ABSTRACT

This report presents the findings from South Carolina's seventh statewide computer survey. The survey solicited information on computer equipment and software, and dealt with such issues as the instructional and administrative uses of computers and the availability and use of Software Evaluation Exchange Dissemination (SEED) software reviews and a BSAP-correlated listing of recommended software. A seven-question school form and a five-question district form, as well as computer equipment forms, were distributed to all South Carolina public school principals and district superintendents. Major findings of the survey include: (1) all school district offices had computers, of which 38% were IBM computers; (2) 61% of school faculty members were rated as being computer literate by their principals; and (3) the rate of growth in the total number of computers has slowed down slightly over the past 2 years. All results are presented in narrative and tabular formats. An addendum to the survey provides information on integrated learning systems and other major instructional computing projects in the state. (DB)

## INTRODUCTION

The 1989-90 Computer Survey is the seventh statewide survey conducted by the Office of Instructional Technology, State Department of Education. This survey was conducted in April 1990.

Tables, charts, and graphs are provided to illustrate results of the 1989-90 survey. Trends and other descriptive statistics are provided to assist educators with decision-making in the use of technology.

## SURVEY DESIGN

The questionnaire inventoried computer equipment and software, and dealt with such issues as the instructional and administrative uses of computers and the availability and use of SEED (Software Evaluation Exchange Dissemination) software reviews, and a BSAP-correlated listing of recommended software. A seven-question school form and a five-question district form, as well as computer equipment forms, were distributed to all South Carolina public school principals and district superintendents.

## RESPONSE RATE

A total of 1,094 school and 94\* district forms were received, for response rates of 99 percent and 100 percent, respectively.

## SURVEY HIGHLIGHTS

Major findings of the survey include the following.

### Districts

- All school district offices had computers.
- 38 percent of the total computers used at the district level were IBM computers.
- The total rate of change in the number of computers at the district level was 180 percent in 1985, 83 percent in 1986, 61 percent in 1987, 28 percent in 1988, and -.24 percent in 1989.
- The largest percentage (31 percent) change in the number of computers used belonged to NCR.
- 15 percent of all printers were laser printers.
- The percent of responding school district offices (86) using BSAP software correlation books was 92 percent.

### Schools

- Over 98 percent of public schools had computers for either instructional or administrative use.
- Over 98 percent of the schools having at least one computer (1,085) had at least one printer (1,078).
- 61 percent of school faculty members were rated as being computer-literate by their principals.
- The computer-student ratio for all computers dropped by 12 percent, from 1:17 to 1:15, from 1988 to 1989.
- The rate of growth in the total number of computers has slowed down slightly over the past two years (from 23 percent in 1988 to 18 percent in 1989).
- IBM continued to be the second-largest computer supplier to schools. The largest rate of change in the number of computers belonged to NCR (more than 57 percent over last year).
- The percent of responding schools (706) using BSAP software correlation books was 72 percent.
- Schools indicated that the rate of computer-literate certified faculty increased 45 percent, 51 percent, 57 percent, and 61 percent during 1986, 1987, 1988, and 1989, respectively.

\*Includes S.C. Department of Youth Services, S.C. School for the Deaf and Blind, and S.C. Opportunity School.

## SURVEY RESULTS

### I. April 1990 Computer Equipment Inventory

#### A. District Office Survey of Computers and Printers

##### 1. Computers

A total of 2,468 computers, comprising over 37 brands, and 1,501 printers were located in school district offices. The number of computers reported by the districts is provided in the table below.

<u>Year</u>	<u>Number of Computers</u>	<u>Number of Districts</u>
1989-90	2,468	94*
1988-89	2,474	93*
1987-88	1,931	92
1986-87	1,199	92
1985-86	656	92
1984-85	234	88
1983-84	323	73

The top-four computer brands in school district offices, their quantities, and percentage change over the last year are listed below.

#### 1989 Computer Survey of School District Offices

<u>Brand of Computer</u>	<u>Percent of All Computers</u>			<u>Percent Change</u>					
	<u>1989</u>	<u>1988</u>	<u>1987</u>	<u>1989</u>	<u>1988</u>	<u>1987</u>			
Apple	756	1,072	743	31	43.3	38.5	-29	44	41
IBM	949	772	559	38	31.2	29.0	23	38	63
Radio Shack	52	81	77	2	3.3	4.0	-36	5	-3
NCR	318	242	170	13	9.8	8.8	31	42	73
Other	<u>393</u>	<u>307</u>	<u>382</u>	<u>16</u>	<u>12.4</u>	<u>19.7</u>	28	-20	150
Total	2,468	2,474	1,931	100	100	100	-.24	28	61

The IBM computer had the highest percentage (38) of school district inventory.

\* Includes S.C. Department of Youth Services, S.C. School for the Deaf and Blind, and S.C. Opportunity School.

## 2. Printers

The breakdown of printers is illustrated by the following chart and table.

Fifty-seven percent of the printers were dot matrix. Table 4 on page 12 illustrates that over 55 percent of the districts had 10 or more printers.

## B. School Survey of Computers and Printers

### 1. Computers

The number of schools having computers has increased substantially over the past five years. Over the past two years, the total number of computers in schools increased from 36,599 to 43,092, a 17.74-percent increase.

Number of Schools with Computers and Total Computers

<u>Years</u>	<u>Number of Schools with Computers</u>	<u>Percent Change Over Last Year</u>	<u>Total Number of Computers</u>	<u>Percent Change Over Last Year</u>
1989-90	1,085	-.40	43,092	17.74
1988-89	1,089	1.40	36,599	22.95
1987-88	1,074	1.26	29,766	23.81
1986-87	1,061	- 0.09	24,041	60.71
1985-86	1,062	17.09	14,959	133.73
1984-85	907	21.10	6,400	57.87
1983-84	749	--	4,054	--

The ratio of computers to students as reported by the schools, is illustrated in the following table. The ratio of computers used in grades K-12 for instruction improved to 1:17, compared to the past year's ratio of 1:21. This ratio has been decreasing steadily over the past five years. See the following table and graph.

**Ratio of Computers to Students**

	1989-90	1988-89	1987-88
<u>Total Computers*</u>			
Grades K-12	1:15	1:17	1:21
Grades K-7	1:17	1:20	1:25
Grades 8-12	1:12	1:14	1:17
<u>Instructionally Used Computers</u>			
Grades K-12	1:18	1:21	1:25
Grades K-7	1:21	1:24	1:29
Grades 8-12	1:14	1:17	1:20
<u>180-Day Student Enrollment</u>			
Grades K-12	633,662	633,345	632,044
Grades K-7	412,865	406,453	398,489
Grades 8-12	220,797	226,892	236,555

**1983-1989 Computer-To-Student Ratio  
(Grades K-12 for Total Computers)**

\* Total computers includes those used for administration and instruction.

The number of computers used in the schools by major brand, percent of all computers, and percent change over last year are given in the table below.

### Top-Five Computer Brands Used in Schools

Brands of Computers	Percent of All Computers			Percent Change					
	1989	1988	1987	1989	1988	1987	1989	1988	1987
Apple	23,379	20,833	17,386	54.2	57.0	58.4	12	20	18
IBM	8,916	6,726	4,933	21.0	18.0	16.5	33	36	38
Radio Shack	2,446	2,371	2,381	5.6	7.0	8.0	-3	-4	15
Atari	1,702	1,422	984	3.9	4.0	3.3	20	45	99
NCR	1,545	982	563	3.5	2.6	2.0	57	74	52
Other	<u>5,104</u>	<u>4,265</u>	<u>3,519</u>	<u>11.8</u>	<u>1.2</u>	<u>11.8</u>	20	23	37
Total	43,092	36,599	29,766	100.0	100.0	100.0	18	23	24

Fifty-four percent of the computer equipment in the schools was by Apple. NCR had the largest increase from last year (57 percent). The overall rate of increase in computers has slowed down somewhat in comparison to last year (18 percent, down from 23 percent). Table 5 on page 13 shows the number of computers, brand/model, and their designated use in schools. Table 6 on page 14 shows that .28 percent of the schools had one computer. Furthermore, 72 percent of the schools with computers had 21 or more computers.

## 2. Printers

Printers are subdivided into four broad categories, distributed as follows.

Seventy-seven percent of all printers were dot matrix. Table 8 on page 15 shows the distribution and use of printers in the schools. Table 9 on page 15 illustrates the frequency distribution of the schools' printers. Only .93 percent of the schools had one printer, and 46 percent of the schools had 10 or more.

## II. Instructional and Administrative Uses, Hardware, Software, and Funding

### A. District Office Computer Survey

Ninety-three school districts reported having at least one computer. Other technologies, such as videodisc and data communication were used by 15 percent and 69 percent of the districts, respectively. At the district office level, over 74 percent of all computers and over 80 percent of all printers were allocated to administrative use.

#### 1. Technologies Used in Education

<b>District Computer Survey</b>				
(Total Districts Responding: 94*)				
<u>Total Yes (Percent)</u>				
<u>Technology Use</u>	<u>1989</u>		<u>1987</u>	
Microcomputers	93	(100%)	91	(98%)
Videodiscs	14	(15%)	6	(11%)
Data Communications	64	(69%)	23	(53%)

#### 2. Reference Sources for Instructional Software Purchased by School District Office

Computer consultants and other school district administrative office staff purchased software frequently, using as references the BSAP-correlated software listings and SEED reviews distributed by the Office of Instructional Technology. A majority of school districts used the BSAP software reference source and the SEED reviews in software purchase decisions, as indicated by the following two tables.

**Table i-1**  
**Number of School Districts Acquiring Software**  
**Using the Software/BSAP Correlation Books**  
**(86 Districts Responding)**

<u>Subject</u>	<u>Total Percent</u> <u>(A &amp; B)</u>	<u>A</u> <u>To a Large</u> <u>Extent</u>	<u>B</u> <u>To Some</u> <u>Extent</u>	<u>C</u> <u>Not At</u> <u>All</u>
Language Arts	68	7	57	22
Mathematics	70	7	59	20
Science	66	4	57	23
Other Reference	52	6	42	28

\*Includes S.C. Department of Youth Services, S.C. School for the Deaf and Blind, and S.C. Opportunity School.

