ABSTRACT

SHAPES--an acronym for the South Plains Child Care Management Services (SpCCMS) Helping, Assisting and Preparing Educators and Staff--is also the name of a preschool readiness curriculum that is being developed for use by administrators and teachers. The first phase of the curriculum development consists of the publication of five books to be used in training teaching staff. The present curriculum guide for day care centers is the third book in the series. Chapter 1 of the guide describes an approach to curriculum activities that requires teachers to design tasks that focus on children's individual needs within a unit structure. Chapter 2, which consists of lesson plans for a 6-week curriculum, is divided into six thematic units: (1) body parts; (2) family and friends; (3) autumn; (4) home; (5) animals; and (6) Halloween. A total of 124 suggested activities related to the lesson plans are listed in Chapter 3. The activities address children's physical, creative, cognitive, language, and social development. Chapter 4 offers curriculum suggestions concerning dramatic play; block play; the use of toys; and activities involving art, books, and music. Additional tips for curriculum development are suggested in Chapter 5. Blank lesson plans and activity sheets for teachers' use are appended. (BC)

PREFACE

SHAPES is an acronym for the South Plains Child Care Management Services (SpCCMS) Helping, Assisting and Preparing Educators and Staff. The SHAPES acronym also names this preschool readiness curriculum, which is being developed annually in phases for use by administrators and teachers. Phase I consists of five books to be used in the training of the teaching staff. It can be used by the trachers for referencing appropriate child care practices and curriculum, and for developing the first six weeks of lesson plans.

A Beginning Curriculum: The First Six Weeks is number three in the five-book series. This book is a guide to curriculum materials and activities, and assists planning for developmental differences in children. It includes six weeks of SHAPES Lesson Plans with accompanying SHAPES Activity Files. The last section includes curriculum suggestions for infants, toddlers, and school-age children.

SHAPES curriculum books published for Phase I include not only A Beginning Curriculum: The First Six Weeks, but four others: A Quick Study: Child Growth and Development Handbook; Guidance Concerning Minimum Standards; Environments That Make a Difference; and Training with the Trainer's Manual.

Acknowledgments

Authorship of a curriculum is only one aspect of the total development of such a publication. Commitment, support and contributions made by individuals actively involved in the SHAPES curriculum development make the result a product of teamwork.

Connie Hindman, Child Development Specialist, Texas Department of Human Services; Landereth Freeman, Director, South Plains Child Care Management Services; Bill Powell, Deputy Director, South Plains Community Action Association, Incorporated; and staff members acted as an executive committee providing ideas, identifying needs and correcting oversights to improve the SHAPES curriculum and teacher training. I express my deep appreciation for their generosity of time, thoughts and goodwill.

Amanda Smith served as the SHAPES project coordinator. Through her tireless efforts, the manuscripts were edited, and typed, and the layout and artwork evolved. She was also the executive editor for the project. I am especially grateful for her professional interest and loyalty to the SHAPES publication.

I want to thank Deborah Cunningham for the final edit of manuscript, and Sheri Lokken, Misty Dolan and Nancy Scott for the pages of typed manuscript. Dawn Jones, graphic designer, contributed greatly to the publication with her artwork.

An education committee of early childhood professionals contributed greatly through critiques and ideas they presented during the development of the curriculum. The table of contents, general format and final copy were field-edited by a group of highly dedicated and influential early childhood educators and administrators from the South Plains of Texas. Thanks to each of you for your commitment to young children and to this project.

CHAPTER 1

Approach to the Beginning SpCCMS Curriculum

Introduction to Curriculum

As day care expands in America, more training is needed in creating developmental programs for children. Teachers need organized guides for their planning process. A guide to curriculum materials and activities which allows for developmental differences in children helps teachers meet the needs of all students.

Ideally, an assessment of each child to be taught would be analyzed by curriculum experts. They, in turn, would guide the teachers in planning experiences developmentally appropriate for the inciridual children.

Today's massive enrollment of preschool children into day care and older children into afterschool programs has dictated a need for some very simplistic guidelines for the children's daily teachers. Lack of financial resources and rewards has resulted in large numbers of child caregivers entering the day-care scene with little or no formal training relating to the development and utilization of curriculum.

