DESCRIPTORS *Adult Education; *Adult Programs; Agricultural

Education; Case Studies; *Farmers; *Farm Management;

Foreign Countries; *Rural Extension

IDENTIFIERS *Saint Lucia

ABSTRACT

This document contains a case description of an adult education program in St. Lucia, a volcanic island in the Windward group of the West Indies. The case study is part of a set that reflects a cooperative effort by adult educators to increase international understanding of various educational programs for adults in their societal context. A face sheet provides this information: name, organization, and address of the person who prepared the case description; program name or title; type of program; type of organization with which the case program is associated; and basic characteristics of service. The Caribbean Agricultural Extension Program described seeks to help farm families improve farming practices and their quality of life. The project's planning process, recommendations for improvement, level of participation, finances, and the recent history of extension are detailed. Excerpts from an interview with a participant and from a recent study on program influences in extension are included. In addition to the case description, this document includes information on the World Perspective case study project, indexes of all cases by country and by category, and guidelines for contributors. WORLD PERSPECTIVE CASE DESCRIPTIONS OF EDUCATIONAL PROGRAMS FOR ADULTS

PREFACE

This set of case descriptions reflects an inspiring cooperative effort by adult educators in many countries to increase international understanding of various educational programs for adults in their societal context. The benefits from reading these case descriptions result from the contributions of case coordinators and authors who arranged for and prepared the descriptions included in the set.

Cooperating case coordinators contributed in several important ways. In addition to sometimes writing one or more case descriptions, coordinators arranged for case authors. The selection of program areas and case authors reflects the case coordinators' professional judgment based on familiarity with educational programs for adults in their country. The list of names and addresses of case coordinators for each country is noted on green paper following the Table of Contents.

The names and addresses of case authors are on the face sheet that precedes each case description. Each crose description is unedited and unchanged, in the form that the author submitted it. The few case descriptions that were translated into English are so noted.

As an aid o comparative analysis, each case coordinator was sent a set of guidelines, to be shared with case authors as they prepared their case descriptions. At the start of the project, active case coordinators received draft guidelines and their comments were used to revise the guidelines used in the project. These guidelines are included at the end of the set of cases and are printed on blue paper. Many authors were very conscientious in following

the guidelines. Even those case descriptions that depart from the suggested format contain useful information about the program.

Each case coordinator who submitted case descriptions has been sent a complete set. This international set of cases can be useful for comparative analysis in several ways. Some coordinators have indicated their intent to contact coordinators in other countries, to collaborate on cross national analysis for specific programs. Within a country, these may be colleagues and students who would like to conduct comparative analysis studies. In at least four countries, all of the case descriptions for that country are being disseminated to interested adult educators in the country.

Arrangements have been made to send a complete set of case descriptions that have been received by the end of the project late in 1988, to the ERIC Clearinghouse on Adult, Career, and Vocational Education at Ohio State University, USA, so that print or microfiche copies can be obtained by anyone interested. All cases from each country have been grouped together as a set on one ERIC document and the set was given an ED number. Therefore, you or other people can purchase microfiche or paper copies of the set for any country in the World Perspective series. For a list of ED numbers and prices for each of the sets, write to the ERIC Clearinghouse on Adult, Career, and Vocational Education, 1960 Kenny road, Columbus, Ohio 43210-1090, USA, ATTN: World Perspective Case Descriptions of Educational Programs for Adult: In response, a listing and order form will be sent.

Many people and organizations have helped with this largely volunteer project, in addition to the fundamental contributions by the case coordinators and authors. Support from the W. K. Kellogg Foundation made feasible many logistical arrangements including duplicating and postage. Many people prominent in adult education internationally were generous with advice and suggestions concerning potential case coordinators. The International Council

11 5

for Adult Education provides a vehicle for continued contact among all oi us interested in cross national adult education research and understanding.

ACCESSING THE CASE MATERIAL

The organization of this great stack of cases is intended to facilitate their use. (The case coordinators now know why a paperweight was selected as a form of recognition.)

The Table of Contents (which is or pink paper following this Preface) is sequenced by country in alphabetical order by category, as are the full set of cases. Reviewing all cases from a country is easy because they are grouped together. The cases are on three hole paper for ease in grouping and adding more cases.

The numbering of cases is as follows. The first (or two digit) number designates the country (Australia is 2, Ireland is 22, etc.) and a list of country codes follows (missing numbers in the sequence are for countries from which cases have not yet been received).

2 - Australia
4 - Cameroon
5 - Canada
6 - China
7 - Chile
9 - Czechoslovakia
13 - Finland
15 - Germany, Federal Republic
16 - Ghana
17 - Greece
19 - Hong Kong
20 - Hungary

1 - Argentina

21 - India

22 - Ireland

23 - Israel

24 - Italy

23 - Israel
24 - Italy
25 - Japan
26 - Korea, Demo. People's Republic
29 - Netherlands
30 - Nigeria
31 - Norway
33 - Portugal
34 - Saudi Arabia
35 - St. Lucia
36 - Sweden
37 - Switzerland
38 - Tanzania
40 - United Kingdom
41 - United States
42 - Union of Soviet Socialist

Republics

45 - Yugoslavia

Following the country code, each case has been given an alphabetic code (A,B,C,etc.) to distinguish that case from the others. A slash "/" follows the alphabetic code. Following the "/" is the pagination with the first page

consisting of the Face Sheet that authors were asked to complete. The coded pagination is on the lower right hand corner of each sheet of paper.

Following the Table of Contents, is an Index (on blue paper) organized by Category of Case. This allows readers interested only in cases in a specific category (such as Literacy or Citizen) to easily locate them. Because some cases are indexed in several categories, they are cross indexed for all categories that apply. The categories and criteria for determining the category follows. Fecause authors usually selected the category(ies) for their case and may not be consistent across all cases, it may be desirable to consult several pertinent categories.

