ABSTRACT

The North Carolina End-of-Course Testing Program was established to provide student, school, and school system information about achievement in high school courses. This report describes: (1) "Characteristics of Algebra I Students"; (2) "Student Performance on the Core Test"; (3) "Combining Performance and Participation: Yield and Effective Yield"; (4) "Anticipated Final Grades and Scores on the Core Test"; and (5) "Average Performance on the Curriculum Test." Each Algebra I student took a test containing 60 common or core items and one of five different sets of 35 items during the final days of the school year. The average core score was 39.8, or 66.4 percent correct. Performance on the core lest differed by parental education, ethnic group, grade level in school, and anticipated final course grade. The select group of students taking Algebra I in the eighth grade had higher average scores than students at any other grade level. Performance and participation rates in educational regions and public school systems, and state percentile tables for 1986-1989 are provided in the appendices. (YP)

FOREWORD

The End-of-Course Testing Program was established in 1985-36 to provide comparative information about student performance and curricular information about school and school system performance on the goals and objectives outlined in the Standard Course of Study and the Teacher Handbook. By assessing student achievement in this manner, state and local educators can determine the degree to which students are meeting the expectations set forth in the Standard Course of Study.

Algebra I was the first course assessed in the End-of-Course Testing Program in 1986. Since that year, the proportion of students taking Algebra I has increased slightly and average test scores have increased statewide by 2.1 points. If the gain in achievement were interpreted on a letter grade scale, the increase since 1986 would be close to half of a letter grade. The gains have been made by students of both genders and all ethnic groups; and it is especially encouraging to see the high gains coming from students enrolled in honors Algebra I.

It is noteworthy, however, that the student participation rate in Algebra I varies considerably among school units and the opportunity to begin an accelerated mathematics course in the eighth grade still does not exist in some schools.

Improvement in Algebra I performance and participation across the state should be commended. Both of these indices of effective Algebra I programs should continue to improve in future years as school systems put forth theil best efforts to improve secondary education in North Carolina.

Bob Etheridge

State Superintendent of Public Instruction

ABSTRACT

The North Carolina End-of-Course Testing Program was established to provide student, school, and school system information about achievement in high school courses. The first Algebra I End-of-Course Tes: was administered in 1935-86. Algebra II and Biology were added to the testing program in 1986-87 and U.S. History was added in 1987-88. Geometry and Chemistry were added in 1938-89. Other high school courses will be added in future years.

The 60,183 students who took the Algebra I End-of-Course Test in 1988-89 were a subgroup of the school population in the eighth through twelfth grades. The proportion of students taking Algebra I has increased slightly each year since 1986. School systems vary in the proportion of students that take Algebra I during their school career and in the proportion of students that take Algebra I at different grade levels. Although students whose parents have less than a high school education and black students appear to be underrepresented in Algebra I classes across the state, the proportion of Algebra I students that are black increased from 1986 through 1988, and stayed at the same level during 1989.

Each Algebra I student took a test containing 60 common or core items and one of five different sets of 35 items during the final days of the school year. The average core score in 1989 was 39.8, or 66.4 percent correct. On average, the 1989 Algebra I students scored 0.6 raw score points higher than 1987 and 1988 Algebra I students, and 2.1 raw score points higher than 1986 Algebra I students. Performance on the core test differed by parental education, ethnic group, grade level in school, and anticipated final course grade. The select group of students taking Algebra I in the eighth grade had higher average scores than students at any other grade level. The grading standards for eighth-grade performance appear to be higher than the standards for other students.

Schools and school systems can identify strengths and weaknesses in their instructional programs by examining relative performance on the goals and objectives measured by the 469 items administered in 1988 and 1989. As in previous years, 1989 average performance on the basic goals taught early in the course was higher than average performance on the more complex goals taught at the end of the course. Also, it appears that some areas of the curriculum need greater emphasis statewide.

Report of Student Performance

Algebra I

Spring 1989

ACKNOWLEDGEMENTS

Development of a comprehensive report of student and school system performance in Algebra I requires the effort of many individuals. We would like to thank Randy Harter of Buncombe County for suggesting the effective yield index; Andrew McEachern for his careful reading of the report to verify accuracy of numbers and statements; Kevin Kirby and Marilyn Zuckerman for producing the plots and graphs; George Stubblefield for producing many of the tables; and Faye Atkinson and Stephanie Moultrie for insuring that the final copies were made, collated, and distributed.

Introduction

North Carolina has developed six end-of-course tests and is in the process of developing additional end-of-course tests within a number of subject areas. The purposes of the tests are twofold:

- 1. The tests provide information about each individual student's performance relative to that of other students in North Carolina.
- 2. The tests provide information about school and school system achievement on the subject area goals and objectives specified in the Standard Course of Study and the Teacher Handbook.

The development of all the end-of-course tests will require many years of effort. End-of-course tests are the final product of a process which includes: curriculum development and review; statewide curriculum surveys; test specification; the writing, review, and field-testing of a large pool of test items matched to objectives in the *Teacher Hendbook*; test construction using selected items from the pool; and review, field-testing, and equating of different forms of each test. Several forms of each end-of-course test are developed so that the same tests are not administered in subsequent years.

Based on statewide enrollment patterns and recommendations made by two commissions on education, the subject areas chosen for initial test development were biology and Algebra I. Item pools for these two courses were built in the spring of 1985. The results of the item development phase indicated that the Algebra I items were sufficient in quality and quantity to meri. building end-of-course tests. Additional biology items and an item bank for Algebra II were developed during the 1985-86 school year, including field-testing in selected sites in May of 1986. In addition to Algebra I, both Biology and Algebra II End-of-Course Tests were administered statewide at the end of the 1986-87 school year. Since then, tests in additional courses have been added to the End-of-Course Testing Program at the rate of one or two a year. The State Board of Education's schedule for development of end-of-course tests through the 1991-92 school year is displayed in a chart on the final page of this report.

