## ABSTRACT

Comparative financial information, derived from two national surveys of 531 public community and junior colleges, is presented in this report for fiscal year 1989-90. Chapter 1 provides guidance on using the report to compare institutional statistics with national and peer group norms, and discusses limitations of the data. Chapter 2 summarizes findings in the areas of expenditures, revenues, service area, and staffing. Chapters 3 and 4 present data on the medians and quartiles for the full sample of 531 colleges, offering information on expenditures by major and detailed categories, computer-related expenditures, revenues, course enrollment distributions, salaries, and student/staff ratios. These chapters also include worksheets to facilitate comparative analyses. Chapter 5 contains medians and quartiles for five college peer groups classified by enrollment size and vocational/technical designation. Report findings include the following: (1) between fiscal year (FY) 1989 and FY90, per-student appropriations decreased by 1.5%, from \$2,863 to \$2,821; (2) academic expenditures increased by 1%, from \$2,480 in FY89 to \$2,504 in FY90, while administrative expenditures dropped by almost 3%; (3) the median college spent \$5,129 per credit full-time equivalent student in FY90, an increase of 103% from the previous year; (4) for FY90, academic expenditures accounted for approximately 60% of the colleges' budgets; and (5) in FY90, student services accounted for 9% of expenditures at the median college, while less than 2% of resources were dedicated to scholarships. A description of the study methodology, sample surveys, and a list of participating colleges and the peer group composition, are appended. (JMC)

## **SCOPE OF REPORT**

**This report contains financial statistics for fiscal year 1989-90 and explanations derived from two surveys of 531 public community and junior colleges from across the nation. The report includes:**

- o Sample findings from the surveys.**
- o Space to compare institutional statistics with national sample medians.**
- o Space to compare institutional statistics with sample medians from five different peer groups of institutions (four groups based on enrollment and one group based on vocational/technical designation).**
- o Quartile data for the national sample and peer groups.**
- o Explanations of the statistics, definitions, and clarification as to what is included in and excluded from each calculation.**
- o Possible interpretations derived from institutional and peer group statistical comparisons, which may be useful for management reports based on this analysis.**

## PREFACE

This report is the thirteenth in an annual series of comparative data studies of public community and junior colleges. It is the result of an intensive six-month study involving three national education associations--The National Association of College and University Business Officers (NACUBO), the Association of Community College Trustees (ACCT), and the American Association of Community and Junior Colleges (AACJC)--as well as the National Center for Education Statistics (NCES) and 531 community and junior colleges. The study is intended to provide information to community college administrators, representatives of state and local agencies, and federal policy makers.

In 1977, members of NACUBO's Two-Year Colleges Committee decided to undertake a comparative data study of public community colleges.\* They were frustrated by the lack of information available to members of governing boards, presidents, and taxpayers who requested comparative data. The committee members thought that these data could be an important part of the information necessary for such decisions as appropriation requests, salary increases, and proposed expenditures by function (instruction, institutional support, plant operation and maintenance). Further, "current" information, rather than historical summary, was needed. Because the committee members were also concerned about potential problems involved in trying to establish comparative data for community and junior colleges (see chapter 1, "Limitations"), they approached the task cautiously. Further information on the method used is given in Appendix A.

The intent of this report is to provide comparative information derived from a sample of 531 public community and junior colleges. Comments on the first twelve years' reports from community college presidents and business officers were used to determine the usefulness of the data and the additional information needed, as well as to make necessary changes. Sample size doubled steadily throughout the first three years, from 97 to 184 to 403, leveled off at 420 and 442 the next two years, increased to more than 500 for this and the past seven years, indicating the perceived usefulness of the statistics for decision making at the institutions.

One of the study's primary objectives has been to learn how comparative information can be used to improve community and junior college decision making. The project also seeks to shed greater light on the financial and operational aspects of community colleges. The report may be useful in comparing the operational and financial statistics of an individual community college to national medians; the report format is designed to facilitate such comparison.

Comments from readers regarding the need for and improvements to this report are encouraged.

---

\* The term "community colleges" is assumed to include all postsecondary institutions offering up to the first two years of higher education.

## ACKNOWLEDGMENTS

The continuation of this project through a twelfth year was made possible by funding from the National Association of College and University Business Officers (NACUBO). In addition, the American Association of Community and Junior Colleges (AACJC) and the Association of Community College Trustees (ACCT) provided cooperative support and the National Center for Education Statistics (NCES) contributed technical assistance, making possible the early use of 1989-90 IPEDS finance data.

In the thirteenth year of the project, guidance and support were once again provided by the NACUBO Two-Year Colleges Committee, whose members include:

Dale H. Miller (Chairman)  
Harrisburg Area Community College, PA

John E. Harper  
Central Piedmont Community College, NC

Robert W. Jensen  
Metropolitan Community Colleges, MO

John Mason  
Foothill-DeAnza Community College, CA

Leila K. Menzies  
Los Angeles Harbor College, CA

Gary Nichols  
Mt. Hood Community College, OR

Therese Sampson  
Atlantic Community College, NJ

Michael Shirley  
Elgin Community College, IL

Jacqueline H. Stanley  
Dalton College, GA

Instrumental in facilitating the project's progress were state liaisons who actively encouraged their colleagues to participate in the study. They were instrumental in achieving the high participation rate enjoyed by this study.

The staff of the NACUBO Financial Management Center devoted both energy and resources to the successful conduct of the study, particularly the data collection and analysis.

A debt of gratitude is owed to Norman Brandt, of NCES, who acted as a liaison and provided a great deal of effort and cooperation since the inception of this project. James F. Gollattscheck, Executive Vice President, AACJC, and Raymond Taylor, Executive Director, ACCT, are also acknowledged for their cooperation and support.

## LIST OF TABLES

### Full Sample

- 1 Expenditures by Major Categories
- 2 Expenditures by Detailed Categories
- 3 Special Categories of Expenditure
- 4 Computer-Related Expenditures
  
- 5 Revenues by Major Categories
- 6 Revenues by Detailed Categories
- 7 Special Categories of Revenue
  
- 8 Course Enrollment Distributions and Salaries
- 9 Staff Ratios
  
- 10 Quartiles for All Expenditure Categories
- 11 Quartiles for All Revenue Categories
- 12 Quartiles for All Staff Ratio and Course Enrollment Distribution Categories

### Group 1 - Institutions with Headcount Enrollment Less than 5,000

- 13 Quartiles for All Expenditure Categories
- 14 Quartiles for All Revenue Categories
- 15 Quartiles for All Staff Ratio and Course Enrollment Distribution Categories

### Group 2 - Institutions with Headcount Enrollment from 5,000 through 15,000

- 16 Quartiles for All Expenditure Categories
- 17 Quartiles for All Revenue Categories
- 18 Quartiles for All Staff Ratio and Course Enrollment Distribution Categories

### Group 3 - Institutions with Headcount Enrollment Greater than 15,000

- 19 Quartiles for All Expenditure Categories
- 20 Quartiles for All Revenue Categories
- 21 Quartiles for All Staff Ratio and Course Enrollment Distribution Categories

### Group 4 - Institutions with FTE Enrollment Less than 1,000

- 22 Quartiles for All Expenditure Categories
- 23 Quartiles for All Revenue Categories
- 24 Quartiles for All Staff Ratio and Course Enrollment Distribution Categories

### Group 5 - Primarily Vocational/Technical Institutions of All Sizes

- 25 Quartiles for All Expenditure Categories
- 26 Quartiles for All Revenue Categories
- 27 Quartiles for All Staff Ratio and Course Enrollment Distribution Categories

## LIST OF EXHIBITS

- 1 Peer Group Definitions
- 2 Number of Participating Institutions
- 3 Total Revenues (Excluding Auxiliaries) Per Credit FTE Student
- 4 Total E & G Expenditures Per Credit FTE Student
- 5 Revenue Sources (Tuition and Appropriations) Per Credit FTE Student
- 6 Scholarships Per Credit FTE Student (Including and Excluding Pell Grants)
- 7 Academic and Administrative Expenditures Per Credit FTE Student
- 8 Utilities Expenditures and Plant Operation and Maintenance Expenditures Without Utilities Per Square Foot of Building Gross Area
- 9 Computer-Related Expenditures Per Credit FTE Student
- 10 Credit FTE Instruction Faculty as a Percentage of Total FTE Staff
- 11 Percentage of Total Credit FTE Instruction Faculty That is Part-time
- 12 Median Percentage of Classes (Including Sections) Offered for Credit as Distributed Among Size Categories

## CHAPTER 1 INTRODUCTION TO THE PROJECT

### How to Use This Report

#### Potential Uses

The primary purpose of this report is to assist an institution in preparing a meaningful analysis of how its financial performance relates to peer group norms. Unlike internal institutional analysis, where performance in terms of revenue and expenditure patterns is related to goals, this analysis compares certain data from an institution with data from other institutions. Comparison is useful only to the extent that the comparison group is similar and that data on revenue and expenditure performance of that group are based on common understandings. Comparative data may be used to define high standards for assessing institutional financial success or to justify average performance, depending on the aspirations of an institution with respect to the norms of the comparison group. Both types of comparison can lead to meaningful analysis of an institution's financial data; such analysis could, in turn, affect the institution's financial policies in cases where an institution appears significantly out of line with its peers.

The unique characteristics of an institution may be revealed by comparison. An institution may have relatively high--or low--cost areas, such as utilities or faculty salaries, or high--or low--quality (and cost) programs, such as instruction or student services. Unique characteristics are reflected in the differences between the cost structure of an institution and the norms for all institutions surveyed. Comparison of an institution's cost structure to those of other institutions serves to highlight these differences. Depending on goals and other perceptions, comparison may reassure or cause concern to governing boards and others regarding whether an institution is monitoring and managing itself in a fashion appropriate to its singular character.

Comparisons are useful for confirming and challenging perceptions. If an institution has high cost areas, are they perceived to be of high priority? For example, if student services costs are above the median, is the institution's priority for these services the cause?

Comparisons also help an institution to set performance goals, which may be planned in terms of budget proportions for various functions, revenue proportions, expenditures per student by various functional categories, staff patterns, or class size distributions. In areas where an institution has revised an internal priority, the median or high quartile scores might provide a reasonable goal for performance. The soundness of a given goal, a question any board member may raise, can, at least in part, be established with reference to the performance of other institutions.

In addition to its primary purpose in providing meaningful comparisons, this report may serve as an internal management document for self-review and self-analysis. Comparisons provide a starting point for finding institutional strengths and weaknesses. For example, costs per student that are far above the median, as well as staff-to-faculty ratios that appear high when compared with others, may indicate problems in institutional management.

These comparisons may suggest new ways for an institution to record data in order to monitor potential trouble points; they may also suggest areas in which more detailed study is required. The analysis this workbook allows can thus suggest areas where new policies or new methods of monitoring performance may be required.

### **Step-by-Step Use of This Report**

The following steps should serve as a guide to this report:

1. Read the "Findings and Trend Data" chapter that follows. It should contribute to an understanding of the report's highlights, the kinds of statistics presented, and the range of results from sampled institutions.
2. Fill in the columns designated "Your Institution." Each institution that participated in the survey will be given computer printouts of its statistics. Other institutions will have to use their own data sources to derive these statistics.
3. Fill in peer group data under the column marked "Peer Group." These data are available in chapter 5 of this report. For the purpose of this study, peer groups are defined by the headcount of the total student body, plus two special groups, one for institutions with less than 1,000 full-time-equivalent (FTE) students and one for institutions that are primarily vocational/technical. This column provides a refinement of national sample data to show where significant differences may occur because of an institution's particular size. For the most part, however, the medians of the national sample do not differ significantly from the medians of each size group.
4. Note the quartile ranges. One may wish to add special notations to institutional statistics that deviate far enough from the median to be outside the first or third quartiles. Quartile scores are given in chapter 4.
5. Examine the work pages for exceptions. Which institutional statistics vary most from the sample medians?
6. Compare all data with institutional goals and perceptions for expenditures, revenues, staff ratios, and course enrollment distributions. Examine each statistic and determine whether it was anticipated in comparison with other institutions.
7. Select ten or fewer statistics as a basis for a report on how the institution compares with this sample of institutions. For most institutions, only a few of the statistics carry a new, significant, and perhaps surprising meaning for the institution. A short report interpreting these statistics would be useful to presidents, key faculty members, and members of governing boards.
8. Communicate with project staff regarding the usefulness of this report. Which statistics are particularly useful for assessing institutional financial policies? What statistics are missing? How can the report be made more reliable? What reports were generated based on this document.

