ABSTRACT
        A paper by Christine Cheney, titled "Preventive
Discipline through Effective Classroom Management," introduces the
issue of preventive discipline and behavior management practices.
Following the reprinted paper, 149 citations from the ECER
(Exceptional Child Education Resources) database and the ERIC
(Educational Resources Information Center) database are presented.
These citations contain bibliographic information, indexing
information, and an abstract of the document when available. Four
basic types of references are included: journal articles, documents
available from the ERIC system, commercially published materials, and
doctoral dissertations. (JDD)

****

MAKING SENSE OUT OF YOUR COMPUTER SEARCH

Please read the following general information before beginning your research.

WHAT INFORMATION IS PROVIDED?

The enclosed printout of abstracts is the result of a computer search of Exceptional Child Education Resources (ECER) and/or the ERIC data bases.

Each reference contains three sections: bibliographic information, indexing information, and an abstract of the document. (NOTE: Journal article citations from the ERIC database, those with an EJ number, may have no abstract or only a brief annotation.)

(1) The bibliographic section provides:

   a. Document identification or order number
      (ED, EJ, or EC)
   b. Publication date
   c. Author
   d. Title
   e. Source or publisher
   f. Availability (most documents are not available
      from the Clearinghouse or CEC)

(2) Descriptors and identifiers indicate the subject matter contained in the document.

(3) The abstract provides an overview of document contents. Sample abstracts are enclosed to clarify the various parts of a citation.

4

HOW DO YOU LOCATE ACTUAL COPIES OF JOURNAL ARTICLES, DOCUMENTS, AND PRODUCTS LISTED IN YOUR SEARCH?

CEC Information Services/ERIC Clearinghouse on Handicapped and Gifted Children does not provide copies of any of the documents or articles in your search except those published by CEC.

Four basic types of references will appear in your search:

(1) Journal articles
(2) Documents available from the ERIC system
(3) Commercially published materials
(4) Doctoral dissertations

Journal Articles

Copies of journal articles can usually be obtained from one or more of these sources:

a. The periodical collection of a library
b. The journal publisher (see CEC Information Services Journal Collection list enclosed for addresses of publishers)
c. University Microfilms International or other article reprint services

A reprint service is now available from University Microfilms International (UMI) for many of the journals cited in your search. A note may appear in the citation that a reprint is available from UMI; if not, check the CEC Information Services Journal Collection List enclosed, the journal list in the front of a recent issue of Current Index to Journals in Education (CIJE), or call UMI. Check the latest issue of CIJE

for current UMI prices. Articles are reproduced to approximately original size, to a maximum of 8½ x 11 inches. All material on a page is copied, including advertising. Line drawings such as maps, tables, or illustrations are reproduced with close approximation to the originals. Photographs do not reproduce as well, but arrangements can be made for special high-quality reproduction on photographic paper.

The scheduled turnaround time is three days, and the price includes postage via first class mail.

Please include author, title of article, name of journal, volume, issue number, and date for each article required.

Send to: Article Copy Service - CIJE
            University Microfilms International
            300 N. Zeeb Road
            Ann Arbor, MI 48106
            800/521-0600

ERIC Documents

ERIC documents will have an ED number (ED followed by six digits) in the first line of the citation. Many of these documents are part of the ERIC Microfiche Collection. There are over 600 libraries in the U.S. which subscribe to the ERIC Microfiche Collection. In these libraries you can see and often make copies of these documents (for a minimal fee). If you would like to know the location of the ERIC Microfiche Collection nearest you, you can call CEC/ERIC at 703/620-3660.

Copies of most ERIC documents are also available from the ERIC Document Reproduction Service (EDRS). You can use the order form enclosed to order these documents. (NOTE: The EDRS prices quoted in the citation may be out of date. Use the current EDRS order form enclosed to compute the correct price based on the number of pages of the document.)

To find out if a document is available from EDRS, check the first line of the citation for an ERIC Document number (an ED followed by six digits). Occasionally you will see ED followed by an abbreviation for a month and the letters RIE (e.g., EDJUNRIE). This indicates that the ED number was not available when the abstract was produced, but the document will be available from EDRS. Next to the EDRS you may also find one of these notations:

Not available - This document is not available from EDRS. Check the citation for another source of availability.

MF; PC   - The document is available from EDRS in either a microfiche or paper copy format.

MF   - The document is only available on microfiche.

Commercially Published Materials

Citations of commercially published materials (books, films, cassettes, tr 'ning packages, and other materials) will include the pub. sher's name and address and a price (whenever possible). If you cannot find these materials in a library or resource center, they can be purchased from the publisher.

Doctoral Dissertations

Copies of doctoral dissertations may be purchased from University Microfilms International. The address for ordering, order number, and prices are provided in the citations.

If you have any questions about your computer search, you are welcome to call CEC/ERIC at 703/620-3660.

CEC Information Services Journal Collection

The CEC Information Services regularly receives more than 200 journals that are scanned for material concerning exceptional children. Articles selected on the basis of established criteria are abstracted and indexed for EXCEPTIONAL CHILD EDUCATION RESOURCES (ECER). Some of these articles are indexed and submitted for announcement in CURRENT INDEX TO JOURNALS IN EDUCATION (CIJE), an Educational Resources Information Center (ERIC) publication. The following list is of journals from which articles were abstracted (current, January 1988).

*ACEHI Journal, University of Alberta, Dept. of Educ. Psychology, 6-102 Education North, Edmonton, Alberta, T6G 2G5 Canada

*Academic Therapy, 28 Commercial Blvd., Novato CA 94927

*American Annals of the Deaf, 814 Thayer Ave., Silver Spring, MD 20910

GENERAL INFORMATION

1. PRICE LIST
The prices set forth herein may ~ ~ changed without notice; however, any price change is subject to the approval of the Contracting Officer/USED/Office of Educational Research & Improvement/Contracts and to Management Division.

2. PAYMENT
The prices set forth herein do not include any sales, use, excise, or similar taxes that may apply to the sale of microfiche or paper copy to the Customer. The cost of such taxes, if any shall be borne by the Customer.

Payment shall be made net thirty (30) days from date of invoice. Payment shall be without expense to CMC.

3. REPRODUCTION
Express permission to reproduce a copyrighted document provided hereunder must be obtained from the copyright holder noted on the title page of such copyrighted document.

4. CONTINGENCIES
CMC shall not be liable to Customer or any other person for any failure or delay in the performance of any obligation if such failure or delay (a) is due to events beyond the control of CMC including, but not limited to, fire, storm, flood, earthquake, explosion, accident, acts of the public enemy, strikes, lockouts, labor disputes, labor shortage, work stoppages, transportation embargoes or delays, failure or shortage of materials, supplies or machinery, acts of God, or acts or regulations or priorities of the federal, state, or local governments; (b) is due to failures of performances of subcontractors beyond CMC's control and without negligence on the part of CMC; or (c) is due to erroneous or incomplete information furnished by Customer.

5. LIABILITY
CMC's liability, if any, arising hereunder shall not exceed restitution of charges.

In no event shall CMC be liable for special, consequential, or liquidated damages arising from the provision of services hereunder.

6. WARRANTY
CMC MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO ANY MATTER WHATSOEVER, INCLUDING ANY WARRANTY OR MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

7. QUALITY
CMC will replace products returned because of reproduction defects or incompleteness. The quality of the input document is not the responsibility of CMC. Best available copy will be supplied.

8. CHANGES
No waiver, alteration, or modification of any of the provisions hereof shall be binding unless in writing and signed by an officer of CMC.

9. DEFAULT AND WAIVER
  a. If Customer fails with respect to this or any other agreement with CMC to pay any invoice when due or to accept any shipment as ordered, CMC, may without prejudice to other remedies, defer any further shipments until the default is corrected, or may cancel the order.
  b. No course of conduct nor any delay of CMC in exercising any right hereunder shall waive any rights of CMC or modify this Agreement.

10. GOVERNING LAW
This Agreement shall be construed to be between merchants. Any question concerning its validity, construction, or performance shall be governed by the laws of the State of New York.

11. DEPOSIT ACCOUNTS
Customers who have a continuing need for ERIC documents may open a Deposit account by depositing a minimum of $250.00. Once a deposit account is opened, ERIC documents will be sent upon request, and the account charged for the actual cost and postage. A monthly statement of the account will be furnished.

12. PAPER COPY (PC)
A paper copy (PC) is a xerographic reproduction, on paper, of the original document. Each paper copy has a Vellum Bristol cover to identify and protect the document.

13. FOREIGN POSTAGE
Postage for all countries other than the United States is based on the International Postage Rates in effect at the time the order is shipped. To determine postage allow 160 microfiche or 75 (PC) pages per pound. Customers must specify the exact classification of mail desired, and include the postage for that classification with their order. Payment must be in United States funds.

STANDING ORDERS SUBSCRIPTION ACCOUNTS

Subscription orders for documents in the monthly issue of Resources in Education (RIE) are available on microfiche from EDRS. The microfiche are furnished on a diazo film base and without envelopes at $0.091 per microfiche. If you prefer a silver halide film base the cost is $0.185 per microfiche and each microfiche is inserted into a protective envelope. SHIPPING CHARGES ARE EXTRA. A Standing Order Account may be opened by depositing $1,600.00 or submitting an executed purchase order. The cost of each issue and shipping will be charged against the account. A monthly statement of the account will be furnished.

BACK COLLECTIONS

Back collections of documents in all issues of Resources in Education (RIE) since 1966 are available on microfiche at a unit price of $0.085 per microfiche. The collections from 1966 through 1985 are furnished on a vesicular film base and without envelopes. Since 1986 collections are furnished on a Diazo film base without envelopes. SHIPPING CHARGES ARE EXTRA. For pricing information write or call Toll Free 1-800-227-ERIC (3742).

SPECIAL COLLECTIONS

Special collections of early (1956 to 1969) Office of Education Reports are also available from EDRS. These are: Office of Education Research Reports 1956-65, Pacesetters in Innovation, Fiscal Year 1966, Pacesetters in Innovation, Fiscal Year 1967, Pacesetters in Innovation, Fiscal Year 1968, Selected Documents on the Disadvantaged, Selected Documents on Higher Education, Manpower Research, Inventory for Fiscal Year 1966 and 1967, Manpower Research, Inventory for Fiscal Year 1968, Manpower Research, Inventory for Fiscal Year 1969. Please write or call for prices and shipping charges.

AIM/ARM MICROFICHE COLLECTIONS

Please write or call for prices and shipping charges.

ERIC CLEARINGHOUSE COLLECTIONS

Back collections of, or standing order subscriptions for current collections of, microfiche of individual ERIC Clearinghouses are available. Please write or call for prices and shipping charges.

ERIC CLEARINGHOUSE PUBLICATIONS

The ERIC Clearinghouses analyze and synthesize the literature of education into research reviews, bibliographies, state-of-the-art studies, interpretive studies on topics of high current interest and many similar documents designed to meet the information needs of ERIC users. Prices include shipping (except for foreign shipment).

PREVENTIVE DISCIPLINE THROUGH

EFFECTIVE CLASSROOM MANAGEMENT

Christine O. Cheney
University of Nevada, Reno

The American public and teachers agree that student behavior problems are among the most serious concerns facing our schools, according to the 1984 Gallup Poll of the Public's Attitudes Toward Public Education. In considering discipline problems, what often come to mind are serious behaviors such as fighting, defiance, or open confrontation with the teacher. Yet, research has indicated that such events happen rarely. The vast majority of student misbehavior-- 90% or more-- consists of inappropriate talking and being out of seat (Jones, 1979). Such "minor" behavior problems take up an inordinate amount of teacher time and may interrupt intructional progress for the entire class.