Although end-of-course tests for different subject areas will vary in length, 110 minutes will be sufficient for administration of the multiple-choice tests in all subjects. The State Board of Education requires that end-of-course tests be administered during 110-minute periods within the last 10 days of school, and recommends that they be administered during final exam periods. In order for scores to be returned to school systems prior to the end of the school year, the proofs portion of the geometry test is administered during regular class periods in the spring. Also, when implemented in 1991-92, the English II essay test may be administered during the spring for scoring to occur prior to the end of the year.

The first North Carolina Algebra I End-of-Course Test was administered at the end of the 1985-86 school year. Five forms of the Algebra I test were administered within each classroom. Each form consisted of 60 common items (the core test) and 40 variable items. In 1987, 1988, and 1989, five additional forms were administered within each classroom each year. The 1987, 1988 and 1989 test forms included new, statistically equivalent, core tests (60 items) and 35 new variable items. Comparisons of performance on the core items are appropriately made across individual students. Average core scores at the initial administration of the test in 1986 provide a baseline with which to compare subsequent performance. Statewide performance on the entire set of 234 items provides a standard to which school and school system achievement of goals and objectives can 'be compared.'

¹While 235 items were administered in each classroom, due to a typographical error, one variable test item was removed from all reporting.

Characteristics of Algebra I Students

Other North Carolina testing programs assess achievement in basic subject areas of an entire cohort or class of students. End-of-course assessments are different in two ways. First, some of the courses are offered to students at different grade levels. Second, some courses are not required of all students; the students who take the courses are a subgroup of the total student population.

Table 1 compares certain characteristics of Algebra I students with the broader population of all enrolled students. The top portion of the table provides the distribution of Algebra I students at various grade levels compared with the average daily membership in those grades. While the largest percentage of Algebra I students (40.7) was in the ninth grade, 17.8 percent were in the eighth grade and 29.9 percent were in the tenth grade. About 13.0 percent of the eighth-grade class, 27.9 percent of the ninth-grade class, and 21.8 percent of the tenth-grade class were enrolled in Algebra I during 1988-89. In 22 of the 139 school systems in North Carolina 20 percent or more of eighth-grade students were enrolled in Algebra I in 21 school systems.

Although the number of students taking Algebra I has decreased over the previous the expears, the proportion of enrolled students taking Algebra I has increased slightly. From the prossection of 60,183 students who took Algebra I in different grade levels in 1988-89, an estimate of the percent of a cohort, or class, of students who eventually take Algebra I in their school career can be obtained by using enrollment in one grade level as a cohort estimate. Using ninth-grade enrollment, an estimate of 68.6 percent will take Algebra I before they graduate from high school. In 1989, this estimate varied considerably among school systems, from a low of 37.3 percent to a high of 100.0 percent (see Table 11 in the Appendix).

The second section of Table 1 compares the ethnic composition of Algebra I with the ethnic composition of K-12 pupil membership. Compared with their distribution in the school population, black students appear to be underrepresented and white students appear to be overrepresented in Algebra I classrooms across the state. However, the gap in participation by ethnic group has n rowed slightly since 1986-87.

The third section of Table 1 compares parental education levels of Algebra I students with parental education levels of students in the eighth grade statewide.³ Students who have parents with an education beyond high school composed 63.0 percent of Algebra I students but only 43.0 percent of the eighth-grade class. On the other hand, students with less educated parents appear to be underrepresented in Algebra I classes across the state.

The proportion of North Carolina students taking Algebra I, both within grade level and within a cohort of students, is similar to a national estimate of Algebra I participation reported by Usiskin in the September, 1987, issue of Mathematics Teacher. Usiskin predicts growth in Algebra I participation, continuing a long trend of increasing percentages of students enrolled in algebra courses and reflecting recent state and school system requirements of algebra for high school graduation.

Obtained from Table 11, North Carolina Public Schools, Statistical Profile 1989.

Teachers recorded education level of the most educated parent of eighth-grade students taking the California Achievement Tests in 1988-89. Algebra I students recorded education level of their most educated parent.

Table 1

North Carolina Algebra I Students¹ Compared with 1988-89 First-Month Average Daily Membership in Eighth, Ninth, Tenth, Eleventh, and Twelfth Grades

GRADE	ADM	Algebra I Students ¹	Percent of ADM	Percent of Algebra I Students

As identified in the 1988-1989 administration of the Algebra I End-of-Course Test.

The 1988-89 ninth-grade class was used as a proxy for a class of students.

Obtained from Table 11, North Carolina Public Schools, Statistical Profile 1989.

As identified in the 1988-89 administration of the California Achievement Tests

Student Performance on the Core Test

Summary scores for the 1989 core test and, for comparison, summary scores for the 1986, 1987 and 1988 administrations, are presented in Table 2. In 1989, the average score for the 60,183 students taking an equivalent core test was 39.8, or 66.4 percent correct. On average, 1989 Algebra I students scored 0.6 raw score points higher than 1987 and 1988 Algebra I students, and 2.1 raw score points higher than 1986 Algebra I students. See the Appendix for 1986, 1987, 1988, and 1989 state percentile distributions.

