#### ABSTRACT

This report presents an overview and a preliminary analysis of the legislative decisions made during 1988 for the 1989 fiscal year on state tax appropriations for higher education in the 50 states. The data are aggregated from GRAPEVINE, a monthly research report of state tax appropriations for operating expenses of higher education. Following an introduction and retrospective of 1989, an overview of higher education appropriations discusses nationwide gains, 2-year gains among the states and "megastates," i.e., states with large, expensive higher education systems that appropriate more than one billion dollars a year for those systems. Other sections discuss the data by region and analyze trends in state higher education support. At the end of the discussion portion of the report a section called "What the Figures Are Intended to Mean" provides a framework for the collection and presentation of data. The bulk of the publication consists of tables of data for each state. In the main, each table presents appropriations to individual higher education institutions including funds for scholarships and sums destined for higher education but appropriated to some other state agency for miscellaneous types of support to institutions or to students. For each table there is not only a column for 1989 but also a column of data for the previous fiscal year which incorporates all revisions provided by the state. (JB)

Microcomputer disks of the appropriations data are available from the Center for Higher Education, 331 DeGarmo Hall, Illinois State University, Normal, IL 61761. The data are in tabulation form for each state for each fiscal year since FY1979 to FY1989, inclusive. The software program used is LOTUS 1-2-3, Release 2.01. Price: \$25.00 (prepayment, preferred). For more information in this regard, please telephone Gwen Pruyne 309/438-5405.

# STATE TAX SUPPORT OF HIGHER EDUCATION: A RETROSPECTIVE OF FY1989

# Introduction and Purpose

This volume contains state tax appropriations for operating expenses of higher education in the 50 states for Fiscal Year 1989. Decisions on these state tax appropriations for FY1989 were made by the state regislatures during the 1988 regislative year. These data are initially published by the Center for Higher Education at Illinois State University in the monthly research report, Grapevine. Next, they appear in abbreviated form in an October issue of The Chronicle of Higher Education. Finally, appropriations for the current fiscal year and for the preceding fiscal year are published in complete form in this report published by the National Association of State Universities and Land-Grant Colleges. These data are furnished by a network of state higher education finance officers and higher education officials in the 50 states.

In the words of the founding editor, M. M. Chambers, <u>Grapevine</u> is a "longitudinal study of state tax support of higher education in the United States." These state tax appropriations data are the earliest figures available and are published in <u>Grapevine</u> as soon as possible after state legislative decisions are made. In addition to the timely quality of these data, they are as accurate as possible. In order to improve the accuracy of the appropriations data, a column of data for the previous fiscal year (FY1983) appears along with the column of FY1989 data in this report. This is the third consecutive year that previous fiscal year data have been included along with current fiscal year data in order to incorporate data revisions which are made by governors or state legislatures for the purpose of either enhancing or reducing the initial legislative decisions. For instance, last year in this report, the national total of state tax appropriations was \$34.0 billion. By including revisions made since that time, this report indicates that a revised national total for FY1988 is slightly more than \$34.2 billion. A few years ago, virtually all revisions were downward adjustments, reflecting rescissions and reversions made by the states in response to revenue receipts which were lower than estimated. Perhaps we are witnessing a new period when adjustments can begin to provide enhancements to higher education.

Grapevine data essentially provide an early notification to a national audience about iegislative decisions made for the current fiscal year. This appropriations measure is an indicator of state tax effort for operating expenses of higher education. However, it is not the only measure of support of higher education. As indicated in "What the Figures Are Intended to Mean," the <u>Grapevine</u> tabulations do not include sums for capital expenses or for student tuition and fees. Other measures—especially those including local tax appropriations—may be of special importance in those states which have large community college systems. In some states, legislatures may appropriate significant amounts to higher education from non-tax sources. Depending on individual state circumstances, these other measures need to be included in order to formulate a more complete picture of state support for higher education.