- A. LITERACY Functional literacy and adult basic education programs (as defined in each nation) with special attention to literacy campaigns, local community groups, role of schools and efforts to include types of adults often neglected, such as prisoners.
- B. AGRICULTURE Extension programs to help farmers and peasants improve productivity (subsistence and cash) and quality of rural life with special attention to efforts by local community groups, ministry of agriculture and agricultural schools and colleges.
- C. WORKERS Educational programs to increase productivity and job change of all types of urban business and industry workers (aside from professionals), with special attention to efforts by enterprises, employers workers universities, labor unions, and trade associations.
- D. PROFESSIONAL, TECHNICAL All types of professional development and in-service programs for people in scientific and technical occupations such as engineering, and medicine, with special attention to efforts by universities, professional associations, and enterprises (factories, hospitals).
- E. PROFESSIONAL, OTHER Continuing professional education activities for any other types of occupations, that tend to be less influenced by new research findings (such as law, social work, teaching).
- F. SECONDARY Part-time secondary school completion programs, with special attention to efforts by schools and ministry of education.

- G. HIGHER Part-time or short term college and university completion programs for working adults, with attention to ministry of education and higher education institutions. In some nations this category may include part-time pursuit of formal credit and degree programs.
- H. HEALTH Preventative and curative health education programs for adults in urban or rural areas, with attention to efforts by ministry of health and local hospitals and clinics.
- FAMILY Family life and home economics education (including food preparation, nutrition, child development, and family relations), with attention to local providers.
- J. PERSONAL All types of educational activities related to leisure time, hobbies, arts, cultural affairs, personal enrichment, and general education, with attention to efforts by ministry of culture, and local libraries and museums.
- K. CITIZEN Educational activities related to community and organizational leadership and problem solving to enable adults to become more informed and participating citizens at local or wider levels to reform or sustain government, with attention to government, educational institutions, and voluntary associations. This may include international issues.
- L. DISADVANTAGED Special or compensatory educational programs for adults who are in hard to reach populations such as people with handicaps or a history of discrimination.
- M. OTHER Any other type of educational program for adults that is important in your nation, for which someone will prepare a case description, such as adult religious education or other examples.

(NOTE: Some important programs combine several categories. For example, in Latin America, popular education may include program emphases from categories A, B, C, K).

OVERVIEW OF AE IN COUNTRY OR REGION

The cooperation and exchange already evidenced in the preparation of this set of case descriptions, combined with the plans for analysis and continued colleagueship, suggests a great potential for ongoing sharing and international understanding. We hope to hear from you.

Ч,

A. SETTING

St. Lucia is a volcanic island in the Winward group, comprised of peaks and valleys. Much of the land is dense with vegetation, leaving little room for expansion. The primary crops are bananas, coconuts, and vegetables such as yams, carrots, onions, and cabbage. As part of diversification, farmers are planting an increasing number of citrus, mango, avocado, cocoa, coffee, and nutmeg trees, intermixed with other tree crops. Banana trees blanket the island, and bananas are the primary export crop. Because St. Lucia has direct airline connections to England, the United states, and Canada, the potential for increasing exports is high.

In recent years, the agricultural program targeted six major areas: (1) crop diversification into tree crops, (2) improvement of banana fruit quality through field packing and field sanitation, (3) multicropping, (4) soil conservation, (5) road improvement, and (6) marketing. Extension services are a longstanding institution in St. Lucia and is operated mainly under the aegis of the Ministry of Agriculture. Several of the farmers interviewed had been receiving extension services for over 30 years. In addition to extension services in general agriculture, there are also specialized extension services in bananas, tree crops, livestock, and farmer credit. It is worth noting that the specialized banana extension service is controlled by the St. Lucia Banana Growers Association (SLBGA)—a statutory organization. Agriculture in St. Lucia is served by both private and public sector extension services. Although banana farmers are serviced mainly by SLBGA extension staff, the Ministry's extension staff also serve these farmers.

St. Lucian farmers are independent and individualistic. About 90 percent of them speak Patois, a French derivative. Illiteracy is estimated at about 50 percent. The majority of farmers do not find farming very profitable, yet they love the life.

35 A/I

St. Lucia is the second largest of the Windward Group. It is 27 miles (34 km) long and 14 miles (22 km' wide at its longest and widest points with an area of 238 square miles (616 km). St. Lucia has a tropical climate which is modified by oceanic influences. The main features are uniformly high temperatures all the year round, mitigated by northeast trade winds which freshens during the dry seasons.

In general, road maintenance is the critical issue in St. Lucia. Because of the topography of the land, the roads generally have steep slopes. This characteristic, combined with heavy rainfall and inadequate drainage in many parts, has affected their quality. In addition, many of the roads were not built to handle the present volume or weight of traffic.

St. Lucia has two main deep water ports--one at Castries on the western Coast of the Island and the other at Vieux Fort on the southwestern extremity.

At present about 80-85% of the population has access to pipe-borne water of reasonable quality. The Authority is generating an average of about 5 million gallons a day, a volume that just about meets current demands.

Ine agricultural education program of the Ministry of Agriculture, Lands, Fisheries and Cooperatives is being implemented by the Extension Division within the Ministry.

In the past every division within the Ministry had an outreach or extension program. However, the persons outside of . e normal extension performing those tasks were not referred to as extension officers. Recently with the restructuring of the Ministry attempts have been made to put all these functions into a central extension division.

4.,

B. OUTCOMES

1. Goals

The ultimate goal of Agricultural Extension is to help farm families improve their farming practices and their quality of life. As the Chief Extension Officer in St. Vincent (a neighboring island, part of the Eastern Caribbean States grouping) said, "Knowing and telling is only half. Until people adopt and change, you haven't done anything." (See also paragraph 2, page 1 on Setting, for goals.)

2. Benefits

Extension officers seem to have good rapport with farmers. This rapport makes it easier to carry out educational programmes.

