#### ABSTRACT

This compilation of tables and a brief text on the states' educational programs emphasizes demographic and fiscal background information. Public school system characteristics by state show the following: number of school districts, number enrolled, school age population estimates, percent of persons age 5-17 years in households below the poverty line, percent of minority enrollment, and public and private school enrollment. Population characteristics include per capita income, percent of adults with 4 years of high school, place of residence (central cities or rural areas), percent voting for President, percent voting for Congress, and resident population per square mile. State resources include gross state product, relative tax capacity, and a grouping of states in five categories of relative wealth. A glossary explains each table. States' educational policies and programs include length of school day and year, monitoring of engaged learning time, students: mandatory entrance and exit ages, instructional programs in kindergarten, graduation requirements, and graduation requirements in core subjects. Teacher preparation includes coursework and assessment requirements and alternative routes of teacher preparation. The final section summarizes effective schooling programs in each state and concludes with a note on future efforts to obtain state-level measures of student outcomes. (MLF)

# STATE EDUCATION INDICATORS

1988

The Council of Chief State School Officers (CCSSO) is a nationwide nonprofit organization of the 57 public officials who head departments of public education in every state, U.S. extra-state juriscictions, the District of Columbia, and the Department of Defense Dependents Schools. CCSSO seeks its members' consensus on major education issues and expresses their views to civic and professional organizations, to federal agencies, to Congress, and to the public. Through its structure of standing and special committees, the Council responds to a broad range of concerns about education and provides leadership on major education issues.

Because the Council represents the chief education administrator, it has access to the educational and governmental establishment in each state and the national influence that accompanies this unique position. CCSSO forms coalitions with many other education organizations, and is able to provide leadership for a variety of policy concerns that affect elementary and secondary education. Thus, CCSSO members are able to act cooperatively on matters vital to the education of America's young people.

In 1985, the Council of Chief State School Officers founded the State Education Assessment Center to provide a locus for leadership by the states to improve the monitoring and assessment of education. This is the principal report of the Assessment Center's program of indicators on education.

### Acknowledgements

The preparation of this report would not have been possible without the cooperation of the staff members of the education agencies of the states. Their efforts to provide the data included in this report are deeply appreciated. The leadership of the National Governors' Association and the support of other organizations in pursuing education reform in the United States must also be recognized. The efforts of the advisory networks to the State Education Assessment Center, chaired by Irene Bandy of Ohio and Anne Hess of Alabama, in planning and formulating these annual reports are gratefully acknowledged. Finally, the guidance and support of the Council's Committee on Coordinating Educational Information and Research, chaired for the past three years by Richard A. Boyd of Mississippi, are gratefully recognized.

This report was prepared by Dr. Ramsay Selden, Director of the State Education Assessment Center, and Todd Landfried, Senior Project Associate for the CCSSO Education Data Improvement Project. Additional support was provided by the staff of the CCSSO State Education Assessment Center.

#### The Purpose of this Report

Information is needed to monitor the dimensions of our educational system and to assess the quality of its accomplishments. This report represents an effort by chief state school officers to compile information systematically on

the states' educational programs and to report that information regularly to the public and their policymakers. In the future, the report will be expanded as other information becomes available.

#### Setting the Context: The Background for Education in the States

This year, the report emphasizes demographic and fiscal background information bearing on the states' education systems. In monitoring education, it is important to set the context within which the schools operate:

- How large and complex are the school systems in the states?
- \* How urban or rural are the areas they serve?
- \* What are the characteristics of the populations they serve?
- \* What special needs do students bring to the states' schools?
- What resources can the state draw on to build its schools?

Setting the background is important so that fair and constructive comparisons can be made among the states on educational programs and accomplishments. Large gaps exist in the information base on education. These gaps will take time to fill. At present, little comparative information is available on the outcomes of education - outcomes such as student achievement or dropout rates. Meanwhile, valid and comparable information does exist describing background conditions bearing on the educational programs of the states. This information must be compiled to describe the environment in which education operates.

### The CCSSO Program on Educational Indicators

Beyond Test Scores. The Council of Chief State School Officers has committed itself to state-by-state reporting of basic educational indicators. The Council is working toward reporting information on a comprehensive set of indicators designed to describe the states' educational systems. Each year, data that are available on these indicators and that meet the program's quality standards are included in these reports.

In order to provide useful information that avoids simplistic and misleading comparisons, educational indicators must address three aspects of the educational system. First, there are educational outcomes. These are the end products or accomplishments of the educational system. Ultimately, the outcomes must represent the different goals of education: student attendance; student achievement; school completion; and student status and progress after elementary and secondary schooling.

Secondly, these outcomes must be related to state-level policies of the educational program—features of the educational system that can be changed for the better: instructional time; instructional content; effective schooling; teacher quality, resource allocation, and policies on program participation.

Thirdly, any analysis of outcomes and programs must take into account each state's background characteristics. These are often beyond the control of the education system, but they determine to a certain extent the needs and accomplishments and may affect the resources of the schools. Measures in all three areas must be examined and interpreted together. It would be of little value to learn that students on average do less well in State A than in State B. But it would help both states to know if they are doing better or worse than states facing similar conditions, and whether better performing states have programs they should be considering.

The operational model for these three areas is shown below:

State Background Characteristics

Figure 1: CCSSO Indicators Model

#### The Quality of Education Data

In each of these three areas—state background characteristics, educational policies and practices, and educational outcomes indicators are being assembled or developed and reported by CCSSO and by other state, local, and national organizations.

Because educational data vary in their quality and in the appropriateness of the purposes for which they are used, CCSSO applies rigid standards to the information used to report on these indicators. First, only information is used that is important and useful for monitoring education. Data that are marginal in utility are not reported. Second, only statistics are used that meet rigorous standards of technical quality. These standards include:

- the validity or appropriateness of the information for the purpose to which it is put,
- \* the reliability or stability of the information,
- the consistency of the information across reporting units, such as states; and
- the accuracy and completeness of the information.

Data not meeting these minimum standards are not used in these reports, even though there may be pressures to use them. For example, statewide averages are available for college-admission tests, but this information is not a valid measure of general levels of student achievement in the states. Average attendance data are available, but they are not measured consistently across states. As a result, neither of these indicators, in their present form, is included. Efforts are underway, however, to address these needs. The states are working with the federal government to prepare for state-by-state achievement testing in 1989-90 school year, and recommendations have been prepared for standardizing attendance data in the state-federal core data on education. No data can be collected and reported until it is technically, financially, and educationally feasible and reasonable to do so. A large part of the progress that will be made in the future to collect education data will consist of attaining this feasibility.

