ABSTRACT

The mattering scales are designed to assess the perceptions of adult learners about their educational environment. They answer these questions: Do I feel I matter to the institution? and Do I feel noticed, appreciated, welcomed? To determine the extent to which adult learners feel they matter, five scales are designed to assess their perceptions in these dimensions of postsecondary education: administration, advising, interaction with peers, multiple roles, and interaction with faculty. For administrators and faculty, the scales identify critical aspects of an institution's response to the needs of adult learners, where those needs are well met, and where adult learners perceive deficiencies. For adult learners, the scales provide a forum for evaluation of the institutional environment and specific aspects of campus activities. The five-point mattering scales are followed by scoring instructions. A manual for using the scales is then presented. It contains these sections: background, administration of the scales, scoring and interpreting the scales, normative data, and reliability and validity. Five references are listed. Appendixes include frequency distribution of respondents' reported college majors and distribution responses for all institutions, for four-year institutions, and for two-year institutions. (YLB)

MATTERING SCALES FOR ADULT STUDENTS IN HIGHER EDUCATION

The Mattering Scales for Adult Students in Higher Education (MHE) were designed to assess the perceptions of adult learners about their educational environment. The questions were: Do I feel I matter to the institution? Do I feel noticed, appreciated, welcomed (Rosenberg and McCullough, 1981)? To determine the extent to which adult learners feel they matter, five scales were designed to assess their perceptions in the following dimensions of postsecondary education (administration, advising, peers, multiple roles, and faculty).

For administrators and faculty, the MHE identifies critical aspects of your institution's response to the needs of adult learners, where those needs are well met, and where there are deficiencies as perceived by the adult learners. For adult learners, the MHE provides a forum for evaluation of the institutional environment and specific aspects of campus activities (e.g., faculty/student interaction, negotiations with campus bureaucracy).

The MHE can provide valuable insight into your institution's successes and problems in providing good education to adult learners. You might administer the MHE before the evaluation process begins and then again after the evaluation has been completed. You can compare different subgroups of adult learners, asking whether some groups feel they matter more than others. In addition, you can determine if those high in mattering (i.e., those that feel the educational environment is responsive to their needs) have a lower dropout/stopout rate than those adult learners who score low on the mattering scales (Schlossberg, 1989).

Purpose

We are interested in learning more about the different ways in which adult learners feel they matter-to whom, under what circumstances, and what this means to them. To help us learn more about mattering, we would appreciate your taking the time to fill cut this form. Also, please feel free to add any comments you wish to make.

Please circle the response which best describes your feelings. Please select a response for each item.

THE MATTERING SCALES FOR ADULT STUDENTS IN HIGHER EDUCATION

FIRST EDITION

ANN D. LASSALLE RENNIE R. GOLEC

SECTION 1. THE MATTERING SCALES FOR ADULT STUDENTS IN HIGHER EDUCATION

The Mattering Scales for Adult Students in Higher Education (MHE; Schlossberg, Lassalle, and Golec, 1989) were developed to operationalize the construct "mattering" as it relates to adult learners. Mattering was conceptualized by Rosenberg and McCullough (1981, p. 165) as "a motive: the feeling that others depend on us, are interested in us, are concerned with our fate, or experience us an ego-extension." Generalizing this construct to the higher education environment, five dimensions of mattering were identified—Administration, Advising, Peers, Multiple Roles, and Faculty.

The MHE was designed to assess the perceptions of adult students concerning the five dimensions of the higher education environment and how well this particular group of students feels they fit in this environment. As such, the instrument is characterized as a campus ecology measure. Baird and Hartnett (1980, p. ix) discuss the use of campus environmental assessment to provide "a relatively new kind of information that can help administrators, professors, and students make better choices, act more effectively, and evaluate the success of their activities more accurately."

For administrators and faculty, the MHE points out critical aspects of the institution's response to this particular population's perceived needs, where needs are particularly well met or where there are deficiencies (as perceived by the stu-

dents). For adult students, the MHE provides the forum for a judgmental evaluation of the institutional environment and specific aspects of campus activities such as faculty/student interaction, interactions with other students, and negotiations with the campus bureaucracy.