Table i-2

Use of SEED Software Reviews by School Districts

<u>Questions</u>	<u>Total Yes</u>	<u>Total No</u>	<u>Percent Yes</u>
Did your district receive copies of the SEED software reviews?	88	5	95%
Do you have access to a copy of the SEED software reviews?	89	4	96%
Has anyone used the SEED software reviews in selecting software?	54	39	58%

B. School Computer Survey

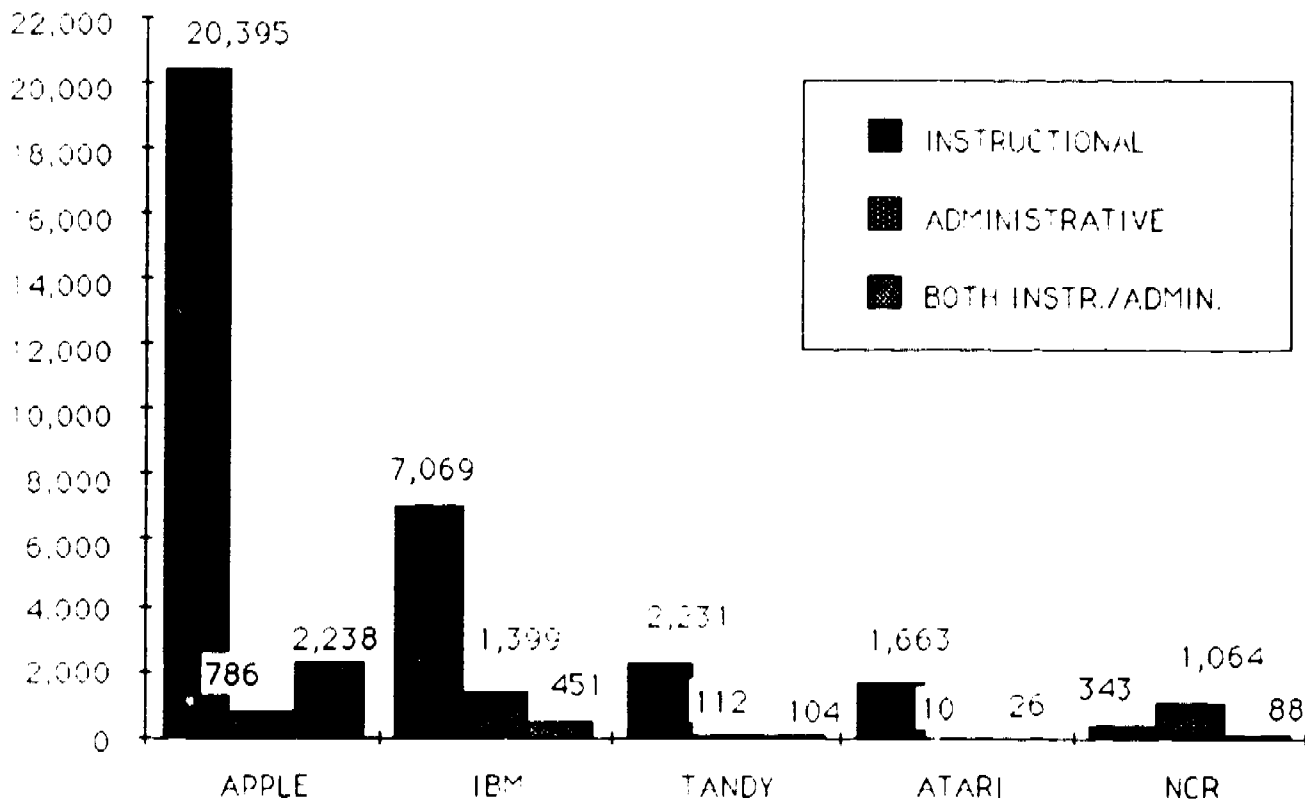

Almost all schools (97 percent) had at least one microcomputer. The vast majority were used for instructional purposes (83 percent). Other technologies such as data communications were used in 20 percent of schools, videodiscs in 8 percent, and robotics in 5 percent.

1. Technologies Used in Education

School Computer Survey  
(Total Schools Responding: 1,094)

<u>Technology Use</u>	<u>Number of Schools Responding Yes</u>			
	<u>1989-90</u>	<u>Percent Yes</u>	<u>1988-89</u>	<u>Percent Yes</u>
Microcomputers	1,058	(97%)	1,077	(98%)
Robotics	60	(5%)	44	(4%)
Videodiscs	87	(8%)	87	(8%)
Data Communications	223	(20%)	154	(14%)

Number of Computers by Type Used By Schools During 1989-90

## 2. Staff Development

The number of school faculty considered to be computer literate has risen substantially, from 45 percent three years ago to 61 percent this year. Forty-two percent of school faculty members used microcomputers for instruction.

	<u>1989</u>	<u>1988</u>	<u>1987</u>	<u>1986</u>
1. Number of computer-literate certified faculty (From total of 38,642 in Fall 1989 Reference: Selected Facts by MIS, SDE.)	23,537 (61%)	21,860 (57%)	19,369 (51%)	17,743 (45%)
2. Number of faculty members who use computers for instruction (From total of 38,642 in Fall 1989 Reference: Selected Facts by MIS, SDE.)	16,103 (42%)	14,837 (39%)	13,104 (35%)	11,278 (29%)

### References for Acquiring Software

#### 1. Use of BSAP Software Correlation Books

Microcomputer software/BSAP correlation books have been published by the Office of Instructional Technology since May 1984. They serve as a reference on available software programs that address specific objectives for students in grades 1-8 in three BSAP curriculum area--language arts, mathematics, and science. The software/BSAP correlation books provide a consolidated, yearly updated listing of recommended micro-computer software programs available in the software market. For further information, contact: ITEC, S.C. Department of Education, Columbia, South Carolina 29201.

The data in Table i-4 is derived from Table i-3. Table i-4 indicates that the largest use of the software/BSAP correlation books was in acquiring mathematics software (71.7 percent of the respondents). The use of this publication in science software selection increased from 61.3 last year to 61.4 percent. The number of schools using BSAP correlation books in science increased from 578 to 580.

Table i-3

#### Number of Schools Acquiring Software Using the Software/BSAP Correlation Books

<u>Subject</u>	<u>Total</u>	<u>To a Large Extent</u>	<u>To Some Extent</u>	<u>Not At All</u>
Language Arts	985 (100%)	140 (14.2%)	548 (55.6%)	297 (30.2%)
Mathematics	985 (100%)	151 (15.3%)	555 (56.4%)	279 (28.3%)
Science	945 (100%)	86 (9.1%)	494 (52.3%)	365 (38.6%)

Note that only a maximum of 985 (89.3%) schools answered this item in the questionnaire.

Table i-4

Summary Data on Number of Schools Using  
BSAP Book in Acquiring Software

<u>Subject</u>	<u>From Some to a Large Extent</u>		
	<u>1989-90</u>	<u>1988-89</u>	<u>1987-88</u>
Language Arts	688 (69.8%)	713 (71.7%)	700 (71.7%)
Mathematics	706 (71.7%)	734 (73.3%)	706 (72.3%)
Science	580 (61.4%)	578 (61.3%)	505 (55.7%)

2. Use of SEED Project Reviews as a Software Reference

The Software Evaluation Exchange Dissemination (SEED) Project is a collaborative effort coordinated by the Southeastern Educational Improvement Laboratory (SEIL) and the state departments of education in Alabama, Florida, Georgia, Mississippi, New Jersey, North Carolina, and South Carolina. The SEED software evaluation process has been designed and implemented by staff members of participating state education agencies.

Beginning in September 1985, each state selected and trained educators as software reviewers for the evaluation of K-12 instructional software using a standard SEED evaluation form and process. Each title is evaluated by three persons from which a single review or annotation is compiled. A total of 809 SEED Software Annotations had been provided by May 1990 to superintendents, computer coordinators, principals, and media specialists.

Of the 1,094 schools responding to the current survey, 1,002 indicated that they received the SEED project software reviews (PSR) and 1,009 schools revealed that they had access to a copy. Another 676 (62 percent) of those who had access to SEED-PSR actually used it in selecting software.

Use of SEED Software Reviews by Schools

<u>Questions</u>	<u>Total Yes</u>	<u>Total No</u>	<u>Percent Yes</u>
Did your school receive copies of the SEED software reviews?	1,002	92	92%
Do you have access to a copy of the SEED software reviews?	1,009	85	92%
Has anyone used the SEED software reviews in selecting software?	676	418	62%

**PROFILE OF INSTRUCTIONAL AND ADMINISTRATIVE  
USES OF COMPUTERS AND FUTURE PLANS  
BY SCHOOL DISTRICT**

This section provides an overview of the instructional uses of computers in the schools--the state's 94\* school districts--by grade and brand/model of equipment. A brief description of future uses is also included. The number of computers and printers employed instructively, administratively, or both is identified by brand/model.

This information is recommended as a reference for school district administrators and other educators desiring to compare or explore the applications of computers in the state's school districts.

**Explanation of Terms:**

**Instructional uses of computers in district schools**

**District/Contact:** Provides the name and address of the district contact person preparing the input for the survey form.

**Instructional Uses:** Lists the subject areas in which computers are used. Use as a "tool" equates with uses of word processing, database management, or for spreadsheets.

**Grade:** Indicates the grade level or grade range in which each brand/model is employed for various instructional uses.

**Brand/Model:** Identifies the computers used at each grade level for each particular instructional use.

**Descriptions:** Provides additional information on use by broadgrade range, i.e., elementary, middle/junior, and secondary schools.

**Future Plans:** Provides a brief description of future applications of computers by grade level and includes remarks on projected purchases and training plans.

*\*Includes S.C. Department of Youth Services, S.C. School for the Deaf and Blind, and S.C. Opportunity School.*

#### **Description of Computer Use**

K-12 students have access to Apple IIc/gs computers to supplement regular classroom work. The computers are in teachers' classrooms, libraries, and high-school labs. Grades 5-8 have a computer literacy program, using LOGO as the language. Computers are used for instruction in high-school business classes, vocational classes, computer math classes, adult-education computer classes, and some remedial math classes. Gifted/talented classes in grades 3-7 use computers in their curriculum.

#### **School and District Office Computers: Future Plans**

- Install more computers and printers (especially for student use).
- Possibly expand CCC for compensatory/remedial students.
- Computerize district libraries with appropriate software.
- Install/expand Pathways OSIRIS networks.
- Network district office computers.
- Increase school participation in district office Macintosh for desktop publishing.

**Description of Computer Use**

Keyboarding, word processing, spreadsheet, database, computer applications through business education are used at the secondary level. Industrial technology education uses CAD/CAM. Elementary grades 1-5 uses CCC for computer-aided instruction and supplemental work. Computer-aided instruction for computer literacy and business education are offered at all high schools. Computers assist remedial/compensatory classes at all levels. Write to Read program used to develop reading/writing skills for beginners.

