ABSTRACT

This volume provides comparative data for faculty salaries in public and private colleges, based on an annual survey of over 700 colleges and universities. Data cover the following 15 disciplines: accounting, agribusiness and agricultural production, anthropology, architecture and environmental design, area and ethnic studies, audiology and speech pathology, business administration and management, business and management, business economics, chemistry, communication technologies, communications, computer and information sciences, curriculum and instruction, and dramatic arts. Presented for each discipline is a summary of the overall average salary increases between the baseline year of 1985-86 and the year 1988-89, for both state and private institutions. Data from institutions participating in both years are compared with each other and with the consumer price index. Also included are average salaries by rank and the faculty mix percentage as well as comparisons with other disciplines. The participating institutions are listed. (DB)

INFORMATION CENTER (ERIC)

Foreword

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, DC, in cooperation with Appalachian State University in Boone, NC, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, DC, and the other for private senior colleges and universities.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines/major fields, 15 of which are included herein in alphabetical order. The disciplines/major fields were chosen from among those defined by the Higher Education General Information Survey (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. Each of the 15 disciplines/major fields presents a summary of the overall average salary increases in that discipline/major field from the "baseline year" of 1985-86 to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA'S STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the baseline year and the trend year. Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

In addition to listing the average salaries in the 15 individual disciplines/major fields for both state and private participating institutions by rank, including "new assistant professor," and listing the faculty mix percentage (FAC MIX PCT) and the salary factor, comparisons are made in each of the 15 individual disciplines/major fields between the two studies for each of the two study years (1985-86 and 1988-89) and with the CPI (Consumer Price Index) of changes in cost-of-living.

The list of all 45 selected academic disciplines/major fields studied is found in Appendix A of each discipline/major field included herein, and the list of all participating senior colleges and universities is found in Appendix B of each discipline/major field included herein.

SALARY-TREND STUDY OF FACULTY IN ACCOUNTING

FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Rebecca Kaenzig

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including accounting. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of accounting in the CIP is as follows:

An instructional program that describes the principles, procedures, and theories of organizing, maintaining, and auditing business and financial transactions.*

[*Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1985], p. 45.--06.02)]

This article presents a summary of the overall average salary increases in

the discipline/major field of accounting from the "baseline year" of 1985-86 to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA'S STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the baseline year and the trend year. Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

In addition to listing the average salaries in accounting for both state and private participating institutions by rank, including "new assistant professor," and listing the faculty mix percentage (FAC MIX PCT) and the salary factor, comparisons are made between the two studies for each of the two study years (1985-86 and 1988-89) and with the CPI (Consumer Price Index) of changes in cost-of-living.

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy and the CPI yields a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .29 for associate professor of accounting in the 1985-86 state study means that 29 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 1.17 for associate professors in the discipline/major field of accounting in the 1985-86 state study means that their salaries are 17 percent higher than the average of all associate professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of accounting with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one might make

based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of accounting was reported in 148 of the 202 state (AASCU) institutions. Average salary of the 1,307 faculty was \$34,372. This average salary was approximately 10 percent (1.10) higher than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of accounting was reported in 152 of the same 202 state (AASCU) institutions. The average salary of the 1,398 faculty was \$41,811. This average salary was approximately 14 percent (1.14) higher than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in accounting after three years in the state institutions studied was 21.6 percent ($\$41,811$ minus $\$34,372$ equals $\$7,439$). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 11 percent or an average of 3.7 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent ($\$36,562$ minus $\$31,282$ equals $\$5,280$). In comparison to the discipline/major field of accounting (21.6%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 4.7 percent (21.6% minus 16.9% equals 4.7%) less than faculty in the discipline/major field of accounting.

The reader may note that the faculty mix percentage in accounting is lower at the professor rank than at the assistant professor rank in both the state

studies: 0.24 vs 0.34 (1985-86) and 0.26 vs 0.33 (1988-89), respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies is as follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89) respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to accounting in both of the state studies.

Finally, the hiring rate of new assistant professors in accounting is high in the state studies: 5.2 percent (68/1,307) in 1985-86 vs. 3.8 percent (1,932/51,525) in ALL MAJOR FIELDS in 1985-86. Also, the hiring rate of new assistant professors in accounting in 1988-89 was 5.4 percent (75/1,398) vs. 4.7 percent (2,573/54,552) in ALL MAJOR FIELDS that same year. In other words the hiring rate in the discipline/major field of accounting is more than for ALL MAJOR FIELDS in both the state studies of 1985-86 and 1988-89.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of accounting was reported in 157 of the 259 private institutions. The average salary of the 629 faculty was \$31,780. This average salary was approximately 7 percent (1.07) higher than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of accounting was reported in 158 of the same 259 private institutions. The average salary of the 652 faculty was \$39,113. This average salary was approximately 11 percent (1.11) higher than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private study.

The increase in average salaries for all faculty in accounting after three

years in the private institutions studied was 23 percent (\$39,113 minus \$31,780 equals \$7,333). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 12.4 percent or 4.1 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of accounting (23%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 5.1 percent (23% minus 17.9% equals 5.1%) less than faculty in the discipline/major field of accounting.

In the discipline/major field of accounting, the reader may note that the faculty mix percentage at the professor rank is much less than the assistant professor rank in the private studies: 0.18 vs. 0.41 (1985-86) respectively; and 0.17 vs. 0.43 (1988-89) respectively. This is quite different from ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86) respectively; and 0.31 vs. 0.31 (1988-89) respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to accounting in both private studies.

Finally, the reader may note that the hiring rate of new assistant professors in accounting in the private studies was greater than the hiring rate in ALL MAJOR FIELDS both in 1985-86, 4.8 percent (30/629) vs. 4.5 percent (1,204/27,049) respectively; and in 1988-89, 6.1 percent (40/652) vs. 4.9 percent (1,388/28,627), respectively. In other words the hiring rate in the discipline/major field of accounting exceeds ALL MAJOR FIELDS in both the private studies of 1985-86 and 1988-89.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of accounting and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 and the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted both for the baseline year and for the trend year--a total of four studies. A total of 4,132 faculty in the discipline/major field of accounting participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of accounting is currently (1988-89) some 14 and 11 percent above the overall average faculty salary of ALL MAJOR FIELDS for both the state and private studies, respectively. The average faculty salary for accounting in the private institutions was 8 percent less in comparison to that in the state institutions in 1985-86, and, the overall salary factor in the private institutions is now (1988-89) almost 7 percent lower in comparison to that for the state institutions.

Second, the CPI of October 1988 in comparison to the CPI of October 1985, indicates that the faculty in accounting, in both the state and private institutions, received overall salary increases for three years above the cost-of-living. Accounting faculty salaries in both the state and private institutions exceeded faculty in ALL MAJOR FIELDS during this same period by

14 percent and 12 percent, respectively. During the past three years the salaries of accounting faculty in the state institutions continued to stay ahead of their colleagues in the private institutions but the "spread" decreased from 8 percent to 6 percent.

Third, in the discipline/major field of accounting the assistant professor rank has a greater percentage compared to full and associate professor ranks for both the state and private studies. The full professor rank is increasing in the state institutions, but decreasing, slightly, in the private institutions.

Fourth, it seems that there continues to be a healthy percentage increase of new assistant professors being hired both in the state institutions (5 percent each both in 1985-86 and 1988-89) and in the private institutions (5 percent in 1985-86 and 6 percent in 1988-89).

Now that a rather significant data base on faculty salaries has been developed, it is anticipated that additional salary-trend studies will be effected both in accounting, and in other 44 relevant disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Rebecca Kaenzig is assistant professor in the Department of Accounting at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN AGRIBUSINESS AND AGRICULTURAL PRODUCTION
FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Sandhya Maharaj

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including agribusiness and agricultural production. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of agribusiness and agricultural production in the CIP is as follows:

A summary of groups of instructional programs that prepare individuals to apply scientific knowledge and methods, and technical skills in support of agribusiness and agricultural activities concerned with the production and propagation of crops and animals, supplies and services, mechanics, products processing and marketing, and horticulture.*

[*Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1985], p. 33.--01.)]

This article presents a summary of the overall average salary increases in

the discipline/major field of agribusiness and agricultural production from the "baseline year" of 1985-86 to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA'S STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the baseline year and the trend year. Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

This study lists the average salaries in agribusiness and agricultural production for both state and private participating institutions by rank, including "new assistant professor," the faculty mix percentage (FAC MIX PCT) and the salary factor. In addition comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1985-86 and 1988-89).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Thus, by comparing changes in faculty salaries with the CPI, a more precise representation of the "real" salary increases is yielded.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. Full-time faculty members are those who teach no less than 51 percent of the time. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary displayed is computed from all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a

given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .28 for associate professor of agribusiness and agricultural production in the 1985-86 state study means that 28 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 0.95 for associate professors in the discipline/major field of agribusiness and agricultural production in the 1985-86 state study means that their salaries are 5 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of agribusiness and agricultural production with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of agribusiness and agricultural production was reported in 45 of the 202 state (AASCU) institutions. The average salary of the 315 faculty was \$29,940. This average salary was approximately 4 percent (0.96) lower than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of agribusiness and agricultural production was reported in 40 of the same 202 state (AASCU) institutions. The average salary of the 267 faculty was \$34,482. This average salary was approximately 6 percent (0.94) lower than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in the discipline/major field of agribusiness and agricultural production after three years in the state institutions studied was 15.2 percent (\$34,482 minus \$29,940 equals \$4,542). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase therefore, in average faculty salaries over the three-year time period is 4.6 percent or an average of 1.5 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent (\$36,562 minus \$31,282 equals \$5,280). In comparison to the discipline/major field of agribusiness and agricultural production (15.2%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 1.7 percent (16.9% minus 15.2% equals 1.7%) more than faculty in the discipline/major field of agribusiness and agricultural production.

The reader may note that the faculty mix percentage in agribusiness and agricultural production is higher at the professor rank than at the assistant professor rank in both the state studies: 0.36 vs 0.29 (1985-86) and 0.39 vs 0.25 (1988-89), respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies are as follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89), respectively. In other words ALL MAJOR FIELDS has approximately equal percentages of professors and assistant professors compared to agribusiness and agricultural production in both of the state studies.

Finally, the hiring rate of new assistant professors in agribusiness and agricultural production in the state studies was higher than the hiring rate in ALL MAJOR FIELDS in 1985-86, 5.4 percent (17/315) vs. 3.7 percent (1,932/51,525), respectively; whereas the hiring rate of new assistant professors in agribusiness and agricultural production in the state studies was lower than the hiring rate in ALL MAJOR FIELDS in 1988-89, 3.4 percent (9/267) vs. 4.7 percent (2,573/54,552), respectively.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of agribusiness and agricultural production was reported in 9 of the 259 private institutions. The average salary of the 19 faculty was \$27,370. This average salary was about 8 percent (0.92) lower than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of agribusiness and agricultural production was reported in 6 of the same 259 private institutions. The average salary of the 10 faculty was \$27,560. This average salary was about 21 percent (0.79) lower than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89

private study.

The increase in average salaries for all faculty in agribusiness and agricultural production after three years in the private institutions studied was 0.7 percent (\$27,560 minus \$27,370 equals \$190). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A decrease, therefore, in average faculty salaries over the three-year time period is -9.9 percent or -3.3 percent each year below the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of agribusiness and agricultural production (0.7%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 17.2 percent (17.9% minus 0.7% equals 17.2%) more than faculty in agribusiness and agricultural production.