Curricula range in sophistication from an <u>in-depth program</u> to a <u>basic survival kit</u> approach. The in-depth program would provide for prescriptive teaching, starting with existing skills observed by the teacher and continuing with a progression of small steps ensuring success with each child. The basic survival kit approach includes, by design, the accepted curricula parts ensuring adequate activities for all children in a menu-driven format. One level of curricula provides individually prescribed component parts, often known as individual educational plans; whereas the latter, such as SHAPES, ensures that basic curricula includes:

- 1) major goals and learning objectives.
- 2) direct teaching experiences,
- 3) styles of learning adaptations,
- 4) environmental structure (suggested surroundings),

1

- 5) reinforcement.
- 6) use of learning materials, and
- 7) meaningful curriculum.

This basic curriculum is a good point for the minimally trained individual to begin a career as a day-care teacher.

What is Curriculum?

A curriculum arranges time, materials and tasks. Ideally, the environment is structured to meet the individual needs and developmental levels of each child. As teachers become better trained, this can become a reality. In the interim, a basic format is followed with each teacher being aware that all children mature at different rates and have varying personalities from birth. SHAPES is a curriculum which provides for:

- 1) individual lessons with all instructional objectives, teaching materials and daily work stored in a separate box for each child:
- 2) the unit approach, which focuses on the common characteristics and needs of children in teaching units of work such as <u>Pets</u> or <u>Halloween</u>; and
- 3) a combination of both the unit approach for a portion of the day, and time alloted for individual lessons during another portion of the day.

The curriculum may be developed entirely around unique characteristics and individual needs, or, through a unit topic approach, it may incorporate both individual and common characteristics of children.

The approach to curriculum activities suggested in this guide requires the teacher to design tasks and materials which focus on individual needs within the unit structure. While teaching the unit concept <u>Autumn</u>, for instance, the teacher presents tasks for the children which differ from one child to the next, and expects each child to respond at his own level of development. Whatever approach is chosen, a good curriculum is one which individualizes activities and is designed to get active responses from all the children.

What is the Curriculum Development Process?

Teaching and learning are the outcomes desired by the creators of a challenging curriculum. A curriculum that is designed to give ample opportunities for learning ensures success and growth for both the teacher and child.

The following checklist consists of a series of questions that are helpful in designing a curriculum. As teachers expand the units of SHAPES, they will want to use this checklist.

CULTICULUM DEVELOPMENT CHECKLIST

	Questions	Yes	No	Comments
1.	Have you assessed the entry behaviors in			
	each area of development when the child			
	comes to you?			
2.	In determining long-range objectives, have			
	you determined what the child will be able			
	to do after you teach in a particular area of			
	development?			
3.	Do you know what skills must be learned for			
	instructional objectives to be met?			
4.	Do you know how and when to sequence			
	instructional objectives so that the child			
	will have success moving from step to step			
	in the process?			
5.	Have you planned to teach the easiest first?			
6.	Have you gathered essential materials?			
7.	Have you individualized tasks?			
8.	Do tasks require active responses from the			
	child?	1		
9.	Have you taught the child an attention-			
	getting signal?		1	
10.	Do you know how to begin presentation of			
	material after getting her attention?		1	
11.	Will you know when he has met the objec-			
	tive?			
	tive?			
tivo	e?			

	Questions	Yes	No	Comments
12.	When you present material, do yo an to			
	test it out?		:	
13.	Have you planned to help children make			
	correct responses by prompting and/or		į	
	modeling when necessary?			
14.	Are you prepared to reward appropriate			
	responses immediately?			
15.	Are you prepared to correct inappropriate			
	responses immediately?			
16.	If a child cannot meet the objectives, are you			
	prepared to change them to ensure immedi-			
	ate success for the child?			
17.	Are the materials you have chosen condu-			
	cive to learning?			
18.	Do you need to change the teaching routine			
	and materials but stick to the present objec-			
	tive?			
19.	If a child is not doing or saying something,			
	are you prepared to restructure objectives			
	and activities?	1		
20.	If a child is rapidly completing activities and			
	becomes restless, are you prepared to en-			
	hance the learning routine?			

Teachers who can truthfully answer all questions with a YES are ready to teach young children and to expect maximum success. Time, training, practice, interest and commitment to teaching will help the teacher overcome any problem areas. The comment section is a good place to write down "how-to's" and/or "how to correct" ideas to later share and compare with the supervisor or a colleague.