## **Limitations**

The results of a comparative data study of this nature must be used with care. Discussion of some of the more obvious concerns follows.

### **Extrapolation**

The 531 public community colleges in this study may not reflect the financial and operational patterns of their 252 sister institutions (counting systems of branch campuses as single institutions).<sup>\*</sup> Care was taken to include institutions that are geographically representative, as well as representative of enrollment levels. However, because of the need to use only data from those cooperating institutions that filed both timely and complete reports, the sample is not random. Generalizing the sample statistics in this study to all public community colleges should be done with care because nonrespondents or late respondents to IPEDS and other surveys may be beset by particular administrative difficulties, thereby somewhat biasing the sample. However, the last 25% of the returns did not significantly affect the median scores calculated up to that point, indicating that late respondents may not be significantly different.

Moreover, comparing previous years' results with this year's results demonstrates the reliability of the results for those years. The median figures are similar for all the years after adjusting for inflation. The expansion of the sample allowed the study team to generate these statistics on an individual basis for the 531 participating institutions.

No great significance is attached to any changes that occurred from year to year for any of the statistics. First, the survey populations differed. Second, most changes are smaller than the confidence limits for the statistics.

### **Original Data**

Lack of well-established definitions for such terms as "full-time-equivalent student" and lack of consistency in reporting such expenditure functions as "Academic Support," "Institutional Support," and "Student Services" create difficulties in generating accurate comparative data. Moreover, some survey responses are estimates because some institutions do not keep precise data in all the areas surveyed. All these factors affect the quality of the results.

### **Treatment of Pell Grants**

Pell Grants were included in both the revenues and expenditures bases from 1982-83 forward, a significant change from previous years. The inclusion of Pell Grants in the HEGIS (now IPEDS) finance survey in 1982-83 was in response to the NACUBO decision, effective 1982-83, to consider Pell Grants as institutional rather than agency funds.

In the revenues category, Pell Grants are included in federal restricted grants; in the expenditures category, in restricted scholarships. For comparison purposes in this study, Pell Grants have been excluded from the above mentioned items and the corresponding totals. (Note that the figures published in the 1982-83 report do not have Pell Grants deducted; those figures were revised to reflect their exclusion and are available from NACUBO.)

### **Normalized Higher Education Price Index**

The Higher Education Price Index (HEPI), used in several of the graphs that follow, has been normalized to 1986. A normalized index is one in which the user selects the base year. The deflator (index) in each year is then divided by the deflator of the base year. The resulting index should have a value of 1 in the base year. As used here, the normalized HEPI uses 1986 as the base year.

### **Institutional Comparability**

There is no way to establish truly homogeneous peer groups for community colleges. Such major factors as mission, location, academic preparation of entering students, local area salary levels, local nonsalary costs, and methods of financing create unique financial and operating patterns. Peer group comparisons that lead to administrative financial policy changes require sensitivity to the many factors not readily apparent from the statistics.

### **The Myth of the "Typical" Institution**

No group of institutions exists whose data show them to be completely "typical." In fact, all institutions had fewer than three-quarters of their statistics within the middle two quartiles; on some statistics all institutions were higher or lower than 75% of the other institutions. There is no typical institution, and institutions should use this report only to find what makes them unique--not to pressure an institution toward some nonexistent "median" performance. This study has found a great diversity of expenditure, revenue, and staffing patterns. Diversity is clearly a characteristic--and no doubt a great strength--of community and junior colleges.

---

\* For the purpose of this study, the lowest level of administrative unit where financial records are maintained was sought. Thus Foothill-DeAnza (made up of several campuses) was counted as a single entity, whereas the California system of community colleges was not treated as a single entity.

The universe of public community colleges, as defined by AACJC, is comprised of approximately 783 institutions.

## CHAPTER 2 FINDINGS AND TREND DATA

The following summary of important financial characteristics is based on the financial data section of the Integrated Postsecondary Education Data System (IPEDS), conducted by NCES, and a supplemental survey conducted by NACUBO. Analysis was performed by NACUBO.

The study sample of 531 institutions was not randomly selected but was derived from the total universe of public community and junior colleges and was dependent on their willingness to participate (see Exhibits 1 and 2). Limitations of the statistics were discussed in the previous chapter. It should be noted that any changes from year to year may be due to a changing population of colleges in the study.

**Calculations.** Pell Grants are excluded from both the revenue and expenditure bases. All revenue and expenditure figures exclude auxiliaries unless specifically noted. All dollar amounts are per credit full-time-equivalent (FTE) student unless otherwise noted.

**Medians.** Medians represent the number that will split the group of colleges in half for a given statistic; half the colleges will be above the median, while half will be below. For that reason, the "median institution" will be different for each separate statistic, and the proportions may thus not add to 100%.

**Constant Dollars.** Current dollars are converted to constant dollars by using a normalized Higher Education Price Index (HEPI). A normalized index is one in which the user selects the base year. The deflator (index) in each year is then divided by the deflator of the base year. The resulting index should have a value of one in the base year. The base year selected for the following exhibits is FY1986 (i.e., HEPI 1986 = 100).

### Exhibit 1: Peer Group Definitions

- Group 1. Total credit and noncredit headcount enrollment less than 5,000.
- Group 2. Total credit and noncredit headcount enrollment from 5,000 through 15,000.
- Group 3. Total credit and noncredit headcount enrollment greater than 15,000.
- Group 4. Total FTE enrollment less than 1,000. (A subset of Groups 1, 2, and 3.)
- Group 5. Primarily vocational/technical institutions of all sizes. (These institutions are a subset of Groups 1, 2, and 3.)

Total enrollment includes full-time, part-time, and noncredit students.  
FTE enrollment consists of full-time equivalents for full-time, part-time, and noncredit students. For institutions without precise figures available, it was suggested that FTE enrollment be calculated by adding full-time students, part-time students divided by 3, and noncredit students divided by 20. For FY 89-90, it was suggested that credit FTE enrollment be calculated by dividing total credit hours (opening fall 1989) by 15.

### Exhibit 2: Number of Participating Institutions

Year	Full Sample*	Group 1	Group 2	Group 3	Group 4	Group 5
1977-78	97	Experimental (included independents and branch campuses)				
1978-79	184	71	63	50	29	N/A
1979-80	403	180	132	91	91	58
1980-81	420	165	139	116	72	58
1981-82	442	157	151	134	73	83
1982-83	520	176	188	156	92	107
1983-84	560	216	192	152	107	110
1984-85	545	228	181	136	112	83
1985-86	506	199	171	136	88	84
1986-87	535	205	180	150	108	101
1987-88	559	199	214	146	103	111
1988-89	544	171	205	168	86	89
1989-90	531	166	192	173	75	89

\*The universe of public community colleges is approximately 790 institutions.

## GENERAL FINDINGS

### CONSTANT DOLLARS

For the third straight year, both total revenues and expenditures decreased slightly at public two-year colleges. Using a constant dollar base of 1986, both revenues and expenditures declined 1 percent compared to FY89 (see Exhibits 3 and 4). Revenues shifted downward from \$4,400 in FY89 to \$4,355 in FY90. Expenditures also decreased, from \$4,240 to \$4,196.

On a per-student basis, appropriations decreased by 1.5 percent, from \$2,863 in FY89 to \$2,821 in FY90. Conversely, tuition, which had increased by 6 percent in FY89, rose by 0.7 percent (from \$842 to \$848) (see Exhibit 5). Scholarships, including Pell Grants, grew by 2.3 percent, from \$408 in FY89 to \$417 in FY90. When Pell Grants were excluded, scholarships remained level at \$74 for both FY89 and FY90 (see Exhibit 6).

**Exhibit 3: Total Revenues (Excluding Auxiliaries)  
Per Credit FTE Student**

Higher Education Price Index (1986-100)

Academic expenditures per student increased by 1 percent in FY90 (from \$2,480 in FY89 to \$2,504 in FY90), while administrative expenditures dipped by almost 3 percent (from \$1,550 to \$1,506) (see Exhibit 7). Academic expenditures include instruction, research, public service, and academic support. Administrative expenditures include student services, institutional support, and plant operation and maintenance.

At community colleges, fixed costs may be greater in administrative areas than in instructional areas because many institutions use varying proportions of part-time faculty to reduce instructional costs and to increase flexibility in adapting program costs to instructional needs.

### CURRENT DOLLARS

In current dollars, colleges with FTE enrollment of less than 1,000 and vocational/technical colleges--Groups 4 and 5--once again had the highest expenditures per student in current dollars in most categories. For the most part, these groups also received the highest revenues per student\* from most sources. Group 4's ranking may be a result of economies of scale, while Group 5's placement may be attributable to the prevalence of specialized programs that require more expensive equipment as well as smaller student-to-faculty ratios within the group. Groups 4 and 5 both had smaller student-to-faculty ratios of 14:1, while the national sample ratio was 18:1.

2

**Exhibit 4: Total E&G Expenditures  
Per Credit FTE Student**

Higher Education Price Index (1986-100)

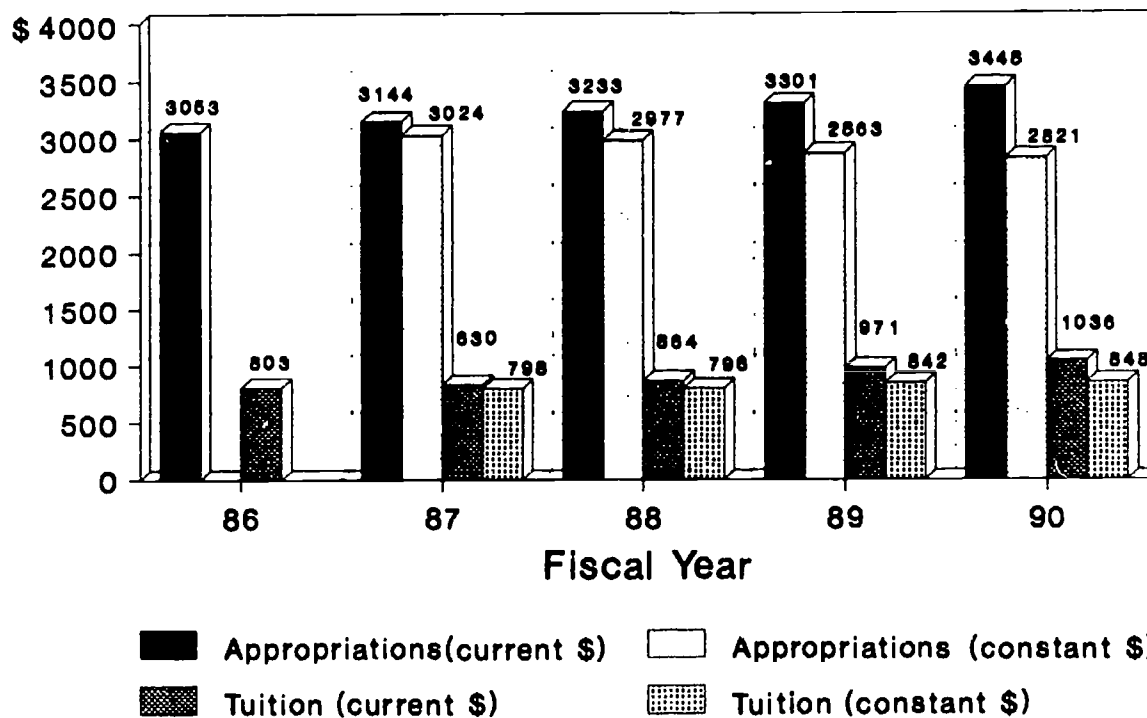

Utilities expenditures per square foot of building gross area remained highest at \$1.29 for colleges with headcount enrollment of more than 15,000--Group 3 and lowest for Groups 1 and 4 (\$0.95).