In the discipline/major field of agribusiness and agricultural production, the reader may note that the faculty mix percentage at the professor rank is lower than at the assistant professor rank in the private studies: 0.26 vs. 0.37 (1985-86), respectively; and 0.30 vs. 0.40 (1988-89), respectively. This is somewhat different from ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86), respectively; and 0.31 vs. 0.31 (1988-89), respectively. In other words ALL MAJOR FIELDS had an equal percentage of professors and assistant professors in both private studies and a lower percentage of assistant professors in both private studies when compared to agribusiness and agricultural production.

Finally, the reader may note that the hiring rate of new assistant professors in agribusiness and agricultural production in the private studies was lower than the hiring rate in ALL MAJOR FIELDS in 1985-86, 0.0 percent vs. 4.5 percent (1204/27,049), respectively; and in 1988-89, 0.0 percent vs. 4.8 percent (1388/23627), respectively.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of agribusiness and agricultural production and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted both for the baseline year and for the trend year--a total of four studies. A total of 611 faculty in the discipline/major field of agribusiness and agricultural production participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of agribusiness and agricultural production is currently (1988-89) some 6 and 21 percent below the overall average faculty salaries of ALL MAJOR FIELDS for both the state and private studies, respectively. The average faculty salary for agribusiness and agricultural production in the private institutions was 9.4 percent lower than that in the state institutions in 1985-86. The overall salary average in the private institutions is now (1988-89) 25 percent less in comparison to that for the state institutions.

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in agribusiness and agricultural production, in both the state and private institutions, received overall salary increases for three years above the cost-of-living, but there was only the slightest increase for private institutions.

Faculty salaries in both the state and private institutions lagged behind faculty salaries in ALL MAJOR FIELDS during this same period. Agribusiness and agricultural production faculty in both the state and private institutions have much catching up to do in salary in comparison with ALL MAJOR FIELDS.

Third, in the discipline/major field of agribusiness and agricultural production the full professor rank has a greater percentage compared to the assistant professor rank in the state studies, but it is just the opposite in the private studies. There are no new assistant professors being hired in the private institutions in comparison to the state institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in agribusiness and agricultural production, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Sandhya Maharaj is a research analyst in the Office of Equal Opportunity Programs at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN ANTHROPOLOGY

FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Sandhya Maharaj

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including anthropology. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of anthropology in the CIP is as follows:

An instructional program that describes the historic and pre-historic origins of man, his physical and cultural development, racial characteristics, social customs, and beliefs.*

[*Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1985], p. 139.--45.02)]

This article presents a summary of the overall average salary increases in the discipline/major field of anthropology from the "baseline year" of

1985-86 to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA'S STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the baseline year and the trend year. Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

In addition to listing the average salaries in anthropology for both state and private participating institutions by rank, including "new assistant professor", and listing the faculty mix percentage (FAC MIX PCT) and the salary factor, comparisons are made between the two studies for each of the two study years (1985-86 and 1988-89) and with the CPI (Consumer Price Index) of changes in cost-of-living.

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Therefore, the CPI was used to yield a more precise representation of "real" salary increases over time.

The salary is based on a nine-or ten-month academic year salary of full time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .36 for associate professor of anthropology in the 1985-86 state study means that 36 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 0.94 for assistant professors in the discipline/major field of anthropology in the 1985-86 state study means that their salaries are 6 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of anthropology with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions

that one might make based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of anthropology was reported in 77 of the 202 state (AASCU) institutions. The average salary of the 348 faculty was \$32,715. This average salary was approximately 5 percent (1.05) higher than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of anthropology was reported in 76 of the same 202 state (AASCU) institutions. The average salary of the 368 faculty was \$37,282. This average salary was approximately 2 percent (1.02) higher than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study. The increase in average salaries for all faculty in anthropology after three years in the state institutions studied was 14 percent (\$37,282 minus \$32,715 equals \$4,567). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 3.4 percent or an average of 1.1 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent (\$36,562 minus \$31,282 equals \$5,280). In comparison to the discipline/major field of anthropology (14%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 2.9% (16.9% minus 14% equals 2.9%) more than faculty in the discipline/major field of anthropology.

The reader may note that the faculty mix percentage in anthropology is higher at the professor rank than at the assistant professor rank in both the state studies: 0.44 vs 0.20 (1985-86) and 0.47 vs 0.20 (1988-89), respectively.

The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies are as follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89), respectively. In other words ALL MAJOR FIELDS has a lower percentage of professors and a higher percentage of assistant professors compared to anthropology in both of the state studies.

Finally, the hiring rate of new assistant professors in anthropology was less than for ALL MAJOR FIELDS in the 1984-85 state study, 1.1 percent (4/348) vs. 3.7 percent (1,932/51,525), respectively. Also, the hiring rate of new assistant professors in anthropology in 1988-89 was 2.7 percent (10/368) vs. 4.7 percent (2,573/54,552) in ALL MAJOR FIELDS that same year. In other words the hiring rate of new assistant professors in anthropology was less than for ALL MAJOR FIELDS in the state study of 1985-86 and in the 1988-89 state study.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of anthropology was reported in 49 of the 259 private institutions. The average salary of the 140 faculty was \$32,415. This average salary was approximately 9 percent (1.09) higher than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of anthropology was reported in 54 of the same 259 private institutions. The average salary of the 194 faculty was \$36,326. This average salary was approximately 3 percent (1.03) higher than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private study.

The increase in average salaries for all faculty in anthropology after three years in the private institutions studied was 12.1 percent (\$36,326 minus \$32,415 equals \$3,911). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 1.5 percent or .5 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of anthropology (12.1%), therefore, the faculty salaries in ALL MAJOR FIELDS were 5.8 percent above those faculty salaries in the discipline/major field of anthropology.

In the discipline/major field of anthropology, the reader may note that the faculty mix percentage at the professor rank and at the assistant professor rank varies in the private studies: 0.34 vs. 0.32 (1985-86), respectively; and 0.29 vs. 0.32 (1988-89), respectively. This is slightly different from ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86), respectively; and 0.31 vs. 0.31 (1987-88), respectively. In other words ALL MAJOR FIELDS has a similar percentage of professors and assistant professors compared to anthropology in both private studies.

Finally, the reader may note that the hiring rate of new assistant professors in anthropology in the private studies was slightly more than the hiring rate in ALL MAJOR FIELDS in 1985-86, 7.1 percent (10/140) vs. 4.5 percent (1,204/27,049), respectively, whereas, in 1988-89 it was less: 5.2 percent (10/194) vs. 4.8 percent (1,388 /28,627), respectively.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of anthropology and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were both conducted for the baseline year and for the trend year--a total of four studies. A total of 1,050 faculty in the discipline/major field of anthropology participated and were included in the overall total of 161,753 faculty in all 45 disciplines/ major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of anthropology is currently (1988-89) some 2 and 3 percent above the overall average faculty salary of ALL MAJOR FIELDS for both the state and private studies, respectively. The average faculty salary for anthropology in the private institutions was 1 percent less in comparison to that in the state institutions in 1985-86. The average faculty salary in the private institutions is now (1988-89) 2.6 percent less in comparison to that for the state institutions.

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in anthropology, in both the state and private institutions, received overall salary increases for three years above the cost-of-living. Anthropology faculty salaries in the state institutions exceeded faculty in ALL MAJOR FIELDS during 1988-89 by 2 percent, whereas

anthropology faculty salaries in the private institutions exceeded faculty in ALL MAJOR FIELDS by 3.5 percent. Anthropology faculty in the state institutions have a little catching up to do in salary comparison to their colleagues in the private institutions.

Third, in the discipline/major field of anthropology the assistant professor ranks vary for both the state and private studies. The full professor rank appears to be increasing at a faster rate in the state institutions, compared to the private institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in anthropology, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Sandhya Maharaj is a research analyst in the Office of Equal Opportunity Programs at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN ARCHITECTURE AND ENVIRONMENTAL DESIGN

FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Ming Land

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including architecture and environmental design. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of agribusiness and agricultural production in the CIP is as follows:

A summary of groups of instructional programs that describe the methods to create, adapt, alter, preserve, and control man's physical and social surroundings.*

[*Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1985], p. 41.--04)]

This article presents a summary of the overall average salary increases in the discipline/major field of architecture and environmental design from the

"baseline year" of 1985-86 to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA's STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the "baseline year" and the "trend year". Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

This study lists the average salaries in architecture and environmental design for both state and private participating institutions by rank, including "new assistant professor," the faculty mix percentage (FAC MIX PCT) and the salary factor. In addition comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1985-86 and 1988-89).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Thus, by comparing changes in faculty salaries with the CPI, a more precise representation of the "real" salary increases is yielded.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. Full-time faculty members are those who teach no less than 51 percent of the time. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary displayed is computed from all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .34 for associate professor of architecture and environmental design in the 1985-86 state study means that 34 percent of the faculty in that major/discipline field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 1.05 for assistant professors in the discipline/major field of architecture and environmental design in the 1985-86 state study means that their salaries are 5 percent higher than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of architecture and environmental design with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of architecture and environmental design was reported in 11 of the 202 state (AASCU) institutions. The average salary of the 96 faculty was \$31,713. This average salary was approximately 1 percent (1.01) higher than average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of architecture and environmental design was reported in 11 of the same 202 state (AASCU) institutions. The average salary of the 97 faculty was \$36,692. This average salary was approximately the same as the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in the discipline/major field of architecture and environmental design after three years in the state institutions studied was 15.7 percent (\$36,692 minus \$31,713 equals \$4,979). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 5.1 percent or an average of 1.7 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent (\$36,562 minus \$31,282 equals \$5,280). In comparison to the discipline/major field of architecture and environmental design (15.7%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 1.2 percent (16.9% minus 15.7% equals 1.2%) more than faculty in the discipline/major field of architecture and environmental design.

The reader may note that the faculty mix percentage in architecture and environmental design is lower at the professor rank than at the assistant professor rank in both the state studies: 0.24 vs. 0.40 (1985-86) and 0.25 vs. 0.36 (1988-89), respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies are as follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to architecture and environmental design in both of the state studies.

Finally, the hiring rate of new assistant professors in architecture and environmental design in the state studies was higher than the hiring rate in ALL MAJOR FIELDS in 1985-86, 4.2 percent (4/96) vs. 3.7 percent (1,932/51,525), respectively; and in 1988-89, 5.2 percent (5/97) vs. 4.7 percent (2,573/54,552), respectively.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of architecture and environmental design was reported in 14 of the 259 private institutions. The average salary of the 176 faculty was \$32,657. This average salary was about 10 percent (1.10) higher than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of architecture and environmental design was reported in 14 of the same 259 private institutions. The average salary of the 186 faculty was \$37,094. This average salary was about 6 percent (1.06) higher than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89

private study.

The increase in average salaries for all faculty in architecture and environmental design after three years in the private institutions studied was 13.6 percent (\$37,034 minus \$32,657 equals \$4,437). The CPI of increased cost-of-living between October 1985 and October 1984 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 3 percent or 1 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of architecture and environmental design (13.6%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 4.3 percent (17.9% minus 13.6% equals 4.3%) more than faculty in architecture and environmental design.