#### **Using Educational Data**

Reporting educational data in a comprehensive manner enables useful comparisons to be made and provides clues to educational programs and policies that seem to make a difference. States can compare their status and progress with states facing similar circumstances, and policymakers can look at the programs of high-performing states in relation to their own. In and of themselves, indicators like these cannot prove that a program is effective or that a method is superior, but they can provide valuable comparative clues to consider with other data.

#### The Next Steps

Establishment of an adequate information base on education is a collaborative effort in which all sectors of the education community, including the public, must participate. Future reports must contain information useful to these sectors including: valid measures of teachers' professional abilities; accurate measures of who finishes school and who does not; what happens to students after they leave school; and data on the educational experiences provided to different groups, especially atrisk students. The years ahead could strain our resources as we support educational services so important to our strength as a society and invest in information that allows us to better manage our schools. It is crucial that we do both. We believe that once the investment in information is made, the return in terms of efficiency and understanding our educational system will greatly exceed the original costs.

Sources, Gross State Product figures are from the U.S. Department of Commerce publication. Survey of Current Business. Volume 68, No. 5, May 1988. State Tax Capacity figures are from the Advisory minission on Intergovernmental Relations. Fiscal Capacity Diskettes for 1987. School-age child figures are from the U.S. Bureau of the Census. Current Population Reports. Series P. 25, No. 1024—202: Gross State Product Per School-Age. Child figures are calculated using 1985-86 Census Data for resident persons age 5 - 17 years.

## Using Background Characteristics Table 11

In the future, as outcome data become available, it will be desireable to group states on their background features as a basis for comparison. Shown below is how gross state product per school age child might be used to classify states.

	STATE	1986 G.S.P. Per School- Age Child

States may also be placed in regional clusters in addition to being grouped according to background characteristics. Below is a classification of regions similar to those used by the National Governors Association to report state-by-state data on education.

NEW ENGLAND	Connecticut Maine Massachusetts New Hampshire Rhode Island Vermont
MIDDLE ATLANTIC	Delaware Maryland New Jersey New York Pennsylvania
MIDWEST	Illinois Indiana Michigan Minnesota Ohio Wisconsin
WEST NORTH CENTRAL	lowa Kansas Missouri Nebraska North Dakota South Dakota
EAST SOUTH CENTRAL	Alabama Kentucky Mississippi Tennessee
S''-UTH A : LANTIC	District of Columbia Florida Georgia North Carolina South Carolina Virginia West Virginia
WEST SOUTH CENTRAL	Arkansas Louisiana Oklahoma Texas
MOUNTAIN	Anzona Colorado Idaho Montana Nevada New Mexico Utah Wyoming
PACIFIC	Alaska California Hawaii Oregon Washington
EXTRA-STATE JURISDICTIONS	American Samoa Guam Puerto Rico Virgin Islands

#### TABLE 1

Fall Membership in Public Schools 1987, the number of students listed on the current roll of a school on a given date. Membership is obtained by adding the total number of original entries and the total number of reentries and subtracting the total withdrawals, or by adding the total number students present and the total number absent.

Number of School Districts 1987-88. the number of localed ucation agencies (LEAs) which operated public elementary and secondary schools in a given state during the 1987-88 school year.

Membership Under 1000: the number of public school districts within a state with student memberships under 1000.

Percent Membership Under 1000: the percentage of all public school districts in each state with memberships of less than 1000 students.

Number of Public Schools, the count of public elementary and secondary schools meach state during the 1987-88 school year. A school is defined by the National Center for Education Statistics as "a division of the school system consisting of students in one or more grade or other identifiable groups and organized to give instruction of a defined type. One school may share a building with another school or one school may be housed in several buildings. (Digest of Education Statistics, 1988, p. 390)

#### TABLE 2

School Age Population 1977, 1982, 1987: the total estimated population of persons age 5-17 years for the years 1977, 1982, and 1987. These figures are based on resident population which includes Armed Forces personnel based within the state.

The percent change figures show the increase or decrease in the estimated schoolage population for the ten-year period 1977-87 and the five-year penod 1982-87 expressed as a percent of the base year. A minus sign [-] indicates a decrease.

#### TABLE 3

School Age Population as a Percent of Total Population 1977, 1982, and 1987: the percentage of persons age 5-17 years in each state as part of the total population of the

state. These figures are based on U.S. Bureau of the Census estimates and are resident counts which include families of Armed Forces personnel based within the state.

The change figures show the increase or decrease in the percent school-age population of the total population for the tenyear period 1977-87 and the five-year period 1982-87. The change is expressed in percentage points and is not the numerical increase expressed as a percent of the base year figure. A minus sign [-] indicates a decrease.

#### **TABLE 4**

Percent Persons Age 5-17 Years in Households Below the Poverty Line 1970 and 1980. the percent of persons of school age living in households with incomes at or below the official poverty line. Poverty status is based upon income earned in the preceding year. The poverty level (in current dollars) for a family of four was \$3,968 in 1970 and \$8,414 in 1980. These data are estimates based upon a sample of U.S. households taken during the decennial census.

The "Change 1970-80" figure reflects the difference in percentage points between 1970 and 1980 and does not reflect the change in the actual number of persons age 5-17 years in households at or below the poverty line.

Percent Minority Persons Age 5-17. the percent of the total population age 5-17 years who are black, of Spanish origin, American Indians or Alaskan Natives, or Asian or Pacific Islanders.

#### TABLE 5

Total School Enrollment. Fall 1980 is the sum of public and private elementary and secondary enrollments in the United States. Enrollment is a count of the number of students registered in an elementary or secondary school at a given time.

Private School Enrollment, 1980. the enrollment count in private elementary and secondary schools for Fall 1980. This count includes only schools which offer first grade or above and includes special education, vocational/technical, and alternative schools. Approximately 5 percent of private schools are not represented in this count as some schools were not included in the survey.

Percent of Total Enrollment, Fall 1980: private elementary and secondary school enrollment as a percentage of total U.S. school enrollment.

#### TABLE 6

Per Capita Income. the average level of money income for each member of the population in a state. Money income is actual cash receipts and includes gross wages and salaries, proprietors' income, pension and annuity payments, government transfers (such as AFDC and Social Security), alimony, cash rent, interest and dividends. Per Capita Income is reported in current dollars (not adjusted for inflation).

Percent Adults with Four Years of High School. the percentage of persons 18 years of age or older who have completed four years of high school.

