IDENTIFIERS \*Annenberg CPB Project

## ABSTRACT

This report contains information on institutions that submitted proposals for integrating technology in education to the Annenberg/CPB (Corporation for Public Broadcasting) Project's New Pathways to a Degree program. It is noted that, although the 243 proposals received contained a number of innovative ideas about how to use technologies to improve both the accessibility and the quality of higher education, only seven of them could be funded. The program information is presented under four headings: Recruitment and Orientation; Program and Course Development and Delivery; Support Services; and Faculty Development. Each proposal is described briefly, and a contact person and telephone number are listed. The appendices provide information about the "New Pathways to a Degree" program, the 7 funded projects, and 31 new Pathways Associates. More detailed descriptions are given of the funded projects--at the College of St. Catherine, St. Paul, Minnesota, Indiana University--Purdue University at Indianapolis, Indiana; University of Maine at Augusta; Northern Virginia Community College; Oregon State System of Higher Education (OSSHE), Eugene, Oregon; the Rochester Institute of Technology, New York, and West Virginia University, Morgantown--as well as a brief description the Annenberg/CPB Project and lists of its television and audio course collections and research reports. Brief descriptions of six technology demonstration projects conclude the report. (DB)

This book may be copied for private use without permission from the  
Annenberg/CPB Project. Reprint of specific ideas attributed to one  
institution require permission from the institution credited.

## **PREFACE**

For many institutions of higher education, the future is clear. Information and telecommunication technologies can provide new pathways to a degree for greater numbers of "new majority" students--those who attend college part-time, are older, and have significant family and work responsibilities.

Integrating technologies with programs means rethinking every facet of a student's contact with professors, administrative offices, peers, the library, and the curriculum in imaginative ways. The 243 applicants to the Annenberg/CPB Project's recent New Pathways to a Degree program did just that. Their proposals contained a significant number of innovative ideas, large and small, about how to use technologies to improve both the accessibility and the quality of higher education.

There were far too many good proposals, and good ideas, to be funded. However, the institutions whose ideas are described herein have graciously consented to share them through this handbook, and to list contact people so you can explore these ideas in more depth. The book is divided into four sections: Recruitment and Orientation, Program and Course Development and Delivery, Support Services, and Faculty Development.

In the appendices we have provided information about the New Pathways to a Degree program, the seven funded projects, and the Associates. You will also find information about the Annenberg/CPB Projects, its television and audio course collection, research reports, and technology demonstration projects. Finally, for those of you with a bitnet account, the Project has an on-line news service, NP-NEWS. NP-NEWS links you to a growing library of archived information about ideas and methods. It also provides information on upcoming events, including workshops and computer conferences. To subscribe, send an electronic mail message to LISTERV@UMUC with the one-line message, SUBSCRIBE NP-NEWS (your name). If you have an Internet account, the address is LISTERSERV@UMUC.UMD.EDU and the message is the same.

We hope you enjoy browsing through this handbook. Moreover, we'd be delighted if you would use the tear-off sheet in the back to let us know about other innovative ideas you've had for ways technologies can be used in new pathways to a degree.

Lin J. Foa  
Senior Project Officer  
The Annenberg/CPB Project

# RECRUITMENT AND ORIENTATION

### **York College**

Create "2+2" programs wherein the student spends the first two years getting an AA degree from a local community college, and then continues to attend the same site to receive the next two years of their B.A. degree -- delivered from a university via telecommunications. Thus, the student is not required to switch locations and schedule, and is more likely to continue for the baccalaureate degree.

Contact:

Joseph Dougherty

717/846-7788 ext. 229

### **Southern Oregon State College**

Increase students' chances for success by creating personalized instruction plans for each distant learner, including a counseling package that includes study strategies and potential learning obstacles.

Contact:

Kevin Talbert

503/482-6331

FAX 503/482-6380

### **University at Bridgeport**

Market audio courses that students can listen to while commuting as "Roads Scholar" courses. Create an "audio wrap" for produced courses by recording the local professor on a separate cassette.

Contact:

Mary Ann Ryan

203/576-4800

Michael Grant

203/576-4177

### **Southwest State University**

Prepare students for distance learning by having them participate in an educational planning course that includes discussion of individualized educational planning, learning strategies, and opportunities involving assessment of prior learning.

To familiarize community public librarians with the resource needs of distant learners, program developers and extension librarians should hold orientation and follow-up meetings. Similarly, community education directors, school principals and custodians at an outreach site, and other people with whom students or potential students might come in contact should be well briefed.

Contact:

Carolyn Steel

507/537-6218

# **PROGRAM AND COURSE DEVELOPMENT AND DELIVERY**

## **Indiana University-Purdue University at Indianapolis**

Reduce psychological distance and increase access for "new majority" students by offering courses at well-equipped outreach centers at inner city churches and community centers as well as vocational colleges. Offer students access to basic baccalaureate courses in math, English, history, chemistry, and information resources through cable television, and provide the opportunity to work with peers by using telecommunications technologies (fax, computers, and voice mail). Support students' work with a combination of technical course assistants and mentor/peer tutors.

**Contact:**

**Amy Conrad Warner**

**317/274-9840**

**Bitnet:IVTY100@INDYCMS**

## **RADIO BROADCASTS**

Use live and recorded radio broadcasts from the campus radio station with a talk show format--including guest experts and listener call-in periods--to deliver courses. Mail visual and text materials to students in advance so they can be referred to during the show.

**Contact:**

**Morgan State University**

**Earl T. Matthews**

**301/444-3155**

**FAX 301/444-3536**

### **Variations:**

Integrate the activities of the college television or radio station and the department of academic computing services to provide better course delivery and support services to students.

**Contact:**

**Pensacola Junior College**

**Elizabeth DuBose**

**904/484-1796 or**

**Lori Nolen**

**FAX 904/484-1838**

Offer seminars via radio, produced by communications students.  
This medium is especially useful for students in prison.

Contact:

**Martin University**  
Warren Lewis

812/855-5847  
Bitnet:WWLEWIS@IUBACS

-----  
**LOCAL "WRAPS"**

Create local "wraps" for nationally distributed telecourses or audio courses. These inexpensive video or audio additions allow local faculty members to introduce themselves and the course, discuss logistics of assignments and reference materials, or make additional content material available. The wraps can either be delivered via broadcast, cable, fiber, or satellite, or they can be made available on cassettes at libraries, off-campus sites, or by mail.

Contacts:

**Utah System of Higher Education**

Cecelia H. Foxley                      801/538-5247  
Don A. Carpenter

**Hiram College**

Hale Chatfield                              216/569-5331  
Bitnet:HCHATF@HIRAMB

**Western Illinois University**

Joyce E. Nielsen                              309/298-2172  
Bitnet:MSJEN@BOGECNVE

**Genesee Community College**

Robert G. Knipe                              716/343-0055 ext. 425 or 595

Variation:

Create videocassettes for students enrolled in telecourses who are not able to come to the introductory class. The cassettes can familiarize students with their instructor, review course content and requirements, describe procedures for getting course cassettes, provide testing information, and review general information to acquaint students with this type of learning--thus serving as a substitute for that important introductory session.

Contact:

**Fox Valley Technical College**

Lori Weyers 414/735-5682

Ellen Krueger 414/735-2518

---

**Boston University Metropolitan College**

When offering classes by audioconference or audiographic techniques, tape the audio portion and store the computer screens that are generated to create a complete transcript of the class for students who may have had to be absent or who might need to use it for review.