In the discipline/major field of architecture and environmental design, the reader may note that the faculty mix percentage at the professor rank is greater than at the assistant professor rank in the private studies: 0.36 vs. 0.20 (1985-86), respectively; and 0.32 vs. 0.28 (1988-89), respectively. This difference is less than in ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86), respectively; and 0.31 vs. 0.31 (1988-89), respectively. In other words ALL MAJOR FIELDS has a lower percentage of professors and a higher percentage of assistant professors in both private studies when compared to architecture and environmental design.

Finally, the reader may note that the hiring rate of new assistant professors in architecture and environmental design in the private studies was lower than the hiring rate in ALL MAJOR FIELDS in 1985-86, 1.1 percent (2/176) vs. 4.5 percent (1204/27,049), respectively; and in 1988-89, 2.7 percent (5/186) vs. 4.8 percent (1,388/28,627), respectively.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of architecture and environmental design and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 555 faculty in the discipline/major field of architecture and environmental design participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of architecture and environmental design is currently (1988-89) approximately the same in the state studies in comparison to ALL MAJOR FIELDS, and is 6 percent above the overall average faculty of ALL MAJOR FIELDS in the priv. studies. The average faculty salary for architecture and environmental design in the private institutions was 3 percent above that in the state institutions in 1985-86; and is now (1988-89) 1.1 percent more in comparison to that for the state institutions.

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in architecture and environmental design, in both the state and private institutions, received overall salary increases for three years above the cost-of-living. However, architecture and environmental design faculty in both the state and private institutions lagged behind those of ALL MAJOR FIELDS during this same period.

Third, in the discipline/major field of architecture and environmental design the full professor rank has a greater percentage compared to the assistant professor rank for private studies but just the opposite is the case in the state studies. It seems a smaller percentage of new assistant professors are being hired in the private institutions in comparison to the state institutions

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in architecture and environmental design, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. he is a professor of leadership and higher education, and history at Appalachian State University Boone, North Carolina. Co-author Ming Land is professor in the Department of Technology and Dean of the College of Fine and Applied Arts at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN AREA AND ETHNIC STUDIES

FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Willie Fleming

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including area and ethnic studies. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of area and ethnic studies in the CIP is as follows:

A summary of groups of instructional programs that describe the history, society, politics, culture, and economics of either a particular geographic region or a particular subset of the population sharing common racial characteristics or common traits and customs.*

[*Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1985], p. 43.--05.)]

This article presents a summary of the overall average salary increases in the discipline/major field of area and ethnic studies from the "baseline year"

of 1985-86 to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA'S STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the baseline year and the trend year. Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

This study lists the average salaries of area and ethnic studies for both state and private participating institutions by rank, including "new assistant professor," the faculty mix percentage (FAC MIC PCT) and the salary factor. In addition comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1985-86 and 1988-89).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Therefore, the CPI was used to yield a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a

given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .46 for associate professor of area and ethnic studies in the 1985-86 state study means that 46 percent of the faculty in that discipline/ major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 1.04 for associate professors in the discipline/major field of area and ethnic studies in the 1985-86 state study means that their salaries are 4 percent higher than the average of all associate professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of area and ethnic studies with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of area and ethnic studies was reported in 20 of the 202 state (AASCU) institutions. The average salary of the 127 faculty was \$33,176. This average salary was approximately 6 percent higher (1.06) than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of area and ethnic studies was reported in 23 of the same 202 state (AASCU) institutions. The average salary of the 135 faculty was \$39,773. This average salary was approximately 9 percent higher (1.09) than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in the discipline/major field of area and ethnic studies after three years in the state institutions studied was 19.9 percent (\$39,773 minus \$33,176 equals \$6,597). The CPI or increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 9.3 percent or an average of 3.1 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent (\$36,562 minus \$31,282 equals \$5,280). In comparison to the discipline/major field of area and ethnic studies (19.9%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 3 percent (19.9% minus 16.9% equals 3.0%) less than faculty in the discipline/major field of area and ethnic studies.

The reader may note that the faculty mix percentage in area and ethnic

studies is lower at the professor rank than at the assistant professor rank in the 1985-86 study: 0.26 vs 0.27, but slightly higher in 1988-89, 0.37 vs 0.24, respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies are as follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89), respectively.

Finally, the hiring rate of new assistant professors in area and ethnic studies in the state studies was lower than the hiring rate for ALL MAJOR FIELDS both in 1985-86, 1.6 percent (2/127) vs. 3.7 percent (1,932/51,525), respectively; and lower in 1988-89, 2.2 percent (3/135) vs. 4.7 percent (2,573/54,552), respectively.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of area and ethnic studies was reported in 16 of the 259 private institutions. The average salary of the 94 faculty was \$34,892. This average salary was 17 percent higher (1.17) than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of area and ethnic studies was reported in 14 of the same 259 private institutions. The average salary of the 62 faculty was \$40,192. This average salary was about 15 percent higher (1.15) than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private study.

The increase in average salaries for all faculty in area and ethnic studies after three years in the private institutions studied was 15.2 percent (\$40,192 minus \$34,892 equals \$5,300). The CPI of increased cost-of-living between

October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 4.6 percent or 1.5 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of area and ethnic studies (15.2%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 2.7 percent (17.9% minus 15.2% equals 2.7%) more than faculty in area and ethnic studies.

In the discipline/major field of area and ethnic studies, the reader may note that the faculty mix percentage varies at the professor rank in comparison to the assistant professor rank in both studies: 0.35 vs. 0.26 (1985-86), respectively; and 0.40 vs. 0.19, (1988-89), respectively. The professor rank is identical to the assistant professor rank for ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86), respectively; and 0.31 vs. 0.31 (1988-89), respectively.

Finally, the reader may note that only 1 percent were hired in area and ethnic studies in the private study 1985-86 and no new assistant professors were hired in the 1988-89 study. In other words the hiring rate of new assistant professors in area and ethnic studies was much less for both of the private studies than the hiring rate of new assistant professors in ALL MAJOR FIELDS 4.5 (1,204/27,049) for 1985-86 and 4.8 percent (1,388/28,627) for 1988-89.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of area and ethnic studies and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 418 faculty in the discipline/major field of area and ethnic studies participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of area and ethnic studies is currently (1988-89) some 9 and 15 percent above the overall average faculty salaries of ALL MAJOR FIELDS in both the state and private studies, respectively. The average faculty salary for area and ethnic studies in the private institutions was over 5 percent greater compared to that in the state institutions in 1985-86. The overall salary average for area and ethnic studies faculty in all the private institutions is now (1988-89) 1 percent more in comparison to that for all the state institutions.

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in area and ethnic studies, in both the state and private institutions, received overall salary increases for three years above the cost-of-living. Area and ethnic studies faculty salaries in both the state and private institutions exceeded faculty in ALL MAJOR FIELDS during this same

period. Area and ethnic studies faculty, however, in the state institutions have a little catching up to do in salary in comparison to their colleagues in the private institutions.

Third, the full professor rank appears to be increasing about equally in the private institutions and the state institutions. A smaller percentage of new assistant professors is being hired in the private institutions in comparison to the state institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in area and ethnic studies, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUFA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Willie Fleming is Director of Multi-Cultural Programs at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN AUDIOLOGY AND SPEECH PATHOLOGY

FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Mary Ruth Sizer

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including audiology and speech pathology. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of audiology and speech pathology in the CIP is as follows:

An instructional program that describes the nature and treatment of hearing and speech disorders, including the principles and techniques of providing therapy that restores or partially restores normal functioning.*

[*Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1985], p.96.--18.01)]

This article presents a summary of the overall average salary increases in the

discipline/major field of audiology and speech pathology from the "baseline year" of 1985-86 to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA's STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the baseline year and the trend year. Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

This study lists the average salaries of faculty in audiology and speech pathology for both state and private participating institutions by rank, including "new assistant professors," the faculty mix percentage (FAC MIX PCT) and the salary factor. In addition comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1985-86 and 1988-89).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Therefore, the CPI was used to yield a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .28 for associate professor of audiology and speech pathology in the 1985-86 state study means that 28 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 0.96 for assistant professors in the discipline/major field of audiology and speech pathology in the 1985-86 state study means that their salaries are 4 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of audiology and speech pathology with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen

the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of audiology and speech pathology was reported in 70 of the 202 state (AASCU) institutions. The average salary of the 463 faculty was \$30,580. This average salary was 2 percent lower (0.98) than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of audiology and speech pathology was reported in 65 of the same 202 state (AASCU) institutions. The average salary of the 413 faculty was \$35,224. This average salary was 4 percent lower (0.96) than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in the discipline/major field of audiology and speech pathology after three years in the state institutions studied was 15.2 percent (\$55,224 minus \$30,580 equals \$4,644). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 4.6 percent or an average of 1.5 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent (\$36,562 minus \$31,282 equals \$5,280). In comparison to the discipline/major field of audiology and speech pathology (15.2%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries 1.7 percent more.

The reader may note that the faculty mix percentage in audiology and speech

pathology is slightly higher at the professor rank than at the assistant professor rank in both the 1985-86 state study: (0.32 vs 0.31), and (0.32 vs 0.29) in the 1988-89 state study. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies is as follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89), respectively.

Finally, the hiring rate of new assistant professors in audiology and speech pathology in the state studies exceeded the hiring rate in ALL MAJOR FIELDS in both 1985-86, 4.8 percent (22/463) vs. 3.7 percent (1,932/ 51,525), and in 1988-89: it was slightly lower, 5.3 percent (22/413) vs. 4.7 percent (2,573/54,002), respectively.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of audiology and speech pathology was reported in 18 of the 259 private institutions. The average salary of the 74 faculty was \$30,929. This average salary was 4 percent higher (1.04) than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of audiology and speech pathology was reported in 19 of the same 259 private institutions. The average salary of the 73 faculty was \$35,279. This average salary was about 1 percent (1.01) higher than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private study.

The increase in average salaries for all faculty in audiology and speech pathology after three years in the private institutions studied was 14.1 percent (\$35,279 minus \$30,929 equals \$4,350). The CPI of increased cost-

of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 3.5 percent or 1.2 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of audiology and speech pathology (14.1%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries slightly more than the faculty in audiology and speech pathology.

In the discipline/major field of audiology and speech pathology, the reader may note that the faculty mix percentage at the professor rank is lower than at the assistant professor rank in the 1985-86 private study: 0.27 vs. 0.32 (1985-86), and is much lower than at the assistant professor rank in the 1988-89 private study: 0.25 vs. 0.40. This is quite different from ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86), respectively; and 0.31 vs. 0.31 (1988-89), respectively. In other words ALL MAJOR FIELDS had a higher percentage of professors and a lower percentage of assistant professors in both the 1985-86 and the 1988-89 private studies when compared to audiology and speech pathology.