Extension can have a significant impact. Farmers are able to cite many examples of ways in which Extension positively affected their lives. In some cases, it was possible to document how Extension information had increased far. Income by helping farmers to improve the technology they used or to do a better job of management and marketing.

Extension services touch farmers' lives in many ways, spanning all phases of the farm operation: deciding what and how to plant; controlling disease, weeds, and insects; field harvesting, packing, and marketing. Most important, perhaps, Extension has helped farmers to take responsibility for their farms and their lives. Many of the farmers interviewed expressed a sense of challenge, as well as satisfaction with their lives.

The Extension Officer in the Eastern District has helped four groups of farmers and several individual farmers to start mini-nurseries. About 35 farmers were involved in providing sites for model nurseries. Farmers were taught to prepare the soil, to prepare seeds for germination, and to use grafting and budding techniques in order to develop tree crop planting material.

Two Extension Officers in the Southwest Region have helped 35 farmers to start up or expand production of food crops, such as tomatoes, carrots, onions, cucumbers, and cabbage. Farmers have increased their vegetable production by as much as one-quarter acre.

Since 1980, over 70 percent of St. Lucian farmers have initiated field packing through Extens. n-provided training. Field packing has cut the banana rejection rate by 20 percent resulting in increased farmer income.

When asked about their success in farming, several linkages to Extension began to emerge:

- The F family members have consistently produced high quality bananas. Their boxing plant was rated the highest quality in St. Lucia. When probed further, they admitted that much of the advice on field sanitation, spraying, mixing chemicals, applying fortilizer, and handling fruit had come from Extension.
- o Their introduction to planting grapeficit and oranges was the result of a recommendation and planting material provided through Extension.
- o Their initial effort to ask the Ministry for financial assistance to build a road to their farm had been spearheaded by the Extension Officer.
- o The recognition of Mrs. F as "Farmer of the Month" had come through nomination by the Extension Officer.
- o The three trips Mrs. F had won also came about through nomination by the Extension Officer.
- The formation of the local farmer groups, in which Mrs. F is actively involved, was encouraged and supported by the Extension Officer, in response to farmers' concerns.

The Fs were not prone to give credit to the Extension Officer for the many influences on their lives and farming practices. The Fs felt ownership for their own hard-won success.

Some farmers noted specific changes that were attributable to Extension intervention. For example, Mr. B listed three major changes that had occurred in his production and marketing practices over the past five years—land preparation, the use of herbicides, and marketing techniques—and indicated that, in each case, the Extension Officer was the major source of his information. He added: "He taught me spacing, how long vegetables should take to be ready for market, and how you fertilize. The Extension Officer is a good boy and good gentleman. He's still my instructor. He always has time to stop with you."

C. PROCESS

1. Planning

The systems approach has been recently introduced by the Caribbean Agricultural Extension Project (CAEP). It is only used by extension officers of Region 1 (the Demonstration Region). If successful the approach is to be adopted by the other seven regions. In using the systems approach to analyze and understand a farm/home situation, the extension officer has opportunities to assist the farm family choose an optimum combination of resources, select interactions or modifications of the agro-ecological system and then develop technically appropriate practices for the system.

A national "Program of Work for Agriculture 1984-85" was developed, emphasizing crop diversification, the strengthening of the infrastructure, and improved coordination. In addition, about 40 percent of the regions submitted their plans for extension services. Agriculturally St. Lucia is divided into eight regions, which is further broken down into two districts--north and

south--each with four regions. These plans tended to be well-written, specific, and action-oriented.

2. Methods

St. Lucia has three propagation stations for tree crops, funded through the British Government. But the stations have not produced enough plants to meet the farmers' needs. Furthermore, the farmers must have title to their land to obtain any materials. So, agents worked to set up four cooperative mini-nurseries on the island. Farmers participated in propagating seeds, grafting, and budding. P has taught the farmers how to meet their own plant propagation needs.

Several examples illustrate how Extension Officers tailor their approach to the individual farmer. Mr. G is illiterate, so written material is of no benefit to him. In this case, the Extension Officer makes frequent visits to the farm and performs simple demonstrations: for instance, digging holes to show the effects of proper spacing. In contrast, Mr. H is interested in the science of farming. He says: "I like the science of agriculture, and I read a lot." He has learned a lot about farming during the past three years, and credits the Extension Officer with being his major source of information. The Extension Officer has given him reading materials and advice.

3. Improvement

Of ten critical components identified for regional support, three were:

- (i) Support for basic agricultural training at the Diploma level for front-line agricultural extension workers.
- (ii) Establishment of on-going training at the National level and sub-regional level to increase field agents' knowledge of appropriate agricultural technology and extension.

(iii) Provision of professional extension staff who will work in the field to assist in implementing national improvement plans, with particular emphasis on organizational development, program planning and staff development.

RECOMMENDATIONS FOR IMPROVEMENT

- Extension should develop an Extension program to make farmers aware of the long-term costs associated with soil erosion and poc soil conservation techniques.
- 2. Extension should make farmers aware of existing free Forest planting materials which can be used in erosion control.
- Frontline officers should be trained in existing farm management approaches to record keeping and decision making.
- 4. Extension should continue to make farmers aware of the importance of record keeping and integrate record keeping books developed by St.

 Lucia's Ministry of Agriculture in farm management extension programs.
- 5. Extension should make farmers more aware of existing extension information and knowledge regarding production practices for crops.
- 6. Extension should develop an educational program in farm and home management for farmers and through the existing farm/home management program, develop cost and returns budgets on crops, and make these available to farmers.
- 7. Extension should make farmers aware of existing schemes of credit agencies available to farmers for land development and rarm operation.
- 8. Extension should bring groups together to develop coordination between marketing agencies; e.g., SFAD (Small Farmer Agricultural Development Project), private sector, and Government in order to develop more attractive marketing arrangements and outlets for agricultural products, including contractual arrangements.