Contact:

Victor Shtern

617/353-2566 or

Internet:VICTOR@BUMETA.BU.EDU

**Texas A & I and South Texas College Composition Network**

Encourage minority and other adult students to complete required English composition courses with better results by offering classes via computer conferencing. Increase the reach of these courses by working with other institutions in your region to develop a network of computer conferencing classes.

Contact:

David H. Sabrio

512/595-2387

Emil A. Mucchetti

512/595-2640

**Troy State University at Dothan**

Ask local school systems to make classroom space available for off-campus college courses in exchange for your college making its networked computer equipment available to teachers when it is not being used by the college students. In addition, offer education courses via computer for doubly positive results -- prospective and current teachers will enhance their computer literacy as they are learning the subject.

Contact:  
Betty Kennedy                                205/983-6556 ext. 360  
  FAX 205/983-5059

**North Carolina State University**

Persuade a local employer who has networked computers to offer courses at their offices from 4:30 to 6:00 for employees . Many assignments and projects can be tied to the employees' work activities as well.

Contact:  
Edward W. Erickson                        919/737-3893  
Stephen E. Margolis                        FAX 919/737-7873

**Mt. San Antonio College**

Recruit advisory board members from local industries to assist in the planning of new technology-based curricula. Representatives from software companies, telephone companies, television broadcasters and producers, and computer-based training specialists can provide invaluable help, especially if encouraged to benefit from the ensuing educational services.

Contact:  
Virginia L. McBride                        714/594-5611 ext. 4308

---

**COURSE MODULES**

Speed up progress toward a degree by designing courses in a modular format. This allows students to use a variety of means (computerized and not) to "assess out of" those areas they already know and reach mastery in areas where they need it.

Contact:  
**Regents College**  
Kate Gulliver                                518/457-4850  
  FAX 518/485-7520

Variations:

Organize courses into modular units to enable students to start and stop at convenient times. Modify the modules as appropriate to reflect the cultural diversity of students, and include assignments that require students to interact with their community.

Contact:

**Alaska Pacific University**

Alicia Martinez

907/564-8322

Bitnet:FNGS@ALASKA

Revise pre-professional courses for distance delivery into modular segments. Then analyze the modules to see which ones might be pulled out and used as separate non-credit continuing education modules for people already in the field, or in related fields.

Contact:

**Kansas State University**

Roberta Flaherty

913/532-5500

Bitnet:FLATERY@KSUVM

-----  
**University of Pittsburgh**

Use a state of the art courseware authoring program to develop a laboratory-based course in Learning and Motivation. In addition, a computer-driven voice-mail system would be implemented to facilitate communications between distant learners and the course instructor. This course would be entirely self-instructional and the development process would serve as a prototype to guide the development of similar courses by professors who need not be programming experts.

Contact:

Diane Davis

412/624-7210

## **LABS FOR DISTANT LEARNERS**

Offer monthly evening star watch labs at off-site locations for students enrolled in astronomy courses. [Ed. Note: Invite students to bring their families -- involving them in your students' learning helps in lots of ways.] When running telecourses, provide a credit lab on campus as an option for students needing science courses with labs.

Contact:

**University of Hawaii - Kauai Community College**  
Glenn Katahara 808/245-8238  
Bitnet:KATAHARA@UHCCVX

### **Variations:**

Develop a laboratory science course in natural resources ecology for distant learners. Using ITV, videocassettes, and interactive computer resources, students can do laboratory exercises in their own locale while studying how natural resources and ecological systems are interrelated.

Contact:

**University of Maine System/Community College of Maine**  
Pamela MacBrayne 207/622-7131  
Bitnet:RUSSO@MAINE

Make lab courses offered at a distance more effective by creating short videotaped segments that can be previewed before performing each experiment at home.

Contact:

**League for Innovation in the Community Colleges**  
Don Doucette 714/855-0710  
Paul Shumaker 216/987-4787  
Applelink:DOUCETTE

Provide lab courses (e.g., chemistry) for distant learners by combining videocassettes of lectures and presentations, dedicated phone lines and scheduled hours for telephone questions, lab simulations using computer software and videodiscs, take-home lab kits for experiments, computer-based testing, and electronic bulletin boards and fax for further interaction and delivery of homework.

Contact:

**University of Hawaii - Leeward Community College**  
Teresita Hartwell 808/455-0269

-----

### **SUNY at Brockport**

Make telecourses more accessible by offering a choice of two syllabi for students to follow -- one requiring 5-7 meetings at on or off campus sites per semester, one requiring telephone, computer, and fax contact with faculty and peers instead of meetings. Laptops and modems are loaned to students who need them.

**Contact:**

Mary Markusen

716/395-5725

FAX 716/395-KEYS

### **Western International University**

Videotape local business experts to show in on-campus classes or courses for distant learners, thereby enriching the course and increasing the likelihood that busy executives will agree to speak.

**Contact:**

John Blair

602/488-3145

MCI Mail:JBLAIR

### **University of Bridgeport**

Make self-paced mastery learning available to distant learners by allowing students to use computer-generated individualized tests to demonstrate proficiency in any course module. If tests are developed to be optically scanned and then processed by computer, students can receive immediate feedback on their test performance.

**Contact:**

Mary Ann Ryan

203/576-4800

Michael Grant

203/576-4177

### **The University of Maryland University College**

Design or adapt courses to enhance critical thinking and discussion opportunities for distance learners using a dual track: computer conferencing for students who have ready access to computers and modems; audioconferencing using a telephone bridge and toll-free number for students not able to participate in computer conferencing.

**Contact:**

William Wolff

301/985-7722

## TEACHING WITH VOICE MAIL

Consider phasing in a technology-based distance delivery program, starting with telephones with voice mail capabilities. Instructors can leave both "public" messages to announce news of concern to the entire class, and use individual voice mail boxes for responses to private questions, assignment feedback, etc. Students can call into this voice mail system from any touch-tone phone with questions, responses, and concerns. Once faculty and students are comfortable with this type of system, the program can begin to include more sophisticated computer and video technologies.

Contact:

**Mt. San Antonio College**

Virginia L. McBride

714/594-5611 ext. 4308

### Variations:

Use a computer-based voice mail system to enable students taking a foreign language telecourse to phone in their oral assignments on a weekly basis and receive oral feedback from their instructor. The system is also used for other courses and administrative purposes.

Contact:

**Northern Virginia Community College**

Randal A. Lemke

703/323-3379

FAX 703/323-3392

Bitnet:NVLEMKR@VCCSCENT

Provide a voice mail system to offset the difficulties distant learners face in communicating with faculty and other students. The system provides a 24-hour message link via a bulletin board to transmit student questions, provide class assignments or changes in schedules, and offer general information and reinforcement.

Contact:

**Suffolk Community College**

Lois Ambash

516/451-4042

AT&Tmail=l1LIB

-----

### **Linfield College**

Improve the quality of liberal arts courses delivered at a distance by creating interactive texts via desktop publishing. Taking a Socratic approach, the interactive texts can include lecture notes, as well as the asides, comments, and questions that would be part of a live lecture. Rationales for studying the subject, discussions of the approaches chosen, statements of learning objectives, and anticipated student questions and responses can also be included.

