IDENTIFIERS Drug Free Schools

ABSTRACT

This report is the third in a series presenting results from surveys on safe, disciplined, and drug-free schools. The introduction notes that the data were obtained from a survey of 739 public school superintendents. Among the highlighted results are the following: (1) nearly all public school districts were found to have written policies on general discipline and alcohol, drug, and tobacco use; (2) school principals and teachers were involved in these policies in over 90 percent of school districts surveyed; (3) the average number of hours drug use education was taught in each grade during the 1990-91 school year ranged from about 14 hours in kindergarten through third grade to about 20 hours in grades 4 through 6,, 21 hours in grades 7 through 9, and 18 hours in grades 10 through 12; (4) drug use education is offered in a variety of different ways; (5) more than 80 percent of the districts teach students about causes and effects of alcohol, drug, and tobacco use, how to resist peer pressure, and school alcohol, drug, and tobacco policies and enforcement; (6) police provided assistance or educational support to a great extent in promoting safe, disciplined, and drug-free schools, according to 42 percent of public school district superintendents; and (7) suspensions occurred on average about 26 times for every 1,000 students per public school district.

Highlights

The following are highlights from a national survey of over 700 district superintendents. Data are weighted to produce national estimates. Some differences among various types of districts are noted, though this publication does not present all such differences.

- Nearly all public school districts (97 to 98 percent) have written policies on general discipline and alcohol, drug, and tobacco use (Table 1).
- Less than 1 year ago, 35 to 38 percent of public school districts significantly changed their alcohol, drug, and tobacco policies (Table 2). Thirty-one percent significantly changed their general discipline policy.
- Public school principals and teachers were involved in the development of general discipline, alcohol, drug, and tobacco policies in over 90 percent of school districts. Parents were involved in the development of these policies in over 70 percent and students in over 50 percent of school districts (Table 2).
- A student alcohol, drug, or tobacco use survey has been conducted in the last 2 years by 61 percent of public school districts (Table 1). Fewer districts in the Northeast (39 percent) conducted a survey than in other regions, and fewer small districts (58 percent) than large districts (75 percent) conducted a survey.
- The average number of hours drug use education was taught in each grade during the 1990-91 school year ranged from about 14 hours in kindergarten through third grade to about 20 hours in grades 4 through 6 to 21 hours in grades 7 through 9, and to approximately 18 hours in grades 10 through 12 (Table 5).
- Drug use education is offered in a variety of different ways in public school districts. About 90 percent of districts offered drug use education within the health curriculum, and about 90 percent offered it at special assemblies or events at the elementary, junior high, and senior high school levels (Table 6).
- Superintendents were asked to indicate what proportion of schools in their district included various components in their drug use education programs/activities. More than 80 percent of public school districts included the following at all schools within the district: teaching students about causes and effects of alcohol, drug, and tobacco use; teaching students to resist peer pressure; school alcohol, drug, and tobacco policies/enforcement; and referrals for counseling and treatment (Table 7). Student drug-testing programs at all schools within the district were reported by only 8 percent of public school districts.
- Police provided assistance or educational support to a great extent in promoting safe, disciplined, and drug-free schools, according to 42 percent of public school district superintendents (Table 9). About 20 percent indicated that parent groups and social service agencies provided the same level of support.
- Suspensions because of disruptive behavior occurred on average about 26 times for every 1,000 students per public school district during the fall 1990 semester. On average, there were 2 student transfers to alternative schools for every 1,000 students and 1 expulsion for every 1,000 students during the same time period for disruptive behavior (Table 11).
- Superintendents were asked to report the number of suspensions, transfers to alternative schools, and expulsions administered for every 1,000 students due to drug use, possession, or sales. There was an average of 1.9 suspensions, 0.4 transfers to alternative schools, and 0.2 expulsions during the fall 1990 semester (Table 12).

Appendix B: Questionnaire	33

Introduction to the Data

This report is the third in a series of three E.D. TABS presenting results from three surveys on safe, disciplined, and drug-free schools. The statistics represent public school district superintendents' perspectives on issues related to safety, discipline, and drug use prevention in public elementary and secondary schools. A national sample of 790 public school district superintendents was selected; 739 of these superintendents responded to questions concerning the extent of discipline problems within schools, the nature and effectiveness of current policies and drug education programs, and disciplinary actions.