Group achievement on tests, whether for schools, school systems, or the state, is usually reported using summary numbers such as the average or median which indicate typical performance for the group. One number, whether it is the average or the median score, provides limited information about performance. Box and whisker plots are graphs which describe not only typical performance, but also the performance of most of the students by showing the spread of scores. Box and whisker plots allow the comparison of the high and low scores for different groups as well as the middle scores.

Figure 1 shows how to interpret the box and whisker plots using statewide Algebra I scores for 1988-89. The box represents the middle 50% of scores with the median represented by a horizontal line inside the box. An '*' inside the box shows the location of the average (mean) score. The whiskers extend up to the 90th percentile and down to the 10th percentile. The entire figure shows the range of the middle 80% of scores. As can be seen in Figure 1, about 50 percent of Algebra I students answered between 34 and 46 (inclusive) items correctly. About ten percent of the Algebra I students scored above 52 and ten percent scored below 28.

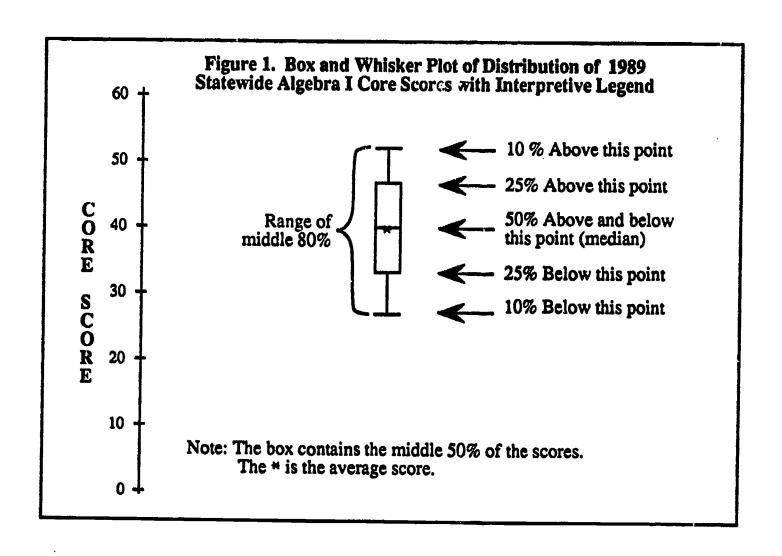

Table 2 Average Performance on Algebra I Core Test: 1986-1989

^{*}Algebra I, Part II, is the second year of a two-year Algebra I course. Type of Class was not reported in 1986.

paralese resistant sense de la compara de la constitución de la consti

Table 2 also shows average performance on the 60-item core test by sex, parental education, ethnic group, grade in school, and type of class. Figures 2 through 5 show the distributions of Algebra I scores by various groups using box and whisker plots. Average performance for males was similar to average performance for females. The distributions of scores are also similar for males and females.

On average, white students and 'other' students scored higher than American Indian students and black students. Average scores and score distributions were similar for the three groups whose parents have no more than a high school education. Students who have parents educated beyond high school had higher average scores than students who have less educated parents.

The largest difference in average core scores and score distributions appeared among students taking Algebra I in different grade levels. Only 13.0 percent of the eighth-grade class took Algebra I; this select group of high achieving students scored higher than any other group. The average score for eighth-grade students was 47.0, more than 5 points higher than the average score for ninth-grade students, and more than 10 points higher than the average score for tenth-grade students. In Figure 5 it can be seen that 90 percent of eighth grade students scored above 35 while 75 percent of ninth grade students scored above this point. Only 50 percent of tenth and less than 50 percent of eleventh grade Algebra I students scored above this point.

The average score for students in the second year of a two-year Algebra I course in 1989 was 2.8 score points lower than that of regular Algebra I students. It appears that participation in the two-year course has increased, while average scores have remained stable. Students in honors or advanced Algebra I classes scored significantly higher than regular Algebra I students.

Combining Performance and Participation: Yield and Effective Yield

Since Algebra I is a selective course not taken by all students, performance may be related to participation within school systems or within the state. For example, if only the top 20 percent of students take Algebra I, scores will necessarily be higher than if the top 50 percent take Algebra I. Yield is an index of the effectiveness of an Algebra I program which takes into account both participation and performance. It is calculated by multiplying the percent of a class taking Algebra I by the percent of core items answered correctly and then multiplying by 100. Yield would be 100 if all students took Algebra I and all students achieved a perfect score. For the state, about 68.6 percent of a class of students took Algebra I in 1988-89 and these students achieved an average of 66.4 percent of core items correct, producing a yield of 45.6. If average achievement does not change, yield will increase whenever participation increases.

Effective Yield is a similar index but it counts as 'participating' in Algebra I only those students whose achievement is above a certain cutoff point. This cutoff point is an estimation of whether or not they will pass the course. The estimate for the cutoff point is 28. In 1985-86 Algebra I teachers indicated that approximately 14.7% of their students would receive a final grade of 'F'; the same year about 14.2% of students received a score below 28. For the state, the 'effective' percent of class, i.e. students scoring at or above 28 in 1988-89, was 53,812 of the 87,675 ninth grade students, or 61.4%, producing a yield of 40.8. Effective yield will be the same as yield only when all students taking Algebra I achieve at or above the estimated passing score of 28. Therefore, the effective yield index will normally be lower than the yield index.