**Contact:**

Vincil Jacobs

503/472-4121 x281  
FAX 503/472-9528

### **Cerritos Community College District**

Enrich student and faculty interaction in writing courses by requiring that students in a given class divide into three small groups. The instructor can meet with each group four times over the semester, with the remainder of the students' work done at a distance, using videocassettes or computers and individualized assignments. In another variation on making more efficient use of faculty resources, two instructors in history and English, for instance, can coordinate their classes using technology to enhance instruction and convenience in an integrated 6-credit liberal arts course, with each class being team-taught for only half the normal on-campus meetings, and students doing the rest of their work at a distance.

**Contact:**

Jan Dennis-Rounds

13/860-2451 ext. 597  
Internet:DENNISROUNDS@CERRITOS.EDU

### **The Evergreen State College**

Develop and implement multi-cultural instructional curricula and materials by having faculty and advisors from all the cultures involved participate in seminars to review available multimedia materials. To make the material even more relevant for specific communities (i.e., Native American students), the subject matter can be organized around contemporary issues. For example, a management studies program could include all the technical skills and disciplinary content usually required, but set within the framework of tribal communities committed to self-determination.

**Contact:**

Carol Minugh

Barbara Leigh Smith

206/866-6000 ext. 6803 or 6025  
FAX 206/866-6823

**Northern State University, Cheyenne River Community  
College, Sisseton Wahpeton Community College, Crow  
Creek/Lower Brule Community College**

Ask experts at tribal community colleges to develop courses in tribal cultures. These can be delivered using two-way audiographic technology to the main campus as part of a Native American Studies program, while they are being offered live to students at the satellite campus on the reservation. In return, faculty at the main campus can deliver courses on topics such as business management or teacher education using the same system.

Contact:  
David Fuller 605/622-2568  
Lynn Carlsgaard FAX 605/622-2542

**Miami-Dade Community College**

Facilitate a student study partner system by creating an on-line data base that lists individual students' courses, available study times, and geographic location. When combined with an audio/visual lending library at outreach sites, the system will enable independent study students to arrange group screenings and discussion of course materials.

Contact:  
Betsy Hilbert 305/347-2513  
FAX 305/347-0941

**Pennsylvania State University**

Prepare distant learners for engineering courses by offering lower division courses via computer. For example, electrical engineering laboratory courses, often disliked by students because of large, impersonal lecture halls and teaching assistants who have trouble communicating, may be converted to multimedia courses using computer software, lab hardware kits and video.

Contact:  
Richard A. Mollo 814/865-0171  
Peter K. Forster 814/865-5403

**The University of Nevada-Reno**

Encourage the development of study groups between students at different sites who are taking the same course by making audioconferencing available after class. Make distant sites more functional by having a paid facilitator for each class, who is responsible for collecting assignments, handling technical problems, assisting with communication with the instructor, setting up study groups, and handling student problems.

**Contact:**

Mary Stewart                               702/784-1465  
Larry Gilbert                               702/784-6083

**California State University-Los Angeles**

Encourage minority and handicapped student participation in discussions, as well as the use of extra tutorials by offering courses that depend on computer conferencing for interchange. Studies have found that the self-paced instruction, the ability of students to receive immediate feedback about their errors, and the ability to ask questions in a more anonymous setting have all worked particularly well for students who may have difficulty with in-class discussions or the stigma of visibly using a tutoring service. The same studies have shown that some students also appreciate the equality computer conferencing brings to the competition for the floor.

**Contact:**

Beryl Bellman                               213/343-4262  
  Bitnet:KGBDLBLB@CALSTATE

**Variation:**

Offering courses via computer conferencing makes an interactive experience accessible to students in prisons.

**Contact:**

**Springfield College**

**Castle Junior College**  
Sister Sheila Garvey   603/893-6111

-----

**Oregon State System of Higher Education**

Enrich the learning experience for students at off-campus sites using two-way audio or video by occasionally having faculty travel to the outlying sites to broadcast class sessions from each of the sites.

Contact:  
Holly Zanville                                      503/346-5726

**University of North Carolina at Charlotte**

Address the problem of separate and minimal fee and state appropriation structures for distant learning by integrating off-campus instruction and student services into main campus offerings. If the course originates from the main campus, and is taught by regular faculty, it doesn't matter in terms of head count or "FTE" if the student hears it broadcast by a microphone to the back of a lecture hall, or by a satellite or microwave system to the next town.

Set up an electronic learning center that serves as a laboratory where students and faculty can freely experiment with a variety of technologies, software, videodisc and hypermedia opportunities on a self-paced, hands-on basis.

Contact:  
Carolyn Blalock                                      704/547-4861

**University of Central Florida**

Improve interactivity during courses taught with audio or video conferencing, coupling a telephone bridge system with a keypad response unit. Such a system allows for instantaneous polling of student answers to questions, with the polled responses displayed on the instructor's viewing monitor as a bar graph. Thus, the instructor can evaluate instantly students' grasp of concepts, as well as store responses for later analysis.

Contact:  
Robert Arnold                                      407/823-2571  
Thomas Shostak                                      407/855-0881

**Rochester Institute of Technology**

Increase options for the graphic interactivity that is necessary for many applied and/or technical courses by using fax machines, telewriters and/or picture phones for audiographic conferencing. In courses such as mathematics, loaning picture phones

provides a lower-cost way of providing adequate visual interaction to students in their homes without the expense of two-way video installations at specific sites.

**PROGRAM AND COURSE  
DEVELOPMENT AND DELIVERY**

Loan students videocassettes through library/media centers or bookstores to increase the use of video as a learner-controlled resource, rather than forcing students to accommodate scheduled broadcasts.

**Contact:**

Susan M. Rogers

716/475-5166

Bitnet:SMRASV@RITVAX

**Memphis State University**

Combine viewing of regularly scheduled television news shows such as MacNeil Lehrer or the ABC Evening News with computer conferencing to offer journalism courses to distant learners. Asynchronous discussions can be held over such services, as CompuServe, and assignments can be sent via computer or fax.

**Contact:**

Dan Lattimore

901/678-2401

Bill Brody

901/678-4779

FAX 901/678-3299

**BUILDING CONSORTIA FOR COURSE DEVELOPMENT AND DELIVERY**

In fields where there are critical shortages of training opportunities such as for medical laboratory technologists, establish a consortium of colleges and universities that will develop joint courses to be delivered at a distance. Students enroll in the B.S. program at their home institution, but can take a significant percentage of their courses through the consortium, knowing they will receive full credit toward their degree.

**Contact:**

**University of North Dakota School of Medicine**

### **University of New Mexico**

Respond to the variety of learning styles students employ by using appropriate instructional design and media such as computer-based simulations, case studies on videocassettes, and group problem-solving audioconferences. Effective instructional design can ensure that all participants are included.

Use audioconferencing to bring guest experts from around the country into discussions with your students. Use audioconferences or computer conferences to conduct roundtable discussions about previously mailed videocassettes, just as traditional classrooms would use the seminar table as a gathering place for a discussion of a text.

Tom Erwin                                     316/32-5083 or  
   FAX 316/321-5122

**Vermont State Colleges**

Provide extended library hours to distant learners by using a rotating 800 number plus call forwarding to create a service network of libraries that share an on-line catalog in a state or region. The on-call library should be able to provide the same reference and interlibrary mail/loan services as the other libraries in the system.

Contact:  
Jeanie Crosby                                802/241-2526

# FACULTY DEVELOPMENT

**ASSISTING FACULTY IN COURSE REDESIGN**

Offer faculty significant opportunities to redesign courses to make the best use of new technologies. Include time for faculty development workshops to familiarize them with the technologies, for thorough review of existing non-print course materials that are nationally available, and for working with consultants or colleagues to rethink their course objectives and strategies. Analyze college faculty reimbursement policies to find compensation for this instructional design time.