## **EXPENDITURES**

The median college spent \$5,129 per credit FTE student in FY90, up from \$2,528 in FY78--an increase of 103 percent over this period. Expenditures per student increased by 5 percent from FY89 to FY90--from \$4,889 to \$5,129 (see Exhibit 4). Median expenditures at Group 4 colleges--\$6,128--were 19 percent higher than those of the median college in the full sample. Vocational/technical colleges (Group 5) spent \$5,748 per student, 12 percent more than expenditures for all institutions surveyed.

**Academics.** Academic expenditures accounted for approximately 60 percent of the budget. The median college spent \$3,060 per student for academics in FY90 (see Exhibit 7).

**Exhibit 5: Revenue Sources  
Per Credit FTE Student**

Higher Education Price Index (1986=100)

In the full sample of colleges, one-quarter devoted more than 65 percent of their budgets to academics, while another 25 percent allocated less than 57 percent. For the median college in the survey, about 80 percent of academic expenditures were for instruction and the remaining 20 percent were spent on academic support, including campus libraries.

Less than half a percent of expenditures were earmarked for public service.

**Instruction.** In FY90, expenditures for credit instruction were highest in Groups 4 and 5 (\$2,456 and \$2,803 respectively). For the full sample of colleges, the median was \$2,282, up 4 percent from \$2,190 in FY89. The median college dedicated almost 1 percent of its expenditure base to noncredit instruction.

**Administration.** Since the survey was established, half the colleges have spent more than one-third of their expenditure base on administration (see Exhibit 7). In FY90, the median college devoted 36 percent, or \$1,841, of its expenditure base to administration, an increase of 3 percent from \$1,787 in FY89.

One-fourth of the colleges spent less than 32 percent (\$1,513) of their operating budgets on administration, while an equal number expended more than 41 percent (\$2,312).

2

Exhibit 6: Scholarships Per Credit FTE Student

Higher Education Price Index (1986-100)

**Student Services.** Student services accounted for 9 percent of expenditures, or \$477 per student, at the median college in FY90. Half the colleges spent between 7 and 11 percent of their budgets on student services.

**Scholarships.** Less than 2 percent of expenditures at the median institution in FY90 were dedicated to scholarships, excluding Pell Grants. The median expenditure of \$90 per student represented a 6 percent increase over the FY89 expenditure of \$85.

**Utilities.** Utilities expenditures ranged from 2 to 4 percent for one-half of the colleges. Utilities include electricity, gas, oil, coal, steam, water, and waste disposal.

The cost of utilities per square foot of building gross area was \$1.13 at the median college in FY90 (see Exhibit 8). This represented a 2 percent increase from the previous year (\$1.11). In FY90, plant operation and maintenance expenditures without utilities accounted for \$2.87 per square foot of building gross area. This represents a 5 percent increase over the previous year (\$2.74).

Exhibit 7: Academic and Administrative Expenditures Per Credit FTE Student

Higher Education Price Index (1986=100)

**Computers.** The median college spent 3 percent of its budget, or \$142 per student, on computer-related expenditures in FY90 (see Exhibit 9). The median college spent \$81 for administrative support per student and \$53 for academic support per student in FY90.

Operating costs accounted for 77 percent of total computer-related expenditures at the median college. Computer-related expenditures include those that are decentralized to administrative offices and academic units, whether directly provided, purchased from vendors, or provided by a consortium (paid through either institutional or noninstitutional funds).

**REVENUES**

Mirroring expenditures, total revenues per student increased 102 percent during the past 13 years, from \$2,635 in FY78 to \$5,323 in FY90. Revenues rose 5 percent in FY90 compared to FY89 (see Exhibit 3). Although revenues are consistently higher than expenditures, it is improbable that colleges are operating at an overall surplus. The difference may reflect transfers to cover expenditures for plant maintenance and auxiliary enterprises.

2

**Exhibit 8: Utilities Expenditures and Plant O&M Expenditures Without Utilities Per Square Foot of Building Gross Area**

Utilities HEPI (1986-100)

**Tuition.** Students paid \$1,036 in tuition and fees at the median college in FY90, a 7 percent increase from \$971 in FY89 (see Exhibit 5). Credit tuition ranged from 12 to 25 percent of revenues for half the colleges and represented 18 percent of revenues at the median college. Students paid from \$675 to \$1,313 in credit tuition and fees at half the colleges.

Noncredit tuition amounted to \$11 per noncredit headcount student at the median college in FY90, less than a half percent of total revenues. Tuition and fee revenues per noncredit headcount student ranged from \$0 to \$56 for half the colleges. This indicates several possibilities: a preponderance of inexpensive courses, subsidized noncredit courses, or a hasty estimate of the split between credit and noncredit tuition revenue.

**Grants.** The median college was awarded \$436 per student in total gifts, grants, and contracts in FY90 compared to \$402 in FY89--an increase of 8 percent. This revenue source has been rising steadily over the past couple of years. Half the colleges surveyed received between \$227 and \$708 per student in FY90.

**Exhibit 9: Computer-Related Expenditures Per Credit FTE Student**

Higher Education Price Index (1986=100)

**Appropriations.** The average student enjoyed the benefits of \$3,448 in federal, state, and local appropriations at the median institution--a 4 percent increase from the FY89 median of \$3,301. The amount received ranged from \$2,781 to \$4,381 per student at half the colleges. As a percent of total revenues, government appropriations ranged from 58 to 74 percent at half the colleges, with a median of 66 percent.

The median college garnered \$3,416 per student in state and local appropriations in FY90. The appropriated amount ranged from \$2,745 to \$4,360 for half the colleges. Local appropriations varied from 0 to 26 percent of revenues at half the colleges, with a median of 10 percent. Local appropriations totaled \$547 at the median college and ranged from \$0 to \$1,366 for half the colleges.

Revenue mix comparisons are difficult to make because states and localities finance their institutions in many ways. State and local appropriation statistics are derived from financing characteristics and vary greatly from state to state; these variations limit comparisons. The lack of control most administrators have in setting tuition and appropriation levels also must be taken into consideration.

**Exhibit 10: Credit Instructional FTE Faculty As a Percentage of Total FTE Staff**

**Exhibit 11: Percentage of Total Credit FTE Instruction Faculty That Is Part-Time**

**OTHER AREAS**

**Service Area.** One in every 18 people in the median college's service area was served by the college in FY90. This indicator, which was similar in previous years, is the ratio of service area population to the estimated unduplicated student headcount.

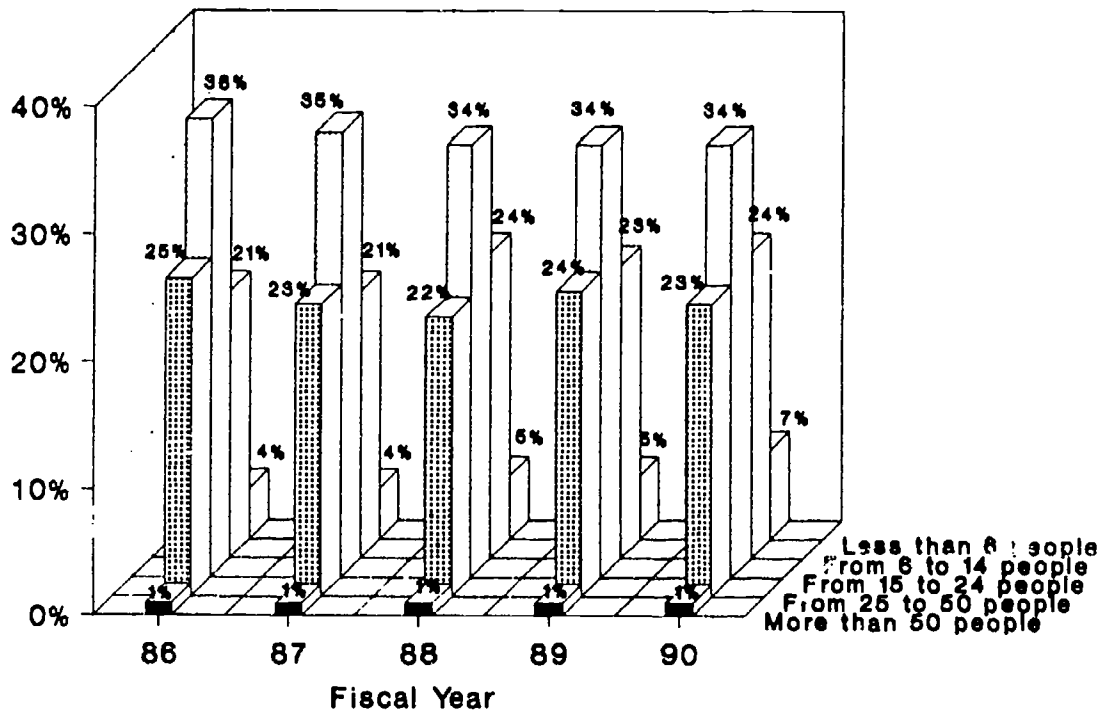

**Staffing.** The ratio of credit FTE students to credit FTE faculty at the median college increased slightly to 18:1 in FY90 after remaining at 17:1 in the four previous years. In FY90 credit instruction faculty accounted for 47 percent of all FTE staff (see Exhibit 10).

The proportion of credit instruction FTE faculty that is part-time was 33 percent at the median college in FY90 (see Exhibit 11). While this figure was fairly stable at 29 percent in previous years, it has increased in the past four years, ranging from 32 to 34 percent. Of all FTE staff, 25 percent were part-time in FY90.

A decrease in the staffing level of an individual college may be attributable to retrenchment or to more efficient use of staff. Careful year-to-year monitoring of the institution's staffing patterns may yield the most information for that college's administrators.

**Class Size.** Classes (including sections) offered for credit shifted downward in the 15-to-24 student size category--from 40% in FY79 to 34% in FY90 (see Exhibit 12). Another class size category appeared to accommodate the shift over this period: the 6-to-14 student size category increased from 14% in FY79 to 24% in FY90. Administrators may find such statistics useful when evaluating methods of delivering instruction.

**Exhibit 12: Median Percentage of Classes (Including Sections) Offered for Credit As Distributed Among Size Categories**

### CHAPTER 3 WORKSHEETS FOR COMPARATIVE ANALYSIS

The statistics in this chapter are medians for the entire sample of 531 institutions, excluding unusable or blank responses. The total number of usable responses for each statistic is shown in parentheses beside the statistic. Medians represent the number that will split the group in half; half the colleges will be below this number, and half will be above. For that reason, the "median institution" will be different for each separate statistic, and the proportions may thus not add to 100%.

Careful interpretation of expenditure and revenue proportions is urged. High costs in any given area, such as utilities, will naturally push the expenditure proportion for other areas, such as instruction, below the sample median--even if the budget support for instruction is perfectly adequate.

