ABSTRACT

This annual report contains 25 tables of detailed demographic data on household and family characteristics for March 1988. The estimates are based on information gathered in the Annual Demographic Supplement to the Current Population Survey and are appropriate for use by teachers developing lesson plans and by students working on class projects. These estimates are based on sample surveys and are thereby subject to sampling variability. Comparisons with previous findings have not been included as in the past in an effort to provide the data to the general public as quickly as possible. Some of the highlights of the findings include: (1) There were 91.1 million households in March 1988, a net increase of 10.3 million since 1980. (2) There was an average of 2.64 persons per household in 1988, down 0.12 persons from the 1980 average. (3) The number of householders under 25 years of age has declined by 20 percent since 1980. (4) The number of one-parent situations has increased by 2.4 million since 1980, reaching a total of 9.4 million in 1988. (JB)

Acknowledgments

Steve W. Rawlings prepared this report in Population Division, under the general direction of **Donald J. Hernandez**, Chief, Marriage and Family Statistics Branch. **Peggy A. Armstrong**, **Gerda K. Mudd**, and **Edith L. Reeves**, provided statistical and clerical assistance. Overall direction was provided by **Arthur J. Norton**, Assistant Chief, Population Division.

The data were collected by Bureau of the Census interviewers, under the direction of **Stanley D. Matchett**, Chief, Field Division. **Thelma N. Varhach** programmed the detailed tables, and **Ronald Tucker**, Demographic Surveys Division, coordinated the survey operations. **Patrick Tamer** conducted the sampling review in Statistical Methods Division.

The staff of Publications Services Division, **Walter C. Odom**, Chief, provided publication planning, design, composition, and printing planning and procurement; **Paula Coupe** edited and coordinated the publication.

Household and Family Characteristics: March 1988

HIGHLIGHTS

This annual report contains detailed demographic data on household and family characteristics for March 1988. The estimates are based on information gathered in the Annual Demographic Supplement to the Current Population Survey. An advance report on the 1988 data was issued in September 1988 (Current Population Reports, Series P-20, No. 432). The advance report contains selected historical data on household composition for 1940, and for each individual year since 1947.

Detailed reports published under this title prior to 1987 included an analytical section which featured a variety of topics relating to household and family composition, and compared data for the most recent point-in-time to similar data for earlier years. This section has been deleted as part of our effort to provide the published data to the general public as quickly as possible. In addition, there is a new series of subject-specific Current Population Reports containing more in-depth analyses of various topics. The first report, Series P-23, No. 162, *Studies in Marriage and the Family*, is being released this summer.

Some of the highlights of the 1988 data include the following:

- There were 91.1 million ($\pm 462,000$) households in March 1988, a net increase of 10.3 million ($\pm 526,000$) households since 1980.
- There was an average of 2.64 ($\pm .01$) persons per household in 1988, down 0.12 ($\pm .03$) persons from the 1980 average.
- The number of householders under 25 years of age has declined by 20 (± 3) percent since 1980.
- The number of one-parent situations (i.e., family households, plus subfamilies) has increased by 2.4 million ($\pm 221,000$) since 1980, reaching a total of 9.4 ($\pm 207,000$) in 1988.

The data in this report are estimates based on sample surveys, and are thereby subject to sampling variability since they are not based on a complete enumeration of the population. Caution is advised when comparing differences in estimates that are based on a small number of cases, especially if the difference between the two estimates being compared is not large. See Appendix B, "Source and Reliability of Estimates," for a complete discussion of sampling variability and how it may affect the data.

RELATED REPORTS

Additional detailed statistics on marital status, unmarried couples, and the living arrangements of children, are among the data presented in Current Population Reports, Series P-20, No. 433, *Marital Status and Living Arrangements: March 1988*, a companion to this report in which persons, rather than households, are the primary unit of analysis. State household estimates were published in Current Population Reports, Series P-25, No. 1024, *State Population and Household Estimates, With Age, Sex, and Components of Change: 1981-87*. County household estimates can be found in Current Population Reports, Series P-23, No. 156, *Estimates of Households for Counties: July 1, 1985*. Household projections are available in Current Population Reports, Series P-25, No. 986, *Projections of the Numbers of Households and Families: 1986 to 2000*.

Additional data for earlier years on households, families, and marital status have been published by the Bureau of the Census in Current Population Reports, Series P-20, P-23, and P-25. See the complete listing at the end of this publication.

Statistics on related subjects for metropolitan areas, counties, urbanized areas, cities, towns, states, regions, and the United States are available from the 1980 Census of Population. These data appear in Volume 1, *Characteristics of the Population*.

Appendix A. Definitions and Explanations

Coverage. The population in this report includes the civilian noninstitutional population of the United States plus approximately 952,000 members of the Armed Forces in the United States living off post or with their families on post in 1988 but excludes all other members of the Armed Forces.

Symbols. A dash (-) represents zero or rounds to zero. The symbol "B" means that the base for the derived figure is less than 75,000. An "X" means not applicable, and "NA" means not available.