For effective faculty development, use the same technologies and curricular methods to teach the faculty that they will use to teach the distant learners. Thus, faculty can be trained at a variety of sites simultaneously and will be comfortable using the technologies to design courses and teach students.

# APPENDICES

## NEW PATHWAYS TO A DEGREE

The purpose of New Pathways is to help colleges use technologies to develop academic programs that are accessible to the New Majority of learners — people with jobs, home responsibilities, and schedules or locations that make full-time study at the campus of their choice difficult or impossible. At the same time, colleges can use these technologies to tap richer, and more diverse academic resources — e.g., remote library collections, distant experts, databases, video material, powerful software.

With New Pathways, the Annenberg/CPB Project is testing the proposition that colleges can offer a new kind of academic program, made possible by technologies, that is accessible, supportive, academically rich, and rigorous. Over 10% of all colleges in the US were involved in 243 proposals to the funding competition in fall 1990, and reviewers were uniformly impressed with how far virtually all of the applicants had already come in putting modern information technologies to work. The technologies are the same as those now being exploited by the modern office: computing, video, fax machines, audio conferencing, and the like.

At the heart of New Pathways are seven projects that are receiving a total of \$1.5 million to develop academic programs that offer much or all of what a student needs to work toward the baccalaureate degree:

**The College of St. Catherine, St. Paul, MN**  
**Indiana University - Purdue University at Indianapolis**  
**Community College of Maine**  
**Northern Virginia Community College**  
**Oregon State System of Higher Education**  
**Rochester Institute of Technology**  
**West Virginia University/Project Breakthrough**

The projects in Maine, Oregon and West Virginia involve several colleges with programs available across their states.

New Pathways begins but does not end with those projects. The Annenberg/CPB Project is also investing \$330,000 in a range of related activities, including:

- a) evaluating what can be learned from the work of these seven projects;
- b) inviting an additional 32 of the best applicants to become New Pathways Associates, and join the funded seven in a series of meetings and activities over the next three years;
- c) developing and distributing information about what other colleges are doing;
- d) offering workshops in 1991 for colleges interested in developing such programs;
- e) sponsoring conversations on the Internet for those involved in similar programs.

Following are descriptions of the projects at each of the funded New Pathways Colleges, and the projects being undertaken by the New Pathways Associates.

# COLLEGE OF ST. CATHERINE, ST. PAUL, MN

## EDUCATIONAL CHALLENGE

The College of St. Catherine operates a very successful Weekend College program for women in the seven-county metropolitan area of Minneapolis/St. Paul. Enrollment has increased almost 300% in its 10-year history from 128 in the fall of 1979 to over 600 in 1990. The College's Weekend Program is already recognized as an excellent model for meeting the needs of adult students who are unable to accommodate a traditional weekday college format. However, there continue to be obstacles preventing many students who want a degree from earning one.

Three problems of national concern addressed by this program are:

- o student retention -- as many as one third of students are forced to "stop out" for a term because of personal or work-related circumstances. Many of these students do not return to school;
- o educational options in suburban and rural areas -- women living outside the Twin Cities area do not have access to the same range of opportunities for higher education as women in the Twin Cities area; and
- o barriers to technologically oriented careers -- it is generally recognized that women experience many barriers to technologically oriented careers.

## PROGRAM

The College of St. Catherine will use available computer, audio/visual and communications technology to make the majority of a baccalaureate degree programs accessible off-campus. For students who do not have access to the necessary technology at their home or workplace, the College will arrange for convenient access through a nearby library, campus, or other facility.

## SERVING STUDENTS

### Through Courses

Two groups of courses will be adapted to computer and communications delivery methods: a) a group of 10 courses that meet 10 of 14 general distribution requirements for a baccalaureate degree, and b) seven of 10 courses required for a major in information management.

Students can take these courses off-campus and on-campus as their circumstances require, thus preventing the need for many students to "stop-out" and lessening the associated risk of dropping out. Of special interest for the women outside the urban area, and a key element of the College's response to the problem of barriers for women

to technologically oriented careers, 70% of the degree with a major in information management can be completed off-campus.

### Through Technologies

The liberal arts core courses and the information management major courses selected for electronic delivery will use a mix of technologies. Lectures, graphs and slides, exercises/assignments, handouts, overheads, chalkboard illustrations, and the text of in-class explanations will be put into electronic form so that they can be sent over telephone lines or carried on computer diskettes. One-to-one communications will be provided by electronic mail, and group discussions by computer bulletin board and computer conferencing.

### Through Course Design

While some faculty will design and create computer-based course materials themselves with easy-to-use hypertext software, the College intends through the New Pathways funding to make professional programmers and student assistants available to faculty for help in creating new materials. Faculty development workshops will be offered to assist faculty with applications of computer and communications technologies to courses they teach.

### Through Enhanced Learning Experiences

The student who takes an electronically-mediated course will have the same textbook, outside reading assignments and projects as students taking the course on campus. Lectures and exercises, however, will be made available on-line or on a computer diskette. Lecture materials may also be made available on videocassette or audio-cassette at the discretion of the instructor. Completed exercises would be sent back to the instructor as a computer file, and the student would receive feedback from the instructor through electronic mail, or through the conferencing system or bulletin board when group work is involved. Students will "talk" with each other as well as the instructor via computer-mediated communications. Students will still come to campus several times a year to work with faculty and to take advantage of campus-based academic and student support services.

Students will be able to request library materials on-line and pick them up at local public libraries. The College has a cooperative arrangement with the Dialog Information Services Company which makes available an Information Lab with computers, modems and telephone lines for accessing on-line databases of bibliographic information from many fields of study.

Contact: Sandra Running, Project Director  
612/690-6542

# INDIANA UNIVERSITY-PURDUE UNIVERSITY AT INDIANAPOLIS, IN

## EDUCATIONAL CHALLENGE

Indiana University-Purdue University at Indianapolis (IUPUI), is a large, highly regarded urban university. Established in 1969, IUPUI began by concentrating on graduate and professional education, but over the past five years the University has emphasized undergraduate education with special emphasis on individuals who have found it difficult or impossible to pursue the baccalaureate degree. While the University has initiated and expanded a number of programs designed to increase access for all students, these programs have not proven attractive to the urban minority population in the heart of Indianapolis. The problems faced by these potential students include cultural and psychological obstacles, compounded by constraints of time, transportation and income. The challenge is to create a learning environment that is psychologically supportive, intellectually invigorating and physically accessible for the urban minority population in Indianapolis.

## PROGRAM

IUPUI's approach involves three key ideas:

- putting classes and meetings at community sites easy for students to reach and that provide support to students;
- building on the pioneering work of Uri Treisman at Berkeley, who has been very successful in helping minority students succeed in difficult subjects by working with them to form supportive study groups that use peer tutoring as well as active involvement of the faculty; and
- using technologies -- including television and computers -- to bring the courses to learners and enable students and faculty to work closely together even when they are physically separated.

## SERVING STUDENTS

### Through Community Sites

IUPUI is reaching out to learners through community-based organizations, each of which serves a somewhat different population. These sites, which will be linked electronically to both the campus and to each other, include: Christamore House, a community center serving low-income minorities; the Hispanic Holistic Education Center; the Indianapolis Churches for Educational Excellence (ICEE), a group of seven inner-city African-American churches; and Indiana Vocational Technical College.