Figure 2. Distributions of Algebra I Core Scores by Sex -- 1989

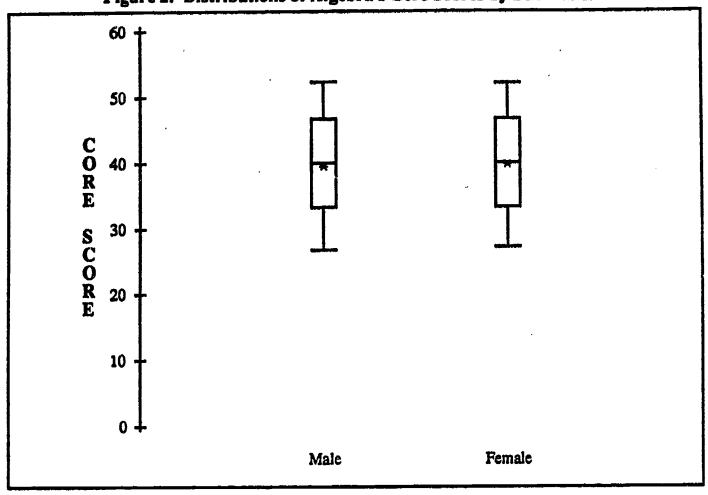

Figure 3. Distributions of Algebra I Core Scores by Ethnic Group -- 1989

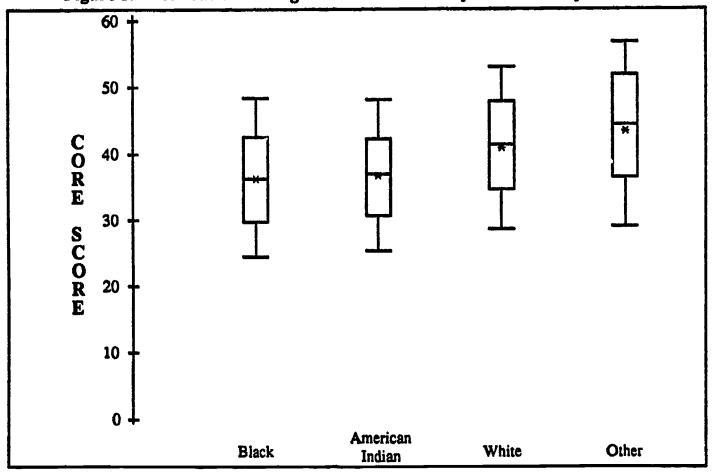

Figure 4. Distributions of Algebra I Core Scores by Parental Education -- 1989

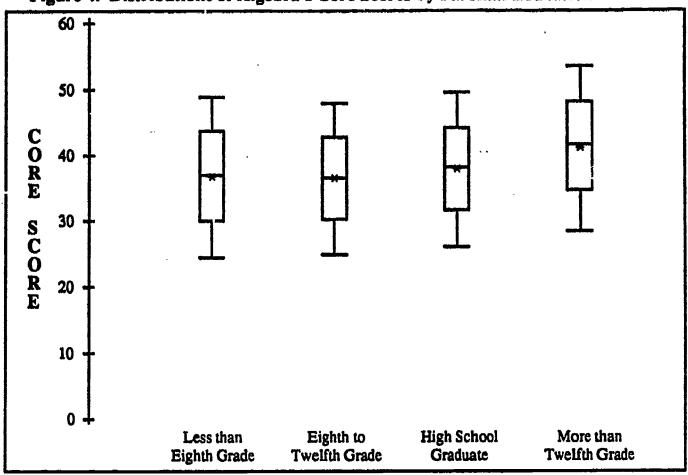

Figure 5. Distributions of Algebra I Core Scores by Grade Level -- 1989

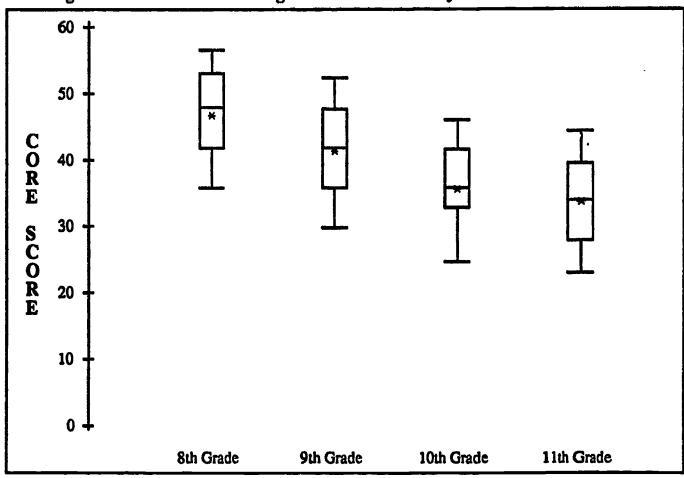

Table 3 shows the yield and effective yield indices for 1986 through 1989. Both indices have increased slightly during the three year period.

Table 3

Algebra I Yield and Effective Yield Indices for 1986-1989

	1986	1987	1988	1989
Yield	40.3	42.6	43.2	45.6
Effective Yield	34.6	36.8	38.1	40.8

The 1986 through 1989 core performance, participation (percent of class), yield, and effective yield for all 139 school systems in the state are presented by region in Table 10 in the Appendix. Figures 17 through 24 in the Appendix graphically present the average 1989 core performance and participation rates for the school systems, by region. Comparisons among school systems should always be sensitive to the fact that the social and demographic factors which are strongly related to differences in achievement are not distributed evenly across the state. These factors influence the yield indices as well as performance. For example, school systems in high socio-economic areas should have both high participation and performance, resulting in high yield and effective yield indices. One appropriate comparison might be among school systems with similar socio-economic characteristics. Another would involve comparing yield and effective yield indices for a school system across time to look for changes in participation and performance.