Rounding of estimates. Individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Age. The age classification is based on the age of the person at the person's last birthday. The adult universe (i.e., population of marriageable age) is now comprised of persons 15 years old and over. Prior to 1980 the adult universe was 14 years old and over.

Race. The population is divided into three groups on the basis of race: White, Black, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except White and Black.

Persons of Hispanic/Spanish origin. Persons of Hispanic origin in this report were determined on the basis of a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (or the origin of some other household member) from a "flash card" listing ethnic origins. Hispanics, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Cuban, Central or South American, or some other Hispanic origin. Persons of Hispanic origin may be of any race.

Marital status. The marital status classification identifies four major categories: single (never married), married, widowed, and divorced. These terms refer to the marital status at the time of the enumeration.

The category "married" is further divided into "married, spouse present," "separated," and "other married, spouse absent." A person was classified as "married, spouse present" if the husband or wife was reported as a member of the household, even though he or she may

have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as separated included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. The group "other married, spouse absent" includes married persons living apart because either the husband or wife was employed and living at a considerable distance from home, was serving away from home in the Armed Forces, had moved to another area, or had a different place of residence for any other reason except separation as defined above.

Husband in Armed Forces. When a woman was reported as married but her husband was not enumerated as a member of the same household, an additional question was asked to determine whether her husband was in the Armed Forces. Women who were reported as separated were not asked the additional question.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. As of 1983 group quarters were defined in the Current Population Survey as noninstitutional living arrangements for groups not living in conventional housing units or groups living in housing units containing nine or more persons (or prior to 1983 five or more persons) unrelated to the person in charge. Since 1972, inmates of institutions have not been included in the Current Population Survey.

Householder. The householder refers to the person (or one of the persons) in whose name the housing unit is owned or rented (maintained) or, if there is no such

person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the "reference person" to whom the relationship of all other household members, if any, is recorded.

Prior to 1980, the husband was always considered the householder in married couple households. The number of householders is equal to the number of households. Also, the number of family householders is equal to the number of families.

Head versus householder. Beginning with the 1980 CPS, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" are used. Recent social changes have resulted in greater sharing of household responsibilities among the adult members and, therefore, have made the term "head" increasingly inappropriate in the analysis of household and family data. Specifically, the Census Bureau has discontinued its longtime practice of always classifying the husband as the reference person (head) when he and his wife are living together.

In this report, the term "householder" is used in the presentation of data that had previously been presented with the designation "head." The householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of other household members is to be recorded.

Family. A family is a group of two persons or more (one of whom is the householder) related by birth, marriage, or adoption and residing together; all such persons (including related subfamily members) are considered as members of one family. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members.

Family household. A family household is a household maintained by a family (as defined above), and any unrelated persons (unrelated subfamily members and/or secondary individuals) who may be residing there are included. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all persons living in the household, whereas family members include only the householder and his/her spouse. (See the definition of family.)

Related subfamily. A related subfamily is a married couple with or without children, or one parent with one or more own single (never married) children under 18 years old, living in a household and related to, but not including, the person or couple who maintains the household. The number of related subfamilies is not included in the count of families.

Unrelated subfamily. An unrelated subfamily (formerly called a secondary family) is a group of two persons or more who are related to each other by birth, marriage, or adoption, but who are not related to the householder. The unrelated subfamily may include persons such as guests, roomers, boarders, or resident employees and their relatives living in a household. The number of unrelated subfamily members is included in the number of household members but is not included in the count of family members.

Persons living with relatives in group quarters were formerly considered as members of unrelated subfamilies. However, the number of such unrelated subfamilies became so small (37,000 in 1967) that beginning with data for 1968 (and beginning with census data for 1960) the Bureau of the Census includes persons in these unrelated subfamilies in the count of secondary individuals.

Family group. A family group is any two or more persons (not necessarily including a householder) residing together, and related by birth, marriage, or adoption. A household may be comprised of one such group, more than one, or none at all. The count of family groups includes family households, related subfamilies, and unrelated subfamilies.

Married couple. A married couple, as defined for census purposes, is a husband and wife enumerated as members of the same household. The married couple may or may not have children living with them. The expression "husband-wife" or "married-couple" before the term "household," "family," or "subfamily" indicates that the household, family, or subfamily is maintained by a husband and wife. The number of married couples equals the count of married-couple families plus related and unrelated married-couple subfamilies.

Unrelated individuals. Unrelated individuals are persons of any age (other than inmates of institutions) who are not living with any relatives. An unrelated individual may be (1) a person living alone or with nonrelatives only, (2) a roomer, boarder, or resident employee with no relatives in the household, or (3) a group quarters member who has no relatives living with him/her. Thus, a widow who occupies her house alone or with one or more other persons not related to her, a roomer not related to anyone else in the housing unit, a maid living as a member of her employer's household with no

relatives in the household, and a resident staff member in a hospital living apart from any relatives are all examples of unrelated individuals.

Nonfamily householder. A nonfamily householder (formerly called a primary individual) is a person maintaining a household while living alone or with nonrelatives only.

Secondary Individual. A secondary individual is a person in a household or group quarters such as guest, roomer, boarder, or resident employee (excluding non-family householders and inmates of institutions) who is not related to any other person in the household or group quarters. (See section on unrelated subfamily for slight change in coverage of secondary individuals in 1968.)