Designed as the Beginning

SHAPES is an acronym for South Plains Child Care Management Services (SpCCMS) Helping. Assisting, and Preparing Educators and Staff. The SpCCMS curriculum is very basic in design and contributes to any program by having curriculum materials and guidelines in place from the beginning. The SHAPES model assists administrators and directors by encouraging teaching staff to learn how to develop and use curriculum. SHAPES is written to prepare new teaching staff who have had very little formal training, experience and education in child development. Educators and staff have an introductory curriculum that is based on appropriate child development scales and practices.

SHAPES is designed to produce various phases of curriculum development. As with most quality curricula designed and written for specific regions, a survey of the needs was made prior to the laying out of the format. Based on the findings, the first phase of SHAPES offers five books, packaged as Phase I Series.

- A Quick Study: Child Growth and Development Handbook
- Guidance Concerning Minimum Standards
- A Beginning Curriculum: The First Six Weeks
- Environments that Make a Difference
- Training with the Trainer's Manual

SHAPES, as presented in this Phase I package, is an effort to enhance teacher confidence in leading daily activities with children. These books provide basic concepts that can be used for further training and practice. SHAPES is designed for several phases of expansion that will lead to a full-year curriculum based on units appropriate for SpCCMS child care.

Survival Units

Six weeks of units with daily lesson plans and explicit activities are designed to encourage teachers to organize the resources needed for a smooth program operation. The units are not designed as the ultimate in child care but present a basic format that any teacher can use for survival in the first six weeks of the program year.

5

Quality curriculum will develop from using these simple daily lesson plans as guideposts. These units interweave the following skills as instructional objectives throughout the program:

- receptive and expressive language,
- · gross and fine motor,
- · cognitive.
- pre-writing,
- self nelp, and
- socialization.

Ideally, the functional levels of the children and the specific instructional objectives will determine the choice of activities. However, for SURVIVAL purposes, the activities were chosen to best meet a wide range of children's cognitive, emotional, social and psycho-motor needs. Even though the theme unit lesson plans may appear generic, they are based on sound knowledge of early childhood principles and practices.

As you will discover, the theme units are based on topics for each day. For example, when studying the theme of <u>Halloween</u>, the daily topic might be "pump) in." Also note the manner in which activities during the day center around "pumpkin." Research data clearly delineates the positive value that repetition and a variation of experiences with a concept or object have on learning. The correlation of all activities around the concept in the group lesson is a major emphasis within the curriculum guide.

Within the theme unit lesson, children will respond according to their individual needs. Based on observation of skill levels, the teacher will determine the sequencing from lower to higher skill levels.

Based on the knowledge of the developmental patterns typical of young children in the preschool years, "active learning" as an educational approach has been formalized and widely accepted by curriculum practices. By active learning, we mean learning that is initiated by the learner rather than "handed down" or "transmitted" by the teacher.

For an activity to be judged active, it must include five key ingredients.

- Materials A variety of interesting materials are readily accessible to children.
- Manipulation Children are free to handle, explore, and work with the materials.
- Choice Children have opportunities to set their own goals and select materials and activities.
- Language from the children Children talk about what they are doing and what they have done.

6

• Support from adults – Adults encourage the children's efforts and help them extend or build upon their work, by talking with them about what they are doing, by joining in their play, and by helping them solve problems that arise.

The Free Play Time throughout the units is clearly based on this High/Scope premise. As the SHAPES curriculum evolves from the survival stages, it will draw from some of the best of research-supported curricula available and develop into a format best fitted to the needs of young Texans.

Teachers with Minimum Training and Planning Time

It is next to impossible in even the most resourceful and well-planned early childhood centers to have adequate teacher-planning time. Day care center teachers who must care for children during full-day activities often find it difficult to find quality planning time. All too often, planning becomes a part of children's nap time, which is acceptable. Although teachers typically utilize this quiet time and other quasi-teaching time to plan and prepare the next day's activities, these times are not recognized as ideal planning periods. SHAPES will assist in reducing the time it takes to organize materials and, therefore, will be an efficient aid in time management.

Training on how best to use SHAPES will further assist those teachers wanting to use the curriculum. Those desiring to use it as a basic tool and to continue to enrich their program by activity files and learning center development will be well on their way to becoming teachers with quality skills. Training in the first phases of the SpCCMS is designed to address the most basic needs of teachers who have little or no training.

