#### ABSTRACT

A study ascertained training, retraining, consulting, and technical support needs of small manufacturing companies in Ohio. Data were obtained from nine service areas of Ohio's two-year educational institutions to determine what human, technical, and physical assets campuses should make available. A survey instrument was designed to provide separate data for management, supervisors, technical support, ard other employees. Data from 519 companies indicated that the most requested need was for process change training, which included statistical process control, just in time, computer-integrated manufacturing, hazardous materials handling, and quality control. The five most frequent topic areas indicating needs for training, retraining, or consulting were as follows: (1) for managers--process change, management information systems, management, human relations and strategic planning; (2) for supervisors--management, process change, management information systems, human resource development, and communication; (3) for technical support employees--process change, human resource development, testing, systems maintenance, and management information systems; and (4) for other employees--process change, machine operation, technical systems operators, systems maintenance, and maintenance and set-up. The following were the top five areas requested by companies for technical support: statistical process control, hazardous materials, computer-assisted design, just in time, and computer systems. Recommendations for training programs were developed. (Appendixes include definitions and the survey instrument.) (YLB)

# The Training, Retraining and Consulting Needs of Small Manufacturing Companies in the State of Ohio

#### Abstract

The purpose of the study was to ascertain the training, retraining, consulting and technical support needs of small manufacturing companies in the State of Ohio. This study was prerequisite to the development of a marketing plan for the two-year colleges in the State of Ohio. The data were obtained from nine service areas of the state's two-year educational institutions. Data were obtained to determine what human, technical and physical assets Ohio's two-year campuses should make available to assist these small manufacturing companies.

Five hundred nineteen companies throughout the state completed the survey which was conducted using the interview method. The data have provided the necessary information for two-year campuses to identify target markets.

The data collection device was developed to ascertain the training, retraining, consulting and technical support needs of the subjects of this study. The survey instrument was designed to provide separate data for management, supervisors, technical support and other employees. The

questionnaire provided data about business functions such as finance, management, marketing and strategic planning as well as management information systems and health care systems. Technical areas such as process change, technical systems operators, systems maintanance and design were also included.

The data indicated the most requested area of need was for process change training which included statistical process control, just in time, computer integrated manufacturing, hazardous materials handling and quality control. The total number of requests indicating some to critical need for training, retraining and consulting in the area of process change was 1594.

The five most frequent topic areas indicating needs for training, retraining or consulting for managers were: process change, management information systems, management, human relations and strategic planning. For supervisors the five most requested areas were as follows: management, process change, management information systems, human resource development and communcation. The five most requested areas for technical support employees were: process change, human resource development, testing, systems maintenance and management information systems. The five most requested areas for other employees were: process

change, machine operation, technical systems operators, systems maintenance and maintenance and set-up.

The top five areas requested by the companies for technical support were: statistical process control, which was first by a large margin, hazardous materials, computer assisted design, just in time, and computer systems. Other services requested were co-op students, screening for employees, retirement planning, audio and video support and technical writing.

The total number of requests indicating some to critical need for training, retraining or consulting in all program areas was 18,181. This seems to indicate there is a large market for training, retraining and consulting programs developed by two-year campuses to serve the needs of small manufacturing organizations in the State of Ohio. The task is one of delivering, at a reasonable price, needed training, retraining and consulting programs indicated by the small manufacturing companies in the State of Ohio. This task will be difficult because of the possibility of a small number of employees in each company that could attend any given program.

The Training, Retraining and Consulting

Needs of Small Manufacturing Companies in the

State of Ohio

This research was a descriptive study, using the survey/interview method to indicate the training, retraining, consulting and technical support needs of small manufacturing organizations in the State of Ohio. The study included only small manufacturing organizations with 10-250 employees located in the State of Ohio. The State of Ohio was divided into nine areas with an area coordinator appointed to facilitate meetings and distribute the surveys. Meetings were held at a convenient location and a representative from all two-year campuses was requested to attend these meetings. Nine of these meetings were held and a training session was conducted to demonstrate the technique to use in the administration of the surveys. Five hundred nineteen (519) surveys were received from throughout the state by the end of October 1988.

Once the data were collected, each questionnaire was tabulated and frequencies and percentages were calculated and cross tabulation performed. The statistical program SPSSX was used to compile this information. The emphasis was not on comparison between areas but on the identification of the needs by groups, with some interrelationships presented.

Responses 1-21 produced demographic data about the organizations that participated in the survey. Questions 22-41 represent data obtained from organizations that selected categories of some need, a lot of need, and/or critical need for specific types of training, retraining or consulting for managers, supervisors, technical support employees and other employees. Questions 42 and 43 focused on technical support needs and other services that may be of interest to the small manufacturing companies. Questions 44-47 yielded more information about current needs in the areas of training and possible future programs.

from the nine areas of the state. Several institutions completed more than they were assigned and several did not complete any surveys or less than they were assigned. The following table demonstrates the response from the areas.

Table 1

Area Institutions Response to Survey

Area	1	2	3	4	5	6	7	8	9	total
	32	49	80	76	56	87	49	30	60	519

The areas were numbered as follows: (1) Lima, (2) Toledo, (3) Cleveland, Youngstown, (4) Springfield, Hamilton, (5) Central Ohio (6) Canton, Akron, (7) Cincinnati, (8) South Central Ohio, (9) Zanesville to Salem. The total number of surveys received was 519.

The surveys were coded into a two digit number of the Standard Industrial Classification Code. Five hundered and seventeen of the surveys received had the two digit code included. The surveys received were from the following two digit classification:

Table 2

#### Standard Industrial Classification

There were 2 non-respondents

Note. There was one current non-respondent and twelve non-respondents on 5 years ago data.

There were 27 respondents that did not exist five years ago and each employee size category demonstrated growth with the movement of 48 companies into the 250+ employee category. Generally there was a modest movement in all nine of the areas in the state.

The small companies with 10-25 employees had 96 respondents (18.5%). The category of 26-50 employees had 96 organizations (18.5%) which responded. The employees with 51-100 had 117 (22.6%) respondents. Companies with 101-200 employees had 129 respondents (24%). The category of 201-250 employees had 32 (6.2%) respondents and we had 48 respondents (9.3%) with 250+ employees. The total number of respondents was 518.

Total	25	46	78	75	50	81	47	27	56	485

Note. There were 34 non-respondents.

Only 49 organizations (10%) reduced the number of employees in the past five years with 90% of the organizations having an increase in the number of employees from 25 to 100%. The top reasons for this change were increased sales with 166 respondents, new markets with 58, expansion 58 and technological changes with 50 respondents.

Table 5 Question 5

The Projected Number of Employees in the Next Five Yea	The	Projected	Number	of	Employees	in	the	Next	Five	Year	S
--	-----	-----------	--------	----	-----------	----	-----	------	------	------	---

·											
<del></del>	Area	1	2	3	4	5	6	7	8	9	State Total
10-25 emp	loyees	2	3	7	10	4	8	6	6	14	60
26-50 emp	loyees	3	9	10	26	3	19	6	1	12	89
51-100 emp	loyees	8	12	26	19	13	18	7	4	20	127
101-200 emp	ployees 1	1	13	23	11	14	18	15	8	7	120
201-250 emp	ployees	2	4	8	4	6	10	5	5	5	49
250+ emp	ployees	5	6	5	6	16	14	9	6	2	69
Total compa	anies 3	1	41	79	76	56	87	48	30	60	514

Note. There were five non-respondents.

