ABSTRACT

In an effort to provide faculty and administrators with a current profile of the diverse student population at Piedmont Virginia Community College (PVCC), a study was conducted of new students entering PVCC in fall 1989. The new student population, representing 33.5% of the total fall 1989 headcount, included 849 first-time students and 644 transfer students. The ratio of new to returning students has been relatively constant for the last five years, while the ratio of first-time to transfer students has not. During fall 1985, the number of first-time students was the lowest in 11 years and the number of transfer students was the highest ever. Between 1985 and 1987, however, first-time student enrollment increased by 14.5% and transfer student enrollment decreased by 1.9%. Generally, during the past five years, the enrollment of new students has mirrored that of the student body as a whole. Demographically, the fall 1989 new and returning students were quite similar: the ratio of males to females was 2:3; the ratio of whites to minorities was 9:1; and between 25% and 30% of all new students were in the age bracket 25 to 34. More notable differences existed between the new and returning student populations. First-time students were typically younger than transfer students and more likely to study full-time at PVCC. Proportionally more first-time students studied during the day at the main PVCC campus than did transfer students, and a larger percentage of first-time students were enrolled in programs of study leading toward degrees or certificates. A research summary is attached to the report. (JMC)

PVCC NEW STUDENT PROFILE FALL SEMESTER 1989

INTRODUCTION

This is the fifth in a series of annual studies on new students attending Piedmont Virginia Community College (PVCC) during the fall term of a given year. The first report in the series profiled only first-time students; subsequent reports were expanded to include transfer students, as well as first-time students.¹

The definitions of first-time, transfer, and returning students are those used by the Virginia Community College System (VCCS). First-time students are students who have never completed any college courses; transfer students are students who have completed one or more college courses but have never enrolled at PVCC; and returning students are students who have previously attended PVCC.

As noted in earlier studies, a tremendous diversity exists among new students. Some have just graduated from high school and are attending college for the first time; others are attending college for the first time, but have waited to begin studying until after raising families or retiring from jobs; still others are college graduates taking one or more courses purely for personal pleasure; and finally, others are high school or college graduates taking courses in order to acquire skills for new jobs or careers.

¹See Ronald B. Head, *PVCC First-Time Student Profile: Fall Quarter 1985* (PVCC Institutional Research Report No. 1-86, April 1986); Ronald B. Head, *PVCC New Student Profile: Fall Quarter 1986* (PVCC Institutional Research Report No. 3-87, April 1987); Ronald B. Head, *PVCC New Student Profile: Fall Quarter 1987* (PVCC Institutional Research Report No. 3-88, March 1988); and Ronald B. Head, *PVCC New Student Profile: Fall Semester 1988* (PVCC Institutional Research Report No. 2-89, February 1989).

Because of this diversity, it is important that faculty and administrators understand the characteristics of students attending PVCC for the first time. If new student expectations differ from faculty perceptions, new students will likely never become returning students. This study, then, is intended as a retention tool, offering perspectives for understanding new PVCC students by providing a longitudinal profile of their demographic and enrollment characteristics.

METHODOLOGY

In terms of methodology, this study is similar to previous studies on new students. The statistical treatment is descriptive, only fall end-of-term figures are used, and data sources are acknowledged at the bottom of each table in the study. For the most part, data were obtained from the Student Enrollment Booklets published electronically each fall by the VCCS.

The VCCS changed from a quarter to a semester academic calendar in 1988-89. In this regard, some caution is in order when comparing fall 1989 figures with those of fall terms prior to 1988.

NEW STUDENT HEADCOUNT

One-thousand four-hundred ninety-three new students enrolled at PVCC during Fall Semester 1989. Of these, 849 were first-time students and 644 were transfer students. New students accounted for approximately one-third (33.5%) of the total fall semester 1989 headcount. As can be seen in Figure 1, 19.1% of the total student headcount consisted

of first-time students, 14.5% consisted of transfer students, and 66.5% consisted of returning students.

Between fall 1988 and fall 1989, student enrollment at PVCC increased by 6.1%, and a new headcount record of 4,454 was established. First-time student enrollment increased at a slightly higher rate (8%), but transfer student enrollment decreased by 3%, so that combining the two categories (first-time and transfer), new student enrollment increased by 3% during this period of time, a lower figure than the increase in either returning students (7.8%) or all students (6.1%).

