ABSTRACT
        The Employment Training and Transition Model is
presented as a comprehensive classroom model whose goal is to prepare
students with severe handicaps to work, live, and recreate in their
home communities while in high school and after graduation. The model
is built on the assumption that high school programs should be
integrated, age-appropriate, community-referenced, future-oriented,
comprehensive, effective, and should involve parents. The model
defines these values in a way that allows them to be measured and
defines target levels of performance. Classroom procedures have been
designed to support achievement of those standards. This visitors'
packet contains background information about the model, followed by a
high school implementation checklist, which focuses on seven areas of
model implementation: student integration; development, monitoring,
and updating of individualized education programs; effective
instructional design and delivery; placement of students in supported
employment; management of classroom tasks and resources; consumer
satisfaction with classroom operation and student outcomes; and
district policies that support the model. The packet also contains a
sample individualized education program, a sample transition plan,
definitions of job clusters, vocational training formats, answers to
common questions about the Employment Training and Transition Model,
and a resource list. (JDD)

ABSTRACT
         The Employment Training and Transition Model is
presented as a comprehensive classroom model whose goal is to prepare
students with severe handicaps to work, live, and recreate in their
home communities while in high school and after graduation. The model
is built on the assumption that high school programs should be
integrated, age-appropriate, community-referenced, future-oriented,
comprehensive, effective, and should involve parents. The model
defines these values in a way that allows them to be measured and
defines target levels of performance. Classroom procedures have been
designed to support achievement of those standards. This visitors'
packet contains background information about the model, followed by a
high school implementation checklist, which focuses on seven areas of
model implementation: student integration; development, monitoring,
and updating of individualized education programs; effective
instructional design and delivery; placement of students in supported
employment; management of classroom tasks and resources; consumer
satisfaction with classroom operation and student outcomes; and
district policies that support the model. The packet also contains a

Employment Training and Transition Project

January, 1988

Welcome to a classroom that uses the Employment Training and Transition Model (ET & T). ET & T is a comprehensive classroom model whose goal is to prepare high school students with severe handicaps to work, live, and recreate in their home communities now and after graduation. The model is designed to be implemented in any self-contained class on a regular high school campus. It is built on the assumption that high school programs should be integrated, age-appropriate, community-referenced, future oriented, comprehensive, effective and involve parents. The model defines these values in a way that they can be measured, and defines target levels of performance. Classroom procedures have been designed to support achievement of those standards.

The Visitors' Guide has been developed to direct your attention to key elements of the model, and their interrelationships.

Curriculum

The classroom uses the Activities Catalog rather than a traditional curriculum. The Catalog is organized into domains that reflect demands and opportunities . adult life -- work, leisure, and personal management -- rather than trad ional academic or developmental domains. The Catalog contains important adult activities, like shopping for groceries or preparing a meal, rather than isolated skills lilke making change or naming the four food groups. There is no logical order for teaching adult tasks. Whether you learn to wash clothes at a laundromat before or after you learn to clean the kitchen is more a question of family preference than any logic of the subject matter. Academic-skills are practiced in the context of activities,, not taught in isolation. Significant efforts are made to adapt activities or develop alternate performance strategies so that even students who lack presumed cognitive or motor prerequisites can participate successfully.

Virtually all students will receive job training in community sites. Rather than assuming that students must be "ready" before they can receive work training, relevant "prevocational skills" are taught in the context of an ongoing work environment. In general, students will have a community-based different work training opportunity each term. Those work training opportunities will reflect a variety of job clusters and training formats (individual job, crew, enclave).

Individualized Education Programs

Since, like any catalog, the Activities Catalog presents more than one could possibly buy (or in this case, have time to teach!) parents and teachers must make careful choices of valued activities for individual students. The IEP consists, quite literally, of an order from the Catalog for each student. IEP meetings are held in the spring and follow a negotiation format that is responsive to parents values and to the fact that there is simply not time to teach everything. Activity goals are rank ordered to ensure that training resources are directed first to priority goals.

Classroom Schedule

A detailed classroom schedule is necessary if a teacher is to implement 10-12 truly individualized education programs. The schedule in an ET & T classroom is built entirely from students' IEPs. No activities are scheduled that are not included on an IEP. The schedule specifies the particular activity goals each student works on each period of the day each day of the week, as well as where training takes place, and who is the trainer. A separate period-by-period display schedules classroom staff (teacher, teaching associates, related service staff, peer tutors) so that they, too, know whom they should be teaching and what and when.