In the next five years there was a reduction in the number of organizations with 10-25 employees and also 26-50 employees. This can be expected because the upper categories have increased. This seems to project a moderate increase in employment in the next five years across the state.

Table 6 Question 6, 7

The Percentage of Change in Expected Employment

	Area l	2	3	4	5	6	7	8	9	State Total
Reduction	<del></del>		4	1	4	4	1			14
0% change	9	15	25	23	23	28	24	14	24	185
25% change	9	26	25	35	21	47	14	6	22	205
50% change	3	3	12	6	3	4	5	1	6	43
75% change	1		1	5		1		1	2	11
100% change	3	2	10	5	3	1	3	5	2	34
Total companie	s 25	46	77	75	54	85	47	27	56	492

Note. There were 27 non-respondents.

Two hundred five organizations predict a 25 percent increase in employees the next five years with only 14 (2.8%) predicting a reduction. This indicates a moderate increase predicted in each category and again the top reasons for employment change were increased sales with 214 respondents, new products and services with 95, new markets with 68 and technological change with 55 respondents.

Table 7 Question 8

Is an Outplacement Program Needed for Displaced Employees?

į.	Area l	2	3	4	5	6	7	8	9	State Total
Yes		1	4		1		2	2	1	11
No	18	32	40 .	39	31	50	33	12	33	288
Total companies	s 18	33	44	39	32	50	35	14	34	299

Note: There were 220 non-respondents.

There were 11 companies across the state that need an outplacement program. Four are located in area 3. This seems to indicate a very small need to develop outplacement programs.

Table 8 Question 9

Percentage of Workforce Unionized

	Area l	2	3	4	5	6	7	8	9	State Total
1-25%		1	1	4	1	1	2			10
26-50%	1	1	3	1	2	4	9	1	1	23

76-100%	9	13	18	5	17	18	2	10	19	111
0%	19	27	42	60	30	50	30	15	35	302
Total companie	s 32	49	78	76	56	85	49	30	60	515

Note: There were 4 non-respondents.

Across the State of Ohio trare were more small manufacturing companies that were not unionized. Two hundred seven had some union workers while 302 had no unionized workers.

Table 9 Question 10

Companies that are Part of a Multi-Unit Firm

	Area l	2	3	4	5	6	7	8	9	State Total
Yes	17	27	31	22	40	47	20	17	23	244
No	14	22	47	53	15	40	29	12	37	269
Total compunies	s 31	49	78	75	55	87	49	29	60	513

Note: There were 6 non-respondents.

Two hundred and forty-four of the 513 companies across the state responding to this question were part of a multi-unit firm.

Table 10 Question 13

Will Planned Capital Investments Impact Your Workforce In 5 Years?

	Area l	2	3	4	5	6	7	8	9	State Total
Yes	22	27	49	39	25	55	19	16	29	281
No	7	22	28	37	29	31	30	13	28	225
Total companie	s 29	49	77	76	54	86	49	29	57	506

Note: There were 13 non-respondents.

In area 1, 75.9% of the companies surveyed were planning capital investments that would impact their workers. This was followed by area 6 and 3 with 64 and 63%. Across the state 55.4% of the companies responding will have capital investments that impact their workers.

Tuble 11 Question 13B

Will You Need Retraining Programs Due to Investment?

	Area l	2	3	4	5	6	7	8	9	State Total
Yes	18	20	28	20	15	25	11	10	13	160
No	10	17	33	29	20	46	22	11	29	217
Total companie	s 28	37	61	49	35	71	33	21	42	377

Note: There were 142 non-respondents.

There were 160 companies that will need retraining programs for the employees that will be displaced due to capital investment. Across the state this results in 42.1% of the companies surveyed.

Will You Need an Outplacement Program for Displaced Workers?

P	Area l	2	3	4	5	6	7	8	9	State Total
Yes	1	1	4	1	2	1		1	1	12
No	26	33	52	46	28	60	31	17	30	323
Total companies	s 27	34	56	. 47	30	61	31	18	31	335

Note: There were 184 non-respondents.

Table 12 Question 13C

Only 12 companies reported the need for an outplacement program of the 519 surveyed. This has not been indicated as a high priority program to be developed.

Table 13 Question 14

There are Major Technological Innovations on the Horizon in Industry that Might Affect Your Organization. Do You Think Any of the Following Innovations Will Impact Your Company?

	Yes	No	Not Sure	More Info.	Total
Fabrication & Assembly	230	187	47	5	469
Information & Quality Ctl.	365	86	24	5	480
Materials & Handling	215	193	53	5	466
Product Design	264	158	39	11	472
rod. Plan/Engin.	294	130	33	5	462
CAD, CAM, CIM, CAE	277	138	46	7	468
Vision/Insp. System	196	190	59	6	451
Biotechnology	19	377	33	11	440
Waste Management	184	237	29	7	457
Organizational Development	232	160	51	9	452
Manufacturing Management (strategy, team mgmt. & organization, bus. practice	302 s)	110	48	9	469

Note. Average response was 462 organizations.

The innovation that received the highest number of yes responses (365) was information and quality control. This was followed by manufacturing management with 302 responses. Product planning and engineering was third with 297 responses followed by CAD, CAM, etc. with 277 responses. The fifth highest response was for product design. Since

these are recent innovations, the relatively small number of responses in the not sure column and need more information may be of interest.

Note: There were 50 non-respondents.

As illustrated by the 11 tables for this question the general state-wide response demonstrated the companies were going to use the majority of the technologies mentioned and very few needed more information about the technologies.

Table 25 Question 15

Does Your Company Have a Tuition Reimbursement Program?

	Area l	2	3	4	5	6	7	8	9	State Total
Yes	20	32	39	47	34	55	37	17	22	303
No	8	15	36	27	18	27	11	11	37	190
Total companie	s 28	47	75	74	52	82	48	28	59	433

Note: There were 26 non-respondents.

Most of the areas of the state reported a two to one margin for tuition reimbursement with the exception of area 3 and area 9. Area 9 reported there are more companies that do not have a program for reimbursement. Sixty-six of the 190 companies that reported no tuition reimbursement were in the catagory of 10-25 employees.

Three hundred and fifteen companies reported they had between a 25 and 100% tuition reimbursement plan. Two hundred and forty one reported 100%. Thirty eight had 75%

and 33 reported a 50% tuition reimbursement plan as reported in Table 26.

Table 26 Question 15B

#### What Percentage of the Cost Does the Reimbursement Cover?

	Area l	2	3	4	5	6	7	8	9	State Total
25%		1		1			1			3
50%	1	2	7	6	1	7	5	2	2	33

Note: There were 202 non-respondents.

Table 27 Question 16

Does Your Company Have a Higher Turnover Rate With Entry-level Employees Than You Would Like?

I	Area l	2	3	4	5	6	7	8	9	State Total
Yes	11	15	26	27	21	24	10	7	17	158
No	21	34	52	49	35	63	38	21	43	356
Total companies	s 32	49	78	76	56	87	48	28	60	514

Note: There were 5 non-respondents.

One hundred and fifty eight companies have a higher turnover rate with their entry-level employees than they would like to have. Only 115 companies believe that prior training would reduce this turnover rate as reported in Table 28.

Table 28 Question 17

Do You Believe Prior Training in a Certain Field Would Reduce This Turnover Rate?

	Area l	2	3	4	5	6	7	8	9	State Total
Yes	6	11	27	20	12	13	10	6	10	115
No	20	28	33	40	29	50	22	10	28	260
Total companie	s 26	39	60	60	41	63	32	16	38	375

Note: There were 144 non-respondents.

