ABSTRACT

In 1986, the Instructional Telecommunications Consortium was funded to collect data over a 3-year period on the utilization of telecourses as a way to offer college credit instruction to off-campus learners. First-year findings, based on course data submitted by 172 institutions, included the following: (1) 183 different telecourses were offered; (2) most telecourses had been used only once, but five were offered more than 100 times, representing a total number of reported uses of 1,764 for the 183 telecourses; (3) 71 institutions belonged to at least one regional or statewide consortia concerned with instructional telecommunications; (4) 81% of the responding colleges offered only two-year degrees; (5) 91% of the reported uses of telecourses were for courses offered for three credit hours, which, in almost all cases, was the same number of credits offered for on-campus courses; (6) the more viewing options students had, the greater the average enrollment per telecourse use; (7) 94% of the telecourses were offered at the freshman or sophomore level; (8) broadcast television was used by 85% of the institutions, video tape by 63%, and cable television by 56%; and (9) in 27% of the reported uses of telecourses, the institution produced a major instructional component (e.g., print, video, or computer software). Detailed survey responses are attached, along with survey instruments. (AJL)

PREFACE

This report is a brief presentation of the data collected during the first year of a three year project. A similar report will be prepared at the end of the second year, with a final report issued in 1990.

In some ways the project is in its initial stages of development. Colleges may still begin participation in the project by submitting data input sheets. Instructions for preparing the data input sheets, codes, and the data input sheets may be found in Part II of this report.

Comments on this report and suggestions on analyses to be included in future ones are welcome, as well as inquiries on possible access to the database.

Please contact the project director for information and participation in the project.

EXECUTIVE SUMMARY

*One hundred and seventy two institutions submitted data at least once during the first year of the project.

*One hundred and eighty three different telecourses were reported having been offered.

*The total number of reported uses of the 183 telecourses was 1,764.

*Seventy one institutions belong to at least one regional or state wide consortia concerned with instructional telecommunications.

*Eighty-one percent of the reporting institutions offered only two year degrees.

*Most telecourses have been reported being used only once (124), but five were offered more than 100 times.

*In twenty-seven percent of the reported uses of telecourses the reporting institution produced a major instructional component - print, video or computer software.

*Ten different sources for the rights to use telecourses were reported with the most important being that the institution participated in the production of the telecourse.

*The number of television programs in the telecourses varied greatly, but most were 11, 13, 26 or 30 in number.

*Most reported uses of telecourses had between 13 and 15 hours of video (81%).

*Ninety one percent of the reported uses of telecourses were for courses with three credit hours.

*In 98% of the cases the telecourse had the same number of credit hours as its on-campus equivalent.

*Most institutions (89%) reported no difference in the general acceptance or identification of telecourse credit as compared to on-campus credit.

*Broadcast television was used by 85% of the institutions, video tape 63% and cable television 56%.

*In 54% of the reported uses of telecourses broadcast television was identified as the most important viewing method.

*The more viewing options students had the greater the average enrollment per telecourse use.

*Most telecourses (94%) were offered at the freshman or sophomore level.

INTRODUCTION

HISTORY

During the summer of 1986 a grant was awarded by The Annenberg/CPB Project to the Instructional Telecommunications Consortium, an affiliate of the American Association of Community and Junior Colleges. The grant funds data collection and research on the utilization of telecourses for college credit instruction for distant learners. Only those telecourses offered in such a way so as to reach off-campus students are included.

A popular definition of a telecourse was made in 1977 by Tom Gripp and is still valid today with only slight modification:

[A telecourse is an] integrated learning system that employs television and various print materials. This system is specifically designed to involve a variety of learning strategies to forge a complete education unit available to the student in the convenience of his own home. [It] is not a correspondence course with pictures; nor is it a televised lecture with supplementary readings. It is an examination and presentation of a body of knowledge and information through the use of sight, sound, color, movement, and print in a manner designed to stimulate, clarify, and quantify. A telecourse is designed to take maximum advantage of the strengths of each component to lead the student through a "success-oriented" experience.¹

The only modification in the definition to make it contemporary is due to the development over the past decade of personal computers. An increasing number of telecourses are being produced which incorporate student activities for microcomputers.

The project is designed to collect data for at least three years. This is necessary in order to develop a longitudinal database and to collect data from a large variety of postsecondary institutions. The goal is to reach participation of over two hundred institutions.

Data was first collected for the fall 1986 semester. Only members of the ITC were requested to participate at that time in order to evaluate the effectiveness of the questionnaire and data collection procedures. Input from these colleges resulted in refinements in the explanations for completing the data input sheets, revised data input sheets, and additional responses and codes.

There was only one major change in the nature of the project as from originally conceived. It was determined that data for courses offered only by live televised instruction should not be

1. (Tom Gripp, "Telecourses Have Designs on You," THE Journal: Technological Horizons in Education 4(1977): pp. 18-19.

collected. Although the instructional uses of these telecommunications technologies are important and will be used by many additional colleges within the next few years, it was determined that the questionnaire was not appropriate for live televised instruction as well for telecourses. For similar reasons, it was also decided not to include audio either live or recorded and audio/graphic based courses.

A revised set of instructions, codes and data input sheets was distributed during the spring 1987 semester. The response codes are revised every few months as needed. See Appendix A for the January, 1988 version of the instructions, data input sheets, and codes.

LEVEL OF PARTICIPATION

The project is approaching its goal of at least two hundred participating institutions. Over 180 institutions have participated at least once as of January, 1988. Institutions may join the project at any time as long as they are willing to continue participating until the summer 1989 semester.

DATA VALIDITY

All data is reviewed by the project director before being entered into the database. This is done to assign new codes when necessary, return those which are incomplete, and to get a "feel" for the nature of the responses and their accuracy. The project director contacts institutions to clarify questionable responses.

It must be kept in mind that this is not a scientific sample of colleges and universities in the United States. However, with a sufficiently large number of participating institutions it should be possible to make important observations about the offering of telecourses by postsecondary institutions.

One possible problem with the data is that there may be disproportionately more two year institutions participating than upper level institutions. Data from other sources indicate that the actual distribution of institutions using telecourses may be closer to fifty percent for two year institutions. The initial predominance of two year institutions was a result of the role of the Instructional Telecommunications Consortium in supporting the project. Unfortunately, there is no comprehensive list of institutions using telecourses.

In preparing this report over 400 pages of listings and tables were generated. During its analysis several cases of invalid data were uncovered. This resulted in either data for specific fields in a record being corrected or deletion of the record. When the latter occurred, it was because the reported course did not meet the guidelines for the project. The most common cases were that it was either not truly a telecourse or it was not offered for college credit.

There are some slight variations in the contents of the database used in preparing this report because some records were corrected during the printing of tables and listings. For example, the total number of reported uses of telecourses is either 1764 or 1769. Thus, totals for any field (question) may vary slightly in different parts of the report. However, there should be no discernible impact on the analysis depending upon which version of the database was used.

