#### ABSTRACT

Data on public and private secondary schools that offer advanced placement programs -- that is, courses for which college credit is awarded -- are provided in this survey report. information on school characteristics and the nature of the program offerings (information not included in College Entrance Examination Board publications) was collected by means of two surveys. The 1985 Public School Survey cotained responses from 8,568 teachers and 2,301 administrators from an initial sample of 2,801 schools, with an 85 percent school response rate and an 80 percent teacher response rate. The 1985-86 National Survey of Private Schools obtained responses from 5,295 teachers and 1,175 administrators in 1,387 private schoosl, with an 85 percent school response rate and a 76 percent teacher response rate. Data were collected on school characteristics, such as teacher/student ratio, school size, minority enrollment percentage, and percentage of high school graduate college applicants. Other variables included public school district size, census region, and enrollment in various courses of study. A comparison of public and private schools examined the relationships between school characteristics and the percentage of schools offering advanced placement programs, the average number of subject areas covered, and the percentage of schools offering such programs in each of the subject areas. Appendices include extensive supporting statistical tables and the survey questionnaires. (LMI)

#### Highlights

Nearly 38 percent of public schools (in the 1984-85 school year) and 41 percent of private schools (in the 1985-86 school year) with grades 10, 11 and 12 offered advanced placement programs. Examination of a number of school characteristics for these schools showed the following:

- o Large schools (1,000 or more students) were more likely to offer advanced placement programs than small schools (less than 300 students). About 72 percent of public and 88 percent of private schools with 1,000 or more students offered such programs, while only about 18 percent of public and 25 percent of private schools with less than 300 students offered them.
- o Public schools in large school districts (more than 50 schools) were more likely to offer at least one advanced placement program than schools in small districts (1-5 schools). About 30 percent of schools in small districts offered an advanced placement program as compared with nearly 48 percent in large districts.
- o Public schools with differing percentages of minority enrollment were equally likely to offer an advanced placement program. However, private schools with minority enrollment of 15-49 percent were more likely to offer programs than schools with minority enrollment of 50 percent or more.
- o Advanced placement programs were offered in about 26 percent of the public schools in which the estimated percentage of graduates applying to college was less than 50 percent; they were offered in nearly 53 percent of the public schools in which the estimated percentage of graduates applying to college was 75 percent or more.
- o In public schools, advanced placement programs in both mathematics and physical science were more likely to be offered in schools

large rather than small,

with minority enrollment of 15-49 percent rather than 50 percent or more,

with a student/teacher ratio of more than 20:1 rather than less than 16:1,

with college application rates of 75 percent or more rather than less than 50 percent,

in large rather than small school districts.

o In private schools, advanced acement programs in both mathematics and the physical a biological sciences were more likely to be offered in large rather than small schools.

#### Introduction

A major emphasis in elementary and secondary education programs is to provide educational and supportive services to educationally disadvantaged students. The need remains to continue and further develop programs which challenge students who are already performing well academically. The National Center for Education Statistics (NCES) Public School Survey, 1985, and National Survey of Private Schools, 1985-86, collected data on secondary schools that offer advanced placement programs; that is, courses for which college credit is awarded.

Advanced placement programs are academic enrichment programs which provide students with the opportunity to accelerate their progress through college. These programs are advantageous to students in several ways. First, they offer an academic challenge to highly motivated students. Second, they offer students entering college the opportunity to move more quickly into higher level courses. Finally, such programs can reduce the cost of a college education.

In the public and private school surveys, a school that offers an advanced placement program is defined as one that that offers courses for which college credit may be granted. This definition does not include schools that allow students to take an exam for potential college credit without having taken the appropriate coursework, or those schools that allow students to take college level courses at colleges and universities.

The administrator of the largest advanced placement program, the College Entrance Examination Board, publishes data regularly on the number of participating students, by subject of exam and the number of participating schools. However, data have not been obtained systematically on either the characteristics of the schools that offer advanced placement programs or the nature of program offerings in different types of schools. Data on schools, programs, and students can provide information on the flow of talent into colleges and universities, the types of schools and school environments in which academic challenges are more likely to be offered, and possible clues to the types of talent and their availability for a future labor force.

The Public School Survey, 1985, and the National Survey of Private Schools, 1985-86, collected data on a number of school characteristics, including school size (enrollment), student/teacher¹ ratio, minority enrollment percentage, and percentage of 12th grade graduates applying to college. Other relevant variables on which data were collected were school district size (collected on public schools only), and census region. Data on school participation in advanced placement programs were collected for the following subject matter areas: mathematics, physical science (public schools only), the physical

<sup>1</sup> Teacher data are for full-time-equivalent teachers

and biological sciences (private schools only), English, fine arts, foreign languages, social studies, and computer science.

Four research questions are addressed in this report:

- (1) How do public and private schools compare in their advanced placement program offerings?
- (2) Are characteristics such as school size, student/teacher ratio, minority enrollment percentage, percentage of graduates applying to college, school district size, and census region related to the percentage of schools offering advanced placement programs?
- (3) Are these characteristics related to the number of different subject matter areas covered in a school's advanced placement program?
- (4) Are these characteristics related to the percentage of schools that offer programs in each of the subject matter areas?

# A Comparison of Advanced Placement Program Offerings in Public and Private Schools

Overall comparisons of public and private schools indicate that they do not differ in terms of the percentage offering advanced placement programs, the average number of advanced placement subject matter areas covered, or the percentage offering such programs by subject matter area. 2,3 Data show that substantial programs by subject matter area. Data show that substantial percentages of public and private schools with grades 10, 11, and 12 offer programs: about 38 percent and about 41 percent, respectively (not shown in text tables). Both public and private schools offer advanced placement courses in several subject matter areas. Of a possible total of seven subject matter areas, data show that public school advanced placement programs cover an average of 2.8 subject matter areas and private school programs cover an average of 3.3 subject matter areas (not shown in text However, since public schools with advanced placement programs in biological science are not included, the average reported here may be somewhat lower than what might have been obtained with data comparable to private school data.