**School and District Office Computers: Future Plans**

- Further expansion of CCC program at all levels. Keyboarding at all levels. Require keyboarding at the high-school.
- Expansion of computerized library system for all schools.
- Expansion of networks at school level.
- Implement district-wide network to tie all schools to district office.
- Continue utilization of computers to teach keyboarding skills. Continue providing CCC instruction at all levels to better prepare students for today's demands for computer literacy.
- Expand the use of CCC for instruction in the reading and mathematics classes during the 1990-91 school year.

**Description of Computer Use**

IBM PC's and Apple II's plus Ataris in the CCC lab are used in compensatory and remedial reading/math centers and in special education classrooms. IBM PC/PC jr's and Apple IIe's are available from the library for classroom use. IBM PC's are used in business/office skills instruction and staff development. Instructional computers were purchased with EIA and Chapter I funds. Atari workstations were purchased by CCC with local funds. IBM PC's, PC jr's and Compaq computers are used for district administration.

**School and District Office Computers: Future Plans**

- Installed CCC in all schools using Atari and IBM workstations.
- Use additional software for data improvement.
- Employ a full time Pathways director of technology for the 1990-91 school year.

**Description of Computer Use**

Students and teachers use MECC software at all grades. Keyboarding, word processing, and computer science are taught at the secondary level. Special education teachers generate IEP's and related forms on computers. The EIA math lab is available for compensatory and remedial students at the secondary level. Computer-assisted instruction is provided in all Chapter I classes.

**School and District Office Computers: Future Plans**

- Purchase six additional computers for special education departments at each school.
- Purchase an additional computer related to instruction in EIA programs.
- Purchase a modem for each school.

**Description of Computer Use**

Thirty-three libraries at the elementary, middle, and high-school levels have completely automated their circulation systems. Three middle schools installed an IBM network (30 computers and one fileserver each). Twenty-five IBM PS/2 computers are used in "take-home" program. Additional units were added to CCC labs, which are in every middle and high school in the district.

**School and District Office Computers: Future Plans**

- Set up BBS for instructional use.
- Offer more CTN courses.
- Introduce CMS gradebook.

**Description of Computer Use**

At the elementary level, most computer-based instruction uses software from the MECC collection. At the upper-grade level, word processing usage is increasing as a tool for teaching writing and language skills. Ten of our schools now use fileserver-based instructional computer labs and the two schools under construction are being prewired so that each classroom can connect to a fileserver.

**School and District Office Computers: Future Plans**

- Expand the telecommunications project using KID\$NET, which was piloted this year.
- Use "The Voyage of the the Mimi" next year in the math and science curriculums of all 14 middle schools.

#### **Description of Computer Use**

Computers span the curriculum from kindergarten through grade 12. BASIC and PASCAL are taught in grades 9-12. Tool (word processing) is taught in grades 9-12, with preliminary word processing taught in grades K-12. A nine-week keyboarding course is required for all seventh graders. All eighth-graders are required to take a nine-week computer literacy course. Computers are used in grades 1-6 to supplement instruction in reading, language arts, and mathematics. Computers and software are available to all basic skills teachers to supplement the curriculum and to provide drill and practice. EIA remedial laboratories (grades 7-8) for reading and math include computer-assisted instruction of one of several instructional methods. In grades 9-12, four remedial language arts and three math labs provide computer-managed and computer-assisted instruction. Other classrooms use computers to provide remediation drill and practice on basic skills and SAT improvement.

#### **School and District Office Computers: Future Plans**

- Expand grade 9-12 programming laboratories with additional computers and printers to allow more flexibility in the curriculum.
- Train all teachers new to the district in the use of the Apple IIe; train new school administrative staff on the IBM.
- Utilizing IBM equipment and NOVELL software, network three laboratories in the vocational center as well as the district office.

**Description of Computer Use**

All compensatory and remedial students receive daily drill/instructional exercises through a computer lab offering programmed instruction. Teachers at all elementary schools use course-specific software to supplement the regular curricular offerings and to provide exposure to the technology. All middle-school and secondary students have access to course offerings presenting introduction, applications, and programming. Two IBM-compatible labs (20-25 workstations networked) have been installed at two high schools. Four high schools and six elementary schools are networked for OSIRIS. Using modems, all schools have daily access to a district bulletin board for messaging, requisitioning supplies, submitting reports, downloading information, etc.

**School and District Office Computers: Future Plans**

- Install additional IBM-compatible networked labs at the two remaining high schools and middle schools.
- Extend laser printer use beyond the present eight schools.

**Description of Computer Use**

Computers are used in compensatory, remedial, and Chapter I classes at the appropriate grade levels. Computers support reading and math in grades 1-12. TABS has been implemented for grades 1-12. Computers are used as instructional aids in science, foreign language, and vocational courses, and are used with gifted students. A new computer lab consisting of Apple IIgs computers is in place for Advanced Placement classes. The journalism department is circulating a newspaper and other publications from a new Macintosh system with a laser printer. The review of software for the total curriculum is done through the Material Center. MECC software is distributed and available throughout the district. Computer projectors are used as teaching aids in the classroom. OSIRIS is fully operational in each school and they are participating in all aspects of OSIRIS-supported modules.

**School and District Office Computers: Future Plans**

- Automate libraries, lunch management program, and bus routing with state-supported software.
- Install a computer lab for all students in grades K-3.
- Offer classes, workshops, and in-services for teachers and aides in all areas of classroom computing.
- Offer PASCAL programming to high-school students.

**Description of Computer Use**

Multimedia labs are used in compensatory reading and math classes in grades 2-5. Compensatory and remedial students in grades 6-8 have access to computers for supplementary remedial help. Gifted summer school students use computers for many academic areas for enrichment and exploration. Vocational students received three computers this year under a grant.

**School and District Office Computers: Future Plans**

- Expand computer literacy and vocational education computer use at all grade levels.

**Description of Computer Use**

Many schools in Darlington County have taken new steps toward the integration of technology into the classroom. Staff development activities in this area have drastically increased. The district co-sponsors the Darlington County Educational Computing Conference each fall. A closer look at individual school goals has created computer labs from individual classrooms and vice versa. The average student, not just the remedial or the gifted, has been afforded more opportunities for computer access. Integrated learning systems have been utilized in Chapter-I classes at some elementary schools and in reading, language arts, and math classrooms at the junior-high level. A Macintosh writing lab was also implemented at one junior high school.

**School and District Office Computers: Future Plans**

- Complete construction of a wide-area network, scheduled to be fully operational by July 1, 1990. All district-level staff and school-level administration will have access to certain applications, i.e., electronic mail and purchase requisition system. Connectivity is achieved via asynchronous communication, direct connections, and laser. Macintosh and IBM compatibles will co-exist on the Novell network to take advantage of existing hardware and software, as well as to provide needed potential for growth.
- Install in several school the integrated learning systems that operate in the Macintosh environment. (The primary hardware platform planned for is the Macintosh, due to its proven success in the district.) Multimedia also has a definite place in the plans.

**Description of Computer Use**

Computers are used for remediation, drill, practice, and enrichment. Some "game" formats are used for challenge and/or rewards. Computer science is offered as a unit course in high school. Computer-management programs are used in Chapter-I classes in grades 4-6. All schools participate in the Pathways Project. A take-home computer program is available for Chapter-I parents and students.

**School and District Office Computers: Future Plans**

- Employ a part-time or full-time computer coordinator.
- Continue to purchase computers at all grade levels to increase availability to teachers and students.
- Provide additional in-service training to teachers, administrators, and clerical staff.
- Offer the take-home computer program to other students and parents.

**Description of Computer Use**

Computer use guidelines are being revised to provide building-level curriculum programs which will be organized and monitored by building-level committees. These committees will ensure that students are exposed to a broad-based curriculum approach to the integration of computers into the classroom. Curriculums and computer hardware is being updated to match these challenges.

**School and District Office Computers: Future Plans**

- Implement the CMS grade book and other Prescription Learning software as it becomes available.
- To aid in paperwork reduction, purchase hardware and networks so that each teacher has a computer.
- Implement a professional training staff program to aid teachers in reaching a goal of 100% computer literacy.
- Complete computerization of the district office.
- Purchase networking of student instructional computers in order to offer students additional time for computers use.

**Description of Computer Use**

At the elementary level, computers are used in the "Writing to Read" lab and the CCC lab. At the middle-school level, computers are used in the CCC lab (reading and math). At the secondary-level, computers are used in the Governor's Remedial Lab (reading and math), elementary programming, and business applications. CAI is used at all grade levels to supplement regular instruction in math, reading, and language arts.

**School and District Office Computers: Future Plans**

- Enlarge present school computer labs or add more labs.
- Establish a district bulletin board service.

**Description of Computer Use**

All students in grades (K-12) have exposure to instructional computing. Each elementary and middle school has at least one computer lab. Kindergarten through sixth-grade students attend one day per week for CAI. Students in grades 7-8 attend by the quarter semester for CAI and simple programming skills. Computers are used in some of the remedial and compensatory classes. The high-school offers programming as an elective. All schools and the vocational school offer word processing. High school special-education students use computers in the resource room. Advanced high-school math classes use computers to explore math topics and to prepare for the SAT. (Note: The high school is presently using student accounting on OSIRIS software on the PC/AT. Data communications to the State Department of Education is being utilized for both the teacher certification project and for the high school vocational SCOIS program via a PC/AT and modem. Word processing, computer concepts, and BASIC programming skills on the S/36 and the PCs are being taught in adult education night classes.

**School and District Office Computers: Future Plans**

- Automate the high-school library during the 1990-91 school year .

**Description of Computer Use**

The IBM "Writing to Read" program is used in kindergarten and first-grade classes. In grades 1-6, EIA classes and Chapter I classes have four or five Apple computers. In the middle school, Apple computers are used in reading remediation. At the high-school level, Apple computers are used in Governor's Remediation Laboratory. At this level, IBMs are used to teach computer literacy, programming, and word processing.

**Description of Computer Use**

Some middle-/high-school students receive computer-literacy training. Computer programming is offered at the high-school level. Some elementary and middle-school students receive instruction in reading and math via Apple IIe software and the CCC Microhost System. The Apple IIe's are also used in some science classes in grades K-8. Word processing and data processing are offered to students in grades 9-12 through the business education department.

**School and District Office Computers: Future Plans**

- No definite plans at this time.