Table 29 Question 18

Does Your Company Have a Formal Structure for Employee Training?

	Area l	2	3	4	5	6	7	8	9	State Total
Yes	17	22	26	30	26	4 4	14	14	23	216
No	14	27	53	45	27	40	35	14	36	291
Total companies	s 31	49	79	75	53	85	49	28	59	508

Note: There were 11 non-respondents.

Two hundred and sixteen of the 508 companies responding to the question of having a formal structure for training reported yes. Fifty nine of these companies employ 101-200 employees. The companies reporting that they did not have a formal structure for training totaled 291. Sixty nine of these companies employ 51-100 employees.

Table 30 Question 19

What Would You Describe the Training Needed By Your Employees?

Ar	ea l	2	3	4	5	6	7	8	9	State Total
College credit	13	17	21	13	13	28	20	4	11	140

Table 31 Question 19B

How Would You Descibe the Training Needed by Your Employees?

	Needed	Non-Respondents
College Credit	140	379
Basic Studies	171	347
On the Job Training	463	54
Custom Training	262	256
Apprentice Training	206	312

The employees surveyed described the training needed by their employees as first on the job training (465) followed by custom training (263) and apprentice training (206).

Table 32 Question 20

	r A Cooperative Arrangement	
University to Pro	vide Instructional Programs	for Your Employees?

•	Area l	2	3	4	5	6	7	8	9	State Total
Yes	16	30	31	25	25	33	17	13	16	206
No	6	4	15	19	9	20	14	4	18	109
Maybe	10	15	29	31	21	32	18	11	25	192
Morning	1	2	11	6	3	14	3	6	5	51
Afternoon	6	3	5	5	5	12	4	2	3	45
Night	14	24	34	38	24	27	19	7	28	215
Plant site	16	17	28	17	19	24	15	12	14	162
College	5	11	23	29	13	2 <b>7</b>	14	4	22	148
Neutral site		4	5	4	4	2			4	23

The question was asked: Would you consider a cooperative arrangement with a college or university to provide instruction programs for your current employees?

There were 507 respondents to this question and 206 reported yes, 109 no and 192 maybe. This seems to indicate there is a major opportunity to establish these relationships.

Employees also requested evening instruction (215). There was a split between offering the courses at the plant (162) or the college (148).

What Additional Incentives Does Your Company Offer Employees in

Order That They May Pursue Further Education?

Table 33 Question 21

Ar	ea l	2	3	4	5	6	7	8	9	State Total
Work-release	12	11	17	9	14	27	11	6	9	116
Salary/wage	13	19	27	18	14	28	13	5	19	156
Increased leader	. 19	24	32	27	15	38	18	13	22	208
Child Care	1		1			1				3
Use of co. equip	. 13	14	23	14	19	18	21	4	9	135
Mentorships	12	8	21	13	14	17	18	6	13	122
Job security	14	25	36	31	21	44	1.	8	32	222

The top response was 222 for job security, increased leadership was second with 208. These two responses require little or no investment by the company. The category of salary and wage was the first category that would require additional investment in the individual and it received 156 responses.

Training, Retraining, Consulting Needs of

Small Manufacturing Companies for Management, Supervisors,

Technical Support Employees and Other Employees

The following tables present the data obtained by suggesting specific topics of training, such as marketing, finance, etc. The first set of tables for each topic represent the need for training, retraining and consulting services for management, supervisors, technical support and other employees. The second set of tables represent the choices of some need, a lot of need and critical need in marketing, finance, etc. across the nine areas of the State of Ohio. The third set of tables for each question represents training, retraining and consulting by the size of the company for each of the nine state areas.

The areas of the State of Ohio were numbered as follows: (1) Lima, (2) Toledo, (3) Cleveland, Youngstown, (4) Springfield, Dayton, Hamilton, (5) Columbus and Central Ohio, (6) Canton, Akron, (7) Cincinnati, (8) Chillicothe and South Central Ohio, (9) Zanesville to Salem.

The companies were asked the degree of need from no need to critical need in the various areas such as marketing and finance. The data reported in these tables represent only those organizations that chose either 3 (some need) 4 (a lot of need), 5 (critical need) for training, retraining or consulting.

Table 34-36 reported the data obtained when the organizations were asked if they have a need in the area of finance.

The data in Table 34 reveal that management and supervisors received the highest number of requests for assistance in the area of finance. Area 6 received 23 requests for training for their management staff. Across the state, there were 719 responses from some to critical need on the topic of finance.

Total Companies	18	18	49	33	24	38	26	10	26	242

Table 35 demonstrated that 62 of these responses were a critical need for finance programs. Forty-nine companies in area 3 gave 143 responses for training, retraining and consulting. Seventeen of these were of a critical nature.

The data in Table 36 illustrate the need for training, retraining and consulting was the highest in the 101-200 employee category. Area 6 had the highest number of responses.

Tables 37 - 39 reported the data obtained when the organizations were asked if they had a need in the area of financial and cost systems. As might be expected, management and supervisory employees received the highest number of requests in Table 37.

There were 767 responses for training, retraining and consulting in financial and cost systems. Area 3 had 24 responses for training and 25 for consulting for their management employees. The data in Table 38 indicate 76 critical responses for training, retraining or consulting in the area of financial and cost systems. Areas 3, 6 and 5 had over one hundred responses each for finance/cost systems. A total of 245 companies responded to the need in this area. The data in Table 39 reveal that the employee category of 101-200 employees had 142 responses for training, 74 for retraining and 54 for consulting in financial and cost systems. There were 46 responses from companies employing 251 plus persons.

Tables 40 - 42 represent the data obtained when the companies were asked their need in the area of management. The data in Table 40 indicate the largest number of responses for management training, retraining and consulting was for supervisory employees followed very closely by management employees. The total number of responses for management training, retraining and consulting was 1302. Two hundred sixty-six responses were for existing courses in management.

As might be expected, the (ata in Table 41 reveal that 108 of the responses were critical, 434 expressed a lot of need and 760 had some need. The total number of companies responding from some to critical need in the area of management was 351. Area 1 had 26 of the 32 companies surveyed (81%) which responded to having some to critical need in the area of management.

The data in table 42 reveal that in all sizes of companies, the top number of responses were for training in the area of management. The need here was very high as demonstrated by the number of responses and the number of companies responding to the need for management training, retraining and consulting in the area of management.

Tables 43 - 45 reported the data obtained when the organizations were asked what degree of need they have in the area of marketing.

The data in Table 43 reveal that the training and consulting categories were high for the management staff of the companies interviewed. There were 716 responses of some to critical need. Ninety-five of these responses wanted custom programs in the area of marketing.

As reported in Table 44, 234 companies responded with 405 being some need, 222 a lot of need and 89 as a critical need in the area of marketing. Area 3 had 50 companies respond some to critical need for marketing programs.

The data reported in Table 45 reveal that in area 3 the need for training, retraining and consulting programs was spread from those companies employing 25-200 employees. There were 40 requests from companies employing 51-100 and 37 requests from the companies employing 101-200 employees.

Tables 46 - 48 reflect the need in the area of management information systems expressed by the companies interviewed.

The data in Table 46 indicated that statewide there were 1296 responses for training, retraining and consulting in management information systems. For management, 211 were for training, 101 retraining and 105 for consulting. For supervisors, 207 requested training, technical support, 183 requested training and for other employees, 113 requested training. Two hundred thirty-eight requests were received for existing courses.