While some students have serious emotional or behavior problems which require specific, systematic interventions, many of the problems which may plague regular or special education teachers can be prevented through effective classroom management. This paper, produced as part of the Council for Exceptional Children's Preconvention Training, "Exploring the Theory/Practice Link in Special Education," focuses on how to prevent discipline problems in both regular and special education settings through the effective use of three key elements:

I.   Organizational management of classroom elements

II. Anticipation and re-direction of student behavior

III. Positive, encouraging interactions with students

ORGANIZATIONAL MANAGEMENT OF CLASSROOM ELEMENTS

Many of the activities that teachers engage in prior to the start of school can contribute to preventing behavior problems. These include the PHYSICAL ARRANGEMENT of the classroom, developing a CONSISTENT SCHEDULE of activities, and devising PROCEDURES to handle classroom routines. Another activity which contributes to a well-ordered classroom is best done soon after the students arrive for the first day of school-- developing RULES FOR CLASSROOM BEHAVIOR. Each of these activities will be discussed below.

The Physical Arrangement of the Classroom--

The typical American classroom is a square or rectangular room with hard surfaces, uncomfortable furniture, inadequate ventilation or temperature control, and poor acoustics. Into this room are placed up to 30 students and one or more adults. It is the teacher's job to make this environment comfortable, pleasant, and efficient. Most teachers work

very hard in making their classrooms comfortable and pleasant for the students-- a great deal of time is spent on bulletin boards, reading corners, plant tables and the hamster habitat. Equally important, however, is the job of making the physical environment of the classroom work EFFICIENTLY.

What is likely to happen in the following situations?

* Becky has been assigned the first coat hook inside the door. Because of the placement of the bookshelves, no one else can get into the room until she has finished hanging up her coat.

* Randy has to ask Jane to scoot in her chair in order for him to go to the pencil sharpener or the drinking fountain.

It is easy to imagine how the arrangements of these classrooms can contribute to behavior problems.

Look at the two classroom diagrams on the next page? Identify at least three potential problems with the arrangements of each of these rooms.
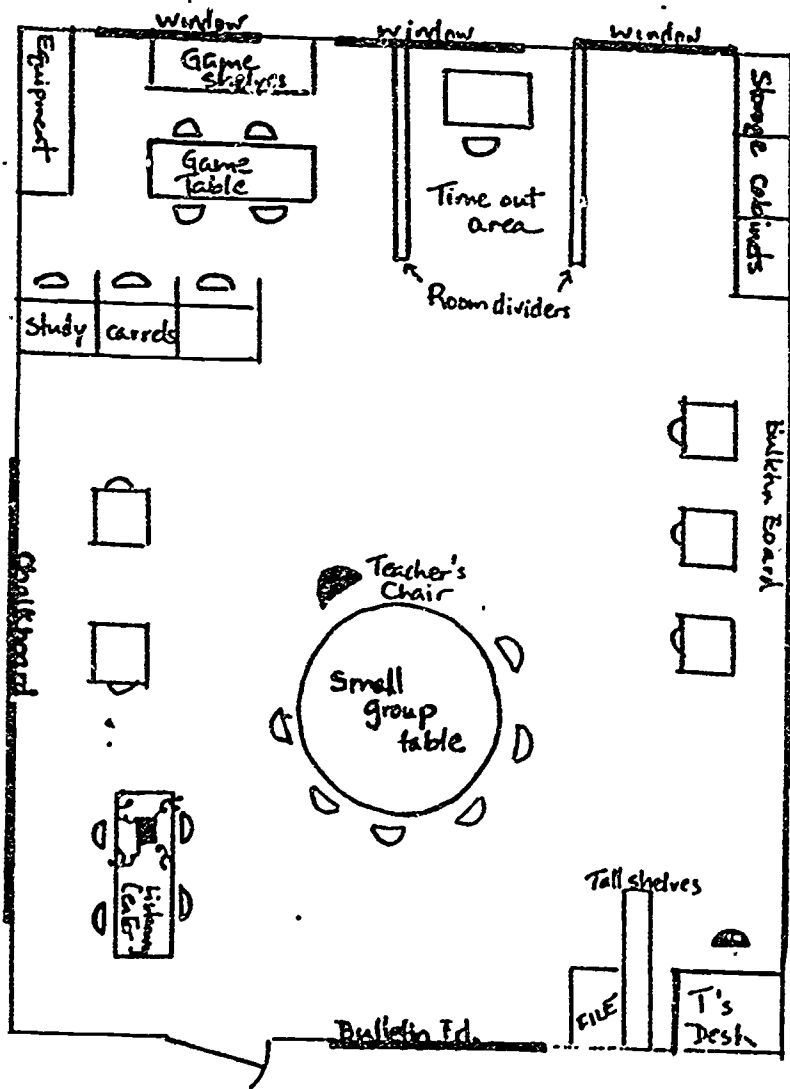

SECOND GRADE CLASSROOM   RESOURCE ROOM

_____   _____

_____   _____

_____   _____

These diagrams portray extreme problems in arrangement: You may have identified other problems. There are some general "rules of thumb," however, to consider in setting up the physical environment of your classroom:

1. The arrangement of student desks should reflect the type of learning activities that will occur. For example, if you group five desks together the students can engage in a cooperative learning activity. However, if after arranging the room in this manner you expect completely independent work with no talking, you are increasing the likelihood of inappropriate behavior.

2. No area should be completely obscured from view by the teacher. All teaching areas-- the front of the room, the small group table, the teacher's desk-- should have a clear view of the entire room.

3. "Traffic patterns" to heavily-used areas of the room should allow for easy movement from all student desks. Such areas include the doors, trash can, pencil sharpener, bathrooms, paper turn-in baskets, etc.

4. Items should be stored near where they will be used.

    a. Frequently-used items should be easy to get to.

    b. Art and science activities should be planned near the sink.

    c. Equipment should be stored with extension cords and as near to fixtures as possible.

5. Areas requiring different behaviors should be clearly marked. For example, a quiet book corner could be indicated by a throw rug; a noisier game area could be marked off with masking tape. High-noise and low-noise areas should be far apart.

Consistent Scheduling of Activities--

The daily schedule of classroom activities can be used to facilitate appropriate, on-task behavior. Teachers vary in the order in which they prefer to present classroom events. A general guideline, however, is that activities requiring quiet concentration should occur when the students are fresh. Those requiring action and movement can be scheduled when the students are more tired. Favorite activities (art. music, computer. story time. etc.) can be scheduled after more demanding lessons (reading, spelling, math, etc.) in order to add interest and variety to the day and to "reward" students for their efforts. This can also help procrastinators with reminders like. "we will sing the song we have been practicing as soon as everyone has put away the math materials."

Activities should be scheduled predictably, although they can vary from day to day. Students soon learn to anticipate what a "typical" Monday is like and come to expect it. Most teachers soon learn that behavior problems can be exaggerated by unpredictable events-- fire drills. unexpected announcements or visitors, extreme weather conditions, etc. Students seem to function better when they know what to expect. Effective teachers plan predictable schedules and, when possible, prepare students in advance for potentially disruptive events.

Specific times during the day may require extra planning: the first activity of the morning, the last activity before the end of school, the activities following recess. lunch, or P.E. What you plan for these times can enable you to proceed smoothly into the next lessons. Often students will need reminders and transitional activities in order to get into the "mind set" for the subject or lesson. Examples of these transitional activities include a lining quietly up at the door so the teacher can give a direction for entering, a short period of silent reading, darkening the room somewhat and having students rest briefly at their desks, a puzzle or problem on the chalkboard that they solve as soon as they enter, writing in a personal journal.

Monday mornings and Friday afternoons may also require special planning. Students may come to school on Monday full of excitement or. occasionally. concern about their weekend. Attention may need to be given to these events in order to have a productive morning. Group sharing and/or a quiet. personal moment with the teacher may help the transition into the day's learning activities. By the same token, on Friday students may be excited or may dread the upcoming weekend. Activities involving talking, movement, and laughter can channel energy in a constructive direction.

Procedures to Handle Classroom Routines--

Orchestrating the movements of a group of students through even the best planned schedule in a beautifully arranged room takes a great deal of planning. A lack of planned procedures for handling routine classroom events can lead to student confusion and/or specific behavior problems. The list of classroom events that require procedures is long and varies with the classroom situation, school routines, and teacher preferences. Among the areas that may need specific routines are the following-- you are probably able to think of others:
* Entering and leaving the classroom

* Use of restrooms

* Use of drinking fountains

* Use of pencil sharpener

* Cues or signals for students to get teacher attention

* Cues or signals for teacher to get student attention

* Talk among students

* Out-of-seat policies

* What to do when seat work is finished

* Passing out and collecting materials

* Turning in assignments

* Housekeeping chores and student monitors

* Use of designated materials and/or areas of the room

* Use and storage of personal belongings

* _____

* _____

The procedures developed to deal with these routine events need to be thoroughly taught early in the year. Time spent in identifying, explaining, modeling, and practicing these procedures is time gained for efficient instruction throughout the rest of the year.

Rules_for_Classroom_Behavior--

In addition to procedures to handle routine classroom events, general rules for student behavior also need to be established. For the purposes of this paper, rules are distinct from procedures in two ways: (1) they are always in effect, not just during specific occurrences, and (2) they are determined by the students in collaboration with the teacher.

Allowing students to determine classroom rules, with teacher guidance, helps them to develop a sense of competence and belonging. The rules are not arbitrary guidelines set by the teacher but are "our" rules that are clearly understood and agreed to. When it is necessary to discuss behavior with students, you may avoid a power struggle by reminding the students of their role in composing the class rules.

Guidelines for developing class rules include the following-- you may have others to add:

1. Rules should be stated in POSITIVE language whenever possible.

2. Rules should be easily MEMORIZED; therefore, they should be FEW IN NUMBER (five or less).

3. Rules should be clearly UNDERSTOOD by all students. If a student breaks a rule, s/he should be asked to state it.

4. Rules should be developed through DISCUSSION and CONSENSUS-- all agree, not just the majority.

5. Rules may be CHANGED, but only after discussion and consensus agreement.

6. Rules should be clearly POSTED in the room.

7. _____

8. _____

ANTICIPATION & RE-DIRECTION OF STUDENT BEHAVIOR

A second major key in the prevention of behavior problems is the ability of the teacher to anticipate circumstances that may lead to misbehavior and re-direct students before the problem becomes serious. Anticipation and re-direction can occur in three ways: through LESSON PLANNING and DELIVERY; through the use of specific TEACHER BEHAVIORS; and through knowledge of INDIVIDUAL STUDENT BEHAVIOR PATTERNS.

Lesson Planning and Delivery--

Effectively planned and delivered lessons may be the single most important factor in the prevention of behavior problems. Students seldom misbehave when they are involved in lessons at the correct skill level. are actively involved with the lesson, and are experiencing high levels of success.

By studying what happened in 80 elementary classrooms, Jacob Kounin (1970) was able to identify specific techniques of group management that were associated with high levels of task involvement and minimal student misbehavior. Kounin's findings do not suggest specific strategies to deal with individual discipline problems: rather they are lesson management techniques that contribute to overall classroom success. Kounin developed some rather creative terms to describe the techniques he observed effective teachers use. Among them are the following:

WITHITNESS-- Being aware of what is happening in all parts of the classroom at all times. and demonstrating this knowledge to the students. Methods of demonstrating withitness include (1) intervening in cases of student misbehavior in a timely manner (i.e.. to prevent problems "spreading" to other students), and (2) identifying the correct students to target (i.e.. not correcting "minor" players while ignoring the major perpetrators of the misbehavior).