- 9. The Ministry of Agriculture communication unit should prepare a fact sheet on source and terms of farm credit for Extension notebook.
- 10. An Extension program should be developed to increase farmer understanding of integrated pest management.
- 11. Extension should conduct educational programs and demonstrations on water management including mulching and irrigation.
- 12. Government should continue to implement its stated policy regarding farm road development and maintenance.
- 13. Government should continue to approach estate owners who have uncultivated and abandoned land in order to encourage them to lease and/or sell lands to farmers.
- 14. The Ministry of Agriculture, Lands, Fisheries and Cooperatives (MALFC) and the National Research and Development Foundation should develop informational materials regarding economic conditions in agriculture for the guidance of credit agencies in developing their policies.
- 15. There is need to develop a firm communication link between the MALFC (Ministry of Agriculture, Lands, Fisheries and Cooperatives) and the lending community.
- 16. There is need for meaningful action to be taken to relieve farmers of the problem of praedial larceny.
- 17. There is need to establish rational grade and standards for agricultural commodities.
- 18. There is need to improve enforcement and management of import policy in better balance supply and demand of agricultural commodities.
- 19. There is the need to develop an agency/committee for monitoring the importation of drugs; medication/chemicals for agriculture or to encourage the existing agency to do the same.

- 20. There is need to foster greater cooperation between forestry and agricultural departments in the Ministry of Agriculture in an effort to continue to develop a land use and conservation policy.
- 21. Farmers should engage in self-help road maintenance and construction activities on a cooperative basis with assistance from Government to ensure proper construction and availability of equipment.
- 22. There is need to develop and implement projects on the coordination of various agencies relating to agriculture.

4. Participation

Farmer contacts in St. Lucia have remained fairly low. The number of weekly farm visits ranges from five to 20, with an average of 12 visits per week. A typical Extension Officer sees between 150-250 farmers annually. Only about 40 percent of the Extension Officers live in the community they serve, and this restricts contacts. The number of farmer contacts has increased slightly since CAEP project start-up.

Some officers are beginning to hold group meetings. This practice represents a significant change, since in previous years the government actively discouraged the organization of farmers into groups. Indeed, both the Ministry and the farmers themselves (who tend to be independent and individualistic) continue to resist such organization. Other constraints which hamper group work include: (1) the Ministry's frequent requests and changes, which throw off planned schedules for group meetings; (2) lack of funds to pay for demonstration equipment, refreshments, and farmer transportation; and (3) unreliable public transportation, which makes it difficult to schedule precise meeting times. Nonetheless, some Extension Officers have convened group meetings on topics such as tree crops. road repair, and coconut drying. They have also cooperated with the St. Lucia

Banana Grower's Association (SLBGA) to form groups on field banana packing techniques.

D. INPUTS

1. Participants

Ways of attaining new farm families to Extension Archives

a. Casual Contacts

Extension officers may encounter a farmer on the roadside, in the marketplace, a bar or even at church services.

b. Group Meetings

For instance, meetings organized to discuss specific problems, e.g., after a hurricane farmers are asked to submit claims for loss of property.

c. Specific Programmers

A specific crop will target specific clientele, e.g., tree crops or livestock.

d. Radio and Television Announcements

Announcements usually indicate the whereabouts of extension officers for specific activities.

e. Community Initiative

A community group can start a project and request extension's input.

f. Directives from Superiors

Extension officers are usually told at times who to work with.

2. Needs

The first step in a farming system extension needs assessment process is to use existing information to develop a situation statement for the region. Basically the Sondeo involved a rapid reconnaiss nce survey of Region

I by a multidisciplinary team drawn from the several areas of specialization and institution that impact on the Agricultural Sector in order to identify:

- (i) The agricultural systems existing in the region.
- (ii) The needs, constraints, as well as opportunities for removing the constraints that face farmers in the region.

The intensive ten (10) day exercise had the following objectives:

- (i) Develop and internalize an understanding of farming systems and the Sondeo process for extension.
- (ii) Conduct a field surve, and develop case study reports of 37 farms and related institutions and organizations.
- (iii) Develop useful categories of farming systems, based on information at hand.
 - (iv) Identify and analyze constraints, opportunities and make recommendations for consideration in the region.
 - (v) Identify extension, research, policy and project directions for the region.
 - (vi) Develop the above with team consensus and a team commitment to follow up and support the extension program in the demonstration region.

3. Staff

It is desirable to improve the organizational structure of extension services and to clarify job responsibilities and reporting relationships. St. Lucia's Ministry of Agriculture has been reorganized several times since 1980 and is still in a period of transition. The Minister of Agriculture summarized the consequences as follows:

Changes in focus, administration, and emphasis of our Ministry have left our extension service in total chaos. We have had four new heads of extension in four years.

Thus, the continual reorganization has created considerable confusion and frustration up and down the line. One bright young Extension Officer recently promoted to District Supervisor said, "I am very much disillusioned. I feel I should leave Extension."

Within this changing environment, there is a large and capable extension staff. In addition to the Chief Extension Officer (CEO), there are two senior field officers (one position is unfilled), eight Regional Supervisors (RS), and 32 Extension Officers (EO).

Through CAEP, thoughtful job descriptions emphasizing educational activities have been written for all staff members. All those interviewed said they had studied their job descriptions. Even the Chief Agricultural Officer noted:

After four years on the job, I finally have a job description. Job descriptions are being followed to some extent. Most extension staff are not yet fully performing th ir responsibilities because of the remaining confusion in the organizational structure. There are plans to have separate extension officers to perform regulatory functions, but this has not been implemented yet.