The classroom schedule makes some of the values of the model obvious. For example, to ensure integration one goal of the model is that each student has at least 25 scheduled contacts with nonhandicapped peers per week. Looking at the schedule for each students you should be able to count those 25 integrated opportunities. They might include work with peer tutors, participation in a regular class (PE, home economics, etc.), all school breaks, or community training. Another outcome of the model is community based training. Specific goals are that students 15-17 years old spend at least 25% of their time in community training and that students 18-21 years old spend at least 35% of their time off campus learning work, living, and leisure activities.

Peer Tutors

Peer tutors are an integral part of the ET & T classroom. In addition to providing training in the classroom and community, their presence increases the likelihood of classroom students developing friendships with nonhandicapped peers. Peer tutor programs also educate nonhandicapped students about handicapping conditions, teaching technology and data management. With training and supervision, peer tutors provide both effective training and advocacy for their fellow students.

Instructional Programs

For each goal on a student's IEP there is a written instructional program. These programs, in turn, are organized into packets that organize the program and data for community performance, the program and data sheets for any related in-class simulation, and data summaries, as well as a record of time spent in instruction. A program packet is developed for each instructional group which may include 1-3 students depending on the scheduleand student IEPs. Data on task acquisition and student errors are used to adjust training procedures.

Master Calendar

In addition to transitional instructional responsibilities, the teacher in an ET & T classroom also assumes the roles of manaager. As a management tool, the Master Calendar allows the teacher to delegate tasks and responsibilities such as contacting parents, calculating instructional time, or preparing materials during noninstructional staff time. The Master Calendar is completed through the end of the school year, and it helps guarantee that important objectives (and routine tasks!) are not overlooked.

Classroom Meetings

Classroom meetings are held at least every two weeks and include teacher, classroom, and support staff. The agenda reviews student, staff and classroom outcomes, and covers new assignments, tasks and timelines. Minutes from meetings are publicly posted in the classroom and specific staff task assignments transferred to the Master Calendar.

Transition Planning

ET & T includes several elements that directl address the need for transition planning. As soon as students enter high school, representatives from relevant adult service agencies are invited to IEP meetings to get to know the student and his or her family, and to become familiar with the program in the high school. For students who are 18 years old, formal transition plans are developed at the IEP. That plan involves parents, teacher, case manager, and relevant others: identifies major post-school needs (employment, residence, leisure, income and medical supports, ongoing advocacy, etc.), and identifies necessary tasks and timelines. Each ET & T site coordinates the compilation of a Transition Handbook for parents (and teachers!) that includes generic information about post-school services, and data on consumer outcomes in all work and residential programs in the county.

We hope you enjoy your visit. We welcome comments and/or questions concerning the ET.& T model. Feel free to contact:

PROGRAM VALUES

Integrated

Educating severely/moderately handicapped students in the least restrictive environment now means attending regular education schools along with same aged non-handicapped peers. This setting better reflects the heterogeneous nature of the community that handicapped students will be expected to function is as adults. Because mere existance of a special education class within a regular high school is not enough to insure integration with non-handicapped peers, opportunities such as lunch, assemblies, use of regular education facilities, classes and peer tutors must be scheduled by the special education teacher. Opportunities for integration must also be a consideration in the proximity of the special education classroom within the high school. There is an increased likelihood that students will interact with non-handicapped peers during transitions when a classroom is positioned between regular education classes, rather than isolated in a special education wing or module.

Age Appropriate

It is essential that teachers of severely/moderately handicapped students use instruction, goals, methods, and materials that highlight similarities with non- handicapped school mates. A classroom that previously used colored blocks for counting should evaluate whether this activity and the materials used would ever be performed by non-handicapped peers or adults. Counting dollars in a store to pay for groceries on the other hand, is not only age-appropriate for a high school student, but also have a functional outcome.

Community Referenced

A program which aims to prepare students to live as independently as possible in the community can only measure its success by student's actual performance in that community. All too often students have been taught in-class skills which are assumed to be prerequisites to community access. The sad fact is that after instruction is completed, student's ability to generalize pre-skills from classroom to community is minimal at best. Assessing the local community to determine IEP goals and then delivering instruction in the target environment insures that teacher instruction is a relevant and efficient means to achieve the critical outcome: competent performance in community living.