Generally, during the past five years, the enrollment of new students at the college has mirrored that of the student body as a whole (see Figure 2). Between fall 1985 and

fall 1987, both total student enrollment and new student enrollment increased; between fall 1987 and fall 1988, both decreased; and between fall 1988 and fall 1989, both increased.

While the proportion of new to returning students has been relatively constant during the past five years, the proportion of first-time to transfer students has not. During Fall Quarter 1985, the number of first-time students was the lowest in eleven years, and the number of transfer students was the highest ever. Between Fall Quarter 1985 and Fall Quarter 1987, however, first-time student enrollment increased by 14.5% and transfer student enrollment decreased by 1.9%. Between fall 1987 and fall 1988, both first-time and transfer student enrollment decreased, but the gap, or difference, between the two

FIGURE 3: PVCC FALL TERM HEADCOUNT (FIRST-TIME STUDENTS/TRANSFER STUDENTS)

remained about the same. Between fall 1988 and fall 1989, however, the gap widened considerably. As has been noted, first-time student enrollment increased by 8%, while transfer student enrollment decreased by 3%. The difference between first-time and transfer student enrollment at PVCC is graphically depicted in Figure 3.

As noted in last year's study:

The increase in transfer students during the early and mid-1980's is probably a reflection of the growth in industry in the Charlottesville area during the period. As has been reported in earlier studies, transfer students are typically older adult students, many of whom have college degrees, and many of whom are taking courses at PVCC to obtain specific job skills. The slight growth in first-time students since fall 1985 is probably a reflection of PVCC's increased recruiting in service region high schools. As was reported in earlier studies, the typical first-time student is a recent high school graduate, 18 to 21 years of age.²

PVCC fall term headcount by first-time, transfer, and returning student status between the opening of the college in 1972 and fall 1988 is shown in Table 1.

TABLE 1: PVCC FALL TERM HEADCOUNT BY TYPE OF STUDENT

DEMOGRAPHIC CHARACTERISTICS OF NEW STUDENTS

Demographic characteristics of fall semester 1989 students by student status (first-

time, transfer, and returning) are shown

in Table 2. Demographic characteristics examined in this study are sex, race, age, and residence.

First-time and transfer students were similar with respect to sex. Slightly over 40% were males and slightly less than 60% were females.

Proportionally more new students, however, were male than

SOURCE: Information on sex, race, and age was taken from the VCCS Student Enrollment Booklet, Tables 11B, 14A, 14B, and 15. Information on residence was taken directly from VCCS student data by means of a Fortran program written by the author. Note that percentages are by column by group except for the last row, which indicates the percentage of students by category in the student body as a whole.

returning students. Only 35.5% of all returning students were males, while 41.5% of all new students were males.

Proportionally more first-time students were black than were either transfer or returning students. The percentage of black first-time students was much higher than that of transfer black students (11.9% as opposed to 6.7%). The percentage of minority students other than black was approximately the same for first-time, transfer, and returning students.

Transfer and returning students tended to be older than first-time students. The mean (or average) age for all students during Fall Semester 1988 was 31. For transfer students, the mean age was also 31, and for returning students it was 32. For first-time students, however, the mean age was 25. The median (or midpoint) age for all students was 29; for returning students, the median age was 30; for transfer students, it was 29; and for first-time students, it was 20. This difference in age may be due to the fact that a first-time students typically include a large number of recent high school graduates.

Slightly over 80% of all first-time and transfer students resided within the PVCC service region.³ Transfer and returning students were more likely to live within the Charlottesville metropolitan area than were first-time students. Approximately 70% of all transfer and returning students lived in either the City of Charlottesville or Albemarle County; approximately 50% of first-time students lived within these two jurisdictions.

The demographic characteristics of new students have been quite stable over time (see Table 3). Since the late 1970's, the ratio of males to females has been 2:3 and the

³Returning students had an even higher rate of residence within the service region (90.1%).

ratio of whites to minorities has been nearly 9:1. Between 25% and 30% of all new students have been in the age bracket 25 to 34, and approximately 80% have lived within the college's service region.

Table 4 shows enrollment characteristics of fall semester 1989 PVCC first-time, transfer, and returning students.