## Expenditures

**TABLE 1  
EXPENDITURES BY MAJOR CATEGORIES**

Expenditures by Major Function:	As a Proportion of Total Educational and General Expenditures (excluding <u>auxiliaries and transfers</u> )		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 5)
Total E & G Expenditures	100.0% (531)	_____ %	_____ % ( )
Academic Expenditures	61.1 (531)	_____ %	_____ % ( )
Support Expenditures	36.2 (531)	_____ %	_____ % ( )
Scholarships and Fellowships	1.8 (531)	_____ %	_____ % ( )

### Meaning and Explanations

Total expenditures include only current fund activities and exclude auxiliaries and transfers. Both restricted and unrestricted expenditures are shown. Each expenditure is shown three ways: as a proportion of total expenditures (as defined above), as the ratio of the expenditure to credit FTE students, and as the ratio of the expenditure to credit and noncredit FTE students.

Academic expenditures include instructional expenditures (for both credit and noncredit courses), research expenditures, public service expenditures, and academic support expenditures (including libraries, audiovisual centers, academic computing, and academic administration).

Support expenditures include student services, institutional support, and plant operation and maintenance.

Scholarships and fellowships include both restricted and unrestricted funds. Pell Grants are excluded.

Note: Pell Grants were included in both the revenues and expenditures bases from FY 1982-83 forward, a significant change from previous years. The inclusion of Pell Grants in the HEGIS finance survey in 1982-83 was in response to the NACUBO decision, effective 1982-83, to consider Pell Grants as institutional rather than agency funds.

In the revenues category, Pell Grants are included in federal restricted grants; in the expenditures category, in restricted scholarships. For comparison purposes in this study, Pell Grants have been excluded from the above-mentioned items and the corresponding totals.

**Expenditures per  
Credit FTE Student  
(in dollars)**

<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 5)</u>
\$5129 (531)	\$ _____	\$ _____ ( )
\$3060 (531)	\$ _____	\$ _____ ( )
\$1841 (531)	\$ _____	\$ _____ ( )
\$ 90 (531)	\$ _____	\$ _____ ( )

**Expenditures per  
Credit Plus Noncredit FTE Student  
(in dollars)**

<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 5)</u>
\$4526 (531)	\$ _____	\$ _____ ( )
\$2689 (531)	\$ _____	\$ _____ ( )
\$1640 (531)	\$ _____	\$ _____ ( )
\$ 79 (531)	\$ _____	\$ _____ ( )

**Possible Interpretations**

Institutions above the median on the proportion of expenditures devoted to instruction may rate themselves as more efficient than other institutions. On the other hand, some institutions may have achieved this "efficiency" by deferring administrative costs (especially some building maintenance) that will inevitably have to be paid. Moreover, some institutions, especially those serving disadvantaged populations, must fund higher student support expenditures. To remain consistent with their goals and mission, this pushes down the instructional cost proportion.

Institutions that are above the median on costs per student may find several interpretations possible: higher regional costs, a concentration of higher cost programs, and an attempt to provide a higher level of service. Higher instructional costs per student are almost always the direct result of higher faculty salaries than the median, lower ratios of students to faculty (see staffing distributions, pp. 32-34), or both.

Governing boards will be most interested in these deviations from the norm and how accurately they correlate with their own perceptions of institutional quality, program efficiency, and overall level of program cost.

Scholarship and Pell Grant funds per student give a measure of the financial need of attending students plus the effort expended by students and the institutional financial aid office in securing grants. It also reflects the institution's commitment to serve lower income students.

**Limitations**

Certain differential practices make the comparability of these statistics somewhat limited. Institutions where certain costs, such as fringe benefits, are paid directly by the state and are not included in institutional figures will show an "incorrect" low cost level.

In comparing expenditures per student for scholarships, numbers of needy students could justify above-median expenditures.

**TABLE 2  
EXPENDITURES BY DETAILED CATEGORIES**

Expenditures by Major Function:	As a Proportion of Total Educational and General Expenditures (excluding auxiliaries and transfers)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 5)
<b>Academic</b>			
Instruction (and Research)	49.9% (531)	_____ %	_____ % ( )
Public Service	0.2 (531)	_____	_____ ( )
Academic Support	8.7 (531)	_____	_____ ( )
<b>Support Services</b>			
Student Services	9.1 (531)	_____ %	_____ % ( )
Institutional Support	15.3 (531)	_____	_____ ( )
Plant Operation and Maintenance	10.5 (531)	_____	_____ ( )

### Meaning and Explanations

Total expenditures include only current fund activities and exclude auxiliaries, transfers, and independent operations. Both restricted and unrestricted expenditures are shown. Each expenditure is shown three ways: as a proportion of total expenditures (as defined above), as the ratio of the expenditure to credit FTE students, and as the ratio of the expenditure to credit and noncredit FTE students.

In this display, academic expenditures are split into three categories: instruction (and research), public service, and academic support. Support expenditures are broken down into student services, institutional support, and plant operation and maintenance. In conformance with NACUBO and IPEDS definitions, any expenditures for instruction, even for noncredit instruction, that were included in public service were transferred and are included in the instruction (noncredit) line. Standard definitions are given in Appendix C.

Research expenditures have been included with instruction because fewer than 10% of the sample institutions reported research expenditures.

Scholarships and fellowships include both restricted and unrestricted funds and exclude Pell Grants.

### Possible Interpretations

Budget proportion statistics may clarify factors making an institution different from other institutions. Its unique qualities may stem from a strong commitment to instruction, with student services perhaps sacrificed somewhat to maintain the academic program. Alternately, a high plant

425 (531)	_____	_____ ( )
682 (531)	_____	_____ ( )
467 (531)	_____	_____ ( )

maintenance commitment or a strong concern for academic support may serve to differentiate the institution from national norms. Analysts should examine data carefully to see if the unique characteristics revealed in the statistics are at variance with commonly held perceptions about the institution on campus. For example, if the institution prefers a low commitment to student services, while data reveal that the institution is far above the norm, a case exists for reexamining the current efficiency of the delivery of student services.

Examining costs on a per-student basis adds another dimension to the analysis. Higher costs per student may be due to relatively higher costs in a given geographic location, to falling enrollment, or to an inefficient educational delivery system--or to an institutional mission of providing high-quality services. At community colleges, fixed costs may be more predominant in administrative areas than in instructional areas because many institutions use varying proportions of part-time faculty to reduce instructional costs and to increase flexibility in adapting program costs to instructional needs. Institutions with enrollments below their physical capacity may have above-median costs per student in administrative areas because of fixed costs, coupled with median costs in the instructional areas.

### Limitations

It must be emphasized that being above or below the median is not necessarily good or bad unless such information conflicts with the stated goals of the institution.

**TABLE 3  
SPECIAL CATEGORIES OF EXPENDITURE**

**Expenditures by Major Function:**

**As a Proportion of Total Educational and  
General Expenditures (excluding  
auxiliaries and transfers)**

	<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 5)</u>
Credit Instruction	47.2% (530)	_____ %	_____ % ( )
Noncredit Instruction	0.8 (531)	_____ %	_____ % ( )
Utilities Expenditures	2.9 (515)	_____ %	_____ % ( )
Plant O & M without Utilities	7.4 (515)	_____ %	_____ % ( )
<u>Utilities</u>			
Building Gross Area (sq. ft.)	\$1.13 (494)	\$ _____	\$ _____ ( )
<u>Plant O &amp; M Without Utilities</u>			
Building Gross Area (sq. ft.)	\$2.87 (494)	\$ _____	\$ _____ ( )
<u>Plant O &amp; M Without Utilities</u>			
Building Replacement Value (est.)	\$0.04 (409)	\$ _____	\$ _____ ( )

**Meaning and Explanations**

Two important breakdowns are given first. Instructional expenditures are split into credit and noncredit categories, and plant operation and maintenance is broken into utilities and nonutilities maintenance costs. Utility expenditures include electricity, gas, oil, coal, steam, water, and waste disposal. Noncredit instruction costs per student are calculated by dividing the expenditures by noncredit headcount only. The breakdown between credit and noncredit is based on a percentage split estimated by each institution.

Plant operation and maintenance less utilities per square foot (gross area of building) is the cost of maintaining buildings, not including heating, cooling, and lighting per square foot of space. Utilities per square foot (gross area of building) include the cost of heating, lighting, and cooling per gross square foot of space. Plant operation and maintenance, not including utilities, per estimated building replacement value is the cost of maintaining the plant in terms of its replacement value. Estimated building replacement value per total FTE students is an estimate of the current value of buildings per student.

Salary ratios show the proportion of institutional expenditures comprised of salaries and wages. The ratio of current fund salaries and wages includes salary expenditures for auxiliary enterprises. E&G is an abbreviation for Educational and General. MT is an abbreviation for Mandatory Transfers.

**Possible Interpretations**

Credit instruction costs per student reveal differences among institutions with regard to class size and faculty compensation. Interpretations of these costs should acknowledge differences in faculty ratios and pay levels.

**Expenditures per  
Credit FTE Student  
(in dollars)**

Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 5)

130 (515)	\$ _____	\$ _____ ( )
335 (515)	\$ _____	\$ _____ ( )

\*No credit FTE students included in denominator; noncredit headcount enrollment used only.

**Building Replacement Value (est.)**

Total FTE Students (cr. + ncr.)      \$8206 (417)      \$ \_\_\_\_\_      \$ \_\_\_\_\_ ( )

**Total Scholarships and Pell Grants**

Credit FTE Students      \$ 510 (531)      \$ \_\_\_\_\_      \$ \_\_\_\_\_ ( )

**Total E & G Salaries and Wages**

Total E & G Expenditures + MT      61% (309)      \_\_\_\_\_ %      \_\_\_\_\_ % ( )

**Total Current Fund Salaries and Wages**

Total Current Fund Expenditures + MT      58% (386)      \_\_\_\_\_ %      \_\_\_\_\_ % ( )

These statistics are expansions on the analysis of plant operation and maintenance expenditures. A variance from the national sample median in overall costs may be due to high utility costs or to high energy consumption per square foot and may be driven by low space-to- student ratios.

Building value per student gives an indication of how much has been "built" per student. This figure may reflect declining or rising student enrollment, availability of funding for this purpose, or both.

Salary ratios are most useful when figures that show changes over time are examined. For individual institutions an increase in this ratio may reflect the preliminary stages of budget stringency. Travel, supplies, telephone, and equipment budgets are often the first to be cut in anticipation of revenue shortfalls.

**Limitations**

In making comparisons, careful attention should be given to the institution's special situation. Well-paid faculty, cold climates, age of buildings, and preventive maintenance plans could easily justify above-median expenditures.

Comparison among institutions on these ratios for a single year yields only an idea of the variety of budget structures. Some institutions depend more heavily on personnel; others have high nonpersonnel costs.

**TABLE 4  
COMPUTER-RELATED EXPENDITURES**

**Expenditures by Major Function:**

**As a Proportion of Total Educational and  
General Expenditures (excluding  
auxiliaries and transfers)**

	<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 5)</u>
Computer-Related Expenditures	2.8% (435)	_____%	_____ % ( )
Administrative Support	1.6 (408)	_____	_____ ( )
Academic/Instructional Support	1.1 (408)	_____	_____ ( )

**Median Percentage of Computer-Related  
Expenditures by Type**

	<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 5)</u>
Total Computer-Related Expenditures			
Operating Expenditures	77.2% (430)	_____%	_____ % ( )
Development Expenditures	0.0 (423)	_____	_____ ( )
Capital Equipment Purchase (amortized over 5 years)	14.4 (428)	_____	_____ ( )
Capital Equipment Lease	0.0 (422)	_____	_____ ( )

**How Computer Services Are Provided**

	<u>Hardware</u>		<u>Software</u>	
Purchased	331	67%	270	57%
Leased	11	2	23	5
Provided by a consortium				
o paid through institutional funds	17	4	24	5
o paid through noninstitutional funds	1	0	2	0
Combination or other	<u>132</u>	<u>27</u>	<u>158</u>	<u>33</u>
Total	492	100%	477	100%

**Meaning and Explanations**

All computer-related expenditures exclude data processing curricular costs except for hardware and software and directly related supplies and other costs required for equipment operation; thus, data processing, faculty compensation, and general instructional support are excluded. Computer-related expenditures include those expenditures decentralized to administrative offices and academic units, whether directly provided, purchased from vendors, or provided by a consortium (whether paid through institutional or noninstitutional funds). Total computer-related expenditures include those of all types, whether centrally administered or decentralized to administrative offices and academic units. This is the sum of operating, development, and purchased and/or leased capital expenditures. Appendix B contains a copy of the questionnaire on computer-related expenditures.