Future-oriented

A program for students with moderate/severe handicaps should focus on what vocational, leisure, and personal management prospects will be available for the student to access in the future. For instance, despite the sometimes bleak vocational outlook for students after graduation, preparation for workshop employment exclusively takes off the pressure to expand adult vocational services and limits students when competitive employment opportunities become available. By being informed of the limitations in current work options, parents can advocate for the development of increased or novel programming efforts.
Comprehensive

If students are to be independent in a variety of post-school settings, programs must prepare students to gain access to work, living, and leisure opportunities in their local community. By concentrating on all three areas, students will become proficient in those activities most likely to effect their self sufficiency as active community members.

Parent Involvement

Traditionally, parent involvement has been limited in special education programs. However, without input regarding parent/family values and life styles much of what is taught at school may have little likelihood of being performed outside of school house. Parents are therefore involved in actively developing the student IEP. In addition, ongoing scheduled contacts with parents help the teacher determine if students are receiving the opportunity to perform school taught IEP goals at home or in the community.

Effective

The above values embodied into a program for learners with moderate/severe handicaps will be inadequate unless it can be determined that the program is in fact increasing a student's independence and competence. To determine whether the program is truly effecting the quality of life in student's vocational, leisure, home, and community environments, standards must be designed to measure student's level of independence in actual performance settings. We can all agree on a set of values, but unless we have an objective means of measuring our intentions, our values may never be translated into action.

E T AND T IMPLEMENTATION CHECKLIST

Accomplishment 1.0 STUDENTS INTEGRATED IN SCHOOL AND COMMUNITY

Timeline for New Items	Element	Data Source	Standard	Status 1	2	3	Comments
	1.1 Interactions with non-handicapped peers during school hours	Classroom Schedule	Each student will have at least 25 scheduled opportunities to interact with non-handicapped peers weekly. These opportunities may occur (a) in integrated class, (b) during lunch and other breaks, (c) while working with peer tutors, or (d) in community-based training.				
	*1.2 Contact with non-handicapped schoolmates during after school hours	Activity Log	Each student will complete at least one activity per term with non-handicapped peers outside of school hours. This activity (a) occurs after school or on the weekend, (b) occurs with a non-handicapped school mate, or peer from the student's neighborhood, and (c) does not involve a "special" activity organized primarily to accommodate individuals with disabilities.				
B	1.3 Instruction in community settings	Classroom Schedule	a. Each student between 15-17 years of age will spend at least 25% (30%*) of the week in community training sites. This may include training in vocational, personal management, or leisure domains. b. Each student between 18-21 years of age will spend at least 35% (40%*) of the week in community training sites. This may include training in vocational, personal management, or leisure domains.				
W	1.4 Age Appropriate	Reviewer's Analysis	Classroom and instructional materials are commensurate with same aged nonhandicapped peers.

Vocational Training Formats for High School Students with Severe Handicaps

FORMAL	DEFINITION	ADVANTAGES	DISADVANTAGES
1. Individual Job Stations in the Community	A work training station in public or private sector, service or industrial setting designed to accomodate a single student. Supervision and training is initially provided by school personnel who have completed a comprehensive job analysis. Student performance is maintained through daily contact with indigenous supervisors and co-workers, with systematic follow-up by school personnel. Individual job sites may be utilized in any job or job cluster.	1. Opportunity to provide regular and frequent training in actual work environments. 2. Training may lead to employment in the worksite. 3. Regular and frequent contacts with nonhandicapped co-workers.	1. Staff intensive training format. 2. Requires high proportion of staff time to complete job development and job analysis activities. 3. Limited opportunities for job expansion within the existing site.
2. Community Work Crews	An instructional and organizational format designed to provide vocational training to up to four students in multiple public or private sector, service or industrial settings. Supervision and training are continuously provided by school personnel who have completed a comprehensive analysis of all job tasks in each worksite. Student performance is maintained through regular and frequent contact with school personnel. Crews may be utilized in any job or job cluster that allows efficient division job requirement into functional work tasks.	1. Efficient utilization of staff for vocational training. 2. Opportunities to teach generalized work skills. 3. Opportunities for job expansion within and across work sites. 4. Regular and frequent contacts with nonhandicapped co-workers. 5. Training opportunities not limited to a single work site or job cluster	1. Little opportunity to fade trainer presence. 2. Limited opportunities to work in crews after high school. 3. Difficult to schedule sufficient training time for all students during crew start-up. 4. Increased resources required for travel.
3. Centralized Work Training Sites	An instructional and organizational format designed to provide vocational training to up to ten students in a single public or private sector, service or industrial settings. Supervision and training is continuously provided by school personnel, with assistnace from indigeneous supervisors or co-workers. Job assignment and design is based on a comprehensive analysis of all jobs in the work site. Centralized Work Training sites may be utilized in any job or job cluster that allows efficient division of job requirements into functional work tasks.	1. Efficient utilization of staff for vocational training. 2. Opportunities to teach generalized work skills. 3. Opportunities for job expansion within and across work sites. 4. Regular and frequent contacts with nonhandicapped co-workers. 5. Training not limited to a single job cluster. 6. Work tasks may be designed to match post-school employment opportunities.	1. Difficult to schedule sufficient training time for all students during start-up. 2. Require staff assignment to central site.