Size of household, family, or subfamily. The term "size of household" includes all persons occupying a housing unit. "Size of family" includes the family householder and all other persons in the living quarters who are related to the householder by birth, marriage, or adoption. "Size of related subfamily" includes the husband and wife or the lone parent and their never-married sons and daughters under 18 years of age. "Size of unrelated subfamily" includes the reference person and all other members related to the reference person. If a family has a related subfamily among its members, the size of the family includes the members of the related subfamily.

Related persons and family members. In the classification of households by number of related persons, the person or couple who maintains the household (housing unit) and all persons in the household related to them are included. In the classification of families by number of family members, all persons in the family are included. The number of family members is the same as the size of the family.

Own children and related children. "Own" children in a family are sons and daughters, including stepchildren and adopted children, of the householder. Similarly, "own" children in a subfamily are sons and daughters of the married couple or parent in the subfamily. (All children shown as members of related subfamilies are own children of the person(s) maintaining the subfamily.) "Related" children in a family include own children and all other children in the household who are related to the householder by birth, marriage, or adoption. For each type of family unit identified in the CPS, the count of own children under 18 years old is limited to single (never married) children; however, "own children under 25" and "own children of any age," as the terms are used here, include all children regardless of marital status. The totals include never-married children living away from home in college dormitories.

The count of related children in families was formerly restricted to single (never married) children. However, beginning with data for 1968 the Bureau of the Census includes ever-married children under the category of related children. This change added approximately 20,000 children to the category of related children in March 1968.

Tenure. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent.

Units in structure. In the determination of the number of units in a structure, all housing units, both occupied and vacant, were counted. The statistics are presented in terms of the number of occupied housing units in structures of specified size, not in terms of the number of residential structures.

Years of school completed. In this report, data on years of school completed were derived from the combination of answers to two questions, (a) "What is the highest grade of school that the person has attended?" and (b) "Did the person finish this grade?"

The questions on educational attainment applied only to progress in "regular" schools. Such schools include public, private, and parochial schools (elementary, junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, "regular" schooling is that which advances a person toward an elementary or high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to a school in the regular school system.

Employed. Employed persons comprise (1) all civilians who, during the specified week, did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family, and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (own home housework, painting or repairing own home, etc.) or volunteer work for religious, charitable, and similar organizations.

Unemployed. Unemployed persons are those civilians who, during the survey week, had no employment but were available for work and (1) had engaged in any specific job-seeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off; or (3) were waiting to report to a new wage or salary job within 30 days.

Labor force. The definitions of labor force and employment status in this report relate to the population 15 years old and over. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" is comprised of all civilians classified as employed or unemployed.

Not in the labor force. All civilians who are not classified as employed or unemployed are defined as "not in the labor force." This group who are neither employed nor seeking work includes persons engaged only in own home housework, attending school, or unable to work because of long-term physical or mental illness; persons who are retired or too old to work, seasonal workers for whom the survey week fell in an off season, and the voluntary idle. Persons doing only unpaid family work (less than 15 hours) are also classified as not in the labor force.

Occupation. The data on occupation of employed persons refer to the civilian job held during the survey week. Persons employed at two or more jobs were reported in the job at which they worked the greatest number of hours during the week.

In 1980, the Bureau of the Census revised the Standard Occupational Classification System (SOC) for use in its tabulation program for the 1980 census and subsequent published reports on occupational data. Consequently, the new classification system was incorporated into the CPS tabulation program in January 1983. While the new system provides comparability between the CPS and other data sources, it causes a break in continuity for all CPS series containing occupational data.

Differences between the 1970 and 1980 occupational systems affect classifications at all levels. Such commonly used identifiers as white-collar, blue-collar, professional and technical, craft workers, and operative occupations have been eliminated. These identifiers have been replaced with new categories which represent conceptual as well as language changes. Moreover, many of the components of the former groupings have been shifted to such an extent that they cannot be

made to correspond readily to the new categories. For a more complete explanation and description of the changes from the old to new occupational classification system see the February 1983 issue of "Employment and Earnings" by the Bureau of Labor Statistics.

Metropolitan-nonmetropolitan residence. The population residing in metropolitan statistical areas (MSA's) constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term SMSA was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's).

Central cities. The largest city in each MSA is always designated a central city. There may be additional central cities if specified requirements, designed to identify places of central character within the MSA, are met. Although the largest central cities are generally included in the title of the MSA, there may be central cities that are not part of the title. The balance of the MSA outside the central city or cities often is regarded as equivalent to "suburbs."

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 30, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan areas as defined on the basis of the 1970 census. Since there are important differences in the population classified as metropolitan using the 1970 and 1984 definitions, comparisons should be avoided.