#### TABLE 7

Residence in Central Cities: the percent of the total population (all ages) who reside in central city jurisdictions of urbanized areas. The U.S. Bureau of the Census defines central cities as the largest city, or one of the largest cities in an urbanized area. An urbanized area has a population of at least 50,000 persons with a population density of at least 1,000 persons per square mile.

The "Change 1970-80" figure reflects the difference in percentage points between 1970 and 1980 and does not reflect the change in percent in the actual central city population. A minus sign [-] indicates a decrease.

Residence in Rural Areas: defined as any area with a population of less than 2,500 inhabitants. A rural classification does not imply farm residence or a sparsely settled area, since a small city or town is rural as long as it is outside an urban area and has fewer than 2,500 inhabitants.

The "Change 1970-80" figure reflects the difference in percentage points between 1970 and 1980 and does not reflect the change in percent in the actual rural population. A minus sign [-] indicates a decrease.

#### TABLE 8

Percent Voting for President. the percentage of all persons of voting age (18 years and older) in a state voting for President in the 1980 and 1984 elections. The figure "Change 1980-84" reflects the change in the voting percentage for a state expressed in percentage points. It does not reflect the percentage change in actual vote totals.

Percent Voting for Congress: the percentage of all persons of voting age (18 years and older) in a state who voted in the 1984 and 1986 Congressional elections. The figure "Change 1984-86" reflects the change in the voting percentage for a state. It does not reflect the percentage change in actual vote totals.

Some states do not require the tabulation of votes for unopposed candidates. These states are denoted with an asterisk (\*).

#### TABLE 9

Resident Population Per Square Mile. defined as the average population density of a state for a given year. It is the sum of total resident population divided by total

land area of the state.

The "Change 1980-86" figure reflects the increase or decrease in a state's population density expressed as a percent of the original figure. A minus sign l-lindicates a decrease in population, not land area. In mar, states, population densities are low so small absolute changes result in large percentage differences.

#### **TABLE 10 - State Resources**

Gross State Product per School-Age Child. the sum of a state's GSP for a given year divided by the number of resident persons in the state between the ages of 5 and 17 years. These data are in current dollars (not adjusted for inflation).

Gross State Product - 1986 (in millions of dollars). Gross State Product (GSP) is the gross market value of the goods and services attributable to labor and property within a state. It is the state equivalent of the national gross domestic product. Current dollar GSP estimates - used in this report - reflect changes in the command over resources associated with production and are particularly useful for chalyzing the differential changes in relative

output prices, such as changes in energy and agricultural prices. Thus, they can be used to measure the resource base available to a state from which it can raise revenue to provide services.

The "Change 1985 86" figure reflects the percent increase or decrease in a state's GrossState Product per School-Age child. A minus sign [-] indicates a decrease.

Relative Tax Capacity: 1984 and 1985: the revenues that would be raised in each state if the state-local governments there taxed every potential tax base at the U.S. average rates. Tax bases include personal income, sales, fees, property, corporate income, etc. For example, if the U.S. average is 100, Alabama could raise 75% of the national average if it collected taxes at average rates from all these tax bases, while Alaska could raise 259%.

Included in this indicator are taxes such as the corporate income tax and severance taxes that are levied wholly or in part on businesses of various kinds. The ability of some tax payments to be "exported" to another state has been taken into account during the development of this indicator.

# Effective Schooling Programs

STATF	INSTRUCTIONAL LEADERSHIP	EFFECTIVE TEACHING	SCHOOL CLIMATE	PROFESSIONALISM COLLEGIALITY	REGULAR ASSESSMENT & USE OF RESULTS	COM IEHENSIVE EFFECTIVE SCHOOLS PROGRAM
Atabama	LEAD Project Admin istrator training in man- agement and leadership skills (1987)	Program assessments and technical assis- tance for targeted school systems (1978)	State Board resolution required all LEAs to adopt policies for discipline, (1984)	Assistance to teachers w/children with specific behavioral/learning yoblems.	Basic Competency test for grades 3,6.9. Graduation Exam at grade 11 (1980)	No program reported
Alaska	The Principals' Leader ship Academy begun in 1983. Rural Mentor Teacher Program is continuing.	The Department conducts ongoing training and technical assistance through workshops, conferences, and district training sessions. The Alaska State Writing Project continues (from 1980), a Math Consortium on that model is in its second year	Ongoing efforts and first annual Seward Wellness Conference on health of staff, students, and school. Thirty-six schools sent teams to share what they learned with their colleagues	Alaska Professional Cabinet brings together leaders of professional organizations in target curriculum areas and district office curriculum leaders. The Leadership Academy, Alaska Coalition on Education also contribute, and electronic mail tinks educators in all school districts and areas of the department	Last February compled results of student achievement tests in all districts over the past 3 years. Regulations are now proposed to conduct student assessment statewide using a single test at three grade levels (1988)	Effective schooling principles are part of virtually all programs and practices sup- ported by the depart- ment (1980)
American Samos	Northwest Regional Lab program with principals on school management (1985)	Project IOTA: model for observation and evaluation of teachers' performance (1970)	Officer of Teacher Services worked w/ teachers & principals on improving school climate. (1985)	No program reported	Conducted workshops at school sites to discuss test results and curricular applications. (1985)	116 1
Arizona	Anzona Principal's Academy focuses on instructional leadership and school improve- ment (1984)	Research-based techniques to increase student opportunity for success. (1985)	Intro to classroom management techniques and effec- tive attitudes of teachers/students. (1986)	No program reported	ITBS for all 1-8 graders. SAT* nh ?- 12 graders. Figures are monitored to adjust instruction	No program reported
Arkansas	The Arkansas Principal's Assessment Center was created in 1986 to improve the quality of leadership at the school building level through more objective selection procedures and a clinical approach to professional development. The LEAD project objectives and to improve the leadership suils of local administrators, enhance the leadership for women and minorities; and, premote a collaborative network. (1986)	The Program for Effective Teaching trains teachers how to teach more effectively and trains administrators in classroom observation and supportive supervision. Bloom's tearning taxonomy and theory of mastery learning and on the research done by Madelino Hunter and others on effective teaching. (1979)	Department of Education required to develop guidelines for the development of school district discipline policies, required each school district to develop student discipline policies monitored as a part of the accreditation process. All LEA's have student discipline policies on falle that meet the intent of Act 104 of 1983. (1984)	Required each school district to file a six-year plan with the Arkansas Department of Education. These plans were developed with the cooperation of school personnel, parents, students, and the community. The plans provide a step-by-step process for improving the educational system in each community (1984)	Teacher Expectations and Student Achievement (TESA) inservice training program for teachers of all subjects, grades K through the college level. Teachers are trained to use an interaction model involving specific supportive and motivating techniques with all students in a nondiscriminatory manner (1984)	No program reported
Catifornia	California School Leadership Academies train prospective ad- ministrators & superin- tendents (1983)	Mentor Teacher Pro- gram supends from state to teachers for specific projects. (1983) In addition, comprehensive state- wide professional de- velopment program	Providing safe schools, improving guidance and counseling	Curriculum frameworks and guides are produced in each subject area. The counties and state hold state wide awareness conferences: the counties and state hold one more in-depth conference for teachers and administrators in the particular subject area and a conference designed for administrators responsible for implementing the new curriculum is held	Assessment Program Performance Report to California schools for grades 3, 6, 8, and 12	(19:21