Anticipated Final Grades and Scores on the Core Test

Algebra I teachers were asked to record each student's anticipated final grade on each answer sheet after the test was administered. Final grades were recorded for 59,406 of 60,183 Algebra I students. Table 4 gives the average score for various grade groups on the core test and the percentages of students who were to receive the various grades for 1987 through 1989. A consistent difference of about 5 raw score points exists between score averages for different anticipated final grades. This pattern is an indication of test validity in that the results parallel the grading practices of teachers. The average for 'C' students was similar to the statewide average in all three years, placing these students in the middle of the score distribution.

Table 5 compares the average scores by anticipated grades between eighth and ninth-grade students for 1987, 1988, and 1989. Average scores for the select group of eighth-grade students have been higher than those for ninth-grade students at each anticipated final grade in each year. For example, the average score for ninth-grade students receiving a 'C' was similar to the average score for eighth-grade students receiving a 'D' for all years. The difference between average scores for eighth and ninth graders within most anticipated final grade groups has decreased each year. On average, ninth-grade students receiving each final grade scored between 3.4 and 5.2 points lower than eighth-grade students receiving the same grade in 1986. In 1987, the difference between ninth and eighth graders was between 2.7 and 4.0 score points for each letter grade and in 1988 the difference was between 2.6 and 3.6 score points. And, in 1989, the difference between ninth and eighth graders was between 2.1 and 3.2 score points for each letter grade. Greater proportions of students received 'A's or 'B's in the eighth grade than in the ninth grade and greater proportions of ninth-grade students received 'D's or 'F's than eighth-grade students.

Box and whisker plots for the score distributions for each letter grade are displayed in Figure 6. The plot illustrates the spread of score points within letter grades and overlap in distributions across letter grades. For example, while the typical 'F' student scored well below the typical 'D' student, 10 percent of 'F' students received an above average core score.

Average Performance on the Curriculum Test

Table 6 shows average performance on the 12 goals as measured by 234 items assessed in 1989, for all Algebra I students in the State and by sex, ethnic group, parental education level, and grade in school. Performance on most objectives can be reported by combining average performance on the 235 items measured in 1988 and the 234 items measured in 1989 (see Table 7). Average scores for goals reported in Table 7 include both the 1988 and 1989 objectives for which there were at least four items. Since they are based on almost twice as many test items, goal scores based on the combined data are better estimates of student achievement than those based on only one year of data. Objective scores yield important information about performance within specific areas in the curriculum. The average percentage correct of all 469 items measured in 1988 and 1989 was 65.5.

The Algebra I goals and objectives are cumulative and sequential and therefore increase in difficulty and complexity from Goal 1 through Goal 12. In general, average student performance in 1988 and 1989 on the goals reflects this pattern with higher average scores occurring on the early goals and lower average scores occurring on the later goals.

Overall goal performance was highest in Goals 1 through 5 (70 to more than 80 percent correct). Performance on the objectives within these goals was generally high. Within Goal 4, student achievement was the lowest on two objectives which are important to more advanced mathematics: Objective 4.6, "Graph a linear equation in two variables" and Objective 4.7, "Graph a line given its slope and y-intercept."

Average performance for Goal 6 was 66.2, with the average percent correct for most objectives ranging in the 50s to 80s. The exception was in the complex problem solving Objective 6.12, for which the average percent correct was only 26.6. Goal 9, "Perform operations with polynomials", was rated as basic to the Algebra I curriculum by more teachers than any other goal in a statewide survey of Algebra I teachers. Overall, the average percent correct for this goal was 67.0. The highest average percent correct was 82.7 for Objective 9.5, "Multiply a polynomial by a monomial", and the lowest was 42.6 for Objective 9.14, "Square a binomial without using long multiplication."

Two difficult areas to teach are contained in Goal 7, "Solve linear inequalities", and Goal 11, "Perform operations with algebraic fractions". Overall percent correct scores for these goals were 54.2 and 50.5, respectively. Performance was quite low for objectives which required students to find a common denominator: Objective 11.7, "Add and subtract algebraic fractions" (30.0 percent correct), and Objective 11.9, "Solve fractional equations" (37.3 percent correct). Performance was also low for Objective 11.8, "Change a mixed expression to an algebraic fraction and a fraction to a mixed expression" (37.0 percent correct).

Goal 8 involves solving systems of linear equations. Of the objectives reported, student performance was weakest on Objective 8.3, "Write the equation of a line given the slope and one point on the line, or two points on the line" (32.5 percent correct), and strongest on two objectives in which they solved open sentences in two variables (52.6 percent correct), or used the substitution method to solve pairs of linear equations (56.6 percent correct). Average performance on Goal 10, "Solve quadratic equations", was 44.6 percent correct. The very low performance on Goal 12 (37.2 percent correct) may be due to the fact that it is taught at the very end of the year and some teachers covered the topics while others did not.

Statewide performance across all Algebra I goals and objectives shows areas of strength and areas in which improvement is needed. As schools and school systems examine their own performance on these goals and objectives, they can identify patterns of strengths and weaknesses relative to statewide performance.

4.6:	GRAPH A LINEAR EQUATION IN TWO VARIABLES (5)	49.0
4.7:	GRAPH A LINE GIVEN ITS SLOPE AND Y-INTERCEPT (6)	47.4

NOTE: THE NUMBER OF ITEMS IN EACH GOAL AREA IS DIRECTLY PROPORTIONAL TO THE NUMBER OF OBJECTI'ES FOR THE GOAL. THESE RESULTS ARE BASED ON AVERAGE PERFORMANCE ON 235 ITEMS MEASURLD IN 1988 AND 234 ITEMS MEASURED IN 1989. EACH YEAR FIVE FORMS OF THE ALGEBRA I TEST ARE ADMINISTERED IN EVERY CLASSROOM. SIXTY ITEMS (THE CORE) ARE COMMON ACROSS THE FIVE FORMS.