To the extent that student alcohol and drug use, violence, and disruptive behavior are problems facing schools, they are impediments to learning. To address such problems, the nation's Governors and the President endorsed a set of National Education Goals to be reached by the year 2000. National Education Goal Six calls for all schools in America to be free of drugs and violence and to offer a safe, disciplined environment conducive to learning. To achieve the goal, policymakers, educators, and the public need information about the current status of the nation's schools and the extent to which the goal's various objectives are being met.

The tabular summaries in this report are based on data collected from the District Survey on Safe, Disciplined, and Drug-Free Schools for the National Center for Education Statistics (NCES). The survey was conducted by Westat, Inc., a research firm in Rockville, Maryland, through the Fast Response Survey System (FRSS). FRSS was designed to provide data on policy-related issues regarding emerging educational developments. The tables present data for all public school districts and for districts by type of school location (urban, suburban, rural), enrollment size (less than 2,500, 2,500 to 9,999, 10,000 or more), region (Northeast, Central, Southeast, and West), and percentage of students receiving free or reduced-price lunches (10 percent or less, 11 to 40 percent, 41 percent or more). Statistics in all tables are based on national estimates (see Table A).

The statistics from the two related surveys have been published: an E.D. TABS report on the Teacher Survey on Safe, Disciplined, and Drug-Free Schools (NCES 91-091) and an E.D. TABS report on the Principal Survey on Safe, Disciplined, and Drug-Free Schools (NCES 92-007). Reports integrating all three surveys will be developed during 1992.

Definitions

Common Core of Data Public School Universe — A data tape containing 84,968 records, one for each public elementary and secondary school in the 50 States, District of Columbia, and five outlying areas, as reported to the National Center for Education Statistics by the State education agencies. Records on this file contain the name, address, and telephone number of the school, name of the school district or other agency that operates the school, school type and locale, the full-time-equivalent number of classroom teachers assigned to the school, the number of students eligible for the federal free-lunch program, and membership, by grade and racial/ethnic categories.

Urban — Primarily serves a central city of a Metropolitan Statistical Area (MSA).

Suburban — Serves an MSA, but not primarily its central city.

Rural — Does not serve an MSA.

Full-time-equivalent (FTE) — Amount of time required to perform an assignment stated as a proportion of a full-time position and computed by dividing the amount of time employed by the time normally required for a full-time position.

Drug use education — Refers to learning activities and related policies to prevent or reduce alcohol, drug (e.g., marijuana, inhalants, cocaine), and tobacco use by youth. It does not include clinical treatment or rehabilitation.

Disruptive behavior — Refers to serious and/or unlawful actions that may interfere with order in school (e.g., physical attacks, property destruction, thefts). Alcohol, drug, and tobacco use, possession, sales, and distribution are reported separately on the FRSS questionnaire and are not included under "disruptive behavior."

Northeast region — Connecticut, Delaware, District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Central region — Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

Southeast region — Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia.

West region — Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oklahoma, Oregon, Texas, Utah, Washington, and Wyoming.

Percentage of students receiving federally funded free or reduced-price lunches — data used as an approximate measure of socioeconomic status.

Survey Methodology and Data Reliability

Sample Selection

A two-stage sampling process was used to select public school districts for the FRSS District Survey on Safe, Disciplined, and Drug-Free Schools. First, a stratified sample of 890 public schools was drawn from the 1988-89 list of public schools compiled by the National Center for Education Statistics (NCES). This file contains about 85,000 listings and is part of the NCES Common Core of Data (CCD) School Universe. Regular, vocational education, and alternative schools in the 50 states and District of Columbia were included in the survey universe, while special education schools were excluded from the frame prior to sampling. Schools not operated by local education agencies and those including only prekindergarten or kindergarten were also excluded. With these exclusions, the final sampling frame consisted of approximately 81,100 eligible schools. The schools were stratified by type of locale (city, urban fringe, town, rural) and level of instruction (elementary, secondary, and combined schools). Within each of the 12 strata, schools were sorted first by state, then district (within each state), and then enrollment size (within each district). Next schools were selected with probabilities proportionate to the square root of the number of full-time-equivalent (FTE) teachers in the school.

