ABSTRACT

This report provides detailed information about crimes committed against Hispanics from 1979 to 1986 based on the U.S. Bureau of Justice Statistics' National Crime Survey (NCS). The rate of violent crime committed against Hispanics each year surveyed is examined and compared to that for non-Hispanics. The demographic characteristics of the Hispanic population, based on the NCS, are presented. The following characteristics of Hispanic and non-Hispanic victims are described: (1) education; (2) occupation; (3) home ownership; and (4) location of household. Based on this information, and given the higher representation of Hispanics in high-crime-risk categories, when Hispanic and non-Hispanic victims with the same characteristics are compared, the Hispanics' higher overall rate of criminal victimization often disappears. An analysis of the following aspects of crime against Hispanics is presented: (1) place where violent crimes occurred; (2) who committed them; (3) outcomes of violent crimes; and (4) whether they were single-offender or mult'ole-offender victimizations. The major finding from this analysis is that, compared to other groups, Hispanics are victimized particularly by robbery. A discussion of the methodology used by the NCS to collect data is included. Data are presented on 18 tables. A list of Bureau of Justice publications, available free to the public, is appended. (JS)

Hispanic Victims

By Lisa D. Bastian BJS Statistician

From 1979 to 1986 the more than 18 million Hispanics in the United States suffered an average each year of 439,000 violent crimes (rapes, robberles, and assaults) and 830,000 personal thefts. in addition, households headed by a Hispanic had an annual average of 1.2 million burglaries, household thefts, or motor vehicle thefts.

These data come from the Bureau of Justice Statistics' National Crime Survey (NCS), an ongoing survey of approximately 100,000 persons age 12 or older, interviewed twice a year in about 50,000 households. Other findings about Hispanic victims include the following:

- For the entire 1979-86 period, Hispanics experienced higher rates of victimization from vicient crime than did non-Hispanics. For every 1,000 Hispanics age 12 or older, there were 11 robberies and 12 aggravated assaults; for every 1,000 non-Hispanics, there were 6 robberies and 10 aggravated assaults.
- The annual rate of violent crime committed against Hispanics dropped after 1983 from about 44 crimes per 1,000 to about 31 per 1,000 in 1985.
- Hispanics suffered a higher rate of household crimes burgiary, household larceny, and motor vehicle theft than did non-Hispanics. For the whole period there was an annual average of 266 household victimizations per 1,000 households headed by a Hispanic, compared to 205 crimes per 1,000 non-Hispanic households.

January 1990

Hispanics comprise the fastest growing ethnic or radal group in the United States. The National Crime Survey, the Nation's second largest ongoing household survey, sponsored by the Bureau of Justice Statistics, provides detailed information on how crime affects this important segment of our society. This report updates a BJS study of Hispanic victims published in 1981.

Perhaps the major finding of this analysis of NCS data for 1979-86 is that compared to other groups Hispanics are victimized particularly by robbery. The report presents a variety of findings on this and other crimes that Hispanics suffer.

Joseph M. Bessette Acting Director

- The higher victimization rate for Hispanics can be partly explained by their being more likely than the rest of the population to have characteristics associated with high crime rates. For example, Hispanics tend to be younger, poorer, and more concentrated in cities than non-Hispanics; however, even when these difference are controlled for, Hispanics still had higher robbery victimization rates.
- The stract was the most common place for violent crimes to occur. Forty-five percent of the robberles of Hispanics, 51% of the robberles of black victims, and 34% of the robberles of whites were on the street.

Hispanic victimization: Overview, 1979-86

	Average annual
	number
Crimes afviolence	438,639
Crimes of theft	829,865
Householdcrimes	1,172,225
Weapons in violent crime	
victimizations	
Victimizations Involving	
aweapon	199,177
Robberies with a knife	29,369
Robberies with a grin	22,384
Injuries in violent attacks*	
Serious	23,750
Minor	105,896
Reporting victimizations to	
the police (all crimes)	
Victimizations reported	837,026
Victimizations not	
reported	1,579,186
Crimes of violence	
Victimizations reported	211,063
Victimizations not	
reported	224,599

crime victimizations	
Victimizations involving	
a single offender	253,076
Victimizations involving two	
or more Offenders	178,168
Robberies	71,206
Aggravated assaults	53,829

*Figures exclude rape injuries and those victimizations in which the presence of injury was not ascertained. Victimizations were classified according to the most serious injury received.

 Hispanic victims of violent crime were more likely to be accosted by a stranger (65%) than were white victims (58%) or black victims (54%). Conversely, Hispanic victims were the least likely (12%), and blacks, the most likely (22%) to be accosted by someone well known to them.