OVERLAPPING-- Being able to deal effectively with two or more matters at the same time. A good example of overlapping occurs when the teacher is working with a small group of students. If a problem arises with a student in another part of the room. is the teacher able to deal with the problem without seriously disrupting the workings of the small group? If so. the teacher is effective at overlapping.

MOMENTUM-- Keeping up a consistent pace with lessons. not allowing dead spots or too much haste. Effective teachers avoid behaviors that slow down lessons such as "overdwelling" or unnecessarily fragmenting lesson subtasks, instructions, or materials. Nagging or lecturing students on misbehavior is another way to slow down the momentum of a lesson.

SMOOTHNESS-- Smooth, efficient lessons as well as transitions from one lesson to another are also important, and effective teachers avoid unnecessary "jerkiness." Jerkiness refers to teacher-initiated

behaviors that break the activity flow of the class. For example, a 6th grade teacher is giving a spelling test and notices quite a bit of paper on the floor. She makes the students pick up around their desks and put the paper in the trash before continuing with the spelling test. This was not effective teaching behavior as it disrupted the smooth flow of the lesson. The cleanup could have waited until the completion of the test.

GROUP FOCUSING-- Maximizing involvement of all students in a lesson, even though only one student may be responding at a time. Examples of group focusing include alerting the class with a key question before randomly choosing a student to respond, creating suspense or challenge, keeping students accountable by having all students hold up their answers on slates, having unison responses, and circulating to monitor and check student progress.

The lesson management techniques that Kounin describes develop with effort and experience. Most teachers can recall times when they failed to demonstrate withitness or "lost" the class by overdwelling on a particular subtask. Less experienced teachers are often so concerned with the content of a lesson that they fail to attend to student behavior cues. Nevertheless, Kounin's description of effective group and lesson management gives teachers specific suggestions for anticipating when misbehavior might occur during lessons, and identifies steps teachers can take to prevent problems and maximize student involvement.

Specific Teacher Behaviors--

In addition to the group and lesson management techniques described above, other teacher behaviors can be directed at individual students or groups to re-direct students and prevent minor problems from escalating. These teacher behaviors are neither negative nor "heavy"-- they are neutral, non value-laden ways of preventing discipline problems. These behaviors include TEACHER MOVEMENT and PROXIMITY, INTERFERENCE and SIGNALING, and the use of HUMOR.

1. TEACHER MOVEMENT AND PROXIMITY can be used very positively to re-direct student behavior. Students who are off-task, daydreaming, or playing with personal items at inappropriate times usually get back on-task when the teacher stands next to their desks during the lesson. Such teacher behaviors can occur without disrupting the lesson or drawing unnecessary attention to the student-- the student has not been reprimanded or embarrassed, but s/he has stopped the inappropriate behavior.

The effectiveness of teacher proximity suggests that teachers should move frequently while teaching, rather than stay in the front of the room (Fifer, 1986). This movement not only keeps students engaged and reduces behavior problems, but it allows the teacher to glance at student work and monitor their understanding of what is being taught.

Students who are easily distracted, impulsive, overactive, or day dreamers can be seated so that the teacher is never far away. If the right classroom climate exists (to be discussed in the following section) these children will feel supported and reinforced by such close teacher proximity.

Teachers who are interested in evaluating their own movement patterns can ask a colleague to actually diagram their movements during an instructional period. Such an exercise often illustrates that teachers generally interact with students seated in the front and down the center of the classroom. It is not surprising, therefore, to find that most student misbehavior occurs in areas farthest from the teacher (Fifer, 1986).

2. INTERFERENCE AND SIGNALING refers to direct teacher behaviors that communicate "get back on task" to the student in a non-threatening way. Interference can be asking the day dreaming student to read the next paragraph; quietly removing the compass from the student boring the hole in the desk and pointing to the correct math problem; or actually using the name of off-task students as part of the lesson ("Let's say Aaron had six apples and gave June three. . .). As with teacher proximity, the behavior has been corrected, but the lesson has continued and class attention has not shifted to the "problem."

Signals are nonverbal behaviors that re-direct students to the task at hand. Simply making eye contact followed with a shake of the head can be a signal for a student to stop a particular behavior. Some teachers prefer a more systematic signaling procedure such as writing names on the board or using some type of token system. Here is an example:

> Ms. F uses a token system to signal appropriate and inappropriate behavior to her classroom for learning disabled students. Color coded chips are dropped into a large jar throughout the day. Red chips indicate inappropriate behavior of an individual or group; green chips signal desired behavior. When tallied at the end of the day, if the green chips outnumber a red ones by an agreed-on number, the class earns a valued activity or privilege.

Token systems have been criticized by many (e.g., Jones & Jones, 1986), but they can be very effective. In this case, Ms. F's plan was to fade out the system when possible. While the use of the tokens often intruded on lessons and brought attention to a student's misbehavior, Ms. F found that the students began reminding each other of the correct behavior so the group would not earn a red chip.

Teachers often find it useful to have a signal to gain whole class attention in order to end an activity or make an announcement about class behavior. Such signals can be a bell, dimming the lights, a clapped sequence that the class joins, a raised hand, or something more creative. Whatever signal is used, the class should be instructed in what it is, why it is used, and their expected response to it.

24

Demonstrating and practicing the use of the signal helps ensure that it will get the desired response when used.

3. THE USE OF HUMOR can be a very valuable management tool for the teacher. Humor can reduce tension, lighten the classroom climate, and build rapport. Using humor to laugh at your own mistakes also models this important behavior for students. It is crucial, however, to distinguish humor from sarcasm. Sarcasm is often enjoyed by all the students except the one it is aimed at. It humiliates and has a negative impact on classroom climate. It also models for students a trait they learn very easily-- how to "put down" others.

Try to think of a humorous responses to the following situations. Some could easily lend themselves to a sarcastic remark so be careful--

* Bernice is stumbling over her answer to a question due to her shyness and she is in danger of ridicule by other students.

* Two students are in the back of the room playing tic-tac-toe.

* Jim, a student with CP, just noisily knocked all his books off his desk.

A last note about humor-- It can also be used to deal with direct student confrontation. Since it is such an unexpected teacher response, it may allow the student to "back down" while saving face. The trick, of course, is having the presence of mind to use a humorous response instead of an angry one!

Knowledge of Individual Student Behavior Patterns--

After getting to know the students in the class as individuals, a teacher may begin to identify certain students as easily frustrated, active and impulsive, and/or prone to misbehavior. The perceptive teacher is able to anticipate events or times of the day that may excite or "set off" certain students, and may make specific plans that will help control those occurrences. Consider this example:

> Charles is in 5th grade and has been labeled as having an Attention Deficit Disorder. His teacher has noticed that when coming in from the playground after lunch it is very difficult to get Charles to go to his seat. He wanders around the room, talks to or annoys other students, and cannot seem to get organized for work. The teacher decided to have her students' line up outside the classroom door. There she would tell them that they were to enter the classroom and take a one-page "brain teaser" from the monitor, go quietly to their desks, and attempt to solve the puzzle. Charles was the monitor who handed out the assignment. When that was completed, the teacher would often ask him to perform simple chores for her. After a few minutes, Charles was usually ready to go to his seat and continue with the afternoon's work.

Some children who are more vulnerable to frustration or behavior problems have characteristic ways of acting before they "blow up." Students may tap a pencil or seem restless or agitated. Others may hold their bodies in characteristic ways, bite their fingers, or hit their heads with their hands. These behaviors should serve as signals to assist the student or to re-direct him/her to another type of activity. Kelly is an example of such a student.

Kelly is 13 and classified as moderately mentally handicapped. Visual-motor tasks are often quite difficult for her, especially when she is tired. When Kelly becomes frustrated with a task she will begin to pull on her hair and mumble, growing more and more agitated. When this behavior has been allowed to escalate, she has become aggressive-- throwing materials and striking out at others. Now that her teacher knows Kelly, however, he monitors her for signs of frustration (especially in the afternoon). If he notices Kelly pulling her hair and becoming agitated, he suggests she take a break and has her complete a less demanding activity. This anticipation and re-direction of Kelly's behavior has resulted in the complete elimination of her aggressive behavior.
POSITIVE INTERACTIONS WITH STUDENTS

The third key to preventing discipline problems in the classroom is through positive. encouraging interactions with students. There are many benefits of positive interactions with students-- they promote the development of a warm and safe classroom climate; they model desirable behavior for students; research has linked positive teacher behaviors with fewer student behavior problems-- and all this makes the act of teaching more enjoyable.

Creating a positive, encouraging classroom environment. however, does not mean that all behaviors are acceptable or that students are allowed to indulge their every wish. Positive and encouraging interactions are in no way incompatible with a businesslike classroom with high expectations for student behavior and academic achievement. The keys to establishing a supportive classroom climate include: high levels of student SUCCESS and INVOLVEMENT in classroom activities, the use of ENCOURAGEMENT instead of praise. and NO CRITICISM or demeaning of students when they misbehave or make academic errors.

Student Involvement and Success--

Academic and behavioral success in the classroom and active involvement in learning have tremendous effects on student self-esteem. Simply helping students avoid failure is not enough to enable them to feel good about themselves-- they must also gain a feeling of accomplishment. Attending to the teacher behaviors discussed above-- management of classroom elements and anticipation and re-direction of student behavior-- will go a long way in promoting student success and involvement.

The Use of Encouragement Instead of Praise--

Most teachers feel that students need praise in order to shape their behavior and build their confidence. Observing what happens when Mr. G praises Ron. however, may provide some interesting insights:

> Ron, a 7th grader who seldom finishes any work. was actually writing the answers to the social studies questions in his notebook. Mr. G is so surprised by this unusual behavior that he wants to acknowledge Ron. "Ron. your answers to the social studies questions are really great." Ron looks at the teacher and sneers, "How do you know, did you read them?" Ron puts away his work and spends the rest of the period with his head down. Sam, who sits near Ron follows Mr. G to the front of the room and asks, "How about my answers, Mr. G? Are they great too?"

Several things happened in this classroom that are common results of praise. One student, Ron, may have felt it was manipulative and insincere. This student was not used to praise and handled it poorly.

Another student. Sam. may have felt slighted because he did not get
praise and stopped working to seek teacher attention. He is not secure
enough to judge the quality of his own work and is dependent on teacher
opinion.

Praise sets the teacher as the standard by which everything is judged.
It emphasizes the finished product as opposed to the process used.
Praise can be discouraging for those not receiving it. Failure to earn
praise is often interpreted as a criticism. Some students are ridiculed
by others when their behavior or work is singled out for attention.
When students set exceedingly high standards for themselves and fail to
meet those standards, even sincere praise can sound like scorn or may
convince the student that the teacher does not have very good judgment.

An alternative to praise is ENCOURAGEMENT. Encouragement focuses on the
effort the child has put into the work-- it emphasizes the problem-
solving process over the product. Encouragement may factually describe
the students' work or behavior. allowing the students to make their own
judgment of the quality. Encouragement recognizes the act, not the
actor. Read the following statements and indicate whether they are
praise (P) or encouragement (E):

1. ___ What a good girl to clean up your room.

2. ___ I'm so glad that you enjoy learning.

3. ___ Your story is exciting and uses very colorful language.

4. ___ I'm proud of you for learning your multiplication tables.

5. ___ I'm very pleased at your behavior on the field trip.

6. ___ You figured that out all by yourself. Aren't you pleased?

(Answers: 1-P: 2-E: 3-E: 4-P: 5-P: 6-E)

Breaking the praise-giving habit and weaning students off teacher praise
are difficult tasks. With effort. however. you can begin using more
encouraging statements with your students-- you may find them requiring
less of your attention and approval of their work.