4. Content

CARDI: At the national level, CARDI (now called the National Agricultural Advisory Committee), has actively participated in the National Planning Committee and on the Research Subcommittee. The agencies involved in research have exchanged information, to clarify research projects and to avoid duplication of effort. CARDI has both given and participated in training sessions related to extension. As the Project Manager for Farm Systems Research noted, "Linkages are happening. Maybe not in a compl tely systematic way and maybe not enough, but they are occurring." That CARDI is mentioned frequently in the Ministry's Agricultural Plan for 1984-85 may be taken as evidence that some attempt is being made to coordinate research and extension activities.

Some Extension Officers feel that CARDI is not adequately backstopping extension-developed programs. One Extension Officer reported that he has gone to CARDI for help for four years and that this help simply has not been provided. There is also a need to extend coordination to grassroots planning between Extension Officers and CARDI staff.

5. Finances

Proportion of Extension budget outside the Ministry of Agriculture, and the proportion of the budget spent on personnel salaries.

This was difficult to understand re: budget outside the Ministry of Agriculture. The Extension division of the Ministry does not have an outside budget. Certain projects are supported by external agencies; e.g., CAEP, FAO, IICA, CARDSI. The funds to conduct these activities are not under the control of the Ministry and are not fixed.

The Banana Association has its own budget for Extension activities.

The following is the Ministry's budget:

	<u>1986-87</u>	EC\$ 1987-88	\$2.60 EC = \$1.00 U.S. 1988-89
Ministry's Total Budget		7,303,571	•
Extension's Total Budget Extension's Salary	1,134,081 771,022	1,165,163 770,794	796,215

6. Facilities

Type of facilities used for Extension, proportion owned or rented by Extension and by other organizations and provided free to Extension.

The eight (8) regions of St. Lucia's is divided up into 42 areas.

There are eight (8) regional offices and two (2) district offices.

There are two (2) extension residential houses in use. There are others but they are uninhabitable because they are not maintained.

35.A/13

The Caribbean Agricultural Extension Project (CAEP) has recently provided tools and equipment to these offices and officers.

Filing cabinet

Overhead projectors

Slide projectors

Soil testing kits

Abney levels

Pruning tools

CAEP has also helped to equip the information unit. This unit has a fully functional radio unit and printing facilities—AB Dick printing press. It is also equipped with audio-visual equipment—slide projectors, overhead projectors, cameras, etc. The unit has a vehicle attached to it. There are also four (4) other vehicles attached to Extension:

Three (3) pick-ups

One (1) truck

All of the above belong to Extension. The Extension Division as a rule does not rent equipment, it borrows from other ministries and supporting institutions like CAEP, CARDI, IICA and CARDATS.

Type of equipment borrowed by Extension includes mainly audio-visual equipment; at times vehicles are borrowed to transport farmers.

7. Other

Linkages with the private sector: Coordination between Extension and the St. Lucia Development Bank has been good. For instance, in July 1983, the bank conducted a workshop on agricultural loan procedures for all Extension Officers.

The director of the St. Lucia Marketing Board felt that Extension Officers should play a more active role in marketing: advising farmers on what to

produce, helping them to meet quality standards, and helping them to harvest correctly. The new job description for Extension Officers states that one of their functions is "to collect marketing data to assist marketing agencies in planning." There is a need for further develo, at in this area.

E. EXTENSION EVOLUTION (recent history and major trend;)

In recent times St. Lucia has seen seven (7) major trends in Extension.

CAEP has contributed significantly to this evolution.

- The development of written individual and national work plans to guide Extension's activities.
- 2. Development of job descriptions and their use in performance review.
- Integration of the various extension arms within the ministry to one unit. The evolution is not fully completed.
- 4. Farmer training programs—outreach farmer training to provide the necessary skills to farmers.

This program is run over a six-month period. Classes are held in the evening. Farmers receive certificates at the end of the course. The classes are highly practical.

- 5. The Agricultural College which is under the control of the Ministry of Agriculture has changed its emphasis to training young farmers. In the past, the College trained extension officers.
- 6. Extension's work activities are oriented toward specific crops. In the past, their activities were more of a general nature. This change is in keeping with the new diversification/report substitution policies.
- 7. Closer working relationships with research in the development of joint programs. This is an IICA project.

35 Å/15

F. INFLUENCES (that help and that hinder)

Major Positive Societal Influences that Help Extension

- 1. In recent times the availability of markets in the U.S. and the U.K. has helped to increase Extension's activities and so has its image.
- 2. The rise of the Tourist Sector has also had a positive influence on Extension through increased markets—greater Extension activity.
- 3. The recognition of Extension's role in the new diversification programs.
- 4. Publicity given to Extension workers through programs like excellence in Extension—a program conducted by CAEP.
- 5. Political support for Extension workers (this support is fragile or inconsistent).

Major Negative Societal Influences that Hinder Extension

- 1. The continued emphasis placed on white collar work and the lower salaries received by Extension workers for similar qualifications.
- 2. Continued resistance to paying more for locally produced foodstuff.
- 3. The growing foreign taste. Consumers are less inclined to buy local.
 As such they see Extension workers as not performing an important task.

Extension program development allows for identifying and developing farming systems on the fullowing bases:

- (i) Inputs farm/home processes outputs.
- (ii) Relationships and family inputs: family resources Land, Labor, Capital, Management
- (iii) Linkages, and relationships among components and subsystem of the farm/family systems.
- (iv) Impact of factors beyond direct control of the family, e.g., world prices and markets, infrastructure status, roads, credit, extension/research, input availability.

35 A/16

ERIC

Full Text Provided by ERIC

FOLLOWING ARE EXCERPTS FROM AN INTERVIEW

#-CN-1

In the first place, what was happening was that we were moving into, again from government's policy, to have self-sufficiency in meat products. Two were identified initially, poultry and pig farms. The government was giving subsidies in the production of pork in terms of subsidies in housing. There was this project being initiated. We had seen that people can stop being traditional for pork products if they can reduce what is being imported.

Fair enough, we'll be satisfying fresh pork or even the salted pork. We didn't have the know-how either, but at the same time the government was establishing some small laboratory in food processing.