**Description of Computer Use**

The elementary-school computer lab houses 17 Tandy 1000's used primarily for math, reading, and writing activities by students in grades 1-4 and in special programs. All elementary and middle Chapter-I programs and nominal programs have at least one computer. The middle school has four IBM-type computers in the library for vocational use (job skills, inventory, college information, etc.) and for use by students needing math and reading help. A dropout-prevention program has 15 Tandy 1000's for use in math, reading, and science remediation. The high school has 10 model IV's in the L. D. classroom, and 26 networked model IV's in a remedial reading and math lab. The business department has 20 Tandy 1000's for business education and word processing. Twenty more Tandy 1000's are used in typing classes.

**School and District Office Computers: Future Plans**

- Convert the elementary lab to "Learning to Write" (IBM) lab.
- Use computers in high-school English classes to promote writing.

**Description of Computer Use**

Computers are used in the WICAT lab for reading and math (grades 7-9), in "Writing to Read" labs (kindergarten and grade 1), and in EIA labs for reading and math (grades 10-12). Prescription Learning is used in Chapter I/EIA remediation (grades 1-6).

**School and District Office Computers: Future Plans**

- Increase acquisition of MS-DOS, OS/2 machines for instruction (all levels).
- Implement SDE Classroom Management System in six pilot schools.
- Increase number of WICAT labs in grades 7-9.
- Implement "Writing to Read" program in kindergarten and grade 1.
- Train all teachers to use word processing software.
- Implement SDE Classroom Management System in seven non-pilot schools (to include laser printers, Novell networks, and other resources).
- Network district offices (Novell) and develop a district-wide student database from OSIRIS school databases.
- Implement adult education component (MS-DOS), applications and instruction.
- Implement take-home computers (MS-DOS) for Chapter I/EIA remediation; and software for specific student needs.

	Tool (word processing, etc.) Business Education	K-12 9-12	Apple IIe Apple IIe/IBM Model 30286

**Description of Computer Use**

Elementary students use computers for enrichment exercises on all grade levels. Secondary students use computers in business, science, EIA remedial programs, Chapter I reading, and gifted and talented classes. Computers are also used on the secondary level for SAT preparation.

**School and District Office Computers: Future Plans**

- Continue participation in the Pathways project at all schools.
- Expand the use of computers in business education and in special education.
- Seek a grant to establish a computer lab in the high school to be used for enhancement of CP and honors-level courses.

Greenwood 52  
Marilyn P. Rieger  
Coordinator, Instructional  
119 South Cambridge Street  
Ninety Six, SC 29666  
Phone: 543-3100

**Description of Computer Use**

Elementary students use computers in all classrooms and for publishing projects. At the middle school, computers are used for enrichment and in Chapter I classes. A networked lab has been implemented. Secondary students use computers in all subject areas and for remediation and SAT preparation. Students in the gifted program, grades 2-8, use computers extensively.

**School and District Office Computers: Future Plans**

- Expand use of computers in special education classes.
- Network all classrooms at the middle school with the computer lab.
- Add Macintosh computers will be added to the high school science labs.
- Convert the high school library to a computerized system.

	Vocational Education	9-12	IBM

**Description of Computer Use**

All schools in the district are running OSIRIS. The compensatory/remedial Chapter-I programs are utilizing CAI at all grade levels. Some elementary schools are successfully offering bonus time in the morning before the actual instructional day begins. This allows all students to have computer time regardless of the EIA classification. Modems have been installed at all schools to provide on-line assistance to schools. Student gains are monitored at the district office.

**School and District Office Computers: Future Plans**

- Expand the number of computers in the district.
- Implement a lab at the high school that can meet a wide range of needs.
- Plan access from middle schools via modem.
- Monitor classwork.

**Description of Computer Use**

All first-graders and some kindergarten students use the "Writing to Read" program. Preschool four-year-olds use "Get Set for Writing to Read." Take-home computers are used at the elementary- and middle-school levels. MEAC is used in grades 2-8/ Prescription Learning labs are used in grades 5-8. GRI labs are used for math and reading in grades 9-11. Keyboarding is taught in grades 9-10. PALS is used in adult education classes. Modems are now available to all schools.

**School and District Office Computers: Future Plans**

- Expand administrative use of computers--networking has been done at the high school. The middle school will be networked next year.
- Expand computer use in science programs.
- Implement a second PALS lab for adult education classes.

**Description of Computer Use**

Secondary students have an opportunity to study computer programming. Other instructional use occurs in an integrated manner through lab scheduling in regular content classrooms. Remedial math labs are available in all of the high schools. Programs for grades K-8 are provided in compensatory and remedial classes and in some schools are integrated into the regular content classrooms. Kershaw County maintains a MECC membership and makes other software available through the district materials center. All schools are implementing OSIRIS software for administration, attendance, and reporting to parents at the middle- and secondary-levels.

**School and District Office Computers: Future Plans**

- Continue to offer training for staff members at no cost.
- Improve ratio of computers to students to reach state average.
- Increase computer access for students not in any special category.
- Continue OSIRIS training and networking all schools, pending funding.

**Description of Computer Use**

Computer literacy is a component of all instruction that uses computers. Lower-elementary levels are concentrating on "Writing to Read" instruction, while elementary- and junior-high levels utilize Josten's (ESC) software for language arts and math instruction. Prescription Learning and PALS software serve the remediation needs of upper-elementary and secondary students. Text processing is introduced at the upper-elementary level, particularly in gifted and talented classes, and continues intermittently throughout the secondary curriculum, with concentration in business education. Math, science, and social studies programs are available in labs in upper-elementary and secondary classes.

**School and District Office Computers: Future Plans**

- Add two additional instructional labs at the elementary and junior-high levels in 1990-91.
- Provide teacher training in the CMS instructional/administrative program relating to paperwork reduction and effective use of instructional data.

	Other (Gifted [Logic])	9-12	Atari (CCC)

**Description of Computer Use**

All schools use Computer Curriculum Corporation (CCC) labs with Atari terminals to serve compensatory and remedial students in reading and mathematics. The CCC labs are also used to serve disadvantaged vocational education students in survival skills and gifted math students in logic, both in grades 9-12. Elementary and middle schools continue to use very limited numbers of Commodore 64's and Apples in computer literacy, reading, language arts, and mathematics. The IBM PC and Columbia labs at the high school continue to be used for computer programming/information processing in the business education department.

**School and District Office Computers: Future Plans**

- Expand CCC/Atari labs at all grade levels.
- Install/expand Pathways networks at two elementary schools.
- Install school lunch program software at four elementary schools.

**Description of Computer Use**

Computers are used in the elementary-, middle-, and secondary-grade levels to assist students in basic skills and computer literacy. Prescription Learning labs are used in elementary, middle, and high schools for students in compensatory and Chapter I programs. Governor's Remediation Labs are also used in the high schools for remediation. Three Appleshare networked labs are used in two elementary and one middle school for basic skills. MECC software is available to all schools for the purpose of integrating computers into the curriculum. The vocational school uses Apples and IBM Compatibles for word processing and business education.

**School and District Office Computers: Future Plans**

- Expand computer-assisted instruction in grades K-12 with additional Apple, Macintosh, and IBM computers.
- Purchase Macintosh computers for administrative work.
- Install modems at all levels for data transmission to SDE.

**Description of Computer Use**

All elementary schools have Prescription Learning labs for reading and math. In addition, schools have labs to reinforce the basic skills. Computer literacy begins at the middle-school level. Secondary students are involved in computer literacy, programming, vocational, and instruction labs. High schools have Governor's Remediation Initiative labs and WICAT labs.

**School and District Office Computers: Future Plans**

- Update WICAT labs, update Governor's Remediation Labs.
- Continue to teach computer literacy at the middle school level.
- Implement keyboarding at the sixth grade level.
- Continue to offer computer labs.
- Implement district-wide computer instructional plan.
- Continue to offer staff development training for teachers through USC courses and teacher-taught computer workshops.
- Purchase additional computers to reinforce basic reading and math skills in grades 1-12.
- Purchase additional computers to increase computer-pupil ratio and to expand computer literacy at the elementary level.

**Description of Computer Use**

WICAT labs in the middle schools provide CAI effort in the district. All business courses in the high schools take place in a Novell network environment. As computerization takes place in the high schools, those computers are moved to the middle school-level for computer literacy efforts. All schools operate in a Novell network environment with 75 users on the district network.

**School and District Office Computers: Future Plans**

- Automate, via modems, the backup of OSIP'S data.

**Description of Computer Use**

Atari ST computers are used in labs (CCC) to teach basic skills in grades 2-12. Apples are used in classrooms to teach a variety of skills as well as computer literacy in grades 2-8. Apple IIe's are used in a lab at the middle-school level for literacy and other activities. This lab is also used before school for computer clubs. Business courses which include word processing and data processing are taught on Tandy TRS-80 and DTK computers.

**School and District Office Computers: Future Plans**

- Add an Apple IIgs lab to teach keyboarding skills and word processing skills at the middle school (grades 6-8).
- Add an IBM lab to teach programming at the high school (grades 9-12).

**Description of Computer Use**

Beginning in kindergarten, computer experiences for students are integrated into the existing instructional programs rather than through pull-out computer programs (i.e., all first- and second-grade students receive computer keyboarding training as part of their language arts program). Word processing begins in second grade and is introduced through LogoWriter software; in the sixth grade, students use Appleworks integrated software. Robotics is implemented in grades 3-5 through the science curriculum using LegoLogo. All fifth-grade students plot on x, y axes to create computer graphics in mathematics. At the middle- and junior-high levels, labs and individual classroom systems offer opportunities for word processing, CAI, and computer programming. All seventh-grade students create databases as part of their genetic study in science. Desktop publishing is part of language instruction. Secondary students have access to the math/science lab, journalism computers, and select courses from Introduction to Computers, Computer Science I (BASIC), Data Processing, Computer Typing/Keyboarding, Computerized Accounting and Computer Technology (maintenance and repair). CAI is used in all areas of the curriculum and for preparation in academic competition.

**School and District Office Computers: Future Plans**

- Elementary-Kindergarten: Add K-6 computer strands at the new school, H.E. Corley Elementary; continue teacher training at all schools and purchase additional resources.
- Secondary (Writing Lab): Implement a writing lab with word processing software for creative writing; teach eighth-grade students to work with spreadsheet software.
- Media Automation: Install network in four more schools, increasing the total to eight. Circulation is automated and catalog stations are networked to a file server as students access on-line catalog searches.

**Description of Computer Use**

Apple IIe's are used in all schools for instruction. IBM PC's are used in the business education department at the high school level (grades 9-12). NCR's are used in the elementary, middle, and high school for administrative use, as well as by the director of special services who uses an NCR for administrative use. The district office uses an IBM and a Macintosh for administrative purposes.