The new CPS metropolitan estimates have consistently been higher than independent estimates of the metropolitan population prepared by the Census Bureau; the new CPS nonmetropolitan estimates have been lower than the independent estimates. The magnitude of the monthly differences has varied from 900,000 to 2.5 million persons over the past year, so that the

proportion of the population living in metropolitan areas according to the CPS has ranged from 0.4 to 1.0 percentage points higher than the independent estimate. The difference in level between the two sets of estimates is partially attributable to the basic CPS sample design, which, because of sampling variability, includes an oversample of metropolitan households and an undersample of nonmetropolitan households. The monthly variations result from the exit and entrance of rotation groups, each with slightly different metropolitan-nonmetropolitan proportions, into the sample. The apparent overestimation of metropolitan and underestimation of nonmetropolitan population in the CPS relative to the Bureau's independent estimates should be taken into account when using the data.

Income. Data on income cover money income only, prior to deduction for taxes, received from such sources

as wages or salaries, net income from self-employment, Social Security, dividends, interest, public assistance and welfare, unemployment compensation, government pensions, and veterans payments. Certain money receipts such as capital gains are not included. For a more detailed explanation, see Bureau of the Census, Current Population Reports, Series P-60.

Mobility status. The population 1 years old and over was classified according to mobility status on the basis of a comparison between the place of residence of each individual at the time of the March 1986 survey and the place of residence 1 year earlier. Nonmovers are all persons who were living in the same house at the end of the period as at the beginning of the period. Movers are all persons who were living in a different house at the end of the period than at the beginning.

Appendix B. Source and Reliability of Estimates

SOURCE OF DATA

Most estimates in this report come from data obtained in March of years 1970 through 1988 in the Current Population Survey (CPS). The Bureau of the Census conducts the survey every month, although this report uses mostly March data for its estimates. The March survey uses two sets of questions, the basic CPS and the supplement.

Basic CPS. The basic CPS collects primarily labor force data about the civilian noninstitutional population. Interviewers ask questions concerning labor force participation about each member 14 years old and over in every sample household.

The present CPS sample was selected from the 1980 decennial census files with coverage in all 50 States and the District of Columbia. The sample is continually updated to account for new residential construction. It is located in 729 areas comprising 1,973 counties, independent cities, and minor civil divisions. About 59,500 occupied households are eligible for interview every month. Interviewers are unable to obtain interviews at about 2,500 of these units because the occupants are not home after repeated calls or are unavailable for some other reason.

Since the introduction of the CPS, the Bureau of the Census has redesigned the CPS sample several times to improve the quality and accuracy of the data and to satisfy changing data needs. The most recent changes were completely implemented in July 1985.

The following table summarizes changes in the CPS designs for the years for which data appear in this report.

Description of the Current Population Survey

Time period	Number of sample areas	Housing units eligible ¹	
		Interviewed	Not interviewed
1986-88.....	729	57,000	2,500
1985.....	² 629/729	57,000	2,500
1982-84.....	629	59,000	2,500
1980-81.....	629	65,500	3,000
1977-79.....	614	55,000	3,000
1973-76.....	461	46,500	2,500
1972.....	449	46,000	2,000
1970-71.....	449	48,000	2,000

¹Excludes about 2,500 Hispanic households added from the previous November sample. (See "March Supplement.")

²The CPS was redesigned following the 1980 Census of Population and Housing. During phase-in of the new design, housing units from the new and old designs were in the sample.

March supplement. In addition to the basic CPS questions, interviewers asked supplementary questions in March about relationship, marital status, and living arrangements.

In order to obtain more reliable data for the Hispanic population, the March CPS sample was increased by about 2,500 eligible housing units, interviewed the previous November, that contained at least one sample person of Hispanic origin. In addition, the sample included persons in the Armed Forces living off post or with their families on post.

Estimation procedure. This survey's estimation procedure inflates weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, sex, race and Hispanic/non-Hispanic categories. The independent estimates were based on statistics from decennial censuses of population; statistics on births, deaths, immigration and emigration; and statistics on the size of the Armed Forces. The independent population estimates used for 1980 to present were based on updates to controls established by the 1980 decennial census. Data previous to 1980 were based on independent population estimates from the most recent prior decennial census. For more details on the change in independent estimates, see the section entitled "Introduction of 1980 Census Population Controls" in an earlier report (Series P-60, No. 133). The estimation procedure for the March supplement included a further adjustment so husband and wife of a household received the same weight.

The estimates in this report for 1985 through 1988 also employ a revised survey weighting procedure for persons of Hispanic origin. In previous years, weighted sample results were inflated to independent estimates of the noninstitutional population by age, sex, and race. There was no specific control of the survey estimates for the Hispanic population. Since then, the Bureau of the Census developed independent population controls for the Hispanic population by sex and detailed age groups. Revised weighting procedures incorporate these new controls. The independent population estimates include some, but not all, undocumented immigrants.

RELIABILITY OF ESTIMATES

Since the CPS estimates come from a sample, they may differ from figures from a complete census using

the same questionnaires, instructions, and enumerators. A sample survey estimate has two possible types of error: sampling and nonsampling. The accuracy of an estimate depends on both types of error, but the full extent of the nonsampling error is unknown. Consequently, one should be particularly careful when interpreting results based on a relatively small number of cases or on small differences between estimates. The standard errors for CPS estimates primarily indicate the magnitude of sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure systematic biases in the data. (Bias is the average over all possible samples of the differences between the sample estimates and the desired value.)