[Is that down in Trinidad then?]

#-NA-AG #-SC-AG

Yes, in Trinidad. They were also involved in the setting up of one of the British laboratories which is a processing operation. So the whole thing was mashed in. It's a question of carrying on or working with what is in the making. So government's policy, it was not the people's desire at all. We know that people eat lots of ham around Christmastime. We had seen that, and if we are to assist in the decrease in the importation, that this is one area we can tackle.

#-EV-T

We are already making progress. We are establishing from about 2 to 20 pig units. From the time this first started into the self-sufficiency product. We have moved from 2 to 20 units. This was a matter of 5 years.

#-MOD

[In your region?]

Yes, in that particular region. There was the subsidy, so farmers agreed to that. We didn't want the whole thing to fall through, in terms of the thing was being subsidized and then for it to be just like that. All along we experienced some problems, like anything else. We are experiencing problems with marketing. Marketing we experienced problems with feed. I think we had a feed mill which went down, so feed was much more expensive. So all of a sudden these things came up. But we are saying we want this thing to survive, so we have to design something. So I said, let us try and have this sort of program. First of all, I have the know-how.

#-SP-Y

[You have the personal know-how?]

Yes, because I attended the two-week workshop.

#-CED-Y

[You had a two-week personal in-service on processing ham and bacon.] #-CN-I

The whole idea was not just to educate me, it was for the people, but through me, so it was up to me now to pass it on. So then this was how I tried to pass it on.

#-AR-T

[You had a merging of your training, research soing on, and the government directives. You had a merging of those three. But the people weren't sensitive to it.]

#-CN-I

But we know to ourselves that people buy hams.

[So you used that data to back it up.]

#-DMC

We were able to turn the two week workshop into one day. We did a one day workshop for farmers and housewives and people interested.

[Tell me about that one day.]

Basically, the whole processing takes more than a day. It takes about something like 2 weeks. The whole thing was planned.

[Was it in your plan of work?]

#-POW-4 #-AR-T #-MAT-AG

Yes. So we had the preparation made. We secured money from the government, from the boards to purchase pigs and the other things which had to be purchased. We had the thing prepared at different stages here so people could see. Then we had people involved in the actual doing of the things. So we had everything well prepared.

[So they actually did that, they practiced.]

Yes. We had a few of them who had the locally made ovens, so we had this thing on site. I have this particular thing on slides.

#-POW-4

[Did you take slides while you were doing this, for that particular workshop?]

Yes. For that particular workshop.

[Then you've used them & terwards, have you?]

I used it only twice.

#-SC-I

[Did you design this workshop? Was it modeled after the training you had gone through?]

Yes. It was modeled after the training that I went through.

#-MAT-AG

[Did you again have handouts or something?]

Yes we had handouts. The same handouts that were given to me. We had them prepared to be given out.

[Give me a sense as to how many people attended this particular workshop.]
We had 18.

[They're a broad section.]

#-DMC #-EV-U

We intended that to be a trial. Simply a trial to see whether we need to continue it. To see if it could continue. We only succeeded in having two individuals continue it. They went into the home processing.

[And you know that based on follow-up that you did.]

Yes.

[The others fell out because they didn't have the adequate inputs.]

Yes. The two were relying on their own personal contacts with the laboratory and also their own personal contacts with certain people in the hospital to get the stitch and the syringe. So these other things we recognize that the two could have got through and others couldn't because they lacked the sort of contact.

This other one experience we look at all others in this light. It required some planning this particular one thing, because I had to be going back and forth with the research people trying to get them to do it on time, have the thing prepared, walking these people around. . . Everything was fine. The only thing I was told from my administration was that I should have involved the other regions. I was looking at it from my own personal area because all the others attended the course as well. So I was doing my one thing for my region. Because it was successful they felt that more regions

should have been involved. But again, we would have to limit the participants, because we could only do so many people at a time.

A-VII: [The evaluation for that you know that two people followed up. Did you personally follow up with the 18 people, or did the other officers?]

The other officers did that. I didn't do that personally. I knew one person that close to one of them, so I knew. When I return to the area, I still see this person.

Excorpt on Program Influences
(from a recent study by Sandmann)

A number of factors were found to influence the educational programs related by the respondents, who typically identified these influences as pressures, problem sources, or resources. For example, pressures on the educator to act in certain ways came from clientele, superiors, or cooperating agencies; crises presented other pressures. Having, or being able to obtain, resources (resources being broadly defined as information, authority, money and so on) also was inherent in various influences.

To fully understand the programming practice of the officers, two dimensions need consideration: (a) the number and nature of dominant influences, and (b) the amount of congruence among the influences bearing on the program.

The effect of influences on an agent's program depended upon the types of influence felt, and the extent to which those influences were congruent to or competitive with each other. The next two sections describe the different types of influences; the third section provides a model that illustrates interrelationships among influences.

Types of Influences

A strong relationship appeared to exist among the number, nature, and dominance of influences that the agents attended to in their program decision-making and in their programming approaches. These influences can be clustered into four major categories or systems: macro-internal, macro-external, micro-internal, and micro-external. The following list, while not intended to be exhaustive illustrates some of the specific influences within each of the four systems.

Macro-Internal Influences

Macro-internal influences are those that come direct, from the agent's employing organization; that is, the national government's ministry of agriculture. Agents with an institutional orientation seemed to primarily consider and be affected by macro-internal influences. The influences include the following elements:

- o The strength and clarity of ministry of agriculture leadership.
- o The existence of a national ministry of agriculture work plan, and the specificity and perceived fairness of that plan.
- o Personnel management practices such as promotion and reward process, supervisor's directives, other officers, and staff movement.
- O The ministry of agriculture's budget, and its ability to consistently supply program resources.
- o Cooperation within the ministry of agriculture (the ability to access resources of livestock division, tree crop, etc.).
- o Ministry policies, especially those related to marketing, land use. and conservation.