GOAL 5:	PERFORM OPERATIONS WITH REAL NUMBERS (62)	78.9
5.1:	DETERMINE THE OPPOSITE, OR ADDITIVE INVERSE, OF A NUMBER (8)	77.6
5.2:	FIND THE ABSOLUTE VALUE OF A NUMBER (7)	74.5
5.3:	USE < OR > TO COMPARE TWO NUMBERS (4)	77.0
5.4:	ADD REAL NUMBERS (3)	***
5.5:	SUBTRACT REAL NUMBERS (5)	67.9
5.6:	MULTIPLY REAL NUMBERS (4)	84.9
5.7;	DIVIDE REAL NUMBERS (6)	88.0
5.8:	DISTINGUISH BETWEEN RATIONAL AND IRRATIONAL NUMBERS (6)	70.4
5.9:	FIND THE SQUARE ROOT OF A NUMBER WHICH IS A PERFECT SQUARE (6)	89.1
5.10:	USE A CALCULATOR, TABLE OF SQUARE ROOTS, OR AN ALGORITHM TO FIND A. DECIMAL APPROXIMATION FOR THE SQUARE ROOT OF A REAL NUMBER (G)	95.7
5.11:	FIND THE UNION AND INTERSECTION OF TWO SETS OF NUMBERS (7)	63.9
GOAL 6:	SOLVE LINEAR EQUATIONS (63)	66.2
6.1:	FIND THE SOLUTION SET OF AN OPEN SENTENCE WHEN REPLACEMENT VALUES ARE GIVEN FOR THE VARIABLE (6)	72.6
6.2:	SOLVE A SIMPLE EQUATION BY USING THE ADDITION PROPERTY OF EQUALITY (7)	81.0
6.3:	SOLVE A SIMPLE EQUATION BY USING THE SUBTRACTION PROPERTY OF EQUALITY (4)	77.9
6.4:	SOLVE A SIMPLE EQUATION BY USING THE MULTIPLICATION PROPERTY OF EQUALITY (6)	77.2
6.5:	SOLVE A SIMPLE EQUATION BY USING THE DIVISION PROPERTY OF EQUALITY (5)	71.9
6.6:	SOLVE AN EQUATION BY USING MORE THAN ONE PROPERTY OF EQUALITY (5)	68.2
6.7:	SOLVE AN EQUATION WHICH CONTAINS SIMILAR TERMS (4)	80.4
6.8:	SOLVE AN EQUATION WHICH HAS THE VARIABLE IN BOTH MEMBERS (5)	58.5
. 6,9:	SOLVE 'AGE,' 'COIN,' AND 'INTEGER' PROBLEMS (5)	52.8
6.10:	SOLVE AN EQUATION IN WHICH THE NUMERICAL COEFFICIENT IS A FRACTION (6)	56.9
6.11:	SOLVE PROBLEMS INVOLVING PERCENTS (6)	60.7
6.12:	SOLVE 'PERCENT-MIXTURE,' 'INVESTMENT,' 'UNIFORM MOTION,' AND 'RATE-OF-WORK' PROBLEMS (4)	26.6
GOAL 7:	SOLVE LINEAR INEQUALITIES (10)	54.2
7.1:	FIND THE SOLUTION SET FOR A LINEAR INEQUALITY WHEN REPLACEMENT VALUES ARE CIVEN FOR THE VARIABLES (4)	60.2
7.2:	SOLVE A LINEAR INEQUALITY BY USING TRANSFORMATIONS (6)	50.2

NOTE: THE NUMBER OF ITEMS IN EACH GOAL AREA IS DIRECTLY PROPORTIONAL TO THE NUMBER OF OBJECTIVES FOR THE GOAL. THESE RESULT: ARE BASED ON AVERAGE PERFORMANCE ON 235 ITEMS MEASURED IN 1988 AND 234 ITEMS MEASURED IN 1989. EACH YEAR FIVE FORMS OF THE ALGEBRA I TEST ARE ADMINISTERED IN EVERY CLASSROOM. SIXTY ITEMS (THE CORE) ARE COMMON ACROSS THE FIVE FORMS.