One of the major findings of previous studies was that sharper differences in enrollment characteristics existed among new students

(first-time and transfer) than between new students and returning students.⁴ Table 4 reveals that these same differences still exist.

A much larger percentage of first-time student were classified as full-time than were either transfer or returning students (see Figure 4). Full-time students were those who took 12 or more credits of course work during the semester. Over 30% of the first-time students were full-time, while only 10.1% of the transfer students were full-time.

⁴See, for instance, *PVCC New Student Profile: Fall Quarter 1986*, Op. cit., p. 11, or *PVCC New Student Profile: Fall Quarter 1987*, Op. Cit., p. 12.

Nearly

30% of all first-time students were classified as evening students; over

70% of all transfer students were evening students. An evening student is any student who takes all of his or her classes after 6:00 p.m. However, with respect to location of study, little difference existed between first-time and transfer students. Approximately one-quarter of all new students, whether first-time or transfer, took all classes off campus. With respect to in-state/out-of-state classification, a larger percentage of transfer students (6.5%) were classified as out-of-state than were first-time students (2.2%).

A much greater percentage of first-time students than transfer students were enrolled in programs of study leading toward degrees or certificates (see Figure 5). Forty-three percent of all first-time students were enrolled in degree programs; only 15.7% of the transfer students were enrolled in degree programs. Approximately one-third of all first-time students were enrolled in college transfer programs (those leading toward the Associate of Arts [A.A.] or Associate of Science [A.S.] degrees); only 12.1% of all transfer students were enrolled in college transfer programs. Nine and two-tenths percent of the first-time students were enrolled in occupational/technical programs as opposed to 3.6%

of the transfer students. Occupational/technical programs are those leading toward the Associate of Applied Science (A.A.S.), a certificate, or a diploma.

Enrollment characteristics of new students have been relatively stable during the past five years (see Table 5). However, between Fall Semester 1988 and Fall Semester 1989, the percentage of degree-seeking new students dropped by 10%. This loss is largely the result of fewer first-time students declaring their intention to seek degrees at PVCC. Between fall 1988 and fall 1989, the percentage of first-time students enrolled in degree programs fell from 55.6% to 43% (a 12.6% decrease); the percentage of transfer students enrolled in degree programs fell from 24.1% to 15.7% (an 8.4% decrease).

 Note that percentages are by column by group except for the last row, which indicates the percentage of new students in the student body as a whole.

Table 6 presents new student enrollment by curriculum from Fall Quarter 1985 through Fall Semester 1989. As can be seen, the sharpest decrease in degree-seeking students between fall 1988 and fall 1989 occurred in General Studies, where the number of students dropped from 150 to 79, a 47.3% decline. Part of the reason for this decline may have been the increased efforts in 1989 by the Office of Admissions and Records to accurately classify students.

PVCC AND VCCS NEW STUDENTS

Table 7 presents a comparison between fall semester 1989 new students from PVCC and from the

VCCS by selected demographic and enrollment characteristics.

Please note that the two categories, PVCC and VCCS, are exclusive--PVCC data have been removed from VCCS data.

As has been the case during the past several years, the typical PVCC new student

was more likely to be female than the typical VCCS new student. Perhaps the reason for this is that PVCC offers a number of programs, such as nursing and respiratory therapy, which traditionally appeal to women. The typical VCCS new student was less likely to be white than the typical PVCC new student. Nearly 20% of all VCCS students were non-

SOURCE: VCCS Student Enrollment Booklet, Tables 4, 5, 11B, 14A, and 14B. Note that the two categories, PVCC and VCCS, are exclusive--PVCC data have been removed from VCCS data.

white, while slightly over 12% of all PVCC students were non-white. The typical VCCS new student was also more likely to be younger than the typical PVCC new student.

Larger percentages of VCCS new students than PVCC new students were classified as full-time, day, and on-campus. One reason for this might be that proportionally more VCCS students were first-time than were PVCC new students. Over three-quarters of all new VCCS students were first-time (76.5%); over one-half of all new PVCC students were first-time (65%). First-time students typically study full-time at the main campus during the day.

With respect to program enrollment, a larger percentage of PVCC new students than VCCS new students were unclassified (68.8% for PVCC; 54.4% for the VCCS). A much larger percentage of VCCS new students were enrolled in occupational/technical programs (21.6% for the VCCS; 6.8% for PVCC) and a slightly smaller percentage in college transfer programs (21% for the VCCS; 24.4% for PVCC).