	<u>_</u>					
STATE	INSTRUCTIONAL LEADERSHIP	EFFECTIVE TEACHING	SCHOOL CLIMATE	PROFESSIONALISM/ COLLEGIALITY	REGULAR ASSESSMENT & USE OF RESULTS	COMPREHENSIVE EFFECTIVE SCHOOLS PROGRAM
Colorado	See Comprehensive effective schools program (1988)	See Comprehensive effective schools pro gram (1988)	See Comprehensive effective schools program (1988)	See Comprehensive effective schools program (1988)	State Board estab- lished the Colorado Student Assessment Program with testing to begin in Fall 1988, Public School Finance Act of 1988 requires State Board to estab- lish rules for reporting/ measuring educational achievement by local school districts and re- quires school buildings to report on educa- tional achievement annually to the public. (1988)	The Public School Finance Act of 1988 requires an accountability committee for every public school who, working with staff, will develop an annual plan to improve achievement and graduation rates for the building's students. Must report annually on how well school has met the goals and objectives set forth in the plan. Plans must be approved by Department Staff and the State Board of Education. Intent is to empower each school to identify those elements of "effective schooling" research that best fit its unique circumstances and to implement them within the building. (1988)
Connecticut	Principals' academy and summer work- shops for teachers/ad- ministrators. (1985)	Summer and Institute workshops on effective teaching. (1984 and 1986)	School Climate ques- tionnaire used to deter- mine areas of improve- ment (1982)	(See School Climate)	Statewide Assessment Program. Annual workshops for teach- ers and curricular coor- dinators, principals and test directors. (1985)	Provide onentation, data management, planning and evaluation, resource coordination, and implementation services to build internal capacity for school renewal. Prortity is given to schools with a substantial number of socioeconomically and/or educationally disadvantaged students. (1980)
Delaware	Delaware Principals Academy provides monthly workshops for school administrators School review process aimed at instructional leadership. School leaders responsible for the management and evaluation of instruc- tion have been re- quired to receive 90 hours of training over the past 3 years. Will be extended to an ad- ditional 45 hours over next 3 years. (1984)	ASCD s program "Effective Teaching Through Higher Achievement" was expanded and presented to all teachers in the State using a turnkey approach Similar programs are provided new trachers (1986)	Workshops available through DPI and the Delaware Teacher Center Program Standards for Delaware schools used in the Delaware School Improvement Review Process also focuses on school climate (1986)	Preparation for and follow-up to the Delaware School Review Process continuously address goal setting, curriculum development, classroom management, nurtunng, etc	Assessment data are used as indicators for ways to improve instruction and curriculum. Both formal and informal data are used. In its is part of the effectiveness training for teachers (1984)	How teachers use as- sessment data is a specific category on the Delaware Perform- ance Appraisal System instrument. The Dela- ware Principal's Acad- emy also holds pro- grams for school ad- ministrators and the Teacher's Center pro- vides courses for teachers based on their own needs as- sessment.
District of Columbia	The Pnnoipals' Center, organized as a school improvement project, provides opportunities to refine supervisory and management skills, explore alternative methodology, increase professional collegiality and expand professionally (1984)	Under the auspices of the Division of Staff Development, courses on effective teaching are offered to teachers duning the school year and summer. The Teacher Center also offers a variety of courses aimed at en- hancing teachers' skills and enniching their pedagogical repertoire. (1984)	On-site assessment process examines schools on whether there is a safe and orderly environment, maintenance of the physical plant, mutual respect in work relations, and whether high expectations are being communicated to staff, students, and parents. (1986-87)	Secondary School Improvement Process, emphasizes the need to improve staff, students, and parents in the development. Implementation and evaluation of school improvement plans. Accomplished through on-going training of local school staff (1985)	The On-Site Assessment process uses Effective Schools cor- relates to determine strengths and weak- nesses of local schools. Results of life skills, end of-course, and NRT are used for student placement and are given to school principals and Im- provement Teams as part of the data base used for developing school plans. (1987)	School improvement was begun in 1985 with emphasis on Senior High Schools, Junior High Schools were added in 1986. The initial focus was on process. Content was the focus in 1987-88. (1985)
Florida	Leadership training and competency- based certification for school principals. (1985)	Instructional strategies training for regular and exceptional education teachers based on research from University of Kansas.	(See Professionalism/ Collegiality)	E. nool based manage ment projects funded for 2-3 years to assist with the planning, de- velopment, and im- plementation of school based management.	Statewide assessment program generates both data and training materials on using test results. (1976)	In 1988 summer team training for selected elementary schools will be provided.