USES OF THE DATABASE

The research project is designed to provide information to The Annenberg/CPR Project. However, the database can also be used by other institutions and individuals for a wide variety of purposes. For example, if an institution is considering the adoption of a telecourse it could obtain a list of others already offering it to see how it is being used. In a similar manner, the database could be used to see how institutions are using certain delivery systems, or the sharing of telecourses initially produced by colleges for their own use. These lists of institutions will be drawn only from those which have agreed to be identified for such purposes.

Telecourse producers will find the data valuable in determining what telecourses have already been produced, how often they are being used, and enrollment trends. It may help identify institutions and consortia which may be willing to participate in the production of telecourses.

The database may be a valuable resource for graduate students. It could also be the basis of articles.

Although there are several constraints on direct access to the database, these should not affect its usefulness as a research database. The primary constraint is that individual institutions will not be identifiable unless agreement is obtained in advance from them.

PRESENTATION OF THE FINDINGS

A summary and discussion of the data makes up the remainder of the report. There is a discussion of the data for each item in the data input sheets. It might be helpful for readers not familiar with the project to turn to Appendix A to review the questionnaire and data input sheets.

No statistical analyses have been made of the data for this report. However, for the final report the database will be converted for analysis by SPSS software.

One final comment on reading the report is necessary. There are several ways in which telecourses and institutions are referred to in tables - - percent or number of telecourses and institutions reported at least once in the database, and the

percent of telecourse uses. The first means that the numbers are based on either the 183 different telecourses reported at least once or the 172 institutions having submitted data for at least one semester. Uses refers to the 1764 reported uses of the 183 different telecourses. This is the number of records in the dBASE file.

REVISIONS IN MAY, 1988 PRINTING

This printing was made in August, 1988. Several additions and revisions have been made to the May, 1988 printing. The most notable are:

*Added to Table G.1 is the total number of times each telecourse was reported having been used in the 1986-1987 academic year and its average enrollment per use.

*A clarification has been made of the instructions for providing data for item R (Telecommunications Systems Used.)

FINDINGS

A. PARTICIPATING INSTITUTIONS

The number of participating institutions is still increasing. Listed below are the 184 institutions which have submitted data by October 1, 1987. Additional reports have been received since then for the spring and summer 1987 semesters, but they are not included in the database used for this report.

B. SEMESTER

Data was first obtained for the fall 1986 semester. Institutions are requested to submit data for each semester a telecourse is offered including summer sessions. Summer semesters are particularly important. Although a small number of colleges offer telecourses during the summer, some of them have large enrollments. The experiences of these few institutions are encouraging others to explore the benefits and feasibility of offering telecourses during the summer.

Table B.1 summarizes some of the basic data by semester.

TABLE B.1

TELECOURSE USE AND ENROLLMENTS BY SEMESTER

	Fall 1986	Spring 1987	Summer 1987
Number of Institutions	63	134	57
Telecourse Uses	548	914	255
Number of Enrollments	28,571	42,712	12,761
Avg. # of Telecourses Per Institution	8.7	6.8	4.5
Avg. Enrollment Per Telecourse Use	52	47	50
Avg. Enrollment Per Institution	454	319	224

The decline in the average enrollment and number of telecourses used per institution from the fall to the spring semester results from a change in the composition of institutions participating in the survey. During the fall most of the largest users of telecourses in the country were in the database. However, those joining in the spring tended to be those with smaller programs.

The summer had the lowest number of participating institutions - - 43% of the reporting institutions using telecourses in the spring semester also offered telecourses in the summer. On the average they also offered fewer telecourses per institution. However, average enrollments were essentially unchanged.

It is interesting to note that even though there was a change in the make-up of participating institutions during the year, there was consistency in the average number of enrollments per telecourse throughout the year.

C. YEAR

This entry is used to determine the calendar year. It is used with the field Semester to determine the academic semester.

D. NUMBER OF CONSORTIA

This question was included to measure the importance of consortia in the offering of telecourses. There is an increasing number of postsecondary consortia located throughout the U.S. They are either state or regionally based. Regional ones can be quite large and have members from several states (e.g., NILRC - Northern Illinois Learning Resource Cooperative) while others have members from within a region of a state (e.g., Southern California Consortium). New consortia are still being formed, and existing ones are adding new members.

A recent experience in Texas demonstrates that consortia can be important to the offering of telecourses and the use of instructional telecommunications in general. A little over a year ago, a consortium was formed to serve colleges in the Northern part of the state that were in a PBS station's broadcast area. However, the needs and interests of these institutions were similar to those throughout the state. Because of this, it has grown to 23 members state-wide and changed its name to the Texas Consortium for Educational Telecommunications. Although it has thus far only limited its formal activities to licensing telecourses, discussions at its biannual meetings indicate a number of additional activities may be undertaken. This trend toward increasingly important roles for consortia is consistent with the findings of the nationwide Higher Education Utilization Study (HEUS) conducted in 1985 by the Corporation For Public Broadcasting and the National Center For Education Statistics.

The sponsoring organizations of consortia vary. Most consortia are independent legal entities, although their administrative offices are sometimes located on a college campus. Others are managed by PBS stations (particularly when there is a state-wide PBS network). Several are part of a state higher education office. All are involved in supporting the offering of telecourses for their members. Some only license telecourses, while others also either buy into their production or produce telecourses themselves.

Table D.1 summarizes the number of consortia concerned with instructional telecommunications belonged to by each institution. The average is 1.2 memberships per institution.

TABLE D.1

CONSORTIA MEMBERSHIPS PER INSTITUTION

Consortia	Percent of Institutions
0	29
1	35
2	30
3	5
4	1

Two-thirds of the participating institutions belong to at least one instructional telecommunications consortium. It is also worthwhile to examine the relationships among the average number of telecourses, enrollments per telecourse, and the number of consortia memberships. Table D.2 shows these data.

TABLE D.2

CONSORTIA MEMBERSHIPS AND TELECOURSE UTILIZATION

Consortia Memberships	Avg. Number Telecourses	Average Enrollment
0	6.0	38
1	9.6	36
2	12.1	56
3	16.2	86
4	20.0	36

There are two clear patterns - - the number of telecourses offered by an institution and their average enrollment increase as the number of memberships in consortia increases. The decrease in the average enrollments for those belonging to four consortia may result from the additional telecourses being offered for courses which are less likely to have either large on-campus or distant learner enrollments. The telecourses having the largest potential enrollments are likely to be offered first.

TABLE D.3

REPORTED CONSORTIUM MEMBERSHIPS

Arkansas College Consortium
 Bay Area Community College TV Consortium
 Central Educational Network
 Eastern Educational Consortium
 Educational Teleconsortium of Michigan
 Florida Community College TV Consortium
 Higher Education Telecommunications Association of Oklahoma
 Instructional Telecommunications Consortium/AACJC
 KAPSET (Kansas Association for Post Secondary Ed. Tv.)
 KYCHE Telecommunications Consortium
 Louisiana Educational Consortium
 Maryland College of the Air
 Nebraska Education Telecommunications Consortium of Higher Ed.
 North Carolina Consortium for Instructional Telecommunications
 Northern California Telecommunications Consortium
 Northern Illinois Learning Resources Cooperative
 Ohio Post Secondary Telecommunications Council
 Oregon Community College Television Consortium
 Southern California Consortium for Com. Col. TV
 Texas consortium for Educational Telecommunications
 Washington State Telecommunications Consortium (Puget Sound)
 West Virginia Higher Education Instructional TV
 Wisconsin Board of Vocational, Technical, and Adult Education

E. MOST IMPORTANT CONSORTIUM

Twenty-two consortia have been reported as being an institution's most important one for instructional telecommunications activities. However, the data for this question may change during the next few years. Some areas of the country are still not covered by a regional or state-wide consortia. It is likely that most of the country will become part of the service area of such a consortium within the next few years as the importance of instructional telecommunications increases: the delivery of video for telecourses; live televised instruction; satellite networks; and, microcomputer based instruction.