**Expenditures per  
Credit FTE Student  
(in dollars)**

Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 5)
\$142 (435)	\$ _____	\$ _____ ( )
81 (408)	_____	_____ ( )
53 (408)	_____	_____ ( )

**Expenditures per  
Credit Plus Noncredit FTE Student  
(in dollars)**

Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 5)
\$127 (435)	\$ _____	\$ _____ ( )
71 (408)	_____	_____ ( )
47 (408)	_____	_____ ( )

**Type of System**

Large-scale system	113	23%
Minicomputer system	148	31
Microcomputer system	10	2
Combination or other	<u>214</u>	<u>44</u>
Total	485	100%

Operating expenditures include those for computer center, computer service personnel, remote terminals, leased lines, computer maintenance costs, steady state and routine programming, and computer-related supplies, whether in the computer center's or user's budget. Development expenditures include internal and external expenditures incurred for special, one-time computer service personnel, remote activities, procurement of software packages, and employment of outside technical consultants.

Capital expenditures include major expenditures for purchase of computer hardware amortized over five years. Lease expenditures include those for the lease of computer hardware.

Of the colleges that reported hardware to be provided by a combination of methods, the predominant combination was purchased and leased. The same was true of software. Half the colleges reported a combination of types of systems, the most common being large-scale and microcomputer systems.

**Possible Interpretations**

Computer expenditures may be compared as a rough guide, but internal management would do well to monitor trends in its own computer-related expenditure patterns. Operating expenditures that constitute the majority of total computer-related expenditures may reflect an effort to upgrade computer software or an attempt to provide a higher level of service.

**Limitations**

Some institutions had difficulty breaking down expenditures between administrative and academic support. Underreporting of computer-related expenditures by institutions with decentralized systems is probable, especially in regard to academic support. This is more likely to have occurred at medium and large institutions. Regarding development expenditures and purchase of capital equipment, the data reflect over- and underreporting. Of those that did not amortize, some included the total amount in the fiscal year reported while others also lumped expenditures in this category but for a fiscal year other than the one reported.

3

## Revenues

**TABLE 5  
REVENUES BY MAJOR CATEGORIES**

Revenues by Major Function:	As a Percentage of Total Current Fund Revenues (excluding auxiliaries)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 5)
Total Revenues (current funds, not including auxiliaries)	100.0% (531)	_____ %	_____ % ( )
Tuition and Fees	19.7 (531)	_____	_____ ( )
Appropriations (all governments) Gift, Grants, and Contracts (all sources)	66.3 (531)	_____	_____ ( )
Other Revenues (not auxiliaries)	8.2 (531)	_____	_____ ( )
	3.0 (531)	_____	_____ ( )

**Meaning and Explanations**

Total revenues exclude sales and services of auxiliary enterprises, hospitals, and independent operations as defined on the IPEDS finance form for lines A-12, A-13, and A-15.

Appropriations (all governments) include federal, state, and local appropriations.

Gifts, grants, and contracts (all sources) include restricted and unrestricted revenues from federal, state, local, and private sources. Pell Grants are excluded from federal grants and contracts.

Other revenues include unrestricted and restricted endowment income, sales and services of educational activities, and "other sources" as defined on the IPEDS finance form for lines A-10, A-11, and A-14.

**Pell Grants**

Pell Grants were included in both the revenues and expenditures bases from 1982-83 forward, a significant change from previous years. The inclusion of Pell Grants in the HEGIS (now IPEDS) finance survey in 1982-83 was in response to the NACUBO decision, effective 1982-83, to consider Pell Grants as institutional rather than agency funds.

In the revenues category, Pell Grants are included in federal restricted grants; in the expenditures category, in restricted scholarships. For comparison purposes in this study, Pell Grants have been excluded from the above-mentioned items and the corresponding totals.

**Revenues per  
Credit FTE Student  
(in dollars)**

<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 5)</u>
\$5323 (531)	\$ _____	\$ _____ ( )
1036 (531)	_____	_____ ( )
3448 (531)	_____	_____ ( )
436 (531)	_____	_____ ( )
168 (531)	_____	_____ ( )

**Revenues per  
Credit Plus Noncredit FTE Student  
(in dollars)**

<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 5)</u>
\$4714 (531)	\$ _____	\$ _____ ( )
927 (531)	_____	_____ ( )
3049 (531)	_____	_____ ( )
370 (531)	_____	_____ ( )
152 (531)	_____	_____ ( )

**Possible Interpretations**

Interinstitutional revenue mix comparisons are difficult to make and have limited uses. States and localities finance their institutions in many ways. Grants may be for student aid or for special programs, such as Title III. These variations make comparison difficult.

**Limitations**

In some states institutions charge no tuition; revenues come from state and local sources only. This explains the great variability of these statistics.

Most revenue analyses would best be done on a state-by-state basis. Comparison is easiest among institutions within the same state or among institutions within states having similar financing for community colleges. Many institutions will want to rely on special home-state revenue analyses.

The large range of financing strategies makes median and quartiles of dubious statistical value.

3

**TABLE 6  
REVENUES BY DETAILED CATEGORIES**

Revenues by Major Function:	As a Percentage of Total Current Fund Revenues (excluding auxiliaries)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 5)
<b>Tuition and Fees</b>			
Tuition and Fees for Credit	17.9%(531)	_____ %	_____ % ( )
Tuition and Fees for Noncredit	0.5 (531)	_____	_____ ( )
<b>Appropriations</b>			
Federal	0.0 (531)	_____	_____ ( )
State	53.3 (531)	_____	_____ ( )
Local	10.1 (531)	_____	_____ ( )
<b>Gift, Grants, and Contracts</b>			
Federal	3.0 (531)	_____	_____ ( )
State and Local	2.5 (531)	_____	_____ ( )
Private	0.3 (531)	_____	_____ ( )

**Meaning and Explanations**

Tuition and fees were split into credit and noncredit portions using the estimated percentage breakdown given by each survey respondent.

All categories include both restricted and unrestricted funds.

Federal grants and contracts exclude Pell Grants.

State and local grants and contracts have been combined to save space.

Other revenues and total revenues are defined on the previous pages.

Table 7 shows state and local appropriations combined to improve state-by-state comparisons where the only variance in funding is the state or local portion provided.

**Revenues per  
Credit FTE Student  
(in dollars)**

<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 5)</u>
\$ 974 (531) N/A	\$ _____ N/A	\$ _____ ( ) N/A
0 (531)	_____	_____ ( )
2583 (531)	_____	_____ ( )
547 (531)	_____	_____ ( )
155 (531)	_____	_____ ( )
141 (531)	_____	_____ ( )
17 (531)	_____	_____ ( )

**Revenues per  
Credit Plus Noncredit FTE Student  
(in dollars)**

<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 5)</u>
N/A \$ 11* (472)	N/A \$ _____ *	N/A \$ _____ *( )
0 (531)	_____	_____ ( )
2304 (531)	_____	_____ ( )
412 (531)	_____	_____ ( )
130 (531)	_____	_____ ( )
114 (531)	_____	_____ ( )
13 (531)	_____	_____ ( )

\* No credit FTE students included in denominator; noncredit headcount enrollment used only.

**Possible Interpretations**

Of interest to some analysts is the range of tuition and fee revenues per noncredit headcount student discovered by this survey. Being lower than the median, for example, may indicate a preponderance of inexpensive courses, subsidized noncredit courses, or a hasty estimate of the split between credit and noncredit tuition revenue.

Most of the other figures can be useful for pinpointing how differently the institution is financed compared to national sample medians. Given the lack of control most administrators have over the setting of tuition and appropriation levels, this is more "interesting" than useful for making policy.

**Limitations**

Comparisons among institutions of budget proportions or revenues per student are more useful when data for a number of previous years are also examined.

3

**TABLE 7  
SPECIAL CATEGORIES OF REVENUES**

Revenues by Major Function:	As a Percentage of Total Current Fund Revenues (excluding auxiliaries) _____		
	Median for the Full Sample _____	Your Institution (fill in) _____	Median for Your Peer Institutions (fill in, see chapter 5) _____
State and Local Appropriations (combined)	65.8%(531)	_____ %	_____ % ( )
<u>Total Appropriations</u> Unduplicated Student Headcount	\$770 (392)	\$ _____	\$ _____ ( )
<u>Service Area Population</u> Unduplicated Student Headcount	17.5 (392)	_____	_____ ( )

**Meaning and Explanations**

Three additional statistics are included:

1. The combination of state and local appropriations shows the combined funding from the two sources.

2. Total appropriations per unduplicated headcount adds federal, state, and local appropriations to arrive at the numerator. Unduplicated headcount was requested on the NACUBO survey (see Appendix B). In the first five years of this report, where no response was given to unduplicated headcount in the survey, the sum of the noncredit FTE enrollment multiplied by 20, the credit part-time FTE enrollment multiplied by 3, and the full-time FTE enrollment was used as a proxy for unduplicated headcount. This approximation was discontinued in subsequent years. It does not appear to have affected this ratio.

3. Service area population per unduplicated headcount is derived from the NACUBO survey responses (see Appendix B). The same approximation for unduplicated headcount, as defined above, was also discontinued in reports for the past several years. This change in calculation may have affected this figure or this ratio may have lowered as institutions become increasingly aware of "market penetration."

**Revenues per  
Credit FTE Student  
(in dollars)**

Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 5)
\$3416 (531)	\$ _____	\$ _____ ( )

**Revenues per  
Credit Plus Noncredit FTE Student  
(in dollars)**

Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 5)
\$3034 (531)	\$ _____	\$ _____ ( )

**Possible Interpretations**

State and local appropriation statistics are derived from financing characteristics and vary greatly from state to state.

Total appropriations per unduplicated headcount gives the dollar amount provided by appropriations per student served. The more an institution is above the median, the more appropriation support the institution receives per student served.

Service area population per unduplicated headcount gives the "market penetration" of the institution. Being below the median may indicate good reception of the institution's programs within the community. The statistic will also be affected by the number and size of competing institutions and reflects the competitive strength of the institution.

**Limitations**

The median for state and local appropriation financing is based on a large range of financing strategies and may be of limited analytic value.

Unduplicated headcounts are not monitored by all institutions; thus, these figures are often estimates and may be in error.

Service area populations may vary in the proportion of people who are generally eligible for college, i.e., 18 years and over. This somewhat limits the comparability of the statistic among institutions. In addition, many of the students counted in the headcount may be drawn from outside the service area, weakening the "market penetration" interpretation of the statistic.

