ABSTRACT

This report presents the 1990 results of the survey of Colorado first- and third-year teachers (N=1,520) and their supervisors as mandated by the Colorado Teacher Certification Act of 1975. The purpose of the survey is to provide Colorado institutions of higher education and the Colorado State Board of Education with information for the continued improvement of teacher education programs. Teachers rated components of their programs on a 5-point scale according to importance for effective teaching and adequacy of preparation. Supervisors rated their teachers' performance of these components based on requirements of the district standards. The components rated were: knowledge of subject matter, knowledge and utilization of teaching/learning theories, planning and organization of curriculum and instruction, classroom management, teaching techniques and communication of instructional material, assessment, communication and cooperation with parents and office staff, professionalism and management of general responsibilities, and communication with students. Over 90 percent of rated teachers met district standards in each area with the exception of classroom management and relationship with students. Teachers, too, felt that preparation in these domains was inadequate. The appendixes contain tables summarizing the 1988 and 1990 ratings of adequacy of program preparation by teacher- and supervisor-respondents and the supervisor and teacher 1990 survey forms. (LL)

Executive Summary

The Colorado first- and third-year teacher survey is sponsored jointly by the Colorado Department of Education and the Colorado Council of Deans of Education. The Implementation of this survey is required by the Teacher Certification Act of 1975. A goal of the project is to provide feedback to institutions of higher education from former students regarding their teacher preparation program. Survey forms were sent to 1520 first- and third-year teachers, and similar forms were sent to each of their supervisors. Teachers rated components of their programs on a 5-point scale according to importance for effective teaching and adequacy of preparation. Supervisors rated their teachers' performance of these components based on requirements of the district standards. Respondents also had the option of commenting on the adequacy of coverage in each of the performance areas.

Statewide, teachers rated each of the domains as "highly important" for effective teaching with two exceptions. Classroom management and communication and relationships with students were rated as "critical" to effective teaching. With regard to the adequacy of their preparation, knowledge of subject matter and knowledge and utilization of teaching/learning theories received an average rating of "effectively and fairly completely covered." The preparation in each of the other domains was rated as "adequate", although ratings for management of the classroom climate and communication and cooperation with parents and office staff were relatively low, and were cited frequently as program weaknesses in the respondents comments. Forty percent of teachers rated the coverage of classroom management as inadequate, and 48 percent felt that communication and cooperation with parents and office staff was inadequately covered. Over 90 percent of teachers were rated by their supervisors as meeting district standards in each of the domains with the exception of management of the classroom climate. Eighty-six percent of teachers were rated by their supervisors as meeting the district standards in this area.

Ninety-five percent of teachers reported feeling successful as a teacher and supervisors rated 90 percent of their teachers as successful. When asked to indicate their degree of satisfaction with teaching, 93 percent of teachers reported that they were "very satisfied" or "satisfied", and only 2 percent were either "dissatisfied" or "very dissatisfied."

The percentage of teachers rating their preparation as adequate or above was down from 1988 results in each of the 9 performance domains, with the exception of knowledge of subject matter which remained the same. The biggest drops were in communication and relationships with students (down 4 percentage points to 70 percent) and professionalism and management of general responsibilities (down 3 percentage points to 69 percent).

The percentage of supervisors who rated their teachers as meeting district standards was up from 1988 results in two of the nine performance domains. Knowledge of subject matter and management of the classroom climate were each up 1 percentage point. However, ratings were down in 4 of the other areas. Professionalism and management of general responsibilities and communication and cooperation with parents and office staff, each dropped 2 percentage points.

Summaries of statewide results and individual institution results are given to each institution. Survey results for each institution are presented in Appendix A.

iv

introduction

This report presents the 1990 results of the survey of Colorado first- and third-year teachers and their supervisors, mandated by the Teacher Certification Act of 1975. The purpose of the survey is to provide Colorado Institutions of higher education and the Colorado State Board of Education with information for the continued improvement of teacher education programs.

Survey forms were mailed to 1520 Colorado first- and third-year teachers, and a similar form was sent to each of their supervisors. The major areas of program preparation were comparable, but the rating scales were different between the instruments. Teachers rated areas of their preparation programs on a 5-point scale with regard to their importance for effective teaching and adequacy of preparation. Supervisors rated teacher preparation and performance relative to requirements of the district's standards.

The survey forms were originally developed by committees of higher education personnel and public school administrators, and are based on the standards for Approved Programs of Professional Education adopted by the State Board of Education.