- Overall, Hispanics were about as likely as whites and blacks to report a victimization to the police.
- Hispanic and black robbery victims were more likely to face an offender with a weapon (57% of each group) than whites (43%). Black robbery victims were the most likely to be confronted by an offender with a gun (29%), and Hispanics were the most likely to face a robber with a knife (25%).

Hispanics in the United States

Hispanics comprise about 8% of the total U.S. population. The Hispanic population is concentrated in nine States — California, Texas, New York, Florida, Iilinois, Arizona,

Source: The Hispanic population in the United States: March 1988 (Current Population Reports). Percenages may not add to 100% because of rounding.

*Figures are based on the total Hispanic population 16 years old or older.

Figures are based on the total Hispanic population 25 years old or older. New Jersey, New Mexico, and Colorado. Nearly three-fourths of Hispanics live in the South or the West.

immigrants from Spanish-speaking countries accounted for about a third of all new-comers to the United States from 1961 to 1987. In 1988 persons who traced their heritage to Mexico comprised 62% of all Hispanics in the United States. Those with a Puerto Rican heritage were 13% of the U.S. Hispanic population; Central and South Americans, 12%; Cuban Americans, 5%; and other Hispanics, including persons descended from early Spanish colonists, 8%.

This report, based upon household interviews conducted for the NCS from 1979 to 1986, discusses characteristics of the Hispanic population in the United States in terms of criminal victimization. It examines the major crimes that Hispanics have sustained, the nature of crime situations, and how the victims responded to crime.

As used in this report, the term "Hispanic" is an ethnic category that can include persons of any race. In discussions where the non-Hispanic category has been broken down by race, members of the resulting categories are referred to as whites and blacks rather than white non-Hispanics and black non-Hispanics. Asians, Native Americans, or members of any other races have been excluded from these breakdowns (see Methodology).

Trends in crime rates

From 1979 to 1983 the annual average rate of violent crime committed against Hispanics age 12 or older was about 44 per 1,000; this rate began to decline in 1984 (table 1). In 1985 the rate dropped significantly, to 31 violent crimes per 1,000, and remained near this level through 1986. (Because the numbers in this report are estimates based on a sample, some apparent differences may reflect sampling variation. Any difference described reflects at least a 90% certainty that the difference is not the result of sampling variation. See Methodology for further discussion of reporting of significant differences.)

During this period the rate of violent crime committed against non-Hispanics fluctuated. The rate per 1,000 non-Hispanics age 12 or older dropped from 38 violent victimizations in 1979 to 36 in 1980 but rose again to about 39 in the year following. In 1983, a year earlier than the beginning of the decline in the violent crime rate for Hispanics, the rate for non-Hispanics dropped significantly and then declined slowly through 1986.

For Hispanics a fall In the rate of personal theft preceded the decline in the violent crime rate. The rate went down significantly in 1984 to 66 thefts per 1,000 Hispanics and remained near this level in 1985 and 1986. The personal theft rate for non-Hispanics dropped in several

or BAMARIA TO 1 13:

significant steps from 95 thefts per 1,000 in 1979. The level fell, first in 1980, then again in 1982, 1983, and 1984, declining to a low of 69 thefts per 1,000 in 1986.

in contrast to the personal crime victimization rates for Hispanics, the rates of household crime fluctuated, declining significantly in 1983, increasing slightly in 1984, and then dropping to a new low in 1985. In 1985 for every 1,000 households headed by a Hispanic, there were 240 burglaries, stolen vehicles, or household thafts. The rate of household crimes against non-Hispanic households declined from 242 crimes per 1,000 households in 1979 to a low of 172 per 1,000 in 1986.

Crime victimization rates for Hispanics and non-Hispanics

For the period 1979-86 Hispanics experienced higher violent crime rates than did non-Hispanics (table 2). Relative to their number, Hispanics were robbed or seriously assaulted more often than other persons. For every 1,000 persons age 12 or older, there were 11 robberies of Hispanics, compared to 6 of non-Hispanics. The 12 aggravated assaults per 1,000 Hispanics exceeded the rate of 10 assaults per 1,000 non-Hispanics.

Aggravated assaults involve either a weapon or a serious injury like broken bones, teeth knocked out, loss of consciousness, or an unknown injury requiring 2 or more days in the hospital. For the less serious simple assaults, the Hispanics' victimization rate did not differ from that of non-Hispanics. Nor did Hispanics and non-Hispanics differ significantly in their rate of victimization by rape.