The distributions of public and private schools with advanced placement programs by number of subject matter areas covered was also examined. As shown in Table 1, the data suggest that the modal points for the public and private school distributions are about one and two subject matter areas, respectively, and that at least 5 percent of public and private schools offering such

<sup>&</sup>lt;sup>2</sup> Six of the seven subject matter areas for which comparisons were made were identical for both public and private schools. The seventh subject matter area was titled "physical sciences" for public schools and "physical and biological sciences" for private schools. This difference in titling probably results in a slightly lower average number of subject matter areas covered by advanced placement programs in public schools relative to private schools. It also makes a comparison of the percentage of public schools with programs in physical sciences with the percentage of private schools with programs in physical and biological sciences difficult to interpret.

All comparisons in this report are statistically significant unless otherwise noted. However, some differences, particularly among private schools, appear quite large, yet are reported as being not statistically significant. These differences occur when the sample sizes for the national estimates are small and result in large standard errors. The larger the standard errors for a pair of estimates, the less likely will a test of the difference between the estimates be statistically significant. However, it is also likely that some differences shown in this report, which are large and not significant, might have been significant if the sample sizes had been larger. Additional discussion of tests of significance can be found in the appendix.

programs cover all seven subject matter areas.

Table 1.--Percentage of public and private schools that offer advanced placement programs, by number of subject matter areas covered

Number of subject matter areas									
Control	Total	1	2	3	4	5	6	7	
Public	*100	25.9	19.1	13.8	11.5	9.1	7.5	5.7	
Private	100	17.1 -	28.7	10.8	12.0	10.1	14.3	7.0	

<sup>\*</sup> The public school percentages add up to 93.6 percent because approximately 7.4 percent that reported offering an advanced placement program did not report subject matter area(s) covered.

Note: Data cover schools with grades 10, 11, and 12.

As shown in table 2, comparison of percentages of public and private schools by subject matter of program (including comparison of public schools with programs in physical science with private schools with programs in the physical and biological sciences) reveals no significant public/private differences.

Table 2.--Percentage of public and private schools that offer advanced placement programs, by subject matter area of program

Control	Mathematics	Physical sciences	Physical and biological sciences	English	Fine arts	Foreign languages	Social studies	Computer
Public	22.3	14.7	(*)	26.6	6.0	1.1	17.4	9.6
Private	25.2	(*)	26.3	27.3	7.6	1.5	25.5	9.0

<sup>\*</sup> Data were not collected for these subject matter areas.

## Characteristics of Public and Private Schools That Have Advanced Placement Programs

This section of the report presents the data for schools with grades 10, 11, and 12 across selected school characteristics (school size, minority enrollment percentage, student/teacher ratio, percentage of graduates applying to college), school district size, and census region.

In the tables below, data are presented for the extreme categories of the variables studied when the data appear to be generally linear. Complete data on all categories are shown in the appendix. For those variables across which data do not appear to be distributed linearly, data are presented for all categories in both text and appendix tables.

All tests of significance discussed in the text are adjusted to account for multiple comparisons among all categories of each variable studied. Details of these adjustments are presented in the appendix.

#### School Size

Data are presented in tables 3, 4, and 5 for two categories of school size: small schools (less than 300 students) and large schools (1,000 and more students). Clearly, large schools, both public and private, are more likely to have advanced placement programs and to cover a greater number of subject areas than small schools. Table 3 shows that about 18 percent of small public schools have such programs, compared with more than 72 percent of large public schools, a difference of nearly 55 percentage points. The corresponding figures for private schools are approximately 25 percent and 88 percent, a difference of more than 60 percentage points.

Table 3.--Percentage of small and large public and private schools that offer advanced placement programs

- ·	School size					
Control	Small (Less than 300)	Large (1,000 or more)				
Public	18.1	72.4				
Private	24.6	88.0				

Note: See table A-1 for data on all categories of school size.

Large public schools offer a greater number of subject matter areas in their advanced placement programs than small public schools. As shown in table 4, large public schools cover an average of 3.5 subject matter areas, compared with an average of 1.3 areas for small public schools; corresponding averages for private schools are 3.7 and 2.4, respectively, a difference not found to be statistically significant. This difference between large and small public schools may, in part, reflect a greater availability of staff, facilities, and resources in large schools. (As noted above, public schools with advanced placement programs in biological science are not included, and the average reported here may be somewhat lower than what might have been obtained with data comparable to private school data.)

Table 4.--Average number of subject matter areas covered by advanced placement programs in small and large public and private schools that offer advanced placement programs

	School size				
Control	Small (Less than 300)	Large (1,000 or more)			
Public	1.3	3.5			
Private	2.4	3.7			

Note: See table A-2 for data on all categories of school size.

School size is also related to the percentage of schools offering advanced placement programs by subject matter area. For each of the subject matter areas listed for public schools, table 5 shows that the percentage of large schools offering a program was larger than that of small schools. All of these differences are statistically significant. For example: Only about 6 percent of small schools offered an advanced placement program in English, compared with approximately 60 percent of large schools; percent of small schools offered a program in physical science, compared with nearly 39 percent of large schools; and about 5 rercent of small schools offered a program in mathematics, compared with nearly 54 percent of large schools. Significant differences between large and small private schools were found for four subject matter areas, with larger percentages occurring for large schools: about 10 percent vs. about 67 percent for mathematics, 14 vs. 67 percent for science, 10 vs. 82 percent for English, and 5 vs. 28 percent for foreign languages.

Table 5.--Percentage of small and large public and private schools that offer advanced placement programs, by subject matter area of program

Control/ school size	Mathematics	Physical sciences	Physical and biological sciences	English	Fine arts		oreign nguages	Social studies	Computer science
Public Small									
(less than 300) Large	5.2	1.6	(*)	6.2	3	.0	1.0	2.4	4.9
(1,000 or more)	53.6	38.5	(*)	59.5	10.	.7	27.9	47.0	19.5
Private Small									
(less than 300) Large	9.5	(*)	13.7	9.5	2.	.2	5.0	14.6	3.2
(1,000 or more)	67.0	(*)	67.4	81.8	13.	.5	27.7	51.4	18.0

<sup>\*</sup> Data were not collected for these subject matter areas.