Finally, the reader may note that the hiring rate of new assistant professors in audiology and speech pathology in the private studies was greater than the hiring rate in ALL MAJOR FIELDS both in 1985-86, 6.7 percent (5/74) vs. 4.5 percent (1,204/ 27,049) respectively; and in 1988-89, 6.8 percent (5/73) vs. 4.8 percent (1,388/28,627), respectively. In other words the hiring rate in the discipline/major field of audiology and speech pathology exceeds ALL MAJOR FIELDS in both the private studies of 1985-86 and 1988-89.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of audiology and speech pathology and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 1,023 faculty in the discipline/major field of audiology and speech pathology participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of audiology and speech pathology is currently (1988-89) some 4 percent below the overall average faculty salaries of ALL MAJOR FIELDS in the state study, and is 1 percent above ALL MAJOR FIELDS in the private study. The average faculty salary for audiology and speech pathology in the state institutions was 1.1 percent less than that in the private institutions in 1985-86. The overall salary average in the private institutions is now (1988-89), however, almost equal to that of the state institutions: \$35,279 vs. \$35,224, respectively.

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in audiology and speech pathology, in both the state and private institutions, received overall salary increases for three years below the cost-of-living. Audiology and speech pathology faculty salaries in the state institutions lagged behind faculty salaries in ALL MAJOR FIELDS during this same

period and faculty in the private institutions were barely ahead. Audiology and speech pathology faculty in the state institutions have some catching up to do in salary in comparison to their colleagues ALL MAJOR FIELDS.

Third, in the discipline/major field of audiology and speech pathology the assistant professor rank has a much greater percentage (0.4) compared to the full professor rank (0.25) in the 1988-89 study. However, it seems an equal percentage of new assistant professors are being hired in the private institutions both in 1985-86 and in 1988-89: (0.05%,0.05% and 0.07%, 0.07%) respectively.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in audiology and speech pathology, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Mary Ruth Sizer is a clinical audiologist in the Department of Language, Reading and Exceptionalities at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN BUSINESS ADMINISTRATION AND MANAGEMENT
FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Sandhya Maharaj

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including business administration and management. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of business administration and management in the CIP is as follows:

An instructional program that generally describes the planning, organizing and controlling of a business, including organizational and human aspects, with emphasis on various theories of management, the knowledge and understanding necessary for managing people and functions, and decision making.*

[*Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1985] p. 45.--06.04)]

This article presents a summary of the overall average salary increases in

the discipline/major field of business administration and management from the "baseline year" of 1985-86 to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA's STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the baseline year and the trend year. Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

This study lists the average salaries of faculty in business administration and management for both state and private participating institutions by rank including "new assistant professor," the faculty mix percentage (FAC MIX PCT) and the salary factor. In addition, comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1985-86 and 1988-89).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Therefore, the CPI was used to yield a more precise representation of "real" salary increases over time.

The salary is based on a nine-or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .32 for associate professor of business administration and management in the 1985-86 state study means that 32 percent of the faculty in that discipline/ major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 1.15 for assistant professors in the discipline/major field of business administration and management in the 1985-86 state study means that their salaries are 15 percent higher than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of business administration and management with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one might make

based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of business administration and management was reported in 144 of the 202 state (AASCU) institutions. The average salary of the 2,034 faculty was \$33,576. This average salary was approximately 7 percent (1.07) higher than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of business administration and management was reported in 141 of the same 202 state (AASCU) institutions. The average salary of the 1,905 faculty was \$40,340. This average salary was approximately 10 percent (1.10) higher than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in business administration and management after three years in the state institutions studied was 20.1 percent (\$40,340 minus \$33,576 equals \$6,764). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 9.5 percent or an average of 3.2 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent (\$36,562 minus \$31,282 equals \$5,280). In comparison to the discipline/major field of business administration and management (20.1%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 3.2 percent (20.1% minus 16.9% equals 3.2%) less than faculty in the discipline/major field of business administration and management.

The reader may note that the faculty mix percentage in business administration and management is lower at the professor rank than at the assistant professor rank in both the state studies: 0.27 vs 0.30 (1985-86) and 0.27 vs 0.31 (1988-89), respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies are as follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to business administration and management in both of the state studies.

Finally, the hiring rate of new assistant professors in business administration and management in the state studies was higher than the hiring rate in ALL MAJOR FIELDS both in 1985-86, 5 percent (102/2,034) vs. 3.7 percent (1,932/51,525), respectively; and in 1988-89, 5.6 percent (106/1,905) vs. 4.7 percent (2,573/54,552), respectively.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of business administration and management was reported in 159 of the 259 private institutions. The average salary of the 1,029 faculty was \$31,708. This average salary was approximately 7 percent (1.07) higher than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of business administration and management was reported in 158 of the same 259 private institutions. The average salary of the 1,109 faculty was \$38,144. This average salary was about 9 percent (1.09) higher than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private study.

The increase in average salaries for all faculty in business administration and management after three years in the private institutions studied was 20.3 percent (\$38,144 minus \$31,708 equals \$6,436). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 9.7 percent or 3.2 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of business administration and management (20.3%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 2.4 percent (20.3% minus 17.9% equals 2.4%) less than faculty in business administration and management.

In the discipline/major field of business administration and management, the reader may note that the faculty mix percentage at the professor rank is less than at the assistant professor rank in the private studies: 0.20 vs. 0.36 (1985-86), respectively; and 0.23 vs. 0.37 (1988-89), respectively. This is quite different from ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86), respectively; and 0.31 vs. 0.31 (1988-89), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to business administration and management in both private studies.

Finally, the reader may note that the hiring rate of new assistant professors in business administration and management in the private studies was greater than the hiring rate in ALL MAJOR FIELDS both in 1985-86, 5.7 percent (59/1,029) vs. 4.5 percent (1,204/27,049), respectively; and in 1988-89, 7.1 percent (79/1,109) vs. 4.8 percent (1,388/28,627), respectively.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of business administration and management and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 6,077 faculty in the discipline/major field of business administration and management participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of business administration and management is currently (1988-89) some 10 and 9 percent above the overall average faculty salary of the other ALL MAJOR FIELDS for both the state and private studies, respectively. The average faculty salary for business administration and management in the private institutions was less compared to that in the state institutions in 1985-86. The overall salary average in the private institutions is now (1988-89) \$2,196 below that for the state institutions (5.8%).

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in business administration and management, in both the state and private institutions, received overall salary increases for three years above the cost-of-living. Business administration and management faculty salaries in both the state and private institutions exceeded faculty salaries

in ALL MAJOR FIELDS during this same period.

Third, in the discipline/major field of business administration and management the assistant professor rank has a greater percentage compared to the full professor rank for both the state and private studies. The full professor rank appears to be increasing at approximately the same rate both in the state and private institutions. It seems a slightly larger percentage of new assistant professors are being hired in the private institutions in comparison to the state institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in business administration and management, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Sandhya Maharaj is a research analyst in the Office of Equal Opportunity Programs at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN BUSINESS AND MANAGEMENT

FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Maryon Urquhart

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including business and management. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of business and management in the CIP is as follows:

A summary of groups of instructional programs that describe the processes of purchasing, selling, producing, and interchanging of goods, commodities, and services in profit making and non-profit state and private institutions and agencies.*

[*Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1985] p. 44.--06)]

This article presents a summary of the overall average salary increases in the discipline/major field of business and management from the "baseline year"

of 1985-86 to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA'S STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the baseline year and the trend year. Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

This study lists the average salaries of faculty in business and management for both state and private participating institutions by rank including "new assistant professor," the faculty mix percentage (FAC MIX PCT) and the salary factor. In addition, comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1985-86 and 1988-89).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Therefore, the CPI was used to yield a more precise representation of "real" salary increases over time.

The salary is based on a nine-or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a

given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .30 for associate professor of business and management in the 1985-86 state study means that 30 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 1.17 for assistant professors in the discipline/major field of business and management in the 1985-86 state study means that their salaries are 17 percent higher than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of business and management with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of business and management was reported in 89 of the 202 state (AASCU) institutions. The average salary of the 1,602 faculty was \$33,730. This average salary was approximately 8 percent (1.08) higher than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of business and management was reported in 102 of the same 202 state (AASCU) institutions. The average salary of the 1,794 faculty was \$41,195. This average salary was approximately 13 percent (1.13) higher than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in business and management after three years in the state institutions studied was 22.1 percent (\$41,195 minus \$33,730 equals \$7,465). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 11.5 percent or an average of 3.8 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent (\$36,562 minus \$31,282 equals \$5,280). In comparison to the discipline/major field of business and management (22.1%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 5.2 percent (22.1% minus 16.9% equals 5.2%) less than faculty in the discipline/major field of business and management.

The reader may note that the faculty mix percentage in business and management is lower at the professor rank than at the assistant professor rank in

both the state studies: 0.26 vs 0.32 (1985-86) and 0.30 vs 0.31 (1988-89), respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies are as follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to business and management in both of the state studies.

Finally, the hiring rate of new assistant professors in business and management in the state studies was higher than the hiring rate in ALL MAJOR FIELDS both in 1985-86, 5.2 percent (83/1,602) vs. 3.7 percent (1,932/51,525), respectively; and in 1988-89, 6.1 percent (109/1,794) vs. 4.7 percent (2,573/54,552), respectively.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of business and management was reported in 96 of the 259 private institutions. The average salary of the 809 faculty was \$33,580. This average salary was approximately 13 percent (1.13) higher than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of business and management was reported in 109 of the same 259 private institutions. The average salary of the 994 faculty was \$41,397. This average salary was about 18 percent (1.18) higher than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private study.

The increase in average salaries for all faculty in business and management

after three years in the private institutions studied was 23.3 percent (\$41,397 minus \$33,580 equals \$7,817). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 12.7 percent or 4.2 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of business and management (23.3%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 5.4 percent (23.3% minus 17.9% equals 5.4%) less than faculty in the discipline/major field of business and management.

In the discipline/major field of business and management, the reader may note that the faculty mix percentage at the professor rank is less than at the assistant professor rank in the private studies: 0.25 vs. 0.36 (1985-86), respectively; and 0.21 vs. 0.41 (1988-89), respectively. This is quite different from ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86), respectively; and 0.31 vs. 0.31 (1988-89), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to business and management in both private studies.

Finally, the reader may note that the hiring rate of new assistant professors in business and management in the private studies was greater than the hiring rate in ALL MAJOR FIELDS both in 1985-86, 6.3 percent (51/809) vs. 4.5 percent (1,204/27,049), respectively; and in 1988-89, 5.3 percent (53/994) vs. 4.8 percent (1,388/28,627), respectively. In other words the hiring rate in the discipline/major field of business and management exceeds ALL MAJOR FIELDS in both the private studies of 1985-86 and 1988-89.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of business and management and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 5,199 faculty in the discipline/major field of business and management participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of business and management is currently (1988-89) some 13 and 18 percent above the overall average faculty salary of the other 44 disciplines/major fields for both the state and private studies, respectively. The average faculty salary for business and management in the private institutions was greater in comparison to that in the state institutions in 1985-86. The overall salary average in real dollars in the private institutions is now (1988-89) \$202 greater in comparison to that for the state institutions (0.5%).

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in business and management, in both the state and private institutions, received overall salary increases for three years above the cost-of-living. Business and management faculty salaries in both the state and private institutions exceeded faculty in ALL MAJOR FIELDS during this same

period. Although having an average higher than ALL MAJOR FIELDS, business and management faculty in the state institutions have a little catching up to do in salary in comparison to their colleagues in the private institutions.