Users are cautioned not to extend individual or non-representative group scores to the general adult student population. The MHE was designed to be used as a campus ecology measure, to provide information about the campus environment which is more comprehensive than that obtained from personal experience, intuitive assessment, chance remarks of colleagues, or random complaints or compliments from the very satisfied or the very dissatisfied. The instrument was not designed to assess individual satisfaction but instead examines the general perceptions adult students have of the higher education environment.

SECTION 2. ADMINISTRATION OF THE SCALES

Subject Populations

The MHE is designed to be used with undergraduate students who are 23 years of age or older. Although some items apply to traditional aged students, most items are specific to adult students and consequently responses of younger students are not relevant.

Administration and Timing

The MHE has been designed to assess the perceptions of groups of adults enrolled in higher education programs. Individual responses cannot

be interpreted.

The scales take approximately fifteen to twenty minutes to complete and are not timed. The instrument can be administered in either a group setting or to individuals. Instructions for completion are included on the instrument, are self explanatory, and are adequate for self-administration, for example through the mail.

SECTION 3. SCORING AND INTERPRETING THE SCALES

The Mattering Scales for Adult Students in Higher Education are a set of perceptual measures consisting of 45 items that generate five subscale scores. Respondents indicate whether they agree or disagree with items that describe their feelings about the institution at which they are enrolled.

Items are scored on a 5-point scale, with 5 representing a high score on mattering. For items noted as reversed, a score of 5 represents a low score on mattering. These items were reversed to avoid response sets. Please note that item 37 is scored twice. Subscale raw scores are the sum of the item scores.

Scores are generated for each of the subscales. Analyses of subscale intercorrelations suggest that a total instrument score is not interpretable. Consequently, five subscales are obtained and are to be reported individually. The five subscales for which scores will be reported are—Administration, Advising, Peers, Multiple Roles, and Faculty.

Scoring instructions for the subscales are included in Table 1.

Table 1: Scoring Instructions

A. Administration

Items 1, 4, 7, 11, 21, 24, 28, 32, 34, 37, 40, 43 Score 1, 11, 24, 28, 34, 43 in reverse direction before totaling subscale raw scores.

Administration Subscale Total: Sum the item scores.

B. Advising

Items 2, 9,13,18,25,29,37,41 Score 2 in reverse direction before totaling subscale raw scores.

Advising Subscale Total: Sum the item scores.

C. Peers

Items 5, 8, 14, 15, 19, 22, 26, 30, 33, 35, 38 Score 8, 30, 35 in reverse direction before totaling subscale raw scores.

Peers Subscale Total: Sum the item scores.

D. Multiple Roles

Items 3, 12, 17, 20, 31, 39, 42 Score 3, 12, 17, 20, 31, 29, 42 in reverse direction before totaling subscale raw scores.

Multiple Roles Subscale Total: Sum the item scores.

E. Faculty

Items 6, 10, 16, 23, 27, 36, 44, 45 Score 6, 10, 16, 23, 36, 44, 45 in reverse direction before totaling subscale raw scores.

Faculty Subscale Total: Sum the item scores.

Subscale Descriptions

Subscale descriptions and possible characteristics of high score respondents are as follows:

The Administration Subscale measures adult students' perceptions of the extent to which campus policies and procedures are sensitive to adult student concerns. High scorers may describe their campus policies as accommodating in terms of timing of class offerings, payment of fees, and registration scheduling. They may also report campus activities and student newspaper articles relevant to adult students' concerns.

The Advising Subscale measures adult students' perceptions of the extent to which advisors and other information providers attend to their questions and concerns. High scorers may describe positive experiences with faculty advisors who are available at convenient times and who appear interested in their concerns. They may also report a clear understanding of administrative rules and regulations and accessibility of administrative staff.

The **Peers Subscale** measures adult student's perceptions of the extent to which they feel they

belong on campus and are accepted as peers in the classroom. **High scorers** may describe feeling comfortable in the classroom and a sense of camaraderie with other students. They may report a give-and-take relationship where their different strengths and weaknesses are as accepted as those of traditional aged students.