Researchers and policy analysts are advised that there are other sources and analyses of interstate higher education finance data. Just as more measures than state tax appropriations may need to be utilized in order to present a complete view of higher education support, more than a single analysis of data should be utilized. Three sources in particular are recommanded. These are the "National Comparison of Financial Support for Higher Education" prepared by Jacquelyn Johnson of the Higher Education Coordinating Board in the State of Washington; State Profiles: Financing Public Higher Education 1978 to 1988 by Kent Halstead which may be purchased from Research Associates, 2605 Klingle Road, NW, Washington, D.C. 20008; and the complete governmental compilation entitled State Higher Education Profiles published by the Center for Education Statistics, U.S. Department of Education.

# A Retrospective of State Support for Higher Education for FY1989

For FY1989, thore were three distinguishing features in state tax support for higher education. First, more than \$36.2 billion for higher education were appropriated by state legislatures, and this was an increase of virtually \$2 billion from the previous year (FY1988). Second, there was a 12.4% increase in two-year percentage gain over FY1987, thus slightly ahead of the 11.3% increase reported in FY1988 over FY1986. The third distinguishing feature of the FY1989 figures was the lack of clear regional distinctions which were reported for the last two years, except for some continued fiscal difficulties west of the Mississippi. The specifics of the gain this year are analyzed below.

Nationwide Gains. The nationwide total number of dollars, gains in dollars, and gains in percentages are shown in Table 1 for the period from FY1979 through FY1989. Comparing the '79 and '89 points in time, the magnitude of state support for higher education more than doubled (\$17 to \$36 billion). There was a one-year gain of nearly \$2 billion from FY1988 to FY1989. This \$2 billion increase was greater than that reported in five of the previous ten years, and less than the one-year gains reported in 1980, 1982, 1985 (the high point with \$2.5 billion gain over one year), and 1986. The low point in magnitude of gain occurred in 1983 (\$1.3 billion) and there was a \$1.5 billion in gain reported in 1987. Admittedly, these gains are small in magnitude, but, nonetheless, they are gains. In one-year percentage gains over the decade, the low point was reported in 1987 (4.8%), the high point of 12.1% in 1980, and nearly a six percent gain was reported this year (5.8%). In two-year percentage gains, the low point occurred in 1988 (11.3%), the high point in 1980 (24.3%), and this year there was a two-year percentage gain of over 12%. One can observe a substantial decline in the rate of percentage gains during the decade from two-year percentage gains in the 20s to the low teens presently. This decline in percentage gains must be viewed in the context of a decreasing rate of inflation during this period from the mid-teens in the late 1970s to under five percent per year in the mid-1980s.

Table 1											
Fiscal Years	1979	1980	1981	1982	1983	1984	1985	1986	1987	1988	1989
Billions of Dollars	17.1	19.2	20.9	23.1	24.4	25.9	28.4	30.7	32.2	34.2	36.2
1-Yr Gain (\$billions)											
										6.1	
2-yr Gain (Percent)	22.6	24.3	22.9	20.7	16.3	11.8	16.2	18.8	13.6	11.3	12.4
<u> </u>											

Note: Some of the above figures differ from those reported earlier because of data revisions submitted by some states.

Two-year Gains Among the States. Table 2 shows two-year percentage gains for all states, grouped according to the number of states reporting an increase, decrease, or the same two-year gain from FY1986 to FY1988, compared to the gain reported from FY1987 to FY1989. This year there were 26 states reporting increasing two-year percentage gains, compared to only 17 states last year. On the other hand, there were 20 states reporting decreasing two-year percentage gains this year, compared to 28 states last year.