For those institutions not included in a service area, either a new consortium may form in their area or they may be included in the expanded service area of an existing one. National organizations may become more important. Several already exist such as the Instructional Telecommunications Consortium and the National ITFS Association. An increasing number of institutions may belong to both regional/state and national organizations.

F. HIGHEST DEGREE OFFERED

Two year institutions may be over-represented in the database. Only 19 percent of the participating institutions award bachelors or higher degrees. Additional efforts are being made to increase the participation of upper level institutions. In general, upper level institutions appear to participate less in organizations and multi-institutional projects involving telecourses.

The average number of enrollments per telecourse varies some by degree level of the institutions.

TABLE F.1

DEGREE LEVEL AND TELECOURSE USE

Highest Degree Level	Percent of Institutions	Avg. Enrollment Per Telecourse
Two Year Academic only	9%	49
Two Year Academic & Voc./Tech.	66	50
Two Year Voc./Tech only	6	21
Bachelors/Master Degrees	11	34
Ph.D.	8	46

Degree level is also related to participation in consortia. Many of the participants in this project were initially contacted to participate through a regional consortium. That participating two year institutions are more likely to belong to a consortium is reflected in Table F.2. Academic two year institutions are much more likely to belong to one or more telecommunications related consortia than are vocational/technical institutions and those offering graduate degrees.

TABLE F.2

DEGREE LEVEL AND CONSORTIA MEMBERSHIPS

Highest Degree Level	Consortia Memberships				
	0	1	2	3	4
Two Year Academic only	25%	44%	25%	6%	0%
Two Year Academic & Voc./Tech.	22	33	40	3	2
Two Year Voc./Tech only	64	9	18	9	0
Bachelors/Master Degrees	40	45	15	0	0
Ph.D.	43	57	0	0	0

Note: A review of the data suggests that memberships may be under-reported for institutions in several states.

G. TELECOURSE NAME

Note that the data and discussion for this section was updated August, 1988. It includes additional data reported for the 1986-1987 academic year. The courses listed below and the number of times their use was reported is slightly different from that used elsewhere in the report. However, this revised list is presented because it accurately reflects the list of telecourses reported for the 1986-1987 academic year.

The table also contains additional information. The left hand columns list the total number of times the use of each telecourse was reported and its average enrollment per use.

One of the most important findings of the research project has been the discovery of the number of telecourses which were used during the 1986-1987 academic year. The following four pages list 181 telecourses. The most common usage was once by one institution during the academic year. Forty-four percent were reported only once during the first year of the project. On the other hand, The Business File was used 121 times.

It has revealed a number of commercial producers who might not normally be identified as telecourse producers. (See codes for item "G" in Appendix A.) More importantly, it shows that an increasing number of institutions are producing telecourses for their own use or in cooperation with other colleges. (This will be discussed in section H.)

TABLE G.1

REPORTED TELECOURSES

# Uses/Enr.	Avg.	Telecourse Name	Producer/Distributor
4/ 18		A VOUS LA FRANCE	BBC/FILMS, INC

49	Average for all telecourse uses	

Table G.1 lists the reported number of uses of each telecourse during the first year. For example, 82 have been used once while one telecourse has been used 121 times. It is expected that the number of telecourses reported having been used once will decrease each year. Many institutions use some telecourses once a year and most of the institutions included in the database had submitted data for only one semester.

There does not appear to be a clear pattern in the average enrollment per telecourse used and the total number of times it has been used. However, total uses less than seven may tend to have the lowest average enrollment while those used eight to 22 times the largest.

TABLE G.2

FREQUENCY OF USE FOR EACH TELECOURSE

121	1	39
Over-all average per use:		48

The number of different telecourses used by each participating institution is listed in Table G.3. One-third used only one, two or three telecourses. It will be interesting to determine during the next two years if these institutions will offer the same telecourses each year, offer the same number but change the courses, or, add some telecourses.

It is clear that a small percentage of the institutions participating in this study offer most of the telecourses and generate the largest number of enrollments. One-third of the institutions offered more than ten different telecourses during the year.

It should be kept in mind that the data in Table G.3 are probably misleading. The number of reporting institutions increased from 63 in the fall 1986 semester to 134 for the spring 1987 semester. Institutions which offer different telecourses in the fall and spring semesters will be under-reported in terms of table G.3.

TABLE G.3

H. TELECOURSE PRODUCER

For 173 of the reported uses of telecourses the institution reported that it had either produced it itself or had joined in its production with others. This is 10% of the total reported uses of telecourses.

This under-reports actual college participation in the production of telecourses because in several cases a consortium is reporting data for its members. The consortium obtained funds from its members to join in the production of the telecourse. However, the telecourse is reported on the institutional data input sheets as having been licensed from the consortium and produced by some other entity. It is possible that the reported participation in the production of telecourses is several times greater than what was actually reported.

The data also indicate that the average enrollment per use of a telecourse in which the institution participated was larger than when participation was absent.

TABLE H.1

INSTITUTIONAL PARTICIPATION IN THE PRODUCTION OF TELECOURSES

	# of Telecourses Used	Average Enrollment
Participated	173	78
Did Not Participate	1,596	45

I. USE PRINT MATERIALS RECOMMENDED BY PRODUCER

The data for this item clearly support the general rule that telecourses come with a recommended textbook and study guide and that colleges use them. Only in 54 of the reported uses of a telecourse did a college indicate that there was not a recommended textbook or study guide. When one was recommended it was almost always used by the college. In only 59 cases were neither the textbook nor study guide used.

This strengthens the argument that a key component for the adoption of a telecourse is the quality, acceptability and recognition of the textbook. Colleges seem to be unlikely to adopt a telecourse and then produce their own print materials.

TABLE I.1

USE OF PRINT MATERIALS

Print Materials	Number of Telecourse Uses	Percent of Tel. Used
No recommended texts	54	3%
Used recommended texts	1577	89
Used recommended textbook only	52	3
Used recommended study guide only	23	1
Used recommended reader	3	<.5
Did not use recommended materials	59	3

Table I.2 shows the relationship between the use of print materials and the degree level of the institution. Four year colleges and universities are more likely to offer telecourses without recommended print materials and not to use them when the telecourse comes with them. This may be due to faculty at these institutions being more likely to develop their own instructional materials and to have greater control over the selection of instructional materials.