Note: See tables A-3 and A-4 for data on all categories of school size as they relate to subject matter areas.

## Minority Enrollment Percentage

In table 6, none of the comparisons among categories of percent minority enrollment for public schools reached statistical significance. This means that schools in different categories of minority enrollment were equally likely to offer an advanced placement program. Among private schools, one statistically significant difference was found: About 63 percent of those with minority enrollment of 15-49 percent offered a program compared with 17 percent of those with minority enrollment of 50 percent or more.

Table 6.--Percentage of public and private schools that offer adminded placement programs, by minority enrollment percentage

	Minority enrollment percentage							
Control	Less than 5%	5-14%	15-49%	50% or more				
Public	35.4	46.4	43.0	31.1				
Private	30.9	47.4	63.2	17.3				

Minority enrollment percentage is not a factor in the average number of subject matter areas covered in either public or private schools that offer advanced placement programs. No statistically significant differences were found for comparisons within either the public or private school sector.

Table 7.--Average number of subject matter areas covered by advanced placement programs in public and private schools that offer advanced placement programs by minority enrollment percentage

Control		Minority e	nrollment perc	entage
	Less than 5%	5-14%	15-49%	50% or more
Public	2.8	2.9	3.0	2.2
Private	3.9	3.9	2.7	3.3

Note: Since public schools with advanced placement programs in biological science are not included, the average reported here may be somewhat lower than what might have been obtained with data comparable to private school data.

Minority enrollment is a factor in the percentage of public schools offering advanced placement programs by subject matter area. Table 8 shows that a larger percentage of public schools with minority enrollment of 15-49 percent offered advanced placement programs in mathematics, physical science, English, and social studies than schools with minority enrollment of 50 percent or more. No other statistically significant differences were found within either public or private schools.

<sup>&</sup>lt;sup>4</sup> There are no significant differences in the percentages of schools with advanced placement programs across categories of minority enrollment percentages (table 6); yet there are differences in percentages across these categories for a number of subject matter areas (table 8). This phenomenon is attributable, in part, to the standard error formula, which will yield smaller standard errors for percentages, the farther they are from 50 percent.

Table 8.--Percentage of public and private schools that offer advanced placement programs, by subject matter area of program and minority enrollment percentage

	Subject matter area							
Control/ percent minority enrollment	Physical and Mathe- Physical biological matics sciences sciences English				Fine arts	Foreign Languaye	Social studies	Computer

50 % or more	13.3	(*)	9.1	12.6	2.2	6.5	7.8	5 <b>.</b> 3

<sup>\*</sup> Data were not collected for these subject matter areas.

## Student/Teacher Ratio

Student/teacher ratio is a factor in the percentage of schools offering advanced placement programs. Tables 9, 10, and 11 show that public schools with student/teacher ratios of more than 20:1 are more likely to have such programs than schools with ratios of less than 16:1. About 28 percent of public schools with a student/teacher ratio of less than 16:1 offered programs, as compared with almost 52 percent of those with a ratio of more than 20:1 The corresponding figures for private schools were 32 and 69 percent. The difference was significant for public schools and barely failed to reach significance for private schools. The failure to reach significance for private schools may be attributable to small sample sizes and large standard errors.

Table 9.--Percentage of public and private schools with student/teacher ratio of less than 16:1 and more than 20:1 that offer advanced placement programs

Control	Student/teacher ratio			
	Less than 16:1	Hore than 20:1		
Public	28.4	51.7		
Private	32.0	69.4		

Note: See table A-1 for data on all categories of student/teacher ratio.

However, table 10 shows that student/teacher ratio is not a

factor in the average number of subject matter areas covered by advanced placement programs.

Table 10.--Average number of subject matter areas covered by advanced placement programs in public and private schools with student/teacher ratio of less than 16:1 and more than 20:1 that offer advanced placement programs

		Student/teacher	ratio
Control	Less than	16:1	More than 20:1
Public	2.6	-	3.2
Private	3.6		3.0

Note: See table A-2 for data on all categories of student/teacher ratio.

Note: Since public schools with advanced placement programs in biological science are not included, the averages reported here may be somewhat lower than what might have been obtained with data comparable to private school data.

Student/teacher ratio is related to the percentage of schools offering advance placement programs by subject matter area. Table 11 shows that in all instances where differences were found, the percentage for schools with a student/teacher ratio of more than 20:1 was larger than that for schools with ratios of less than 16:1. The percentage of public schools with ratios greater than 20:1 is larger than that for schools with ratios of less than 16:1 in five of the seven subject matter areas. Only in fine arts and foreign languages are the differences not significant. Among private schools, there were no statistically significant differences.

Table 11.--Percentage of public and private schools with student/:teacher ratio of less than 16:1 and more than 20:1 that offer advanced placement programs by subject matter area of program

Control/ student: teacher ratio	Mathematics	Physical sciences	Physical and biological sciences	English	Fine arts	Foreign language	Social studies	Computer science

More than 20:1	33.8	26.2	(*)	36.3	7.0	17.0	27.3	17.9
Private							•	
Less than 16:1	23.6	(*)	17.9	27.5	9.6	15.8	17.9	9.4
Hore than 20:1	31.6	(*)	55.4	41.4	3.4	12.7	50.5	9.9

<sup>\*</sup> Data were not collected for these subject matter areas.

Note: See tables A-3 and A-4 for data on all categories of student/teacher ratio.

#### Percentage of Graduates Applying to College

Data on the percentage of graduates applying to college were analyzed in three categories for public schools and two categories

for private schools.