Among the 28 states reporting increases in twoyear percentage gains from 1987 to 1989, several made iarge gains. Mississippi gained 26 percentage points from 4% to 30%, Texas went from 1% to 14%, Oklahoma from -9% to 8%, Kansas from 5% to 17%, and Alabama from -4% to 23%. These inciuded some states which had been showing very tow or negative gains. Other states increased aiready strongly positive support for higher education, such as Hawaii (22% to 24%) iowa (15% to 18%), Maryland (16% to 22%), and Jersey (20% to 26%). The 20 states experiencing decreasing two-year percentage gains included those with large decreases, such as Massachusetts (26% to 6%), Maine (40% to 29%), and Tennessee (17% to 9%). The remaining 16 states experienced small decreases of 8 percentage points or iess.

Table 2

The Megastates. Using a term coined by Neal Pierce, the "Megastates" of America are those states having large populations and concentrations of economic productivity, manufacturing output, and wealth. They include those states appropriating more than one billion dollars annually for higher education. There have been ten states in that category for several years, and Virginia joined the group this year. These are the states with large, extensive higher education systems. Together, these states appropriated \$20.6 billion for higher education in FY1989, representing 57% of the total amount appropriated for higher education in the nation. Generally, these states appropriated funds to higher education at a slower rate of increase than in previous years. This rate of percentage gain was nearly one percentage point less than the national average of a 6% increase from FY1988 to FY1989. Of the 11 states in this category, 80% of the increase was represented by California, Florida, New Jersey, New York and Virginia. Increases of less than \$100 million each were made by !lilinois, Michigan, North Carolina, Ohio, Pennsylvania and Texas.

# A Regional View of Fiscal Year 1989

By arranging the 50 states in quadrants and quartiles, as shown in Table 3, we can examine regional; tterns and variations more closely. Using quartiles permits a focus on four groups according to rates of two-year percentage gains. Because of the piaces at which percentage differences enabled groupings to be made, 13 states were placed in the top quartile and 14 in the bottom quartile. Quadrants were formed by dividing the nation into four

fairly-even geographic sections. The northeast corner of Missouri was the center; the Mississippi River divided East from West, and the Ohio River and southern border of Pennsylvania divided Northeast from Southeast. The Northeast has 14 states; Southwest, 13; Southeast, 12; and the Northwest has 11 states.

The top quartile of 13 states ranges from Mississippi with the highest percentage gain in the nation at over 30%, to eight states with percentage gains in the 20s, and four states with gains at 18%. The two middle quartiles have 12 and 11 states, respectively, with the second quartile ranging from over a 17% two-year gain in Kansas down to a group of six states at 14%. The third quartile ranges from North Carolina at over a 13% gain down to three states at 9% two-year gains. The lowest quartile of 14 states begins with Oklahoma and Oregon at 8%, and declines to three states in the negative percentage gain: North Dakcta, Louisiana, and Alaska.

Table 3

Quadrants	NW*	NE	SE	SW**	Total
Highest	2	5	3	3	13
Second	2	3	4	3	12
Third	1	4	4	2	11
Lowest	6	2	1	5	14
Total	11	14	12	13	50
*Includes Ala**Includes Ha					

Among the four quadrants, there was a more even distribution this year than in either FY1988 or FY1987 when the New England states, the Midsouth and selected Western states experienced the highest two-year gains. This year, in the Southeast there were seven states in the top half compared to five states in the bottom half. The Northeast had eight states in the top half and six in the bottom half, while in the Southwest there were six states in the top half and seven in the bottom. The Northwest had seven states in the bottom half and only four states in the top half.

There was a more diverse regional pattern of states in the top quartile this year, and a larger grouping of Western states in the bottom quartile. Yet, eight of the 13 states in the top quartile were in the East. Four of the six New England States (New Hampshire, Maine, Connecticut, and Rhode island) appeared in the top quartile. New Jersey was the other Northeastern state in the top quartile. Three of the 12 Southeastern states were in the top quartile (Mississippi, Maryland, Alabama). Only five of the 24 states west of the Mississippi River were in the top quartile (Hawaii, Arizona, Nevada, Nebraska, Iowa). States in the bottom quartile exhibited a situation with an over-representation of Western states. In location, these states form a broad arc beginning in the Southcentral area (Louisiana, Arkansas, Oklahoma, New Merico), then extending Northwest to Utah and Wyoming, the Northern Plains states of North Dakota, South Dakota, and Montana, and ending with Oregon and Alaska. Among Northeastern states, only Massachusetts and Illinois appeared in the bottom quartile, and West Virginia was the only Southeastern state in the bottom quartile.