Key Learning Concepts and Activities

SHAPES was designed around key-concept experiences for children in self-help skills, language development, logical reasoning and emotional support opportunities. These key concepts encompass safety standards, health-promoting habits, appropriate learning environments, physical development, cognitive activities and social/emotional guidance.

Activities that occur repeatedly are related to themes and topics using the following child center and developmentally appropriate learning experiences. Vocabulary development is often introduced through theme experiences that include classification, seriation and number activities. Repetition and recitation of specific information within a framework of time and space ensure advancement of the child's knowledge. The following types of activities are encouraged in the SHAPES curriculum.

- Exploring actively with all the senses
- Discovering relationships through direct experience
- Manipulating, transforming, and combining materials
- Choosing materials, activities, and purposes
- Acquiring skills with tools and equipment
- Using the large muscles
- Taking care of one's own needs
- Talking with others about personally meaningful experiences
- Describing objects, events, and relationships
- Expressing feelings in words
- Having one's own spoken language written down by an adult and read back
- Having fun with language: rhyming, making up stories, listening to poems and stories
- Recognizing objects by sound, touch, taste, and smell
- Imitating actions and sounds
- Relating pictures, photographs, and models to real places and things
- Role-playing, pretending
- Making models out of clay, blocks, etc.
- Drawing and painting
- Observing that spoken words can be written down and read back

R

- Investigating and labeling the attributes of things
- Noticing and describing how things are the same and how they are different; sorting and matching
- Using and describing something in several different ways
- Distinguishing between "some" and "all"
- Holding more than one attribute in mind at a time
- Describing what characteristics something does not possess or what class it does not belong to
- Comparing along a single dimension: bigger/smaller, heavier/lighter, rougher/smoother, louder/quieter, harder/softer, longer/shorter, taller/shorter, wider/narrower, etc.
- Arranging several things in order along some dimension and describing the relationships (the longest one, the shortest one, etc.)
- Fitting one ordered set of objects to another through trial and error
- Comparing number and amount: more/less, same amount
- Arranging two sets of objects in one-to-one correspondence
- Counting objects
- Fitting things together and taking them apart
- Rearranging and reshaping objects (folding, twisting, stretching, stacking, tying)
- Observing things and places from different spatial viewpoints
- Experiencing and describing relative positions, directions, and distances
- Experiencing and representing one's own body
- Learning to locate things in the classroom, school, and neighborhood
- Interpreting representations of spatial relations in drawings and pictures
- Distinguishing and describing shapes
- Stopping and starting an action on signal
- Experiencing and describing different rates of speed
- Experiencing and comparing time intervals
- Observing seasonal changes
- Observing that clocks and calendars are used to m. : passage of time
- Anticipating future events verbally and making appropriate preparations
- Planning and completing what one has planned
- Describing and representing past events
- Using conventional time units in talking about past and future events
- Noticing, describing, and representing the order of events

9

What Theme Units Provide

The theme units follow a pattern by repeating daily the following major planning components:

- Welcome.
- Sharing Time,
- · Large Group Time,
- Free Play Time in the Learning Centers.
- Outdoor Play,
- Special Group Learning Activities,
- · Story Time, and
- Small Group Time.

Throughout the day, transitions should be made from one activity to another. These transition times also may be used as breaks for toilet and cleanliness needs. Snacks are scheduled for twice a day, and lunch is served near the noon hour.

Understanding and implementing each of the major planning components comes with training, practice and interest. Each major planning component provides various opportunities for learning and fun.

Welcome and Sharing Time

The welcome and sharing time represents a prime opportunity to:

- communicate with parents as they bring children to the program;
- get to know and assess children's development:
- expand, introduce, or review the theme and topic;
- practice for reinforcement and recall; and
- make each have day a pleasant beginning.

Large Group Time

All the children come together to enjoy and learn important things during large group time.

- Vary traditional songs with new themes or topics (i.e., activity flie has many songs).
- Teach traditional children's songs and sing one or two daily.
- Plan weekly for gross motor activities to use here and in outdoor play.
- Introduce new units or concepts with a sense of drama.
- Give special announcements or daily reminders as necessary.
- Present fingerplays, flannel board stories and other fascinating visual aids.
- Produce other entertaining and learning events.