Hispanics from 1979 to 1986 had higher rates of victimization than non-Hispanics for household crimes: 266 household crimes per 1,000 households headed by a Hispanic versus 205 crimes per 1,000 non-Hispanic households. The rate of burgiary was a fifth larger for Hispanic households than for non-Hispanic households. For every 1,000 Hispanic households there were 144 larceny thefts and 26 thefts of vehicles, while for every 1,000 non-Hispanic households there were 114 larcenies and 15 motor vehicle thefts.

Demographic characteristics of the Hispanic population in the NCS

During the 1979-86 period, 36% of the Hispanic population estimated by the NCS, compared to 26% of non-Hispanics, were older than age 11 and younger than age 25 (table 3). A fifth of the Hispanics, but nearly a third of the non-Hispanics, were age 50 or older.

Hispanics and non-Hispanics were concentrated in different categories of marital status and education. A higher percentage of Hispanics than non-Hispanics had never married (36% versus 29%). Less than half of all Hispanics had completed high school, compared to two-thirds of the non-Hispanics. Seventeen percent of Hispanics and 31% of non-Hispanics had attended at least 1 year of college.

About a third of non-Hispanic individuals had annual family incomes under \$15,000, but half of the Hispanics were at that level. About 17% of Hispanics and 31% of non-Hispanics were at the other end of the scale, belonging to families earning \$25,000 or more.

Table 2. Victimization rate, by type of crime and ethnicity, 1979-86

Type of prime	Hispanic	Non- Hispanic
Crimes of violence	39.6	35.3
Rape	1.0	1.0
Robbery	10.5	6.1
Aggravated assault	12.0	9.7

Personal larceny without contact	69.8	77.4
Household crimes	265.6	204.5
Burglary	95.4	75.3
Household larceny	143.9	113.8
Motor vehicle theft	26.2	15.4

Note: Characteristics of the victim are used for crimes of violence and theft; characteristics of the head of household are used for household crimes. Victimization rates are average annual victimization rates per 1,000 persons or households.

Unemployed Hispanics accounted for 10% of the Hispanic population who belonged to the labor force; 7% of the non-Hispanics who worked for gain were unemployed. Thirty-four percent of Hispanics and 36% of non-Hispanics did not participate in the labor force; they were students, homemakers, retirees, persons unable to work for gain, or other nonparticipants.

"The category "marital status not ascertained" is not displayed.

Less than half of the Hispanic households owned their homes; 57% rented, Two-thirds of non-Hispanic heads of households were home owners.

More than 1 of every 2 Hispanic households were located in a central city, compared to fewer than 1 in 3 non-Hispanic households (table 4). While 14% of Hispanic households were located in non-metropolitan areas, 31% of non-Hispanic households were outside cities and their suburbs.

The relationship between persone having certain demographic characteristics and their likelihood of failing victim to crime has been shown in research by BJS and others.¹ For each characteristic discussed above, Hispanics were concentrated in those categories associated with higher crime rates. Compared to non-Hispanics, a larger percentage of Hispanics were —

- younger and less likely to be over age 50
- unmarried
- less well educated
- earning a low income
- nonprofessional, with a higher unemployment rate
- renters rather than owners
- city dwellers instead of suburbanites or residents of nonmetropolitan areas.

Given the higher representation of Hispanics in high-crime-risk categories, when Hispanic and non-Hispanic victims with the same characteristics are compared, the Hispanics' higher overall rate of criminal victimization often disappears.

Detailed examination of selected characteristics of Hispanic and non-Hispanic victims

For most crimes Hispanic and non-Hispanic individuals sharing the came demographic characteristics had generally comparable victimization rates, except for robbery and, to a lesser extent, aggravated assault. Some support for and exceptions to this generalization can be found in an analysis of criminal victimization while taking into account education, employment, home ownership, and piace of residence.

Education

Hispanics more ofter, fell victim to robbery than did non-Hispanics, regardless of the victims' educational background (table 5). Among persons with less than a ninthgrade education, non-Hispanics suffered a higher rate of simple assault than Hispanics.

The risk of violent crime, BJS Spectal Report, NCJ-97119, May 1985.

Occupation

Only Hispanics and non-Hispanics not in the labor force differce significantly in their rates of victimization for certain crimes (table 6). Of persons not in the labor force, for every 1,000 Hispanics there were 29 violent crimes; for non-Hispanics, 20 violent crimes. Hispanic homemakers were nearly twice as likely to have experienced violent crimes as non-Hispanic homemakers. Non-Hispanic students with a rate of 123 per 1,000 persons experienced significantly more thefts than Hispanic students (86 per 1,000).