Common Questions About

THE EMPLOYMENT TRAIN   TRANSITION MODEL

<u>What are the benefits of ET&T implementation to the severely handi-
capped students in the participating classroom</u>?

Students achieve greater independence both at home and in the
community following graduation (if parent allows--some do not); they
receive training in work skills and in self-management skills
(scheduling time, making choices, problem solving, time management);
and have an increased ability to use leisure time appropriately. In
addition, students benefit from state-of-the-art teaching technology
and increased instructional time, from increased contact with non-
handicapped people, and from learning a functional curriculum
focused on adulthood. Project data indicates that improvements in
students' lifestyles also take place following model implementation.
After following students in ET&T classrooms over a year, the data
show a significant increase in student performance of activities in
integrated community settings. Students in ET&T classrooms are
spending more time in community settings engaged in leisure activi-
ties, personal management tasks such as shopping, and work as a
result of their participation in the model. In other words, ET&T
activities have an impact on students' quality of life outside of
school.

Aren't severely handicapped students too vulnerable to access the

community by themselves?

The notion that handicapped persons are more vulnerable to community

risk may be addressed in two ways:

1. Severely handicapped persons are only vulnerable if they are not
    adequately trained. The success of training for adaptive com-
    munity behaviors has been well documented.

2. The "dignity of risk" (Perske, 1972) is an important aspect of
    learning for everyone. Handicapped students have the right not
    to be overly protected and hence restricted from the opportunity
    for community integration. The key is supervised training so
    that risk is minimized. Handicapped citizens, like everyone
    else, have the right to realistic feedback from others.

Aren't severely handicapped students too slow and low functioning to

be out in the community? Won't their presence annoy other citizens?

This question has a multifaceted response:

1. Many individuals--the elderly, individuals with crutches or
    limbs in casts--may also respond more slowly. Society is gener-
    ally tolerant of them.

2. A handicapped individual completes tasks slowly or
    inappropriately due to a lack of training or exposure; there-
    fore, better training over time will eliminate the "annoyance"
    to other citizens.

3. Handicapped individuals are members of the local community and
    have the same claim on access to services and opportunities as
    anyone else. Personal inconvenience is an excuse, not a reason,
    for segregation or denial of access.

4. Prejudice against a minority group is reduced by exposure to its
    members, making this a compelling argument for integration in
    the schools and in the community. Successfully trained, handi-
    capped citizens then are their own best advocates.

Does the emphasis on community training mean that academic skills will no longer be taught?

Training of academic skills will not be abandoned, but will be taught in context rather than in isolation. Reading, math, or language skills will be taught in the context of valued activities such as shopping, cooking, or riding the bus. Treatment of academic skills is influenced by the concept of "opportunity cost": Given limited instructional time and many activities that could be taught, it is important to spend educational time in those areas that will maximize success after leaving school. For a student with a severe handicapping condition, it is considerably more important to learn community and job skills than to learn more math facts, adjectives, or sight words.

Can severely handicapped individuals actually learn to use community stores and services? Isn't is unrealistic to think of them participating in community activities?

Severely handicapped students may learn more slowly or need to employ prosthetic devices or alternate performance strategies to successfully function in the community. It is likely that lack of skill is due to lack of training and access, not lack of ability.

Will an ET&T classroom be more expensive to operate than a traditional secondary classroom?

No, the ET&T model has been designed to fit whatever resources are regularly available to the classroom. In all likelihood, however, it will be necessary to allocate those resources in a different way.