Free Play Time in the Learning Centers

Children use a brief planning period with the teacher to select from one of the interest areas: art, blocks, library center, table toys, housekeeping, sand and water, and science and nature. Their choice will be the area where their work takes place. Play and work are used interchangeably throughout SHAPES. Maria Montessori defined play as a child's work. In observing children, adults gain an increased appreciation for the diligence, persistance and interest that evolve in the Free Play period.

The teacher will encourage children in decision-making that distributes them to the various learning centers daily. Her repertoire of theme and topic development coupled with their interests, developed and lacking, will be interrelated factors in setting their learning center priorities.

The children's photographs taken on the first day and framed in plastic picture-holder key rings will be distributed to the children as they tell the teacher what they have chosen to work on during the Free Play period.

As their decisions are made, they will hook the key ring on the hook provided in front of each center. If the teacher wants only four children in the Art Center, he will have four hooks out on the center sign.

The necessity for a teacher to maximize learning experiences planned for the children during Free Play will be discussed in more detail in Phase II of SHAPES.

Outdoor Play

Children will have the opportunity to randomly select from a wide variety of outdoor toys and equipment. Standard items and activities include safe climbing structures, wheel toys, sand and water play, woodworking, and gardening. Child-initiated games become everyday activities if the environment and the teaching atmosphere are appropriate.

To best develop themes and their topics, an array of special outdoor events, games and direct learning experiences permeates the SHAPES curriculum. More about appropriate environments for both learning centers and outdoor play is discussed in the SHAPES manual Environments That Make a Difference.

11

Special Group Learning Activities

Throughout SHAPES Theme Units, various special learning activities are suggested to ensure the teaching of basic concepts and these learning/pre-learning skills and abilities. These activities teach how to:

- match concrete objects.
- discriminate between objects.
- locate objects,
- match pictures.
- discriminate between pictures,
- · discern figure-ground.
- formulate visual capsule,
- identify basic functions,
- make associations.
- imitate verbalizations, and
- assign labels (form generalizations).

Each of these skills and abilities may be taught directly and indirectly through art, snacks, exercises, games, story telling, and music. Furthermore, the activities reinforce the development of self-concept.

Story Time

Language development occurs during story time, a cognitive learning experience. The stories reinforce Theme Unit Concepts by incorporating a variety of objects and characters relating to the Theme Unit topics into positive, moral development and specific relationship situations. Fingerplays and stories told on flannel boards, if planned well, are effective techniques to incite and hold children's interest.

Story time is frequently suggested prior to nap or quiet time as a transition for the children from active to restful states. However, more stories, fingerplays and flannel board stories should be incorporated throughout the daily curriculum to introduce and emphasize various points.

Children should hear, read, and re-read a series of classics. This repeated experience builds a wide range of recall and selectivity skills, and provides a basic cultural foundation of knowledge.

12

Small Group Time

- Small groups are designed to improve specific skills and to involve all children.
- Small group time allows special interest groups to learn new details or complete projects in the late-day period.
- Teachers can effectively use small groups to try our new ideas prior to spending elaborate planning and preparation time for a large group.

The teachers work through the SHAPES lesson plans by using the Activity File found in Chapter 3 of this book. Each activity has been written to accomplish specific objectives. Each activity is denoted as best suited to indoors or outdoors or both. Suggestions for the number of children, time span and target ages give some guidance for planning.

Activities accommodating many developmental areas at one time are grouped on the Activity Files as follows:

SHAPES Activities for

- Large Muscles
- Small Muscles
- Your Own Activities

Creative Activities

- Art
- Blocks
- . Dramatic Play
- Music
- Your Own Activities

Cognitive Activities

- Science and Nature
- Numbers
- Story Time
- Shape, Size and Color
- Five Senses
- Your Own Activities

Language Development

- Conversation
- Learning New Words/Concepts
- Story Development
- Your Own Development

Self-Concept/Social Development

- Build Self-Confidence
- Increase Social Awareness
- Handle Peer Relationships
- Share with Others
- Learn Group Play
- Practice Social Transitions

Each SHAPE activity is described and the materials are listed as needed.

Expand and Adapt SHAPES

Remember, SHAPES is being developed in phases. Phase I suggests only five themes and units for the first six weeks of preschool. In an expanded curriculum, some of these units would be lengthened (i.e., <u>Body Parts</u>: <u>Getting to Know Mel. Autumn</u>, <u>Where I Jave</u>, <u>Animals</u> and <u>Halloween</u>). These particular themes were chosen in order to give teachers an idea of which units should be developed in the early months of the program.