Home cwnership

Among those families who owned or were buying a home, Hispanics had higher rates of all household crimes than non-Hispanics (table 7.) For example, the Hispanics' rate of motor vehicle theft was about twice that that of non-Hispanic residence owners. Hispanics, whether owners of renters, were robbed relatively more often than non-Hispanics.

Location of household

Hispanic households in nonmetropolitan areas, suburbs, and central cites were victimized more often than non-Hispanic households (table 8). Hispanic households (table 8). Hispanic households in central citles lost motor vehicles to theft at a significantly higher rate than non-Hispanic households (29 versus 24 per 1,000 households). In the suburbs, Hispanics, compared to non-Hispanics, had higher rates of households larcency and motor vehicle theft, while in the non-metropolitan areas, households headed by Hispanics experienced burglary and larceny at rates higher than those of non-Hispanic households.

In central cities and suburbs, Hispanics were robbed more often than non-Hispanics, while non-Hispanics were more often the victims of personal theft.

Note: Characteristics of the victim are used for crimes of violence and theft; characteristics of the head of household are used for household crimes. Victimization rates are arrange annual victimization rates per 1,000 persons or households.

*Include data on rape not shown as a separate category.

Where violent crimes occurred and who com:nitted them

All types of violent crime most often occurred on the street (table 9). Robberies of Hispanics or blacks, especially, were more likely to take place on the street (45% of Hispanic robbery victims, 51% of black victims, and 34% of white victims). Simple or aggravated assaults were about as likely to occur on the street for the three groups.

Larger percentages of the aggravated assaults on Hispanics (18%) and on blacks (14%) than on whites (10%) occurred near the victims' homes. Hispanic and white victims of aggravated assaults experienced about the same percentage of assaults in their homes (10% and 11%). A larger percentage of simple assaults on black victims, compared to those on Hispanics or whites, took place at home.

Most victims of violent crime did not know the offender (table 10). Hispanics, in particular, fell victim to strangers (65% of Hispanics, compared to 58% of whites and 54% of blacks). As already noted, Hispanics had a relatively high rate of victimization by robbery, primarily a stranger-to-stranger crime. Strangers (according to survey results not reported in a table) committed 37% of the robberies against Hispanics. Conversely, Hispanics were the least likely, and blacks, the most likely, to have been victimized by an offender well known to them.

²Violent crime by strangers and nonstrangers, BJS Special Report, NCJ-103702, January 1987.

About half of Hispanic and black victims of violent crime faced armed offenders (45% and 49%, respectively), compared to about a third of whites (32%) (table 11). For robbery, 57% of Hispanics and blacks faced an armed offender, compared to 43% of whites. Black robbery victims were the most likely to be confronted by an offender with a gun (29%), and Hispanics were most likely to face an offender with a knife (25%).

Note: Detail may not total 100% because of rounding. Although some respondents may have reported more than one weapon present, victimizations have been classified according to a hierarchy of weapons use: any gun present, any knife present, other weapon present but type not ascertained, no weapon, and not known or not ascertained if weapon present.

Like black victims, about a third of the Hispanics were robbed by a person having no weapon. Robbers of whites had no weapon 44% of the time.

Outcomes from violent crime

Hispanic, white, and black victims who were attacked sustained injuries of similar severity (table 12). When robbed and attacked, whites were more likely to be injured than blacks (64% versus 56%). No significant differences distinguished the racial or ethnic groups in the percentages of attacks resulting in serious injury.

Although whites were injured more often than blacks or Hispanics in an attack during a robbery, for all violent crimes resulting in injury, black victims more frequently

similar frequency (table 14). Crimes most often reported were crimes of violence; victims of all racial or ethnic groups reported about half the violent victimizations. About a quarter of all personal thefts were reported to the police. Motor vehicle thefts were reported by each group in the largest proportions,

Although rolative to their population Hispanics were robbed more often than non-Hispanics, those robberies were reported to the police less frequently than robberies of either blacks or whites. Hispanics reported 47% of the robberies, compared to 57% for whites and 55% for blacks.

When violent crimes were not reported to the police, the victims most often gave as a reason that the crime was a private matter or that they considered it inconsequential (table 15). Fear of reprisal was least frequently given as a reason for not reporting these crimes.

Robbery victims most often cited lack of proof as the reason for not reporting a victimization to the police. Whites more than Hispanics or blacks failed to report

robberies because they felt these victimizations were private matters /20% of whites who had not reported, 9% of Hispanics, and 15% of blacks). Similarly, 17% of white robbery victims who had not reported to the authorities said that the incident was not important enough, compared to 12% of Hispanics and 13% of blacks.