The sampling of schools, in turn, identified the 790 districts to be included in the district survey. Districts comprised of schools that appeared in two or more school strata had multiple chances of selection. The overall probability of selecting a district was approximately proportional to the size of the district.

Response Rates

In mid-April 1991, questionnaires (see Appendix B) were mailed to districts in the sample. Telephone followup of nonrespondents was initiated in late May; data collection was completed by the beginning of July. A response rate of 94 percent (739 districts) was obtained (see Table B). Item nonresponse ranged from 0.0 percent to 2.5 percent.

Table B.--Number of public school districts in the study sample that responded, by district characteristics: United States, 1990-91

District characteristic	Sample	Respondents	Response rate
All districts	790	739	0.94
Location of district			
Urban	146	138	0.95
Suburban	364	337	0.93
Rural	280	264	0.94
Enrollment size			
Less than 2,500	285	264	0.93
2,500 to 9,999	272	257	0.94
10,000 or more	233	218	0.94
Region			
Northeast	161	150	0.93
Central	227	210	0.93
Southeast	181	170	0.94
West	221	209	0.95

Sampling and Nonsampling Errors

The response data were weighted to produce national estimates. The weights were designed to adjust for the variable probabilities of selection and differential enrollment. The findings in this report are estimates based on the sample selected and, consequently, are subject to sampling variability.

The survey estimates are also subject to nonsampling errors that can arise because of nonobservation (nonresponse or noncoverage) errors, errors of reporting, and errors made in collection of the data. These errors can sometimes bias the data. Nonsampling errors may include such problems as the differences in the respondents' interpretation of the meaning of the questions; memory effects; misrecording of responses; incorrect editing, coding, and data entry; differences related to the particular time the survey was conducted; or errors in data preparation. While general sampling theory can be used in part to determine how to estimate the sampling variability of a statistic, nonsampling errors are not easy to measure and, for measurement

purposes, usually require that an experiment be conducted as part of the data collection procedures or that data external to the study be used.

To minimize the potential for nonsampling errors, the questionnaire was pretested with superintendents from districts like those that completed the survey. During the design of the survey and the survey pretest, an effort was made to check for consistency of interpretation of questions and to eliminate ambiguous items. The questionnaire and instructions were extensively reviewed by the National Center for Education Statistics, as well as the Office of Educational Research and Improvement, the Office of the Undersecretary, and the Drug Planning and Outreach Staff, Office of Elementary/Secondary Education, in the Department of Education. Manual and machine editing of the questionnaires were conducted to check the data for accuracy and consistency. Cases with missing or inconsistent items were recontacted by telephone. Imputations for item nonresponse were not implemented, as item nonresponse rates were less than 5 percent (for most items, nonresponse rates were less than 1 percent). Data were keyed with 100 percent verification.

Variances

The standard error is a measure of the variability of estimates due to sampling. It indicates the variability of a sample estimate that would be obtained from all possible samples of a given design and size. Standard errors can be used as a measure of the precision expected from a particular sample. If all possible samples were surveyed under similar conditions, intervals of 1.96 standard errors below to 1.96 standard errors above a particular statistic would include the true population parameter being estimated in about 95 percent of the samples. This is a 95 percent confidence interval. For example, the estimated percentage of public school districts that conducted a student alcohol, drug, or tobacco use survey in the last two years is 61 percent, and the estimated standard error is 2.9 percent. The 95 percent confidence interval for the statistic extends from $61 - (2.9 \text{ times } 1.96)$ to $61 + (2.9 \text{ times } 1.96)$, or from 55 to 67 percent.

Estimates of standard errors were computed using a technique known as jackknife replication. As with any replication method, jackknife replication involves constructing a number of subsamples (replicates) from the full sample and computing the statistic of interest for each replicate. The mean square error of the replicate estimates around the full sample estimate provides an estimate of the variance of the statistic (e.g., Wolter, 1985, Chapter 4). To construct the replications, 30 stratified subsamples of the full sample were created and then dropped one at

a time to define 30 jackknife replicates (e.g., Wolter, 1985, page 183). A proprietary computer program (WESVAR), available at Westat, Inc., was used to calculate the estimates of standard errors. The software runs under IBM/OS and VAX/VMS systems.