# Trends in State Support for Higher Education

Grapevine provides the earliest picture of interstate higher education finance data nationally. These data displayed on a state-by-state basis enable identification of trends in state support. Although the data pertain only to state tax support and need to be viewed along with other data sources which are available later in the year, they provide an indication of patterns and levels of state support. In that sense, Grapevine is an initial building block in a complete examination of state higher education support.

Regional Variations. The national pattern was different this year from that exhibited during the previous two years. FY1987 and FY1988 were characterized by clear economic resurgence in New England, a strong performance of coastal states, and severe economic difficulties in the Southcentral and Northern Plains regions. This year, there was a more diverse representation of states in the top quartile with a leaning toward Eastern states being in the upper groupings, combined with a larger number of Western states in the lower quartiles. The Northern Plains states and selected Western states are continuing to experience difficulties in providing support to higher education, and this condition undoubtedly relates to revenue and taxation problems in those areas.

Overall, however, this analysis demonstrated that more states experienced increases in two-year percentage gains as reported in FY1989 compared to FY1988. In fact, the pattern nearly reversed with 26 states reporting two-year gains in FY1989 with only 20 states having experienced decreases in this most recent two-year period. An examination of the 11 "megastates" utilizing these increasing or decreasing groups revealed that only three of the 11 megastates (New Jersey, Pennsylvania and Texas) experienced increasing percentage gains in '89 versus '88. Fully, seven of these 11 states reported decreasing two-year gains (California, Florida, Michigan, New York, North Carolina, Ohio, and Virginia) and one state (Illinois) reported identical two-year percentage gains for the two years. The "gainer" states included a number of states with smaller higher education systems and thus appropriations amounts of relatively smaller magnitude.

State Revenue Availability. This report has recognized the importance of state revenue availability in the capacity of a state to support higher education. If states are not or cannot produce revenue through taxation systems, higher education as well as other public services will not fare as well as when revenue becomes more plentiful. States do not engage in deficit financing. In order to illustrate this point, Table 4 displays data obtained from a national survey completed by the National Conference of State Legislatures (NCSL). The percentage gains in states' general funds and in total state appropriations are illustrated for the period FY1988 to FY1989. Two year percentages gains in appropriations for higher education in the top nine states and in the bottom ten states were identified and displayed along with one-year percentage gains for general funds and total appropriations from a report from the NCSL. (Nine states were used, rather than 10 states, in the top category, because four states clustered around the 19% cutoff point.) Table 4 demonstrates clearly that states having large increases in their general funds are able to show greater percentage gains in total appropriations, including percentage gains in higher education appropriations.

Table 4 also contains some interesting "aberrations" in the observations noted above. For instance, Hawaii had a very small increase in the general fund (0.4%) yet was able to give a 24% two-year gain to higher education. Similar effort for higher education was exerted by Mississippi, New Hampshire, Maine and Maryland. Perhaps this indicated that when states have more plentiful revenue, choice becomes an important factor in whether or not to allocate revenue to selected areas, including higher education. Further, at least some of the states in the higher education top quartile are those where higher education has been viewed as an important means of improving the economic development of the state (New Jersey, Connecticut, Maryland). On the opposite end of the spectrum, the same aberrations are not found. General fund increases were very low or even negative in all of the "bottor. quartile" states, although both Arkansas and Illinois made considerable effort in increasing total state appropriations, but these increases were not extended to higher education.

TARLE 4

	TOP NINE T	NO-YEAR GAI	INERS	BOTTOM TEN TWO-YEAR GAINERS				
States	General Fund Increase	State Approp Increase	Higher Education Increase	States	General Fund Increase	State Approp Increase	Higher Education Increase

\*Not reported

Sources: Gold, Steven D., Corina L. Eckl and Martha A. Fabricius. State Budget Action in 1988.