Third, in the discipline/major field of business and management the assistant professor rank has a greater percentage compared to the full professor rank for both the state and private studies. The full professor rank appears to be increasing at a greater rate in the state institutions compared to the private institutions. It seems a slightly smaller percentage of new assistant professors are being hired in the private institutions in comparison to the state institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in business and management, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Maryon Urquhart is a research analyst in the Office of Equal Opportunity Programs at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN BUSINESS ECONOMICS

FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Maryon Urquhart

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including business economics. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of business economics in the CIP is as follows:

An instructional program that describes the principles and methods for organizing a business firm and for combining resources to produce goods and services, taking account of costs, profits and the nature and extent of competition in markets.*

[* Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1985]. p.45.--06.0501)]

This article presents a summary of the overall average salary increases in the discipline/major field of business economics from the "baseline year" of

1985-86 to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA's STATE (AAS-CU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the baseline year and the trend year. Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

This study lists the average salaries of business economics faculty for both STATE and private participating institutions by rank including "new assistant professors," the faculty mix percentage (FAC MIX PCT) and the salary factor. In addition, comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1985-86 and 1988-89).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Therefore, the CPI was used to yield a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a

given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .31 for associate professor of business economics in the 1985-86 state study means that 31 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 1.09 for assistant professors in the discipline/major field of business economics in the 1985-86 state study means that their salaries are 9 percent higher than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of business economics with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one must make based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of business economics was reported in 115 of the 202 state (AASCU) institutions. The average salary of the 910 faculty was \$33,348. This average salary was approximately 7 percent (1.07) higher than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of business economics was reported in 115 of the same 202 state (AASCU) institutions. The average salary of the 903 faculty was \$39,373. This average salary was approximately 8 percent (1.08) higher than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in business economics after three years in the state institutions studied was 18.1 percent (\$39,373 minus \$33,348 equals \$6,025). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 7.5 percent or an average of 2.5 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent (\$36,562 minus \$31,282 equals \$5,280). In comparison to the discipline/major field of business economics (18.1%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 1.2 percent (18.1% minus 16.9% equals 1.2%) less than faculty in the discipline/major field of business economics.

The reader may note that the faculty mix percentage in business economics is higher at the professor rank than at the assistant professor rank in both the state studies: 0.33 vs 0.30 (1985-86) and 0.35 vs 0.28 (1988-89),

respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies are follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89), respectively. In other words ALL MAJOR FIELDS has a somewhat similar percentage of professors and assistant professors compared to business economics in both of the state studies.

Finally, the hiring rate of new assistant professors in business economics is high in the state studies: 5.7 percent (52/910) in 1985-86 vs. 3.7 percent (1,932/51,525) in ALL MAJOR FIELDS in 1985-86. Also, the hiring rate of new assistant professors in business economics in 1988-89 was 5.9 percent (53/903) vs. 4.7 percent (2,573/54,552) in ALL MAJOR FIELDS that same year. In other words with the hiring rate in the discipline/major field of business economics being higher than that for ALL MAJOR FIELDS in both of the state studies indicates that business economics continues to be a "growing" discipline nationally.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of business economics was reported in 138 of the 259 private institutions. The average salary of the 545 faculty was \$31,248. This average salary was approximately 5 percent (1.05) higher than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of business economics was reported in 152 of the same 259 private institutions. The average salary of the 627 faculty was \$36,800. This average salary was approximately 5 percent (1.05) higher than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private

study.

The increase in average salaries for all faculty in business economics after three years in the private institutions studied was 17.8 percent (\$36,800 minus \$31,248 equals \$5,552). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 7.2 percent or 2.4 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of business economics (17.8%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by only .1 percent (17.9% minus 17.8% equals .1%) less than faculty in the discipline/major field of business economics.

In the discipline/major field of business economics, the reader may note that the faculty mix percentage at the professor rank is less than at the assistant professor rank in the private studies: 0.23 vs. 0.41 (1985-86), respectively; and 0.23 vs. 0.38 (1988-89), respectively. This is quite different from ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86), respectively; and 0.31 vs. 0.31 (1988-89), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to business economics in both private studies.

Finally, the reader may note that the hiring rate of new assistant professors in business economics in the private studies was greater than the hiring rate in ALL MAJOR FIELDS both in 1985-86, 6.6 percent (36/545) vs. 4.5 percent (1,204/27,049), respectively; and in 1988-89, 5.6 percent (35/627) vs. 4.8 percent (1,388/28,627), respectively. In other words the hiring rate in the discipline/major field of business economics exceeds ALL MAJOR FIELDS in both the private studies of 1985-86 and 1988-89.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of business economics and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 2,985 faculty in the discipline/major field of business economics participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of business economics is currently (1988-89) some 8 and 5 percent above the overall average faculty salary of ALL MAJOR FIELDS for both the state and private studies, respectively. The average faculty salary for business economics in the state institutions was greater in comparison to that in the private institutions in 1985-86. The overall salary factor in the state institutions is now (1988-89) 7 percent higher than the overall average in comparison to that for the private institutions: 1.08 vs. 1.05, respectively.

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in business economics, in both the state and private institutions, received overall salary increases for three years above the cost-of-living. Business economics faculty salaries in both the state and private institutions exceeded faculty in ALL MAJOR FIELDS during this same

period.

Third, in the discipline/major field of business economics the assistant professor rank has a greater percentage compared to the full professor rank for the private studies and just the opposite is the case for the state studies. The full professor rank appears to be increasing more quickly in the state institutions. It seems that a slightly higher percentage of new assistant professors are being hired in the state institutions in comparison to the private institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in business economics, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Maryon Urquhart is a research analyst in the Office of Equal Opportunity Programs at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN CHEMISTRY

FOR THE YEARS

1985-86 AND 1988-89

By

Richard D. Howe
and Maryor. Urquhart

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including chemistry. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of chemistry in the CIP is as follows:

A group of instructional programs that describe the micro and macro structure of matter, of the changes matter undergoes, of the energy involved in these changes, and of the models that interpret and the theories and laws that describe these phenomena.*

[*Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1985], p. 129.--40.05)]

This article presents a summary of the overall average salary increases in the discipline/major field of chemistry from the "baseline year" of 1985-86 to

and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA's STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the baseline year and the trend year. Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

In addition to listing the average salaries in chemistry for both state and private participating institutions by rank, including "new assistant professor," and listing the faculty mix percentage (FAC MIX PCT) and the salary factor, comparisons are made between the two studies for each of the two study years (1985-86 and 1988-89) and with the CPI (Consumer Price Index) of changes in cost-of-living.

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy and the CPI yields a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a

given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .25 for associate professor of chemistry in the 1985-86 state study means that 25 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of .97 for assistant professors in the discipline/major field of chemistry in the 1985-86 state study means that their salaries are 3 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of chemistry with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of chemistry was reported in 174 of the 202 state (AASCU) institutions. The average salary of the 1,487 faculty was \$33,418. This average salary was approximately 7 percent (1.07) higher than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of chemistry was reported in 173 of the same 202 state (AASCU) institutions. The average salary of the 1,512 faculty was \$38,683. This average salary was approximately 6 percent (1.06) higher than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in chemistry after three years in the state institutions studied was 15.8 percent (\$38,683 minus \$33,418 equals \$5,265). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 5.2 percent or an average of 1.7 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent (\$36,562 minus \$31,282 equals \$5,280). In comparison to the discipline/major field of chemistry (15.8%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 1.1 percent (16.9% minus 15.8% equals 1.1%) more than faculty in the discipline/major field of chemistry.

Since the discipline/major field of chemistry is one of the "older" disciplines, the reader may note that the faculty mix percentage is higher at the professor rank than at the assistant professor rank in the state studies;

0.54 vs. 0.20 (1985-86) respectively; and 0.53 vs. 0.21 (1988-89) respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies is as follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89) respectively. In other words ALL MAJOR FIELDS has a lower percentage of professors and a higher percentage of assistant professors compared to chemistry in both state studies.

Finally, the hiring rate of new assistant professors in chemistry is moderate in the state studies: 4.0 percent (60/1,487) in 1985-86 vs. 3.7 percent (1,932/51,525) in ALL MAJOR FIELDS in 1985-86. Also, the hiring rate of new assistant professors in chemistry in 1988-89 was 3.7 percent (56/1,512) vs. 4.7 percent (2,573/54,552) in ALL MAJOR FIELDS that same year. In other words the hiring rate in the discipline/major field of chemistry is slightly higher than for ALL MAJOR FIELDS in 1985-86 and lower than all ALL MAJOR FIELDS in 1988-89.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of chemistry was reported in 232 of the 259 private institutions. The average salary of the 1,079 faculty was \$32,360. This average salary was approximately 9 percent (1.09) higher than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of chemistry was reported in 230 of the same 259 private institutions. The average salary of the 1,072 faculty was \$37,314. This average salary was approximately 6 percent (1.06) higher than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private

study.

The increase in average salaries for all faculty in chemistry after three years in the private institutions studied was 15.3 percent (\$37,314 minus \$32,360 equals \$4,954). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 4.7 percent or 1.6 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of chemistry (15.3%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 2.6 percent (17.9% minus 15.3% equals 2.6%) more than faculty in the discipline/major field of chemistry.

Because the discipline/major field of chemistry is one of the "older" disciplines, the reader may note that the faculty mix percentage is higher at the professor rank than at the assistant professor rank in the private studies: 0.51 vs. 0.22 (1985-86) respectively; and 0.48 vs. 0.24 (1988-89) respectively. This differs from ALL MAJOR FIELDS; FAC MIX PCT are equal for both private studies: 0.31 vs. 0.31 (1985-86); and 0.31 vs. 0.31 (1988-89) respectively. In other words ALL MAJOR FIELDS has a lower percentage of professors and a higher percentage of assistant professors than chemistry in both private studies.

Finally, the reader may note that the hiring rate of new assistant professors in chemistry in the 1985-86 private study was lower than the hiring rate in ALL MAJOR FIELDS; 3.6 percent (39/1,079) vs. 4.5 percent (1,204/27,049) respectively; and in the 1988-89 private study, almost equal: 4.6 percent (49/1,072) vs. 4.8 percent (1,388/28,627) respectively.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of chemistry and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 and the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 5,150 faculty in the discipline/major field of chemistry participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of chemistry is currently (1988-89) some 6 percent above the overall average faculty salary of ALL MAJOR FIELDS for both the state and private studies, respectively. The average faculty salary for chemistry in the private institutions was 4 percent less than that in the state institutions in 1985-86. The overall salary average in the private institutions is now (1988-89) 4 percent less than that in the state institutions.

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in chemistry, in both the state and private institutions, received overall salary increases for three years above the cost-of-living. Chemistry faculty salaries in both the state and private institutions, however, lagged behind faculty in ALL MAJOR FIELDS during this same period.

Third, since the discipline/major field of chemistry is one of the older disciplines, there is a marked difference between the number of faculty with the rank of full professor and assistant professor in the state and in the private institutions. The full professor rank is already "top heavy" in both the state and private institutions. It seems a healthy percentage of new assistant professors are being hired both in the state and private institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in chemistry, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Maryon Urquhart is a research analyst in the Office of Equal Opportunity Programs, Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN COMMUNICATION TECHNOLOGIES

FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Patton Reighard

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including communication technologies. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of communication technologies in the CIP is as follows:

A summary of groups of instructional programs that prepare individuals to support and assist communication professionals and skilled communication workers. Programs stress specialized, practical knowledge related to the mechanical, scientific, or technical aspects of communications. These groups include the technologies of educational media; motion picture; photography; and, radio and television production and broadcasting.*

[Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1985] p. 62.--10.)]