Background Information

The survey was performed under contract with Westat, Inc., using the Fast Response Survey System (FRSS). Westat's Project Director was Elizabeth Farris, and the Survey Managers were Wendy Mansfield and Sheila Heaviside. Judi Carpenter was the NCES Project Officer. The data requestor was Mary Frase, Data Development Division, NCES; outside consultants were Oliver Moles, Office of Research, Office of Educational Research and Improvement, and Kimmon Richards, Planning and Evaluation Service, Office of Policy and Planning.

The report was reviewed by Rita Altman, Associate Superintendent, School District of Philadelphia; Floraline Stevens, AERA Fellow, Director of Research and Evaluation, Los Angeles Unified School District; and Alfred Tuchfarber, Institute for Policy Research, University of Cincinnati. Within NCES, report reviewers were John Grymes, Data Development Division, and John Matthews, Education Assessment Division.

For more information about the Fast Response Survey System or the Surveys on Safe, Disciplined, and Drug-Free Schools, contact Judi Carpenter, Office of Educational Research and Improvement, National Center for Education Statistics, 555 New Jersey Avenue NW, Washington, DC 20208-5651, telephone (202) 219-1333.

DISTRICT SURVEY ON SAFE, DISCIPLINED, AND DRUG-FREE SCHOOLS

FAST RESPONSE SURVEY SYSTEM

This survey is authorized by law (20 U.S.C. 1221e-1). While you are not required to respond, your cooperation is needed to make the results of this survey comprehensive, accurate, and timely.

DEFINITIONS FOR THIS SURVEY:

Drug use education refers to learning activities and related policies to prevent or reduce alcohol, drug (e.g., marijuana, inhalants, cocaine), and tobacco use by youth. It does not include clinical treatment or rehabilitation.

Disruptive behavior includes serious and/or unlawful actions that may interfere with order in school (e.g., physical attacks, property destruction, thefts). Alcohol, drug, and tobacco use, possession, sales, and distribution should be reported separately on this questionnaire and not included under "disruptive behavior."

AFFIX LABEL HERE

IF ABOVE INFORMATION IS INCORRECT, PLEASE UPDATE DIRECTLY ON LABEL.

Name of Person Completing This Form: _____ Telephone Number: _____

Title: _____

RETURN COMPLETED FORM TO:

WESTAT, INC.

Rockville, Maryland 20850

Public reporting burden for this collection of information is estimated to average 30 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the U.S. Department of Education, Information Management and Compliance Division, Washington, D.C. 20202-4651; and to the Office of Management and Budget, Paperwork Reduction Project 1850-0657, Washington, D.C. 20503.

1. Circle the number for each item describing your district's general discipline and alcohol, drug, and tobacco policies. (Please describe the components separately, even if they are included in a single policy.)

	GENERAL DISCIPLINE POLICY		ALCOHOL POLICY		DRUG POLICY		TOBACCO POLICY	
	YES	NO	YES	NO	YES	NO	YES	NO
a. Does your district have a written policy? (If NO to a policy, skip items b and c for that policy.)	1	2	1	2	1	2	1	2
b. Which of the following were involved in the development of your district's policies?								
1) State Department of Education	1	2	1	2	1	2	1	2
2) Principals.....	1	2	1	2	1	2	1	2
3) Teachers	1	2	1	2	1	2	1	2
4) Parents.....	1	2	1	2	1	2	1	2
5) Students.....	1	2	1	2	1	2	1	2
6) Community groups.....	1	2	1	2	1	2	1	2
7) Outside experts.....	1	2	1	2	1	2	1	2
c. Circle the number indicating when each of your policies was last changed significantly. (If never changed, indicate when they were adopted.)								
			LESS THAN 1 YEAR AGO	1 - 3 YEARS AGO	MORE THAN 3 YEARS AGO			
1) General discipline policy			1	2	3			
2) Alcohol policy			1	2	3			
3) Drug policy.....			1	2	3			
4) Tobacco policy.....			1	2	3			

2. a. Circle all grades taught in your district.