**School and District Office Computers: Future Plans**

- Install a writing lab at the high school.
- Increase intra-district use of communications software.
- Fully implement TRIMS and PARTS.
- Continue staff development to increase computer literacy.

**Description of Computer Use**

All elementary students are given access to computers on a limited basis; Chapter I remedial and compensatory math students are receiving CAI using CCC (grades 3-12). Chapter-I students in reading also use CAI with CCC. Students in grades 9-12 may elect to take an introductory computer course and an introduction to PASCAL.

**School and District Office Computers: Future Plans**

- Continue to more fully utilize available technology.
- Expand the use of MECC materials and CAI through updated technology using CCC.
- Purchase additional computers and printers.

**Description of Computer Use**

Britton's Neck Elementary School has a Chapter-I reading and math lab that serves grades 2-7. Britton's Neck High School currently participates in the Governor's Remedial reading and math lab program.

**School and District Office Computers: Future Plans**

- Expand the Chapter I CCC lab.
- Add Josten's learning management system to the compensatory reading and math classes at the elementary level, and remedial at the high-school level.
- Use computers in math classrooms, language art classrooms, and libraries.
- Include computers in the instructional programs for special education and kindergarten.

	Vocational Education	9-12	IBM PC/IBM Model 30

**Description of Computer Use**

Computer-awareness programs have been designed for students in grades 1-12. Instructional programs in reading and math are provided for students enrolled in remedial/compensatory programs (grades 1-12) and for Chapter-I students (grades 4-8). Introduction to keyboarding is taught in grades 6 and 7. Counselors are using computers for career information and SAT practice activities. Computers are also used for compiling test and student information, business management, and drafting classes (grades 11-12). The district office maintains personnel records and plans are to include instructional inventories and internal accounts. Master schedules and individual student schedules are being prepared for the high school and middle school with the aid of computers.

**School and District Office Computers: Future Plans**

- Design the school district staff development plan toward the appropriate software (all levels).
- Network all schools in the district with the district office and the SDE.
- Purchase more computers for remediation in math and reading (all levels).

**Description of Computer Use**

All compensatory/remedial students receive CAI using an Apple IIe or IIgs. All high schools have computer labs equipped with Apple IIe or IIgs for math and science CAI. One elementary school (grades 4-5) has a Apple IIe lab for CAI. Students in grades 11-12 have the option to take computer science. All business and/or office occupation students receive data processing and word processing training.

**School and District Office Computers: Future Plans**

- Complete installation of IBM computers/computer labs in the three high schools and the two junior high schools as part of the Target 2000 program funded through the SDE.

	Business Education	8-12	149 IBM Computers
Vocational Education	9-12	IBM	

**Description of Computer Use**

Over the past few years, the district has steadily increased computer quantities to where 42 percent of the elementary schools have laboratories. The primary concern in the elementary area is literacy--the goal is to have every elementary student computer-literate before reaching the middle-school grades.

In the middle-school grades, computer literacy continue to be emphasized, but programming is also addressed. All middle schools have IBM laboratories. Because of the county's participation in the State Vocational Education consortium, 130 IBM Mode 25 computers were purchased for student use and five IBM Model 30 computers were purchased for teacher use in the five middle-school laboratories. The county's goal is to have every student master keyboarding skills by the end of the eighth grade, using "PC Viewers" interfaced to the IBM Model 30 computers as the primary means of instruction, with Touch Typing Tutor as the support software.

Every secondary school has a laboratory. Each has received five additional IBM Model 25 computers. In addition, all of the high schools are networked for administrative purposes.

**School and District Office Computers: Future Plans**

- Continue to purchase one or two computer systems for every elementary school.
- Continue participation in the South Carolina Education Consortium, which will possibly provide additional equipment for middle/junior high schools.
- Continue to expand existing secondary computer laboratories by one or two computer systems.

**Description of Computer Use**

The TRS-80, IBM, and NCR computers are housed in the business department and are used primarily by students in that department to learn word processing skills; however, the computers are available to students with time in their schedules to work with them. Eleventh- and twelfth-graders are taught data processing. The Apple IIe computers are used for instruction in reading/language arts, math (computer lab for remedial students), special education, and vocational classes.

**School and District Office Computers: Future Plans**

- Use computers in science instruction.
- Offer an on-site computer class for teachers.

**Description of Computer Use**

Computers are used in reading and mathematics for Chapter I (grades 1-6) and kindergarten classes. Computer use in the middle schools has increased this year. High-school business students regularly use computers. The district also offers two one-semester introductory computer science courses for high school students.

**School and District Office Computers: Future Plans**

- Purchase computers for all high school mathematics and science classes.
- Encourage teachers to obtain needed training for use of computers in their classes.

**Description of Computer Use**

Presently, all students in grades 1-4 are being exposed to computers. Chapter I reading and math students are being trained on IBM computers. Middle-school students now have access to computers and will be provided with additional workstations as funds become available. Students in grades 9-12 have access to IBM workstations having updated programs.

**School and District Office Computers: Future Plans:**

- Purchase additional workstations for Chapter-I reading and math students at the high school and middle school.
- Continue to update the high-school computer lab.
- Purchase new and innovative programs for the primary school as funds become available.

**Description of Computer Use**

The primary use of computers is as a supplement (enhancement) to instruction at as many levels as possible. Some programming (LOGO) is done at the elementary level; however, most programming is at the secondary level, with emphasis on computer science through BASIC or PASCAL. Two keyboarding labs have been established in schools. Elementary schools have added computers and now provide more computer instruction.

**School and District Office Computers: Future Plans**

- Install in each school a computer lab and sufficient mobile computers for classroom use.
- Install a computer with large screen monitor in every classroom, starting with grades 7-12.
- Increase workshops to provide for more extensive teacher use of computers.

**Description of Computer Use**

Computers are available to students in labs, classrooms, and media centers throughout the district. The thrust for computer use is to integrate the technology into the regular instructional program. Literacy courses are offered to middle- and high-school students. Students in business education, Chapter I, EIA, special education, and gifted programs use computers on a regular basis. Seventeen networked Apple labs and four networked IBM writing centers have been added in the last two years. Thirteen CCC integrated instructional systems will be operational by August 1990 in EIA and Chapter I programs.

**School and District Office Computers: Future Plans**

- Offer, via staff development program, comprehensive training in the use of computers and technology to support instruction.
- Offer workshops and courses for certificate renewal and graduate credit.

**Description of Computer Use**

Three-, four-, and five-year olds participate at least once a week in developmentally appropriate computer activities. Computers are used in elementary school in "Writing to Read" labs, reading, math, science, word processing, on-line encyclopedia, math and reading remediation, and the take-home computer program. In the middle schools, computers are used in math, reading, science, critical-thinking skills, journalism/newsletters, word processing, computer programming. At the secondary level, computers are used in science and math labs, computer programming, word processing, remedial labs, research skills, and journalism in the production of newsletters and the yearbook. MECC software is used with all grade levels.

**School and District Office Computers: Future Plans**

- Install 15-station labs at the middle schools and 24-station labs at the high schools for Target 2000/at-risk-students.
- Equip library circulation systems with on-line card catalog at all schools.
- Continue participation in the SDE CMS pilot project.
- Increase staff development in all areas.

**Description of Computer Use**

All elementary students are given limited access to computers. In compensatory, remedial, and Chapter-I classes, computers are used for drill and practice. Kindergarten and first-grade students have CAI in math and reading. Computer instruction provides enrichment in G/T classrooms. The middle school has distributed former lab computers to teachers so that they may use them according to their needs for the day's instruction. At the high school, computers are used to teach word and data processing, computer literacy, computer science, and CAI in math and consumer homemaking. A computer lab is available to all students and teachers. Twenty Atari computers have been purchased to remediate seventh and eighth grade students in reading, writing, and math.

**School and District Office Computers: Future Plans**

- Install a writing lab for in high school and one of the elementary schools in 1990-91.

**Description of Computer Use**

All elementary students are given limited access to computers. In compensatory, remedial, and Chapter-I classes, computers are used for drill and practice. For the first time this year, students also received a computer-literacy course in the Chapter-I classes and a selected compensatory class. Kindergarten and first-grade students have CAI in math and reading. Computer instruction provides enrichment in G/T classrooms. The middle school has a computer lab available to all teachers and students. At the high school, computers are used to teach word and data processing, computer literacy, computer science, and CAI in math and consumer homemaking. A computer lab is available to all teachers and students.

**School and District Office Computers: Future Plans**

Add three IBM-compatible computers for increased administration use in FY '91.

	Business Education	10-12	IBM

**Description of Computer Use**

Five of our six elementary schools have computer labs, which are used for instruction in reading/language arts, science, social studies and math. In the middle schools, computers are used for instruction, drill, and practice. Secondary students use computers for word processing in business education and for application of spreadsheets and databases in computer literacy courses. One high school has a WICAT lab for instruction. The Pathways project is being used in 11 schools in the district for attendance. Three schools also use Grade Reporter and Scheduler.

**School and District Office Computers: Future Plans**

- Purch. modems for each school.

**Description of Computer Use**

Elementary students have access to computers in the classroom and in school library media centers. Computers are used for computer-assisted instruction. Computer literacy is taught in all of these programs. At the high school, computers are used to teach word processing, computer literacy and computer science. Compensatory, remedial, and Chapter-I classes use computers for drill and practice. All special education classes have computers to assist with instruction.

**Description of Computer Use**

The school's MS-DOS computers are networked to each administrator's office. All district schools use the OSIRIS software for their administrative activities. The schools and the district media center provide training for software products for administrative and instructional use. Annual computer camps are offered each summer. A complete IBM "Write to Read" lab is housed at Alice Drive Elementary and all schools use Prescription Learning resources. The schools have access to computer labs and computers on carts in each school. These are used for all levels of instruction. A district computer catalog is published containing MECC and commercial software. The high school has a semester course in computer math and a two-semester course in data processing.

**School and District Office Computers: Future Plans**

- Continue to implement the Pathways project with additional modems and training.
- Expand instructional software resources and available hardware.

#### **Description of Computer Use**

Two high schools, a middle school, and a junior high school are networked. All schools are doing attendance, discipline, and scheduling on computers. Some schools are doing grade reporting on computers. Apple IIc and IIgs computers are used in grades K-8 for remediation. The vocational school uses IBM's and IBM clones to teach students keyboarding, word processing, desktop publishing, spreadsheets, and database management.