Avoiding Criticism & Demeaning Language--

Eventually, every teacher experiences students who fail to meet the
class's academic or behavioral standards. Criticizing or demeaning
students for these failures, however, is the surest way to undermine a
positive classroom climate. Behavioral problems that do arise should be
dealt with in a swift and logical manner, making it clear that the
behavior is inappropriate. The student, however, should not feel
personally diminished or belittled by the teacher's actions. Demeaning
teacher behavior invariably leads to lack of student trust and a

reduction of academic risk-taking. Students who are unwilling to take academic risks learn very little.

SUMMARY

The focus of this paper has been on the prevention of behavior problems through classroom management. There are many theorists who have written on effective ways of dealing with students who present serious behavior challenges to educators. The intent here, however, was to emphasize what teachers can do to keep many behavior problems from occurring in the first place. The key elements discussed are presented in outline form.

I. Organization of classroom elements

    A. Physical arrangement of the classroom

    B. Consistent scheduling of classroom events

    C. Procedures to handle classroom routines

    D. Rules for classroom behavior

II. Anticipation and re-direction of student behavior

    A. Lesson planning and delivery

    B. Specific teacher behaviors

        1. Movement and proximity

        2. Interference and signaling

        3. Use of humor

    C. Knowledge of individual student behavior patterns

III. Positive interactions with students

    A. Creating involvement and success

    B. The use of encouragement instead of praise

    C. Avoiding criticism and demeaning language

  Theoretical Orientations and Perceived Acceptability of Intervention Strategies Applied to Acting-Out Behavior.
  Hall, Cathy W.; Wahrman, Elizabeth
  Journal of School Psychology, v26 n2 p195-98 Sum 1988
  Available from: UMI
  Language: English
  Document Type: JOURNAL ARTICLE (080); RESEARCH REPORT (143)
  Journal Announcement: CIJFEB89
  Evaluated teachers' acceptability ratings of three types of interventions applied to an acting-out behavior problem, and the relationships among these acceptability scores and self-reported use of those interventions. Teachers rated humanistic and behavioral approaches most acceptable and the pragmatic approach least acceptable. Ratings of behavioral intervention correlated significantly with use of behavioral interventions in the classroom. (Author/KS)

  Journal Announcement: RIEMAR89
  The study attempted to decrease the talking-out behavior and
increase the pre-writing skills of a 7-year-old educable
mentally retarded boy in special school for children with
orthopedic handicaps. Differential reinforcement of other
(DRO) behaviors was used during 30 minutes a day four times a
week. Appropriate behaviors of the subjects and other students
in the class were reinforced with praise. All inappropriate
behaviors were ignored. A program of decreasing assistance
moving from physical guidance to verbal prompts to no cues was
used to increase the pre-writing behavior. Each successful
attempt at any phase of the cuing was praised. The
intervention resulted in decreasing talking-out behavior from
84% to 7% and increasing pre-writing behaviors from 8% to
100%. (DB)

  Journal Announcement: RIESEP88
  Target Audience: Teachers; Practitioners
  This pamphlet presents a series of tips for teachers to use
in establishing classroom discipline. The first 11 tips
provide guidance for the teacher in the use of language to
maintain discipline: (1) be specific and clear; (2) be simple,
brief, and to the point; (3) state directions positively; (4)
use hard-line phrases selectively; (5) offer alternatives for
unacceptable behavior; (6) replace threats with clear
expectations and consequences; (7) eliminate questions you
really don't mean to ask; (8) avoid labeling; (9) avoid
ambivalent words; (10) replace authoritarian words; and (11)
offer choices. Additional suggestions concerning limit setting
and timing are also offered which include establishing
routines, pointing out the sequence of activities, allowing
time for transition from one activity to another, recognizing
that it can be hard for children to stop an activity, and
preparing children for new situations. (VW)

  Language: English
  Document Type: CONFERENCE PAPER (150); RESEARCH REPORT (143)
  Geographic Source: U.S.; Georgia
  Journal Announcement: RIEAUG88
  Two primary objectives were served in this study.
Perceptions were identified for preservice teachers relative
to: (1) the kinds of discipline problems with which public
schools are confronted; and (2) the frequency utilization of a
variety of methods of managing student behavior. A secondary
objective was to identify significant differences in
perceptions categorized on the basis of academic major,
cumulative grade point average, sex, and stage in preservice
preparation. The first of two questionnaires elicited
information on academic preparation, career plans, personal
data, and interest in teaching as well as perceptions of
discipline problems and methods for managing student behavior.
Respondents were also asked to rate 24 discipline problems in
terms of frequency of occurrence, and the most effective
methods of managing behavior. Among the most frequently
observed breaches of decorum in the classroom were excessive
talking, inattention, and failure to complete assignments.
Most frequent methods of classroom control were verbal
emphasis upon behavior limits, and positive reinforcement of
good behavior. Statistical data obtained from the
questionnaires are presented in tables. (JD)

  A description is given of the Classroom Management Decision
Point Series, a training tool that provides an opportunity for
teachers to practice making decisions concerning incidents in
elementary and secondary classrooms. This tool may be used in
workshop groups or placed in a media center for students to
complete the decision making response forms on an individual
basis. Open-ended vignettes are presented in a simulation
format ending at a decision point requiring the viewer to
determine a course of action that would maintain an effective
learning environment. Included in the description is an
overview of the vignette topics as well as guide for the
facilitator of a workshop. A decision making model is
outlined, providing a step-by-step guide that may be used to
determine an appropriate strategy for dealing with a
disruptive classroom situation. A synthesis of some of the
more important ideas and research relative to classroom
management is included. (JD)

  Document Type: RESEARCH REPORT (143); CONFERENCE PAPER (150)
  Geographic Source: U.S.; North Carolina
  Journal Announcement: RIEMAY88
  Two   research   projects   were   conducted   to   assess   the
relationship   between   teachers'   views   on   the   acceptability   of
intervention strategies for dealing with behavior problems and
their   classroom   use   of   such   interventions. One   study   with
student   teachers   (N=72)   investigated   acting-out   and   passive
behavior   problems   and   the   acceptability   of   behavioral,
humanistic,   and   pragmatic   interventions.   The   second   study
conducted   with regular education teachers (N=72) included the
acting out behavior problem and the acceptability of the three
interventions. The ratings of the interventions indicated that
both   student   teachers   and   regular   education   teachers   viewed
the   humanistic   and   behavioral   approaches   as   being   the   most
acceptable   and   the   pragmatic   approach   as   being   the   least
acceptable.   In   terms   of   classroom   use,   there   were   significant
positive correlations among acceptability ratings of the three
intervention   types   and   student   teacher   self-reported   use   of
these   three   types   of   intervention.   With   regular   education
teachers,   there   was   a   significant   positive   correlation   between
the   ratings   of   the   behavioral   intervention   and   self-reported
use   of   behavioral   interventions   within   the   classroom.   Neither
the   pragmatic   nor   the   humanistic   ratings   correlated   with
self-reported   classoom   use   for   the   regular   education   teachers.

  Assertive   Discipline   is   an   outgrowth   of   Canter   and
Associates' professional efforts in both working directly with
children   with   behavior   problems   and   consulting   with   teachers
on   how   to   deal   effectively   with   such   children. Assertive
Discipline   is   an   in-depth   approach   to   classroom   and   school
discipline.   Lee   and   Marlene   Canter   first   published   "Assertive
Discipline: A   Take   Charge   Approach   for   Today's   Educator"   in
1976. Over   the   past   decade,   Canter   and   Associates   have   trained
over   500,000   teachers   in   this   competency-based   approach   to
classroom   management.   Despite   Assertive   Discipline's
popularity   with   teachers   and   its   acceptance   by   school
districts   across   the   nation,   there   are   educators   who   express
concerns   and   doubts   about   the   approach   and   its   effectiveness.
Some   of   those   educators   have   asked   the   following   questions:
"Does   Assertive   Discipline   have   a   sound   research   base?"   and
"Has   Assertive   Discipline   been   researched   as   to   its
effectiveness?"   This   article   is   intended   to   answer   those
questions. (Author/JD)

  Improving Elementary School Students' Bus Behavior through a
Driver and Student Training Program.
  Richardson, Donald M.
  1986
  139p.; Ed.D. Practicum Report, Nova University.
  EDRS Price - MF01/PC06 Plus Postage.
  Language: English
  Document Type: RESEARCH REPORT (143); PRACTICUM PAPER (043)
  Geographic Source: U.S.; Florida
  Journal Announcement: RIEJAN88
  Target Audience: Administrators; Researchers; Practitioners
  This practicum report analyzes a driver and student training
program developed at an elementary school to improve students'
bus   conduct.   Seventy   percent   of   students   require
transportation   by   school   bus. Except   for   chronic   bus
misconduct,   discipline   has   not   been   a   school   concern. It   was
hypothesized   that   the   lack   of   a   comprehensive   program
addressing   conduct   improvement   primarily   accounted   for   the
problem. This   was   supported   by   studies   showing   improvement
with classroom student training. The practicum's goals were as
follows: (1)   to   reduce   the   number   of   bus   misconduct   referrals
from the previous year; (2) to increase bus driver utilization
of   effective   strategies   in   behavior   management   and   bus   patrol;
and   (3)   to   develop   student   awareness   (in   grades   4-6)   of   the
link   between   bus   conduct   and   safety. The   school   implemented
training   programs   for   drivers   and   for   students   during
classroom   sessions   with   teachers. Results,   which   were
evaluated   by   referral   records   and   surveys   of   drivers   and
students,   include   the   following: (1)   bus   referrals   decreased,
depending   on   infraction,   by   50   percent   to   61   percent--a
substantial   improvement   in   student   behavior;   (2)   the   majority
of   drivers   surveyed   correctly   identified   the   effective

Target Audience: Teachers; Practitioners
Teachers need to realize that they are the true professionals holding the real power for taking discipline actions in the classroom. This book offers a comprehensive resource guide of strategies, procedures, and possible actions. After an introductory chapter (1), section I deals with teacher beliefs on discipline in these chapters: (2) "Beyond Theory to Classroom Practice"; (3) "The Supportive Model: Gordon's Teacher Effectiveness Training"; (4) "The Communication Model: Berne and Harris's Transactional Analysis"; (5) "The Valuing Model: Raths and Simon's Values Clarification"; (6) "The Social Discipline Model of Rudolf Dreikurs"; (7) "The Reality Model of William Glasser"; (8) "The Behavior Modification Model"; (9) "The Assertiveness Model of Lee and Marlene Canter"; (1) "The Behaviorism/Punishment Model of Engelmann and Dobson"; and (11) "Strengths and Limitations of Today's Teacher Student Interaction Models." Section II looks beyond models to professional decisions in these chapters: (12) "Decision Making Based on an Eclectic Approach"; (13) "Decision Making Based on the Degree of Seriousness of Student Behavior"; (14) "Decision Making Based on Student Social Development"; and (15) "Decision Making Based on a Professional Team Approach." Section III, on discipline and classroom management, includes

these chapters: (16) "Classroom Management: A Preventive Process"; and (17) "Conclusion: A Better Tomorrow." An appendix and index are included. (WTH)

This booklet discusses four of the more common classroom behavior disorders with which teachers must deal: hyperactivity, childhood depression, extreme shyness, and aggressive behavior. In the section on hyperactivity, three characteristics--excessive motor activity, inattentiveness, and impulsiveness--are listed as constituting the hyperactivity syndrome. The term Attention Deficit Disorder is explained. A case study of a hyperactive child is presented. assessment of hyperactivity is discussed, causes of hyperactivity are considered, treatment is reviewed, and the prognosis for hyperactive children is described. The section on childhood depression presents a case study of a depressed child and addresses the issues of assessment, causes of childhood depression, and intervention strategies. Case studies, assessment techniques, causes, and intervention strategies are also described for the disorders of extreme shyness and aggressive behavior. References are included. (Author/NB)