This article presents a summary of the overall average salary increases in

the discipline/major field of communication technologies from the "baseline year" of 1985-86 to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA'S STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the baseline year and the trend year. Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

This study lists the average salaries of communication technologies faculty for both private and state participating institutions by rank, including "new assistant professor," FAC MIX PCT (Faculty Mix Percentage) and the salary factor. In addition, comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1985-86 and 1988-89).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Therefore, the CPI was used to yield a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .28 for associate professor of communication technologies in the 1985-86 state study means that 28 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 0.98 for assistant professors in the discipline/major field of communication technologies in the 1985-86 state study means that their salaries are 2 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of communication technologies with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one might make

based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of communication technologies was reported in 20 of the 202 state (AASCU) institutions. The average salary of the 145 faculty was \$29,147. This average salary was approximately 7 percent (0.93) lower than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of communication technologies was reported in 16 of the same 202 state (AASCU) institutions. The average salary of the 151 faculty was \$34,158. This average salary was about 7 percent (0.93) lower than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in communication technologies after three years in the state institutions studied was 17.2 percent (\$34,158 minus \$29,147 equals \$5,011). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 6.6 percent or an average of 2.2 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent (\$36,562 minus \$31,282 equals \$5,280). In comparison to the discipline/major field of communication technologies (17.2%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by .3 percent (17.2% minus 16.9% equals .3%) more than faculty in the discipline/major field of communication technologies.

The reader may note that the faculty mix percentage in communication technologies is lower at the professor rank than at the assistant professor rank in both the state studies: 0.26 vs. 0.31 (1985-86) and 0.22 vs. 0.35 (1988-89),

respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies are as follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89) respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to communication technologies in both of the state studies.

Finally, the hiring rate of new assistant professors in communication technologies was higher in comparison to ALL MAJOR FIELDS in the 1985-86 state study: 4.8 percent (7/145) vs. 3.7 percent (1,932/51,525), respectively. The hiring rate of new assistant professors in communication technologies in 1988-89, however, was less than that of ALL MAJOR FIELDS: 2.6 percent (4/151) vs. 4.7 percent (2,573/54,552) respectively.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of communication technologies was reported in 22 of the 259 private institutions. The average salary of the 66 faculty was \$25,971. This average salary was approximately 13 percent (0.87) lower than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of communication technologies was reported in 23 of the same 259 private institutions. The average salary of the 88 faculty was \$30,715. This average salary was approximately 12 percent (0.88) lower than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private study.

The increase in average salaries for all faculty in communication technol-

ogies after three years in the private institutions studied was 18.3 percent (\$30,715 minus \$25,971 equals \$4,744). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 7.7 percent or 2.6 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of communication technologies (18.3%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by .4 percent (18.3% minus 17.9% equals .4%) less than faculty in the discipline/major field of communication technologies.

In the discipline/major field of communication technologies, the reader may note that the faculty mix percentage at the professor rank is less than at the assistant professor rank in the private studies: 0.14 vs. 0.61 (1985-86), respectively; and 0.15 vs. 0.59 (1988-89), respectively. This is quite different from ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86), respectively; and 0.31 vs. 0.31 (1988-89), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to communication technologies in both private studies.

Finally, the reader may note that the hiring rate of new assistant professors in communication technologies in the private studies was much greater than the hiring rate in ALL MAJOR FIELDS both in 1985-86, 15.2 percent (10/66) vs. 4.5 percent (1,204/27,049), respectively; and in 1988-89, 5.7 percent (5/88) vs. 4.8 percent (1,388/28,627), respectively. In other words the hiring rate in the discipline/major field of communication technologies greatly exceeds that of ALL MAJOR FIELDS in both the private studies.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of communication technologies and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 450 faculty in the discipline/major field of communication technologies participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of communication technologies is currently (1988-89) some 7 and 12 percent below the overall average faculty salary of ALL MAJOR FIELDS for both the state and private studies, respectively. The average faculty salary for communication technologies in the private institutions was approximately 12 percent less in comparison to that in the state institutions in 1985-86. The overall salary average in the private institutions is now (1988-89) 11 percent less in comparison to that for the state institutions.

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in communication technologies, in both the state and private institutions, received overall salary increases for three years above the cost-of-living. Communication technologies faculty salaries in the state institutions lagged slightly behind faculty salaries in ALL MAJOR FIELDS during this same period and faculty in the private institutions were barely ahead.

Third, in the discipline/major field of communication technologies the assistant professor rank has a greater percentage compared to full and associate professor ranks for both the state and private studies. The full professor rank appears to be increasing rather slowly in both the state and private institutions. It seems a smaller percentage of new assistant professors in communication technologies are being hired in the state institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in communication technologies, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Patton Reighard is professor of communication arts at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN COMMUNICATIONS

FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Patton Reighard

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including communications. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of communications in the CIP is as follows:

A summary of groups of instructional programs that describe the creation, transmission, and evaluation of messages.

[*Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1985], p. 61.-09.)]

This article presents a summary of the overall average salary increases in the discipline/major field of communications from the "baseire year" of 1985-86 to and including the "trend year" of 1988-89 for both state and private

institutions. Of the 262 institutions which participated in CUPA's STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the baseline year and the trend year. Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the baseline year and the trend year.

This study lists the average salaries of communications faculty for both state and private participating institutions by rank, including "new assistant professor," the FAC MIX PCT (faculty mix percentage) and the salary factor. In addition, comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1985-86 and 1988-89).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Therefore, the CPI was used to yield a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .31 for associate professor of communications in the 1985-86 state study means that 31 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 0.95 for assistant professors in the discipline/major field of communications in the 1985-86 state study means that their salaries are 5 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of communications with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of communications was reported in 138 of the 202 state (AASCU) institutions. The average salary of the 1,212 faculty was \$28,487. This average salary was approximately 9 percent (0.91) lower than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of communications was reported in 138 of the same 202 state (AASCU) institutions. The average salary of the 1,287 faculty was \$33,200. This average salary was approximately 9 percent (0.91) lower than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in communications after three years in the state institutions studied was 16.5 percent (\$33,200 minus \$28,487 equals \$4,713). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 5.9 percent or an average of 2.0 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent (\$36,562 minus \$31,282 equals \$5,280). In comparison to the discipline/major field of communications (16.5%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by .4 percent (16.9% minus 16.5% equals .4%) more than faculty in the discipline/major field of communications.

The reader may note that the faculty mix percentage in communications is lower at the professor rank than at the assistant professor rank in both the state studies: 0.23 vs 0.31 (1985-86) and 0.25 vs 0.33 (1988-89), respectively. The differences in faculty mix percentage at the ranks of professor and assis-

tant professor in ALL MAJOR FIELDS for both state studies are as follows: 0.34 vs. 0.2, (1985-86) and 0.35 vs. 0.28 (1988-89), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to communications in both of the state studies.

Finally, the hiring rate of new assistant professors in communications is high in the state studies: 4.9 percent (59/1,212) in 1985-86 vs. 3.7 percent (1,932/51,525) in ALL MAJOR FIELDS in 1985-86. Also, the hiring rate of new assistant professors in communications in 1988-89 was 6.5 percent (84/1,287) vs. 4.7 percent (2,573/54,552) in ALL MAJOR FIELDS that same year. In other words the hiring rate in the discipline/major field of communications is less than for ALL MAJOR FIELDS in the state study of 1985-86. Conversely, the hiring rate in the discipline/major field of communications is higher than for ALL MAJOR FIELDS in the state study of 1988-89.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of communications was reported in 128 of the 259 private institutions. The average salary of the 688 faculty was \$27,180. This average salary was approximately 9 percent (0.91) lower than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of communications was reported in 142 of the same 259 private institutions. The average salary of the 724 faculty was \$31,937. This average salary was approximately 9 percent (0.91) lower than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private study.

The increase in average salaries for all faculty in communications after

three years in the private institutions studied was 17.5 percent (\$31,937 minus \$27,180 equals \$4,757). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 6.9 percent or 2.3 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of communications (17.5%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by .4 percent (17.9% minus 17.5% equals .4%) more than faculty in the discipline/major field of communications.

In the discipline/major field of communications, the reader may note that the faculty mix percentage at the professor rank is much less than at the assistant professor rank in the private studies: 0.20 vs. 0.37 (1985-86), respectively; and 0.17 vs. 0.40 (1988-89), respectively. This is quite different from ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86) respectively; and 0.31 vs. 0.31 (1988-89) respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to communications in both private studies.

Finally, the reader may note that the hiring rate of new assistant professors in communications in the private studies was greater than the hiring rate in ALL MAJOR FIELDS both in 1985-86 7.1 percent (49/688) vs. 4.5 percent (1,204/27,049), respectively; and in 1988-89, 8.0 percent (58/724) vs. 4.8 percent (1,388/28,627), respectively. In other words the hiring rate in the discipline/ major field of communications exceeds ALL MAJOR FIELDS in both the private studies of 1985-86 and 1988-89.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of communications and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 3,911 faculty in the discipline/major field of communications participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of communications is currently (1988-89) approximately 9 percent below the overall average faculty salary of ALL MAJOR FIELDS for both the state and private studies. The average faculty salary for communications in the private institutions was approximately 5 percent less in comparison to that in the state institutions in 1985-86. The overall salary factor in the private institutions is now (1988-89) still the same at approximately 4 percent less in comparison to that for the state institutions.

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in communications, in both state and private institutions, received overall salary increases for three years above the cost-of-living. However, communications faculty salaries in both the state and private institutions lagged behind those of ALL MAJOR FIELDS during this same period. Communications faculty in both state and private institutions have some catching up to do in salary in comparison to their colleagues in ALL MAJOR FIELDS.

Third, in the discipline/major field of communications the assistant professor rank has a greater percentage compared to full professor for both the state and private studies. The full professor rank appears to be increasing more rapidly in the state institutions, in comparison to the private institutions. It seems a smaller percentage of new assistant professors in ALL MAJOR FIELDS are being hired in the private institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in communications, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Patton Reighard is professor of communication arts at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN COMPUTER AND INFORMATION SCIENCE
FOR THE YEARS
1985-86 AND 1988-89

By
Richard D. Howe
and Maryon Urquhart

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including computer and information science. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of computer and information science in the CIP is as follows:

A summary of groups of instructional programs that describe the coding, processing, and storage of data through repetitious and highly complex mathematical operations at high speed, and in accordance with strictly defined systems and procedures.*

[*Gerald S. Malitz, A Classification of Instructional Programs (Washington, DC.: National Center for Education Statistics, [1985], p. 63.--11)]

This article presents a summary of the overall average salary increases in the discipline/major field of computer and information science from the "base-

line year" of 1985-86 to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA's STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the "baseline year" and the "trend year". Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the "baseline year" and the "trend year".