### By Bringing the "Lecture Hall" to the Students

Courses will be broadcast to the centers, and out to learners' homes, from IUPUI's state-of-the-art lecture hall. Courses will be videotaped as well, and copies of the tapes will be available for review and check-out for home viewing at each community center. In the lecture hall, a science demonstration table and microscope have been equipped with video cameras so that all experiments can be captured on video. A sophisticated sound system transcribes materials from a variety of formats into an appropriate medium both for projection into the room and for transmission. Apple, IBM, and NeXT computer systems can be used together or in isolation to augment the class discussions with projections of text, graphics, and simulations.

### Through an Enhanced Learning Experience

Each learning center will have computers connected by a network to the IUPUI campus and library, a television set with cable access and a videocassette player, a fax machine, a telephone with voice mail capability, and a library of information resources. Textbooks and required readings will be on reserve in the learning centers as will cassette copies of each lecture. Comfortable study areas will be provided.

Students in a given course will join collaborative study groups to work with carefully selected peer tutors. On a normal class day students and their peer tutors will watch the video broadcast of the day's lecture. Students will be encouraged to come to their learning centers to watch, but those who need to remain at home can either receive the broadcast via their cable system, or watch it on videotape.

Learners may use the technologies available at their centers to communicate with members of their study group, faculty, course assistants, mentor/peer tutors, and academic advisors. For example, using electronic mail, students can share drafts of course assignments, comment on other students' work, raise questions for group consideration, and/or ask faculty assistants or other students for information or instructions. Computer-based educational modules will be developed from lecture materials and related supplemental materials, so that individuals and groups who want further explanation, review and practice can focus on specific aspects of the week's course work. When students require additional assistance, peer tutors will act as liaisons between the remote students and resource people at IUPUI's Writing Center and University Access Center.

# UNIVERSITY OF MAINE AT AUGUSTA<sup>1</sup>

## EDUCATIONAL CHALLENGE

College campuses in Maine are too far from most of the state's learners. To combat this problem, the state invested in the development of a microwave and fiber optic network for video, audio and data. All public institutions in the state are linked with a growing number of community sites. The resulting Community College of Maine Telecommunication System offered its first courses in fall 1989. Faculty are drawn from any of the University of Maine system campuses, since they all can originate programming on the network. During spring 1990, 2,852 students enrolled in ITV courses. Students can see and hear the faculty member delivering a live lecture via one-way video, and can ask questions via telephone during the lecture.

Maine has encountered three challenges that will be faced by any rural state using this general strategy:

- reaching beyond the lecture to support seminars, library research, laboratories, and student services;
- filling out the curriculum so that it offers a coherent pathway to a degree; and
- educating faculty so that they can adapt their courses to the characteristics of the students and technology-based system.

## PROGRAM

Maine will upgrade its curriculum, student support services, and faculty/staff training so that a model Associate of Arts degree can be offered. Such a degree would be accepted for transfer to appropriate four-year programs at all the public universities in the state. The Community College will:

- offer courses to satisfy requirements for the AA in liberal arts, including courses requiring more interactive styles of teaching and learning, such as laboratory science requirements, composition, communications, and advanced mathematics;
- add computer conferencing, electronic mail, and fax machines to support interactive styles of teaching and learning;
- extend more resources to the off-campus sites, including laboratory equipment, enhanced library services, and a variety of electronic equipment such as videodisc players; and

- **develop an innovative strategy for showing faculty, student support staff, and technical staff how to teach adults and disabled students through new uses of technologies.**

## **SERVING STUDENTS**

**Students will take advantage of more interactive forms of delivery through four new courses and revisions of 16 existing courses.**

### **From the Student's Point of View**

**A student taking statistics, for example, would go to the nearest off-campus site in order to participate by viewing the live instruction and using the telephone or fax machine to ask the faculty member questions during the lecture. Tapes of the previous sessions or of relevant programs from AGAINST ALL ODDS, the Annenberg/CPB Project video used with the course, could also be studied. When doing homework, the student could work on more interesting and complex problems than is usually the case, because Maine will offer computers and statistics software at its sites. Software for tutoring students through the toughest issues in statistics would also be available. The student would do most assignments at home or work. Computer and fax would be used to get homework assignments, send completed homework, and take part in discussions via a computer conferencing system.**

### **Training of Faculty and Staff**

**Development of the program will be supported by a new Center for Distance Education. Its mission: to help faculty, student support staff and technical staff learn how to use technologies to teach adults and disabled students who come to system sites.**

**During the academic year, the Center will offer a series of workshops to introduce faculty and staff to the technologies they need. During the summer, the Center will run a week-long institute for faculty and staff on adult learning, disabled students, and the use of technologies in developing courses that are accessible to these students.**

**The Center will also offer such programs to other colleges around the country; the money from such programs will help the Center sustain itself as part of the University.**

**Contact: Pamela MacBrayne, Project Director  
207/662-7131**

---

<sup>1</sup> On behalf of the Community College of Maine.

# NORTHERN VIRGINIA COMMUNITY COLLEGE

## EDUCATIONAL CHALLENGE

Northern Virginia Community College is one of the two largest multi-campus community colleges in the country, and has provided distance learning options to over 100,000 students since 1975. NVCC has an impressive track record in using technologies to open new pathways for students to take courses. The NVCC Extended Learning Institute (ELI) has 75 distance education courses using mostly one-way, single-media delivery methods.

NVCC's challenges consist of addressing problems students have in attempting to earn degrees through distance learning:

- an inability to take all courses required for a degree by distance learning methods;
- limited opportunities for communication and interaction with fellow students, teachers, counselors and advisors; and
- lack of coordination and planning between distance education administrators and campus-oriented academic departments, resulting in schedule conflicts and limited access to campus-based services and resources.

## PROGRAM

Through the Extended Learning Institute, NVCC will:

- develop new courses so students can complete all requirements for the Associate degree through distance learning;
- take advantage of multiple technologies to improve access to information and to improve communication and interaction; and
- increase access to resources and campus-oriented services for off-campus learners by improving understanding and cooperation between distance learning administration and campus-oriented academic units.

## SERVING STUDENTS

### Through Complete Degree Programs

A total of 18 new or redesigned courses will make it possible for students to achieve a complete Associate degree in general studies or business administration. In all cases, better integration of computer, audio, video and print technologies will be employed to

**improve access to academic and support services, increase access to learning resources, and increase communication among students and with faculty.**

**These degrees are intended for students who plan to continue toward a baccalaureate degree at a four-year college or university, and thus will directly meet the central objective of the New Pathways initiative by creating access that was not previously possible to a baccalaureate degree.**

### **Through Information and Communication**

**ELI will introduce technologies making it easier for students to communicate with each other and their instructor. For example, FRENCH IN ACTION will be cablecast on NVCC's cable channel; and the voice mail system will be used for students to phone in their oral assignments and receive critical oral feedback from the instructor. The compressed video network, which connects NVCC's five main campuses, will also be employed to support live dialogue for French instruction.**

**The voice mail system will serve information and communication purposes for student services as well as instruction. Both course and student services information will be made available around the clock on the voice mail system. Students will be able to communicate with student services personnel just as they will with faculty by leaving voice mail messages on the system.**

**To improve the off-campus student's access to counseling information, five 30-minute counseling videos covering academic counseling, vocational counseling, college services and college life, and how to be a successful distant learner, will be produced, shown on cable and be made available for check-out at learning resource centers.**

### **Through Coordination and Planning**

**ELI will sponsor seminars for campus-oriented administrators and faculty that will provide them with a better understanding of distance learning, and workshops in which distance learning administrators and key campus staff can collaborate in developing new policies and procedures that will improve the collegial experience for distance learners.**

**Contact: Randal A. Lemke, Project Director  
703/323-3379**

# OREGON STATE SYSTEM OF HIGHER EDUCATION (OSSHE)<sup>1</sup>, EUGENE, OR

## EDUCATIONAL CHALLENGE

Many states are beginning to recognize that using technologies intelligently for education means putting in place a "hardware highway" that blankets the entire state and serves all levels of education -thus helping educators share resources and provide opportunities to all citizens.