Journal Announcement: RIEJAN87
Target Audience: Practitioners
Disruptive behavior, which can range from tardiness to
violence against classmates or staff members, is a growing
problem in adult basic education (ABE). Many feel that this is
because ABE programs have begun serving young adults below the
age of 18 who are quite different from their more mature
classmates both psychologically and emotionally. Five basic
techniques that ABE instructors can use to minimize classroom
disruption in a positive manner are (1) communicating that the
teacher is aware of everything occurring within the room; (2)
demonstrating smoothness, both within a lesson and in
transitions between lessons; (3) altering groups frequently
and holding groups accountable for their own learning; (4)
arousing challenges; and (5) providing seat work variety and
challenge. The instructionally effective program is not only
academically successful, but safe as well, and the key to an
instructionally effective school is a committed, active
leader. ABE programs can change in a way that limits
disruptive student behavior. The commitment to change must be
headed by a strong academic and disciplinary leader, and staff
cooperation is vital. Even if age segregation of students is
not deemed necessary, educators must still be sensitive to the
different stages of adulthood and must learn how to address
the distinctive concerns of each age group of adult students
served by a particular program. (MN)

DESCRIPTION (141)
Geographic Source: U.S.; New York
Journal Announcement: RIENOV86
This book was written with the aim of helping teachers deal
with those behavior problems which are commonly encountered in
the classroom and around the school. Part 1 discusses the
background to behavior problems, psychological approaches to
problem behavior, and factors affecting behavior. The
assessment of behavior problems is the topic of Part 2.
Suggestions are made on describing behavior, observing and
measuring behavior, and choosing ways to modify behavior. In
part 3, intervention strategies are described. The final part
considers practical ways in which positive behavior management
may be put into effect. A step-by-step guide is provided in
the form of an assessment chart or intervention chart to
enable a teacher to design a behavior management program. Each
chapter contains all the practical information necessary for
the completion of a cell in either the assessment chart or the
intervention chart. The appropriate chart is given at the
beginning of each chapter and the cell with which it is
concerned is indicated. (JD)

A "troubleshooting" model was designed to aid individual
teachers in solving behavioral problems in the classroom. The
model focused on student behavior for problem identification;
on teacher behavior for causal analysis; and on teacher
behavior for solution proposals. To examine how readily the
model can be understood, applied, and integrated into
teachers' existing ways of identifying and solving classroom
problems, two questions were addressed: (1) How readily do
teachers learn the components of a troubleshooting model via a
guided design approach? and (2) Is the language used by the
model consistent with the language used by teachers?
Forty-five teachers, first individually and then in groups,
identified problems they perceived in a transcript of a high
school mathematics class. While the group exercise was seen as
an effective tool for having teachers explore the

46

Target Audience: Practitioners; Parents

Discipline is essential to quality education. A blueprint for classroom discipline is presented that is designed to restore discipline in the classroom. The plan calls for the participation and cooperation of parents, teachers, administrators, the school board, and the students. The plan is based on principles such as: (1) school administrators must take appropriate disciplinary action, including suspension or expulsion of disruptive students, so that other students will not be deprived of a quality education; and (2) parents are primarily responsible for instilling discipline in their children and should cooperate with school administrators and teachers in maintaining firm discipline. A question and answer format is used to explain the background for increased problems in school discipline and the actions that should be taken to improve the school environment. Suggested disciplinary actions differ for the elementary and high school levels. Over half of the publication consists of attachments, including articles from two magazines and one newspaper about discipline problems; a model for state legislation on school discipline policy; and a handbook, "Student Rights & Responsibilities with Staff Implementation Guidelines," from Montgomery County Public Schools, Rockville, Maryland. Utilizing a behavioral approach to classroom management, this book provides effective methods for preventing and remediating student misbehaviors. These tested and proven management strategies are highlighted with actual case studies of behavior problems involving average and exceptional students from elementary and secondary settings. Teacher, administrator, and parent behaviors; management of various school environmental factors; problems associated with over-reliance on punishment; and related legal, ethical, and humanitarian considerations are detailed. Sections are included on becoming an effective classroom manager, preventing behavior problems, and applying behavior management strategies to manage classroom behavior. (JD)

Journal Announcement: RIEJUN83
Results of an ethnographic study indicate that one elementary school teacher's management plan reflects interaction between teaching goals, strategies which are hierarchically arranged, and the selection criteria she considers relevant. Selection criteria include teacher beliefs about the student's personality, the student's level of required supervision, the relative intentiality and disruptiveness of the student's behavior, if the student's behavior is isolated or repeated, and if the student's behavior is improving. Once all the possibilities for action are considered, a repertoire of management strategies is produced reflecting the teacher's goals and beliefs. A technique for testing the data indicates an accuracy rate of 92 percent for predicting the teacher's selections of management strategies during another school year. Results suggest that, if a teacher has a plan in mind, it is possible to select management strategies during interactive teaching with student outcomes in mind. (Author/JD)

This manual is designed to train teachers to prevent and cope with disruptive student behavior. The focus is on dealing with mainstreamed students with special emotional needs. The manual's six modules can be used by instructors with a general competence in special education. The first module explores behavior values, standards and limits. Module 2 introduces three educational approaches to problem behavior: understanding the organic causes of learning problems, realizing the influences of feeling and attitudes on learning problems, and behavior modification. The third module focuses on specific strategies which may be used to reinforce established behavior standards and limits. Module 4 introduces methods for teaching children how to cope with frustration and conflict. In the fifth module, methods for early intervention in disruptive student behavior are presented. The sixth module offers guidelines for teachers in crisis intervention, focusing on specific incidents as starting points for helping students to see and resolve personal problems. Interviewing and counseling techniques are demonstrated. Each module contains an overview of the module topic; objectives to be mastered; an instructional unit guide to be used by the instructor as a lesson plan; and lists of instructional materials, tasks which must be completed to show mastery of the module objectives, and supplemental readings. In this paper, William Wilbanks discusses Herbert Foster's
"Ribbin', Jivin', and Playin' the Dozens," a book on the
relationship between inner city youth and their teachers. The
book's title derives from three types of games often played in
the classroom: ribbing, a verbal game of taunting other
students or the teacher; jiving, which involves manipulative
techniques to protect oneself from trouble; and playing the
dozens, in which contestants insult one another until one
gives up or resorts to violence. According to Wilbanks,
Foster's thesis is that in inner-city schools there is a
culture gap between largely black, lower class youth and their
largely white, middle-class teachers. Students, behaving
according to the rules of their streetcorner subculture,
constantly play games to test teachers who misinterpret the
games as forms of disruptive behavior. Hence, Foster
maintains, educational failure is largely due to teachers'
inability to understand the students' subculture. Wilbanks
criticizes Foster as being rather too critical of the teacher,
and as having neglected the students' role in understanding
the teachers' perspectives. Moreover, Wilbanks notes that
several of Foster's statements are insufficiently explained.
Nevertheless, Wilbanks finds Foster's points valuable in
understanding not only inner-city students but also criminals
and prisoners who play similar games. (Author/MJL)

Target Audience: Practitioners
This handbook is designed to assist vocational teachers in
maintaining effective classroom and laboratory control.
Following an introduction to the topic, the importance of
effective control and teacher attitude are overviewed. The
third section offers definitions of discipline and "in loco
parentis", a perspective on discipline, and reasons for
disruptive behavior. Section 4 first discusses 31 strategies
for managing the classroom and laboratory. Facility
organization, beginning the year, and problem awareness are
briefly addressed. Discussion follows of corrective techniques
for use in dealing with misbehavior, including leave it alone,
end the action, attend more fully, spell out directions, track
the student's progress, withhold reinforcement, use suspense,
use individual conferences, and use volume. Corporal
punishment is addressed, and techniques to avoid are
described. A table of 20 common discipline situations with
three possible solutions each is provided. The final section
of the handbook summarizes seven theories of classroom
discipline. Each one is described and key ideas and
suggestions for implementation are presented. The theories are
managing the group; classroom awareness, student
accountability, and group management; shaping desired
behavior; addressing the situation with sane messages; good
behavior comes from good choices; confronting mistaken goals;
and assertively taking charge. References are appended. (YLB)

DIALOG

Guidance techniques for use with children are discussed in this set of training materials, part of an overall curriculum for Child Development Associate trainees. Topics presented include the following: (1) principles of human behavior according to such theories as psychoanalysis, humanistic psychology, and social learning theory; (2) common behavior problems in children, with a focus on types and severity of problems; (3) guidance in the child's early years, formulated around the principles of affection, respect, help, and approval; (4) direct and indirect guidance techniques; (5) the importance of self-understanding on the part of teachers; and (6) reasons for failure of guidance techniques when environmental and/or personal factors are mismanaged. The objectives of this curriculum guide are to enable trainees to distinguish between accidents and misbehavior among preschoolers, to select guidance techniques appropriate for the individual child, to identify problems requiring professional help, and to use a variety of positive guidance and discipline techniques. Intended for those who want to reduce disruptive behavior in elementary and secondary schools, this book argues that children must be held responsible for their actions and prefers self-discipline to imposed discipline that evaporates when authority is absent. Schools need to take greater initiative in teaching students responsibility and giving them opportunities to exercise it. Parents, teachers, principals, students, school board members, and others concerned all have a role in teaching as well as modelling responsible behavior. To guide these groups in their endeavors to improve student discipline, the book provides a discussion of the causes, expectations, a choices involved in discipline problems; reviews case st. es of nontraditional approaches that have succeeded, at least in part, in secondary and elementary

schools; and offers strategies for change and data collection techniques for local districts to use. A chronicle of the experiences of Richland School District #1, Columbia (South Carolina), in assessing the state of discipline in its schools serves as an example for a discipline improvement program and includes recommendations and instruments used for observation and analysis. The Discipline Policies Needs Assessment Instrument, The Discipline Context Inventory, and an annotated resource list offer further alternatives to readers. (WD)

This monograph focuses on various approaches toward disciplining antisocial behavior. The author gives e 'dence to the failure of the widely used stimulus-respo   approach (i.e., punishing people when they are bad and rewa   n when they are good), and suggests how a new approach more successful in solving problems of crime and This new disciplinary approach is based on behav. perception psychology. The basic premise of this psyc that people are internally motivated; that is, t reorganize and redirect their behavior according   rra and individual perceptions of reality. These percep   and, consequently, behaviors based on the perceptions, are constantly changing as people try to make them coincide with the image of the world they carry in their minds. Several examples are presented of case studies in which discipline based on behavior control perception psychology was used to solve altercations in the classroom. In one case, a teacher chatted with an unruly student outside of class regarding his disrespectful classroom behavior. She did not confront him in the class because she felt that his antisocial behavior was really intended as a means of gaining stature among his peers and would very likely increase if she publicly humiliated him. The conclusion is that discipline based on behavior control perception psychology can help individuals stop dissipating energy and retain more of the strength they need to