**Course Enrollment Distributions, Salaries, and Staff Ratios**

**TABLE 8  
COURSE ENROLLMENT DISTRIBUTIONS**

Course Enrollment by Major Function:	Median Percentage of Classes (including sections) Offered for Credit as <u>Distributed Among Size Categories</u>		
	<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 5)</u>
<b>Class Size</b>			
More than 50 students	1% (402)	_____%	_____%( )
From 25 to 50 students	23 (402)	_____	_____( )
From 15 to 24 students	34 (402)	_____	_____( )
From 6 to 14 students	24 (402)	_____	_____( )
Less than 6 students	7 (402)	_____	_____( )

**Meaning and Explanations**

Course enrollment distributions are given for credit and noncredit courses separately. Medians were calculated by ordering in each size category the proportion of courses that each responding institution had in that category. Thus, for the category "class size more than 50," the proportions given by individual institutions might range from 0% (no classes with more than 50 students including individual sections) to 100% (all classes at the institution with more than 50 students). (Note that there were no colleges with all classes this large.) The median (1%) split this distribution in half, such that half the colleges had more than 1% of their classes with more than 50 students. Because each median is calculated separately, a different college may be at the median for each class size. This results in the sum of the proportion not adding to 100%.

**Possible Interpretations**

Institutions that find their instructional costs per student above the median may wish to examine the course size distribution to see if high costs are a result of their class size distribution. A large proportion of small classes is costly. Some institutions may find that they have a predominance of very large and very small classes, with few in the mid-range when compared with the national sample. They may wish to reevaluate methods of delivering instruction.

**Limitations**

These questions had the fewest respondents and the largest spread among responses. The large amount of variation that exists makes it questionable whether any sort of a "national norm" for class sizes can really be said to exist; however, the median proportions have not differed significantly from year to year.

**Median Percentage of Classes (including sections) Not Offered for Credit as Distributed Among Size Categories**

\* Credit FTE students used only.

\*\* Noncredit student headcount used only.

\*\*\* Too few staff in this category to provide a meaningful statistic.

**Meaning and Explanations**

Institutions provided FTE staff counts according to the NACUBO functional categories. Instructional staff were further categorized as credit instruction, noncredit instruction, and all other staff instruction. The final category was used for clerical, laboratory, or administrative staff (all nonteaching) who may be classified in the instruction function but not as faculty. FTE staff statistics are calculated in four ways: proportion of staff in each category for the median institution, median ratio of FTE staff in each category to FTE credit students, median ratio of FTE staff in each staff category to number of unduplicated headcount students (an estimate of all those enrolled as students during the year), and part-time FTE staff as a percentage of total FTE staff per each specific staffing category only.

Two other ratios are provided: unduplicated student headcount per total FTE nonfaculty staff and FTE nonfaculty staff per total FTE faculty staff, including credit and noncredit faculty. FTE nonfaculty staff includes the sum of all staff categories excepting credit instructional faculty and noncredit instructional faculty. FTE nonfaculty staff to total FTE faculty staff, including credit and noncredit faculty, is a comparison of administration staffing with faculty staffing.

Where no response was given to unduplicated headcount in the survey, no proxy was used in this year's and previous years' reports. This differs from the first five years of this report.

### **Possible Interpretations**

These ratios may provide a starting point for an institution to judge whether it has too many or too few faculty or other staff. Comparison of administrative staffing must be made with care because of the wide range of administrative services provided by institutions; the median institution may be providing a very different level of administrative support and services than any other college.

The increase in the ratio of unduplicated headcount to total FTE nonfaculty staff may be attributable to the method of calculation (i.e., dropping the proxy for unduplicated headcount), which may have deflated headcount in previous years, or may be an actual decrease in staffing levels, possibly attributable to retrenchment or to more efficient use of staff.

An institution may want to use comparative data as a rough guide to "standard behavior in the industry," but alert management also requires careful year-to-year monitoring of trends in its own staffing patterns.

### **Limitations**

Some institutions could not provide staffing ratios by functional categories because they maintained only exempt, nonexempt, and faculty breakdowns.

Many respondents had difficulty in determining whether an employee who did not teach but who worked exclusively in the instructional area was instructional or academic support. There is probably considerable overlap between these two categories. Some confusion may also exist over the difference between noncredit instructional faculty and public service personnel.

Some institutions also had difficulty converting part-time noncredit instructional faculty to FTE. Although class-hour conversions were suggested, some difficulty must be expected when the noncredit offerings might be for such extremes as one weekend or six months on an irregular schedule.

**CHAPTER 4  
QUARTILES FOR THE FULL SAMPLE  
(INSTITUTIONS OF ALL SIZES)**

This chapter includes quartiles for the entire sample.

The first quartile is the value for a given statistic that separates the lowest 25% of the institutional values from the top 75% of the institutional values.

The median is the value that separates the lowest 50% of the values from the top 50% of the values for each statistic.

The third quartile is the value that separates the lowest 75% of the values from the top 25% of the values for each statistic.

N is the number of institutions that provided the data necessary to calculate the statistic. Hence, N is the number of values to find the quartiles and median. N varies with each statistic.

---

**IMPORTANT NOTE**

Because each statistic has a different institution at its median and quartile values, proportions will not add to 100%. This is especially true of the first and third quartiles. An institution that has a low instructional budget proportion will have a high administrative budget proportion. Thus, the quartiles are formed from very different institutions. As a result, the sum of the first quartiles proportions will generally be less than 100%, while the sum of the third quartiles proportions will tend to exceed 100%.

**CHAPTER 5  
MEDIANS AND QUARTILES FOR PEER GROUPS  
CLASSIFIED BY ENROLLMENT SIZE  
AND BY VOCATIONAL/TECHNICAL DESIGNATION**

This chapter shows medians and quartiles for peer groups classified as follows:

- Group 1: Total credit and noncredit headcount enrollment less than 5,000 (166 institutions).
- Group 2: Total credit and noncredit headcount enrollment from 5,000 through 15,000 (192 institutions).
- Group 3: Total credit and noncredit headcount enrollment greater than 15,000 (173 institutions).
- Group 4: Total FTE enrollment less than 1,000 (75 institutions). (These institutions are a subset of Groups 1, 2, and 3.)
- Group 5: Primarily vocational/technical institutions of all sizes (89 institutions). (These institutions are a subset of Groups 1, 2, and 3.)

Total enrollment includes full-time, part-time, and noncredit students.

FTE enrollment consists of full-time equivalents for full-time, part-time and noncredit students. For institutions without more precise figures available, it was suggested that FTE enrollment be calculated by adding full-time students, part-time students divided by 3, and noncredit students divided by 20. From FY85 forward, it was suggested that credit FTE enrollment be calculated by dividing total credit hours (opening fall) by 15.

Group 1

## APPENDIX A METHOD

Beginning in October 1978, staff members of NACUBO, AACJC, and the American Council on Education (ACE) met with a task force composed of community and junior college business officers from various regions of the country, a community college president, and several consultants to identify information that might be useful to community and junior college administrators. They decided to emphasize the provision of basic comparative data for general use at community colleges and to create peer groups on the basis of institutional size.

A review and evaluation of the first year of the project in September 1979 served to streamline the method used in the second year. In the second year of the project the National Center for Education Statistics (NCES) agreed to provide computational support, a liaison between the staff and NCES, and copies of the HEGIS finance survey from sampled institutions as soon as the surveys were returned to NCES. NACUBO, ACE, and AACJC provided the remaining financial support, and NACUBO's Two-Year Colleges Committee assumed a guiding role for the project. Two members of the task force from the first year, Maurice P. Arth and W.L. Prather, provided project continuity and made several special trips to Washington to assist in designing the NACUBO survey and in preparing the second year's report.

Future years of the project emphasized expansion of the sample group rather than revision, although limited additions and changes were made. NACUBO's Two-Year Colleges Committee continued to provide project continuity and special support.

The project made use of unedited Integrated Postsecondary Education Data System (IPEDS, formerly HEGIS) finance data. Each participating institution was asked to carefully complete the IPEDS finance survey, due to NCES by November 15, 1990.

In addition to the use of IPEDS finance data, a separate survey of 783 public institutions was conducted to gather information not currently available at the national level. Such information included data on:

1. Revenues and expenditures for noncredit institutional activities.
2. Utilities expenditures.
3. Student aid disbursements.
4. Building space.
5. Service area population.
6. Unduplicated student headcounts.
7. Staffing levels by function.
8. Course enrollment distributions.
9. Current fund expenditures for salaries and wages.

The eight previous years' studies incorporated information on computer-related expenditures. Gratitude is owed to Maurice P. Arth for his two previous studies of computer-related expenditures for community colleges. This study's computer survey, wholly derived from those of Mr. Arth, requested information on:

1. How computer services (both hardware and software) are provided.
2. Type of computer system.
3. Computer-related expenditures, including a breakdown by operating, development, equipment purchase, and equipment lease.
4. Percentage breakdown of computer-related expenditures between administrative and academic support.

Five hundred and thirty-one of those surveyed provided usable responses, and their data were utilized in this report. Appendix B contains copies of the questionnaires, while Appendix C contains definitions of terms. Appendix D lists all participating institutions.

The NACUBO Two-Year Colleges Committee approved the substance and format of the comparative data study report. This year's report remains relatively unchanged from that of previous years. Based on task force recommendations, the following peer groups were established:

1. Total credit and noncredit headcount enrollment less than 5,000.
2. Total credit and noncredit headcount enrollment from 5,000 through 15,000.
3. Total credit and noncredit headcount enrollment greater than 15,000.
4. Total FTE enrollment less than 1,000. (These institutions are a subset of Groups 1, 2, and 3.)
5. Primarily vocational/technical institutions of all sizes. (These institutions are a subset of Groups 1, 2, and 3.)

These categories differ from the first year's breakdown only by the deletion of the branch campus category and the addition of the under-1,000 FTE student category. The vocational/technical group was added in the third year of the study.

Both because cost structures for branch campuses vary markedly from those of consolidated or single-campus institutions--therefore adding an element of noncomparability of data--and because the response rate from branch campuses was low in the initial year, only single institutions or systems were encouraged to provide data in the second year. Thus, data for branch campuses where fiscal records are kept at a central office are not included in this sample.

The conversion of noncredit headcount to FTEs remains unchanged. It is generally understood that community colleges offer courses that encourage part-time, noncredit participation. Courses may range from two-week workshops to full-term courses. Relating such headcount numbers to FTEs has been a major problem in developing comparative data among community colleges.

To resolve this issue, the task force in the initial year established a standard for converting full-year, noncredit headcount to a proxy for the fall-term FTE enrollment. The conversion ratio of 20:1 established then was also used in the next two years. Thus, in the first three reports in this series, noncredit headcount enrollment for the year was divided by 20 and the result was defined as the number of FTE students. This number is added to the fall-term FTE credit student count, which is used as a proxy for the activity level of community colleges. The AACJC directory survey was the source of enrollment data for these earlier reports. One of the purposes of this study is to obtain reactions from readers to the calculation for conversion and the resulting statistics.

A different approach for obtaining FTE enrollment was used in the earlier studies. The NACUBO survey requested FTE enrollment data. For institutions without precise figures available, it was suggested that FTE enrollment be calculated by adding full-time students, part-time students divided by 3, and noncredit students divided by 20. Dividing part-time students by 3 is the standard formula used by NCES to determine full-time equivalents. From FY85 forward, it was requested that credit FTE enrollment be calculated by dividing the total number of credit hours (opening fall) by 15 (see Appendix B).

Institutions unable to obtain all the requested information were retained in the study; however, where individual pieces of data were missing, the institution was not included for the calculation of that particular median or quartile.

According to the AACJC directory, there were 783 districts or single-campus public community and junior colleges. Two-year branch campuses of universities were included in the sample only when they were not so closely affiliated with their universities that they had difficulty in separating the financial statistics of each branch from those of its affiliate university.

Data were gathered and coded from October 1990 through January 1991. Analysis was conducted during February 1991. All financial statistics are for FY 1989-90; enrollments are for fall 1989 (except noncredit enrollment, which are based on 1989-90 year-long enrollment estimates).

Institutions participating in the study were sent a copy of their survey data as they were entered into the computer, as well as the statistics generated from the data. Institutions were asked to verify the data and check the reasonableness of the statistical calculations. In this way, statistics from individual institutions have been thoroughly reviewed, resulting in a more reliable final report.

