfered with their success in school. This objective required identification of those elements which appeared to be obstructing pupil achievement, and evidence of positive adjustment by at least 50% of the pupils in the evaluation sample. The third objective was to serve as a home-school-community liaison to promote understanding and provide assistance for pupil adjustment to the school environment. This objective required that both 80% of the pupils served and 80% of the professional staff members referring pupils to the program would perceive that the HSCA promoted understanding and assistance to pupils for adjustment to the school environment. It also required documentation of weekly activities of the HSCA in carrying out this objective. The fourth objective was to provide at least two inservice sessions to project personnel, such that at least 80% of the participants would rate each session as valuable in providing information that would assist them in their duties.

Objective 1.0 was attained. Slightly more than 50% of pupils (50.2%) showed improvement in their attitude as measured by the Total Score of the Demos D Scale (DDS). The average change score across grade levels indicated a statistically significant improvement in attitude on the total score and also on two subtest scales: attitudes toward education and influence by peers and parents.

The primary purpose of the DDS is to determine the probabilities of a pupil dropping out of school. The assumption is made that students who are likely to drop out of school have a poor attitude about teachers

and school. The test publisher states that the DDS may be used to identify students with strongly negative attitudes toward teachers and school but cautions that DDS scores be used with all other available information concerning the student. It is not advisable that DDS scores by themselves be used for definitive diagnostic purposes.

The first criterion of Objective 2.0, identification of those elements which appeared to be obstructing pupil achievement, was evaluated on the basis of the Pupil Entry Information Sheet. The instrument provided individual pupil data which could be used by the HSCA, as well as for project evaluation. The five most frequent reasons for referral to the project were disruptiveness, poor grades, peer conflict, teacher conflict, and hostility to authority. More than three-fourths (79.7%) of the pupils in the sample were referred for two or more reasons.

The second criterion of Objective 2.0, evidence of pupil adjustment by at least 50% of the pupils samp'ed, was primarily evaluated on the basis of individual data from the Pupil Census Forms. As rated by the HSCAs, 72.4% of pupils in the evaluation sample showed evidence of improvement in relation to their original referral reasons (54.7% showing "improvement," and 17.6% showing "marked improvement"). also gave positive ratings to 66.3% of the pupils regarding academic improvement, and 75.5% of the pupils regarding social adjustment. Further verification of the attainment of this criterion was provided by the Pupil Questionnaire and the Professional Staff Questionnaire. Pupils responding to the Pupil Questionnaire reported that they were getting along better with their teachers (77.0%), families (44.0%), and friends (42.3%) since talking with the HSCA. Of those who responded to the Professional Staff Questionnaire, 78.3% reported improvement among the pupils they had referred to the HSCA for assistance. indicated that both criteria for Objective 2.0 were met; thus Objective 2.0 was achieved.

The first criterion of Objective 3.0 was that 80% of the pupils served would perceive that the HSCA promoted understanding and provided assistance for their adjustment to the school environment. Analysis of the Pupil Questionnaire indicated that well over 80% of the pupils perceived the HSCA as promoting understanding, and well over 80% also perceived the HSCA as providing assistance. These data indicate that Criterion 3.1 was achieved. In addition, over two-thirds of the pupils perceived that they had actually improved in each of the following areas: classroom attendance, keeping up with assignments, and getting along better with teachers. Over 40% of the pupils also perceived that they were getting along better with family and with friends. In regard to specific activities most often performed by the H3CA on behalf of the pupils, 81.0% of the pupils reported HSCA-pupil conferences, 52.4% reported home visits, and 47.2% reported arrangement of conferences with their teachers.

The second criterion of Objective 3.0 was that 80% of the professional staff who referred pupils to the HSCA would perceive that the HSCA promoted understanding and provided assistance for the adjustment of pupils to the school environment. Analysis of the Professional Staff Survey indicated that 96.9% of the respondents viewed

the HSCA's role of home-school-community liaison to be important, and 91.5% rated the HSCA as effective in providing the liaison services. Insights or understandings provided by the HSCA were also considered helpful toward positive pupil adjustment by 87.6% of the respondents. The data from the Professional Staff Survey indicate that this criterion of Objective 3.0 was met.

Objective 3.0 also required documentation of HSCA's weekly activities to meet the goals and needs of the pupils. Analysis of the HSCA Log Sheet indicated that an average HSCA's week included 33.8 contacts involving individual or group guidance for 9.9 hours; 29.8 liaison activities involving parents, school personnel, and/or community agencies for a total of 9.2 hours; and 4.8 hours served in various school support activities.