\*\*Grapevine\*\*

The mean percentages were included on Table 4 from FY1988 and FY1987. The pattern appears fairly consistent. Available revenue in the states increases the opportunity for increasing higher education appropriations, but it does not guarantee increases. Such increases are within the prerogative of state lawmakers. This same table reported a year ago (FY1988) showed that there were eight states showing negative higher education gains (decreases among bottom quartile states). This year only North Dakota, Louisiana, and Alaska experienced percentage decreases in higher education appropriations.

Additional Considerations. There are a number of reasons why there were modest increases in state support to higher education in FY1989. Three such reasons are suggested here. First, education was identified as the leading fiscal issue in the states in the 1988 legislative sessions, when decisions were being made for FY1989. The NCSL survey indicated that elementary-secondary education was the leading fiscal issue in 28 states, and that higher education was the leading fiscal issue in Idaho, Maryland, Mississippi, Missouri, Nebraska, South Dakota, and Washington. Six of these seven states (excepting for South Dakota) were in the top or second highest quartiles in higher education support. The NCSL report indicated that elementary-secondary education fared better than higher education in FY1989, and that higher education did not fare as well as in FY1988. Although the numerical differences are small in magnitude, Grapevine data are in disagreement with the NCSL report with modest gains having been demonstrated by Grapevine data for FY1989. An explanation of K-12 schools' receiving relatively more support than higher education would include the legislative decisions being made in a number of states in support of the implementation of education reform in the schools.

There are other reasons for the pattern of state support for higher education which has been described in this analysis. Two factors identified here are state support of student financial aid and state support of community colleges. The purpose of <u>Grapevine</u> is not to isolate appropriations for specific areas such as financial aid and community colleges. However, these amounts are set out in <u>Grapevine</u> when state financial officers report them as separate entries. It was found that student financial aid was reported separately in 33 of the 50 states. Community colleges were reported as separate items in 40 of the states. The mean percentage gain for appropriations to student financial aid programs this year was slightly over 20%, a full eight percentage points greater than the national weighted average percentage gain of 12%. The mean

percentage gain for state appropriations to community colleges this year was 15%, three percentage points greater than the statewide average of 12%. These two appropriation areas illustrate that states are making particular effort to increase support to student aid during a period when tuition rates are increasing faster than state tax appropriation increases. Additionally, states are making particular effort to support community colleges, quite possibly because community colleges have been leading institutions in developing programs to improve economic development, retrain workers, and create cooperative relationships with business. These categorical programs devised to achieve specific purposes of benefit to both higher education and the state are receiving proportionately greater percentage increases than are operating budgets generally.

Thus, a multiyear trend of state higher education support continues to demonstrate slower rates of percentage gain for higher education operating budgets, and economic resurgence in New England, the Mid-Atlantic states, and other coastal states. At the same time, increases in state support are being targeted increasingly to programs which offer the potential of achieving specific purposes in which both higher education and the state have an interest.

# <u>Acknowledgments</u>

The contributions of many individuals go into the preparation and publication of these data and to them gratitude is extended. Foremost is the recognition of the work of M. M. Chambers, founding editor of <u>Grapevine</u>, whose eternal optimism is reflected in the quote below:

For a century phenomenal progress has been made in the accessibility, scope, and quality of higher education in the United States, all for the good of the states, the nation, and the whole society, and for that progress bids fair to continue. There have been ups and downs, often depending on the fortunes of conflicting ideologies; but for the long future, it is legitimate to assume that the general trend is upward.

The contributions made by members of the Advisory Committee, whose names are listed below, are recognized and appreciated deeply. Their technical and policy acvice has enabled Grapevine to be strengthened in a number of ways. The fifth annual meeting of this Advisory Committee took place at the Inservice Education Program of the State Higher Education Finance Officers in August 1988.

