IDENTIFIERS \*North Carolina; Performance Indicators; Status Reports

ABSTRACT

This document is a compendium of reports prepared for presentation to each of North Carolina's 134 local school systems by the State Board of Education. Each report summarizes student performance in the system for 1989-90 in table and graph form and permits a comparison with student performance in preceding years. These reports satisfy a state legislative mandate. Information related to school system performance is outlined in 5 sections for each of the 134 individual reports: (1) school system characteristics (including membership, finances, numbers and types of classroom teachers and students, and an index of advantagement); (2) community characteristics; (3) student performance indicators; (4) achievement by subject area and overall achievement for 1990 (standardized test results); and (5) accreditation status for systems seeking 1990 state accreditation. School system reports are arranged alphabetically by county, with city reports following the system reports of the counties in which they are located. (SLD)

## Introduction

This document, 1990 Report Card, the State of School Systems in North Carolina, is a compendium of reports prepared for presentation to each of North Carolina's 134 local school systems by the State Board of Education. Each report summarizes student performance in that school system for 1989-90 and permits a comparison with student performance in preceding years. These are the first reports to be prepared in response to the School Improvement and Accountability Act (Senate Bill 2) adopted by the North Carolina General Assembly in 1989. The Act provides for issuance by the State Board of Education of an annual report assessing each local system's efforts to improve student performance.

The Report Card is a document that is intended to support policy decisions at local and state levels. Accordingly, data are presented in a form designed to facilitate interpretation of trends in school system performance for a variety of measures. For example, although data as presented are derived from scores that are precise to one or more decimal points, most have been rounded to a whole number for the Report Card. This procedure should enable the reader to reach a clearer understanding of school system performance results.

Information related to school system performance is outlined in five sections for each of the 134 individual reports. The first two sections, School System Characteristics and Community Characteristics, summarize the context in which the system operates. Included are a number of factors that have been shown to relate to student performance. Some of these factors are used to calculate an index of advantagement for each school system. This index provides the basis for a school system to compare itself with school systems having similar levels of advantagement, demographic features, and economic characteristics.

The next two sections display information related to Student Performance on a variety of measures used to accredit or evaluate the state's public schools. In the section on Student Performance, test results are given for nationally normed tests as well as for those developed specifically for North Carolina. Measures other than tests, such as drop-out rates and attendance, are provided also. This array of measures offers the individual school system a comprehensive summary of its own achievement and permits the system to compare its results with the state as a whole.

The Achievement by Subject Area and 1990 Overall Achievement section summarizes test scores into four subject areas over three years and into a single 1990 achievement score for all tests. A school system may determine its performance both in relation to the state as a whole and in comparison with school systems that are similarly advantaged. In addition to pointing out areas needing improvement, the display also permits identification of outstanding programs that have potential for replication in other school systems. Overall achievement for 1990 indicates whether the school system as a whole is performing on par, above par, or below par in comparison to similar systems.

For school systems seeking State Accreditation for 1990, the fifth section presents the system's actual level of performance in relation to each of the state accreditation standards and notes whether the system is eligible for accreditation by the State Board of Education.

Following the "Introduction" there is a page entitled NOTES which provides additional explanatory information about the Report Card and how to interpret the charts and graphs.

School system reports are arranged alphabetically by county, with city reports following the system report of the counties in which they are located.

Raleigh, North Carolina  
December 1990

## NOTES

### General

Throughout the report "State Average" means the average of all local school system averages.

### School System Characteristics

Information that describes the school system and the students that attend its schools is collected annually by the Department of Public Instruction. The source of information that describes the community in which the school system is located is the 1980 U.S. Census supplemented with mid-decade estimates.

Data collected annually are used in calculating school system advantagement if they are sufficiently related to school achievement. The index is shown as a positive or negative number. A school system with a positive index number is above the state advantagement average, while one with a negative index number is below the state advantagement average. The individually calculated index of advantagement allows for a school system to compare itself with other school systems having similar advantagement.

Per student finances data for 1990 were not available at the time this report was prepared.

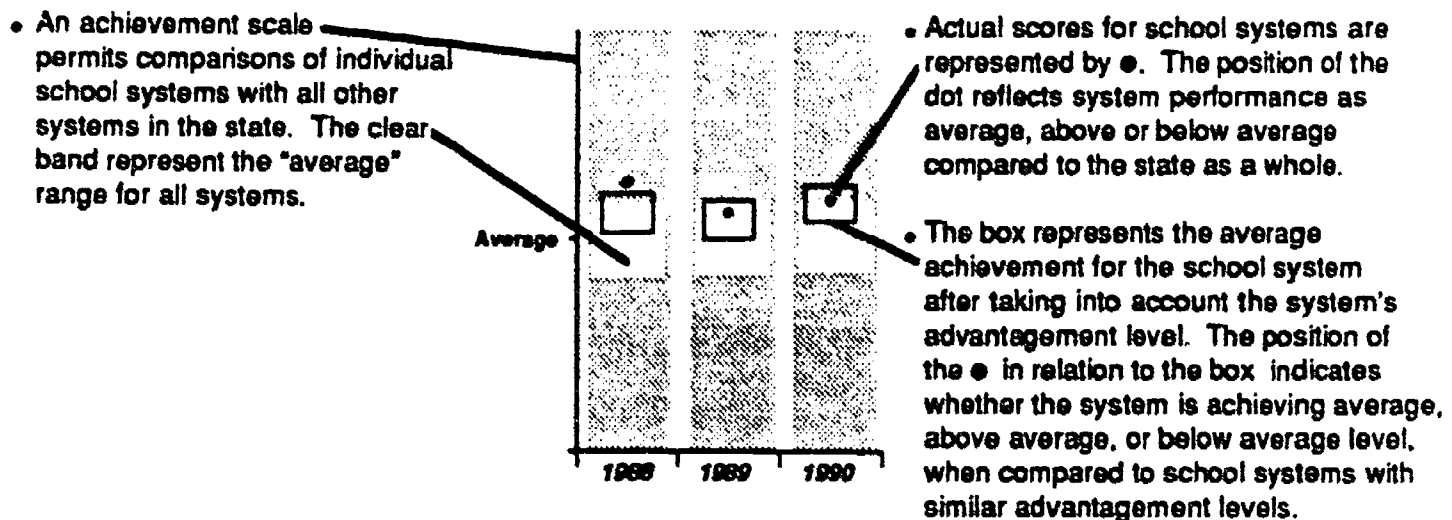

### Student Performance

Performance levels are reported for indicators that are related to State Accreditation standards. Dropout data for 1990 were not available at the time this report was prepared. Student achievement scores describe specific levels of performance on North Carolina and national tests. These scores also relate to State Accreditation standards.

Scores shown indicate the ranking of the school system in comparison with the state average or the national average, as appropriate. A score of 50 is considered average for both state and national tests. National tests are the California Achievement Tests (CAT) in grades 3, 6, and 8; all other tests are state tests.

### Achievement by Subject Area

School system test scores are summarized into four curriculum areas -- mathematics, reading/language, science, social studies -- and a single overall achievement score for all tests in all curriculum areas.

### 1990 Overall Achievement

"Per" represents average achievement for the school system after taking advantagement into account. The position of the ● reflects overall achievement of this school system for all curriculum areas combined.

### State Accreditation Status

Accreditation information is shown only for those school systems seeking accreditation for this year.

### Senate Bill 2 Status

Reporting of information concerning the degree to which systems participating in the School Improvement and Accountability Act provisions have reached their local performance goals will begin with the 1991 report on the State of School Systems in North Carolina.