The data in Table 47 reveal that 172 responses from 316 companies were critical in nature, 437 with a lot of need and 687 expressed some need. Area 1 had 86% respond and Area 2 had 75% of the companies respond to the need for management information systems programs.

The data in Table 48 indicated that 241 responses for programs in management information systems came from area 6. Since the largest amount of surveys came from companies employing 101-200 employees, that bracket demonstrated the highest number of responses.

Tables 49-51 report the data obtained when organizations were asked if they had a need in the area of strategic planning.

The data in Table 49 indicated 677 total responses for training, retraining and consulting programs in the area of strategic planning. Ninety-one of these responses were for custom designed programs.

In Table 50 are data that 222 organizations responded with some need (369), a lot of need (232), and critical need (76) for strategic planning program.

In Table 51, area 5 did not have any companies employing 1-25 persons request programs in strategic planning. As expected, companies employing 101-200 people responded more frequently demonstrating their need in strategic planning.

Tables 52-54 reflect the data obtained when companies were asked for their need in the area of human resource development. Table 52 represents the data obtained from the 1005 responses for training, retraining and consulting needs. As might be expected, management and supervisory employees received the highest number of responses for training, retraining and consulting in the area of human resource development. Table 53 reflects the breakdown of the data obtained from the 1005 responses by 290 companies. There were 584 responding some need, 314 a lot of need and 107 a critical need for programs in human resource development. There were 182 responses from area 3 followed by area 6 with 178.

In Table 54, there were 204 responses from companies employing 51-100 people. Areas 7, 4 and 5 were very close with 121-129 responses for training retraining or consulting in the area of human resource development.

Tables 55 - 57 represent the data obtained when organizations were asked to respond to their needs in the area of logistics/distribution.

Table 55 deals with the need for training, retraining and consulting needs in the area of logistics and distribution. The supervisory employees received 263 responses for training, retraining and consulting. This was followed by management employees which received 253 responses.

In Table 56, of the 735 responses received, 229 expressed a lot of need and 58 expressed a critical need in the area of logistics and distribution.

The data in Table 57 reveal again the largest number of requests were from the companies employing 101-200 employees. Area 9 which did not have any companies in the category of 251 plus had 70 responses from 23 companies for training, retraining and consulting programs in the area of logistics and distribution.

Tables 58 - 60 represent the data obtained from companies when asked their needs in the area of communication.

The data in Table 58 indicate that management and supervisory employees received 647 responses for training, retraining and consulting of the 1053 received for all employees as indicated by the companies interviewed. Two hundred and three responses indicated they were interested in using existing courses.

Depicted in Table 59 are 257 organizations having some need (644), a lot of need (300) and a critical need (109) in the area of communication.

In table 60, area 6 had 182 responses followed by area 3 (171), area 7 (144), area 4 (136) and area 5 with 122 responses for the area of communcations. Thirty-nine organizations in area 5 with employees of 251 plus indicated a need for training, retraining and consulting in the area of communication.

Tables 61 - 63 indicate the need expressed when the companies were asked about their needs in the area of office administration.

Table 61 reported the data that indicated technical support employees, supervisory employees and other employees were the top three categories that demonstrated needs in the area of office administration. This accounted for 655 of the 859 responses received for training, retraining and consulting.

Table 62 depicts some need expressed by 555 responses, a lot of need by 244 responses and 60 responses expressed a critical need. There were 244 companies state-wide that expressed the 859 responses.

In Table 63, the category of 101-200 employees was the only one that reported training, retraining and consulting needs for office administration in every area of the state.

In area 9, 81 responses were received from the 27 companies that chose to answer some to critical need in the area of office administration.

Tables 64 - 66 report the data obtained from the organizations when they were asked to respond to their needs in the area of safety and security.

The data depicted in Table 64 indicate the training, retraining and consulting needs in the area of safety and security were highest in the category of supervisory employees. Of the 971 responses received, 308 were in the supervisory category. One hundred and eighty-three responses indicated they would want existing courses in the area of safety and security.

As revealed in Table 65, 245 companies yielded responses from some need (562), a lot of need (253), and critical need (156) in the area of safety and security. Area 9 had 90 responses from 21 companies.

Table 66 represents the data obtained by number of employees in the areas of training, retraining and consulting. In area 9, 32 of the 90 responses were from companies employing 1-25 employees. Area 6 had 48 companies indicating 194 responses for training, retraining and consulting in the area of safety and security.

Tables 67 - 69 represent the data obtained from the organizations when asked to respond to their need in the area of health.

Table 67 revealed the need for training, retraining and consulting in the categories of employees with supervisory employees first (132), management second (131) other employees third (121) and technical support employees fourth (114). Only 84 responses were received for custom programs in the area of health.

As depicted in Table 68, 176 companies yielded 526 responses of some need, 222 a lot of need, and 65 critical need in the area of health for a total of 813 responses.

In Table 69, only 18 of the 76 companies interviewed in area 4 responded to the need for training, retraining or consulting in the area of health. Training, again, was the largest response category overshadowing retraining and consulting in the area of health.

Tables 70 - 72 represent the data resulting from the companies being asked to indicate their need in the area of design.

The data in Table 70 revealed the need for training, retraining and consulting was highest in the category of technical support employees. This category received 286 of the 823 responses in the area of design. One hundred seventy-eight of the responses indicated they would use existing courses in the area of design.

In Table 71, 472 responses indicated some need, 273 a lot of need and 78 a critical need in the area of design. There were 227 companies indicating some to critical need across the state. Area 7 had 100 responses from 22 of the 49 companies interviewed.

Table 72 depicted the need for training, retraining and consulting by employee size. Area 7 did not have any responses in the 26-50 employee category but had 21 in the 251 plus category. Area 9 was the only area not responding in the 101-200 employee category.

Tables 73 - 75 represent the data obtained when the organizations were asked their need in the area of testing.

The data in Table 73 indicated the employee area of technical support received 354 of the 1121 responses for training, retraining and consulting in the area of testing. This was followed by the category of supervisory employees with 309 responses.

In Table 74, 146 responses were received for a critical need, 411 a lot of need and 564 some need in the area of testing. Two hundred sixty-two companies responded 1126 times for the area of testing.

Table 75 depicted 173 responses from companies employing 251 plus employees. Area 3 had 220 responses from 49 companies far surpassing the other area responses in the area of testing.

Tables 76 - 78 represent the data obtained when the organizations were asked their need in the area of maintenance and set-up.

In Table 76, the data indicated the technical support employees and the other employees categories received 403 of the 666 responses received for training, retraining and consulting in the area of maintenance and set-up. The employee area of technical support received responses from all areas of the state in the categories of training, retraining and consulting.

Table 77 depicted the 666 responses received from 193 organizations. Four hundred and one reported some need, 176 reported a lot of need and 89 reported a critical need in the area of maintenance and set-up.

Tables 79 - 81 report the data obtained when the organizations were asked their need in the area of systems maintenance.

In the data reported in Table 79, the area of technical support employees received 343 of the 925 responses received for training, retraining and consulting in the area of systems maintenance. The category of supervisors was next followed very closely by the other employees category. There were 210 responses for existing courses.

In Table 80, the data indicated 269 companies made the 925 responses. In area 1, 22 companies responded of the 32 surveyed. Also in area 8, 20 of the 30 companies surveyed respond from some to critical need in the area of systems maintenance. State-wide, 482 responses were received for some need, 324 indicated a lot of need and 119 indicated a critical need in the area of systems maintenance.

Table 81 dealt with the data received as to the company size.