The data in table 12 show that about 26 percent of public schools in which less than 50 percent of the graduates were estimated to have applied to college offered an advanced placement program. The percentage with programs increased to about 54 percent for schools with estimated college application rates of 50-74 percent and remained at about the same level for schools with rates of 75 percent or more. This difference of about 28 percentage points was statistically significant for both comparisons.

Among private schools, there was no statistically significant difference in the percentage offering advanced placement programs when application rates of less than 50 percent were compared with rates of 75 percent or more. (This is another example of a possible real difference being obscured by small samples and large standard errors.) However, the difference of about 32 points between the percentage of private schools with college application rates of 50-74 percent and those with rates of 75 percent or more was statistically significant.

Table 12.--Percentage of public and private schools that offer advanced placement programs, by percentage of graduates applying to college

	Percentage applying	of gradu	
Control	Less than 50%	50-74%	75% or more
Public	25.5	53.5	52.8
Private	32.3	22.0	53.7

Public schools with college application rates of 75 percent or more were more likely to offer a greater number of subject matter areas in their advanced placement programs than schools with application rates of 50-74 percent (table 13). No statistically significant differences were found for private schools.

Table 13.--Average number of subject matter areas covered by advanced placement programs in public and private schools that offer advanced placement programs, by percentage of graduates applying to college

		e of gradua g to colleg	
Control	Less than 50%	50-74%	75% or more
Public	2.5	2.8	3.7
Private	••	2.9	3.8

Sample size for private schools too small for analysis.

Note: Since public schools with advanced placement programs in biological science are not included, the averages reported here may be somewhat lower than what might have been obtained with data comparable to private school data.

Table 14 shows results of comparisons between schools with differing college application rates, by subject matter area. Differences were found between public schools with college application rates of less than 50 percent and those with rates of 50-74 percent and 75 percent or more. Differences were found between private schools with application rates of 75 percent or more and those with application rates of less than 50 percent and 50-74 percent.

Public schools with application rates of less than 50 percent were less likely than schools with application rates of 50-74 percent or 75 percent or more to offer advanced placement programs in every subject matter area but fine arts. In fine arts, the differences were not statistically significant. Private schools with application rates of 75 percent or more were more likely than schools with application rates of less than 50 percent to offer advanced placement programs in five of the seven subject matter areas. For the biological and physical sciences and for social the differences were not statistically significant. Significant differences were found between private schools with application rates of 75 percent or more and those with application rates of 50-74 percent; schools with application rates of 75 percent or more were more likely to offer programs in the physical and biological sciences, foreign languages, and social studies.

Table 14.--Percentage of public and private schools that offer advanced placement programs, by subject matter area of program and percentage of graduates applying to college

<sup>\*</sup> Data were not collected for these subject matter areas.

## Size of School District

Data on size of school district are reported for public schools only. They reveal differences between schools in small districts (1-5 schools) and those in medium (6-50 schools) and large (more than 50 schools) districts. For example, about 30 percent of schools in small districts (1-5 schools) have advanced placement, programs compared with approximately 45 percent in medium size and approximately 48 percent in large size districts. The differences between the percentage for schools in both large and medium size districts vs. small districts are statistically significant. However, the difference between the percentage of schools in large and medium size districts is not.

Schools in large districts are more likely to cover more subject areas in their advanced placement programs than schools in small and medium size districts. Advanced placement programs covered an average of about 3.5 subject areas in large districts, compared with approximately 2.9 areas in medium size districts and about 2.5 areas in small districts. The difference between schools in small and medium size districts was not statistically significant.

Table 15 shows that schools in large districts are more likely than those in small districts to offer advanced placement programs in nearly all subject matter areas. This is evident in all subject matter areas but fine arts, where the difference was not significant. Schools in medium size districts are more likely to offer programs in mathematics, physical science, English, and social studies than schools in small districts. Only one significant difference was found between schools in medium vs. large districts: Schools in large districts were more likely to offer advanced placement programs in social studies.

Table 15.--Percentage of public schools that offer advanced placement programs, by subject matter area of program and size of school district

School district size	Mathematics	Physical sciences	English	Fine arts	Foreign language	Social studies	Computer science
Small (1-5 schools)	15.9	3.4	17.9	5.9	7.8	10.2	8.6
Medium (5-50 schools)	28.5	18.7	34.4	4.8	11.4	22.5	9.5
Large (More than 50 schools)	30.9	24.9	39.8	9.8	16.1	32.4	14.1

The school district size variable was studied further by examining it in combination with the two levels of school size previously used: schools with enrollment of less than 300, and schools with enrollment of 1,000 or more. This was an exploratory analysis with no particular relationships hypothesized. the data in table 16 show that the percentage of large schools with advanced placement programs is larger than that for small schools within each of the three school district sizes. The data also reveal an interesting statistic for small schools in small districts: Approximately 23 percent of small schools in small districts offered an advanced placement program compared with only about 4 percent of small schools in large districts. Among large schools there were no significant differences among percentages for schools in small, medium, and large districts. Stated another way, small schools have a greater likelihood of offering a program if they are in small districts as opposed to large districts; whereas large schools in small, medium, and large districts have an equal likelihood of offering an advanced placement program.

Table 16.--Percentage of public schools that offer advanced placement programs: school size by school district size

		School district s	size
School size	Small (1-5 schools)	Medium (6-50 schools)	Large (More than 50 schools)
Less than 300	23.4	8.6	4.1
1,000 or more	57.6	74.7	73.3

#### Census Region

Data in tables 17 and 18 show, by region of the country, the percentage of public and private schools offering advanced placement programs and the average number of subject matter areas covered in schools with such programs. (Percentages of schools, by subject matter area, are shown in table A-3.) In table 17, two significant differences in percentage were found for public schools: Approximately 53 percent of schools in the Northeast

offered programs, compared with about 27 percent of schools in the Midwest; and about 40 percent of schools in the South offered programs, compared with the 27 percent figure for the Midwest. There were no significant differences among percentages for private schools.