Language: English
Document Type: REVIEW LITERATURE (070)
Geographic Source: U.S.; New York
Journal Announcement: RIEOCT81
Target Audience: Practitioners
This paper reports on approaches shown to be successful in preventing and dealing with disruptive behavior in the classroom. The studies on preventing classroom disruptions state that the best prevention is effective instruction, achieved through lending increased importance to teacher preparation programs that emphasize teaching content, curriculum development, and evaluation of instruction. The models concerned with managing classrom disciplinary problems are more numerous, and can be grouped into five categories: (1) teacher-centered; (2) analytic; (3) behavioristic; (4) student-centered; and (5) student-teacher interaction. Each method is described, and its variations are delineated. It is suggested that teachers and prospective teachers must conduct a self-analysis to determine the approach best suited to their personality. A teacher preparation program that provides future teachers with a variety of techniques for dealing with classroom behavior problems has the greatest potential for producing teachers who can successfully manage the classroom environment and help those students with behavior problems. Teachers can improve classroom discipline in a number of ways. An objective grading system that is based on academic performance alone will assure students that they are being fairly graded, whether or not they are liked by the teacher. Discipline and self respect are related and hinge upon the perception in students that they are learning something. This is accomplished by (1) providing students with a clear idea of what is expected of them; (2) using a variety of approaches; (3) actively engaging students in learning activities; (4) monitoring students' progress with tests; and (5) providing review. Smooth classroom routines will reduce friction between the teacher and students. Student classroom monitors may handle a variety of tasks. Disorderly conduct should be referred to the principal. A consistent system of handling minor disruptions that allows for some leeway is effective in reducing their frequency of occurrence. A teacher should exhibit a friendly, respectful attitude towards all students, resulting in the prevention of many potential disciplinary problems. (JEH)

This report summarizes the findings of a survey designed to
identify strategies that have been found to be successful for
dealing with school disciplinary problems. Data were collected
through questionnaires responded to by more than 2,000 school
administrators, with supplementary data provided by interviews
with 100 administrators and information from state education
departments and public agencies. The report begins with an
overview of survey results, including brief case studies of
two urban school districts that have developed successful
programs for improving student conduct. The second chapter is
an alphabetized listing of practices used in various school
systems for managing student behavior. The following chapters
discuss specific issues, and ideas for resolving them. The
topics addressed are: (1) school board policies, (2) student
conduct codes, (3) student handbooks, (4) students, (5) parent
involvement, (6) classroom teachers, (7) inservice education,
(8) curriculum improvement, (9) vandalism and violence, (10)
smoking, (11) in-school suspension, (12) corporal punishment,
and (13) suspension and expulsion. (MK)

Target Audience: Practitioners
According to non-Indian educators, American Indian children
in public schools often pose discipline problems that cannot
be handled with traditional non-Indian methods such as
spanking, scolding, yelling, or isolation. The elements of
Indian discipline (shaming, ridicule, threats of punishment by
supernatural figures, storytelling, community pressure) are
usually absent in the non-Indian classroom. Other cultural
differences that may cause educational problems are the Indian
emphasis on the group, concepts of time and personal freedom,
and attitudes towards family and age. Because Indian and
non-Indian frames of reference, life experiences, and value
systems differ vastly, the Indian child may react to a
non-Indian school setting with seemingly negative behaviors
such as silence, tiredness, high levels of activity,
irritability, and inattentiveness. Educators must realize that
such behaviors indicate that the child's needs are not being
met. Educators must become more knowledgeable and accepting of
Indian cultures; community members must provide the children
with traditional guidance and become actively involved in
education; parents must supply solid values and behavior
guidelines; and children must be responsible for themselves.
Together, educators, families, community and tribal members,
and the children themselves share the responsibility for
lessening negative classroom behavior. (SB)

Elementary teachers' responses to vignettes depicting twelve
types of student problem behavior (instructional concerns:
failure syndrome, perfectionist, underachiever, and low
achiever; aggression problems: hostile aggressive, passive
aggressive, and defiant; activity issues: short attention
span, hyperactive, and immature; and peer relation
difficulties: shy/withdrawn and rejected by peers) were
analyzed for points of agreement across the twelve types of
problem behavior concerning problem-solving strategies that

58

DIALOG File 1: ERIC = 66-89/JUN.

involved rewards, punishments, supportive behaviors, and threatening/pressuring behaviors. Subanalyses were conducted to identify distinctions between teachers who differed by school location, grade level, teacher role perception (primarily instructor vs. primarily socializer), and management expertise (outstanding vs. average). In general, teachers' responses to the vignettes involved more punishment than reward, and supportive behavior more than threatening or pressuring behavior. (Authors)

The report documents a problem solving approach to the adoption of procedures for dealing with serious behavior problems of severely emotionally disturbed and autistic students in California public schools. Summarized are a review of the literature, an analysis of general techniques of student control, and a list of advantages and disadvantages of such behavior control strategies as physical intervention, timeout, and corporal punishment. The end product of the project is explained to be an approved policy list of eight types of behavior control for use by classroom teachers. Specific procedures are described, (including parent involvement), and maximum duration information is listed. (CL)

The problem of children's misbehavior in school is an urgent concern. Although misbehavior is not unique to the school, the whole of society suffers from violence. It is important to recall that those committing crimes today were yesterday's students. There are two modes for discipline in the schools. The "established" mode aims for teacher control of children's behavior. This mode assumes that students cannot be trusted to pursue their own learning. In contrast, the "emergent" mode aims to help children assume responsibility for their behavior and to encourage them to think about the effects of their actions upon others. The underlying philosophy of the emergent mode is that human beings have a natural potential for learning. The emergent mode of discipline builds upon the ideas of Ginott, Glasser, and Gordon which stress the importance of good student-teacher communications for preventing problems, and teaching that irresponsible behavior is not acceptable. Gordon's "Teacher Effectiveness Training" is a good method for opening up student-teacher communication and for helping children accept personal responsibility for their actions. It is important for the schools to implement the emergent mode which requires children to take responsibility for their behavior so that they may become responsible citizens in a democratic society. This informally written handbook for elementary school teachers describes typical classroom behavioral problems and proposes ways of dealing with them. The "problem" student is identified as one who requires the teacher's personal energy or reactions, drawing attention away from the remainder of the class and creating added burdens for the teacher. Nineteen specific categories of problem students are described, including the bully, the quiet one, the superior snob, and the
(cont. next page)

DIALOG File 1: ERIC - 66-89/JUN.

sneak. For each category, possible solutions to the behavior problem are described. Penalties that students may be subjected to in case the solutions prove inadequate are also suggested. In addition to this, general suggestions pertaining to ways of building a classroom behavioral foundation are discussed. These include daily, informal conversation sessions which allow for free discourse between teacher and students, parental involvement, and careful attention to the physical arrangement of the classroom. (CM)

  The booklet examines issues and strategies in serving
learning disabled (LD) secondary students. Chapter 1, on
program development, reviews such program options as varieties
of the resource room model and self-contained class and
examines three major factors involved in decisions about
program emphases: (1) administrative practices, (2) teacher
orientation, and (3) student characteristics. The second
chapter considers three aspects of instructional planning:
assessment   of   individual   instructional   needs, student
motivation, and classroom organization and student behavior
management. Research is reviewed in chapter 3 on elements that

affect student learning and implications are drawn for LD
teachers in terms of interaction with students, structure of
lessons, and learning time. Chapter 4 briefly discribes
indirect services. such as consultation and communication with
other teachers. Chapter 5 concludes the booklet by offering 10
recommendations   for   LD   teachers   including   conducting
systematic assessments, stressing motivation, and planning
instruction carefully. A reference list is provided. (CL)

The paper presents strategies to help regular class teachers help their mainstreamed students read and learn better. The seven teaching ideas are offered for use in "whole class" settings and are designed to benefit both mainstreamed and regular students. Further, the strategies can be used by subject matter instructors who cannot become extensively involved in remedial or individualized instruction. The following ideas are discussed and examples offered: (1) once a week oral reading, (2) pyramiding (helping students classify and subordinate related concepts or terms), (3) exploring texts with students, (4) contextual redefinition, (5) words on the wall (to reinforce key vocabulary), (6) guided reading procedures, and (7) special adaptations for study guides.   Precis are presented of the meetings, workshops, and seminars at the 1984 Conference on Elementary and Middle School Physical Education. Papers were presented on the following subjects: suggestions for adapting physical education for handicapped children; ideas for discipline and classroom management; curriculum design in movement education for children in dance, gymnastics, and games; creation of a perceptual motor laboratory; improvement of cardiorespiratory health; wellness education; and current research in physical education. Included in the discussions were considerations of the implications for physical educators of the various types of medication used to control certain mental or emotional disorders. Descriptions are given of 91 ideas for classroom activities and games. (JD)

  The report summarizes findings of a study of least restrictive environment (LRE) for handicapped students. Reviews are presented of the legal and legislative background of LRE, the conceptual background of research on environments, the concept of environment in special education, and the results and methodological issues in efficacy research. Analyses of cooperative goal structuring and academic learning times as influences in the environment are presented. Three concluding sections review research on homogeneous versus heterogeneous grouping, teacher behavior and attitudes, and the role of peer interactions. Implications for LRE are addressed for each topic. Four general goals for special education research are identified, including comparison of specific environments or types of environments and intervention toward improvement of environments. The report concludes by emphasizing the importance to conceptualize and measure, broadly and flexibly, the nature of classroom environments. (CL)

DIALOG File 1: ERIC - 66-86/DEC

Geographic Source: U.S.; Pennsylvania
Journal Announcement: RIEMAY84
Target Audience: Teachers
This module is designed to assist vocational teachers in meeting the needs of mainstreamed handicapped learners. It may be used by the teacher as a resource and guide, or the information and activities may be adapted for use with vocational education students or preservice teachers. The module consists of three sections. The first section defines mainstreaming and its implications for vocational educators, and it examines the recent history of mainstreaming in vocational education, including legislation pertaining to handicapped persons. The second section explores ways that a vocational educator can modify instructional strategies to provide for the individual needs of students with handicaps. Learning styles as well as physical and affective disabilities are discussed. Section 3 provides methods that vocational educators can use to evaluate the classroom progress of students with handicaps. A glossary of terms commonly used when discussing mainstreaming of handicapped learners is provided. The guide also contains a resource section with lists of agencies and organizations, literature, and audiovisual aids available for help with mainstreaming students. In addition, the module contains an attitude assessment sheet to allow users to evaluate their present feelings about handicapped persons before using the module. (KC)

Document Type: RESEARCH REPORT (143)
Geographic Source: U.S.; Texas
Journal Announcement: RIEFEB84
A study examined the impact of teaching handicapped students in regular vocational education classrooms on class interaction and instructional variables. During the study,

researchers conducted individual interviews with 22 vocational education instructors from 11 randomly selected school districts throughout Texas and later conducted a total of 678 thirty-six minute observation periods of the vocational classes taught by these same 22 teachers. Based on their analysis of the data obtained from the class observations and instructor interviews, the researchers concluded that over 90 percent of the timed classes were organized as a group with handicapped students participating fully within the group. Ninety-six percent of the vocational instructors stated that the general interactions of handicapped and nonhandicapped students in the vocational setting were positive. While 87 percent of the teachers had not seen a copy of their students' individualized education programs (IEP), all of the vocational instructors were individualizing instruction for the handicapped students in their classrooms. Generally speaking, the modifications that were made for the handicapped vocational students were of an instructional nature and did not entail any excess costs. Recommendations were made calling for more hands-on activities and more one-to-one instruction for the handicapped students in regular vocational settings. (MN)

This handbook is designed to aid educators as they serve handicapped students who are enrolled in regular programs. The emphasis of the handbook is on selecting an appropriate vocational program, developing an individualized education program (IEP), and preparing students for meaningful employment through effective teaching. Addressed in the individual sections of the guide are the following topics.