Area 8 received 33 of their 60 responses in the category of 101-200 employees. Area 1 had 23 of their 64 responses in this category.

Area 5 had 47 responses from the category of 251 plus employees, demonstrating their training, retraining and consulting needs in the area of systems maintenance.

Tables 82 - 84 report the data received when the organizations were asked to indicate their needs in the area of machine operations.

In Table 82, the data indicates the need for training, retraining and consulting programs in the area of machine operations is, as might be expected, in the category of other employees. There were 283 responses in that category of the 765 received. The second category was technical support employees with 225. There were 170 responses for existing courses.

The data in Table 83 were received from 218 companies. There were 415 responses expressing some need, 229 stated a lot of need and 121 reported a critical need in the area of machine operation.

Table 84 reported the data that indicated in the categories of 1-25 and 26-50 employees received 279 of the 761 responses for machine operations. As expected, the largest response (200) was from the category of 101-200 employees because of the number of surveys in this category.

Tables 85 - 87 represent the data obtained when the organizations were asked to indicate their need in the area of technical systems operators.

In Table 85, the data indicated the categories of technical support employees (279) and other employees (218) received the vast majority of the 805 responses for training, retraining and consulting in the area of technical systems operators. There were 161 responses for existing programs in the area of technical systems operators.

The data reported in Table 86 indicated there were 417 responses of some need, 265 expressed a lot of need and 123 reported a critical need in the area of technical systems operators. There were 197 companies that responded from some to critical need in the area of technical systems operators.

Table 87 reported the data received by company size. Since more companies were surveyed in the category of 101-200 employees, this category received the highest response. The other categories received a relatively even distribution.

Tables 88 - 90 represent the data obtained when the organizations were asked to indicate their need in the area of material properties.

In Table 88, the data indicated the largest response was received from the technical support employee category (204). This was followed by supervisory employees with 151 responses. There were 134 responses for existing courses.

In Table 89, the data indicated 155 companies had some need (366), a lot of need (147) and critical need (56) in the area of material properties. The 569 responses received for this area was the lowest number in the survey.

Table 90 indicated there was a relatively even distribution between the categories of employment for programs in the area of material properties. Again, the lowest was between 101-200 employees.

Tables 91 - 93 represent the data obtained when the organizations were asked to indicate their need for process change.

In Table 91, the data indicated 460 responses for the category of supervisory employees, 433 responses for management, 383 for technical support employees and 318 for other employees for training, retraining and consulting in the area of process change. There were 240 requests for existing courses.

The data in Table 92 indicated 753 responses that expressed some need, 582 a lot of need and 259 expressed a critical need in the area process change. In area 1 there were 22 of the 32 companies responding to this question with 106 responses. Twenty one of the 30 companies in area 8 responded with 86 requests.

The data in Table 93 indicated there were a large number of requests in each employment category for process change. Retraining had the top number of responses in each employment category. Areas 2, 4, 6 received 748 of the 1594 requests for process change.

The data in Tables 94 and 95 indicate the technical support and other support services the companies surveyed were interested in the colleges providing. The top six areas of technical support were statistical process control (239), hazardous materials handling

(175), computer assisted design (171), just in time (137), computer systems analysis (132), and materials testing (131). An interesting aspect of the survey was topics not chosen, such as robotics, fiberoptics and geometric dimensioning and design.

Table 95 for other services the companies may want the colleges to provide indicated the following top five areas: co-op students (194), screening for employees (132), retirement planning (104), audio video support (94) and technical writing (91).

Total responses	s 27	47	73	68	52	81	43	25	60	476

Table 96 contains the data obtained when the organizations were asked about their needs in the future for management, supervisory or employee training programs. Three hundred and seventy-eight (79%) of the companies answering this question indicated they will have the need for these programs in the future. In area 2, 87% of the companies surveyed indicated they would be having these programs in the future.

Table 97 Question #45

How Are Your Current Training, Retraining and Consulting Needs Being Met?

Ar	ea l	2	3	4	5	6	7	8	9	State Total
2yr. college	24	29	23	22	20	44	28	8	15	213
Vendor Training	20	25	40	25	24	39	28	9	17	227

Total responses	97	132	188	157	136	219	140	58	111	1238

Table 97 represents the data obtained when the companies surveyed were asked how their current training, retraining and consulting needs are being met. Four hundred twenty-five or 37% of the responses indicated their needs were being met internally. Vendor training was chosen by 18% of the respondents while 17.2% are currently being served by two year colleges. Thirteen percent are being helped by vocational high schools.

Table 98 Question #46

Would You Like Additional Beneficial Program Information?

A	rea l	2	3	4	5	6	7	8	9	State Total
Strong Uninteres	st. 1	1	3	5	3	1	2		1	17
Uninterested	2	2	4	12	9	8	2	1	16	56
Undecided	2	6	11	14	5	10	3	3	6	60
Interested	12	20	38	27	21	55	22	13	28	236
Strong interest	7	8	11	7	.5	8	5	1	5	57
Total responses	24	37	67	65	43	82	34	18	56	426

Table 98 reports the data obtained when the organizations were asked if they would like additional beneficial educational programs for their employees. Fifty-five percent of the respondents answered they were interested. Thirteen percent indicated a strong interest while only 3% indicated they were strongly uninterested.

## Summary and Recommendations

The purpose of this study was to reveal the training, retraining, consulting and technical support needs of small manufacturing companies in the State of Ohio. The data were obtained from the nine areas of the state as designated by the Ohio Board of Regents. The study provided a basis for reflecting what resources the two year campuses for Ohio should develop and make available to these small manufacturing companies.

## Method

The subjects of this study were the small manufactuing companies in the State of Ohio. Five hundred and fifty-eight surveys were requested from the nine areas of the state. Several institutions completed more than they were assigned and several did not complete any surveys or less than they were assigned. The goal of over 500 surveys was obtained when 519 surveys were returned by October of 1988.

The questions in the data collection device were written to provide demographic data and separate data for management, supervisors, technical support employees and other employees. The questionnaire provided data about business functions such as finance, management, process change as well as health, office administration, and safety/security. Technical areas such as testing and system maintenance were also included. The final section of the

questionnaire was designed to obtain information about technical and other support services important to small manufacturing companies. This was followed by specific questions about programs that two year campuses could provide for the particular small manufacturing company.

## Summary of Findings

The training, retraining and cousulting needs identified by the 519 small manufacturing companies as well as the total responses for the state were identified in Table 99.

Material properties	569	276	160	133
Total	18,181	9,191	5,248	3,742

The total number of requests for training, retraining and consulting in the topic areas was 18,181. The top five training, retraining and consulting needs for the State of Ohio were: process change, management, management information systems, testing and communication. Although the exact number of participants is unknown, the size of the number of requests by the companies in the table seems to indicate a potential for a large number of participants. The two year institutions should follow up with contacts in the organizations to develop quality training programs.

Tables 100-108 indicate the training, retraining and consulting needs of the companies surveyed in the nine areas of the State of Ohio. Although their was some variance the top five requests for training, retraining, and consulting are all included in the top ten requests from each area.

Table 109 indicated the twenty categories by the response of some need, a lot of need and critical need for programs in the State of Ohio from the 519 small manufacturing companies surveyed.

The first five responses for programs with some to critical need were: process change, management, management information systems, testing and communication. The top five categories of critical need were: process change, management information systems, safety/security, testing and technical systems operators. In the a lot of need area, human resource development took the place of communications in the top five categories chosen.

Tables 110-118 indicate the state response compared to each of the areas total requests from some to critical need for programs and the area ranking.