Where possible, results from 1988's first- and third-year teacher survey are presented alongside the results of this year's survey. Where data is represented by percent, responses may not total to 100 percent due to rounding error. Sample numbers (n) in tables represent only 1990 data.

Characteristics of First- and Third-Year Teacher Sample

Response Rate

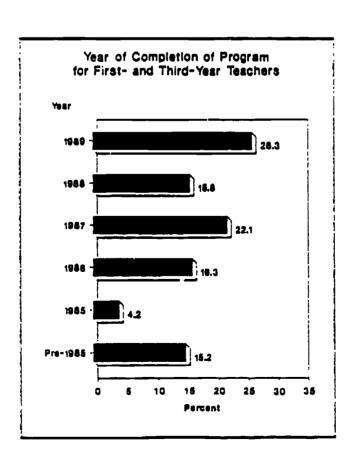

In March 1990, survey forms were sent to 1520 Colorado first- and third-year teachers, and similar forms were sent to each of their supervisors. The survey was mailed to all teachers in their first or third year of teaching who hold a Colorado Type A certificate as indicated by the database supplied to the Colorado Department of Education by the 176 Colorado school districts.

Of the 850 teacher surveys which were returned, 16 indicated out-of-state recommending institutions and 112 were not first- or third-year teachers. One survey did not indicate a recommending institution. The total number of teacher surveys used for data analysis was 722. Supervisors returned 984 surveys. Fifteen surveys indicated out-of-state recommending institutions, and 121 were not first- or third-year teachers. Thirteen surveys did not indicate a recommending institution. The number used in the data analysis was 848 surveys. The overall return rate was 55.9 percent for teachers, and 64.7 percent for supervisors. The usable return rate was 47.5 percent for teachers, and 55.8 percent for supervisors. The relatively high number of surveys returned from teachers who were not in their first- or third-year is an indication of a problem with the database. The nature of the problem was that inaccurate information was supplied to the department by districts, regarding the experience level of teachers within their district.

Teacher Preparation

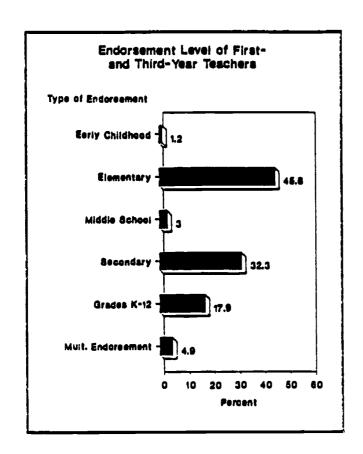

The 722 first- and third-year teacher respondents reported the following information about their preparation.

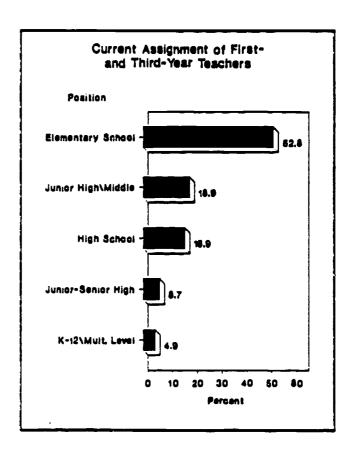

• Twenty-six percent completed their teacher education program in 1989. Fifteen percent completed their program prior to 1985.

 Over 45 percent were endorsed in elementary education, 32 percent in secondary education, and the remaining 22 percent in early childhood education, K-12, and middle school. Slightly under 5 percent of teachers received multiple endorsements.

- Eighty-one percent of teachers received their teacher endorsement from the same institution which granted them their Bachelor's degree. Just under 13 percent received their Bachelor's degree from another Colorado institution, and 6 percent received their degree from an institution outside of Colorado.
- Three of the 14 Colorado institutions with teacher preparation programs prepared 56 percent of Colorado's first- and third-year teachers.

Recommending Institution for First- and Third-Year Teachers

Teacher Sample

Colorado Institution	Number of Respondents	Percent of Colorado Sample
Adams State College	49	6.8

Present Teaching Assignment

First- and third-year teacher respondents reported the following regarding their current teaching assignments.

- Slightly under 50 percent were in their first year, and just over 50 percent were in their third year.
- Over half of the respondents were elementary school teachers.
- More than half of the respondents taught in districts of over 6000 students. Twelve percent taught in districts of under 300 students.