#### **School and District Office Computers: Future Plans**

- Network one of the elementary schools next year.
- Network the district office's personnel department using MS-DOS computers.
- Purchase an IBM lab for the vocational school, to be used for instructional purposes and to teach teachers and administrators database management.
- Purchase or receive grants for IBM labs at two elementary schools.

**Description of Computer Use**

Apple II labs are located at the elementary, junior high, and high schools. Teachers are able to sign up to use these labs. At the primary school, computers are available for check-out from the media center. Atari learning stations are located at all schools and serve to remediate students with weaknesses in reading, math, and writing.

**School and District Office Computers: Future Plans**

- Begin adding teacher workstations to the OSIRIS networks.
- Improve current Apple II labs (including upgrading and possible networking).
- Open CCC labs during the summer to allow all students access to the programs.
- Offer additional staff training to meet needs regarding new hardware and software.

**Description of Computer Use**

Teachers use computer-assisted instruction across subject and grade levels to assist students in mastering course content. A K-6 computer curriculum has been implemented district-wide. Students receive instruction in computer literacy, keyboarding, and programming in LOGO. Students in grades 7-8 have an opportunity to take a computer applications and a BASIC programming course. High-school electives include an introductory applications and programming course in BASIC, a computer math course, and an advanced placement computer science course.

**School and District Office Computers: Future Plans**

- Purchase computer equipment and software to implement remedial language arts and math computer labs at the elementary and secondary levels.
- Continue to offer computer courses for teachers to assist them in using the computer as a tool and in incorporating the computer into their classroom instruction.
- Install a Macintosh computer lab in each of the district's middle schools so that students can learn word processing, database, and spreadsheet application; explore desktop publishing with PageMaker; and develop computer programs using LOGO.

#### **Description of Computer Use**

A 16-workstation WICAT lab was installed at Birchwood High School to serve remedial students (67% of usage) in grades 7-12 and GED students (33% of usage). A 16-workstation WICAT lab was installed at Birchwood High School to serve at-risk students (Target 2000 Grant). In grades 9-12, computer-assisted instruction is used with some classes utilizing limited computer-managed instruction. For grades 6-12, computerized system is in place which scores the California Achievement Test, correlates the results to BSAP, and prints out a mastery/non-mastery report for use in remedial and regular classrooms immediately after a new student enters a district school. This program has been rewritten to run on Novell networks utilizing the NCS optical sheet readers and is currently being beta tested. A custom IEP generator program for grades 9-12 is in use by all districts special services staff. An electronic system has been implemented in the graphic arts vocational program (grades 9-12). This system includes an Apple Macintosh, laser printer, optical scanner, video camera digitizer, accelerator, and two-page monitor. Small IBM PALS labs at Birchwood High and Willow Lane Junior High Schools are used for Chapter-I remedial reading students. A nine-workstation Novell network at Birchwood High School, an eight-workstation network at Willow Lane Junior High School, and a three-workstation network at the R&E annex school are utilized. A six-workstation Sun/TOPS network is used in the district office. All networks have the capability to access OSIRIS information from the other networks and to electronically transfer information. The district office has purchased and installed a digital scanner and software to allow the scanning of text documents into a word processor.

#### **School and District Office Computers: Future Plans**

- Purchase and install a 16-station WICAT lab to serve remedial students at Willow Lane Junior High School (Summer 1990).
- Tie all four of the district's networks into the Agencies Client Folder system, a statewide network which is a pilot project for state agencies and is under development. This system will utilize optical scanners to FAX records between the county offices and institutions and DYS schools and will maintain all records on a networked mini-computer (Summer 1990).
- Have documents such as policies and Procedures, the Defined Minimum Program, and various handbooks, etc. scanned into the fileserver as word-processing documents, which will allow instant access and searches from any workstation in the district office or school.

## **SPECIAL SURVEY ADDENDUM TO 1989-90 STATEWIDE COMPUTER SURVEY**

This section of the report provides a brief review of several special computer projects and their activities, and their firms and locations in the state. Sufficient information is provided so that educators may visit, write, or call a computer firm or the site of a project.

Information provided for each includes the following:

- Name of firm, brand, or project
- Contact person's name, address, and telephone number
- Project description
- Placement and use of computers and software
- Future plans
- Student gains/results of project
- Other comments

The projects and firms described in this section include:

- Computer Curriculum Corporation
- IBM (Distance Interactive Learning: Spanish (DIL:S), Teaching and Learning with Computers (TLC), and Writing to Read projects)
- Jostens Learning Corporation
- Rural Education Alliance for Collaborative Humanities (Project REACH)
- South Carolina Occupational Information System (SCOIS)
- WICAT

**Computer Firm Brand/Project:** Computer Curriculum Corporation (CCC)

**Contact Person:** Nancy Taylor  
Communications Administrator

**Address:** One Parkway Center  
1850 Parkway Place  
Suite 215  
Marietta, GA 30067

**Telephone:** 800/456-4077

**Person Supplying Information:** Thomas F. Foley, Regional Vice President-Marketing and  
Charlie House, Jr., Sales Representative  
800/456-4078

## **PRODUCT DESCRIPTION**

- About 3,000 schools, according to CCC, now use CCC's learning systems—more than the total number of schools using other integrated systems. (Integrated systems provide hardware and software combined into one product.)
- Students get individualized instruction not possible in the classroom. A powerful computer continually adjusts instruction to each student's performance. Detailed reports help teachers keep track of student's progress.
- CCC produces the only courseware that continually adapts instruction to each learner's performance. The system keeps track of mastery, focuses on weak areas, and raises instructional levels as the student learns.
- CCC courses cover basic skills and higher-order thinking skills, meeting standard curriculum objectives in mathematics, reading, language skills, and science. For example, CCC's basic math course covers grades K-8, with over 1,000 skill objectives and 30,000 exercises.
- Over two dozen studies show that a year of CCC instruction produces average gains of 1.5 to three years. Seven exemplary achievement awards from the U.S. Department of Education have been given to school districts as a result of CCC instruction.
- Each time a student makes a response at the computer, the system analyzes that student's performance pattern and checks for mastery. Reports of the student's performance help teachers diagnose learning problems and keep track of progress.
- A CCC system of 30 computers can provide 15-minute sessions to 300 students every day.
- Special learning environments within CCC courses strengthen problem-solving and higher-order thinking skills. In CCC's new Science Discovery course, for example, students infer the properties of static electricity by experimenting with on-screen images of positively and negatively charged rods.
- Using a pioneering approach unique in the CAI field, CCC's evaluation staff conducts a weekly analysis of responses from over 15,000 students to exercises in the CCC courses. The statistical analysis of these responses, which number in the millions, has helped CCC create or significantly update about two-thirds of its courses over the past four years.
- A special CCC program, Individualized Prescriptive Strategy, can forecast with very high accuracy the year-end grade placement of each student. This prediction enables teachers to develop special strategies for students who need extra help to reach year-end goals.
- Schools adopting a CCC system receive a complete package of software, hardware, and support services. Support services include training, consultation, installation, and maintenance.

## PLACEMENT AND USE OF COMPUTERS AND SOFTWARE

### Equipment Placed by School, Subject, and Grade

<u>School District</u>	<u>Subject Area(s) Emphasized</u>	<u>Number of</u>	
		<u>Schools</u>	<u>Terminals</u>

York	Reading and Math	5	66

### FUTURE PLANS

- CCC is very pleased to announce that on March 10, Computer Curriculum Corporation joined the family of companies owned by Simon and Schuster, the nation's largest educational publisher. Simon and Schuster is the publishing arm of Paramount Communications Inc.
- A variety of MS-DOS® computers (including the IBM P/S 2® Model 25 286 and the Tandy® 2500 XL), as well as the ATARI ST® computer, serve as student stations on a local area network. These computers offer the high-resolution color graphics and powerful processors essential to CCC courseware.
- CCC has captured the power of the entire CCC Instructional System™ in a single personal computer.
- CCC President Dr. Ronald F. Fortune said, "This new product represents a breakthrough in computer-assisted instruction. As an affordable alternative to the networked lab, SOLO™ enables customers who need no more than two or three stations to take advantage of CCC's comprehensive instructional system with a very cost-effective solution."

## **FUTURE PLANS (continued)**

- According to Fortune, potential SOLO customers include schools that want to integrate CAI into a single classroom, the workplace, home-study programs, job training and adult literacy centers, and other small, remote instructional sites.
- SOLO will deliver CCC's 26 courses and complete management system on a Tandy or IBM stand-alone computer equipped with CD-ROM drive. The courses and management system are stored on a single compact disk and are delivered to the students as required.
- The following are registered trademarks: MS-DOS: Microsoft Corporation; IBM P/S 2: International Business Machines, Inc.; Tandy 2500 XL: Tandy Corporation; ATARI ST: Atari Corporation. The CCC Instructional System and SOLO are trademarks of Computer Curriculum Corporation.

## **STUDENTS GAINS/RESULTS OF PROJECT**

- CCC courseware gets outstanding results in reading, language, and math for primary to adult students. New courses address adult literacy and middle-school physical science.
- A three-year independent study of several hundred students in Calvert County, Maryland, found math and reading skills so improved that virtually all students' test scores were above the second stanine. Contact Dr. Eugene Karol, superintendent, at 303/535-1700.
- Students most at risk of dropping out have a remarkable response to the system. These students not only achieve a rapid rise in skill levels, but also show a dramatic turnaround in their motivation to stay in school.
- The Escambia County School District in Pensacola, Florida, has reduced its 40% dropout rate to under 2% for the past two years. Other districts using the system have reported similar success. Contact Dr. John DeWitt, director of Grants and Research, at 904/432-6121.
- Because the system accelerates literacy gains, many schools use their systems for adults. Adults using the system have gained several grade levels in only a few months.
- Both Baltimore, Maryland, and Louisville, Kentucky, use their systems in alternative learning projects designed for adults. Contact Mr. Carl Wheeler, Office of Manpower Resources, in Baltimore, at 301/396-7510 and Mr. Buell Snyder, director of Jefferson County High School, in Louisville, at 502/456-3173.
- CCC instruction can be transmitted by telephone lines to remote locations. CCC's unique DIAL-A-DRILL<sup>®</sup> programs allow students to learn from home by using a telephone.
- The Chicago Public Schools serve 500 students with the DIAL-A-DRILL program. The Kentucky Schools Technology Project serves 29 rural schools with CCC CAI phone lines. In Chicago, contact Mr. Frank Perry, Chapter I director, at 313/890-8149. In Kentucky, contact the project director at 502/745-4424.
- DIAL-A-DRILL is a registered trademark of Computer Curriculum Corporation.
- The system complements teaching by providing daily individualized reinforcement of concepts being learned in class. The reports help assess student progress and pinpoint learning problems. The system is easy to operate and does not add to the teaching workload.
- Teachers in Milwaukee, Wisconsin, as at other CCC school projects, use the reports in parent conferences and in planning for students who need additional help. Contact Ms. Ying Ying Chen, Chapter I CAI supervisor, at 414/475-8009.
- CCC student reports enable districts to know exactly what each student has mastered. A special program, Individualized Prescriptive Strategy (IPS), even predicts students' year-end placements months in advance.
- Aiken, South Carolina, and 21 other districts in the state, use the CCC reports to assess students' mastery of competencies in the basic skills mandated by the state. The district also uses IPS to predict the time needed to reach mastery levels and to intervene if necessary. Contact Dr. Nancy Smith, assistant superintendent, at 803/648-1311.