In Table 110, area 1, health and financial cost systems took the place of safety and security and design in the top ten requested programs.

Table 111 represents the data from area 2. Health and logistics/distribution take the place of safety/security in the top ten requested programs for area 2.

In Table 112, machine operation took the place of safety/ security in the top ten requested programs in area 3.

In Table 113, technical system operators, machine operation and marketing took the place of safety/security, systems maintenance and office administration in area 4.

Table 114 represents the data from area 5. Health and financial cost systems replaced office administration and design in the top ten requested programs for area 5.

In Table 115, health replaced design for the top ten requested programs in area 6.

Table 116 represents the data from area 7. Technical systems operators replaced design in the top ten requested programs for area 7.

In Table 117, health and logistics/distribution replaced safety/security and design in area 8.

In Table 118, finance and marketing replaced communication and systems maintenance in the top ten requested programs for area 9.

Tables 119-127 present the data in a different format. The ranking of the categories on the state level by the number of companies indicating a need in a category can be compared to the total response ranking in the state. Also the number of companies in each area were ranked by category and their total responses in each of the twenty categories were ranked. For example, in Table 119, 351 companies of 519 surveyed indicated a need for management training, retraining or consulting and they chose the category, management, 1302 times which was the second highest program requested in the state. In area 1, 26 of 32 companies chose the category management which was the highest number of companies requesting any of the twenty categories in area 1. They also chose training, retraining or consulting in this category 89 times which was the second highest number of responses for any of the twenty programs for area 1. looking at these tables, the number of companies per category and their responses can be compared on the state and area level.

Human res.dev.	Human res.dev.	Sys.maintenance	Sys.maintenance
Strategic pln.	Communication	Mgmt.info.sys.	Maint.set-up

Table 128 represents the top five categories chosen by the companies for training, retraining or consulting for their managers, supervisors, technical support employees and other employees. Process change was the first choice of all but supervisory employees and it was the second choice for them. As might be expected, managerial concerns were the top choices for both management and supervisory employees. Technical support employees had testing and systems maintenance in the number three and four positions. The training, retraining and consulting needs for other employees included machine operations, technical systems operators and maintenance and set-up. The five choices for the employees followed the duties expected of them.

The final set of tables will graphically represent the percentage of companies in each area and the state that responded

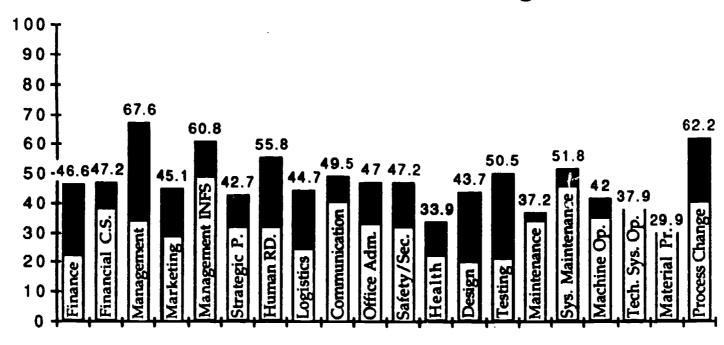

from some need to critical need for programs in the twenty categories listed. The number of small manufacturing companies located in each area has been identified along with the number of companies surveyed.

Table 129 includes the State of Ohio data with 519 companies surveyed of the 8,429 located in the state.

Tables 130-138 report the data obtained in each area of the state by the percentage of companies that selected the various categories and the total number of companies located in that area.

## State Of Ohio Percentages

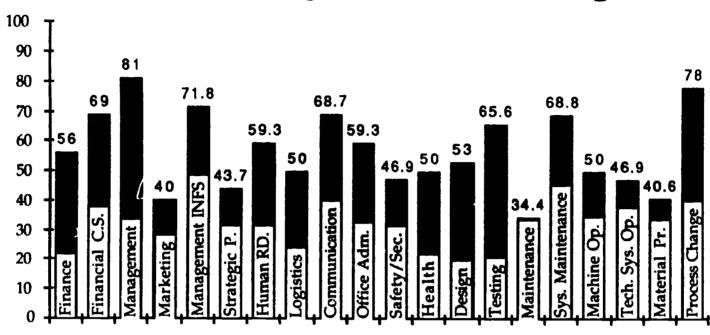

519 of the 8489 small manufacturing companies located in the State of Ohio were surveyed. This graph indicates the percentage of companies that expressed some to critical need for programs in the various topic areas.

Table 129

157

# Region #1 Percentages

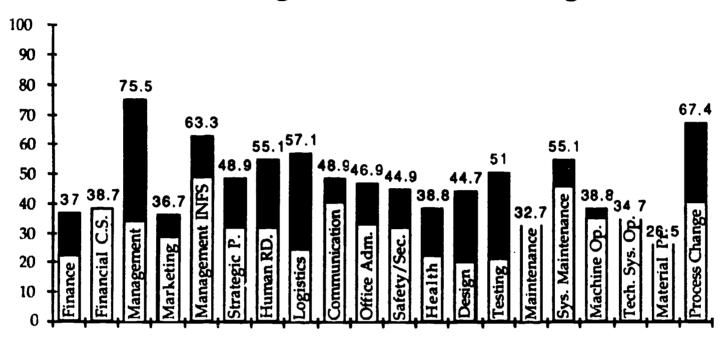

32 of the 401 small manufacturing companies located in Region #1 were surveyed. This graph indicates the percentage of companies that expressed some to critical need for programs in the various topic areas.

Table 130

155

## Region #2 Percentages

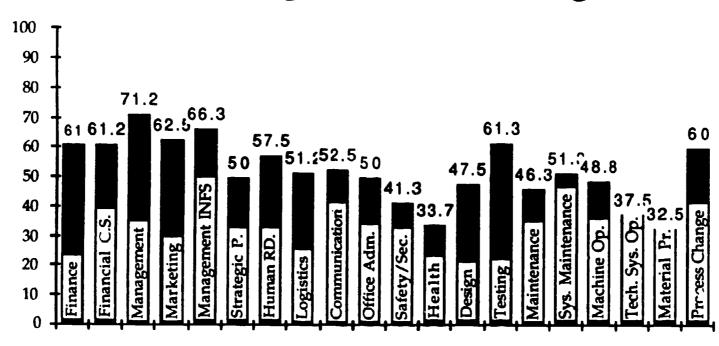

49 of the 870 small manufacturing companies located in Region #2 were surveyed. This graph indicates the percentage of companies that expressed some to critical need for programs in the various topic areas.

Table 131

161

# Region #3 Percentages

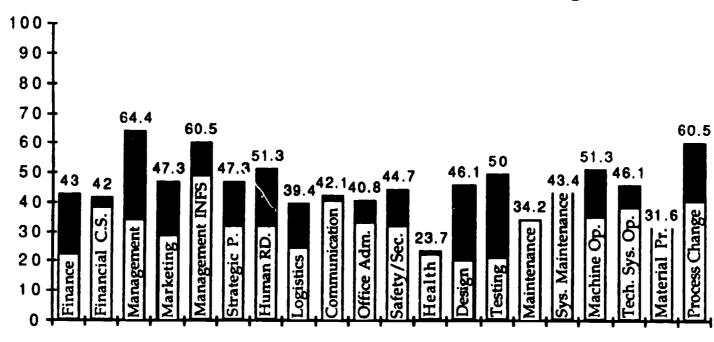

80 of the 2427 small manufacturing companies located in Region #3 were surveyed. This graph indicates the percentage of companies that expressed some to critical need for programs in the various topic areas.