Macro-External Influences

Macro-external influences are those influences not under the jurisdiction or beyond the control of the ministry of agriculture. The influences may include other agencies, national developments, environmental factors, the country's infrastructure, and the world market.

Particular instances of these types of influences are described below:

Other Agencies

This category includes influences from public and private agencies, such as the Caribbean Agriculture Research and Development Institute (CARDI), the Caribbean Agricultural Extension Project (CAEP), and the Windward Island Banana

Growers Association (WINBAN). It also includes French, Algerian, and British funded agricultural projects, and the development bank.

National Government

Influences from the national government include those that stem from an imposed budget, and from national policies such as the redistribution of estates.

Environment

Many different environmental factors can influence agents' programs, including the tropical conditions of volcanic islands, and the islands' dry and rainy seasons. In addition, farms are often situated on steeply-sloping lands, the quality of which are affected by heavy rainfalls and inadequate drainage.

Infrastructure

Different aspects of a country's infrastructure itself bear directly on programmers. Examples of negative infrastructure influences include inadequate 'ater supply and poor road maintenance.

World Markets

Linkages and relationships among world prices and markets also influence programmers. These influences include the presence, stability, and profitability of domestic and foreign markets as well as infrastructure status, credit, and research, and the availability of input.

Micro-Internal Influences

Micro-internal influences are defined as those related directly to the extension officers. Agents with a personal orientation seemed to respond most to micro-internal influences. These influences include an agent's observations, training, energy level, programming preference, previous work assignments, vocational or avocational interests (such as a personal farming operation), and understanding of problems.

Micro-External Influences

These are influences that are related to the characteristics of clientele, such as the farmers' literacy level, language, age, attitude (individualistic and independent). Agents with a clientele orientation seemed to be affected most by these influences. Micro-external influences also include the following:

- o The farmer's past pattern of participation in educational programs.
- o Husbandry practices.
- o Input relationships.
- o Family resources such as land, labor, capital, and management.
- o Linkages and relationships among components and subsystems of the family or farm system.
- o The needs expressed through one-to-one interactions or advisory groups.

Officers who had a transactive approach attended not to only one system of influences, but rather to many types of influences at once. Most of the programs were affected by multiple influences. This interplay of elements from different systems was consistent with the notion that the practice of the extension programmer occurs in an open system. It appeared that influences were able to define and direct programs if the influences were perceived as important and were attended to by the programmers, and if the influences were dominant in a particular case. In addition, whether influences were congruent or competing affected the extent to which the influences helped or hindered the programs.

During the course of the study, social, economic, political, legal, technological, and cultural forces were found within each of the influence categories. It was sometimes difficult to assign an influence to a particular category; the source of the force, or the system from which the force was derived, determined the final classification of the influence. For example,

economic influences could be listed as macro-external (national economy), macro-internal (the extension division's budget), micro-internal (the resources agents felt they had to execute the program), or micro-external (the farmers' ability to pay for farming inputs). Technological influences could be as diverse as the officers' ability to access information or understand the technology (micro-internal), the traditional practices of farmers (micro external), or the existence of knowledge or technology to solve a particular problem (which would be considered a macro-external influence if it existed at the community level, or a macro-internal influence if it existed at the institutional level).

Level of Congruence

In addition to the nature and number of dominant influences, the congruency or competitiveness of those influences also affected officers' program-approaches. The data suggest that influences range from being congruous, or supportive of each other, to being competitive, or conflicting with one another. The extent to which the influences were congruent or competitive affected the programmer's practice and the clarity, fluidity, and outcomes of the resulting programs.

For example, in one banana production case, all of the influences appeared to work together to contribute to, or least not detract from, the program. The anticipated outcomes were being achieved. In another participant's weed control program, the influences appeared to be congruent in the beginning. However, halfway through the program, the major community employer began to compete with the agent's goal and the clientele's participation. The program died.

A WORLD PERSPECTIVE: AN INTERNATIONAL COMPARATIVE ANALYSIS OF EDUCATIONAL PROGRAMS FOR ADULTS

Overview

During 1986-88, adult education scholars and practitioners from more than twenty nations throughout the world will cooperate on a cross-national adult education project. The purpose of the project is to understand the ways educational programs for adults function in society. Cross national similarities and differences will be analyzed and the results reported.

The overall project coordinator is Alan B. Knox, Professor of Adult Education, University of Wisconsin, USA. Working with Professor Knox on the project will be his wife, Linda Book Knox, an experienced adult educator and writer, who will be helping with data collection and project coordination, and Professor Dusan Savicevic, University of Belgrade, Yugoslavia, who will be helping with the comparative analysis.

In each of the nations included in this project an adult educator will serve as a coordinator for the preparation of case descriptions of educational programs for adults important in their nation. Types of programs might include: educational programs focused on literacy, agriculture, workers, continuing professional education, part-time secondary education completion, part-time higher education completion, health, family, leisure, citizen role, and underserved populations.

Each case stidy will describe the program in terms of its outcomes, process, inputs, past evolution, current influences, and how and why the program functions as it does in its national context. In addition to the comparative analysis and published report of case descriptions by Knox, Knox, and Savicević, each case coordinator will receive a complete set of case descriptions from other coordinators and will be encouraged to conduct their own analysis focused on implications for their own national setting and prepare their own reports. Copies of the project report and case descriptions will be sent to libraries and institutes around the world.

For additional information, contact:

Professor Alan B. Knox Continuing Education University of Wisconsin-Madison 264 Teacher Education Building 225 N. Mills Street Madison, Wisconsin 53706, USA Phone: (608) 263-2937

NOTE: The term adult education refers to all types of part-time and short-term formal, informal, and non-formal educational activities for all categories of adults about any subject matter content.