## **STUDENTS GAINS/RESULTS OF PROJECT (continued)**

- **Many courses include "learning environments" where students apply the skills they've mastered to problem-solving challenges. For example, one math course has a series of exercises that guides the student in analyzing scientific data.**
- **A magnet school in Kansas City School District uses its CCC system not only to build literacy skills but also to learn logic and computer-science principles. Contact Mr. Jack Casner, director of technology, at 816/373-2237.**
- **Many community learning centers and nontraditional settings use CCC systems. These systems have been established by cooperative councils, such as those administering Job Training and Partnership Act (JTPA) funds.**
- **Pensacola, Florida, and Houston, Texas, are just two of the communities using CCC systems in school-business partnerships. Contact Dr. John DeWitt, Escambia County Schools, at 904/432-6121; and Mr. Terry Hudson, Houston JTPA director, at 713/654-1919.**

**Computer Firm Brand/Project:** IBM Distance Interactive Learning: Spanish (DIL:S)  
**Contact Person** Al Woodham  
**Address:** IBM Corporation  
1333 Main Street  
Columbia, SC 29201  
**Telephone:** 803/748-5248

## **PROJECT DESCRIPTION**

Distance Interactive Learning: Spanish is an integrated package of video lessons, computers with speech capabilities, and cooperative learning techniques designed to deliver a beginning Spanish course. This systematic approach to learning Spanish meets two of education's critical needs: equity and access.

The DIL:S system provides quality instruction to all students in spite of a shortage of certified Spanish teachers. The system requires a classroom teacher to direct the lesson plans and manage the activities. The program provides video instruction to the teacher as well as the student. Both the teacher and the student acquire proficiency in the language by the end of the course.

The video lessons "Se Habla Espanol" emphasize teaching the student a basic speaking proficiency level in Spanish. Listening, writing, and reading skills are included in the program. The course also gives an awareness of the Spanish people, their culture, and their contributions to world civilization. Its effective use of technology increases intercultural relationships between students and other cultures. This well-coordinated program enriches Spanish language instruction.

The DIL:S system includes content delivery through 69 videotapes containing lessons presented by television teachers who are native Spanish speakers. Student interaction with a computer network is a vital part of the DIL:S system. The computer activities support the video lessons with oral practice in pronunciation as well as written exercises. An array of printed learning materials also are a part of the DIL:S program.

Utah initially developed the Distance Interactive Learning: Spanish program for students in remote areas. Now, however, students in urban, suburban, and rural areas are learning Spanish through this program.

## **PLACEMENT AND USE OF COMPUTERS AND SOFTWARE**

<b>School District</b>	<b>School</b>
Barnwell 19	Blackville Middle
Orangeburg 5	Orangeburg-Wilkinson High

## **FUTURE PLANS**

Expansion plans call for the installation of new DIL:S labs in all South Carolina middle schools and high schools as a credit or non-credit course.

## **STUDENT GAINS/RESULTS OF PROJECT**

"Se Habla Espanol" develops students' skills in listening, speaking, reading, and writing Spanish. Unit themes allow students to use Spanish functionally in real-life tasks, such as conversing about school, writing about family, and reading about famous people and events. Cultural aspects of Spanish-speaking peoples are integrated within the units as actors and actresses role-play everyday situations. Students are exposed to authentic language at a normal rate of speech.

Current emphasis in foreign language teaching is on functional proficiency—what students can actually do with the language. Through the integrated approach of "Se Habla Espanol", students develop this proficiency by listening to native speakers in the video, speaking in cooperative groups (and with the computer!), reading computer and workbook exercises (and other extension materials), and writing letters and exercises.

## **OTHER COMMENTS**

IBM and the S.C. Department of Education have entered into a partnership which will greatly enhance the opportunity for South Carolina public schools to participate in this program. Call Al Woodham at 748-5248 for details.

**Computer Firm Brand/Project:** IBM Classroom-Based "Teaching and Learning with Computer"  
**Contact Person:** Rick Young  
**Address:** 1333 Main Street  
Columbia, SC 29201  
**Telephone:** 803/748-5370

## PROJECT DESCRIPTION

IBM "Teaching and Learning with Computers" (TLC) combines the integration of networked computers in the classroom with quality training on IBM basic skills courseware, word processing software, and classroom-management strategies. TLC complements the existing instructional program. Writing across the curriculum is highlighted in this approach.

## PLACEMENT AND USE OF COMPUTERS AND SOFTWARE

Computers are distributed in the classroom using a ratio of 1:5. Installed sites include:

School District	School
Charleston	Cochran Elementary
Greenville	Crestview Elementary
Greenville	Morton Elementary
Orangeburg 5	Elementary and middle schools
Richland 2	Keels Elementary

## FUTURE PLANS

IBM Educational Systems intends to announce the "Writing to Write" elementary-school writing series, which will be designed to enable elementary school children to learn to write what they think. "Writing to Write" will be a balanced curriculum where the teacher and the courseware are equal instructional partners. The program design will be instructional, so that students actively participate and learn by doing, as opposed to "drill and practice." "Writing to Write" will encompass the stages of the writing process approach: pre-writing, drafting, editing, revising, publishing, and sharing. The spiral curriculum, the combination and coordination of computer exercises, the ancillary print activities, and the teacher instruction will make "Writing to Write" a courseware product that takes full advantage of technology.

The "Writing to Write" series will make extensive use of Personal System/2 graphics and voice capability. It will serve as a follow-up to "Writing to Read" and will complement IBM's Teaching and Learning with Computers methodology. "Writing to Write" will employ a spiral curriculum with problem-solving techniques, and will be designed as the primary source of instructional sequence and methodology for the teaching of writing in the elementary school.

"Writing to Write" elementary school writing series will be made up of networked products only and will run under the IBM Classroom LAN Administration System Version 1.11 or later.

Field-testing of this new series has begun with selected schools. IBM is announcing this Statement of Direction at this time to allay uncontrolled speculation which might otherwise result as our field testing becomes more apparent to the general public. IBM's current intentions and plans are subject to review, and announcement of products in this new series will be based on IBM's technical and business judgement.

## STUDENT GAINS/RESULTS OF PROJECT

Districts reporting gains in BSAP performance attribute them not only to technology, but also to the restructuring of the classroom.

## E. OTHER COMMENTS

To ensure success of the program, districts should commit to teacher in-service days. Training and support is provided by IBM education consultants.

**FUTURE PLANS**

Expansion plans call for installation and support of new labs, as well as development of a "Writing to Read" follow-up curriculum. Using technology to extend the writing process into all curriculum areas and grade levels is currently being implemented in a number of school districts, including Orangeburg 5, Anderson 3, Richland 2, and others.

**STUDENT GAINS/RESULTS OF PROJECT**

Substantial student gains have been documented by several South Carolina districts, including Richland 1 and 2, Orangeburg 5, and Aiken, as well as other districts across the country.

**OTHER COMMENTS**

IBM "Writing to Read" works! Quality training and on going support are provided by IBM.

**Computer Firm Brand/Project:** Jostens Learning Corporation

**Contact Person:** Cathy Mobley  
Sales Analyst

**Address:** 6150 North 16th Street  
Phoenix, AZ 85016

**Telephone:** 602/678-7272, ext. 2231

## PROJECT DESCRIPTION

Jostens Learning Corporation provides technology-based learning products and services—from single curricula to complete turnkey systems—to more than 3,500 schools across the country. Products include:

- 1) The Basic Learning System. Primarily for grades 1-9, this is an integration of reading, writing, and mathematics.
- 2) Discovery Learning System. Includes a research-writing system, Compton's research center (Compton's multimedia encyclopedia), and a physical science program for grades 1-12.
- 3) At-Risk Learning System. Includes life skills, take-home computer, and family learning programs for grades K-12 and adult.

Service is at the heart of Jostens business. More than 300 educational consultants and technicians provide ongoing training/consulting services, as well as computer hardware maintenance.

## **FUTURE PLANS**

Jostens is in the process of launching a complete middle-school science curriculum and remedial basic skills, life skills, and employability skills at the high-school level, indicating more emphasis on learning beyond the elementary-school level.

## **STUDENT GAINS/RESULTS OF PROJECT**

Contact Miriam Simmons at 1/800/221-7927, ext. 4413.

## **OTHER COMMENTS**

- Jostens is working on enhanced management features, including the ability to upload to district level.
- Support is ongoing; new releases are issued at least annually.
- The customer has hardware flexibility—Jostens can provide Apple, Tandy, or IBM models.
- For more information, contact:  
Mike Hayes  
SE Regional Vice President  
Jostens Learning Corporation  
1/800/221-7927, ext. 2202

Columbia, SC 29208

**Telephone:** 803/777-5992

## PROJECT DESCRIPTION

The Rural Education Alliance for Collaborative Humanities (REACH) is part of CHART. The Rockefeller Foundation, working with other major foundations and corporations, has funded 13 major projects under the aegis of CHART (Collaboratives for Humanities and Arts Teaching). All thirteen projects are exploring ways of improving and enhancing student learning. For the past three years, REACH has sponsored humanities projects in South Carolina schools. As an integral part of that effort, it has encouraged teachers and students to explore the potential of electronic mail, teleconferencing, and other support technologies to enhance inquiry learning in its schools.