Table 132

163

# Region #4 Percentages

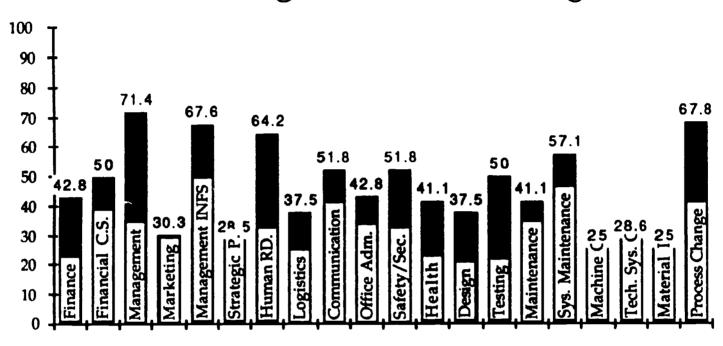

76 of the 1193 small manufacturing companies located in Region #4 were surveyed. This graph indicates the percentage of companies that expressed some to critical need for progra as in the various topic areas.

Table 133

165

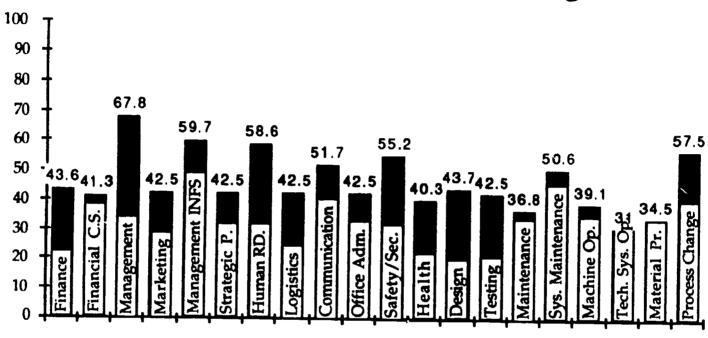

## Region #5 Percentages

56 of the 969 small manufacturing companies located in Region #5 were surveyed. This graph indicates the percentage of companies that expressed some to critical need for programs in the various topic areas.

Table 134

# Region #6 Percentages

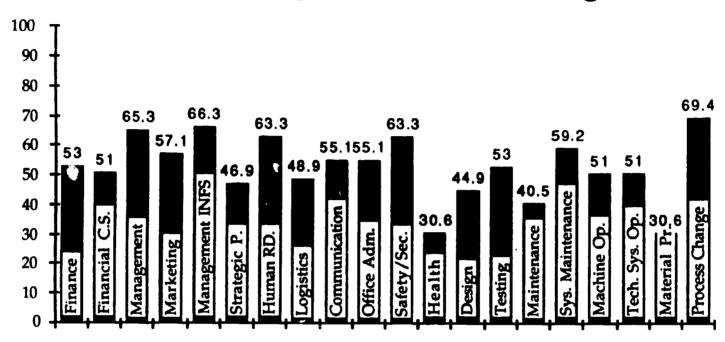

87 of the 1152 small manufacturing companies located in Region #6 were surveyed. This graph indicates the percentage of companies that expressed some to critical need for programs in the various topic areas.

Table 135

169

# Region #7 Percentages

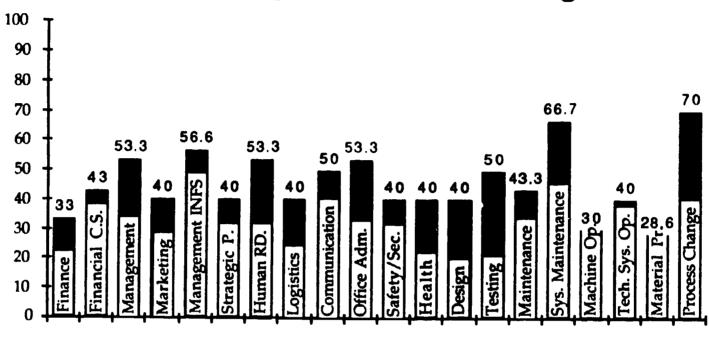

49 of the 910 small manufacturing companies located in Region #7 were surveyed. This graph indicates the percentage of companies that expressed some to critical need for programs in the various topic areas.

Table 136

170

# Region #8 Percentages

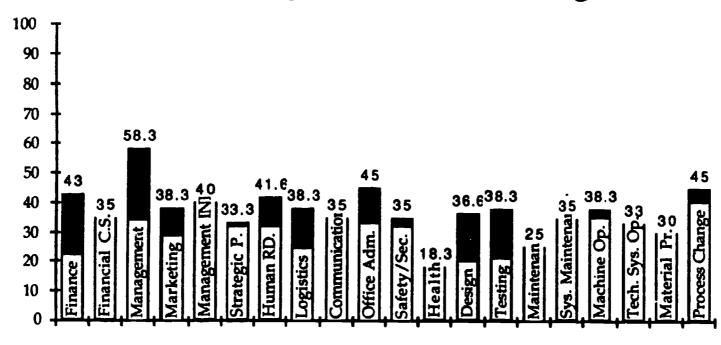

30 of the 246 small manufacturing companies located in Region #8 were surveyed. This graph indicates the percentage of companies that expressed some to critical need for programs in the various topic areas.

Table 137

173

# Region #9 Percentages

60 of the 301 small manufacturing companies located in Region #9 were surveyed. This graph indicates the percentage of companies that expressed some to critical need for programs in the various topic areas.

Table 138

175

## Technical Support Needs

The top six technical support needs indicated by the 519 companies surveyed were: statistical process control which was first by a large margin, hazardous materials handling, computer assisted design, just in time, computer systems analysis, and materials testing. The companies were asked to indicate what other services of interest the colleges or universities could provide. The top five services indicated were: co-op students, screening for employees, retirement planning, audio video support and technical writing.

## Recommendations

The following recommendations are presented:

- 1. The training, retraining and consulting program needs of small manufacturing companies in the State of Ohio have been identified. Two year campuses in each of the nine regions should develop programs designed to meet the identified needs of small manufactureres in Ohio.
- 2. From the data obtained, the most requested program topics were as follows: for training, process change and management information systems: for retraining, process change and management; for consulting, process change and management information systems. Although the total number of managers, supervisors, technical support employees

- and other employees for which these programs were requested is not known, sufficient data exists to indicate that these topics should be given serious consideration for program development.
- 3. All facets of the two year campuses should be involved in the development, marketing, and evaluation of the programs identified in this study. This is essential to the development of quality programs. Departments such as engineering technology, communications, business, and computer science should be informed of the results of this study thus allowing for a systematic, integrated approach to program development, marketing and evaluation. They then should become an integral part of the development of the needed programs and the marketing of these programs.
- 4. The two year campuses should concentrate on the development of technical support programs in the areas of statistical process control, hazardous materials handling, computer design, just in time, and a plan for co-op students as well as screeing for employees and retirement planning. Keetings with organizations requesting these programs should be held to ascertain specific program content designed to meet their needs.

- campuses to establish linkages with local small manufacturing companies. This liaison should be strengthened in order for both the institutions and the organizations to communicate and cooperate effectively to meet the various educational needs of the local community. This interchange will benefit the organizations, the institutions, and the community.
- f. This research was a study in a dynamic field and should be repeated and modified. This study should be replicated for other larger businesses and industries in order for the two year campuses to develop programs that meet their identified needs. When this is accomplished, the liaison between the campuses and the communities they serve will be strengthened.