STATE	INSTRUCTIONAL LEADERSHIP	EFFECTIVE TEACHING	SCHOOL CLIMATE	PROFESSIONALISM/ COLLEGIALITY	REGULAR ASSESSMENT & USE OF RESULTS	COMPREHENSIVE EFFECTIVE SCHOOLS PROGRAM
Minnesota	Minnesota Educational Effectiveness Administrative Training Program - Part of the comprehensive Minnesota Educational Effectiveness Program, this two-year, 40-day training program will promote skills in ten areas to support organizational planning, staff development, program development, program dassessment of productivity. (1988)	The Minnesota Educational Effectiveness Program has identified six charactenstics which describe effective instruction (1) Strategies that communicate the seriousness and purposefulness with which the school takes its task; (2) High expectations and positive interpersonal relationships for all students; (3) Flexible grouping based on student needs; (4) Instructional preparation taking into account student needs, learning styles, and available resources; (5) Effective mode's of teaching to increase academic learning time and student achievement; and (5) Assessment, monitoring, and appropriate for 1983.	One of the fifteen characteristics identified by the Minnesota Educational Effectiveness Program as being present in effective schools, participating schools are directed to assess the extent to which the climate in their building provides both a satisfying and a productive environment for teaching and learning. (1983)	Staff in the 430 participating schools determine the extent to which collaborative planning and collegial relationships reflect the belief system within the school, to what extent it is practiced, and develop action plans to reduce the discrepancy between value and practice. (1983)	No program reported	The Minnesota Educational Effectiveness Program is funded in part by the State Legislature and supported by District funds. The program has expanded to involvement of 430 schools. Each project involves an entire school staff with a commitment to the long term. Innovations are therefore becoming part of established practice in the target schools. A facilitator to help schools implement change is located in each region of the state, not consultants but rather enablers and trainers. Two statewide conferences are held each year, with content based on assessed needs. (1983)
Mississippi	Statewide "Instructional Manage, nent" program which requires strong instructional leadership at both the building level and district level. Reinforced in 1985 with the establishment of the School Executive Management Institute, a program for providing management and leadership training for administrators. (1978)	Through the State Education Reform Act of 1982, major emphasis has been placed on the concepts and constructs of "Effective Teaching" through majoration as Performance-Based Accreditation. Staff Development, and Personnel Appraisal. (1983-84)	Two major programs focused on "School Climate" at the state level, Performance-Based Accreditation and Staff Development. (1984-85)	Collegiality is a corner stone of the statewide staff development program and has been the major emphasis of the ten-year instructional Management program. (1978)	The instructional Management program has been based upon the assessment of learner outcomes and using the results for instructional program improvement. Performance-Based Accreditation is based upon assessment of outcome measures and results are used for school improvement. (1978)	The entire Mississippi Education Reform Act is predicated upon en- compassing the effec- tive school correlates into all aspects of the educational environ- ment. (1982)
Missouri	Leadership Academy has offered workshops on Effective Schools Research One of the workshops is entitled "Principal as the Instructional Leader." The topic is covered in depth and administraturs make an action plan of how they will implement what they have ICumed. (1985)	An emphasis of learner outcome based instruction using, primarily, mastery learning and cooperative learning processes has been emphasized by the Department with unusually high achievement gains. (1985)	Another Leadership Academy workshop on Etfactive Schools cov- ers "Safe, Orderly, Positive Climate." The topic is covered in depth and administra- tors make an action plan of how they will implement what they have learned. (1985)	Some 300+ target sub- ject area teachers were brought together in tour subject area groups to describe es- sential tearner out- comes for higher learn- ing levels in reading/ language arts, math, science, and social studies. After learner outcomes were identi- fied, criterion refer- enced test items were developed to assess student performance. (1985)	Excellence in Educa- tion Act of 1985 re- quires all school dis- tricts to periodically test their students on the Missouri Key Skills They are required to use the results to use the results to monitor student prog- ress and identify areas for instruction improve- ment. Both the Test- ing and Assessment and Curriculum Sec- tions conduct work- shops throughout Mis- souri yearly. (1987)	Covered in the senes of workshops on Effective Schools. Each workshop covered correlates of an effect school and had follow-up activities for participants to implement what they had learned. (1985)
Montana	Sponsored by School Administration of Montana. (1987-88)	No program reported	See Instructional Leadership	See Instructional Leadership	No program reported	See Instructional Leadership
Nebraska	No program reported	Consulted with some local education agencies on effective teaching strategies.	Approval and accreditation regulations require local boards to have policies which address the activities that are considered instructional and the conditions under which students can be excused from that time. (1985)	Administrator Days - An annual conference co-sponsored by the Department, the University, and the Administrators' Council to address trends, problums, and strategies in school ad- ministration. (1975)	No program reported	No program reported

STATE	INSTRUCTIONAL LEADERSHIP	EFFECTIVE TEACHING	SCHOOL CLIMATE	PROFESSIONALISM/ COLLEGIALITY	REGULAR ASSESSMENT & USE OF RESULTS	COMPREHENSIVE EFFECTIVE SCHOOLS PROGRAM
Nevada	Nevada School Im provement Project - setting goals, develop- ing strategies for more effective schools (1985)	Individual school districts develop and maintain Professional Development Centers (PDCs) for the express purpose of training teachers in the most effective teacher practices based on current research. Those districts without PDCs frequently contract with PDCs for services (1982)	The Nevada School Improvement Project works with teachers and school administrators, aimed at providing a school fearning climate that provides optimal opportunities for all students to learn (1985)	The Nevada School Improvement Project provides the opportunities for collaborating, goal-setting, curriculum planning, and development of complementary activities by teaching staff (1985)	The Nevada School Improvement Project includes a disaggregated analysis of student achievement in order to monitor student progress in relation to expectations and to tailor instruction to student needs. (1985)	The Nevada School Improvement Project is a voluntary program for individual elementary and secondary schools that assesses needs in the areas of school learning climate, instruction leadership, expectations of students and staff, school mission, monitoring progress, and home-school relations. From the needs assessment, school goals are determined and activities addressing the goals are implemented. (1985)
New Hampshire	Principals Academy operated by Adm Assoc. (1985)	Profiling effectiveness in special education. Comprehensive literacy and dropout prevention. State task force on children at-risk, State task force on vocational education access and opportunities for all students.	No program reported	No program reported	State testing program and California Achievement Tests (1985)	Effective school projects - Governors' initiatives.
New Jersey	Explore concepts of leadership drawn from research-based, state-of-the-art execut ve training program and applied to the educational environment. (Leadership for Today's Schools, The Effective Principal: Civating a Vision). (1986)	Explore research- based concepts which bring to the conscious level "what" is being done in the classroom and "why" it works. Examine implications of research for reacting a wide variety of learners. (Instructional Theory Into Practice, Learning Styles/Teaching Approaches). (1985)	Explore relationships between instruction and management of student bettaviors. Focus on individual expectations and needs. (Classroom Management K-6 7-12). (1987)	Opportunity for professionals to learn more about their profession by working together collaboratively. (Models of Supervision, Peer Coaching, Peer Assisted Leadership, Creative Problem Solving). (1986)	No program reported	Effective Demonstra- tion. School Grants Program - The schools were selected through a competitive request for proposal. They receive an average of \$29,000 to implement improvement plans developed through collaborative planning. The state provides regional training and on-site assistance. (1986)
New Mexico	Staff Accountability Project includes plans for administrative staff development. Summer Leadership Institutes are being provided by the State Department of Education for state educators. (1981)	Targets genenc teaching skills to be displayed by all classroom teachers (1981)	Part of essential teaching and administrator competencies.	Covered by the essential leaching and administrator competencies.	Statewide testing system has been sypanded, customized to access New Mexico competen- cies.	No program reported
New York	Twelve Principal Acad emies focus on instruc- tional leadership, ef fective schools, and school improvement (1984)	Effective Class:com Management a ten- unit, three-day program for teachers and admin istrators. (1986)	Statewide conferences address topic of school climate, instrumenta tion, practices, and pro- grams (1987)	Conferences on partici- pative decision making, collaboration and colle- giality sperated state- wide (1986)	Statewide testing pro- gram reported to dis- tricts and public each fall Statewide confer- ences on use of results. (1986)	Conferences, material, and technical assistance operated for all schools in the state. (1985) Conferences on Whole Language Instruction (1988). Conferences on Reading Recovery (1988)
North Carolina	North Carolina Leader ship Institute for administrators (1979) Principals' Executive Program in instructional leadership Seminars (10-15 hours each) focusing on principals' role in setting instructional goals, curriculum development, feedback to staff and inservice based on staff needs. (1984)	Thirty hour 'Effective Teaching Training Pro- gram" on instructional presentation, feed- back, lesson plan, and evaluation (1985-86)	Seminars for principals assistant principals in developing discipline policies and practices as well as providing climate conducive to teaching/ learning. (1983)	Development of colle- gial groups based on model from IDEA (1987)	Comprehensive state- wide testing prugram includes regional tech- nical assistance to lo- cal est scondinators on reporting and in- structional interpreta- tion (1978)	Three and one half day seminars for school principals and assistant principals on effective school corre- lates developed by Ron Edmonds. (1985)