In the spring of 1989, REACH received a four-year grant from the BellSouth Foundation to fund an Office of Telecommunications and Instructional Technology at the Center for Computers and Writing at the University of South Carolina in Columbia. The initial goal of the Office of Telecommunications was to provide teachers in the 25 schools directly funded by the Rockefeller Foundation with the technical assistance and training they needed to begin to communicate with one another using VMS Mail and VAX Notes. Concomitant with its efforts to directly support teachers within REACH schools with the support and encouragement of the BellSouth Foundation and several educational organizations within South Carolina, REACH has taken the first steps toward building a statewide telecomputing network that will be open to any individual or organization in the state having a need or interest in becoming part of the "the net"—the South Carolina Network for Educational Telecomputing.

Telecommunications within "the net" is supported through a statewide network of modems and leased phone lines and a VAX computer located at Clemson University. The network can be accessed, via modem, with a local phone call from anywhere in the state. Members of the network have access to VMS Mail, VAX Notes, and—and InterNet and BitNet—the ability to communicate with other teachers and students virtually anywhere in the world. The database of National Dropout Prevention Center can be accessed through the network, and teachers who are on the network can search the stacks of the Cooper Libraries at both Clemson and the University of South Carolina, via modem, without leaving home. The network currently supports 300, 1200, and 2400 baud modems and virtually any software capable of supporting VT100 emulation. Teachers in the network are using Apple II, Macintosh, and a variety of DOS computers to access the network.

Currently, there are over 60 different "accounts" and more than 200 individuals who are members of the network— three-fourths of whom will be scheduled for training and technical assistance in the fall and early winter. Among the accounts are the faculty of the Governor's School of Science and Mathematics, the directors and codirector of the nine projects which comprise the South Carolina Writing Project; the directors and regional coordinators of the Writing Improvement Network; the managers, associate managers, and affiliates of Enterprise Development Incorporated; the South Carolina Arts Commission; the state director of the Arts in Basic Education Program; the director of Odyssey of the Mind; etc. REACH will be working cooperatively with Clemson University and South Carolina State College to provide a computer network to support science and mathematics education.

Financial support of technical assistance and staff development training for new users is being provided by the BellSouth Foundation. By late fall, the Center for Computers and Writing will have in place a networked computer laboratory that will support both telecommunications training and instruction in composition.

Any individual or organization in the state who is interested in becoming a part of the network is encouraged to call or write the director of the REACH Office of Telecommunications. If you wish, you may simply ask anyone involved with one of the statewide REACH projects to request information for you.

Center for Computers and Writing  
Department of English, USC-Columbia  
Columbia, SC 29208  
Phone: 803/777-5992**

## **PLACEMENT AND USE OF COMPUTERS AND SOFTWARE**

Based upon last year's survey, a majority of the 25 or so REACH schools are using some version of the Apple II computer (Ile, Iic, Iigs), usually an Apple Personal modem, and ProTerm software. Macintosh users are, by and large, using 2400 baud Practical Peripheral modems, and Microphone, White Knight(Read Ryder), or Microsoft Works software. A number of the DOS users are using 2400-baud Practical Peripheral modems and ProCom or ProComPlus software. The Center for Computers and Writing is using a Macintosh SE/30 computer, a 2400-baud Practical Peripherals modem, and Microphone Software. User database is maintained with Filemaker. The Center also has in place a networked lab of 20 Macintosh Plus computers, an Apple Laserwriter, a DEST scanner, and a Kodak DataShow LCD projector. By late fall, it is anticipated that the lab will be connected to the University's Ethernet backbone, thus allowing any computer user in the laboratory to access resources anywhere in the network, including BitNet and InterNet access.

Clinton High School uses an Apple Iie, located in the library, for telecommunications. Both teachers involved with REACH have been provided DOS computers by their principal. Beck Middle School is using DOS computers. Andrews High School has a Macintosh. The South Carolina Writing Project and the Writing Improvement Network are using a mix of DOS computers, Apple II computers, and Macintosh computers—used with 2400-Baud Practical Peripheral modems. The South Carolina Arts Commission is using DOS computers. Enterprise Development, Inc. is using DOS computers in South Carolina but is communicating with Macintosh users in North Carolina and Georgia. Ann Godbee, director of Odyssey of the Mind, has a Macintosh, NCR laptop, and a DOS desktop—all equipped with modems and telecommunications software. The South Carolina Teacher Recruitment Center uses a Macintosh SE.

A complete list of schools, organizations, and individuals who have been or are in the process of being assigned user names in the network is available from Kimble Oliver.

## **USE BY SCHOOLS/ORGANIZATIONS**

Alice Drive Elementary School  
Andrews High School  
Apple Computers  
ASCD

York Comprehensive High School

## FUTURE PLANS

In September, the Rockefeller Foundation funded REACH for three more years. The grant from the BellSouth Foundation will run concurrently with the grant from Rockefeller; moreover, the BellSouth Foundation has asked REACH to submit a supplementary proposal in early 1991 for additional funds to support the development of the statewide telecomputing network.

Within the limits of the three years of the two grants, REACH will attempt to encourage every school in South Carolina to equip at least one microcomputer with a modem and the telecommunications software needed to join the network, locating that microcomputer in the school media center where it can be made available to any teacher or student in the school. REACH schools will be learning to access remote databases, and to communicate with teachers and students in other states and countries. We'd like to learn from what other teachers and students are doing, and share what we are learning with them!

For the next three years, the REACH Office of Telecommunications and other members of the REACH effort will be actively encouraging individuals and organizations to become a part of the network. Funds from BellSouth are available to support training and technical assistance throughout the state, and funds for a limited number of school-based REACH projects are available through the Rockefeller Foundation. However, REACH encourages individual schools to tap into other available funding sources to support network activities. In fact, one of the "dynamic databases" that REACH will offer its members through a VAX Notes conference, will be a constantly updated listing of funding sources available to schools in the state.

Complementing efforts to establish a statewide network of teachers and students in the humanities and social sciences will be efforts on the part of REACH to establish a statewide network of teachers and students in mathematics and the hard sciences. REACH will also be making an effort to involve school principals and district administrators in the network.

**Computer Firm Brand/Project:** South Carolina Occupational Information System (SCOIS)  
**Contact Person:** Carol J. Kososki  
SCOICC Director  
**Address:** P.O. Box 995  
Columbia, SC 29202  
**Telephone:** 803/737-2733  
**Person Supplying Information:** Angeleen Hunter  
Assistant SCOICC Director

## PROJECT DESCRIPTION

SCOIS is a computer information system delivering up-to-date career, educational, and job search information. SCOIS provides students, adults, teachers, and counselors with the information necessary to explore and plan for careers and choose jobs in a logical and systematic way.

SCOIS is a telephone dial-up system with access to a Prime mini-computer through computer terminal teleprinters or microcomputers with modems.

SCOIS is operational throughout the state, with 370 sites having access to the system.

## PLACEMENT AND USE OF COMPUTERS AND SOFTWARE

SCOIS locations:

184	High Schools
50	Vocational Education Centers
52	Middle Schools
2	Elementary Schools
16	Technical Schools
11	Colleges/Universities
12	Community-Based Organizations
6	Job Service Offices
7	Public Libraries
15	Vocational Rehabilitation Centers
<u>15</u>	Others
370	Total Sites

## FUTURE PLANS

SCOIS is currently evaluating "Peterson's Private Source of Financial Aid" as a possible addition to the SCOIS Financial Aid File.

## STUDENT GAINS/RESULTS OF PROJECT

An average of 4,000 accesses to SCOIS are recorded each month. Students have a better understanding of careers, job opportunities, and educational training options as a result of using SCOIS.

## OTHER COMMENTS

SCOIS User Services staff maintain SCOIS-owned computer terminals and provide training to counselors, teachers, librarians, students, etc. The annual fee for a SCOIS-owned computer terminal is \$795. Users who provide their own equipment pay \$495 a year. SCOIS now offers a microcomputer software package, Resume Writer and Application Maker, at a one-time cost of \$95. SCOIS users can purchase Holland's Self-Directed Search Materials from SCOIS at a discount rate. SCOIS computer information is supplemented by the use of printed materials and videos. For demonstrations or conference presentations, contact Carol J. Kososki, SCOICC Director, at 803/737-2733.

**Computer Brand/Project:** WICAT Systems  
**Contact Person:** Judy Ethridge  
**Address:** 39 Winfield Road  
 Greenville, SC 29607  
**Telephone:** 803/676-1436  
**Person Supplying Information:** Judy Ethridge

**PROJECT DESCRIPTION**

With over 2,600 hours of instruction, WICAT courseware spans virtually every subject from kindergarten through GED. WICAT is the only vendor providing a separate testing component which is both diagnostic and prescriptive. WICAT Systems is currently being used by more than over 300,000 students in over 600 schools 150 districts and colleges. Current applications include, but are not limited to, raising test scores, remediation, individualization, basic skills, dropout prevention, GED, adult literacy, and enrichment.

**PLACEMENT AND USE OF COMPUTERS AND SOFTWARE**

**Equipment Placed by School, Subject, and Grade**

<u>School District</u>	<u>School</u>	<u>Grade</u>	<u>Subject Area(s) Emphasized</u>	<u>Equipment Model</u>	<u>Quantity</u>
Anderson 5	Homeland Park Elementary	K-5	Reading, Language Arts, Math	WICAT	16 workstations

Sumter 2	R.E. David Elementary	K-6	Reading, Math	WICAT	30 workstations
Sumter 2	Rafting Creek Elementary	K-6	Reading, Math	WICAT	30 workstations
Sumter 2	St. Johns Elementary	K-6	Reading, Math	WICAT	30 workstations
Youth Services	Birchwood High	9-12	Reading, Language Arts, Math	WICAT	32 workstations

## **FUTURE PLANS**

WICAT is an on-line test that simulates either the ITBS, CTBS, CAT, SAT, or MAT. This test is both diagnostic and prescriptive and will be available in 1990-91.

## **STUDENT GAINS/RESULT OF PROJECT**

In just five months, Chapter-I students at McCorkle Elementary School in Chicago achieved an 42% gain in math and 152% gain in reading on the ITBS.

At Wayne State University in Detroit, students who had dropped out of school returned to work on the WICAT program. In only 12 weeks after coming back to school, these students, using WICAT's GED courseware, achieved gains of 12.5 months in math and eight months in reading.

## **OTHER COMMENTS**

WICAT is the only vendor to offer an on-line training component, which is currently being reviewed by a South Carolina college for granting teacher credit hours. WICAT provides training for lab managers, teachers, and district personnel who will be involved with the WICAT program. WICAT provides a "800" customer service "hotline" for any information. A service technician is also available to provide full, on-site service within a 24-hour response time.

WICAT has adopted an open-architecture approach which can integrate a variety of computer equipment in schools (IBM, Apple, Tandy).