TABLE I.2

USE OF PRINT MATERIALS BY DEGREE LEVEL OF INSTITUTION

Degree Level	Use of Text Materials					
	None Rec.	Textbook & S.G.	Textbook	Study Guide	Reader	Didn't Use
2 Yr. Academic	2%	96%	2%	0%	0%	0%
2 Yr. Acad.+V/T	2	91	3	1	0	3
2 Yr. V/T only	2	84	0	10	0	4
Bach./Masters	4	73	5	4	1	14
Ph.D.	23	57	13	3	0	3
	N= 53	1,574	52	23	3	58

NOTES: The responses to this item may underestimate the number of cases where colleges do not use recommended materials. This is most likely to occur when data is provided by consortia for their members.

The total number of telecourse uses (records) in Tables I.1 and I.2 are slightly different. This is an example of the situation discussed in the Introduction where a later version of the database had three fewer records.

J. USE INSTRUCTIONAL MATERIALS PRODUCED BY INSTITUTION

The data for question I discussed previously indicate that colleges generally use the textbook and study guide recommended for a telecourse. However, the data for this question indicate that many colleges also produce supplemental instructional materials. For 19 percent of the telecourse uses the institution reported that it had produced some form of instructional material. This indicates that some institutions perceive the video programs, textbook, and study guide for a telecourse as core materials to be either supplemented as necessary. Twenty-seven percent of all participating institutions reported at least one telecourse for which it had produced some type of instructional material.

TABLE J.1

INSTRUCTIONAL MATERIALS PRODUCED BY INSTITUTION

Material Produced	Percent of Reported Telecourses	Average Enrollment	Percent of Institutions
Did not produce anything	81%	45	73%
Textbook or study guide	4	53	12
Microcomputer software	<.5	302*	1
Video programs	1	28	4
Print and video	1	37	3
Other materials	14	65	15

Colleges and universities are becoming better able to produce instructional materials. Some are either adding video production studios or upgrading existing ones. Some are writing computer software for personal computers. Others are even beginning to produce videodiscs. It will be interesting to determine over the next two years if an increasing number of institutions produce supplemental materials for telecourses.

*This large average results from the data reported by a single institution.

K. LICENSED FROM

It has been reported that telecourses have been licensed from 56 different sources. However, this question has been subject to various interpretations by reporting institutions and consortia. The primary source of differing interpretations has been when consortia officers have completed the data input sheets for their members.

When a consortium licenses telecourses for its members, for example, from the Adult Learning Service (ALS), the consortium officer generally reports that the institutions licensed the telecourse from the consortium, not ALS. However, in other cases where colleges belong to consortia and submitted the data input sheets themselves, they have reported the ALS as the licensing agent even though it was obtained through their consortium. The net result has been to somewhat under-report the number of telecourses licensed through consortia which in turn licensed telecourses for its members.

Similar interpretations exist for those cases where the consortium bought into the production of a telecourse on behalf of its members. The consortium officer may report that the college licensed this telecourse from the consortium because the consortium bought into the production of the telecourse. However, colleges in the same consortium may report that it bought into the production of the telecourse because it contributed funds to the consortium for the consortium buy-in. In either case it is still possible to determine what institution produced the telecourse.

The ten most often cited sources of telecourse licenses are listed in Table K.1. It must be kept in mind, however, when reading the table that this does not indicate the producer of the telecourse. For example, both Dallas County Community College District and the Southern California Consortium are greatly under-reported as distributors. This results because many, if not most times, their courses are licensed from other agencies, such as the Adult Learning Service, or colleges that participated in the funding of the production.

TABLE K.1

TEN MOST FREQUENT SOURCES OF TELECOURSE LICENSES

Organization	Percent of Total Telecourse Uses
Participated in production	22%
Adult Learning Service	15
Northern Illinois Learning Resources Coop.	15
Southern California Consortium	12
Coast Community College	5
Dallas County Community College District	4
Florida Community College TV Consortium	5
Higher Education Telecommunications Association of Oklahoma	3
Maryland College of the Air	3
Miami-Dade Community College	1

L. NUMBER OF PROGRAMS IN SERIES

Table L.1 provides data on the number of programs in a telecourse (not hours of video). The column "Percent of Telecourses" indicates the percent of the 183 telecourses having a given number of programs. The distribution is somewhat more diverse than might be expected. The primary range is from eight to 30 programs with one cluster from eight to 16 and the other 26 to 34.

Note that the percentages total 165, not 100. This results when a telecourse is reported with different total numbers of programs. There are several possible explanations for these differences. Some colleges produced supplemental video programs and added them to the telecourse. A telecourse could be used for either a single course or the programs could be divided and offered for two courses; e.g., Economics U\$A. And, in several cases the hours of programming were reported instead of the number of programs. In these cases, the records will be corrected in future reports of the database.

The third column in Table L.1 lists the percent of the participating institutions which reported using a telecourse with the number of programs. Not surprisingly, the data reveals that most uses of telecourses had 26, 28 and 30 programs. This is the number which the most popular telecourses tend to have. However, many institutions apparently have no difficulty in offering telecourses with numbers of programs substantially different from these.

Related to these data is the number of hours of video programming in a telecourse. The number of hours is more revealing about the nature of telecourses than the number of programs. This is examined in the next section.

TABLE L.1

NUMBER OF PROGRAMS IN EACH TELECOURSE

M. HOURS OF PROGRAMMING IN SERIES

Table M.1 compares data among several questions with the number of hours of programming for each use of a telecourse. The first column lists the hours of programming for each reported use of a telecourse. The second column is the frequency in percentages of all reported uses of telecourses. For example, 24% of the 1769 uses of telecourses had 13 hours of video. It is not surprising that 81% of all reported telecourse uses had between 13 and 15 hours of video.

The range from two to 48 hours results from several factors. Some were developed by colleges for their own use. These show a greater variation in the hours of programming than those produced by the major telecourse producers. Some shorter series were produced in order to fit into prime time television scheduling. Also, errors were made in the data submitted by project participants which is explained below.

The third column shows the percent of the 172 participating institutions reporting the use of a telecourse with that number of hours of programming. For example, 74 percent of the institutions reported offering at least one telecourse with 13 hours of video. The total of 292 percent results from institutions offering telecourses with different total hours of video.

The right hand column is the percent of all telecourses having the specified number of hours of programming. For example, 32 percent of the 185 telecourses reported at least once had 15 hours of video. The percentages add to 186. This column should be much closer to, but still greater than, 100 percent. That is, each telecourse should have only one number for hours of programming except for those cases where an institution either produced supplemental programs or it did not use all those which came with the license. A review of the data leads to the following explanations. Telecourses with an odd number of programs were rounded both up and down to the next whole number; the number of programs in a telecourse was reported rather than the total number of hours of video programming; and, several telecourses could be offered as one or more separate courses (e.g., "Economics U\$A" and "French In Action").

Table M.1 indicates that many colleges are willing to use telecourses with a wide range of total hours of video. Many may not have a "standard" that their selection and use of telecourses must meet.

TABLE M.1

NOTES: * indicates less than .5%.
 Reported hours of video greater than 24 is mostly due to data being entered for the number of programs rather than hours of video. These records will be corrected in future uses of the database. This is also true for Table M.2.

Table M.2 addresses this issue more directly. It indicates the fewest number of hours of video in a telecourse used by each institution. Thus, for 49% of the participating institutions 13 hours was the minimum.