This study lists the average salaries of computer and information science faculty for both state and private participating institutions by rank, including "new assistant professor," the FAC MIX PCT (faculty mix percentage) and the salary factor. In addition, comparisons are made with the CPI (consumer price index) of changes in cost-of-living between the two studies for each of the two study years (1985-86 and 1988-89).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Thus, by comparing changes in faculty salaries with the CPI, a more precise representation of the "real" salary increases is yielded.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. Full-time faculty members are those who teach no less than 51 percent of the time. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary displayed is computed from all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .30 for associate professor of computer and information science in the 1985-86 state study means that 30 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 1.14 for assistant professors in the discipline/major field of computer and information science in the 1985-86 state study means that their salaries are 14 percent higher than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of computer and information science with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of computer and information science was reported in 146 of the 202 state (AASCU) institutions. The average salary of the 1,203 faculty was \$32,485. This average salary was approximately 4 percent (1.04) higher than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of computer and information science was reported in 161 of the same 202 state (AASCU) institutions. The average salary of the 1,377 faculty was \$38,847. This average salary was approximately 6 percent (1.06) higher than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in the discipline/major field of computer and information science after three years in the state institutions studied was 19.6 percent ($\$38,847$ minus $\$32,485$ equals $\$6,362$). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 9.0 percent or an average of 3 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent ($\$36,562$ minus $\$31,282$ equals $\$5,280$). In comparison to the discipline/major field of computer and information science (19.6%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 2.7 percent (19.6% minus 16.9% equals 2.7%) less than faculty in the discipline/major field of computer and information science.

The reader may note that the faculty mix percentage in computer and

information science is lower at the professor rank than at the assistant professor rank in both the state studies: 0.19 vs 0.35 (1985-86) and 0.21 vs 0.35 (1988-89), respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies are as follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to computer and information science in both of the state studies.

Finally, the hiring rate of new assistant professors in computer and information science in the state studies was higher than the hiring rate in ALL MAJOR FIELDS both in 1985-86, 6.7 percent (80/1,203) vs. 3.7 percent (1,932/51,525), respectively; and in 1988-89, 6.0 percent (82/1,377) vs. 4.7 percent (2,573/54,552), respectively.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of computer and information science was reported in 178 of the 259 private institutions. The average salary of the 619 faculty was \$30,216. This average salary was approximately 2 percent (1.02) higher than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of computer and information science was reported in 183 of the same 259 private institutions. The average salary of the 751 faculty was \$36,517. This average salary was about 4 percent (1.04) higher than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private

study.

The increase in average salaries for all faculty in computer and information science after three years in the private institutions studied was 20.9 percent (\$36,517 minus \$30,216 equals \$6,301). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 10.3 percent or 3.4 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of computer and information science (20.9%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 3 percent (20.9% minus 17.9% equals 3.0%) less than faculty in computer and information science.

In the discipline/major field of computer and information science, the reader may note that the faculty mix percentage at the professor rank is less than at the assistant professor rank in the private studies: 0.14 vs. 0.44 (1985-86), respectively; and 0.15 vs. 0.45 (1988-89), respectively. This is quite different from ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86), respectively; and 0.31 vs. 0.31 (1988-89), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to computer and information science in both private studies.

Finally, the reader may note that the hiring rate of new assistant professors in computer and information science in the private studies was greater than the hiring rate in ALL MAJOR FIELDS both in 1985-86, 7.9 percent (49/619) vs. 4.5 percent (1,204/27,049), respectively; and in 1988-89, 5.7 percent (43/751) vs. 4.8 percent (1,388/28,627), respectively.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of computer and information science and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 3,950 faculty in the discipline/major field of computer and information science participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of computer and information science is currently (1988-89) some 6 and 4 percent above the overall average faculty salaries of ALL MAJOR FIELDS for both the state and private studies, respectively. The overall average faculty salary for computer and information science in the private institutions was approximately 8 percent lower than in state institutions in the 1985-86 study. The overall salary average in the private institutions is now (1988-89) approximately 6 percent lower in comparison to that for the state institutions.

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in computer and information science, in both the state and private institutions, received overall salary increases for three years above the cost-of-living. Computer and information science faculty salaries in both the state and private institutions exceeded faculty in ALL

MAJOR FIELDS during this same period.

Third, in the discipline/major field of computer and information science the assistant professor rank has a greater percentage compared to the full professor rank for both the state and private studies. The full professor rank appears to be increasing at a greater rate in the state institutions compared to the private institutions. It seems a smaller percentage of new assistant professors are being hired in both the state and private institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in computer and information science, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Maryon Urquhart is a research analyst in the Office of Equal Opportunity Programs at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN CURRICULUM AND INSTRUCTION

FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Arthur Quickenton

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including curriculum and instruction. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of curriculum and instruction in the CIP is as follows:

An instructional program that describes the theories, methods, and procedures of designing, controlling, developing, and integrating educational activities and programs.*

[*Gerald S. Malitz, A Classification of Instructional Programs (Washington, DC.: National Center for Education Statistics, [1985], p. 66.- 13.0301.)]

This article presents a summary of the overall average salary increases in the discipline/major field of curriculum and instruction from the "baseline

year" of 1985-86 to a 1 including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA'S STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the "baseline year" and the "trend year". Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the "baseline year" and the "trend year".

This study lists the average salaries of curriculum and instruction faculty for both state and private participating institutions by rank, including "new assistant professor," the FAC MIX PCT (Faculty Mix Percentage) and the salary factor. In addition, comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1985-86 and 1988-89).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Thus, by comparing changes in faculty salaries with the CPI, a more precise representation of the "real" salary increases is yielded.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. Full-time faculty members are those who teach no less than 51 percent of the time. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary displayed is computed from all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .36 for associate professor of curriculum and instruction in the 1985-86 state study means that 36 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 1.01 for assistant professors in the discipline/major field of curriculum and instruction in the 1985-86 state study means that their salaries are approximately 1 percent higher than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of curriculum and instruction with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of curriculum and instruction was reported in 51 of the 202 state (AASCU) institutions. The average salary of the 701 faculty was \$31,821. This average salary was approximately 2 percent (1.02) higher than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of curriculum and instruction was reported in 48 of the same 202 state (AASCU) institutions. The average salary of the 651 faculty was \$35,609. This average salary was 3 percent lower than (.97) the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in the discipline/major field of curriculum and instruction after three years in the state institutions studied was 11.9 percent (\$35,609 minus \$31,821 equals \$3,788). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 1.3 percent or an average of .4 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent (\$36,562 minus \$31,282 equals \$5,280). In comparison to the discipline/major field of curriculum and instruction (11.9%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 5 percent (16.9% minus 11.9% equals 5%) more than faculty in the discipline/major field of curriculum and instruction.

The reader may note that the faculty mix percentage in curriculum and instruction is higher at the professor rank than at the assistant professor

rank in both the state studies: 0.39 vs 0.23 (1985-86) and 0.35 vs 0.28 (1988-89), respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies are as follows: 0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89), respectively. In other words ALL MAJOR FIELDS has a lower percentage of professors in the 1985-86 study. However in the 1988-89 study, ALL MAJOR FIELDS has an equal percentage of professors and assistant professors as curriculum and instruction.

Finally, the hiring rate of new assistant professors in curriculum and instruction in the 1985-86 state study was slightly lower than the hiring rate in ALL MAJOR FIELDS, 3.6 percent (25/701) vs. 3.7 percent (1,932/51,525), respectively. Currently, the hiring rate in curriculum and instruction is higher than the hiring rate in ALL MAJOR FIELDS, 5.8 percent (38/651) vs. 4.7 percent (2,573/54,552), respectively.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of curriculum and instruction was reported in 13 of the 259 private institutions. The average salary of the 87 faculty was \$33,161. This average salary was approximately 11 percent (1.11) higher than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of curriculum and instruction was reported in 11 of the same 259 private institutions. The average salary of the 117 faculty was \$35,564. This average salary was about 1 percent (1.01) higher than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private study.

The increase in average salaries for all faculty in curriculum and instruction after three years in the private institutions studied was 7.2 percent (\$35,564 minus \$33,161 equals \$2,403). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is -3.4 percent or 1.1 percent each year less than the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of curriculum and instruction (7.2%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 10.7 percent (17.9% minus 7.2% equals 10.7%) more than faculty in curriculum and instruction.

In the discipline/major field of curriculum and instruction, the reader may note that the faculty mix percentage at the professor rank was higher than at the assistant professor rank in the 1985-86 private study: 0.25 vs. 0.22, respectively; but was lower in the 1988-89 private study: 0.27 vs. 0.30, respectively. The faculty mix percentage at the professor rank was equal to the assistant professor rank for ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86) and 0.31 vs. 0.31 (1988-89), respectively.

Finally, the reader may note that the hiring rate of new assistant professors in curriculum and instruction in the 1985-86 private study was higher than the hiring rate in ALL MAJOR FIELDS, 4.6 percent (4/87) vs. 4.5 percent (1,204/27,049), respectively. Also, in the 1988-89 private study, the hiring rate in curriculum and instruction was less than that for ALL MAJOR FIELDS, 4.3 percent (5/117) vs. 4.8 percent (1,388/28,627), respectively.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of curriculum and instruction and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the "trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 1,556 faculty in the discipline/major field of curriculum and instruction participated and were included in the overall total of 161,753 faculty in all 45 disciplines/major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of curriculum and instruction is now some 3 percent below 1 percent above the overall average faculty salaries in ALL MAJOR FIELDS in the state and private studies, respectively. The average faculty salary for curriculum and instruction in the private institutions was approximately 4 percent more compared to that in the state institutions in 1985-86. The overall salary factor in the private institutions is now (1988-89) \$45 less in comparison to that for the state institutions(0.1%).

Second, the CPI of October 1985, in comparison to the CPI of October 1988, indicates that the faculty in curriculum and instruction, in both the state and private institutions, received overall salary increases for three years above the cost-of-living. Curriculum and instruction faculty salaries in both the state and private institutions lagged behind faculty in ALL MAJOR FIELDS

during this same period. Curriculum and instruction faculty in both the state and private institutions have some catching up to do in salary in comparison to their colleagues in ALL MAJOR FIELDS.

Third, in the discipline/major field of curriculum and instruction the full professor rank has a greater percentage compared to the assistant professor rank for in the state studies. In the private studies the full professor rank was much greater in comparison to the assistant professor rank in the 1985-86 study, however the opposite was true in the 1988-89 study. The assistant professor rank was greater in comparison to full professor rank. The full professor rank appears to be slightly increasing in the private institutions, whereas the full professor rank appears to be slightly decreasing in the state studies. It seems a smaller percentage of new assistant professors are being hired in the private institutions in comparison to the state institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in curriculum and instruction, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Arthur Quickenton is an associate professor of curriculum and instruction, at Appalachian State University, Boone, North Carolina.

SALARY-TREND STUDY OF FACULTY IN DRAMATIC ARTS

FOR THE YEARS

1985-86 AND 1988-89

By
Richard D. Howe
and Maryon Urquhart

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1988-89. Each year two separate studies are conducted, one for state senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including dramatic arts. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1985. The definition of the discipline/major field of dramatic arts in the CIP is as follows:

An instructional program that describes the development, theory, and processes of creating live performances through human expressive modalities.*

*Gerald S. Malitz, A Classification of Instructional Programs (Washington, DC.: National Center for Education Statistics, [1985], p. 158.--50.0501.)

This article presents a summary of the overall average salary increases in the discipline/major field of dramatic arts from the "baseline year" of 1985-86

to and including the "trend year" of 1988-89 for both state and private institutions. Of the 262 institutions which participated in CUPA's STATE (AASCU) study of 1985-86, 202 also participated in 1988-89. Data from those same 202 institutions were used in both the "baseline year" and the "trend year". Of the 440 institutions which participated in CUPA'S PRIVATE study of 1985-86, 259 also participated in 1988-89. Data from those same 259 institutions were used in both the "baseline year" and the "trend year".