DIALOGFile ERIC - 66-86/DEC

understanding the nature of various types of disabilities:
providing a continuum of services to handicapped students:
developing an IEP: providing vocational evaluation services:
adapting teaching strategies (curriculum adaptation, learning
styles, and instructional techniques), utilizing alternative
types of testing and methods of grading: employing various
troubleshooting techniques to cope with problems in the
classroom: providing support services: and offering job
placement assistance. (MN)

   Geographic Source: U.S.; Pennsylvania
   Journal Announcement: RIEDEC83
   Target Audience: Practitioners
   This handbook is intended to serve as a resource for
cooperative education coordinators who must instill in
handicapped students an awareness and grasp of the job-seeking
and job-maintenance skills that are so vital in today's
competitive job market. Assembled in response to questions
asked by vocational educators in Pennsylvania, the guide is
organized into five sections. Each section contains strategies
that may help handicapped students improve specific problem
areas that may deter their successful job training placement.
The five sections focus on these areas: verbal
characteristics, personal/physical characteristics, self-conce
pt/personality characteristics, work characteristics, and
handicap characteristics. The guide also contains a glossary
and a list of resources. Appendixes to the document contain
forms and samples useful in implementing the strategies. (KC)

   Target Audience: Practitioners
   Guidelines are provided for integrating the trainable
mentally handicapped (TMH) student into the regular classroom
in the province of Alberta, Canada. Normalization and
integration are explained with regard to the unique commitment
undertaken in developing an integrated program for TMH
students. Outlined are goals of the integrated program, such
as access to nonhandicapped peer models. Three types of
integration are noted, ranging from regular class placement to
special class placement in a regular school. Briefly explained
are roles of people involved in an integrated program,
including the special and regular teacher and administrators.
Seven suggestions are given for successful development of an
integrated program; this is followed by a checklist for the
regular classroom teacher's self-preparation, and 10
suggestions for classroom management (e.g., give the student
positive directions rather than telling him what not to do). A
short reference list is provided. (MC)

    Target Audience: Practitioners
    The guide provides strategies for regular teachers to use
with visually impaired (VI) students in the province of
Alberta, Canada. After an introduction, definitions of terms
such as "adventitiously blind" are presented. Next addressed
are effects of visual impairment on cognitive development,
emotional and social aspects, and orientation and mobility.
Considered, then, are such aspects of planning and classroom
management as safety (including fire drills), the buddy
system, course scheduling, ways to obtain and store special
materials and equipment, seating of the VI student,
orientation of regular students, use of the VI student as a
resource, and the VI student's responsibilities. Suggestions
are given for meeting educational needs of the VI preschool,
Braille-using, and partially sighted student in such areas as
visual efficiency, skill development, use of media and aids
(e.g., diagrams), physical education, and fine arts. Suggested
are approaches to assessment and evaluation including
techniques teachers may use to equalize opportunity for VI
students taking tests or examinations. Appendixes include a
list of seven useful terms, a discussion on Braille,
descriptions of special materials and equipment, photographs
showing ways VI students see, and a list containing 48
references organized into areas for six categories of users
including educators and parents. (MC)

    Document Type: NON-CLASSROOM MATERIAL (055)
    Geographic Source: U.S.; Iowa
    Journal Announcement: RIENOV83
    Target Audience: Practitioners
    Two studies on reintegration of behaviorally disordered (BD)
students into general education classroom are presented. Part
I, by S. Huntze, considers five basic assumptions underlying
the concept of reintegration and the following five areas that
need to be considered when matching student and classroom
environment: physical setting, academic programing,
teacher-student interaction, peer attitudes, and personnel
attitudes. In addition, five phases of the reintegration
process are examined. (1) information on student/environment
fit is incorporated into the individual education plan (IEP);
(2) classroom selection is made at the time of the IEP
staffing; (3) the student is kept involved in the general
class environment, (4) the time the student spends in the
general education classroom is gradually increased; and (5)
the student achieves the exit criteria, and reintegration
becomes total. Questions to ask when gathering information
about the teacher-student verbal interaction variable are
included. Part II, by R. Werner, Jr., describes procedures and
concepts helpful to special education personnel in planning
for the re-entry of BD students from a restricted, separate
placement into the regular school program. Attention is
directed to systematic planning by the special education
teacher, preparing the parents, preparing the regular class
teacher, and preparing the student. It is emphasized that the
special educator should prepare written descriptions of the
history and current status of the BD student to aid the
general education teacher. Examples of various formats for
reporting this information are included. (SEW)

   This second edition on strategies for solving discipline
problems provides classroom teachers with a ""rainbow"" of
discipline models and techniques to permit them to move beyond
a singular approach in handling classroom behavior problems.
Section One discusses the Teacher Behavior Continuum, which
encompasses various student behaviors and can be used in
different ways for different youngsters. Section One also
describes several operating models of discipline, in the
following chapters: ""The Supportive Model: Gordon's Teacher
Effectiveness Training,"" ""The Communication Model: Berne and
Harris's Transactional Analysis,"" ""The Valuing Model: Raths
and Simon's Values Clarification,"" ""The Social Discipline
Model of Rudolf Dreikurs,"" ""The Reality Model of William
Glasser,"" ""The Behavior Modification Model,"" ""The
Assertiveness Model of Lee and Marlene Canter,"" ""The
(cont. next page)

78

Behaviorism/Punishment Model of Engelmann and Dobson,"" and ""Strengths and Limitations of Today's Teacher-Student Interac⁻ior. Models.'' Section Two provides four decision-making methods to determine which behaviors, techniques, and skills to use, based on: (1) an eclectic approach, (2) the degree of seriousness of student behavior, (3) student social development, or (4) a professional team approach. Section Three studies classroom management as a preventive process and as the means for a better future through the effective use of discipline. (JDD)

REPORT NO.: ISBN-0-89443-933-2
DOCUMENT TYPE: 010; 052;
The text is intended to explore teacher attitudes to discipline and examines components of classroom and administrative approaches for dealing with common disruptive behavior. The initial chapter provides an overview of the problem of discipline in the schools, noting litigational issues surrounding corporal punishment and approaches used to prevent violence and vandalism. Suggestions regarding prevention of discipline problems in chapter 2 center on such aspects as trust and respect, classclimate, and social reinforcement. A third chapter reviews past methods of isolation, expulsion, suspension, and detention, and proposes alternative practices for each. Chapter 4 offers examples of common behavior problems (such as chronic disobedience, interruptions, and disruption of class) and possible remediation and management ideas for each. The management techniques incorporate aspects of behavioral, humanistic, psychoeducational, medical, and psychodynamic models. In the fifth chapter, 12 programs wich have been successful in providing discipline are described. Programs selected include inservice teacher education programs, Saturday mornign sessions for supervising out-of-school suspension, programs to reduce vandalism, and programs using peer relationships and groupdecisionmaking to model appropriate behavior. Chapter 6 focuses on objectives, activities, and materials for enhancing students'social development. Personal development and self realization are th concern of chapter 7 which includes a section on emotionality and learning disabilities. Procedures for developing behavioral and cognitive self control are explored in chapter 8, while the concluding chapter considers issues and approaches to students' substance abuse. (CL)

The resource guide contains seven units to assist teachers in identifying and remediating problem behaviors of children and adolescents. The guide is presented in a loose leaf binder to accommodate future periodic updates. The first unit addresses the behavioral basis with discussions on the state of the art, importance of assessment, and exemplary approaches. Next, a unit on treatment perspectives by J. Olson covers aspects such as systematic densensitization, token systes, precision teaching, and self management. The third unit, on general skill improvement, gives such advice to teachers as learning how students do their work, using the right materials, and working with parents and volunteers. In the fourth unit, emotional problems such as low frustration tolerance, low self concept, anxiety, and terper tantrums are discussed along with approaches for improvement. Next, ways to improve social problems including disruptiveness, nonattention, achievement anxiety, and socia withdrawal are proposed. In the sixth unit, K. Aigozzine gives guidelines for classroom use of music, play, art, and bibliotherapy. In the last unit, S. Freeman makes suggestions for improving skills of secondary students including setting goals and providing learning activities to improve basic academic study, and affective skills. (MC)

EDRS: NOT AVAILABLE
DOCUMENT TYPE: 141; 051;
The materials described in the manual are based on a series of anecdotes of conflict situations in secondary classrooms. The situations focus on emotional and behavioral problems of adolescents. The trainer's manual is intended to be used with a videotape cassette that depicts fifteen vignettes of classroom events in which student behavior problems are portrayed. A series of teacher's response forms is provided for each episode, offering choices between five clusters of teacher behaviors. The clusters are: authoritative-appealing to outside authority; neutral facilitation; incentive manipulation; interview and supportive intervention; and deliberate ignoring. The vignettes are presented in narrative form along with the worksheets and may be used with or without the accompanying videotape. (JD)

DOCUMENT TYPE: 100; 052;
The kit, consisting of six video training workshops, a workshop leader's manual, activity sheets, and a text with self instructional modules, is designed to help teachers, parents, and paraprofessionals understand the range of variant behaviors occuring in elementary and secondary classrooms. Materials are designed to be used in five 2 hour inservice or preservice workshops. One videocassette features 15 incidents of problem behavior while the remaining five present contrasting interpretations of the problem behavior by 10 experts in special education, sociology, psychology, and medicine. The text presents self instructional modules on six theoretical positions: psychodynamic, behavioral, biophysical, sociological, ecological, and alternative. Each unit includes a pre- and posttest, a brief history of the position, description of terms, and a review of diagnostic and intervention techniques. The workshop leader's manual outlines procedures and activities for five workshops. (CL)

behavior modification are outlined in the first chapter and include specifying a behavioral goal to be reached by the child, presenting a punishment or reward immediately after the behavior is exhibited, and selecting a reinforcer that is meaningful to the child. Brief chapters apply the principles to the following areas: reasons for the lack of effectiveness of corporal punishment, ignoring and praising behavior, improving behavior and motivation, avoiding conflicts, improving school attendance, reducing lying and tattling, helping the child with school phobia, improving cafeteria behavior, helping the shy and nonassertive child, teaching manners and respect for others, helping the hyperactive child, developing an after school guidance activities program, and improving standardized test performance. The final two chapters give note of other effective techniques to change behavior and offer a list of suggested readings. (DB)

negotiations with teachers and principals are outlined, and some behavioral concepts relevant to classroom management are presented. The section ""Problem Solving'' proposes a series of steps to be taken in the school consultation process, covering such topics as specifying and assessing problem student behaviors, implementing behavior measurement, specifying desirable behaviors, identifying positive reinforcers, delineating contingent relationships, and fostering positive interactions. An example of a classroom management program employing a point system is presented, along with examples of agendas, letters, and forms that may be used during consultation. The section ""Consultation Experiences'' presents special difficulties and emotional issues that are often encountered during actual consultations. A glossary and list of selected readings are appended. (Author/DLS)

EDRS: NOT AVAILABLE
DOCUMENT TYPE: 052;
Six strategies for the management of behavior problems in a classroom at the secondary school level are presented. The six are as follows: (1) deliberately designed coping skills curb surface disruptive behavior of students; (2) excellent teaching tends to prevent disruption; (3) teachers should tolerate normal, but sometimes irritating student behaviors typical for the age group being taught; (4) free expression and due process granted students have resulted in better informed teachers and increased use of preventative techniques; (5) punishment is one alternative for modifying deviant behavior; and (6) the teacher cannot be expected to solve all the problems in the classroom singlehandedly. =A 3 The principle of successive approximations, which
summarizes learning as a series of small steps, is described
and applied to changing problem behavior in students. One
example is given for using the principle to remediate calling
out of turn in class. It is reported that the instructor who
teaches according to the principle becomes a keen observer of
student behavior, a good task analyzer, and a skilled learning
manager. The following criticisms of the approach are cited
and discussed: it requires more work from the teacher; it
requires the teacher to change teaching habits; it invo'ves
lowering standards; it sets up inequality in student
treatment; and it presents problems in terms of traditional
grading. (SBH)