It is recommended that the teacher:

- expand the activity files;
- rearrange the daily schedule to fit the center;
- include more transition times; and
- change planning components, time arrangements, to best fit the center's hours.

The items of selection and time variances were chosen based on research and respected curriculum known to work. However, SHAPES should be improved by adding and altering according to the needs of each unique center.

THEME: Halloween

GOAL:

TO TEACH CHILDREN ABOUT HALLOWEEN, THROUGH EMPHASIS OF COGNITIVE AND LANGUAGE DEVELOPMENT, SOCIAL AND SELF-HELP

APPROXIMATE TIME	COMPONENT	ACTIVITY NO.	OBJECTIVE
7:30-8:30	Welcome	·	
	 Sharing Time Start teaching the five Halloween concepts and encourage conversation about them. 1. Black and orange are common Halloween colors. 2. Pumpkins harvested during autumn are carved into jack-o'-lanterns. 3. Children dress in costumes and go trick-or-treating from door to door. 4. Scary creatures, costumes, and stories associated with Halloween are only fantasy and are not to be feared. 5. Halloween safety and ways to have fun without harming other people or property are important aspects of this holiday. IMPORTANT: Entry hall must be decorated for Halloween. Be sure to always have an area to show off children's art. Make a large haunted house mural for your backdrop for the week's large and small group activities. 		To teach children basic concepts relating to Halloween
8:30-9:00	Large Group Time Continue discussing the Halloween concepts and season's activities for the upcoming week. Give some Halloween Facts and Customs. Sing Pumpkin Songs.	88 89	To introduce the Halloween theme with a variety of developmental approaches

Halloween

GOAL:

TO TEACH CHILDREN ABOUT HALLOWEEN, THROUGH EMPHASIS OF COGNITIVE AND LANGUAGE DEVELOPMENT, SOCIAL AND SELF-HELP

APPROXIMATE TIME	COMPONENT	ACTIVITY NO.	OBJECTIVE
2:10-2:40	Snack Serve assorted Halloween cookies and apple juice.		
2:40-3:40	Mask Making Time Use this time to develop rapport with children and assure good feelings about Halloween. Use key phrases such as: How do you look when wearing a mask or costume? How does a costume or mask make you feel? Are you sometimes afraid of costumes or masks? Which costumes are funny, scary, sad, and happy? Do you become a different person when you wear a costume or mask? Halloween costumes can be removed. They are not real but only representations of characters.	116	To instill cognitive concepts such as shape, size and color To promote social growth and acceptance
3:40-5:00	Have a Halloween Carnival! Set up and organize the outdoor area for fun and games to conclude the Halloween theme. (Be sure to plan ahead.) The following activites will ensure children and teacher pleasurable results: Have children wear the masks they made. Play Ghost Card Game. Sing: "Trick or Treating." Visit the Haunted House. Play Pass the Pumpkin. Examine Trick or Treat Sack. Sing: "Oh. Do You Have A Mask?" Break the Halloween Piñata. Enjoy Halloween Music.	117 118 119 120 121 122 123 124	To culminate the Halloween theme To encourage creative movement, cognitive development, and language acquisition
5:00-6:00	Clean Up & Small Group Activities

Target Ages:

All ages

Getting to Know Me!

Have a camera loaded and ready to take a picture of each child on the first day at the center. Have a special setting arranged for the picture taking. This can be done near the entry of the room with the parent watching before they depart. Talk to child with enthusiasm while taking the picture. Make him feel great! "Oh what a pretty smile!"

If no camera is available, plan to have pictures taken by vendor to sell to parents or have parents provide a recent picture upon enrollment.

Songs of Yesterday

- 1. Sing to the tune of "Here We Go 'Round the Mulberry Bush":
 - Verse 1:

This is the way I touch my head,

touch my head, touch my head.

This is the way I touch my head,

I touch (child's name) head.

Verse 2: This is the way I pat my head....

Verse 3: This is the way I shake my head....

Verse 4: This is the way I wash my head....

Pantomime, "Touch my head." On the last line, touch a child's head and have the group sing the child's name.

2. Sing to the tune of "If You're Happy and You Know It":

Verse 1: If you're happy and you know it, touch your head.

If you're happy and you know it, touch your head.

If you're happy and you know it, Then your face will surely show it;

If you're happy and you know it, touch your head.