Note: Hours of video greater 24 and greater are mostly due to data being entered for the number of programs rather than hours of video.

Table M.3 examines the use of telecourses by hours of video and the degree level of the granting institution. The data reveal that there is a tendency for four year/graduate institutions and two year comprehensive institutions to offer telecourses with a wider range of hours of video than either two year academic only and vocational/technical institutions.

N. ACADEMIC DEPARTMENT OFFERING TELECOURSE

Table N.1 lists the ten academic departments which were most frequently reported as offering a telecourse. Perhaps the least expected department was child development where six different telecourses were used a total of 51 times.

TABLE N.1

DEPARTMENTS MOST OFTEN OFFERING TELECOURSES

Department	Telecourse Uses	Enrollments
Business Management	215	9620
Psychology	141	7290
Sociology	132	6264
History	110	6963
Social Science	80	7929
Economics	75	2773
English	70	3176
Humanities	54	3450
Child Development	51	1884
Computer Science	51	1661

A related issue is which departments offered the greatest number of different telecourses. This is shown in Table N.2.

TABLE N.2

NUMBER OF DIFFERENT TELECOURSES OFFERED IN A DEPARTMENT

Department	Number of Different Telecourses
Social Sciences	24
History	19
Business Management	16
English	14
Psychology	14
Sociology	13
Humanities	11
General Education	11

Most telecourses were offered by one department at most institutions. However, some lent themselves to use by several departments. Table N.3 shows the telecourses that were offered in more than five different departments among all the reporting institutions. Of these ten telecourses, five rank low in terms of the total number of times they were reported and in total enrollment.

Several telecourses in the table have low total reported enrollments and uses as telecourses. However, they were still offered in a large number of departments.

TABLE N.3

TELECOURSES OFFERED IN THE MOST DIFFERENT DEPARTMENTS

American Government Survey	6

O. NUMBER OF CREDIT HOURS FOR TELECOURSE

Most telecourses are offered as three credit hour courses. Few telecourses have been reported as being offered for other than three credits. There appears to be no clear relationship among those having been offered for different amounts of credit. The only observed relationship is that the more any telecourse was used the more likely it was offered by some institutions for other than three credits.

TABLE O.1

COLLEGE CREDIT HOURS OF TELECOURSE

P. DOES THE TELECOURSE CARRY THE SAME CREDIT HOURS AS ITS ON-CAMPUS COUNTERPART?

In only eight of 1,769 reported uses of telecourses did an institution report that the telecourse was awarded fewer credit hours than its on-campus equivalent. Each of the eight cases was for a different telecourse and a different institution. There is clearly no evidence that telecourses are valued differently than on-campus classes.

Table P.1 also shows that institutions offer telecourses even though there is no on-campus equivalent class. Some institutions only offer a course because it is available as a telecourse. Twenty-two percent of the participating institutions have offered at least one telecourse even though there was not an on-campus equivalent.

TABLE P.1

TELECOURSE HAS SAME CREDIT HOURS AS ON-CAMPUS EQUIVALENT

Credit Equivalence	% of Reported Telecourses
Same as On-campus	98%
Fewer Credits	<.5
No on-campus equivalent	2

Q. DOES THE TELECOURSE HAVE THE SAME ACCEPTANCE AS ON-CAMPUS COUNTERPART

In most cases telecourses carry the same acceptance on student transcripts and for other college policies as on-campus courses.

TABLE Q.1

ACCEPTANCE OF TELECOURSES

	% of Telecourses	% of Institutions
No difference	90%	89%
Identified on transcript	4	6
Limited in # of telecourse credit hours	2	4
Special Assessment	2	<.5
Other	2	10*
		Total: 110

NOTES: Institutional percentage total equals 109% due to some institutions reporting data for telecourses in more than one way. A review of the data indicates that "Other" responses did not limit students in either the taking or transferring telecourse credits.

R. TELECOMMUNICATIONS SYSTEMS USED TO DELIVER VIDEO PROGRAMMING

This question obtained information that is somewhat subjective in nature. It asks the method(s) used by institutions to deliver the video programming to students. The subjective component is that the person completing the reports had to indicate the relative importance of each of these methods. It is unknown how many institutions have surveyed their students on how they view programs for each telecourse which they offer.

It should be noted at this point that in all tables in this section most, if not all, the data for "Addressable Cable TV" should be added to "Subscriber Cable TV". A review of the data indicates some misinterpretation of the response codes for this question. Institutions will be questioned about this data. For this report readers should also read the tables by combining "Addressable cable tv" with "Subscriber cable tv."

Table R.1 on the next page contains the results for this question. Broadcast television is clearly the single most important delivery system used by institutions today. However, an examination of the overall importance of the delivery systems reveals that broadcast television and video cassette tapes are of almost equal importance. And, even though subscriber cable television ranks a low third in first importance, it is the most important second delivery system.

This relative overall importance of video cassettes and subscriber cable television probably would not have been true several years ago. Broadcast television would have been much more important. During the next few years video cassettes and cable television may become even more important, particularly as the most important delivery system.

The data in Table R.1 show how institutions evaluated the relative importance of each delivery system for each reported use of a telecourse. Table R.2 indicates the percentage of the participating institutions that used each delivery system.

Seventy-five percent of the institutions use broadcast television as one of their most important delivery systems, i.e., for at least one reported use of a telecourse. (Please note that rows in Table R.2 can not be added to obtain the total percentage of institutions that used a particular delivery system. That data is in Table R.5.)

Although 75% of the institutions reported that broadcast television was their most important delivery system for at least one of their uses of telecourses, for only 54% of the reported uses of telecourses was it ranked as the most important delivery system. This apparent discrepancy can be explained by a number of factors. Even though a college might rank broadcast television as their most important deliver system, it would not always be able to broadcast all their telecourses. This could be due to limited air time, cost of broadcasting fees, and possibly

other reasons. However, it can be concluded that colleges probably use broadcast television much less frequently than they desire to. How great would the impact be on telecourse uses, institutions offering telecourses, and enrollments if all institutions could show their telecourse programming at least once on a broadcast television station? The increasing use of alternatives such as cable television and video cassettes are effective alternatives to the limitations of broadcast television.

On the other hand, although 23% of the institutions ranked video cassettes as their most important delivery system, it was reported as the most important delivery system for 26% of the reported uses of telecourses.

TABLE R.1

HOW STUDENTS VIEWED VIDEO PROGRAMS

Delivery System	All Uses of Telecourses			
	Most Important	Second of Importance	Third of Importance	1+2+3
Addressable cable tv	5%	4%	2%	11
Broadcast television	54	11	5	70
ITFS	2	0	1	3
Subscriber cable tv	12	33	4	49
Video tape	26	24	14	64
Not used	-	28	73	

TABLE R.2

PARTICIPATING INSTITUTIONS USE OF DELIVERY SYSTEMS BY IMPORTANCE

Delivery System	Most Important	Second of Importance	Third of Importance
Addressable cable tv	8	7	2
Broadcast television	75	13	6
ITFS	1	0	1
Subscriber cable tv	20	45	5
Video tape	<u>23</u>	<u>35</u>	<u>24</u>

Table R.3 shows that the average enrollment in telecourses having broadcast television as their most important delivery system is much higher than the other delivery systems. This is another indication of the importance of broadcast television, but the data should not be interpreted as a causal relationship. It does not directly measure the impact on enrollments of broadcasting a telecourse as compared to other delivery systems, although there can be little doubt that broadcasting increases enrollments.