Among nonreporting black and Hispanic victims of robbery, personal theft, and household crimes, comparatively similar

percentages said that they did not call the police because they felt that the police would think the incident unimportant or would do little to respond.

Single-offender versus multipleoffender victimizations

During the 1980's gang activity appears to have increased, contributing to the street violence that exists in many central city neighborhoods. In some Hispanic communities, a majority of the male youth may at some time belong to a gang.³

The NCS does not gather data on the offenders' ethnicity or on gang violance as a separate category. It does, however, measure victimizations involving multiple offenders, which may represent the impact of gang activity.

Of the violent crimes, robbery most frequently involved multiple offenders, and Hispanics, as noted earlier, were more likely than blacks or whites to be robbed (table 16). Offenders in groups committed

includes reasons given by respondents such as:

of the robberies of Hispanics, 54% of the robberies of blacks, and 45% of the robberies of whites. For aggravated assault as well as robbery, Hispanics relatively more often than whites or blacks fell victim to multiple offenders: 41% of the aggravated assaults against Hispanics, 28% against whites, and 26% against blacks. For simple assault by two or more persons, Hispanics and blacks did not significantly differ. There was some syldence, however, that a higher proportion of simple assaults by multiple offenders were against Hispanics than against whites.

Violent criminals were usually under age 30, but multiple-offender victimizations were particularly likely to Involve very young offenders. Offenders under age 21 predominated in multiple-offender victimizations, except for aggravated assault (table 17). In multiple-offender victimizations, no ethnic or racial group was more likely to be victimized by offenders of any particular age.

Violent offenders and their victims tended to be similar in age. Black and white victims in each age range were confronted most frequently by an offender or offenders in the same category (table 18). This association also occurred for Hispanic victims up to the age of 29. However, Hispanics age 30 or older were about as likely to be victimized by an offender or offenders in their twenties (27%) as by offenders age 30 or older.

*Estimate is based on 10 or fewer sample cases; see Methodology.

Methodology

The NCS collects data on crime from a nationally representative sample of households. When a household is selected for inclusion in the sample, household members age 12 or older are interviewed every 6 months for 3 years. During each interview information is obtained about the personal victimizations, if any, experienced by the interviewe in the 6 months preceding the interview. One member, generally over age 18, is also designated the household respondent, from whom information is obtained about all crimes committed against the household during the preceding 6 months.

The NCS measures both attempted and completed incidents of rape, robbery, and aggravated and simple assault; personal thefts with and without contact; and the household crimes of burgiary, household larceny, and motor vehicle theft. In 1986 approximately 100,000 persons were interviewed in about 50,000 households.

in this report the Hispanic category includes all individuals of the following Spanish origins regardless of radal identity: Mexican-American, Chicano, Mexican, Puerto Rican, Cuban Central or South American, and any other Spanish origin. Non-Hispanics are individuals of any origin not listed above, including respondents for whom origin is not known or not ascertained.

Series crimes are three or more similar incidents that a victim cannot describe in detail separately. Series crimes are included in this report and counted as one victimization. The characteristics of the victimization are those of the most recent event in the series.

Estimation procedures

An incident is a specific criminal act involving one or more victims, while a victimization refers to the criminal act as it affects a single victim. Therefore, because personal crimes may have more than one victim, the number of victimizations is detainined by the number of victims of the crime. With respect to household crimes, a household is the sole victim of that crime. Thus, in

this report, data covering the period 1979-86 have been victim-weighted, using standard NCS weighting procedures, to obtain the national estimates presented. For a more detailed description of NCS estimation procedures, see appendix iii of *Crimi*nal victimization in the United States, 1987 (NCJ-115524).

Reliability of comparisons

All comparisons made in this report were tested to determine whether the differences between groups were statistically significant. The comparisons are significant at the 90% confidence level; most are also significant at the 95% confidence level. Statistical significance at the 95% confidence level requires that the estimated difference between the values be .ig compared is greater than twice the standard error of this difference.

Tables note when estimates are based on 10 or fewer sample cases; standard errors cannot be computed accurately for such estimates. It is particularly inadvisable to compare these with other estimates based on a small sample size.

Bureau of Justice Statistics Special Reports are prepared principally by BJS staff. This report was written by Lisa D. Bastian. Catherine J. Whitaker and ida Hines provided statistical assistance. Thomas Hester edited the report. Marilyn Marbrook administered publication, assisted by Yvonne Boston. Tina Dorsey, and Jayne Pugh.