STATE	INSTRUCTIONAL LEADERSHIP	EFFECTIVE TEACHING	SCHOOL CLIMATE	PROFESSIONALISM COLLEGIALITY	REGULAR ASSESSMENT & USE OF RESULTS	COMPREHENSIVE EFFECTIVE SCHOOLS PROGRAM
North Dakota	The instructional lead- ership academy as- sesses, via surveying and schreporting, skill areas which are ad- dressed through formal courses, workshops, seminars, etc. Both the skills assessment cen- ter and business/indus- trial management are used appropriately. (1987)	The Evaluation for Growth program trains teams of administrators, teachers, and school board members who return to their respective districts to develop teacher/administrator evaluation procedures and techniques focusing upon staff and professional development. (1983)	The Education Advancement Task Force is finalizing pnority recommendations among which will be the encouragement of pilot schools which model key aspects of how to effectively address climate. (1986)	In collaboration with the institutions of higher education, teacher preparation programs are jointly evaluated and approved by NCATE and the Department of Public Instruction.	Through a statewide cumculum council, the results of a voluntary statewide testing program are analyzed. This analysis produces information leading to activity and budget decisions. (1988)	The state accreditation standards and procedures are currently under revision and will include comprehensive effective schools programs (1988)
Ohlo	OASIS is a 5-day training sess on for school administrators on school leadership. (1982)	Entry-year Programs are designed to meet the needs of first-year teachers (1987)	Part of comprehensive effective schools effort. (1981)	Teacher Development Program supporting in- service training (1979); and the Ohio Building Leadership Model de- signed to foster colle- gial decision-making at the building level. (1982)	Competency-Based Education requires pupil performance standards and intervention based on needs determined through testing. (1984- 84) Graduation testing begins 1990-91.	An estimated 65 percent of school districts are developing and implementing some form of effective schools process
Oklahoma	State mandated criteria for Effective Administrative Performance with two-day training sessions were conducted in 1986 for all administrators in state. Training is on-going and is conducted at intervals throughout the year for new administrators. The Oklahoma State Board of Education has mandated 11-day training for all first-year superintender.ts in Oklahoma. (1985)	State mandated onte- na for Effective Teach- ing Performance train- ing is provided by locat school administrators and by State Depart- ment of Education per- sonnel upon request. (1985)	An assessment of all school facilities in Oklahoma was conducted and a master plan for improvement presented to Oklahoma State Board in 1987. (1982)	All state mandated performance chtena have components of training to enhance collegiality. Staff development required by state law requires mutual decisions by teachers and administrators. (1982)	The State has mandated norm referenced testing for all students grades 3,7 and 10. A writing assessment is mandated for grade 10 in 1987, grade 7, 1988, and grade 3, which began in Spring 1986. The State mandated testing in content area for all entry level teachers and administrators before certification is issued. (1985)	Oklahoma is addressing every charactenstic of Effective Schools as defined in research. All school improvement programs implemented since 1980 have used the research as a basis for development. (1981)
Oregon	Follows a process developed by NASSP for instructional leadership of school administrators. School administrators parkicipate in eight days of professional development during the year-long program. (1983)	Beginning teacher sup- port program provides mentor for beginning teacher during first year. Activities of men- tor-protege team in- clude observation, coaching, instructional planning, and informa- tion sharing. (1987)	No program reported	School improvement and professional development program supports school-based management of improvement guided by site committees composed of teachers, administrators, and community members. (1988)	Assessment results used to monitor curnculum goals and student instructional decisions. (1980)	Oregon Action Plan for Excellence, adopted by State Board of Education, resulted in state-wide common curriculum goals, increased graduation requirements, strengthened state testing program, school profiles, and increased state monitoring of school district compliance with laws and administrative rules. (1984)
Pennsylvania	Pennsylvanian Principals' academy-staff development to improve management and instructional leadership. (1987)	Each LEA must pre- pa. 9 plan for induction for new leachers and continuing education of existing leachers. (1983)	No program reported	See Comprehensive Effective Schools Pro- gram	Education C vality Assessment (EOA) evaluates extent to which schools meet 12 state goals of quality education. Competencies assessed in math and reading. (1970 and 1984)	The Pennsylvania Effective Schools Project is a program designed to help districts make use of effective schools research. The two goals of the program are to: (1) provide an assessment instrument that helps schools identify strengths and weaknesses by measuring ic which programs to differ the schools; and (2) assist in identified characteristics of effective schools; and (2) assist in identified strengths and improve identified weaknesses. (1984)