Nonsampling variability. Nonsampling errors can be attributed to many sources. These sources include the inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, respondents' inability or unwillingness to provide correct information or to recall information, errors made in data collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units with the sample (undercoverage).

CPS undercoverage results from missed housing units and missed persons within sample households. Compared to the level of the 1980 decennial census, overall CPS undercoverage is about 7 percent. CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. As described previously, ratio estimation to independent age-sex-race-Hispanic population controls partially corrects for the bias due to undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race-Hispanic group. Furthermore, the independent population controls have not been adjusted for undercoverage in the 1980 census.

For additional information on nonsampling error including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, *An Error Profile: Employment as Measured by the Current Population Survey*, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978 and Technical Paper 40, *The Current Population Survey: Design and Methodology*, Bureau of the Census, U.S. Department of Commerce.

Sampling variability. Sampling variability is variation that occurred by chance because a sample was surveyed rather than the entire population. Standard errors,

as calculated by methods described later in "Standard errors and their use," are primarily measures of sampling variability, although they may include some nonsampling error. The sample estimate and its standard error enable one to construct a confidence interval, a range that would include the average result of all possible samples with a known probability. For example, if all possible samples were surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples. However, one can say with specified confidence that the interval includes the average estimate calculated from all possible samples. Some statements in the report may contain estimates followed by a number in parentheses. This number can be added to and subtracted from the estimate to calculate upper and lower bounds of the 90-percent confidence interval. For example, if a statement contains the phrase "grew by 1.7 percent (± 1.0)," the 90 percent confidence interval for the estimate, 1.7 percent, is 0.7 percent to 2.7 percent.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis appearing in this report is that the population parameters are different. An example of this would be comparing the number of family households in 1988 to the number of family households in 1980. Tests may be performed at various levels of significance, where a significance level is the probability of concluding that the characteristics are different when, in fact, they are the same. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better. This means that the absolute value of the estimated difference between characteristics is greater than or equal to 1.6 times the standard error of the difference.

Comparability of data. Data obtained from the CPS and other sources are not entirely comparable. This results from differences in interviewer training and experience and in differing survey processes. This is an example of nonsampling variability not reflected in the standard errors. Use caution when comparing results from different sources.

Caution should also be used when comparing estimates in this report, which reflect 1980 census-based population controls, with estimates for earlier years, which reflect 1970 census-based population controls. This change in population controls had relatively little

impact on summary measures such as means, medians, and percent distributions, but did have a significant impact on levels. For example, use of 1980 based population controls results in about a 2-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for 1980-based data will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

Since no independent population control totals for persons of Hispanic origin were used before 1984, compare Hispanic estimates over time cautiously.

Note when using small estimates. Summary measures (such as medians and percent distributions) are shown only when the base is 75,000 or greater. Because of the large standard errors involved, summary measures would probably not reveal useful information when computed on a smaller base. However, estimated numbers are shown even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates permit combinations of the categories to suit data users' needs. Take care in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Standard errors and their use. A number of approximations are required to derive, at a moderate cost, standard errors applicable to all the estimates in this report. Instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. Thus, the tables show levels of magnitude of standard errors rather than the precise standard errors.

Standard errors of estimated numbers. There are two ways to compute the approximate standard error, s_x , of an estimated number shown in this report. The first uses the formula

$$s_x = fs \quad (1)$$

where f is a factor from table B-4, and s is the standard error of the estimate obtained by interpolation from table B-1. The second method uses formula (2), from which the standard errors in table B-1 were calculated. This formula will provide more accurate results than formula (1).

$$s_x = \sqrt{ax^2 + bx} \quad (2)$$

Here x is the size of the estimate and a and b are the parameters in table B-4 associated with the particular type of characteristic. When calculating standard errors

Table B-1. Standard Errors of Estimated Numbers
(Numbers in thousands)

Size of estimate	Total or White	Black	Hispanic
10.....	4	4	4
25.....	7	6	6
50.....	9	9	9
75.....	12	11	11
100.....	13	13	13
250.....	21	20	20
500.....	30	28	28
750.....	36	34	34
1,000.....	42	39	38
2,500.....	66	60	56

7,500.....	113	91	66
10,000.....	130	97	(X)
15,000.....	156	96	(X)
25,000.....	195	(X)	(X)
50,000.....	253	(X)	(X)
70,000.....	275	(X)	(X)
100,000.....	279	(X)	(X)
125,000.....	257	(X)	(X)

X Not applicable.

For regional data, multiply the standard errors by 0.91, 0.96, 0.99, and 1.17 for the Northeast, Midwest, South, and West, respectively. For 1979 and earlier, multiply the standard errors by 0.88.

For a particular characteristic, see table B-4 for the appropriate factor to apply to the standard errors.

for numbers from cross-tabulations involving different characteristics, use the factor or set of parameters for the characteristic which will give the largest standard error.