GOAL 8:	UNDERSTAND AND SOLVE SYSTEMS OF LINEAR EQUATIONS (42)	47.1
8.1:	FIND THE SLOPE OF A NON-VERTICAL LINE GIVEN THE GRAPH OF A LINE, OR AN EQUATION OF THE LINE, OR TWO POINTS ON THE LINE (5)	43.5
8.2;	WRITE THE SLOPE-INTERCEPT FORM OF AN EQUATION OF A LINE (5)	45.8
6.3:	WRITE THE EQUATION OF A LINE GIVEN THE SLOPE AND ONE POINT ON THE LINE, OR TWO POINTS ON THE LINE (7)	32.5
8.4:	FIND THE SOLUTION SET OF OPEN SENTENCES IN TWO VARIABLES WHEN GIVEN REPLACEMENT SETS FOR THE VARIABLES (7)	52.6
8.5:	USE A GRAPH TO FIND THE SOLUTION OF A PAIR OF LINEAR EQUATIONS IN TWO VARIABLES (3)	***
8.6:	USE THE SUBSTITUTION METHOD TO FIND THE SOLUTION OF A PAIR OF LINEAR EQUATIONS IN TWO VARIABLES (6)	56.6
6.7:	USE THE ADDITION-OR-SUBTRACTION METHOD TO FIND THE SOLUTION OF A PAIR OF LINEAR EQUATIONS IN TWO VARIABLES (3)	***
8.6:	USE MULTIPLICATION WITH THE ADDITION-OR-SUBTRACTION METHOD TO SOLVE SYSTEMS OF BINEAR EQUATIONS (6)	45.6
GOAL 9:	PERFORM OPERATIONS WITH POLYNOMIALS (96)	67.0
9.1;	ADD POLYNOMIALS (5)	64.4
9.2:	SUBTRACT POLYNOMIALS (6)	53.7
9.3:	MULTIPLY MONOMIALS (5)	68.6
9.4:	FIND AN INDICATED POWER OF A MONOMIAL (5)	65.5
9.5:	MULTIPLY A POLYNOMIAL BY A MONOMIAL (5)	82.7
9.6:	MULTIPLY TWO POLYNOMIALS (3)	***
9.7:	FACTOR A MONOMIAL (6)	71.1
9.8:	DIVIDE TWO MONOMIALS (7)	69.4
9.9:	DIVIDE A POLYNOMIAL BY A MONOMIAL (5)	76.5
9.10:	DIVIDE A POLYNOMIAL BY A BINOMIAL (6)	56.5
9.11:	FIND A COMMON MONOMIAL FACTOR IN A POLYNOMIAL (7)	66.5
9.12:	FIND THE PRODUCT OF THE SUM AND DIFFERENCE OF TWO BINOMIALS (7)	72.7
9.13:	FACTOR THE DIFFERENCE OF TWO SQUARES (4)	61.0
9.14:	SQUARE A BINOMIAL WITHOUT USING LONG MULTIPLICATION (4)	42.6

9.16:	FIND THE PRODUCT OF TWO BINOMIALS (5)	73.5
9.17:	FACTOR A QUADRATIC TRINOMIAL WHEN THE COEFFICIENT OF THE QUADRATIC TERM IS ONE-(6)	74.6
9.18:	FACTOR A QUADRATIC TRINOMIAL WHEN THE COEFFICIENT OF THE QUADRATIC TERM IS NOT ONE (5)	63.9

NOTE: THE NUMBER OF ITEMS IN EACH GOAL AREA IS DIRECTLY PROPORTIONAL TO THE NUMBER OF OBJECTIVES FOR THE GOAL. THESE RESULTS ARE PASED ON AVERAGE PERFORMANCE ON 235 ITEMS MEASURED IN 1988 AND 234 ITEMS MEASURED IN 1989. EACH YEAR FIVE FORMS OF THE ALGEBRA I TEST ARE ADMINISTERED IN EVERY CLASSROOM. SIXTY ITEMS (THE CORE) ARE COMMON ACROSS THE FIVE FORMS.

		STATE
GOAL 10:	SOLVE QUADRATIC EQUATIONS (19)	44.6
10.1:	SOLVE A SECOND DEGFLE EQUATION WHEN ONE MEMBER IS IN FACTORED FORM AND THE OTHER MEMBER IS ZERO (5)	50.0
10.2:	SOLVE A SECOND DEGREE EQUATION BY FACTORING (5)	40.3
10.3:	USE FACTORING TO SOLVE A VERBAL PROBLEM (4)	46.3
10.4:	SOLVE A QUADRATIC EQUATION THAT IS IN THE FORM PERFECT SQUARE - CONSTANT (5)	42.3
GOAL 11:	PERFORM OPERATIONS WITH ALGEBRAIC FRACTIONS (48)	50.5
11.1:	WRITE AN ALGEBRAIC FRACTION IN ITS SIMPLEST FORM (6)	60.5
11.2:	SOLVE PROPORTIONS (5)	75.2
31.3;	USE RATIOS AND PROPORTIONS TO SOLVE PROBLEMS (4)	56.9
J1.4:	MULTIPLY ALGEBRAIC FRACTIONS (5)	59.0
11.5:	DIVIDE ALGEBRAIC FRACTIONS (6)	52.5
11.6:	SIMPLIFY ALGEBRAIC EXPRESSIONS INVOLVING MULTIPLICATION AND DIVISION OF ALGEBRAIC FRACTIONS (5)	53.0
11.7:	ADD AND SUBTRACT ALCEBRAIC FRACTIONS (7)	30.0
11.8:	CHANGE A MIXED EXPRESSION TO AN ALGEBRAIC FRACTION AND A FRACTION TO A MIXED EXPRESSION (6)	37. 0
11.9:	SOLVE FRACTIONAL EQUATIONS (4)	37.3
GOAL 12:	SIMPLIFY EXPRESSIONS WHICH CONTAIN RADICALS (11)	37.2
12.1:	SIMPLIFY PRODUCTS AND QUOTIENTS OF RADICAL EXPRESSIONS (4)	42.4
12.2:	SIMPLIFY SUMS AND DIFFERENCES OF RADICAL EXPRESSIONS (7)	34.1
	PERCENT CORRECT ALL ITEMS (469)	65.5
	AVERAGE SCORE ALL ITEMS (469)	307.4
	NUMBER OF STUDENTS TESTED (1988)	59723
	NUMBER OF STUDENTS TESTED (1989)	60183

NOTE: THE NUMBER OF ITEMS IN EACH GOAL AREA IS DIRECTLY PROPORTIONAL TO THE NUMBER OF OBJECTIVES FOR THE GOAL. THESE RESULTS ARE BASED ON AVERAGE PERFORMANCE ON 235 ITEMS MEASURED IN 1988 AND 234 ITEMS MEASURED IN 1989. EACH YEAR FIVE FORMS OF THE ALGEBRA I TEST ARE ADMINISTERED IN EVERY CLASSROOM. SIXTY ITEMS (THE COPE) ARE COMMON ACROSS THE FIVE FORMS.