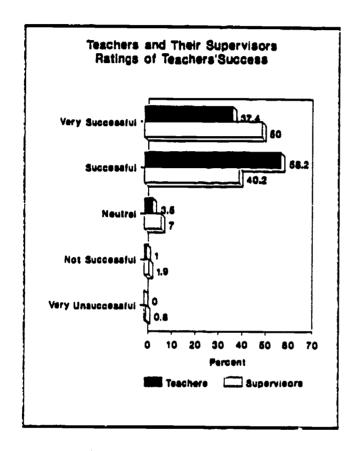

Year of Teaching

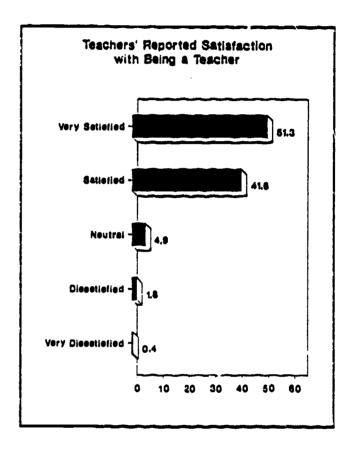

<u>Year</u>	Percent of Teachers
First year	49.9
Third year	50.1

- Over 95 percent of teachers reported feeling successful as a teacher, and supervisors rated 90 percent of their teachers as successful. Supervisors rated less than 3 percent of teachers as unsuccessful.
- When asked to indicate their degree of satisfaction with being a teacher 93 percent of teachers reported that they were satisfied, and only 2 percent were dissatisfied.

 $\nu = \mathcal{U}_{n,2}^{p_1}$

Teacher/Supervisor Ratings of Program Preparation

Survey items were developed by committees of higher education personnel and public school administrators, and were based on the standards established in the Approved Program of Professional Education as adopted by the State Board of Education. Teacher respondents were asked to rate 9 general performance domains on two 5-point scales with regard to importance for effective teaching and adequacy of teacher program preparation.

Performance Domains

- 1. Knowledge of subject matter.
- 2. Knowledge and utilization of teaching/learning theories.
- 3. Planning and organization of curriculum and instruction.
- 4. Management of the classroom climate.
- 5. Teaching techniques and communication of instructional material.
- 6. Assessment of and provision for individual and collective student needs.
- 7. Communication and cooperation with parents and office staff.
- 8. Professionalism and management of general responsibilities.
- 9. Communication and relationships with students.

Importance for Effective Teaching

1 = Irrelevant 2 = Somewhat relevant

3 = Moderately important

4 = Highly important

5 = Critical

Adequacy of Preparation

1 = Never covered

2 = Minimally or

inadequately covered

3 = Adequately covered

4 = Effectively and fairly completely covered

5 = Provided excellent and thorough knowledge

Supervisors were asked to rate a teacher's performance in these areas relative to the requirements of the district standards.

Performance and Preparation

- 1 = Meets district standards
- 2 = Does not meet district standards

Each respondent was also afforded the opportunity to comment on the adequacy of coverage of each of the performance areas.

Summary of State Results

The following tables show that statewide, teachers rated each of the domains as "highly important" for effective teaching with two exceptions. Classroom management and communication and relationships with students were rated as "critical" to effective teaching. With regard to the adequacy of their preparation, knowledge of subject matter and knowledge and utilization of teaching/learning theories received an average rating of "effectively and fairly completely covered." The preparation in each of the other domains was rated as "adequate", although ratings for management of the classroom climate and communication and cooperation with parents and office staff were relatively low, and were cited frequently as program weaknesses in the respondents comments. Forty percent of teachers rated the coverage of classroom management as inadequate, and 48 percent felt that communication and cooperation with parents and office staff was inadequately covered.

Over 100 percent of teachers were rated by their supervisors as meeting district standards in each of the domains with the exception of management of the classroom climate. Eighty-six percent of teachers were rated by their supervisors as meeting the district standards in this area.

Ninety-five percent of teachers reported feeling successful as a teacher and supervisors rated 90 percent of their teachers as successful. When asked to indicate their degree of satisfaction with teaching, 93 percent of teachers apported that they were "very satisfied" or "satisfied", and only 2 percent were either "dissatisfied" or "very dissatisfied."

The pc. centage of teachers rating their preparation as adequate or above was down from 1988 results in each of the 9 performance domains, with the exception of knowledge of subject matter which remained the same. The biggest drops were in communication and relationships with students (down 4 percentage points to 70 percent) and professionalism and management of general responsibilities (down 3 percentage points to 69 percent).

The percentage of supervisors who rated their teachers as meeting district standards was up from 1988 results in two of the nine performance domains. Knowledge of subject matter and management of the classroom climate were each up 1 percentage point. However, ratings were down in 4 of the other areas. Professionalism and management of general responsibilities and communication and cooperation with parents and office staff, each dropped 2 percentage points.