**APPENDICES** 

### APPENDIX A

#### DEFINITIONS

Question Numbers And Definitions From the Survey

- 22. FINANCING: Financial planning and control systems, determining level of capital funding, where to obtain financing, and procedures for generating financing, how to analyze financial statements, ration analysis, financial analysis for the small firm.
- 23. FINANCIAL AND COST SYSTEMS: Inventory control, capital projects approval system, standard and direct cost systems. Accounting, developing profit and loss statements, balance sheets, cash flow schedules. Auditing, financial forecasting, leveraging your firm, horizontal statement analysis.
- 24. MANAGEMENT: Organization of work, organized relationships necessary, supervisory techniques, delegation process, to be communicated and understood.
- 25. MARKETING: As it applies to your business success, how to develop opportunity strategies, target market, establish pricing policy, determine product mix, distribute most efficiently and economically, promote successfully and to

- obtain, research, product sampling, consumer behavior and packaging assistance, demographics, and market testing.
- 26. MANAGEMENT INFORMATION SYSTEMS: Relationship to the computer, how and what to include, data processing, management computer report systems, data transmission and reception.
- 27. STRATEGIC PLANNING: Develop your strategic plan. How? Who? When? Small businesses need a strategic plan.
- 28. HUMAN RESOURCE DEVELOPMENT: Personnel policy, performance appraisal, evaluation, retirement planning, succession planning, position charts, and job descriptions.
- 29. LOGISTICS/DISTRIBUTION: Traffic, materials management, purchasing, material handling.
- 30. COMMUNICATION: Interview techniques, inter-office, with customers, phone techniques, house organs, newspapers, public relations, electronic mail.
- 31. OFFICE ADMINISTRATION: Word processing, business English, writing, time management and general office procedures.
- 32. SAFETY/SECURITY: Physical security, computer security, OSHA requirements.

- 33. HEALTH: Wellness program, conditioning, physical fitness.
- 34. DESIGN: Design of new products, shop design, packaging design, plant layout, and architectural drafting, pattern and mold making, electrical drafting, mechanical drafting, technical illustrating, etc.
- 35. TESTING: Product inspection and measurement, stress
  testing, conduction, chemical properties and bacteriological
  testing, quality control, new product or process testing,
  etc.
- 36. MAINTENANCE AND SET-UP: Carpentry, and masonry repair, operating equipment, cleaning and lubrication, welding, machine set-up operators, etc.
- 37. SYSTEMS MAINTENANCE: Repair of electrical, mechanical, HVAC pneumatic and hydraulic systems, repair of robotics, CNC, computer, laser/fiber optic and other electronic components and equipment, programmable control trouble shooting, etc.
- 38. MACHINE OPERATION: Lathes, extruders, cutters, grinders, assemblers, fabricators, painting, glazing and coating operators, drill and other pressing operators, machine welding and soldering operators, etc.

- 39. TECHNICAL SYSTEMS OPERATORS: CNC operators, robotics operators, computer-assisted drafters, laser optic cutters, heat chemical and electronic sensor operators, etc.
- 40. MATERIAL PROPERTIES: Rubber, plastics, chemicals and their reactions, ceramics, metallurgy and other ore materials, wood, food, textile and other agricultural products, etc.
- 41. PROCESS CHANGE TRAINING: Statistical process control (SPC).

  just-in-time (JIT), computer-integrated manufacturing (CIM).

  h:zardous material handling, quality control, etc.

3	If yes or maybe would you want the course on (1) Plant site, or (2) at the college, (3) a netural site?
	What additional <u>incentives</u> , if any, does your company offer your employees in order that they may pursue further education? (check all appropriate with an X )
1. 2. 3.	Work-release  Salary wage incentive Increased leadership role Child care  5. Use of company equipment Mentorships/personal support Job security
The	following is a list of areas where training, retraining, or consulting activities might be needed. Each item listed is a broad area that affects business. Please indicate your need for training, retraining, and consulting, in the area listed for management, supervisors, technical support (i.e. skill trades, data processing, office support), or other employees (i.e. production, clerical, semi-skilled workers).

### **GLOSSARY**

### FABRICATION AND ASSEMBLY

parts fabrication includes all piece-making processes, e.g., machining, casting, molding, stamping, forming, welding, etc. Flexible machining systems and press operations, internal mold release, machine diagnostics, n/c model and pattern machining, near net shape casting and forging.

Assembly comprises the joining together of parts and/or sub-assembly at work stations which include people, robots, fixed automation, conveyors, feeders and sensors: AGVS assembly pallets, automated feed and orienting, machine vision/machine intelligence, Modular assembly.

## INFORMATION AND CONTROL/QUALITY

Information and control systems monitor factory operations: computerized maintenance control systems, facilities monitoring and control, information display, inventory monitoring, production monitoring.

Total quality management and technology that is effective in the appraisal process including feedback processes to information systems: Automated X-Ray inspection, coating thickness measurement, machine vision assembly verification, machine gauging, material identification.

## MATERIAL HANDLING

Systems move and store material and can consist of AGVS AS/RS, bar codes, robots and vision systems: AGVS, Automated storage and Automated Retrieval, Bar code Identification, Material identification, Count verification.

## PRODUCT DESIGN

The initial input to design consists of criteria, guidelines, tolerances, assembly and manufacturing consideration. Initial or conceptual design may be analyzed and optimization requires large or super-computers: CAD/CAM Graphics Systems, computerized data acquisition and analysis, finite element analysis and modeling.

### PRODUCTION PLANNING

Short range production planning utilizes existing capacity to manufacture products and meet delivery schedules. It includes plant layout, simulation analysis, line balancing, and production scheduling. Long range planning assures that there will be adequate capacity to satisfy the forecasted future demand for products and incorporates group technology, process planning, capacity planning, make/buy analysis, and facilities planning. Technologies can include production scheduling, computer graphics, plant layout, corporate planning system, functional modeling, machine load planning, material requirements planning, project management systems, tool room reporting and control, training system for plant personnel.

### PRODUCTION ENGINEERING

Designing and manufacturing dies, tools, fixtures and computer-generated machine programs necessary to adapt the manufacturing facility to the production of the specific product. Technologies can include 3-axis and mill surface machining, computer aided process planning, die design, wire frame, die layout, die development, mold design and analysis.

## CAD, CAM, CAE (CIM)

Computer-Aided Design, Computer-Aided Manufacturing, Computer-Aided Engineering, Computer-Integrated Manufacturing.

### VISION/INSPECTION SYSTEMS

This area focuses on technology that is effective in the appraisal process. Technologies included Automated X-Ray inspection, cost of quality analysis, calibration procedures, infrared images, etc.

#### BIOTECHNOLOGY

Bio-processing and genetic engineering.

### WASTE MANAGEMENT

Hazardous materials reduction/substitution, treatment and disposal, waste minimization, recycling and reclamation techniques.

## ORGANIZATIONAL DEVELOPMENT

Traditional business education experience. Technology examples included are accounting, purchasing planning and information gathering, personnel--including union and contract negotiating, work force selection and other such activities.

### MANUFACTURING MANAGEMENT

Strategic issues include automation, flexible integration, computer integration, top down planning, bottom up commitment and product life cycles, etc.. Team management issues, project planning and pre-production, personnel management, cross-divisional relations. Business practices can include purchasing, Just-In-Time Inventory, self-inspected quality, cost accounting, performance measurement criteria, and consumer/customer characteristics.