The Multiple Roles Subscale measures adult students' perceptions of the extent to which the campus acknowledges competing demands on their time. High scorers may describe rules and policies flexible enough to allow students to meet other responsibilities. They may report evening hours for administrative offices, options for part-time students, or some acknowledgement of their other responsibilities.

The **Faculty Subscale** measures adult students' perceptions of the extent to which faculty members accept them in the classroom. **High scorers** may describe a feeling of comfort in the classroom. They may report that they are treated equitably in comparison with traditional aged students. They may describe faculty members who are accepting of their life experiences and who welcome diversity in the classroom.

SECTION 4. NORMATIVE DATA

Description of the Institutions

Initial analyses for the MHE were performed using instruments distributed to 605 non-traditional aged students at 23 institutions of higher education. This normative sample of institutions included 16 four-year colleges and universities and seven two-year colleges. Eight of the four-year institutions had undergraduate enrollments of less than 10,000 students, as did three of the two-year colleges. The majority of the schools were public, with only three private colleges included in the sample.

Description of the Sample

The demographic questionnaire provided the following description of the normative sample.

TABLE 2Ages of Normative Sample

Age	n	<i>76</i> *
23-30	213	35.2
31-40	235	38.9
41-50	120	19.8
51-60	31	5.2
over 60	6	1.0

^{*}Total does not sum to 100% due to rounding.

Respondents were predominantly female (71%). Fifty-four percent reported their marital status as married, 16% were divorced, 26% single, and the remaining were separated or widowed. The sample was also predominantly White (87%) with 6% Black, 3% Native American, 2% Hispanic, 1% Asian-American, and 1% Other. The ages of the respondents are reported in Table 2.

The majority of the respondents were enrolled part-time (61%), but were enrolled with the intention of earning a degree (81%), although 53% reported spending less than ten hours a week on campus. A frequency distribution of respondents' reported college majors is included in Appendix A. Reported hours spent in outside employment indicated a bimodal distribution (see Table 3). Ten percent of the sample reported they worked on campus.

TABLE 3
Hours Spent in Outside Employment

Hours Worked	n	% *
0-10	233	38.5
11-20	76	12.6
21-30	48	7.9
31-40	186	30.7
over 40	62	10.2

^{*}Total does not sum to 100% due to rounding.

Description of Subscale Norms

Normative data for responses grouped by type of institution have been computed. Table 4 provides a description of responses for each of the five subscales for two-year institutions, four-year institutions, and the total sample. The distribution of responses for each subscale for all institutions, for four-year institutions only, and two-year institutions only are presented in Appendices B, C, and D.

Faculty	2-year	29.65	1.45	7
-	4-year	27.84	2.12	16
	Combined	28.39	2.08	23

SECTION 5. RELIABILITY AND VALIDITY

Mattering is an individual psychological construct. In designing the MHE, the construct has been applied to the assessment of group perceptions of an environment. It is suggested that the collective perceptions of individuals can provide some evidence of an environmental trend, but that individual data in the absence of confirming data from others is of no value. Individual responses are considered to be uninterpretable. Evidence of reliability and validity refer to group applications and reflect the current state of research on the scales.

Content Validity

Content validity arises from the operationalization of the theory of mattering in higher education to a table of specifications, and from an adherence to a table of specifications in writing items (Crocker and Algina, 1986). The table of specifications was defined as the result of a review of the literature on adult students and structured interviews with adult students. Instrument items were written to describe those dimensions.

Construct Validity

Based on the table of specifications, six dimensions of mattering were hypothesized—Resources, Policies, Faculty. Administration, Peers, and Classroom. A factor analysis was used to test the structural integrity of the construct as measured by the scales. That factor analysis found five dimensions—items from Administration and Faculty were combined to create the Advising Subscale; items from Administration and Policy were combined into the Administration Subscale; items from Policy and Resources were combined into the Multiple Roles Subscale, the Faculty and Peers Subscales remained in the model.

Reliability

Evidence of reliability is presented in Table 5.

TABLE 5
Internal Consistency Coefficients (Cronbach Alpha) for The Mattering Scale for Adults in Higher Education (n=511)

Subscale Alpha	Number of Items	Mean	S.D.	Cronbach
Administration	11	32.42	7.12	.85