TABLE R.3

MOST IMPORTANT DELIVERY SYSTEM AND ENROLLMENTS

Delivery System	% of Total Enrollment	Avg. Enrollment Per Tel. by Delivery System
Addressable cable tv	3%	30
Broadcast television	67	62
ITFS	2	48
Subscriber cable tv	10	40
Video tape	15	28

Is there a relationship between the number of delivery systems which students can access and the average enrollment in a telecourse? Table R.4 clearly indicates that there is. Over all average enrollments are almost twice as large for those telecourses using three delivery systems compared to those using one. This relationship holds true for when either broadcast television or subscriber cable television are the most important delivery system. However, additional information may be needed in order to explain why the number of delivery systems does not affect average enrollment in telecourses having video tapes as the most important delivery system.

TABLE R.4

NUMBER OF DELIVERY SYSTEMS AND ENROLLMENTS

Most Important Delivery System	<u>1 System</u>		<u>2 Systems</u>		<u>3 Systems</u>	
	Tel. Uses	Avg. Enrol.	Tel. Uses	Avg. Enrol.	Tel. Uses	Avg. Enrol.
Addressable cable tv	<.5%	26	3%	32	1%	27
Broadcast television	10	42	10	62	16	72
ITFS	0	-	0	-	2	48
Subscriber cable tv	2	31	6	35	3	59
Video tape	14	25	8	29	4	24
<u>Totals:</u>	<u>27%</u>	<u>33</u>	<u>46%</u>	<u>50</u>	<u>27%</u>	<u>59</u>

NOTES: Tel. Uses = percent of total reported telecourse uses.
 Avg. Enrol. = average enrollment per telecourse use for that most important delivery system and number of delivery systems.

Table R.5 lists the percent of the participating institutions which used the different video delivery systems at least once. For example, 85% reported using broadcast television. Remember that most of the institutions reporting using addressable cable television should be added to the subscriber cable television number. This results in cable television being used by 72% of the institutions.

The percentages total to 223. This indicates that on the average each institution used a little over two different telecommunications technologies to deliver telecourse programming.

TABLE R.5

INSTITUTIONAL USE OF TELECOMMUNICATION SYSTEMS

Delivery System	% of Institutions Using System
Addressable cable tv	16%
Broadcast television	85
ITFS	1
Point-to-point microwave	1
Subscriber cable tv	56
Videodisc	1
Video tape	<u>63</u>
	223%

An interesting aspect of this research project to watch during the next two years is the use of telecourse delivery systems. The relative importance of each may change which may also impact average enrollments. In some cases access to more delivery systems may increase average enrollments. However, the decreasing cost of delivery systems may reduce average enrollments because colleges will find it cost effective to offer telecourses with lower enrollments.

S. HOURS OF INSTRUCTION BY NON-TELECOMMUNICATION SYSTEM

Over two-thirds of the reporting institutions require students to attend at least one hour of on-campus activity supervised by a faculty member. In most cases this consists of an orientation session at the start of the semester and monitoring periodic exams. However, in some institutions much more contact is required.

Variations in the number of hours of faculty contact is probably due to several factors. Some faculty monitor exams and the number of hours of examinations may vary. Several courses have laboratory activities which may require on-campus attendance. Several periodic contacts between students and instructors may be required during the semester. There may also be state requirements.

TABLE S.1

HOURS OF NON-TELECOMMUNICATIONS INSTRUCTION BY FACULTY

Hours	% of Reported Telecourses	% of Institutions
0	14%	31%
1	4	3
2	2	4
3	10	10
4	11	13
5	7	14
6	8	16
7	3	9
8	4	6
9	3	9
10	5	11
11	<.5	3
12	2	10
13	1	2
14	1	3
15	4	15
16	1	8
17	<.5	2
18	15	18
19	0	0
20	10	6
20+	less than .5% each	

Note that "% of Institutions" sums to 193%. This results because the requirements of some institutions differ among their telecourses.

Table S.2 indicates that 52% of the participating institutions have the same requirement concerning on-campus contact with the instructor for all their telecourses. Almost one-fourth of the institutions have three or more telecourses with different on-campus requirements.

TABLE S.2

NUMBER OF DIFFERENT HOURS OF REQUIRED CONTACT PER INSTITUTION

Number of Different Requirements	Institutions
1	52%
2	24
3	8
4	9
5	2
6	1
7	1
8	1
9	0
10	1
13	1

T. OFFICIAL REPORTED ENROLLMENT

There has been previous discussion of enrollment. However, there are several additional points which can be made relating to enrollment patterns. Table T.1 shows the distribution of enrollments per telecourse use. Thirteen reported telecourse offerings had only one student enrollment while the largest had 690. Average enrollment per telecourse use was 48.

TABLE T.1

FREQUENCY OF ENROLLMENTS PER TELECOURSE USE

Enrollment Per Reported Telecourse	Percent of Total Use
1-25	39
26-50	33
51-75	14
76-100	6
101-125	3
126-150	1
151-175	1
176-200	1
201-225	1
226-250	1
251-275	1

NOTE: All remaining intervals up to 476-500 have less than .5%

U. PERCENT OF INSTRUCTION BY TELECOMMUNICATIONS THAT WAS LIVE

Seven percent of the reported telecourses used some form of telecommunications system to offer live instruction to the students. This was in addition to the recorded telecourse programs. Seven institutions accounted for 68 percent of the reported cases.

This data is further evidence that institutions use telecourses as an instructional resource to be used with other materials and technologies to provide postsecondary instruction to distant learners.

V. FORMS OF TELECOMMUNICATIONS AVAILABLE FOR STUDENT-FACULTY INTERACTION

This question was designed to determine the role that telecommunications systems are being used for student-faculty interaction outside of an organized environment. Audio conferences via a telephone bridge, electronic mail, and sending micro computer diskettes via the mail are several of the possibilities. Only five percent of the reported uses of telecourses gave students at least one of these options.

By far the most common method was access to an audio bridge. Eighteen institutions reported the use of an audio bridge. Five used electronic mail and floppy diskettes.

During the next two years of the research project there may be a marked increase in the use of these technologies to increase student-faculty interaction.

W. LEVEL OF INSTRUCTION FOR THE TELECOURSE

Table W.1 indicates the course level at which the telecourse was offered. The data may under-report represent junior/senior level uses of telecourses because two year institutions may be over-represented in the database. During the next two years the percentage of courses offered at the upper under graduate level may increase as more upper level institutions participate and additional telecourses are produced that are appropriate for this level of instruction.