Illustration of the computation of the standard error of an estimated number. Table 1 shows there were 51,809,000 married-couple family households in 1988. Using formula (1), the appropriate factor from table B-4 (1.0), and interpolation from table B-1, the approximate standard error is

$$s_x = (1.0)(255,000) = 255,000$$

Alternatively, using formula (2) with $a = -0.000010$ and $b = 1,778$ from table B-4, the approximate standard error is

$$s_x = \sqrt{(-0.000010)(51,809,000)^2 + (1,778)(51,809,000)} = 255,000$$

This means a 90-percent confidence interval for the number of married-couple family households in 1988 is from 51,401,000 to 52,217,000, i.e., $51,809,000 \pm 1.6(255,000)$.

Standard errors of estimated percentages. The accuracy of an estimated percentage, computed using sample data for both numerator and denominator, depends on both the size of the percentage and the base of the percentage. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages

Table B-2. Standard Errors of Estimated Percentages: Total or White

Base of estimated percentages (thousands)	Estimated percentages							
	1 or 99	2 or 98	5 or 95	10 or 90	20 or 80	25 or 75	35 or 65	50
10	4.2	5.9	9.2	12.6	16.9	18.3	20.1	21.1
25	2.6	3.7	5.8	8.0	10.7	11.6	12.7	13.3
50	1.3	2.6	4.1	5.7	7.5	8.2	9.0	9.4
75	1.5	2.2	3.4	4.6	6.2	6.7	7.3	7.7
100	1.3	1.9	2.9	4.0	5.3	5.8	6.4	6.7

5,000	0.2	0.3	0.4	0.6	0.8	0.8	0.9	0.9
7,500	0.2	0.2	0.3	0.5	0.6	0.7	0.7	0.8
10,000	0.13	0.2	0.3	0.4	0.5	0.6	0.6	0.7
15,000	0.11	0.2	0.2	0.3	0.4	0.5	0.5	0.5
25,000	0.08	0.12	0.2	0.2	0.3	0.4	0.4	0.4
50,000	0.06	0.08	0.13	0.2	0.2	0.3	0.3	0.3
70,000	0.05	0.07	0.11	0.2	0.2	0.2	0.2	0.2
100,000	0.04	0.06	0.09	0.13	0.2	0.2	0.2	0.2
125,000	0.04	0.05	0.08	0.11	0.2	0.2	0.2	0.2

For regional data multiply the standard errors by 0.91, 0.96, 0.99 and 1.17 for the Northeast, Midwest, South and West, respectively. For 1979 and earlier, multiply the standard errors by 0.88.

For a particular characteristic, see table B-4 for the appropriate factor to apply to the standard error.

are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter from table B-4 indicated by the numerator.

The approximate standard error, $s_{x,p}$, of an estimated percentage can be obtained by use of the formula

$$s_{x,p} = fs \quad (3)$$

In this formula, f is the appropriate factor from table B-4, and s is the standard error of the estimate obtained by interpolation from table B-2 or B-3. Alternatively, formula (4) will provide more accurate results:

$$s_{x,p} = \sqrt{\frac{b}{x} p (100 - p)} \quad (4)$$

Here x is the total number of persons, families, households, or unrelated individuals in the base of the percentage, p is the percentage ($0 \leq p \leq 100$), and b is the parameter in table B-4 associated with the characteristic in the numerator of the percentage.

Illustration of the computation of the standard error of a percentage. Table 20 shows there were 91,066,000 households in 1988, 28.5 percent of which were non-family households. Using formula (3), the appropriate factor from table B-4 (1.0), and $s = 0.2$ (interpolation from table B-2), the standard error is approximately

$$s_{x,p} = (1.0)(0.2) = 0.2$$

Alternatively, using formula (4) with $b = 1,778$ from table B-4, the approximate standard error is

$$s_{x,p} = \sqrt{\frac{1,778}{91,066,000} (28.5) (71.5)} = 0.2$$

This means a 90-percent confidence interval for the percentage of households that are nonfamily households in 1988 is from 28.2 to 28.8 percent, i.e., $28.5 \pm 1.6 (0.2)$.

Standard error of a difference. The standard error of the difference between two sample estimates is approximately equal to

$$s_{x-y} = \sqrt{s_x^2 + s_y^2} \quad (5)$$

where s_x and s_y are the standard errors of the estimates, x and y . The estimates can be number, percentages, ratios, etc. This will represent the actual standard error quite accurately for the difference between estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. However, if there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration of the computation of the standard error of a difference. In 1988, there were 25,933,000 non-family households. In 1981, this estimate was 22,059,000. The difference between the estimates for 1988 and 1981 is 3,874,000. Using formula (2) and the appropriate a and b parameters for 1988 and 1981, the approximate standard errors of these estimates are

$$s_x = \sqrt{(-0.000010) (25,933,000)^2 + (1,778)(25,933,000)} = 198,000, \text{ and}$$

$$s_y = \sqrt{0.78 (-0.000010) (22,059,000)^2 + 0.78 (1,778)(22,059,000)} = 164,000$$

From formula (5), the approximate standard error of the estimated difference of 3,874,000 nonfamily households is

$$s_{x-y} = \sqrt{(164,000)^2 + (198,000)^2} = 257,000$$

This means a 90-percent confidence interval for the 3,874,000 difference is from 3,463,000 to 4,285,000. Since this interval does not contain zero, we conclude with 90-percent confidence the number nonfamily households has increased.