The creation of the Oregon Ed-Net has made the state a leader in this area. Ed-Net involves three different ways of distributing information and permitting communication. Network 1 is a satellite-transmitted broadcast-quality channel that will reach over 700 locations throughout the state. Network 2 supports 30 channels of two-way compressed video and two-way audio communications transmitted by a mix of satellite and fiber optic cable. Network 2 will initially have transmitters and receivers at 39 locations around the state. Network 3 will provide audio and data communications from remote sites to library resources through a combination of computers and telephone lines.

## PROGRAM

The OSSHE program will:

- offer three academic programs using its telecommunications highway
  - B.S. in Agricultural Business Management
  - B.A./B.S. in Liberal Studies
  - B.S. in Nursing
- modify the courses in each of those programs so that they can be delivered over Ed Net;<sup>2</sup>
- plan and carry out a model for comprehensive student support services.

## SERVING STUDENTS

Faculty will use Ed-Net's Network 2 to deliver their courses to students. Network 2 makes it possible for the faculty member and the students all to see and hear each other as if they were in the same classroom. In a typical class session, the instructor will deliver the course from either the home institution or any of the other Network 2 sites across the state. A portion of the session will be given over to lecture incorporating preproduced video and graphics. The liberal studies program will make some use of video materials from the Annenberg/CPB Project in particular. Because all Network 2 sites are send and receive sites, this portion of a class may also include a guest lecturer from any site.

**After the day's lecture, the Network's two-way capabilities will allow faculty and guests to open the class--literally--into a seminar involving students at all participating sites. This period of question and answer will let learners discuss the points in the lecture, and see and explore the ideas of their extended classmates.**

**Each course session will be recorded and videocassette copies will be made available at each site. Students with VCRs will be able to check out these tapes and review lectures and seminar sessions at home and at their convenience. Students without access to a VCR will be able to come to the nearest site for review.**

**In some cases, particularly in the nursing and agribusiness programs, Network 1 (the one-way broadcast-quality network) may be used to retransmit course sessions to other groups at many of the hundreds of receive-only Network 1 sites in rural and isolated parts of the state.**

**OSSHE will provide computing facilities at each two-way video site, giving students access to Ed-Net's data communications network (Network 3). Following the class, and at any time between classes, students will be able to interact with each other, and to direct further questions to faculty using electronic mail over Network 3. Students will also be able to use Network 3 to search libraries and to check out books which will then be delivered to their classroom site.**

**Each two-way video site will have its own facilitator who will be able to help students with registration, contacting advisors, and use of the Ed-Net system.**

**Contact: Holly Zanville, Project Director  
503/346-5726**

---

<sup>1</sup> Eastern Oregon State College, Western Oregon State College, Southern Oregon State College, University of Oregon, Oregon State University, Portland State University, Oregon Institute of Technology, Oregon State University, and Oregon Health Sciences University.

<sup>2</sup> Exceptions are clinical courses for nursing, which will be offered in selected hospitals across the state, and practicals in agribusiness.

# ROCHESTER INSTITUTE OF TECHNOLOGY, NY

## EDUCATIONAL CHALLENGE

The Rochester Institute of Technology (RIT) has employed a variety of strategies for reaching working adults. During the last decade RIT has mounted a successful telecourse program, but one facing familiar limits: not enough upper division courses are available, and not enough capability exists to support interactive teaching. So RIT has tried offering courses using various combinations of low-cost video and interactive technologies. The results have been encouraging, and they are now ready for the next step: developing a coherent pathway to a degree.

## PROGRAM

Rochester will develop 40 courses from which students could structure a degree program in applied arts and sciences. Their strategy has four key elements:

- offer faculty a choice of relatively affordable, flexible technologies;
- offer students a choice of technologies that can be accessed at home or work and/or that are inexpensive enough that the college can afford to loan the student needed hardware;
- develop equipped sites at several locations over 100 miles from RIT so that more students can take part in discussions where they have to point or draw as they discuss a "blackboard" drawing or slide; and
- modify the regular courses and services to make them more accessible.

## SERVING STUDENTS

### Through A Choice of Majors

RIT will redesign 40 courses that are applicable to a major in applied arts and sciences. The major's core courses will include offerings in math/science, humanities, as well as a senior seminar. Each student will also take courses from at least two of the program's areas of concentration. These areas include telecommunications, applied computing, management, and health systems administration.

### Through Course Design

Courses will be organized around a core of videotaped presentations. Where possible, existing telecourses will be used. For most upper division courses, the RIT faculty member will work with staff to plan and tape the class presentations. Videos will be made available through the local PBS affiliate, local cable, a remote site or bookstore rental.

**RIT will offer its faculty and staff a choice of technologies, including audio conferencing, audiographic conferencing, and picture phones. Because student schedules vary, RIT will also provide electronic mail, fax, and computer conferencing as media for conversation and exchange. These technologies have an additional benefit: they open the class to the hearing-impaired. (RIT is the home of the National Technical Institute for the Deaf.)**

**To help students acquire the intellectual skills that faculty are describing in class, RIT will offer a range of tools for research. At the center are a suite of on-line library services. In some courses, distant students can connect their home computers via phone line to laboratory equipment on campus, using the computers to gather and analyze data from real experiments. Videotapes will be used to give students vicarious tours of industrial sites where laboratory equipment is in use.**

#### **Through Student Services.**

**On-line access to a wide range of student services such as course registration, financial aid, and special support services for the disabled will be developed and/or enhanced.**

#### **Through Equipment Access**

**The computer and the VCR are the primary instruments in the RIT ensemble. Access to such equipment has proven quite manageable. As early as 1988, 75% of RIT's telecourse students already had computer access. RIT has developed, and will enlarge, its program for lending and leasing equipment, and will make equipment available at remote sites.**

#### **Through Remote Sites**

**RIT aims to support learning in the home and at work, but certain types of equipment can more easily be provided at equipped sites or on campus. Sites are established at Jamestown Community College and Tompkins-Cortland Community College. Each is over 100 miles from RIT, making it possible to serve a variety of distant learners. A third site will be established at Corning Community College. Other sites under consideration include Onondaga Community College, several public schools, and several corporations in the region. All sites will be equipped with at least one computer, a speakerphone, audiographic conferencing equipment, VCR, and a fax machine.**

**Contact: Susan M. Rogers, Project Director  
716/475-5166**

# WEST VIRGINIA UNIVERSITY, MORGANTOWN, WV

## EDUCATIONAL CHALLENGE

West Virginia has the lowest percentage in the country of residents who have attended college. Although a recent survey showed that more than 40 % of West Virginians want a college education, they feel that pursuit of it conflicts with full-time jobs and family life. In addition, attending on-campus classes means spending time and money on traveling over rugged West Virginia terrain.