TABLE W.1
COURSE LEVEL OF TELECOURSES

	% of Reported Telecourses	% of Total Enrollments
Freshman/Sophomore	94.4%	95.3%
Junior/Senior	4.0	3.9
Masters	.7	.4
Ph.D.	.1	<.05
Other	.7	.3

SURVEY OF COLLEGE CREDIT TELECOURSES FOR DISTANT LEARNERS

RESEARCH BY:

THE INSTRUCTIONAL TELECOMMUNICATIONS CONSORTIUM/AACJC

FUNDED BY:

THE ANNENBERG/CPB PROJECT

PURPOSE

This project collects data on the utilization of telecourses by postsecondary institutions to reach distant learners in the United States and Canada. Not all uses of telecourses are included. The video programs must use telecommunications systems to reach distant learners by taking prerecorded instructional materials to students at off-campus sites. Also, only courses consisting primarily of prerecorded instructional materials are included.

Included in the study are courses using distant learning systems that deliver instructional materials to students by either sending or lending video tapes to students. However, this study does not include courses using only print materials.

Live televised classes offered via a telecommunications system, such as ITFS, and audio conferencing, are not included in this study.

PARTICIPATION:

The project is committed to collect data for at least three years in order to build a longitudinal data base. It is necessary that a sufficiently large number of institutions participate in the project on a consistent basis in order for the data base to be usable. It is hoped that a wide variety of two year academic and vocational/technical institutions, and upper level colleges and universities will participate. An institution may join the project at any time; however, it should be willing to maintain participation for the duration of the project.

BENEFITS FROM PARTICIPATION

Participating institutions will receive annual reports. Reports will also be made for institutions, consortia and state systems as requested. However, a fee to cover the cost of data processing and preparing the reports may be required. Contact either the Project Director or The Annenberg/CPB Project for information on obtaining custom reports and their cost.

The acquisition of this data will make it possible for participating institutions and individuals to request reports on a wide variety of topics. The reports would be valuable for:

- * Planning and implementing telecourse programs.

- * For the review and adoption of telecourses.
- * Use or production of supplemental materials.
- * Maintaining an updated list of media based courses for distant learners.
- * Marketing analysis for the production and distribution of telecourses.

INFORMATION ON PARTICIPATING IN PROJECT

For additional information about either the completion of the data input sheets or for reports, contact:

Ron Brey
 Coordinator Non-Traditional Instruction
 Austin Community College
 P.O. Box 2285
 Austin, TX 78768

512-495-7571

INSTRUCTIONS FOR COMPLETING DATA INPUT SHEETS

There are two data input sheets. Only one "Input Sheet A" is completed each semester. It contains general information about the institution. Each semester the data for items A, B and C must be reported. For second and subsequent semesters it is necessary to provide only the information for items D, E and F which have changed since the previous report.

Data "Input Sheet B" must be completed for each course to be included in the data base. All data must be entered the first time a course is reported. However, in subsequent semesters the data for item G and only those other items which have changed, such as enrollment (T) need be reported.

Some of the questions are followed by blank lines. Use these to enter the requested information when you can not find an appropriate response in the CODE SHEETS. The CODE SHEETS will be updated at least once a year.

All data should be entered right justified; e.g., for a possible three digit response 10 is 1 0, not 1 0 . Leading 0s are not necessary.

Once the Data Input Sheets have been entered in the database you will receive a computer generated printout with the data from the A and B sheets for your institution. These will have space for entering the data for the next semester. Only the data has changed, e.g. enrollment, will need to be entered.

A. INSTITUTION:

This is the name of the reporting institution. Enter the name of the district only if the data is from more than one institution in the district. Enrollment by college in a district is preferred. Please inform the project director if data reporting is changed from a district to separate colleges or vice versa.

PLEASE READ YOUR INSTITUTION'S NAME AND ITS CORRESPONDING CODE NUMBER CAREFULLY. CODE NUMBERS ARE NOT IN COMPLETE ASCENDING NUMERICAL ORDER.

ZZZ UPDATED: AUGUST, 1988

B. SEMESTER/QUARTER

For which semester is the data being reported? One separate Input Sheet "A" is needed for each semester.

Code #8 is for flex-entry/flex exit courses which must begin and end within a single semester.

Code #9 is for open enrollment programs (flex-entry/flex-exit) which do not fall within a single semester; i.e. student may register in October (fall semester) but complete the course in March (spring semester).

SEMESTER SYSTEM:

1=FALL
2=SPRING
3=SUMMER

QUARTER SYSTEM:

4=1ST QUARTER
5=2ND
6=3RD
7=4TH

8=Flex-entry/flex-exit within a single semester

9=Flex-entry/flex-exit courses which may be within two or more semesters

C. YEAR

Enter the last two digits of the calendar year data is being reported for. If the semester is in two years, enter the year in which it began.

D. NUMBER OF CONSORTIA MEMBERSHIPS:

How many consortia or organizations does your institution belong to that are involved with the instructional uses of telecommunications? See item E below for a partial list of consortia and organizations.

E. MOST IMPORTANT CONSORTIUM:

For your institution what is the name of the most important consortium that it belongs to which is concerned with issues involving instructional uses of telecommunications systems?

CODES:

- 3 Arkansas College Consortium
- 5 Bay Area Community College TV Consortium
- 10 Central Educational Network
- 20 Eastern Educational Consortium
- 25 Educational Teleconsortium of Michigan
- 30 Florida Community College TV Consortium
- 40 Higher Education Telecommunications Association of Oklahoma
- 50 Instructional Telecommunications Consortium/AACJC
- 51 International University Consortium
- 53 KAPSET (Kansas Association for Post Secondary Ed. Tv.)
- 55 Knowledge Network, University of British Columbia
- 57 KYCHE Telecommunications Consortium
- 58 Louisiana Educational Consortium
- 60 Maryland College of the Air
- 63 Nebraska Education Telecommunications Consortium of Higher Ed.
- 65 North Carolina Consortium for Instructional Telecommunications
- 67 Northern California Telecommunications Consortium
- 69 Northern Illinois Learning Resources Cooperative
- 74 Ohio Post Secondary Telecommunications Council
- 75 Oregon Community College Television Consortium
- 80 Southern California Consortium for Com. Col. TV
- 84 Southern Michigan Television Educational Consortium
- 88 Texas consortium for Educational Telecommunications
- 90 Washington State Telecommunications Consortium (Puget Sound)
- 92 West Virginia Higher Education Instructional TV
- 95 Wisconsin Board of Vocational, Technical, and Adult Education

F. HIGHEST DEGREE OFFERED BY THE INSTITUTION

- 1=TWO YEAR ACADEMIC ONLY
- 2=TWO YEAR ACADEMIC AND VOC./TECH.
- 3=TWO YEAR VOC./TECH. ONLY
- 4=BACH./MASTERS
- 5=MASTERS/PH.D. ONLY
- 6=PH.D. (ALL LEVELS)

G. TELECOURSE NAME:

This item requests the name given the telecourse by its producer. An example is the telecourse "Understanding Human Behavior." Enter the name on the blank line of the Data Input Sheet B if it is not on the list below.

H. PRODUCER

Enter "0" if the reporting institution produced the telecourse either by itself or in cooperation with other institutions.. Enter "1" if was obtained from another source.

I. USE TEXT RECOMMENDED BY PRODUCER:

This item applies only to courses obtained from outside the institution. Most producers of telecourses recommend the use of a specific textbook and sometimes other materials. Does your institution use these materials?