STATE	INSTRUCTIO NAL LEADERSHIP	EFFECTIVE TEACHING	SCHOOL CLIMATE	PROFESSIONALISM/ COLLEGIALITY	REGULAR ASSESSMENT & USE OF RESULTS	COMPREHENSIVE EFFECTIVE SCHOOLS PROGRAM
Puerto Rico	The School Directors Academy organized to improve management conditions and school effectiveness. (1987)	In-service training for new teachers at the Department training center. Mini-grants program for teachers and school directors was implemented. (1985)	School Safety Guard Corps was organized for safety and protec- tion of life/property. (1985)	Supervisory and cur- nculum council advises and sets goals on ba- sis of information about pupil perform- ance. (1964)	Each local district has a supervisory and cur- nculum council that provides regular as- sessment in the areas of testing, pupil per- formance, and curricu- tum development. (1964)	The School Directors Academy is geared to pursue the improve- ment of all the ele- ments described above. (1987)
Rhode Island	Instructional Leader ship training sessions offered to principals participating in the Ef- fective Schools Proj- ect. (1984)	Several school districts offered (with state level assistance) workshops for staff members on the staff members, clinical supervision, and other techniques. (1984)	Schools continue to use school climate surveys to assess local needs (1984)	A new program in school based management has introduced participatory decision-making. Three pilot sites are in operation. (1987)	Students in grades 3, 6, 8, and 10 are tested in basic skills and health and filness. Grades 3 and 6 students are also tested in writing. Workshops on use of results for individual assessments and program development. (1986)	No program reported
South Carolina	Administrators' Lead ership Academy provides training to school administrators to enhance instructional leadership and management skills. All superintendents and principals are required to attend at least one seminar every two years. Additional programs are designed to develop instructional leadership. Also required that all candidates for the principalship be evaluated by the South Carolina Assessment Centet. In the 1987-88 school year, implemented a new evaluction system statewide and piloted a principal incentive program in 27 of the state's 92 school districts. (1981)	A program was begun in 1984 involving the use of instructional skills by teachers and the improvement of those skills through clinical supervision.	(See Instructional Leadership) In addition, districts are required by state law and State Board of Education regulations to develop discipline policies, minimize classroom interruptions and meet grade requirements for participation in extracurricular activities	(See Instructional Leadership) Addition- ally, staff development for all staff is required by law and state funds are provided	(See Instructional Leadership) In addition, each schoc is required to establish a school improvement council who must develop long and short range plans based on specified data sources	Effective schools training is designed to give school administrators, teachers, and district staff the knowledge and skills from the effective schools research to implement in their schools to move toward effectiveness. (1981)
South Dakota	The LEAD Project will provide skills in communication and supervision to administrators and teachers who have elected to participate. (1987-88)	No program reported	No program reported	No program reported	No program reported	No program reported
Tennessee	The Tennessee Academy for School Lead ers (TASL) includes programs emphasizing the importance of and ways to offer strong instructional leadership in each of its institutes. (1985)	The TASL works with administration to help them improve evalu- ation skills for improv- ing instruction (1985)	Each TASL Institute offers sessions on im proving school climate (1985)	TASL insulutes offer administrators opportu- nities to interact with other administrators to build networks aimed at problem solving (1985)	The Tennessee Ex- ecutive Development Program for Public School Leaders has brought in practitioners to share workable practices for use of test results for instruc- tional improvement. (1986)	The TASL and Executive Development Program both work to expose Tennessee Leadership to the most current theory and practice of effective schooling through institutes offered throughout the year. (1985)
Texas	Program aimed at se lected principals, who are trained in the state's performance-based accreditation process to improve student performance and learning, includes training to implement Effective School Correlates. Known as Texas School Improvement Intitative. (1988)	Publication produced to provide teachers and principals at low-performing elementary campuses with activities for immediate implementation to improve scores on statewide basic skills test (1988). Class size caps mandated for Grades K-4 (1984).	Each school district must adopt and imple ment a discipline man- agement program, which must be ap- proved by state educa- tion agency. State pol- icy addresses condi- tions under which stu- dents may be removed from class, sent to al- ternative settings, or expelled. (1987)	No program reported	State policy requires school districts to use results of basic skills test to design and implement appropriate compensatory or remedial instruction for students who do not demonstrate mastery on statewide basic skills test. Scores also compared with national norms. (1985)	Texas School Improve- ment Initiative focuses on correlates of Effec- tive Schools Research. Participants trained in materials of Azademy for Effective Schools Research and strate- gies for implementa- tion of research corre- lates. (1988)

STATE	INSTRUCTIONAL LEADERSHIP	EFFECTIVE TEACHING	SCHOOL CLIMATE	PROFESSIONALISM/ COLLEGIALITY	REGULAR ASSESSMENT & USE OF RESULTS	COMPREHENSIVE AFFECTIVE SCHOOLS PROGRAM
Utah	Approximately 50 school level administrators are selected each year and they participate in an extensive series of workshops, labs, mentonngs, etc. designed to improve leadership performance. (1984)	In arvice program on effective school practices. All school districts are involved in a state funded outcome based distributional model which supports and compliments the direction of the State Core Curriculum.	A program focusing on discipline and class-room instruction has been an ongoing practice since 1978. Assertive Discipline Program or similar type program have been implemented in every district.	Utah's Career Ladder System calls for and provides fiscal re- sources to pay for in- struction/curriculum development, plan- ning, inservice, etc. (1984)	Utah's move toward an outcome based instruction model has facilitated the shift toward more assessment followed by tailored instruction for students. A major 4-year effort is underway to develop a state assessment program which assesses outcomes outlined in the State Core Curriculum for each subject area and each grade level. (1983)	Utah has all of the program elements but they are not packaged in a singly comprehensive piece of legislation or program activity. (1985)
Vermont	Leadership monitoring programs, particularly for new principals. (1988)	No program reported	Annual assessment of school climate now required in State School Approved Stan- dards. (1984)	Part of school improvement program. (1984)	Competency assess- ment - locally de- signed, addresses 66 competency state- ments. (1975)	Public School Ap- proval, school im- provement program. Utilizes peer review based on state stan- dards. (1984)
Virgin Islands	Development and dis- semination of a pnnoi- pal's handbook of standard operating procedures for day-to- day schoolbased op- erations within the St. Thomas/St. John dis- trict.	No program reported	No program reported	Staff development committee composed of school administration and superintendent office staff prepare activities during monthly principals' meeting. (1985)	Monthly report of school volunteer serv- ices program (1985). Standardized testing initiated. (1987)	"Quality Indicators" - Will be used to deter- mine effectiveness in schools. Program is not yet finalized but will be for 1982-89 school year. (1988)
Virginia	Week-long institutes in which principals are trained to develop and supervise an effective teaching model with their staff have been held during the past eight summers. Recent institutes have included teachers and supervisors as part of an instructional team. This training has reached three-fourths of the 140 divisions. (1986)	An effective teaching model which incorporates much of the Madeline Hunter model has been used for training principals and teachers in summer institutes and in staff development activities provided to local divisions. (1981)	Assistance is provided localities to improve school-based delinquency prevention strategies. The goal is for schools to realize a reduction in dropouts, suspensions, disciplinary actions, absenteeism, vandalism, etc. A three-day training session on classroom management was provided to eight school drivisions for teachers in pre-school programs. (1983-84)	(1978)	No program reported	The program first started by taking existing research on effective schools and worked with some school divisions to develop plans for putting the research findings into practice. Summer institutes for teachers and principals and inservice training have addressed instructional leadership and effective teaching. (1983-84)
Washington -	No program reported	The Washington State Legislature established a mandated program focusing on increasing academic learning at the school, classroom, and individual student levels (SSHB 1065). Legislation included training of school trainers in nationally established training models. Funding expired June 30, 1987. (1986-87)	No program reported	No program reported	Every student tested annually grades 4, 8, 10 in reading, math, and language	No program reported