All K 1 2 3 4 5 6 7 8 9 10 11 12

b. What is the average number of hours drug (including alcohol and tobacco) use education is required in each grade for the 1990-91 school year? (Write 0 for each grade in which it is not required; write NA for each grade not offered in your district.)

GRADE	HOURS	GRADE	HOURS	GRADE	HOURS	GRADE	HOURS
K	_____	4	_____	7	_____	10	_____
1	_____	5	_____	8	_____	11	_____
2	_____	6	_____	9	_____	12	_____
3	_____						

c. In which of the following ways do schools in your district offer drug (including alcohol and tobacco) use education?

	WITHIN HEALTH CURRICULUM		WITHIN SCIENCE CURRICULUM		AS A SEPARATE COURSE		THROUGHOUT THE CURRICULUM		AT SPECIAL ASSEMBLIES OR EVENTS		OTHER (SPECIFY)
	YES	NO	YES	NO	YES	NO	YES	NO	YES	NO	
Elementary	1	2	1	2	1	2	1	2	1	2	_____
Junior high.....	1	2	1	2	1	2	1	2	1	2	_____
Senior high.....	1	2	1	2	1	2	1	2	1	2	_____

3. Circle the number indicating how many schools in your district currently include each of the following components as part of their drug use education program/activities.

	ALL SCHOOLS	MOST SCHOOLS	SOME SCHOOLS	NO SCHOOLS
a. Teaching students about causes and effects of alcohol, drug, and tobacco use	1	2	3	4
b. Teaching students about laws regarding alcohol, drug, and tobacco use, possession, sales, and distribution	1	2	3	4
c. Teaching students skills to resist peer pressure	1	2	3	4
d. Peer counseling	1	2	3	4
e. School alcohol, drug, and tobacco policy/enforcement	1	2	3	4
f. Student assistance programs (SAPs)	1	2	3	4
g. School services for high-risk students	1	2	3	4
h. Referrals to counseling and treatment	1	2	3	4
i. Student drug-testing programs	1	2	3	4
j. Other (specify)	1	2	3	4

4. Has your district conducted a student alcohol, drug, or tobacco use survey within the last two years? YES NO

5. Circle the number indicating the extent to which each of the following organizations in your district provides assistance or educational support to promote safe, disciplined, and drug-free schools.

	GREAT EXTENT	MODERATE EXTENT	SMALL EXTENT	NOT AT ALL
a. Parent groups	1	2	3	4
b. Private corporations and businesses ..	1	2	3	4
c. Social service agencies	1	2	3	4
d. Police	1	2	3	4
e. Civic organizations/service clubs	1	2	3	4
f. Colleges/universities	1	2	3	4
g. Religious organizations	1	2	3	4

6. Circle the number indicating to what extent the above groups provide support to promote safe, disciplined, and drug-free schools.

	GREAT EXTENT	MODERATE EXTENT	SMALL EXTENT	NOT AT ALL
a. Sponsoring alcohol and drug prevention education programs for teachers and/or school staff	1	2	3	4
b. Sponsoring alcohol and drug prevention education programs for students and families	1	2	3	4
c. Sponsoring after-school activities/programs	1	2	3	4
d. Serving on planning committee/task force	1	2	3	4
e. Supporting efforts to increase school safety	1	2	3	4

7. How many times were the following actions taken in your district in the fall 1990 semester for disruptive behavior or student alcohol and drug use, possession, or sales? ("Times" refers to number of incidents, not number of students disciplined.)

NUMBER OF TIMES ACTIONS TAKEN FOR

	DISRUPTIVE BEHAVIOR	ALCOHOL AND DRUG USE, POSSESSION, OR SALES
a. Transfer to an alternative school (write NA if alternative schools are not available)	_____	_____
b. Suspension	_____	_____
c. Expulsion	_____	_____

8. To obtain an approximate socioeconomic measure for your district in order to better interpret the data of this survey, please indicate the percent of students in your district currently receiving federally funded free or reduced-price lunches.