This study lists the average salaries of dramatic arts faculty for both state and private participating institutions by rank, including "new assistant professor," the FAC MIX PCT (Faculty Mix Percentage) and the salary factor. In addition, comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1985-86 and 1988-89).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Thus, by comparing changes in faculty salaries with the CPI, a more precise representation of the "real" salary increases is yielded.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. Full-time faculty members are those who teach no less than 51 percent of the time. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary displayed is computed from all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .28 for associate professor of dramatic arts in the 1985-86 state study means that 28 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: STATE 1985-86, STATE 1988-89, PRIVATE 1985-86 and PRIVATE 1988-89. For example, a SALARY FACTOR of 0.90 for assistant professors in the discipline/major field of dramatic arts in the 1985-86 state study means that their salaries are 10 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1985-86 or 1988-89). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of dramatic arts with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1985-86 and the "trend year" of 1988-89 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO STATE (AASCU) STUDIES, 1985-86 AND 1988-89

In the STATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of dramatic arts was reported in 116 of the 202 state (AASCU) institutions. The average salary of the 639 faculty was \$29,112. This average salary was approximately 7 percent (0.93) lower than the average salary of \$31,282 for all 51,525 faculty in ALL MAJOR FIELDS in the 1985-86 state study.

In the STATE 1988-89 salary study in the above table, the discipline/major field of dramatic arts was reported in 114 of the same 202 state (AASCU) institutions. The average salary of the 679 faculty was \$33,849. This average salary was approximately 7 percent (0.93) lower than the average salary of \$36,562 for all 54,552 faculty in ALL MAJOR FIELDS in the 1988-89 state study.

The increase in average salaries for all faculty in dramatic arts after three years in the state institutions studied was 16.3 percent ($\$33,849$ minus $\$29,112$ equals $\$4,737$). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 5.7 percent or an average of 1.9 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the state institutions studied was 16.9 percent ($\$36,562$ minus $\$31,282$ equals $\$5,280$). In comparison therefore, the faculty in the discipline/major field of dramatic arts increased their salaries by 0.6% less, than the faculty in ALL MAJOR FIELDS (16.9% minus 16.3% equals 0.6%).

The reader may note that the faculty mix percentage in dramatic arts is lower at the professor rank than at the assistant professor rank in both the state studies: 0.30 vs 0.35 (1985-86) and 0.31 vs 0.34 (1988-89), respectively.

The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both state studies are as follows:

0.34 vs. 0.27 (1985-86) and 0.35 vs. 0.28 (1988-89), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to dramatic arts in both of the state studies.

Finally, the hiring rate of new assistant professors in dramatic arts is high in the state studies: 5.5 percent (35/639) in 1985-86 vs. 3.7 percent (1,932/51,525) in ALL MAJOR FIELDS in 1985-86. Also, the hiring rate of new assistant professors in dramatic arts in 1988-89 was 7.4 percent (50/679) vs. 4.7 percent (2,573/54,552) in ALL MAJOR FIELDS that same year. In other words the hiring rate in the discipline/major field of dramatic arts is more than for ALL MAJOR FIELDS in both of the state studies.

RESULTS OF THE TWO PRIVATE STUDIES, 1985-86 AND 1988-89

In the PRIVATE 1985-86 salary study in the above table, the reader may note that the discipline/major field of dramatic arts was reported in 124 of the 259 private institutions. The average salary of the 419 faculty was \$26,789. This average salary was approximately 10 percent (0.90) lower than the average salary of \$29,765 for all 27,049 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

In the PRIVATE 1988-89 salary study in the above table, the discipline/major field of dramatic arts was reported in 130 of the same 259 private institutions. The average salary of the 437 faculty was \$30,975. This average salary was approximately 12 percent (0.88) lower than the average salary of \$35,099 for all 28,627 faculty in ALL MAJOR FIELDS in the 1988-89 private study.

The increase in average salaries for all faculty in dramatic arts after three years in the private institutions studied was 15.6 percent (\$30,975 minus \$26,789 equals \$4,186). The CPI of increased cost-of-living between October 1985 and October 1988 was 10.6 percent. A more realistic increase, therefore,

in average faculty salaries over the three-year time period is 5 percent or approximately 1.6 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 17.9 percent (\$35,099 minus \$29,765 equals \$5,334). In comparison to the discipline/major field of dramatic arts (15.6%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 2.3 percent (17.9% minus 15.6% equals 2.3%) more than faculty in the discipline/major field of dramatic arts.

In the discipline/major field of dramatic arts, the reader may note that the faculty mix percentage at the professor rank is less than at the assistant professor rank in the private studies: 0.21 vs. 0.37 (1985-86), respectively; and 0.21 vs. 0.39,(1988-89), respectively. This is quite different from ALL MAJOR FIELDS for both private studies: 0.31 vs. 0.31 (1985-86), respectively; and 0.31 vs. 0.31 (1988-89), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to dramatic arts in both private studies.

Finally, the reader may note that the hiring rate of new assistant professors in dramatic arts in the 1985-86 private study was higher than the hiring rate in ALL MAJOR FIELDS, 8.1 percent (34/419) vs. 4.5 percent (1,204/27,049), respectively. However, in the 1988-89 state study the hiring rate of new assistant professors in dramatic arts was less than that in ALL MAJOR FIELDS, 3.9 percent (17/437) vs. 4.8 percent (1,388/28,627), respectively.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of dramatic arts and compared that information with ALL MAJOR FIELDS over a period of three years: the "baseline year" of 1985-86 through the

"trend year" of 1988-89. Two studies, one for state (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 2,174 faculty in the discipline/major field of dramatic arts participated and were included in the overall total of 161,753 faculty in all 45 disciplines/ major fields in all four studies. The same 202 state (AASCU) institutions and the same 259 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of dramatic arts is currently (1988-89) some 7 and 12 percent below the overall average faculty salary of ALL MAJOR FIELDS for both the state and private studies, respectively. The average faculty salary for dramatic arts in the private institutions approximately 9 percent less in comparison to that in the state institutions in 1985-86. The overall faculty salary average in the private institutions is now (1988-89) 9 percent less in comparison to that for the state institutions.

Second, the CPI of October 1988, in comparison to the CPI of October 1985, indicates that the faculty in dramatic arts, in both the state and private institutions, received overall salary increases for three years above the cost-of-living. Dramatic arts faculty salaries in the state institutions lagged slightly behind faculty in ALL MAJOR FIELDS during this same period, but is somewhat ahead in the private institutions.

Third, in the discipline/major field of dramatic arts the assistant professor rank has a greater percentage compared to the full professor rank for both the state and private studies. The full professor rank appears to be increasing at a faster rate in the state institutions, compared to the private institutions. It seems a higher percentage of new assistant professors are being hired

in the state institutions in comparison to the private institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in dramatic arts, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Maryon Urquhart is a research analyst in the Office of Equal Opportunity Programs at Appalachian State University, Boone, North Carolina.

CUPA State (AASCU) Faculty Salary-Trend Studies: 1985-86 and 1988-89

Institutions Participating in Both Studies:

Adams State College (CO)	Fort Lewis College (CO)
Alabama State University (AL)	Francis Marion College (SC)
Angelo State University (TX)	Frostburg State University (MD)
Appalachian State University (NC)	George Mason University (VA)
Arkansas State University (AR)	Georgia College (GA)
Arkansas Technological University (AR)	Georgia Southern College (GA)
Auburn University at Montgomery (AL)	Georgia Southwestern College (GA)
Augusta College (GA)	Glenville State College (WV)
Blackhills State College (SD)	Grand Valley State University (MI)
Bluefield State College (WV)	Harris-Stowe State College (MO)
California State University at Fullerton (CA)	Humacao University College (PR)
California State University at Long Beach (CA)	Idaho State University (ID)
California State University at Stanislaus (CA)	Illinois State University (IL)
California University of Pennsylvania (PA)	Indiana State University (IN)
Castleton State College (VT)	Indiana University of Pennsylvania (PA)
Central Connecticut State University (CT)	Jackson State University (MS)
Central Michigan University (MI)	Keene State University (NH)
Central Missouri State University (MO)	Kent State University (OH)
Central State University (OK)	Kutztown University (PA)
Central Washington University (WA)	Lake Superior State University (MI)
Christopher Newport College (VA)	Lander College (SC)
Citadel, The Military College of S.C., The (SC)	Lewis Clark State College (ID)
Clarion University of Pennsylvania (PA)	Livingston University (AL)
Cleveland State University (OH)	Longwood College (VA)
Clinch Valley College of Univ. of Virginia (VA)	Louisiana State University in Shreveport (LA)
College of Charleston (SC)	Marshall University (WV)
College of Staten Island - CUNY, The (NY)	Mary Washington College (VA)
Columbus College (GA)	Mayville State University (ND)
Concord College (WV)	McNeese State University (IA)
Dakota State College (SD)	Memphis State University (TN)
Delta State College (MS)	Mesa State College (CO)
Dickinson State University (SD)	Metropolitan State College (CO)
East Central State University (OK)	Middle Tennessee State University (TN)
East Stroudsburg University (PA)	Millersville University of Pennsylvania (PA)
East Texas State University (TX)	Minot State University (ND)
East Texas State University at Texarkana (TX)	Missouri Southern State College (MO)
Eastern Connecticut State University (CT)	Missouri Western State College (MO)
Eastern Illinois University (IL)	Morehead State University (KY)
Eastern Kentucky University (KY)	Murray State University (KY)
Eastern Michigan University (MI)	New Mexico Highlands University (NM)
Eastern New Mexico University (NM)	Nicholls State University (IA)
Eastern Washington University (WA)	North Carolina A & T State University (NC)
Edinsboro University of Pennsylvania (PA)	Northeast Louisiana University (LA)
Fitchburg State College (MA)	Northeast Missouri State University (MO)
Florida A & M University (FL)	Northeastern Illinois University (IL)
Florida Atlantic University (FL)	Northern Arizona University (AZ)
Florida International University (FL)	Northern Illinois University (IL)
Fort Hays State University (KS)	Northern State College (SD)

Participating Institutions, continued:

Northwest Missouri State University (MO)	University of the District of Columbia, The (DC)
Oakland University (MI)	University of Houston at Clear Lake (TX)
Old Dominion University (VA)	University of Lowell (MA)
Oregon Institute of Technology (OR)	University of Maine at Presque Isle (ME)
San American University (TX)	University of Maryland-Baltimore County, The (MD)
Peru State College (NB)	University of Missouri - St. Louis (MO)
Pittsburg State University (KS)	University of Montevallo (AL)
Plymouth State College (NH)	University of Nebraska at Omaha (NE)
Purdue University Calumet (IN)	University of Nevada at Las Vegas (NV)
Radford University (VA)	University of North Carolina at Charlotte (NC)
Ramapo College of New Jersey (NJ)	University of North Carolina at Greensboro (NC)
Richard Stockton State College (NJ)	University of Northern Colorado (CO)
Saginaw Valley State University (MI)	University of Northern Iowa (IA)
Salem State College (MA)	University of Science & Arts of Oklahoma (OK)
Salisbury State University (MD)	University of South Alabama (AL)
Sam Houston State University (TX)	University of South Carolina at Spartanburg (SC)