CODES:

- 0 Producer did not recommend a textbook or study guide.
- 1 Institution used recommended textbook and study guide.
- 2 Institution used recommended textbook only.
- 3 Institution used recommended study guide only.
- 4 Institution used recommended reader.
- 9 Institution did not use recommended materials.

J. USE MATERIALS PRODUCED BY INSTITUTION:

For leased telecourses some institutions produce materials to either supplement or replace those developed by the producer. Please indicate if your institution produced any major materials. Do not include basic items such as exams and course syllabuses.

CODES:

- 0. Institution did not produce any materials.
- 1. Produced and used print materials - textbook and/or study guide.
- 2. Produced and used microcomputer software.
- 3. Produced and used video programs.
- 4. Produced and used other instructional materials.
- 5. Produced print materials and video programs.
- 9. Produced other important instructional materials - write on data input sheet.

K. LICENSED FROM:

What was the name of the entity from which the course was licensed or purchased? Enter "1" if your institution either produced the telecourse or bought into its production and does not have to license it. Enter the name of the licensing agency on the line on the Data Input Sheet if it is not on this list.

CODES:

- 1 College participated in production of course - owns rights to use.
 - 40 Adult Learning Service
 - 45 AGEE
 - 46 Agency for Instructional Television
 - 47 Annenberg/CPB Project

 999 PROGRAMS ACQUIRED FROM A NUMBER OF SOURCES

L. NUMBER OF PROGRAMS IN THE TELECOURSE:

Enter the actual number of separate instructional video programs in the telecourse which are delivered by telecommunications, e.g. 26 for a telecourse having 26 one-half video programs.

M. HOURS OF PROGRAMMING IN TELECOURSE:

Enter the total number of hours of instruction delivered by telecommunications systems for this course. Round number down to whole number if less than .50, round up to whole number if .50 or larger.

N. INSTITUTIONAL DEPARTMENT NAME OFFERING TELECOURSE:

Choose the department from the list below that offered credit for the telecourse. For example, if "Understanding Human Behavior" is offered as an introductory course in the psychology department, choose "Psychology" department. Enter the name of the department on the Data Input Sheet if it is not on the list below.

ZZZ UPDATED: March, 1988	

O. NUMBER OF CREDIT HOURS:

Enter the number of college credit hours that your institution awarded for this telecourse. If the number is a fraction round it to the nearest whole number.

P. DOES THE TELECOURSE CARRY THE SAME CREDIT AS ITS ON-CAMPUS COUNTERPART?

- 1=Has the same number of credit hours
- 2=Has fewer credit hours
- 3=Has more credit hours
- 9=No on-campus counterpart

Q. THE SAME ACCEPTANCE AS ON-CAMPUS COUNTERPART:

Does your college treat this telecourse differently in any of the ways listed below? Sometimes a college may report these courses differently either on transcripts or limit the number of hours taken by telecommunications systems.

CODES:

- 0=No difference.
- 1= This mode of instruction is identified on transcript.
- 2= Students are limited in the number of credit hours delivered by this mode of instruction that can count toward a degree plan.
- 3= students must take a special assessment test before enrolling in courses offered by this mode of instruction.
- 4= 1 and 2 above
- 5= 2 and 3 above
- 6= 1, 2 and 3 above
- 9= No on-campus counterpart, other, please write on the Data Input Sheet or attachment, also use if no on-campus counterpart.

R. TELECOMMUNICATION SYSTEMS USED:

List the telecommunication system(s) used to deliver instruction to the student for this course. How was the television program delivered to the site where the student viewed the programs? Note that for home viewing use broadcast television, cable television, etc. even if students viewed the programs after having recorded it at home on a VCR. Although the student viewed the program from a videotape, it was delivered to the home by broadcast tv, etc. Videotape should be listed here only if the student either went to a LRC or library and viewed the program there or was able to borrow the videotapes and take them home.

Note that up to three different telecommunications systems can be reported for each course. List first ("R1") the one that you believed to be the most important source for student viewing. "R2" is the second most important and "R3" the third. It is realized that you may not have data on student viewing patterns at your institution, so please use your best judgment.

CODES:

- 5 Addressable cable television channel (telecourse programs shown on pay-per-view channel, not viewable by all subscribers)
- 10 Broadcast television station (PBS and commercial stations)
- 20 Compact disc
- 25 Electronic Mail/Conferencing
- 28 I-Net (institutional cable tv network)
- 30 ITFS
- 60 Point-to-point microwave
- 80 Subscriber cable television system
- 90 Videodisc
- 95 Videotape

S. HOURS OF INSTRUCTION BY NON-TELECOMMUNICATION SYSTEM:

This item is the total number of mandatory hours of instruction or contact between an instructor or instructional support staff and students that occurred without the aid of a telecommunications system. Include orientation sessions, discussion sessions, microcomputer and science laboratories, etc. Include time when exams are monitored by either faculty members or support staff.

99=Variable or do not know.

T. OFFICIAL REPORTING ENROLLMENT:

This data is very important, yet it is also some of the most difficult to compare among institutions, because there are many different methods of determining "official enrollment." It would be helpful to attach an explanatory note to the data input sheets the first time your institution participates in the study, indicating that point in the semester when the "official" enrollment is taken. Report this data as the percent of the semester which is passed when "official" enrollment is determined; e.g., the 4th week of a 16 week semester = 25%. It is not necessary to attach an explanation in subsequent semesters unless the definition changes.

U. WHAT PERCENT OF THE INSTRUCTION BY TELECOMMUNICATIONS WAS LIVE?

Sometimes a telecourse is offered in conjunction with live instruction via a telecourse. Enter the percent of the total mandatory instruction delivered over a telecommunications system that was live, i.e. not recorded. Do not include time for any optional activities such as discussion sessions, conferences, etc. These are reported in item "V". Enter "99" if 100%.

V. WHAT FORMS OF TELECOMMUNICATIONS ARE AVAILABLE FOR STUDENT-FACULTY INTERACTION?

This does not include any part of regularly scheduled instructional activities included under "U". Include one-on-one contacts as well as optional group arrangements not included in "U". Do not include telephone or U.S. mail service. Report the most important system if more than one is used.

1. Audio conferencing via telephone bridge
3. Electronic mail
5. Micro computer diskettes

9. Multiple forms

W. LEVEL OF INSTRUCTION FOR THIS COURSE

- 1=freshman, sophomore
- 2=junior, senior
- 3=masters
- 4=Ph.D.
- 5=other

SURVEY OF COLLEGE CREDIT TELECOURSES

ITC/AACJC - ANNENBERG/CPB PROJECT

INPUT SHEET A

Enter appropriate numbers from the "Instructions for Completing Data Input Sheets." If the appropriate response for the item is not on the sheet, enter the information on the blank line below the item. A code will be assigned for future use. Updated "Instructions for Completing Data Input Sheets" will be distributed periodically. Right justify all numbers. Copy this sheet and Input Sheet B for use in subsequent semesters.

Contact Ron Brey for additional information or clarification: Austin Community College, P.O. Box 2285, Austin, TX 78768, 512-495-7571.