**FY 1989-1990 COMPARATIVE FINANCIAL STATISTICS  
For Public Community and Junior Colleges**

National Association of College and University Business Officers  
American Association of Community and Junior Colleges  
Association of Community College Trustees

**Instructions.** This is the comparative financial data survey form for fiscal year 1989-90. Data should be drawn from the same records used to prepare the IPEDS financial statistics survey for 1989-90 (ED(CS) Form G-50-14P-F, to be returned to NCES by November 15, 1990). Community colleges with branch or multiple campuses should report total system activity. Answer only those questions for which data are readily available. A partially completed form is useful to us; however, it is essential that the following be provided:

- Enrollment figures (question no. 1)
- Copy of the FY 1989-90 IPEDS finance form (pages 1-7)

Please return this completed survey AND a copy of the IPEDS finance form by **November 30, 1990** to the NACUBO Financial Management Center, One Dupont Circle, Suite 500, Washington, DC 20036. Questions may be directed to Alfonso de Lucio at 202-861-2535.

 Primarily vocational/technical

1. Total credit FTE enrollment: total credit hours (opening fall 1989) divided by 15: \_\_\_\_\_  
Noncredit student headcount enrollment (1989-90) divided by 20: + \_\_\_\_\_  
Total FTE enrollment: = \_\_\_\_\_
2. How many students took some form of instruction from your institution at some time during the year?  
Unduplicated student headcount for credit students: \_\_\_\_\_  
Unduplicated student headcount for noncredit students: \_\_\_\_\_
3. Estimate what percentage of instructional expenses (line B-1, col. 3, IPEDS finance form) was used for noncredit teaching. (Include only faculty salaries if that is the only figure available.)  
Percentage instructional expenses that is noncredit: \_\_\_\_\_%
4. Was the "public service" category on the IPEDS finance form (line B-3, col. 3) used to indicate some or all of the dollars spent on teaching noncredit courses?  
Public service includes some noncredit instruction:  Yes  No  
If yes, estimate the percentage of public service that is noncredit instruction: \_\_\_\_\_%
5. How much of the operations and maintenance figure shown on the IPEDS finance form (line B-8, col. 3) was spent for utilities? Include electricity, water, waste disposal, gas, heating oil, and coal.  
Utilities costs: \$ \_\_\_\_\_ (over)

6. What was the amount paid out in salaries and wages for the year? Provide two figures: a) salaries and wages that were reported as a proportion of total E & G expenditures (line B-23, col. 5, IPEDS finance form) and b) salaries and wages that were reported as a proportion of current fund expenditures (a proportion of line B-22, col. 3, IPEDS finance form, as requested in previous years). Do not include staff benefit expenditures. Do not include wages to students.
  - a. Total E & G salaries and wages: \$ \_\_\_\_\_ (directly from IPEDS survey, line B-23, col. 5)
  - b. Total current fund salaries and wages: \$ \_\_\_\_\_ (a proportion of line B-22, col. 3)

7. What proportion of tuition and fees (IPEDS finance form, line A-1, col. 3) was received as payment for noncredit instruction?

Percentage tuition and fees for noncredit instruction: \_\_\_\_\_%

8. What is the total gross area of campus buildings in square feet?

Gross area of buildings: \_\_\_\_\_ square feet

9. Estimate the population of the geographic area that your institution serves.

Service area population: \_\_\_\_\_

10. What proportion of your course sections enrolled:

	Credit	Noncredit
More than 50 students:	_____%	_____%
25-50 students:	_____	_____
15-24 students:	_____	_____
6-14 students:	_____	_____
Fewer than 6 students:	_____100%	_____100%

11. How many full-time equivalent personnel were authorized in the following educational and general functional categories? If significant services were performed by contract, enter the estimated full-time equivalent. Exclude student assistants, both regular and work-study. (See *College and University Business Administration*, 4th ed., pp. 404-412 for definitions of categories.)

- a. Operating expenditures \$ \_\_\_\_\_
- b. Development expenditures \_\_\_\_\_
- c. Capital expenditures \_\_\_\_\_
- (1) capital equipment purchase expenditures (amortized over 5 years) \_\_\_\_\_
- (2) capital equipment lease expenditures \_\_\_\_\_
- d. Total computer-related expenditures \$ \_\_\_\_\_

Indicate here if computer-related expenditures are unknown or cannot be estimated. \_\_\_\_\_

4. Estimate the percentage breakdown of your total computer-related expenditures between administrative support and academic/instructional support. (A suggested method is by expenditures that can be directly identified with each of the two functions plus an allocation of all other operating, overhead, and capital expenditures on the basis of the value of benefits provided to each function.)

- a. Administrative support expenditures \_\_\_\_\_%
- b. Academic/instructional support expenditures \_\_\_\_\_%
- c. Total \_\_\_\_\_  
(over) 100%

**Definitions**

All figures exclude data processing curricular costs except for hardware and software and directly related supplies and other costs required for equipment operation; thus, you may exclude data processing, faculty compensation, and general instructional support. Include all computer-related expenditures, including those decentralized to administrative offices and academic units, whether directly provided, purchased from vendors, or provided by a consortium.

**Operating expenditures.** Includes expenditures for computer center, computer service personnel, remote terminals, leased lines, computer maintenance costs, steady state and routine programming, and computer-related supplies, whether in the computer center's or user's budget.

**Development expenditures.** Includes internal and external expenditures incurred for special, one-time computer service personnel, remote activities, procurement of software packages, and employment of outside technical consultants.

**Capital expenditures.** Major expenditures for purchase of computer hardware, amortized over 5 years (as recommended by NACUBO's Two-Year Colleges Committee).

**Lease expenditures.** Expenditures for lease of computer hardware.

**Percent administrative expenditures.** Administrative portion of total computer-related expenditures (broken down as necessary), including financial management, payroll/personnel, student registration and info: , academic effort accounting, and other uses not directly supporting instruction.

**Percent academic/instructional expenditures.** Academic/instructional portion of total computer-related expenditures (broken down as necessary), including computer-assisted instruction, simulation, gaming, problem solving, and other support to students and faculty in the academic/instructional process.

**Total computer-related expenditures.** Computer-related expenditures of all types, whether centrally administered or decentralized to administrative offices and academic units. This is the sum of operating, development, and purchased or leased capital expenditures.

*Instruction*

This category should include expenditures for all activities that are part of an institution's instruction program. Expenditures for credit and noncredit courses, for academic, vocational, and technical instruction, for remedial and tutorial instruction, and for regular, special, and extension sessions should be included.

Expenditures for departmental research and public service that are not separately budgeted should be included in this classification. This category *excludes* expenditures for academic administration when the primary assignment is administration—for example, academic deans. However, expenditures for department chairmen, in which instruction is still an important role of the administrator, are included in this category.

This category includes the following subcategories:

*General academic instruction.* Includes expenditures for formally organized and/or separately budgeted instructional activities that are: (1) carried out during the academic year (as defined by the institution), (2) associated with academic offerings described by HEGIS instructional program categories 01 through 50, and (3) offered for credit as part of a formal postsecondary education degree or certificate program. Open university, short courses, and home study activities falling within this classification and offered for credit would therefore be included. However, this subcategory does *not* include instructional offerings that are part of programs leading toward degrees or certificates at levels below the higher education level, such as adult basic education.

*Vocational/technical instruction.* Includes expenditures for formally organized and/or separately budgeted instructional activities that are: (1) carried out during the academic year (as defined by the institution), (2) usually associated with HEGIS instructional program categories identified in appendix D of the NCES publication "A Classification of Instructional Programs (CIP)," and (3) offered for credit as part of a formal postsecondary education degree or certificate program. Open university, short courses, and home study falling within this classification and offered for credit would therefore be included. However, this subcategory does *not* include instructional offerings that are part of programs leading toward degrees or certificates at levels below the higher education level, such as adult basic education.

*Special session instruction.* Includes expenditures for formally organized and/or separately budgeted instructional activities (offered either for credit or not for credit) that are carried out during a summer session, interim session, or other period not common with the institution's regular term. This subcategory is to be used to classify only expenditures made *solely* as a result of conducting a special session (such as faculty salaries associated with the special session). Special sessions would *not* include regular academic terms held during the summer months. Expenditures for special sessions conducted over a fiscal year-end should be reported totally within the fiscal year in which

the program is predominantly conducted. The revenues and expenditures for any special session should be reported in the same fiscal year. This procedure for reporting expenditures of special sessions is an allowable exception to reporting expenditures on an accrual basis.

*Community education.* Includes expenditures for formally organized and/or separately budgeted instructional activities that do not generally result in credit toward any formal postsecondary degree or certificate. It includes noncredit instructional offerings carried out by the institution's extension division as well as noncredit offerings that are part of the adult education or continuing education program. This subcategory also includes expenditures for activities associated with programs leading toward a degree or certificate at a level below the higher education level, such as adult basic education.

*Preparatory/remedial instruction.* Includes expenditures for formally organized and/or separately budgeted instructional activities that give students the basic knowledge and skills required by the institution before they can undertake formal academic coursework leading to a postsecondary degree or certificate. Such activities, supplemental to the normal academic program, generally are termed preparatory, remedial, developmental, or special educational services. These instructional offerings may be taken prior to or along with the coursework leading to the degree or certificate. They are generally noncredit offerings, although in some cases credit may be given and the credit requirements for the degree or certificate increased accordingly. Only offerings provided *specifically* for required preparatory or remedial skills or knowledge should be included in this category. For example, if students may satisfy preparatory requirements by taking offerings provided primarily for other than remedial or preparatory purposes, those offerings should be classified appropriately elsewhere.

*Research*

This category should include all expenditures for activities specifically organized to produce research outcomes, whether commissioned by an agency external to the institution or separately budgeted by an organizational unit within the institution. Subject to these conditions, it includes expenditures for individual and/or project research as well as those of institutes and research centers. This category does not include all sponsored programs nor is it necessarily limited to sponsored research, since internally supported research programs, if separately budgeted, might be included in this category under the circumstances described above. Expenditures for departmental research that are separately budgeted specifically for research are included in this category.

This category includes the following subcategories:

*Institutes and research centers.* Includes expenditures for research activities that are part of a formal research organization created to manage a number

of research efforts. While this subcategory includes agricultural experiment stations, it does *not* include federally funded research and development centers, which should be classified as independent operations. (These centers are listed in the section "Independent Operations.")

*Individual and project research.* Includes expenditures for research activities that normally are managed within academic departments. Such activities may have been undertaken as the result of a research contract or grant or through a specific allocation of the institution's general resources.

### *Public Service*

This category should include funds expended for activities that are established primarily to provide noninstructional services beneficial to individuals and groups external to the institution. These activities include community service programs (excluding instructional activities) and cooperative extension services. Included in this category are conferences, institutes, general advisory services, reference bureaus, radio and television, consulting, and similar noninstructional services to particular sectors of the community.

This category includes the following subcategories:

*Community service.* Includes expenditures for activities organized and carried out to provide general community services, *excluding* instructional activities. Community service activities make available to the public various resources and special capabilities that exist within the institution. Examples include conferences and institutes, general advisory services and reference bureaus, consultation, testing services (for example, soil testing, carbon dating, structural testing), and similar activities. The activities included in this subcategory are generally sponsored and managed outside the context of both the agricultural and urban extension programs and of the institution's public broadcasting operation.

*Cooperative extension service.* Includes expenditures for noninstructional public service activities established as the result of cooperative extension efforts between the institution and outside agencies such as the U.S. Department of Agriculture's extension service and the affiliated state extension services. This subcategory is intended primarily for land-grant colleges and universities and includes both agricultural extension and urban extension services. The distinguishing feature of activities in this subcategory is that programmatic and fiscal control is shared by the institution with the U.S. Department of Agriculture's extension service, the related state extension services, and agencies of local government.