CONCLUSIONS

As noted in previous studies, the differences among new students were more pronounced than the differences between new and returning students. First-time students were typically younger than transfer students and more likely to study full-time at PVCC. Proportionally more first-time students studied during the day at the main PVCC campus than did transfer students. A larger percentage of first-time students were enrolled in programs of study leading toward degrees or certificates.

First-time students at PVCC are closer to the common perception of college students (recent high school graduates, 18 to 22 years of age, studying full-time) than are college transfer students. College transfer students are a more diverse group, attending PVCC for a wide variety of reasons.

One major finding in this year's study which may merit further investigation concerns program enrollment. Quite simply, both the number and percentage of new students enrolling in instructional programs leading toward degrees or certificates at PVCC dropped sharply between Fall Semester 1988 and Fall Semester 1989. Within the VCCS as a whole, the opposite was true. In fall 1988, a larger percentage of PVCC new students than VCCS new students were enrolled in degree programs (41.2% for PVCC; 40.3% for the VCCS). Between fall 1988 and fall 1989, however, degree-seeking, new students in the VCCS rose to 42.6%, and degree-seeking new students at PVCC fell to 31.2%.

Of course, the number of degree-seeking students during previous fall terms may have been exaggerated--recent efforts by the Office of Admissions and Records to accurately classify students resulted in the number of General Studies students declining by nearly 50%. Still, the number of unclassified students at PVCC rose by 20.7% from Fall Semester 1988 to Fall Semester 1989. This is certainly an alarming increase, and why so many new students in fall 1989 decided not to enroll in degree programs is unclear.

PVCC Institutional Research Brief

March 1990

PVCC NEW STUDENT PROFILE: FALL 1989

This brief summarizes the major findings of *PVCC New Student Profile: Fall Semester 1989* (PVCC Institutional Research Report No. 2-90, March 1990), a study on new students attending Piedmont Virginia Community College (PVCC) during Fall Semester 1989. Students new to both PVCC and college in general are classified as first-time; students new to PVCC but having one or more credits from other institutions of higher education are classified as transfer; students who have taken classes at PVCC previously are classified as returning.

One-thousand four-hundred ninety-three new students enrolled at PVCC during Fall Semester 1989. Of these, 849 were first-time students and 644 were transfer students. New students accounted for approximately one-third (33.5%) of the total fall semester 1989 headcount. As can be seen in Figure 1, 19.1% of the total student headcount consisted of first-time students, 14.5% consisted of transfer students, and 66.5% consisted of returning students.

As noted in previous studies, the differences among new students were more pronounced than the differences between new and returning students. First-time students were typically younger than transfer students and more likely to study full-time at PVCC. Proportionally more first-time students studied during the day at the main PVCC campus than did transfer students. A larger percentage of first-time students were enrolled in programs of study leading toward degrees or certificates.

First-time students at PVCC are closer to the common perception of college students (recent high school graduates, 18 to 22 years of age, studying full-time) than

(Continued on reverse side)

are college transfer students. College transfer students are a more diverse group, attending PVCC for a wide variety of reasons.

One major finding in this year's study which may merit further investigation concerns program enrollment. Quite simply, both the number and percentage of new students enrolling in instructional programs leading toward degrees or certificates at PVCC dropped sharply between Fall Semester 1988 and Fall Semester 1989. Within the Virginia Community College System (VCCS) as a whole, the opposite was true. In fall 1988, a larger percentage of PVCC new students than VCCS new students were enrolled in degree programs (41.2% for PVCC; 40.3% for the VCCS). Between fall 1988 and fall 1989, however, degree-seeking, new students in the VCCS rose to 42.6%, and degree-seeking new students at PVCC fell to 31.2%.

Of course, the number of degree-seeking students during previous fall terms may have been exaggerated--recent efforts by the Office of Admissions and Records to accurately classify students resulted in the number of General Studies students declining by nearly 50%. Still, the number of unclassified students at PVCC rose by 20.7% from Fall Semester 1988 to Fall Semester 1989. This is certainly an alarming increase, and why so many new students in fall 1989 decided not to enroll in degree programs is unclear.