Standard error of a ratio. Certain estimates may be calculated as the ratio of two numbers. The standard error of a ratio, x/y , may be computed using

$$s_{x/y} = \frac{x}{y} \sqrt{\left[\frac{s_x}{x} \right]^2 + \left[\frac{s_y}{y} \right]^2 - 2r \frac{s_x s_y}{xy}} \quad (6)$$

The standard error of the numerator, s_x , and that of the denominator, s_y may be calculated using formula (2). Alternatively, use formula (1) and tables B-1 through B-3. In formula (6), r represents the correlation between the numerator and the denominator of the estimate.

For one type of ratio, the denominator is a count of families or households and the numerator is a count of persons in those families or households with a certain characteristic. If there is at least one person with the characteristic in every family or household, use 0.7 as an estimate of r . An example of this type is the mean number of children per family with children.

For all other types of ratios, r is assumed to be zero. If r is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio. An example of this type is the mean number of children per family.

NOTE: For estimates expressed as the ratio of x per 100 y or x per 1,000 y , multiply formula (6) by 100 or 1,000, respectively, to obtain the standard error.

Illustration of the computation of the standard error of a ratio. Table 20 shows the number of household members under 18 years of age, x , was 63,439,000 and the number of households, y , was 91,066,000 in 1988. The ratio of family household members under 18 to all households was 0.70. The standard error of this estimate (x/y) is calculated using the following steps:

1. Compute s_x and s_y using formula (2).

$$s_x = \sqrt{(-0.000025)(63,439,000)^2 + (4,480)(63,439,000)} = 428,000$$

$$s_y = \sqrt{(-0.000010)(91,066,000)^2 + (1,778)(91,066,000)} = 281,000$$

2. Compute $(s_{x/x})^2 = 0.000046$.

3. Compute $(s_{y/y})^2 = 0.000010$.

4. Using formula (6) and $r = 0$, the approximate standard error is

$$s_{x/y} = 0.70 \sqrt{0.000046 + 0.000010} = 0.005$$

This means a 90-percent confidence interval for the ratio of household members under 18 years of age to all households is from 0.69 to 0.71, i.e., $0.70 \pm 1.6(0.005)$.

Standard error of a mean for grouped data. The formula used to estimate the standard error of a mean for grouped data is

$$s_{\bar{x}} = \sqrt{(b/y)S^2} \quad (7)$$

In this formula, y is the size of the base of the distribution and b is a parameter from table B-4. The variance, S^2 , is given by the following formula:

$$S^2 = \sum_{i=1}^c p_i \bar{x}_i^2 - \bar{x}_2 \quad (8)$$

Table B-3. Standard Errors of Estimated Percentages: Black or Hispanic

Base of estimated percentages (thousands)	Estimated percentages							
	1 or 99	2 or 98	5 or 95	10 or 90	20 or 80	25 or 75	35 or 65	50
10	4.0	5.6	8.7	12.0	16.0	17.4	19.1	20.0
25	2.5	3.6	5.5	7.6	10.1	11.0	12.1	12.7
50	1.3	2.5	3.9	5.4	7.2	7.8	8.6	9.0
75	1.5	2.0	3.2	4.4	5.8	6.3	7.0	7.3
100	1.3	1.8	2.8	3.8	5.1	5.5	6.0	6.3
250	0.8	1.1	1.8	2.4	3.2	3.5	3.8	4.0
500	0.6	0.8	1.2	1.7	2.3	2.4	2.7	2.8
750	0.5	0.6	1.0	1.4	1.8	2.0	2.2	2.3
1,000	0.4	0.6	0.9	1.2	1.6	1.7	1.9	2.0
2,500	0.2	0.4	0.6	0.8	1.0	1.1	1.2	1.3
5,000	0.2	0.2	0.4	0.5	0.7	0.8	0.8	0.9
7,500	0.2	0.2	0.3	0.4	0.6	0.6	0.7	0.7
10,000	0.13	0.2	0.3	0.4	0.5	0.6	0.6	0.6
15,000	0.10	0.14	0.2	0.3	0.4	0.4	0.5	0.5

For regional data, multiply the standard errors by 0.91, 0.96, 0.99 and 1.17 for the Northeast, Midwest, South and West, respectively. For 1979 and earlier, multiply the standard errors by 0.88.

For a particular characteristic, see table B-4 for the appropriate factor to apply to the standard errors.

where \bar{x} , the mean of the distribution, is estimated by

$$\bar{x} = \sum_{i=1}^c p_i \bar{x}_i \quad (9)$$

c is the number of groups; i indicates a specific group, thus taking on values 1 through c .

p_i is the estimated proportion of households, families or persons whose values, for the characteristic (x -values) being considered, fall in group i .