Objective 4.0 was to provide at least two inservice sessions to program personnel such that at least 80% of the inservice participants would rate each session as valuable in providing information that will assist tham in carrying out their program responsibilities. Four inservice meetings were held during the 1987-J8 school year. All four meetings were evaluated using the General Inservice Evaluation Form. Each of these was rated as providing information that would assist them in their project by more than 90% of the participants. The average percent of positive responses over the four evaluated meetings was 98.3%. Objective 4.0 was achieved.

The data collected for the 1987-88 Home-School-Community Agent project indicate that the project was successful in identifying disruptive pupils and helping them make some positive adjustment to those elements in their lives that interfere with their success in school. The project met all four of its objectives and was considered valuable by pupils, HSCAs and professional staff members involved in the project. It is recommended that the program be continued in the 1988-89 school year.

M. S. MARIO

PUPIL QUESTIONNAIRE HOME-SCHOOL-COMMUNITY AGENT PROGRAM

You have met with ________, the Home School Community Agent in your school, during this school year. The following questions give you a chance to express your feelings about how the Home-School-Community Agent has helped you. This is of a test. You do not have to give your name. When you are finished, fold your completed questionnaire and give it to a secretary in the school office, who will put it in the school mail. Thanks for your help.

Section I

Please circle all responses that apply to each statement.

- 1. Which of these ways was used by the Home-School-Community Agent to help you?
 - A. Visited my home.
 - B. Arranged a meeting(s) with my teacher(s).
 - C. Took time to discuss my problems with me.
 - D. Visited a community agency on my behalf, such as CMACAO, Health Center, or counseling agency.
- 2. Since I talked to the Home-School-Community Agent, I am getting along better with
 - A. my teachers
 - B. my family
 - C. my friends

Section II

Please circle yes or no to each statement.

| 3. | When a student has trouble in school or with a teacher, it is a good idea to talk it over with the Home-Schoo'-Community Agent. | Yes | No |
|----|---|-----|----|
| 4. | The Home-School-Community Agent is understanding to talk to. | Yes | No |
| 5. | I think I understand my own problems better since talking with the Home-School-Community Agent. | Yes | No |
| 6. | The Home-School-Community Agent was helpful to me. | Yes | No |
| 7. | I feel my classroom attendance has improved since meeting with the Home-School-Community Agent. | Yes | No |
| 8. | I am keeping up with my assignments better since working with the Home-School-Community Agent. | Yes | No |
| 9. | Students with problems can get help from the Home-School-Community Agent. | Yes | No |

DES 1/88

HOME-SCHOOL-COMMUNITY AGENT PROJECT PROFESSIONAL STAFF SURVEY

Please circle the number after each statement that shows how much you agree with each statement.

| | Item | Strongly Agree | Agree | Undecided | Disagree | Strongly Disagree |
|----|---|-------------------|--------|-----------|----------|----------------------|
| 1. | The Home-School-Community Agent's role as a liaison between home, school, community is important. | 5 | 4 | 3 | 2 | 1 |
| 2. | The Home-School-Community Agent has been effective in providing liaison between home, school, and community. | 5 | 4 | 3 | 2 | 1 |
| 3. | The services of the Home-School- Community Agent to the total instructional effort at your building are valuable. | 5 | 4 | 3 | 2 | 1 |
| 4. | The student(s) you referred to the Home-School-Community Agent showed some improvement. | 5 | 4 | 3 | 2 | 1 |
| 5. | The Home-School-Community Agent helps the disruptive student(s) make positive adjustments in the following areas (please rate all three areas): | | | | | |
| | a. The school | 5 5 | 4 4 | 3 3 | 2 | 1 |
| | b. The home c. The community | 5 | 4 | 3 3 | 2 2 | 1 |
| 6. | The Home-School-Community Agent provides insights that are helpful toward positive adjustment of disruptive students to school | 5 | 4 | 3 | 2 | 1 |
| | to school | J | 4 | 3 | ۷ | 1 |

In order to solve the problem(s) of student(s) you referred, the Home-School-Community Agent:

| | | Frequently | Sometimes | Undecided | Infrequently | Never |
|----------|---|---------------|-----------|-----------|--------------|-------|
| 7. | Made home visits | 5 | 4 | 3 | 2 | 1 |
| 8. 9. | Held conference(s) with you concerning the student(s) Had conferences with student you referred | 5 (a) 5 | 4 | 3 | 2 | 1 |
| 10. | Arranged student conferences school which included parents and/or professional staff | | 4 | 3 | 2 | 1 |
| 11, | Enlisted help from community agencies (such as CMACAO, CETA, Health Centers, etc.) | 5 | 4 | 3 | 2 | 1 |
| 12. | Appeared in court in regard to the student(s) | 5 | 4 | 3 | 2 | 1 |