Thanks go to the Office of Communications Services at the National Association of State Universities and Land-Grant Colleges for their interest and assistance in publishing this annual volume for the past 28 consecutive years.

# WHAT THE FIGURES ARE INTENDED TO MEAN

The data for this report are supplied by key persons in each state who report them to the monthly research report, GRAPEVINE. The ground rules used to achieve an approach to uniformity of reporting are enumerated below. Diversities of practices among the 50 states make it impossible to eliminate all inconsistencies and to accomplish absolute comparability among states and among institutions. We emphasize that comparisons are of limited usefulness but have value if correctly interpreted.

- 1. Report only appropriations; not actual expenditures.
- 2. Report only sums appropriated for annual operating expenses.
- 3. For the state tax appropriations in complex universities, set out separately the sums appropriated for (or allocated to) the main campuses, branch campuses, and medical centers (even if on the main campus). The medical center item should include operation of colleges of medicine, dentistry, pharmacy, nursing, and teaching hospitals, either lumped as one sum or set out separately as preferred.

# 4. Include:

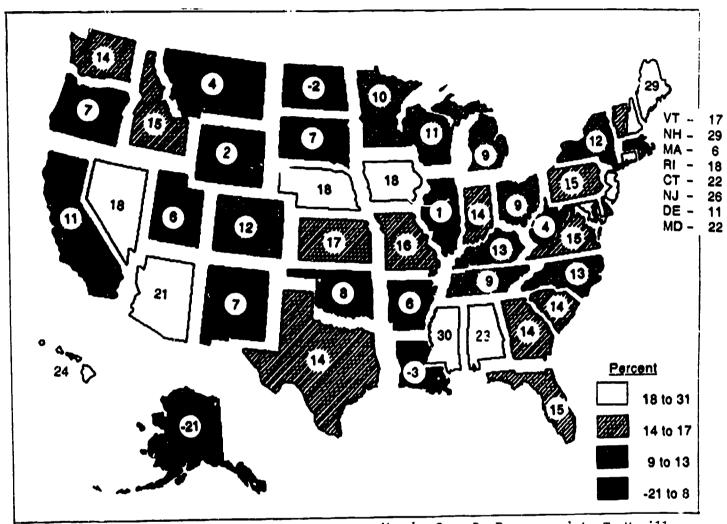

- sums appropriated for state aid to local public community colleges and for operation of state-supported community colleges, and for vocational-technical two-year colleges or institutes which are predominantly for high school graduates and adult students.
- sums appropriated to statewide coordinating boards or governing boards, either for board expenses or for allocation by the board to other institutions or both.
- sums appropriated for state scholarships or other student financial aids.
- sums destined for higher education, but appropriated to some other state agency. Examples: funds intended for faculty fringe benefits may be appropriated to the State Treasurer and disbursed by that office; certain funds for medical and health education may be appropriated to the state department of health and disbursed from that department. Sometimes these sums have to be estimated because the exact amount disbursed cannot be known until after the end of the fiscal period.
- appropriations directed to private institutions of higher education at all levels.

# 5. Exclude:

- appropriations for capital outlays and debt service.
- appropriations of sums derived from federal sources, student fees, auxiliary enterprises, and other non-tax sources.

# PERCENTAGES OF TWO-YEAR GAINS IN APPROPRIATIONS OF STATE TAX FUNDS FOR ANNUAL OPERATING EXPENSES OF HIGHER EDUCATION IN THE FIFTY STATES, FISCAL 1989 OVER 1987

Map by Gwen B. Pruyne and A. T. Mogill

# STATE TAX FUND APPROPRIATIONS FOR OPERATING EXPENSES OF HIGHER EDUCATION FOR FISCAL YEARS 1978-79,1986-87, AND 1988-89, WITH PERCENTAGES OF GAIN OVER THE MOST RECENT TWO AND TEN YEARS.

(In thousands of dollars)