Table 17.--Percentage of public and pr'vate schools in the West, Midwest, Northeast, and South census regions that offer advanced placement programs

		Census	region	
Control	West	Midwest	Northeast	South
Public	40.2	27.0	52.6	40.4
Private	29.1	42.5	60.2	31.2

In table 18, two statistically significant differences were found for public schools and no significant differences were found for private schools. Public schools in the Northeast offered advanced placement programs that covered an average of 3.5 subject matter areas, compared with an average of 2.4 areas for schools in the Midwest and 2.7 areas for schools in the West.

Table 18.--Average number of subject matter areas covered by advanced placement programs in public and private schools in the West, Midwest, Northeast, and South census regions that offer advanced placement programs

	_	Census region		
Control	West	Midwest	Northeast	South
Public	2.7	2.4	3.5	2.8
Private	3.1	2.9	3.4	3.6

Note: Since public schools with advanced placement programs in biological science are not included, the averages reported here may be somewhat lower than what might have been obtained with data comparable to private school data.

#### Summary

Data on advanced placement programs were examined for the 1984-85 school year for public schools and the 1985-86 school year for private schools. The analysis addressed the following questions:

(1) How do public and private schools compare in their advanced placement program offerings?

(2) Are characteristics such as school size, student/teacher ratio, percentage of minority enrollment, percentage of graduates applying to college, school district size, and census region related to the percentage of schools offering advanced placement programs?

(3) Are these characteristics related to the number of subject matter areas covered in a school's advanced

placement program?

(4) Are these characteristics related to the percentage of schools that offer programs in each of the subject matter areas?

### The following results were obtained:

- (1) Public and private schools do not differ in terms of the percentage offering advanced placement programs, the average number of subject matter areas covered, or the percentage offering such programs by subject matter area.
- Large public and private schools were more likely to (2) offer advanced placement programs than small schools. Public schools with different percentages of minority enrollment were equally likely to offer such a program, while private schools with minority enrollment of 15-49 percent were more likely to offer a program than those with minority enrollment of 50 percent or more. Public and private schools with large student/teacher ratios were more likely to offer advanced placement programs than schools with small ratios. Public schools in which 75 percent or more of the graduates were estimated to have applied to college were more likely to offer a program than schools with less than a 50 percent application rate. At the same time, private schools with application rates of 75 percent or more and and those with less than 50 percent were equally likely to offer an advanced placement program. Public schools in large school districts were more likely to offer programs than schools in small districts. Regionally, public schools in the Northeast and South were more likely to offer such programs than schools in the Midwest region. No regional differences were found for private schools.

- Large public and private schools were more likely to (3) offer a greater number of subject areas in their advanced placement programs than small schools. However, neither minority enrollment percentage nor student/teacher ratio was a factor in the average number of subject matter areas covered in either public or private schools. Public schools offering with college application rates of 75 percent or more were more likely to offer a greater number of subject matter areas in their programs than schools with application rates of 50-74 percent. Among private schools, college application rate was not related to the number of subject matter areas covered. Public schools in large districts were more likely to offer a larger number of subject matter areas than schools in small districts. Regionally, public schools in the Northeast offered advanced placement programs covering a larger number of subject areas than schools in the Midwest and the West. No regional differences were found for private schools.
- Large schools, both public and private, were more likely than small schools to include advanced placement programs in subject matter areas such as mathematics, science, and Public schools with a minority enrollment of English. 15-49 percent were more likely to offer programs in mathematics, science, and English than schools with minority enrollment of 50 percent or more. However, no differences were obtained for private schools. schools with large student/teacher ratios were more likely to offer a program in the areas of mathematics, science, and English than schools with small ratios, while private schools with large ratios were more likely to offer a program in science than schools with small Public schools with college application rates of 75 percent or more were more likely to offer an advanced placement program which included mathematics, science, and English than schools with less than a 50 percent rate. Private schools with application rates of 75 percent or more were more likely to offer programs including mathematics and English than schools with rates of less than 50 percent. Public schools in large districts, were more likely to offer programs which included mathematics, science, and English than schools in small districts.

#### Technical Notes

#### The Surveys

The Public School Survey, 1985, obtained responses from 8,568 teachers and 2,301 administrators from an initial sample of 2,801 The schools were selected from the Common Core of Data maintained by the National Center for Education Statistics (NCES) and were stratified on both school type (i.e., elementary, secondary, and other) and local school district size (i.e., 1 to 5 schools, 6 to 50 schools, and more than 50 schools). Teachers were sampled from lists provided by the schools and stratified by teaching assignment (i.e., elementary, mathematics or science, and In addition to data on advanced placement programs, enrollment, school-level data were collected on staffing levels, use of aides characteristics, and unpaid volunteers, computer usage, incentive pay programs, and other areas. Teacher-level data were collected on variables including demographic characteristics, educational background, training, experience, time usage, use of aides and unpaid volunteers. compensation, and outside employment. Data were collected during winter and spring of 1985. Response rates were 85 percent for schools and 80 percent for teachers.

The National Survey of Private Schools, 1985-86, obtained responses from 5,295 teachers and 1,175 administrators in 1,387 private schools during spring 1986. The response rate was 85 percent for schools and 76 percent for teachers. The schools were selected from lists developed in 1983 of all identifiable private schools in 75 primary sampling units. Teachers were selected without stratification from lists supplied by the schools. At the school level, in addition to advanced placement programs, information was collected on religious orientation of the school, grades served, enrollment, student characteristics, tuition, staffing, use of aides and volunteers, program offerings, and years of operation. From teachers, information was collected on demographic and educational characteristics, experience, courses taught, use of time, cash and non-cash compensation, and use of teacher aides and unpaid volunteers.