- A. Purposes of project: to prepare a report that will enable adult educators around the world:
 - 1. appreciate the wide diversity of adult education programs regarding terminology, activities, and concepts.
 - 2. understand ways in which such programs function in the society in which they occur.
 - 3. analyze similarities and differences that can help us recognize options and learn from each other about conditions under which practices produce desirable results.
- B. The basic method of the project is in two parts, descriptive and analytic.
 - 1. One adult educator in each nation participating in this project will serve as case coordinator for that nation. That coordinator may prepare all of the case descriptions of adult education programs for that nation or may cooperate with other people from that nation who may help do so. Prof. Alan Knox (University of Wisconsin, USA) has agreed to serve as overall project director. Each coordinator will arrange for preparation of short case descriptions of typical adult education programs in their nation. The case description will be based on familiarity with the type of program by the person who prepares the case, and may also be based on research or evaluation reports.
 - 2. Prof. Knox, Prof. Savićević, and other researchers interested in doing so, will conduct comparative analysis based on the case descriptions.
 - a. Some of the analyses will be cross national, based on the set of case descriptions, such as literacy, of similar programs in various nations.
 - b. Some of the analyses will be based on the set of case descriptions of all programs in one nation or a set of similar nations, and will emphasize programs within a national setting.
 - 3. The intent is to select nations and programs that are fairly representative, while recognizing that much will be omitted.
 - 4. The purpose of the guidelines for selection of widespread types of adult education programs and for preparation of case descriptions is to make possible comparative analysis without greatly influencing the conclusions that emerge from the comparative analysis.

Nations to be included - adult educators from about twenty nations have expressed interest in preparing case descriptions for this project. The nations are from all regions of the world [east and west, north and south, large and small]. Together they contain three quarters of the world's population and land area.

3

Selection of adult education programs for case description - If describing a typical or widespread program in a case that you prepare (or arrange for) in a given category does not reflect the great variation that actually occurs among programs in that category, two or more contrasting cases can be written in that category. All of the comparative analysis and interpretation that occurs subsequently depends on accurate and balanced case descriptions. Such valid cases depend on the detailed familiarity with the program and context by the person who writes the case.

Sections of each case description - Coordinators will arrange for a brief case description (10-20 double spaced pages) for the programs which the coordinator decides to submit. Each case description will be about a typical current or recent local adult education program such as one program coordinator might supervise, and which typically includes a number of teachers. (These cases should not describe either a single teaching episode or an entire national program.) For widespread national programs, select one or more local or regional examples that functions under the supervision of a coordinator. The purpose of the case description is to increase our insight and understanding of how the program functions in its societal context, and not to evaluate it. Special attention should be given to linkage that program staff provide between client systems of adult learners who are served and resource systems of experts and others who help to plan or conduct programs. We encourage you to prepare your case in such a way that if someone else were to do so independently for the same program, the result would be very similar.

Listed below are proposed categories of information for each case example, to facilitate comparative analysis. Each case may describe a typical specific instance, or may summarize average programs based on available information. Formal, informal, or non-formal educational programs may be included, and for each category listed below, a brief paragraph or two should provide a sufficient description and explanation of the essential characteristics of a typical program. Categories A, B, C, and D will constitute a descriptive portrayal of the program as a system.

A. <u>Setting</u> - Type and size of the provider organization, including the size and characteristics of the service area of program.

B. Outcomes

- 1. Goals Program goals, content and intended outcomes (Include the major stated objectives, the types of people and groups that influence goals, and the process of gaining agreement on these goals and objectives. Indicate the main societal benefit that the program tries to serve, such as assimilation of immigrants, increased agricultural production, or modernization of technology).
- 2. Benefits Evidence of actual program benefits to learners and others (based on evaluation findings or general impressions).

C. Process

- Planning Program planning (including who conducts needs
 assessment and/or context analysis, and how they usually do so,
 along with other major planning arrangements, such as objectives
 and activities, and use of plans).
- 2. Methods Methods of teaching and learning (including main types of methods and materials for helping adults learn).

4

- 3. <u>Improvement</u> Program improvement (including evaluation and improving the performance of program staff).
- 4. Participation Encouraging participation and responsiveness to learners (including counseling and other ways to retain learners in programs).
- D. <u>Inputs</u> Numbers and characteristics of people and resources that are acquired for the program to function, along with the procedures to obtain them. For example:
 - 1. Participants (numbers and characteristics of learners or students and average number of hours spent in the program each week)
 - 2. Needs (indication that a problem or educational need existed that the program should address)
 - 3. Staff (number of full time equivalent administrators, teachers, discussion leaders, coordinators and other staff members)
 - 4. Content (major subject matter fields)
 - To describe general levels of financial support and expenditures for this program, estimate the total amount of annual financial and in-kind income and support that the program receives to cover all instructional and other direct program costs. (Do not include indirect costs.) Using that total budget level for the program as a base, compute and report the percentage of program income and support from government funds, fees paid by participants, and all other sources combined. Also, report the percentage of the total budget that is used to pay staff salary and wages.
 - 6. Facilities, equipme t, materials
 - 7. Other (including feedback regarding outcomes that influence inputs and process)
- E. Evolution Brief history of major program trends to describe how this program started or evolved, and the major past influences that helped and that hindered its development.
- F. Influences Major current societal influences from the past few years and now that affect stability and change in the program's functioning and outcomes. (Examples could include: financial support, government policies, economic status or conditions, religious or social traditions, available volunteers and staff.) The influences could be local, regional, national, or international.
 - 1. Positive influences that help or contribute to the program's effectiveness or success.
 - 2. Negative influences that hinder or make it difficult for the program to be effective.
- G. Other Any other brief comments that help explain how and why the program functions as it does in its societal context. Illustrative comments could include clarification of important variables, indications how how the selected program differs from others of its type in your nation, opinions about widespread values and beliefs relevant to the program (description of important adult education staff roles), and your own perspective and interpretation of activities and meanings. Pertinent articles, reprints, statistics, and bibliographic citations that would clarify the program for readers are also welcomed.