\bar{x}_i is $(Z_{i-1} + Z_i)/2$ where Z_{i-1} and Z_i are the lower and upper interval boundaries, respectively, for group i . \bar{x}_i is assumed to be the most representative value for the characteristic for households, families, and unrelated individuals or persons in group i . Group c is open-ended, i.e., no upper interval boundary exists. For this group the approximate average value is

$$\bar{x}_c = \frac{3}{2} Z_{c-1} \quad (10)$$

Standard error of a median. The sampling variability of an estimated median depends on the form of the distribution and the size of the base. One can approximate the accuracy of an estimated median by determining a confidence interval about it. (See the section on sampling variability for a general discussion of confidence intervals.) Estimate the 68-percent confidence limits of a median based on sample data using the following procedure.

1. Determine, using formula (4), the standard error of the estimate of 50 percent from the distribution.
2. Add to and subtract from 50 percent the standard error determined in step 1.

3. Using the distribution of the characteristic, determine upper and lower limits of the 68-percent confidence interval by calculating values corresponding to the two points established in step 2. Use the following formula to calculate the upper and lower limits.

$$X_{pn} = \frac{p^N}{N_2 - N_1} (A_2 - A_1) + A_1 \quad (11)$$

where

X_{pn} = estimated upper and lower bounds for the confidence interval ($0 \leq p \leq 1$). For purposes of calculating the confidence interval, p takes on the values determined in step 2. Note that X_{pn} estimates the median when $p = 0.50$.

N = for distribution of numbers: the total number of units (persons, households, etc.) for the characteristic in the distribution.

= for distribution of percentages: the value 1.0.

p = the values obtained in step 2.

A_1, A_2 = the lower and upper bounds, respectively, of the interval containing X_{pn} .

N_1, N_2 = for distribution of numbers: the estimated number of units (persons, households, etc.) with values of the characteristic greater than or equal to A_1 and A_2 , respectively.

= for distribution of percentages: the estimated percentage of units (persons, households, etc.) having values of the characteristic greater than or equal to A_1 and A_2 , respectively.

4. Divide the difference between the two points determined in step 3 by two to obtain the standard error of the median.

Illustration of the computation of the standard error of a median. Table 12 of this report shows that the estimated median age of married-couple family householders with no own children under 18 in 1988 was 58.1

Table B-4. a and b Parameters and Factors for Calculating Approximate Standard Errors for Persons, Families, Households, Householders, and Unrelated Individuals

Characteristic	Persons			Families, households, householders and unrelated individuals		
	a	b	f	a	b	f
Total or White	(X)	(X)	(X)	-0.000010	1,778	1.0
Some household members	-0.000025	4,480	1.6	(X)	(X)	(X)
All household members	-0.000031	5,444	1.7	(X)	(X)	(X)
Black and other races	(X)	(X)	(X)	-0.000066	1,606	1.0
Some household members	-0.000265	6,426	2.0	(X)	(X)	(X)
All household members	-0.000391	9,475	2.4	(X)	(X)	(X)
Hispanic	(X)	(X)	(X)	-0.000137	1,606	1.0
Some household members	-0.000548	6,426	2.0	(X)	(X)	(X)
All household members	-0.000807	9,475	2.4	(X)	(X)	(X)

X Not applicable.

For regional estimates, multiply the a and b parameters by 0.83, 0.93, 0.98 and 1.37 for Northeast, Midwest, South and West, respectively. For and earlier, multiply the parameters by 0.78.

For nonmetropolitan data, multiply the parameters by 1.5.

years and the base of the distribution from which this median was determined, N, was 27,209,000 householders.

1. Using formula (4), and the appropriate parameter ($b = 1,778$) from table B-4, the standard error of 50 percent with a base of 27,209,000 is

$$\sqrt{\frac{1,778}{27,209,000}} (50.0) (100.0 - 50.0) = 0.4 \text{ percent}$$

2. To obtain the 68-percent confidence interval, add to and subtract from 50 percent the standard error found in step 1. This yields percentage limits of 49.6 and 50.4.
3. Table 12 also shows that 15,944,000 married-couple family householders with no own children under 18 were 55 years of age or older and

8,505,000 were 65 or older. Use formula (11) to find the upper limit on the 68-percent confidence interval:

$$\frac{0.496 (27,209,000) - 15,944,000}{8,505,000 - 15,944,000} (65 - 55) + 55 = 58.3$$

Similarly, since the lower limit is in the same age range, it can be computed as

$$\frac{0.504 (27,209,000) - 15,944,000}{8,505,000 - 15,944,000} (65 - 55) \dagger 55 = 58.0.$$

4. The standard error of the median age of married-couple family householders with no own children can be approximated as

$$s_{\text{median}} = \frac{58.3 - 58.0}{2} = 0.2 \text{ years}$$

Announcing . . .

Time Series of County and MSA Population Estimates, 1980-85

The Bureau of the Census has released individual State reports showing annual population estimates for counties (or equivalents) and metropolitan statistical areas (MSA's) for the years 1981 through 1985, together with 1980 census counts and components of population change for the period 1980 to 1985. The series of 50 State reports has been published on a flow basis over several months in Current Population Reports, Series P-26.

These estimates supersede the Series P-26 State reports issued for 1981-83 and the provisional county estimates published separately for 1984 and 1985. They are consistent with provisional county population estimates for 1986 released in Current Population Reports, Series P-26, No. 86-A.