#### Accuracy of Estimates

The estimates presented in the tables are based on samples and are subject to sampling variability. Caution should be exercised in interpreting statistics based on relatively small numbers of cases, as well as in interpreting small differences between estimates. If the questionnaires had been sent to different samples, the responses would not have been identical; some numbers might have been higher, others lower. The standard errors in the tables provide indications of the accuracy of each estimate. If all possible samples of the same size were surveyed under identical conditions, a range of plus or minus one standard error around the

estimate would include the "true" population value of the variable in about two-thirds of the cases; a range of plus or minus two standard errors would include the population value about 95 percent of the time. The standard errors in the tables do not take into account the effects of biases due to nonresponse, measurement error, processing error, or other systematic error that could occur even in a complete ("universe") survey.

## Significance Tests

There are hazards in performing statistical tests for each comparison. When making several tests, it becomes increasingly likely that at least one of them will give a misleading result. When there is really no difference between the means or percentages being compared, there is still a 5 percent chance of getting a t value of 1.96 from sampling error. Although this 5 percent risk seems acceptable for a single t test, the risk of getting at least one t value of 1.96 in a series of t tests goes up considerably. For five t tests, the risk of getting one misleading t score grows to 23 percent; for ten t tests, it grows to 40 percent; and for 20 t tests, the risk of getting one t value of 1.96 from sampling error increases to 64 percent. The risk of finding a significant t score as a result of sampling error decreases for t scores over 1.96.

In this report all comparisons cited in the text are significant at the .05 level unless a statement is included indicating that no statistically significant difference was found between the groups being compared. Bonferroni adjustments were used to ensure that the overall alpha level did not exceed .05. The number of comparisons and the corresponding z-scores required for statistical significance are shown below for each of the text tables.

Text table number	Number of comparisons	.z-score
5,6,8,9,21,22 7,10 13,16 4,11,12,14, 15,17,18 19	12 84 42 6 3 21 25	2.87 3.40 3.20 2.64 2.40 3.04 3.12

# Item Descriptions and Variable Definitions

The "Administrator Questionnaire" of the Public School Survey and the "School Questionnaire" of the National Survey of Private Schools provided the data for this report. The quescionnaires are Appendix B.

A. School size

Data on school size were obtained form the responses to item 1 of the Administrator Questionnaire and the summed responses to item 4, line 2 of the School Questionnaire.

B. Percentage of minority enrollment

Data on percentage of minority enrollment were obtained from the responses to item 3 of the Administrator Questionnaire and item 5 of the School Questionnaire.

C. Student/teacher ratio

The ratio was obtained for each school by dividing school enrollment by the number of FTE (full-time-equivalent) teachers. For public schools, the response to item 1 of the Administrator Questionnaire was divided by the response to item 4d. For private schools, the response to item 4 of the School Questionnaire was divided by the summed response to items 8b1 and 8b2.

- D. Percent of 12th grade graduates that applied to college
  These percentages were obtained from the responses to item
  14 of the Administrator Questionnaire and item 17c of the
  School Questionnaire.
- E. School district size (public schools only)

  This variable was used in stratifying the sample of schools.

  Schools were grouped into three categories cf school district size: small (1-5 schools), medium (6-50 schools), and large (over 50 schools).
- F. Geographic region

All schools in both surveys were classified into four geographic regions used by the U.S. Bureau of the Census.

West	Northeast
Montana	Maine
Idaho	New Hampshire
Wyoming	Vermont
Colorado	Massachusetts
New Mexico	Rhode Island
Arizona	Connecticut
Utah	New York
Nevada	New Jersey
Washington	Pennsylvania
Oregon	-
California	South
Alaska	
Hawaii	Delaware

Maryland District of Columbia Virginia

Illinois Michigan Wisconsin Minnesota

West Virginia North Carolina South Carolina Iowa Georgia

Missouri North Dakota South Dakota Nebraska Kansas

Florida Kentucky Tennessee Alabama Mississippi

Arkansas Louisiana Oklahoma Texas

# Schools with advanced placement programs

Only schools with grades 10, 11, and 12 were considered in this analysis since these were most likely to offer an advanced placement program. Schools with these grades were identified by item 10 of the "Administrator Questionnaire" and item 14 of the "School Questionnaire". Schools with advanced placement programs were then identified by a "yes" response to item 11 of the "Administrator Questionnaire" and a "yes" response to item 16 of the "School Questionnaire". If the estimated number of students enrolled in a course in one or more of the listed subject areas in item 12 of the "Administrator Questionnaire" or in item 16 of the "School Questionnaire" was greater than zero, the school was counted as one which offered an advanced placement course in that area.

#### For More Information

For more information about this report or the 1985 Public School Survey, contact Charles H. Hammer, U.S. Department of Education, National Center for Education Statistics, 555 New Jersey Avenue NW, Washington, DC 20208-5651: telephone (202) 357-6330.

#### Acknowledgments

The draft manuscript of this report was reviewed by Macknight Black of the Postsecondary Education Statistics Division, Mary Frase of the Data Development Division, and Philip B. Arbolino, Associate Director, Advanced Placement Program, The College Board. Robert S. Burton, Elementary and Secondary Education Statistics Division, was the mathematical/statistical consultant for the report. Skee Smith of Information Services was the editor of the report.

## NATIONAL CENTER FOR EDUCATION STATISTICS:

#### PUBLIC SCHOOL SURVEY ADMINISTRATOR QUESTIONNAIRE 1985

FORM APPROVED OMB No.: 1850-0536 Expiration Date: 12/31/85

THIS REPORT IS AUTHORIZED BY LAW (20 U.S.C. 12216-1). WHILE YOU ARE NOT REQUIRED TO RESPOND, YOUR COOPERATION IS NEEDED TO MAKE THE RESULTS OF THIS SURVEY COMPREHENSIVE, ACCURATE, AND TIMELY.

