ABSTRACT

This guide, developed by a project to revise the minimum core competencies for the Fundamentals of Marketing course in secondary marketing education in Missouri, contains four sections. The first section explains competency-based marketing education, including its mission, nature, curriculum, and the fundamentals of competency-based instruction. The second section lists the expected student learning outcomes in Fundamentals of Marketing based on the core curriculum for marketing education. Competencies are listed in the areas of communications, economic concepts, employment and advancement, human relations, operations, planning, advertising and sales promotion, selling, and marketing concepts. The third section is a suggested curriculum model for Fundamentals of Marketing; the final section cross-references fundamentals of marketing student competencies to selected resources and tasks. A four-item suggested resource list is included. (KC)

COMPETENCY BASED MARKETING EDUCATION

Marketing Education represents a body of instruction focused on marketing, including merchandising and management. It includes multiple instructional programs to meet the education and training needs of youth and adults who have employment or self-employment goals in marketing or have employment goals in another career field and wish to acquire marketing competencies as part of their preparation.

Mission

The mission of marketing education is to develop competent workers in and for the major occupational areas within marketing; assist in the improvement of marketing practices; and build understandings of the range of social and economic responsibilities that accompany the right to engage in marketing in a free enterprise system.

Nature of Marketing

Marketing consists of those activities that make products and services readily available to consumers and businesses. Essentially, marketing is the bridge between production, including the creation of services and ideas, and consumption. Most of these activities are performed by retailers, wholesalers, and businesses providing services. Marketing occupations, however, are found in all types of for-profit business, including those that manufacture products, as well as in not-for-profit organizations.

Curriculum

In broad terms, successful workers in marketing are skilled in the functions of marketing; know how to relate to people; are computer literate and able communicators; reflect a positive work ethic; draw on all of their educational achievements; know their product or service area; and apply economic understandings in a private enterprise system and international commerce.

Based on these desirable competencies for initial employment and upward mobility, the Missouri Marketing Education curriculum framework for instructional content is as follows:

- Advertising and Sales Promotion
- Communications in Marketing
- Economic Concepts
- Employment and Advancement
- Human Relations in Marketing
- Marketing Concepts
- Marketing Operations
- Market Planning
- Selling

Competency Based Instruction

Briefly stated, competencies (objectives), competency-referenced instruction (curriculum content), and competency-referenced assessment (testing/evaluation) are matched or made congruent. The assessment samples the student learning and does not measure anything other than the stated objectives of the program. Students have the opportunity to learn what they are expected to learn and teachers have test data to determine learning.

Curriculum Alignment

The process of proper curriculum alignment involves describing the ends of the Marketing Education program (knowledges, skills, attitudes). Instructional materials, procedures, and activities are then referenced to the learning outcomes. A regular, reliable assessment of learning with respect to expected outcomes is also necessary.

In practical terms, "we should teach students what we expect them to learn, and we should only test students on what they have had an opportunity to learn." This model implies that objectives are derived first; then, instructional resources are outlined for each objective; last, in the sequence, but prior to the beginning of instruction, assessment instruments are constructed to measure the exact objectives outlined and not others.

Objectives. In the rational decision-making model, the objectives are written prior to selection of curriculum materials, instructional methods, and methods of assessment. It is generally recommended that three elements or components be included in a performance (instructional/behavioral) objective:

1. the behavior expected of the student
2. the conditions under which the behavior is to be demonstrated
3. the degree of mastery required.

Textbooks (Instructional Resources). In the curriculum alignment model, the curriculum content is the middle element, chosen to facilitate the objectives. Practically, the curriculum content is equivalent to the textbook but, since the textbooks are composed by different writers a match does not always exist. In this case, the teacher has to try to align textbook content with stated objectives and tests.

Testing. The curriculum alignment model assumes a competency-referenced test that is referenced to the identified explicit objectives of the instructional program in marketing. Competency-referenced tests measure each student's achievement against an absolute standard of accomplishment rather than a relative ranking against peers as the norm-referenced test does. If the competency-referenced test is tailor-made to evaluate student progress on specific objectives, after outcomes-referenced teaching, a viable curriculum can exist.

Evaluation. There are four steps associated with evaluation:

Step 1: Administrating a competency (criterion) test. This may involve a demonstration of a hands-on skill or the taking of a paper-and-pencil test.

Step 2: Scoring the test. This requires an assessment of the students' attempt to demonstrate mastery (or competency attainment). This phase of evaluation consists of tallying up the correct responses or scoring student performance and assigning a score based on a rating scale set up for the specific competency which has been observed.

Step 3: Assessing the results. This is the instructor's evaluation of student performance with respect to the overall objectives and relative student progress.

Step 4: Recording student achievement. This generally refers to a tabulation of the results of the evaluation on a form which can be used as a record of student competency attainment.

Record Keeping (Reporting System). The effective management of an instructional system depends on an accurate record of student performance. Various systems are available for use by the marketing instructor: student profile records, Comp VIMS microcomputer system, mini VAMS system and the VAMS system. A reporting system must be developed to document student outcome measures.