STATE	INSTRUCTIONAL LEADERSHIP	EFFECTIVE TEACHING	SCHOOL CLIMATE	PROFESSIONALISM/ COLLEGIALITY	REGULAR ASSESSMENT & USE OF RESULTS	COMPREHENSIVE EFFECTIVE SCHOOLS PROGRAM
West Virginia	West Virginia Principal Academy. This 17-day residental program provides in-depth professional development on the effective schools and school improvement. The principals make a threeyear commitment to develop and implement a threeyear plan designed to improve the quality and equity of student achievement. Four hundred principals will have an effective schools program for local districts. This involves a yearlong commitment of all principals and key teachers from each school in a district and results in a district and school level program for school improvement, based on effective schools research.	As a result of the suc cess of the Principals' Academy, a statewide Teachers' Academy was begun in 1986. This Academy is also 17 days and focuses on the elements of effective teaching as identified by Stallings, Rosenshine, and Hunter, Each participant completes a personal improvement plan as a result of the Academy experience. (1986)	Principals Academy and Teachers' Acad- emy	Principals Academy and Teachers' Acad- emy	Principals' Academy and Teachers' Acad- emy	Both the West Virginia Principals' Academy and the Effective Schoots Program provide a comprehensive approach to Effective Schoots implementation. Five years of work have gone into the development of the materials and training modules related to these programs. (1984)
Wisconsin	Administrator Academy—LEAD program. Assessment Center and school district standards (1983; 1987; 1988)	Characteristics of Effective Schools and the Standards of Ex- cellence Programs. (1973)	See Effective Teaching	See Effective Teaching	Competency-based testing - The Department of Public Instruction has developed objective-referenced tests. State standards require menitoring pupil progress. (1976; 1988)	Mini-grants were given to schools to integrate the characteristics of effective schools with the state standards. Schoots were encouraged to organize staff for school improvement planning in line with state standards. (1985)

### **Educational Outcomes**

A Note on Efforts for the Future

#### Data Gaps

This report and others like it amass impressive numbers of state-level statistics on education. But there are major gaps. Among statistics on education, it is difficult, for example, to account for differences in cost of living when measuring per-pupil wealth, and we lack valid, direct measures of the proportion of students who are handicapped or have limited proficiency in English, to use as background factors reflecting educational need. Among features of the process of schooling, a true measure of the quality of teachers' professional performance is not available and will be difficult and expensive to obtain.

Missing entirely from this report are state-level measures of student outcomes, the ultimate accomplishments of the educational system. Even the most rudimentary accomplishment—succeeding in getting students to school—is plagued by inconsistencies in measuring student attendance. Other outcomes that should be reported to reflect the multiple goals of education—school completion rates, achievement, and how students do after leaving school-are affected by differences in how states define enrollments a dropouts, by differences in state testing programs, and by the lack of follow-up data on students after they leave high school.

Most states have comprehensive programs in place for testing student achievement. But to measure achievement, each state uses a virtually unique combination of tests and testing procedures. In addition to the tests used, the time of year when tests are administered varies as do the grade levels that are tested Standard tests used across states, such as the College Board or ACT college aptitude tests, are neither appropriate for evaluating high school achievement nor do they report on comparable samples of students among states.

Follow-up surveys of what happens to students after elementary and secondary schooling have been too expensive for most states to undertake or maintain.

While outcome data meeting rigorous

technical standards are not presently available, steps are being taken to correct the problems. States are adopting new, standard definitions and procedures for counting schools and enrollments. This is the first step in working toward consistent and valid graduation-rate data. Standard definitions for counting dropouts and other categories of students who do not graduate have been developed and are being pilot tested this year by most of the states. Also this year, states will begin planning together for compilation of follow-up data, either collected anew or derived from surveys of employment and higher education.

The most exciting prospect is that statelevel achievement data should be available by 1990 or 1991. In May, Congress passed legislation allowing the National Assessment of Educational Progress (NAEP) to conduct a two-year pilot program to collect state-level data in mathematics in 1990 and mathematics and reading in 1992. The states are now working with the federal government to produce state level results for mathematics achievement in eighth grade in the 1989-90 school year. This is a momentous undertaking in education, because it not only offers the prospect of valid, state-comparative data on achievement. It also entails arriving at a consensus among states on what should be measured. This is an historical development in our local-state-federal system of education.

Educators and data specialists in state and local school systems and in federal agencies are working to provide more complete and useful information on education. This summer, the National Governors' Association released its second annual report on education, Results in Education: 1988. The report demonstrates the governors' belief in the value of information for assessing education and guiding its improvement. But the report again this year includes blank columns. These are for important areas of education where data still are not available. Including these columns as markers presses the education system to fill the gaps, and the system is responding.

#### Next steps

The collection of valid, state-level indicators in education is crucial to providing information that can be used constructively to establish education policies for the future.

In order to know how well the system is doing we need sound data on educational outcomes; we need that bottom line and we need to complete that component of a full model of the education system. The outcome data will not only be available but can be interpreted in terms of demographic or regional clusters. For example, low- or high-wealth states would be able to compare themselves to see how they are doing in relation to other states facing similar circumstances, and states in a relatively homogeneous region, like the Great Lakes area might want to compare themselves. These comparisons can be made to guide short-range interpretations of relative standing without removing the principle that performance differences based on demographic factors should be reduced and utimately removed.

In addition, outcomes must be related, at least tentatively, to educational inputs, so policymakers and decision makers have some clues as to where to place their efforts. If patterns indicate that high-performing or improving states have certain program features in common, other states might want to look at those features as areas where improvements might be made.

Over the long run, a comprehensive set of state-level indicators could tell a policymaker or program manager that, under given environmental conditions, certain policies seem to be associated with certain outcomes. Such indicators should not singly, definitively, and conclusively guide policy, but they could add immensely to the information base upon which policy is made.