Address Label Here

NCES FORM 2403-1, 1/85

1.	How many students were on the official membership roll of this school on or about October 1, 1984?	<ol> <li>Enter in each of the following categories the number of TEACHERS (head count) regularly assigned to this school on or about October 1, 1984:</li> </ol>					
	Number of students:	Number of Teachers					
2.	What is the design capacity of this school, i.e., the number of students that this school was designed to house?  Number of students:	a. Persons assigned a full-time position at this school whose primary assignment is teaching  b. All other persons assigned full- or part-time at this school whose-duties Include some teaching (including itinerant teachers)					
	accommodated in the classrooms and other instructional areas as determined by existing State-approved standards. Include the capacity for which the school was originally designed plus any increases resulting from permanent additions.)	8. Do any UNPAID VOLUNTEERS provide services for this school? (Do not include students from this school as unpaid volunteers.)  1  YES (Continue) 2  NO (Skip to Item 9)					
3.	What is the estimated percentage of students attending this school who are members of a minority group? Minority groups include: American Indian or Alaskan Native, Asian or Pacific Islander, Black and Hispanic. (Check box for appropriate percentage below.)	7. What is the estimated total number of unpsid volunteers that you expect to perform services at this school ON A CONTINUING OR SCHEDULED BASIS during the 1984-85 school year?  Number of volunteers:					
	1 None 5 25-49% 2 Less than 5% 6 50-74% 3 5-14% 7 75-89% 4 15-24% 2 90% or more	8. Enter the number of the volunteers reported in item 7 who worked or will work in each of the following					
_		activities: Number of Volunteers					
4.	For each of the categories listed below, enter the full-time-equivalent (FTE) number of PAID EMPLOYEES regularly assigned to work in this school on or about October 1, 1984. (Report totals to the nearest one-tenth.)  DEFINITION: One full-time equivalent (FTE) is equal to the amount of time a person would spend serving full time on an assignment.  EXAMPLES: (1) A full-time teacher would add 1.0 to the TEACHERS category.  (2) A person working half-time as a teacher and half-time as a guidance counselor would add 0.5 to the TEACHERS category and 0.5 to the GUIDANCE COUNSELORS	a. Instructional support (e.g., tutoring, grading papers, science lab monitoring, conducting rote exercises) b. Guidance support (e.g., career and college counseling, health and drug awareness) c. Extracurricular support (e.g., athletics, clubs, trips, newspaper, library) d. Management/advisory support (e.g., citizen advisory group organized through school, computerization of schedules) e. Clerical support					
	category. (3) A half-time librarian would add 0.5 to the LIBRARIANS AND OTHER PROFESSIONAL	f. Other type of support (monitoring cafeteria, playground, etc.)					
	MEDIA STAFF category.  FTE  a. Principals and assistant principals	9. Check each grade in which instruction is offered in this school. (If this is an ungraded school, report on the basis of the GRADES usually corresponding to the ages of the students attending.) (Check all that apply.)					
	b. Guidance counselors	PK KG 1 2 ·3 4 5					
	c. Librarians and other professional media staff	6 7 8 9 10 11 12 0 0 0 0 0					
	d. Teachers	10Were grades 10, 11, and/or 12 checked in item 9?					
	assist teachers)	1 YES (Continue) 2 NO (Skip to Item 16)					

——————————————————————————————————————	1
11. Does this school have an advanced placement program for students in grades 10, 11, or 12; that is, courses for which college credit is granted based upon approval by a college or secondary school association?  1 YES (Continue) 2 NO (Skip to Item 13)	16. Does this school currently have one or more computers, microcomputers, or computer terminals physically located on the school premises?  1  YES (Continue) 2  NO (Skip to Item 21)
12. Enter the estimated number of 10th, 11th, and 12th grade students enrolled in courses for the advanced placement program, by the subject matter areas ilsted below.  Estimated Number of Subject Area Students  a. Mathematics	17. Are any of these computers, microcomputers, or computer terminals used for instruction of students in computer use?  1  YES (Continue) 2  NO (Skip to Item 20)
b. Physical Sciences  c. English  d. Fine Arts  e. Foreign Languages  f. Social Studies  g. Computer Science  13. How many students who were enrolled in a regular day school program were graduated from the 12th grade in this school last year? (Include summer school graduates for 1984.)	18. Check below each type of instruction in computer use for which these computers, microcomputers, or computer terminals are used.(Check all that apply.)  1  Data entry operations 2  Off-line equipment operations 3  Computer operating 4  Introduction to computer concepts 5  Computer programming 6  Other (specify)
Number of students graduated:	Approximately how many students are currently receiving instruction in computer use?  Estimated number of students:
15. For the period July 1, 1983 to June 30, 1984, please provide the average score of SENIORS and your best estimate of the percentage of seniors tested for each of the following tests:  Average Score Percent of of Seniors Seniors Tested Scholastic Aptitude	20. For what purpose(s) other than instruction in computer use are these computers, microcomputers, or computer terminals used? (Check all that apply.)  1
Test:	21. Do the teachers in this school participate in any teacher incentive programs?  1 □ YES (Continue) 2 □ NO (Skip to Item 23 at bottom of next page)

22. INCENTIVE PROGRAMS—Indicate below ALL the incentive programs currently in use in your school, the PURPOSE(S) for which each is used, and your RATING of the effectiveness of each incentive used. NOTE: We are interested in ALL incentive programs currently in use in your school, regardless of how successful they appear to be.

#### **INSTRUCTIONS:**

- Check the purposes ("Used" box) for each type of incentive used by this school, regardless of the source of funds.
- For each purpose and type of incentive checked as "USED", rate your opinion of its effectiveness by entering a 1, 2, or 3 on

			opinion of its chocareness by chief	y u ., z, ,	<i>y</i> , 0 0
the line provided.	-Use the following sca	le for evaluating the effectiven	ess:	Used	Rating
1 = Productive	2 = No Difference	3 = Counterproductive	(Example: a Cash Ponus	, F	. 1

<del></del>	Purpose of Incentive							
Type of incentive	Teac Less	racting chers to Dealrable cations	Expe	aining rienced ichers	Tea for	ruiting ichers Fields hortages		arding

4 🛘 15-24%

6. Enter in each of the following categories the number of TEACHERS (head count) regularly assigned to this school on or about October 1, 1985. (Exclude teachers paid by public agencies, itinerant teachers, unpaid volunteers, and teacher aides):

		Number of Teachers
•	Persons assigned a full-time position at this school whose primary assignment is teaching	
b.	All other persons assigned full- or part-time at this school whose duties include some teaching	
C.	Total Teachers: sum of 6a and 6b	

7. Enter in columns A-C the number of full-time teachers (item 6a) at each salary level. When determining salary level, exclude the value of income-in-kind (e.g., housing, meals, transportation, reduced tuition rates for family members) received in addition to or in lieu of salary.