Rather than expenditures for purchases of commercial curriculum
materials, teachers will need support for local curriculum develop-
ment activities. Instead of traditional classroom supplies
(workbooks, prepackaged materials), classrooms will need flexibility
to purchase consumable supplies (cooking ingredients, restaurant
meals) and other nontraditional items (bus tokens, etc.). Parents
can be expected to provide at least partial support for some commun-
ity-based activities that benefit families directly (such as
shopping for grocery items) and for those activities that parents
usually support (e.g., student leisure activities).

What is the role of related service staff (occupational therapist
(OT), physical therapist (PT), speech/language specialist, adaptive
physical education specialist) in the ET&T model?
OT, PT, speech and language specialists act as consultants to the
teacher and may assist in the following ways: evaluate current
level of performance; give input on IEPs and suggested activities;
develop prosthetic devices; train students on instructional programs
such as telephone use, grocery shopping, using fast food restau-
rants; and monitor effective communication in community settings.
The adaptive physical education specialist may function as a consul-
tant or provide instruction on age-appropriate recreation and
leisure skills in the school or community. Related service staff
coordinate goal development, assessment, effective classroom manage-
ment and procedures, and instruction with the teacher, aide, and
other support staff.

Is ET&T an appropriate undertaking? Is the idea itself credible?
Are the model developers reputable and knowledgeable?

The development of ET&T was supported by a contract from the Special
Education Program, U.S. Department of Education, to the University
of Oregon and the Lane Education Service District. Prior to the
contract, the University and Lane ESD staff had collaborated on a
number of other projects related to secondary education for severely
handicapped students. Staff are experienced in teaching, program
development, staff training, research, and program administration.
The concepts of age-appropriate, integrated, community-based, and
activity-oriented training for high school students with severe han-
dicaps appear throughout contemporary program literature across the
nation.

What are the benefits of ET&T implementation to the participating
parents?

Parents are able to give planning and program-evaluation assistance,
to receive specific outcome information on their son's/daughter's
progress, to coordinate home and school/community programs with the
teacher, to see increased independence of their son or daughter, to
use sets of materials developed by ET&T, to actively participate in
transition planning, and to have increased involvement in goal set-
ting.

Don't some components of ET&T actually duplicate the
responsibilities of adult service programs?

The ET&T model does include some components that can be expected to
be in the work domain of adult service agencies. However, many
adult service agencies are not familiar with the service needs of
severely handicapped students and find it difficult to respond with
adequate services. The goal of the program is to provide informa-
tion about students to the representatives of these agencies that
would allow them to do better planning. The process of transition
requires early involvement of all participants (school, parents,
adult service agencies) in the future planning for an individual
student. All potential service providers need to work together
before, not after, high school completion.

RESIDENTIAL PROGRAMS

R.1   Newton, S., Romer, M., Bellamy, G. T., Horner, R. H., & Boles, S. M. (1983). Neighborhood Living Project Group Home Operations Manual. Eugene, OR: University of Oregon, Center on Human Development.
$30.00

The Neighborhood Living Project Operations Manual for Specialized Group Homes describes standardized systems and procedures for managing a small group home for individuals with severe handicaps.

R.2   Newton, S., Romer, M., Bellamy, G. T., Horner, R. H., & Boles, S. M. (1983). Neighborhood Living Project Tenant Support Operations Manual. Eugene,OR: University of Oregon,Center on Human Development. $30.00

The Neighborhood Living Project Operations Manual for Intensive Tenant Support programs describes standardized systems and procedures for managing a small residential program that provides services to individuals with severe handicaps living in apartment settings. The purposes of the manual are identical to those of the manual for group home programs.

R.3   Newton, J. S. (1986). Neighborhood Living Project Basic Inservice Training Package. Eugene, OR: University of Oregon, Center on Human Development. $10.00

This package, which consists of eight learner-guided, programmed "modules", is designed to help staff members teach themselves how to perform the basic responsibilities and duties of a staff person in a residential program using the Neighborhood Living Model.

R.4   Newton, J. S., & Horner, R. H. (1986). Neighborhood Living Program Advanced Training Package. Eugene, OR: University of Oregon, Center on Human Development. $5.00

This package is a learner-guided manual that introduces staff in residential programs to more advanced concepts and procedures for assisting people with severe disabilities to learn adaptive skills.