West Virginia University's (WVU) challenge is to provide access to higher education to all of the state's adult population. It believes that to do this it must first mobilize, state-wide, all key institutions concerned with education and telecommunications. WVU will set a system in place which will provide the personal support West Virginia adults will need as they work toward a degree through distance education.

## PROGRAM

West Virginia University has performed a careful and extensive study of adult West Virginians, of their educational wants and needs and the obstacles they face trying to fulfill them. Based on this study, West Virginia University in cooperation with the West Virginia Higher Education System, the West Virginia Educational Broadcasting Authority, the West Virginia Library Commission, and SATNET (the statewide satellite delivery network), has developed a program to increase access to higher education – to the higher education wanted and needed -- for these adults. Called Project Breakthrough, it would:

- develop telecourses that mix newly produced video and existing highly produced segments and that satisfy the requirements for college degrees;
- deliver, via satellite, four different telecourses per semester to adult learners in their homes and at the 16 public higher education institutions, nearby public libraries and public schools, and places of business; and
- support adult learners taking these telecourses with a technology-enhanced, human network of dedicated employees of the state's 16 public higher education institutions, 160 public libraries and 55 county extension offices.

## SERVING STUDENTS

### Through Course Selection

A significant number of adults want to pursue degrees in general studies and business management. Therefore, the courses selected will allow West Virginians to fulfill all

undergraduate degree requirements in these two areas, as well as pursue one- or two-year degrees. Working closely with state public television personnel, Project Breakthrough staff will schedule four telecourses per semester, to be transmitted over SATNET, that will provide the degree path.

### Through Course Design

Project Breakthrough courses will be designed to combine approximately 30 minutes of preproduced video -- in many cases Annenberg/CPB telecourse video -- with 60 minutes of live instruction. They will be taught by faculty from the 16 public higher education institutions in the state. Each campus has an electronic classroom linked by microwave to SATNET uplinks, so faculty at each campus can teach courses as part of their normal load and students at each campus can take any course. Project Breakthrough is viewed in West Virginia as providing the opportunity for colleges to highlight outstanding faculty, and faculty identified as outstanding instructors have been invited to teach Project Breakthrough telecourses.

### Through Interaction

Learners will be able to interact with instructors outside of class by phone, by fax from any of 75 public libraries in the state, or by electronic mail from any of the 55 county extension sites (three fourths of the potential learners live less than 10 miles from the nearest public library and less than 20 miles from the nearest county extension office). Each learner will be encouraged to register for her/his courses through the nearest higher education institution. An advisor from the off-campus credit office will be assigned and will: coordinate discussions with instructors; ensure the learner becomes connected to the nearest public library where course tapes can be viewed or checked out, books loaned, and materials faxed to instructors; and help the learner become familiar with the local county extension office where he/she can meet in study groups with the county extension office educator and other students taking courses.

### Through Orientation

Because some learners will be returning to class after several years' absence, and because learning at a distance may be new to many, Project Breakthrough staff will create a non-degree credit course, Introduction to College/Telecourse Learning. This course will be a refresher in student study skills and will give a complete overview of all aspects of Project Breakthrough. Learners will be able to take this course in every semester.

# THE ANNENBERG/CPB PROJECT

The Annenberg/CPB Project began in 1981 with funding from the Annenberg School of Communications to the Corporation for Public Broadcasting. The goal of the Project is to make a high quality college education more accessible to the American public. To that end, the Project has supported the development of a collection of television and audio courses that are licensed by colleges and universities as complete courses, and used to supplement classroom teaching. The Project has also supported technology demonstration projects that use computers and information technologies to make education more accessible for all students. The New Pathways to a Degree program was launched in 1990.

## TECHNOLOGY DEMONSTRATION PROJECTS

The Annenberg/CPB Project technology demonstration projects are experiments in using computer and telecommunications technologies to answer questions and solve problems particularly relevant to nontraditional learners and educators. Three of these projects have resulted in products that are, or will soon be, available to colleges and universities.

### **Perseus**

Harvard University has created a multimedia interactive database on Greek civilization. The compact disc and videodisc include Greek texts and English translations, a dictionary of ancient Greek, an atlas, measured drawings, and images of the artifacts and topography of the classical world. Over the next three years, the database will be expanded annually and larger editions of the discs will be produced. Perseus currently runs on Macintosh computers, using the HyperCard program from Apple Computer. Available beginning January 1992 from Yale University Press.

### **Audiographic Conferencing: Calculus Course Materials and Authoring Guides**

Audiographic conferencing is really two technologies in one: an audio conference enabling many people to have a conversation at a distance over the phonelines, and a visual conference in which the screens of their computers all display the same images. This allows, for example, the faculty member both to show a picture, to point to a part of the image using the computer cursor, and to talk about what is being pointed to. It also allows a student to ask a question in the same way: talking, pointing, drawing, and/or typing at the same time. A team based at Harvard devised an author's guide for developing course materials and a full set of materials for teaching calculus via audiographic conferencing.

## **BioQUEST**

Beloit College produced a full-course curriculum of biology computer software with a supporting lab manual. The software allows students to conduct simulated experiments like those commonly performed in standard biology "wet labs." In addition, it gives them access to datasets that let them do statistical analyses. Sixteen modules cover four major areas of biology: biochemistry/biotechnology, ecology/evolution, genetics and physiology. BioQUEST runs on Macintosh computers. Available beginning June 1992.

## **The Virtual Classroom: EIES 2**

The NJIT has created a virtual classroom (tm) version of its EIES 2 (eyes two) computer conferencing system. Whether at home or at work, and not matter what the hour, students can read lectures, participate in discussions, and send one another graphics, spreadsheets and other computer-based documents, work on projects together, reread a transcript of previous class discussion, vote, receive and submit tests, and take part in virtually any other activity the professor wants. A Spanish version of EIES 2 is also available.

## **Interactive Text Project**

The Collegium for Research in Interactive Technologies (CRIT) at the University of San Deigo has created NewBook Editor, an authoring tool that allows you to easily manipulate text and images for building instructional software. Designed primarily for use by instructors in the humanities, NewBook Editor has been used to create a module for teaching critical thinking skills, Warsaw 1939. The reader begins with historical information that can be investigated in greater detail -- word definitions, additional background or images -- using hypertext. Then the reader is asked to make decisions as an individual in the Warsaw ghetto in 1939. In the next level, there is a record of the student's decision and a notebook for marginal notes, queries, or the composition of a developing essay.

**Salsa: Writing Assistant for Spanish**

Salsa comes from Cornell University, and the producers of Systeme-D: Writing Assistant for French. It is a basic word processor with rapid access to language references materials including a Spanish-English dictionary, vocabulary-stretching definitions in Spanish, example sentences with English translations, complete regular and irregular verb conjugations, and concise notes on grammar points, word families, and functional phrases.