Column A: Enter the total number of full-time teachers at each salary level.

Column B: Enter the total number of full-time teachers who receive income-in-kind, at

each salary level.

Column C: Enter the number of full-time teachers who receive each type of income-in-

kind, at each salary level.

		NUMBER OF FULL-TIME TEACHERS									
			THOSE WHO RECEIVE INCOME-IN-KIND								
	A.	9.	C. NUMBER WHO RECEIVE;								
Annual salary paid excluding income-in-kind	Total full-time teachers	Total receiving income- in-kind	Housing	Meals	Trans- portation	Family member tuition	Other				
a. No salary paid											
b. Less than \$5,000							-				
c. \$5,000 to \$9,999				_							
d. \$10,000 to \$12,499											
e. \$12,500 to \$14,999				_	†						
f. \$15,000 to \$17,499						-	-				
g. \$17,500 to \$19,999											
h. \$20,000 to \$24,999											
i. \$25,000 or more		1			1 -						

8. Enter the full-time equivalent (F.T.E.) number of persons employed at this school in each of the assignment categories listed below.

Note definition: One full-time equivalent equals the amount of time one person would spend serving full-time in an assignment. For example, if a person were assigned full-time to a teaching position, you would add 1.0 to the classroom teacher category. If, however, a person served half-time as a teacher and half-time as a counselor, you would add 0.5 to the teacher category and 0.5 to the guidance counselor category. Report totals to the nearest one-tenth.

ASSIGNMENT	F.T.E.
a. Principals and assistant principals	
b. Teachers	
Paid by the private school	
Paid by public agencies (i.e. to implement legislated programs)	,
c. Guidance counselors	
d. Librarians and other professional media staff	
Other professional staff (e.g., curriculum specialists, administrative and business staff, social workers, etc.)	
1. Paid by the private school	
2. Paid by public agencies (i.e. to implement legislated programs)	
f. Teacher aides (paraprofessionals who assist teachers)	<u> </u>
g. Nonprofessionals (secretaries, janitors, bus drivers, etc.)	;

		AU MARER OF MA

j.	Speech therapy					

3.	Selected school characteristics
	How many hours per day are students in the highest grade expected to attend? hours
	b. What is the number of days students in the highest grade attended school in the 1984-85 school year?  days
	c. Is this school operated in a private home used as a family residence?  1 □ Yes 2 □ No
	d. In what year did this school begin operation?
	■. Was it operational in school year 1983-84?  1 □ Yes 2 □ No
	<ul> <li>f. Does this school require an entrance examination for admission?</li> <li>1 ☐ Yes</li> <li>2 ☐ No</li> </ul>
	g. Were any students expelled from this school during the 1984-85 school year?  1  Yes — If yes, now many? students 2  No
	h. Were any students barred from re-enrolling at the conclusion of the 1984-85 school year?  1  Yes — If yes, how many? students 2  No
	L. During the 1984-85 school year, did you accept any new students who were expelled from public schools?

1 ☐ Yes — If yes, how many?

2 🗆 No

14.	Does this school:	serve 10th,	11th and/or	12th grade students?
-----	-------------------	-------------	-------------	----------------------

1 ☐ Yes — If yes, please continue and complete items 15 through 19.

2  $\square$  No - If no, this completes the questionnaire. Thank you for your cooperation.

15. How many years of coursework in each of the following subject matter areas are required for graduation (high school) from your school?

SUBJECT AREA		YEARS OF COURSEWORK REQUIRES	
<b>a</b> .	Mathematics		
b.	Physical and Biological Sciences		
C.	English		
d.	Fine Arts		
€.	Foreign Languages		
f.	Social Studies		

16. Does this school have an advanced placement program for students in grades 10, 11, or 12; that is, courses for which college credit is granted based u on approval by a college or secondary school association?

1 🔲 Yes — If yes, please enter the estimated number of 10th, 11th, and 12th grade students enrolled in courses for the advanced placement program, by the subject matter areas listed in a-g below.

2 □ No — If no, skip to item 17.

SUBJECT AREA	ESTIMATED NUMBER OF STUDENTS
a. Mathematics	
b. Physical and Biological	Sciences
c. English	
d. Fine Arts	
e. Foreign Languages	
f. Social Studies	
g. Computer Science	

17.	How many students were enrolled in 12th grade in a regular day school program last year (1984-85)?  12th grade students				
	b. How many of these students were graduated from the 12th grade last year? (Include 1985 summer graduates.  12th grade graduates				
	c. What is the estimated percentage of these graduates that applied to a 2- or 4-year college?  Estimated percent				
18.	Do you have Scholastic Aptitude Test (SAT) and/or American College Test (ACT) scores of your seniors for the				
	period July 1, 1984 to June 30, 1985?  1  Yes — If yes, please continue and complete item 19.				

19. For the period July 1, 1984 to June 30, 1985, please provide the average score of SENIORS and your best estimate of the percentage of seniors tested for each of the following tests:

2 \(\sigma\) No — If no, this completes the questionnaire. Thank you for cooperation.

	AVERAGE SCORE OF SENIORS	PERCENT OF SENIORS TESTED
Scholastic Aptitude Test:		
SAT (Math)		%
SAT (Verbal)		%
American College Test:		
ACT (Composite)		%

THIS COMPLETES THE QUESTIONNAIRE. THANK YOU FOR YOUR COOPERATION.
