ABSTRACT

This resource list on preventing alcohol and other drug use among secondary school students was compiled by the Office for Substance Abuse Prevention (OSAP). All resources have been reviewed to ensure that they reflect the latest scientific facts and convey a clear no-use message. The list is divided into three major sections: (1) resources for secondary school students; (2) resources for parents, secondary school teachers, and administrators; and (3) organizations and programs. The first section contains two subdivisions: (1) publications; and (2) posters and other materials. The second section groups resources under three subheadings: (1) materials for classroom/group activities; (2) assessment materials; and (3) general information materials. The third section provides brief descriptions of various organizations and programs involved in preventing and stopping alcohol and other drug use among young people. Most of the materials included in this resource list are free of charge. (LLL)

You Can Help Prevent Alcohol and Other Drug Use Among Secondary School Students

Students have never been more aware of how alcohol and other drugs threaten their well-being and future. Throughout the country, real-life stories and statistics are accumulating, pointing to the success of prevention efforts.

The 13th National High School Senior Drug Abuse Survey, released in January 1988, for the first time showed a significant drop in the use of cocaine among those still in school and indicated that daily use of marijuana reached the lowest levels ever among these students. Abuse of stimulants and sedatives also continued to decline during the past year among high school seniors.

Dr. Elaine M. Johnson, Director of OSAP, attributes these successes to the teamwork of many people across the country. "Until we had solid information on prevention and intervention strategies, parents and teachers were handicapped and frustrated, and young people were easy prey." But now that we are learning what works, "the prevention message is spreading and drug-free is becoming a way of life."

The good news is that prevention efforts are paying off. Education about the risks involved in illicit drug use, including alcohol use by underage youth, appears to be a key factor in preventing use among secondary school students. Awareness of the risks associated with cocaine use and other strategies, such as learning refusal

skills and involvement in alternative activities, may account for some of the positive changes in personal attitudes and peer norms.

However, the High School Senior Survey also showed that alcohol use hasn't decreased during the past 3 years. Nor is there cause for complacency when viewing the survey's preliminary data that suggest no decline in the use of LSD, inhalants, heroin, or opiates other than heroin. Much remains to be done.

This resource list was compiled to help junior and senior high school students and the adults who assist them in maintaining alcohol- and drug-free schools and lives. All resources have been reviewed by OSAP to ensure that they reflect the latest scientific facts and convey a clear nonuse message. The list is divided into three major sections:

- Resources for secondary school students;
- Resources for parents, secondary school teachers, and administrators; and
- Organizations and programs.

The first section contains two subdivisions--publications and posters and other materials. The

second section groups resources under three subheadings--materials for classroom/group activities, assessment materials, and general information materials. In the third section are brief statements about various organizations and programs involved in preventing and stopping alcohol and other drug use among young people. There is no charge for materials in this list unless otherwise indicated.