APPENDIX

Algebra I Core and Goal Performance in Educational Regions and Public School Systems

Table 8 presents average performance on the 60-item core test, the 235-item curriculum test, and the 12 goals of Algebra I for the eight educational regions. Public school system average core and goal performance are given in Table 9. School systems are arranged by educational region.

Algebra I Box and Whisker Plots of Core Scores for Education Regions and Public School Systems

Figure 7 displays the distributions of core scores for eight educational regions using box and whisker plots. Public school system box and whisker plots are presented in Figures 8 through 15. See the interpretive legend in Figure 1 on page 4.

Algebra I Core Performance, Participation Rates, Yield, and Effective Yield for Public School Systems: 1986-1988

Table 10 presents participation rates, yield, effective yield, and performance on the equivalent 60-item core tests administered in all three years for the public school systems. School systems are arranged by educational region. Comparisons among school systems should always be sensitive to the fact that the social and demographic factors which are strongly related to differences in achievement are not distributed evenly across the state. These factors influence the yield indices as well as performance. For example, school systems in high socio-economic areas should have both high participation and performance, resulting in high yield and effective yield indices. One appropriate comparison might be among school systems with similar socio-economic characteristics. Another would involve comparing yield and effective yield indices for a school system across time to look for changes in participation and performance.

Graphs of Algebra I Core Scores and Participation Rates in Public School Systems

Figures 16 though 24 graphically present Algebra I core scores and participation rates (percent of class) for educational regions and public school systems. For each school system, the length of the bars representing the average core scores and class participation rates can be compared to the state averages for these measures (state averages are indicated by the vertical arrows). School systems for which both bars extend beyond the state averages have both higher than average participation in Algebra I, and above average performance on the Algebra I End-of-Course Test.

Characteristics of the Algebra I Students in Public School Systems

Select characteristics of all students in public school systems and all students taking Algebra I are listed in Table 11. The percent of a class is an estimate of the percent of an entire cohort or class of students who will eventually take Algebra I in their public school career. As shown in Table 1, in North Carolina it is estimated that 68.6 percent of a class of students will take Algebra I before they graduate from high school. Approximately 13.0 percent of the eighth-grade class took Algebra I in the 1988-89 school year. The percentages of eighth graders taking Algebra I vary among school systems: from 0 percent in 21 school systems to 20 percent or more in 22 school systems.

The ethnic distribution and parental education distribution within school systems and Algebra I classes also varies by school system. Statewide, black students and students with less educated parents appear to be underrepresented in Algebra I classes.

State Percentile Tables for 1986-1989

Tables 12-14 give summary statistics, the score distributions, and state percentiles for 1986, 1987, 1988 and 1989. The 1986 percentiles provide a baseline to which subsequent performance on the equivalent core tests can be compared.

Note: Percent of class is an estimate of Algebra I participation calculated by dividing the total number of Algebra I students by the number of students in the ninth grade class. Yield is an index of the effectiveness of an Algebra I program which combines participation and performance. It is calculated by multiplying the percent of a class taking Algebra I by the percent of core items answer correctly and then multiplying by 100. Effective yield is a similar index which counts as 'participating' in Algebra I only those students whose achievement is estimated to be passing. 57

Note: Percent of class is an estimate of Algebra I participation calculated by dividing the total number of Algebra I students by the number of students in the ninth grade class. Yield is an index of the effectiveness of an Algebra I program which combines participation and performance. It is calculated by multiplying the percent of a class taking Algebra I by the percent of core items answer correctly and then multiplying by 100. Effective yield is a similar index which counts as 'participating' in Algebra I only those students whose achievement is estimated to be passing.

North Carolina End-of-Course Testing Program Core Performance, Participation Rate, Yield, and Effective Yield Algebra I: 1986-1989

Note: Percent of class is an estimate of Algebra I participation calculated by dividing the total number of Algebra I students by the number of students in the ninth grade class. Yield is an index of the effectiveness of an Algebra I program which combines participation and performance. It is calculated by multiplying the percent of a class taking Algebra I by the percent of core items answer correctly and then multiplying by 100. Effective yield is a similar index which counts as 'participating' in Algebra I only those students whose achievement is estimated to be passing.

NOTE: NUMBER TESTED IS THE NUMBER OF STUDENTS WHO TOOK THE ALGEBRA I TEST. PERCENT OF CLASS IS THE TOTAL NUMBER OF ALGEBRA I STUDENTS DIVIDED BY THE NUMBER OF STUDENTS IN THE NINTH GRADE CLASS. IT IS AN ESTIMATE OF THE PERCENT OF A COHORT OR CLASS OF STUDENTS WHO WILL TAKE ALGEBRA I BEFORE LEAVING HIGH SCHOOL. PERCENT OF EIGHTH GRADE IS THE PERCENT OF EIGHTH GRADE STUDENTS TAKING ALGEBRA I. PERCENT OF NINTH GRADE IS THE PERCENT OF NINTH GRADE STUDENTS TAKING ALGEBRA I. PERCENT BLACK IS THE PERCENT OF TOTAL ENROLLMENT THAT IS BLACK. PERCENT ALGEBRA I BLACK IS THE PERCENT OF ALGEBRA I STUDENTS THAT IS BLACK, PERCENT LESS THAN HS EDUC IS THE PERCENT OF EIGHTH GRADE STUDENTS TAKING THE CALIFORNIA ACHIEVEMENT TEST IN 1989 WHOSE PARENTS HAVE LESS THAN A HIGH SCHOOL EDUCATION.