An Evaluation of Daily Report Cards with Minimal Teacher and Parent Contacts as an Efficient Method of Classroom Intervention.
Lahey, Benjamin B. and Others
Behavior Modification V1 N3 P381-394 Jul 1977; 1977-JUL 14P.
EDRS: NOT AVAILABLE
*A 3 An experiment using daily report cards to modify behavior during rest periods was conducted with 50 normal kindergarten children from two classrooms. Targeted was the excessive amount of disruption that occurred during rest periods. Measurement, which required minimal changes in the teacher's established procedures, was completed in 20 minutes each day during rest period. Children took home a ""Brag Sheet'' at the end of each day wherein they were rated on 7 positive type behaviors. Results suggested that the use of daily report cards, which required no special training of either parents or teachers, represent a highly efficient method of indirect intervention with behavior problems of children. EDRS: NOT AVAILABLE
*A 3 An eclectic model of classroom management skills incorporating disciplinary, behavioristic, and therapeutic approaches is presented. Necessary areas of teacher competence are identified in reference to decisions about student and teacher roles and classroom environment, intervention strategies when student behavior fails to conform to expectations and the ability to interpret and respond to children's emotional needs. It is recommended that teacher training programs introduce concepts at the cognitive level before providing opportunities for application in classrooms. The authors maintain that assessment of teachers' behavior management skills must encompass the teacher's cognitive knowledge, actual classroom interaction and effects on student behavior. (GW)

Reducing Inappropriate Classroom Behaviour of Retarded Students Through Three Procedures of Differential Reinforcement.
Deitz, S. M. and Others
Journal of Mental Deficiency Research V20 N3 P155-170 Sep 1976;   1976-SEP   16P.
EDRS: NOT AVAILABLE
*A 3 Studied in six experiments was the effectiveness of reducing inappropriate classroom behavior in 22 adolescent EMR Ss through the use of three positive reinforcement procedures: the differential reinforcement of low rates of responding (DRL), theOdifferential reinforcement of other behavior (DRO), and the differential reinforcement of incompatible responding (DRI).   TwoOexperiments were conducted to test the effectiveness of each differential reinforcement procedure. In the experiments involving DRL disruptive behavior was reduced in an individual student and in a class of 14 students. DRO
(cont. next page)

DIALOG File 54: ECER/EXCEP CHILD - 66-89/JUL

was effective in reducing the disruptive behavior in one male student, and reducing talking out in two pairs of students. The DRI procedure proved successful in reducing sleeping in class of one student, and in reducing aggressive talking out behavior in one student. Successful results indicated that these procedures may be effective alternatives to common procedures, such as punishment, used to reduce inappropriate behavior in the classroom. (PT)

    The Elimination of Discipline Problems Through a Combined School-Home Motivational System.
    Ayllon, Teodoro and Others
    Behavior Therapy V6 N5 P616-626 Oct 75; 1975-OCT 11P.
    EDRS: NOT AVAILABLE
    *A 3 Upon discovering limitations in a school based reinforcement program to eliminate discipline problems in a class of 23 third graders, a procedure was designed which linked the child's daily classroom behavior to consequences provided at home by parents. To give the child and parent feedback, a ""Good Behavior'' letter was sent home if the student met criteria for good conduct. Parents then provided differential consequences in the home based on receipt or nonreceipt of the letter. Findings showed that within a day, contingent presentation of the letter decreased disruptive behavior to a mean of 10% (baseline prior to the program was set at 90%); and that when the letter was given irrespective of conduct in school, disruption rose to 50%.     Eliminating Classroom Disturbances of Emotionally Disturbed Children by Positive Practice Procedures.
    Azrin, N. H.; Powers, M. A.
    Behavior Therapy V6 N4 P525-534; 1975-JUL 10P.
    EDRS: NOT AVAILABLE
    *A 3 In a study involving six emotionally disturbed boys (7-11 years old) enrolled in a special education class, the effectiveness of the Positive Practice (PP) procedure to eliminate disruptive behavior was evaluated. During 20 minute class periods, the incidence of disruptive behaviors (speaking aloud or getting out of the seat without authorization) was compared for the four study phases: warnings, reminders and reinforcements; loss of recess; delayed PP; and immediate PP. The PP procedure required the child to practice asking permission to speak out or leave his seat after a disruptive episode. Disruptive actions decreased by 95% when the practice

requirement was delayed and by 98% when it was immediate, as compared to 60% reduction during the loss-of-recess procedure. The principal advantage of the PP procedure over the alternative methods was its reeducative value as well as its greater effectiveness. (Author/SB)

The text examines the instructional part of a model for
mainstreaming mildly handicapped students. The first chpater
provides an overview on mainstreaming in terms of the law, the
problems, and the teacher's role. A chapter on identification
reviews federal definitions of handicapping conditions,
describes five stages in the referral to placement process,
and considers uses of test data. The succeeding five chapters
deal with specific classroom approaches to facilitate
mainstreaming (sample subtopics in parentheses): adapting the
environment (preparing the master schedule, designing the
physical environment); adapting instruction (learning and
conditions affecting l arning styles); modifying lesson plans
(components of lesson plans, ways to present the lesson);
managing the classroom (techniques involving the physical
organization of the classroom, grouping, peers, assignments,
and preventing planning before mainstreaming); and evaluating
students in the mainstream (adaptations on the regular
classroom tests, alternative grading procedures, and
graduation requirements). (CL)

   The text is intended for a resource activities guide for classroom teachers responsible for integration o´ handicapped children. Focusing on attitudes and classroom arrangements for positive interaction, the book presents an experience education approach. An initial chapter describes activities for teacher workshops concentrating on understanding uniqueness and commonality. Simulation activities designed to increase empathy and knowledge are presented in chapter 2, while chapter 3 provides suggestions for activities to understand high incidence handicapping conditions. The focus of chapter 4 is on low incidence handicaps, such as hearing, visual, and physical impairments. Chapter 5 covers aspects of self esteem, acceptance and encouragement, while the activities in chapter 6 are designed to foster abilities in the understanding of helping. Chapter 7 addresses skills in dealing with parents and other family members. Approaches for individualizing and personalizing the environment are explored in the eights chapter, followed by an exploration of learning centers and their benefits for mainstreamed children. A final chapter emphasizes the need for positive reinforcement of others as well as of self nurturance. An epilogue contains 180 activity idieas for teachers to enhance mainstreaming. (CL)

   Twenty-five general profiles of special children with specific types of academic and behavioral characteristics and 188 strategies for teachers are presented to assist the regular education teacher who has exceptional students in the classroom (kindergarten through grade 8). The rationale of this approach is that although each special child has individual needs, working with those students has revealed that many have similar deficiencies to varying degrees, with some overlap. General profiles are presented because of these universal traits. Each profile has a name, a cartoon face, and a general description, as well as a list of characteristic behavior. The names include the following: Stevie Squirmer,
                                                    (cont. next page)

DIALOG File 54: ECER/EXCEP CHILD - 66-86/NOV

Sarah "Silent," and Virginia Visual. A Teacher who observes a particular behavior by a student can locate the behavior on the characteristics list. Next to the behavior are numbers for suggested strategies located in the latter part of the book. These 188 strategies are techniques that have been used and that the regular education teacher can implement without devoting a great deal of time to a particluar student. Only the strategies that are consistent with and complementary to the teacher's style of teaching need to be employed. Thirteen general teacher guidelines are also included. It is suggested that this guide, which may serve as an inservice aid, allows a means for discussing a student by referring to a profile, thus maintaining confidentiality. (SEW)

Research is reviewed on instructional procedures for facilitating integration of preschool handicapped children through adult and peer imitation as well as through intentional intervention to increase appropriate language and social play. The author cites the scarcity of research on overall program outcomes on integrated settings and describes a 3 year evaluation study in Northern California which suggested a trend toward preference of the integrated setting for the handicapped child. Clinical suggestions offered include emphasizing structured practices that bring handicapped and nonhandicapped students together for high rates of appropriate social interaction. (CL)

EORS: NOT AVAILABLE
Document Type: 080; 052;
The authors redirect attention to the instructional needs of the handicapped student in the mainstream setting. Three characteristics of mildly handicapped learners are reviewed--task oriented behavior, attentional problems, and interpersonal relationships. Environmental events or situations which can be varied to meet the needs of particular learners are grouped into three clusters: those relating to instruction as a process, those relating to the overt and covert responses of the learner, and those which occur after responses by the learner. It is concluded that if mainstreaming is to be more than social integration, attention must be shifted to the conditions required for effective instruction. (SB)

 The article summarizes three studies of the effectiveness of the psychological support system and social-affective development for 150 educable mentally retarded (EMR) and 87 learning disabled (LD) children. Ss were assessed on the Barclay Classroom Climate Inventory and placed in mainstreamed or alternate educational settings. Among four conclusions were that mainstreaming of EMR children without a careful assessment of their social support system and ability to relate to others can result in generally adverse social-affective consequences, and that EMR females have a particularly difficult adjustment in mainstreamed settings.  Under a research and development project entitled Reducing Isolation in the Mainstream. classroom teachers who had hearing impaired or vision impaired students in their classes were recruited to join special educators in investigating how to promote integration of handicapped students. Data was gathered on nonacademic factors such as student interaction. classroom climate. and handicaped students' self concept through structured observation. structured interviews. and teacher. report. It was found that interaction patterns could be changed by restructuring the physical classroom environment and by utilizing the cooperative learning approach. (SBH)

  The article establishes the importance of constructive interaction between handicapped and nonhandicapped students as the primary objective of mainstreaming, discusses a theoretical model and supporting validating evidence concerning how handicapped students may be successfully integrated into constructive peer relationships with nonhandicapped peers within the regular classroom, and outlines a set of practical strategies for teachers directly based on the theoretical model and supporting evidence. Listed among the benefits of positive peer relationships are the teaching of social competencies necessary to reduce social isolation and providing the context in which children master aggressive impulses. Findings of six studies that directly compared cooperatively structured learning with competitive and individualized instruction involving mainstreamed handicapped students are cited. Procedures for structuring cooperative learning activities are noted to include arranging the classroom so that group members are close together and facing each other, and so that the teacher as well as members of other groups have clear access to all the groups.   The authors focus on specific strategies, concrete examples, and the application of research findings in integrating exceptional children into the regular classroom. Emphasis is placed on fostering learning strengths rather than dwelling on learning weaknesses. The book translates the diagnostic/prescriptive teaching approach into a workable plan that can be used in all educational settings. Chapters address the following questions: what is the state of the art in special education; what personal and professional qualities are needed in working with mainstreamed students; what adaptations of the teaching/learning process are needed in mainstreamed classrooms; and what resources can be utilized by the regular classroom teacher in planning effective programs for mainstreamed students. In addressing these questions, the authors provide a history of special education, a chart of developmental processes, a learning center guide, an overview of an inservice training program, adaptations of methods and materials, and information necessary for implementing P.L. 94-142 (the Education for All Handicapped Children Act). Appendixes include checklists for teacher referrals, a review of commonly used testing instruments, informational resources, a glossary of behavior modification terms, terms and definitions relating to educational psychology, and a list of sources for perceptual motor development.   The text emphasizes practical aspects of mainstreaming mildly handicapped students. An initial chapter examines implications of labeling exceptional children and reviews the most common handicapping conditions (mild mental retardation, learning and language disabilities, and emotional disturbances). The concepts involved in the principle of least restrictive environment are explored. The effect of P.L. 94-142 (the Education for All Handicapped Children Act) is discussed in terms of a model of systematic instruction. Chapter 4 analyzes procedures for classroom management, including developing individual behavior programs. The succeeding five chapters focus on components of a systematic instructional model: initial assessment, determination of goals and objectives, selection of instructional activities, monitoring of the instructional program, and implementation. Appended is a case study of a 6 year old mildly handicapped student. (CL)