*Public broadcasting services.* Includes expenditures for operation and maintenance of broadcasting services operated outside the context of the institution's instruction, research, and academic support programs. Thus *ex-*

*cluded* from this subcategory are broadcasting services conducted primarily in support of instruction (which should be classified in the subcategory "Ancillary Support"), broadcasting services that are primarily operated as a student service activity (which should be classified in the subcategory "Social and Cultural Development"), and broadcasting services that are independent operations (which should be classified in the subcategory "Independent Operations/Institutional").

### *Academic Support*

This category should include funds expended primarily to provide support services for the institution's primary missions— instruction, research, and public service. It includes: (1) the retention, preservation, and display of educational materials—for example, libraries, museums, and galleries; (2) the provision of services that directly assist the academic functions of the institution, such as demonstration schools associated with a department, school, or college of education; (3) media such as audiovisual services and technology such as computing support; (4) academic administration (including academic deans but not department chairmen) and personnel development providing administration support and management direction to the three primary missions; and (5) separately budgeted support for course and curriculum development. For institutions that currently charge certain of the expenditures—for example, computing support—directly to the various operating units of the institution, this category does not reflect such expenditures.

This category includes the following subcategories:

*Libraries.* Includes expenditures for organized activities that directly support the operation of a catalogued or otherwise classified collection.

*Museums and galleries.* Includes expenditures for organized activities that provide for the collection, preservation, and exhibition of historical materials, art objects, scientific displays, etc. Libraries are *excluded*.

*Educational media services.* Includes expenditures for organized activities providing audiovisual and other services that aid in the transmission of information in support of the institution's instruction, research, and public service programs.

*Academic computing support.* Includes expenditures for formally organized and/or budgeted activities that provide computing support to the three primary programs. *Excluded* from this category is administrative data processing, which is classified as institutional support.

*Ancillary support.* Includes expenditures for organized activities that provide support services to the three primary programs, but that are not appropriately classified in the previous subcategories. Ancillary support activities usually provide a mechanism through which students can gain practical ex-

perience. An example of ancillary support is a demonstration school associated with the school of education. However, the expenditures of teaching hospitals are *excluded*.

*Academic administration.* Includes expenditures for activities specifically designed and carried out to provide administrative and management support to the academic programs. This subcategory is intended to separately identify only expenditures for activities formally organized and/or separately budgeted for academic administration. It includes the expenditures of academic deans (including deans of research, deans of graduate schools, and college deans), but does not include the expenditures of departmental chairmen (which are included in the appropriate primary function categories). It also includes expenditures for formally organized and/or separately budgeted academic advising. Expenditures associated with the office of the chief academic officer of the institution are *not* included in this subcategory, but should be classified as institutional support.

*Academic personnel development.* Includes expenditures for activities that provide the faculty with opportunities for personal and professional growth and development to the extent that such activities are formally organized and/or separately budgeted. This subcategory also includes formally organized and/or separately budgeted activities that evaluate and reward professional performance of the faculty. Included in this subcategory are sabbaticals, faculty awards, and organized faculty development programs.

*Course and curriculum development.* Includes expenditures for activities established either to significantly improve or to add to the institution's instructional offerings, but only to the extent that such activities are formally organized and/or separately budgeted.

### *Student Services*

This category should include funds expended for offices of admissions and registrar and those activities whose primary purpose is to contribute to the student's emotional and physical well-being and to his or her intellectual, cultural, and social development outside the context of the formal instruction program. It includes expenditures for student activities, cultural events, student newspaper, intramural athletics, student organizations, intercollegiate athletics (if the program is operated as an integral part of the department of physical education and not as an essentially self-supporting activity), counseling and career guidance (excluding informal academic counseling by the faculty), student aid administration, and student health service (if not operated as an essentially self-supporting activity).

This category includes the following subcategories:

*Student services administration.* Includes expenditures for organized ad-

ministrative activities that provide assistance and support (*excluding* academic support) to the needs and interests of students. This subcategory includes only administrative activities that support more than one subcategory of student activities and/or that provide central administrative services related to the various student service activities. In particular, this subcategory includes services provided for particular *types* of students (for example, minority students, veterans, and handicapped students). *Excluded* from this subcategory are activities of the institution's chief administrative officer for student affairs, whose activities are institutionwide and, therefore, should be appropriately classified as institutional support.

*Social and cultural development.* Includes expenditures for organized activities that provide for students' social and cultural development outside the formal academic program. This subcategory includes cultural events, student newspapers, intramural athletics, student organizations, etc. Expenditures for an intercollegiate athletics program would be included in this subcategory if the program is not operated as an essentially self-supporting operation (in which case all the related expenditures would be reported as auxiliary enterprises).

*Counseling and career guidance.* Includes expenditures for formally organized placement, career guidance, and personal counseling services for students. This subcategory includes vocational testing and counseling services and activities of the placement office. *Excluded* from this subcategory are formal academic counseling activities (academic support) and informal academic counseling services (instruction) provided by the faculty in relation to course assignments.

*Financial aid administration.* Includes expenditures for activities that provide financial aid services and assistance to students. This subcategory does *not* include outright grants to students, which should be classified as scholarships and fellowships.

*Student admissions.* Includes expenditures for activities related to: (1) the identification of prospective students, (2) the promotion of attendance at the institution, and (3) the processing of applications for admission.

*Student records.* Includes expenditures for activities to maintain, handle, and update records for currently enrolled students as well as for students who were previously enrolled.

*Student health services.* Includes expenditures for organized student health services that are not self-supporting rather than those organized as auxiliary enterprises.

### *Institutional Support*

This category should include expenditures for: (1) central executive-level activities concerned with management and long-range planning of the entire

institution, such as the governing board, planning and programming, and legal services; (2) fiscal operations, including the investment office; (3) administrative data processing; (4) space management; (5) employee personnel and records; (6) logistical activities that provide procurement, storerooms, safety, security, printing, and transportation services to the institution; (7) support services to faculty and staff that are not operated as auxiliary enterprises; and (8) activities concerned with community and alumni relations, including development and fund raising.

Appropriate allocations of institutional support should be made to auxiliary enterprises, hospitals, and any other activities not reported under the Educational and General heading of expenditures.

This category includes the following subcategories:

*Executive management.* Includes expenditures for all central, executive-level activities concerned with management and long-range planning for the entire institution (as distinct from planning and management for any one program within the institution). All officers with institutionwide responsibilities are included, such as the president, chief academic officer, chief business officer, chief student affairs officer, and chief development officer. This subcategory includes such operations as executive direction (for example, governing board), planning and programming, and legal operations.

*Fiscal operations.* Includes expenditures for operations related to fiscal control and investments. It includes the accounting office, bursar, and internal and external audits, and also includes such "financial" expenses as allowances for bad debts and short-term interest expenses.

*General administration and logistical services.* Includes expenditures for activities related to general administrative operations and services (with the exception of fiscal operations and administrative data processing). Included in this subcategory are personnel administration, space management, purchasing and maintenance of supplies and materials, campuswide communication and transportation services, general stores, printing shops, and safety services.

*Administrative computing support.* Includes expenditures for computer services that provide support for institutionwide administrative functions.

*Public relations/development.* Includes expenditures for activities to maintain relations with the community, alumni, or other constituents and to conduct activities related to institutionwide development and fund raising.

#### *Operation and Maintenance of Plant*

This category should include all expenditures of current operating funds for the operation and maintenance of physical plant, in all cases net of amounts charged to auxiliary enterprises, hospitals, and independent operations. It

does not include expenditures made from the institutional plant fund accounts. It includes all expenditures for operations established to provide services and maintenance related to grounds and facilities. Also included are utilities, fire protection, property insurance, and similar items.

This category includes the following subcategories:

*Physical plant administration.* Includes expenditures for administrative activities that directly support physical plant operations. Activities related to the development of plans for plant expansion or modification, as well as plans for new construction, should also be included in this subcategory.

*Building maintenance.* Includes expenditures of activities related to routine repair and maintenance of buildings and other structures, including both normally recurring repairs and preventive maintenance.

*Custodial services.* Includes expenditures related to custodial services in buildings.

*Utilities.* Includes expenditures related to heating, cooling, light and power, gas, water, and any other utilities necessary for operation of the physical plant.

*Landscape and grounds maintenance.* Includes expenditures related to the operation and maintenance of landscape and grounds.

*Major repairs and renovations.* Includes expenditures related to major repairs, maintenance, and renovations. Minor repairs should be classified in the subcategory "Building Maintenance." The distinction between major repairs and minor repairs should be defined by the institution.

#### *Scholarships and Fellowships*

This category should include expenditures for scholarships and fellowships—from restricted or unrestricted current funds—in the form of grants to students, resulting either from selection by the institution or from an entitlement program. It also should include trainee stipends, prizes, and awards, except trainee stipends awarded to individuals who are not enrolled in formal course work, which should be charged to instruction, research, or public service as appropriate. If the institution is given custody of the funds, but there is neither a selection by the institution nor an entitlement program, the funds should generally be accounted for and reported in the Agency Funds group rather than in the Current Funds group.

Recipients of grants are not required to perform service to the institution as consideration for the grant, nor are they expected to repay the amount of the grant to the funding source. When services are required in exchange for financial assistance, as in the federal College Work-Study Program, the charges should be classified as expenditures of the department or organizational unit to which the service is rendered. Aid to students in the form of

tuition or fee remissions also should be included in this category. However, remissions of tuition or fees granted because of faculty or staff status, or family relationship of students to faculty or staff, should be recorded as staff benefit expenditures in the appropriate functional expenditure category.

This category includes the following subcategories:

*Scholarships.* Includes grants-in-aid, trainee stipends, tuition and fee waivers, and prizes to undergraduate students.

*Fellowships.* Includes grants-in-aid and trainee stipends to graduate students. It does *not* include funds for which services to the institution must be rendered, such as payments for teaching.

#### *Mandatory Transfers*

This category should include transfers from the Current Funds group to other fund groups arising out of (1) binding legal agreements related to the financing of educational plant, such as amounts for debt retirement, interest, and required provisions for renewals and replacements of plant, not financed from other sources, and (2) grant agreements with agencies of the federal government, donors, and other organizations to match gifts and

grants to loan and other funds. Mandatory transfers may be required to be made from either unrestricted or restricted current funds.

This category includes the following subcategories:

*Provision for debt service on educational plant.* Includes mandatory debt service provisions relating to academic buildings, including (1) amounts for debt retirement and interest and (2) required provisions for renewals and replacements, to the extent not financed from other sources.

*Loan fund matching grants.* Includes mandatory transfers to loan funds required to match outside gifts or grants, usually from the U.S. government.

*Other mandatory transfers.* Includes all mandatory transfers not included in the above subcategories.

#### *Nonmandatory Transfers*

This category should include those transfers from the Current Funds group to other fund groups made at the discretion of the governing board to serve a variety of objectives, such as additions to loan funds, additions to quasi-endowment funds, general or specific plant additions, voluntary renewals and replacements of plant, and prepayments on debt principal.

**APPENDIX D  
PARTICIPATING COLLEGES AND  
PEER GROUP COMPOSITION**

- Group 1:** Total credit and noncredit headcount enrollment less than 5,000.  
**Group 2:** Total credit and noncredit headcount enrollment from 5,000 through 15,000.  
**Group 3:** Total credit and noncredit headcount enrollment greater than 15,000.  
**Group 4:** Total FTE enrollment less than 1,000. (These institutions are a subset of Groups 1, 2, and 3.)  
**Group 5:** Primarily vocational/technical institutions of all sizes. (These institutions are a subset of Groups 1, 2, and 3.)