**Annenberg/CPB Project  
RESEARCH REPORTS**

**E001 NEBRASKA VIDEODISC SCIENCE LABORATORY  
SIMULATIONS**

This study explores the potential of computer-controlled videodiscs to provide simulated undergraduate science laboratory instruction in biology, chemistry and physics. (Submitted by Barbara Gross Davis, March 1985)

**E002 A STUDY OF TELECOURSE STUDENTS**

Responses from about 8,000 students enrolled in 42 television-based courses provide a snapshot of characteristics of television course students. (Submitted by AACJC, June 1984)

**E003 RESEARCH ON STUDENT USES OF ANNENBERG/CPB  
TELECOURSES**

Three aspects of television course use are carefully studied: (a) characteristics of students who take television courses; (b) how students use the various components in a television course; and (c) student reactions to and assessment of television courses. First conducted in fall 1984, the study was replicated in fall 1987. (Submitted by Research Communications, Ltd., Fall, 1984)

**E004 NATIONAL BROADCAST SERVICE**

The Public Broadcasting Service conducted a 15-week demonstration of the National Broadcast Service (NBS) designed to assess the feasibility of providing a new programming service to colleges, businesses, public agencies, and other organizations that might have adult populations who seek continuing education. (Submitted by the National Broadcast Service and the Public Broadcasting Service, August 1986)

**E005 FACULTY AND ADMINISTRATOR USE OF ANNENBERG/CPB  
VIDEO COURSES**

This study examines several sets of factors that encourage or impede adoption and use of television courses by colleges and universities. (Submitted by the University of Michigan, April 1986)

**E007 EVALUATING STUDENT OUTCOMES FROM TELECOURSE  
INSTRUCTION**

The problems of comparing the effectiveness of television-based courses to traditional classroom courses are explored. A new concept of "exchangeability" and new research methodologies are suggested by the findings. (Submitted by Rand Corporation, May 1986)

**E008      ADOPTION AND UTILIZATION OF A/CPB TELECOURSES**

This survey of college faculty and administrators examines the decision-making process for adopting television-based courses, the ways these courses are used, how television-based courses are perceived compared to regular courses, and factors related to successful use of television-based courses. (Submitted by ELRA Group, Inc., August 1986)

**E009      FACULTY PERSPECTIVES ON THE ROLE OF INFORMATION TECHNOLOGY IN ACADEMIC INSTRUCTION**

Interviews with almost 200 college faculty provide a look at faculty perceptions of how information technologies can contribute to the solution of important instructional problems. (Submitted by Learning Technology Services, December 1985)

**E010      INSTRUCTIONAL TECHNOLOGY IN HIGHER EDUCATION: EDUCATIONAL USES OF TELECOMMUNICATIONS TECHNOLOGY IN AMERICAN COLLEGES AND UNIVERSITIES**

This final report of the Higher Education Utilization Study describes nationwide patterns of availability and use of television, audio and computer-based technologies in higher education in the United States. (Submitted by CPB/NCES, May 1986)

**E011      TELECOURSE ENHANCEMENT THROUGH ELECTRONIC MAIL**

For three semesters, electronic mail was used to support a television-based course offered to distant learners. Learning effectiveness, faculty and student attitudes, and cost are examined. (Submitted by the University of South Florida, February 1987)

**E012      STATEWIDE COORDINATION OF EDUCATIONAL TELECOMMUNICATIONS**

This state-by-state analysis of how educational telecommunications are organized and administered is based on telephone interviews with leading figures in each state. (Submitted by Hezel Associates, October 1987)

**E013      AN EVALUATION OF LEARNING AND ATTITUDINAL CHANGES IN STUDENTS ENROLLED IN ECONOMICS USA**

The two semester course was studied in carefully controlled settings. It was found to be an effective instructional approach for on-campus and off-campus classes. (Submitted by Western Illinois University, November 1987)

**E014      STUDENT AND FACULTY ASSESSMENT OF ANNENBERG/CPB TELECOURSES**

The study describes the experience of the students and faculty members in taking or teaching Annenberg/CPB telecourses, assesses telecourse components, evaluates responses to telecourses and interest in future telecourse enrollment or teaching. (Submitted by Research Communications, Ltd., July 1988)

**E015      INTERMEDIA**

A hypertext/hypermedia-based development system (called "Intermedia") for the preparation of computer-based teaching and research materials is assessed. The

report focuses on the strategies and techniques employed by instructors and students in using it in their scholarly routines. (Submitted by William O. Beeman, February 1988)

**E016      ASSESSING ELECTRONIC TEXT FOR HIGHER EDUCATION:  
EVALUATION RESULTS FROM LABORATORY AND FIELD  
TESTS**

The evaluation of electronic text services for higher education focuses on learning effectiveness, attractiveness to students, usage patterns, economic issues, likely adoption patterns by students and colleges and potential barriers. (Submitted by The Electronic Text Consortium, July 1985)

**E017      TELECOURSE DESIGN AND NEEDS ASSESSMENT**

Institutions which used or might possibly use college-level telecourses responded to this survey soliciting information about telecourse design and content. (Submitted by Sally V. Beatty, September 1988)

**E018      SUPPLEMENTAL USES OF ANNENBERG/CPB PROJECT  
COURSES**

Interviews with more than 500 college educators provide an in-depth look at how the Project's video resources are being used to supplement on-campus courses. (Submitted by Research Communications, Ltd., August 1988)

**E019      A CRITICAL REVIEW OF THE USE OF AUDIOGRAPHIC  
CONFERENCING SYSTEMS BY SELECTED EDUCATIONAL  
INSTITUTIONS**

Based on a survey and interviews with 70 persons, this report finds an atmosphere of readiness for an emerging technology known as audiographic conferencing. Compared to other systems for establishing visual and audio interaction, audiographic conferencing appears to be the most cost-effective choice. (Submitted by Kay W. Gilcher and Sally M. Johnstone, The University of Maryland University College, December 1988)

**E020      THE TELETEACHING CALCULUS REPORT**

This report describes the development, testing, demonstration and evaluation of new methods for teaching introductory calculus as a for-credit course to students at remote sites. (Submitted by Sumner Myers, Jr. of University Tech-Tel (UTT) and the Cambridge Teleteaching Group, June 1988)

**E021      DISSEMINATION, UTILIZATION AND ASSESSMENT PROJECT**

This study was designed to shed light on the factors which might facilitate or impede more effective and extensive use of audio visual materials in higher education. The study focuses specifically on audio visual materials produced by the Annenberg/CPB Project. (Submitted by the Educational Testing Service, June 1989)

**E022      STATEWIDE PLANNING FOR TELECOMMUNICATIONS  
IN EDUCATION**

An update of a similar report completed in 1987, this report describes educational telecommunications (E012) planning in organizations and institutions that

are key to planning in telecommunications activities of a more regional or local nature. In addition, the report looks at policy issues related to statewide or regional planning for technology. (Submitted by Hezel Associates, May 1990)

**E024 FACULTY USE OF COURSE DEVELOPMENT RESOURCES**

This report assesses how college faculty members develop new courses and how they chose textbooks and other print and non-print materials for their courses. In particular, the study determines the types of resources the faculty members seek out for the development of courses and how they find those resources. (Submitted by Hezel Associates, November 1989)

**E025 ENROLLING IN ON-CAMPUS COURSES: TELECOURSE STUDENT'S CONSTRAINTS**

This study examined the hypothesis that distance from a campus is the major obstacle that prevents many potential students from pursuing a college degree. In addition, the study assessed student's willingness to use computers for their college telecourses. (Submitted by Hezel Associates, January 1990)

**E026 FACULTY PERCEPTIONS OF THE EFFECT OF INTENSIVE COMPUTER USE ON TEACHING AND LEARNING**

Departments in two- and four-year colleges were studied to identify types of qualitative curricular improvements being made possible by easy access to computers and other information technologies. (Submitted by Raymond J. Lewis of Learning Technology Services, April 1989)

**E027 TELECOURSE UTILIZATION SURVEY: THIRD ANNUAL REPORT (FALL 1986-SUMMER 1989)**

For three years, this longitudinal study has tracked trends in enrollments in telecourses at some 200 two-and-four year colleges. (Submitted by Ron Brey, Austin Community College)