Verse 2: Verse 3: If you're happy and you know it, pat you head.

If you're happy and you know it, shake your head.

Materials:

(You may choose to use a musical instrument or a recording of the songs but this is not necessary. Sing with the children, using good eye contact, facial expressions, and broad gestures. Children respond to the rhythms.)

Eve Tunes

1. Sing to the tune of "Here We Go 'Round the Mulberry Bush":

Verse 1: This is the way I touch my eyes,

touch my head, touch my eyes. This is the way I touch my eyes,

I touch (child's name) eyes.

Verse 2: This is the way I close my eyes....

Verse 3: This is the way I blink my eyes...

Verse 4: This is the way I roll my eyes....

Pantomime, "Touch my eyes." On the last line, touch a child's eyes and have the group sing the child's name.

Sing to the tune of "Row, Row, Row Your Boat";
 Look, look with your eyes, (cup hand around eyes)
 See what you can see.
 I see the boys and girls are here. (point to boys and girls)

I see a friend for me. (pick a friend)

3. Sing, "I Have Two Eyes and They're Both the Same Size." (from Sesame Street).

Materials:

(You may choose to use a musical instrument or a recording of the songs, but this is not necessary. Sing with the children, using good eye contact and animated gestures.)

"This Is The Way I Touch My Ears"

1. Sing to the tune of "Here We Go 'Round the Mulberry Bush":

Verse 1:

This is the way I touch my ears,

touch my ears, touch my ears.

This is the way I touch my ears,

I touch (child's name) ears.

Verse 2:

This is the way I pat my ears....

Verse 3:

This is the way I pull my ears....

Verse 4:

This is the way I wash my ears....

Pantomime, "Touch my ears." On the last line, touch a child's ears and have the group sing the child's name.

Outdoor

No. of Children:

1-20

Time:

:30

Target Ages:

Ear Games

- Have children press "Clickers" and "Squeakers" and listen to the sounds.
- Have children play castinets and listen to sound.
- Make cardboard puzzles with ears missing. Have children put "Ear" pieces in puzzle.
- Have children identify taped sounds of telephone, car horn, teacher's voice, dog barking, T.V. set, child's mother, etc. by touching correct pictures of source of sound or by verbalizing source of sounds.
- Place three rhythm instruments in front of children. Let children close their eyes
 while teacher plays one hidden from sight. Ask one child to touch the instrument played.
- Have children listen to a transistor radio with an ear plug, try on earrings, and talk on a telephone. Ask, "What do you hear?" or "What is on your ears?"
- Seat group in a circle with hands behind backs. "It" is in center with eyes closed. One child shakes a bell and "it" tries to guess who made the jingle sound. The child discovered becomes "it."
- Play "echo." Have children make the same sounds that come from behind a screen. Let them really enjoy these silly and happy sounds, whining, etc. Let 3 or 4 children go behind the screen. One speaks and the children on the other side identify him by his voice. One laughs and is identified, etc.

* Great fun for outdoors when possible.

Materials:

- taped sounds
- recorder
- pictures
- rhythm instruments
- castinets
- puzzles
- rhythm instruments
- radio
- earrings
- toy phone

:05-:40

Target Ages:

More Ear Games

- Match Concrete Objects Present two ears. Say, "This is an ear." Ask each child in turn to put the ear with the ear. Gradually increase number of irrelevant objects from which (s)he must select ear to match.
- Discriminate Objects Present several objects. Have each child touch the ear in response to verbal direction, "Touch the ear."
- Locate Own Have each child touch his/her own ear upon request: "Touch your ear, (child's name)."
- 4. Match Pictures Present several pictures of common objects. Have each child match the pictures of the cars.
- Discriminate Pictures Present a group of several unrelated pictures of objects. Have each child touch the picture of the ear in response to verbal direction, "Touch the ear."
- Figure-Ground Present a "busy" picture with many visual distractions. Ask each child to find the picture of the ear.
- Visual Closure Partially cover each of several pictures with paper. Ask each child to find the picture of the ear.
- Function Ask, "What do we do with our ears?"
- Association Ask, "What goes with the ear?" Use related pictures or objects including hearing aid, ear muffs, etc., with several unrelated objects or pictures.
- 10. Imitate Verbalization Present an ear and ask, "What is this? Say, 'Ear." The child will imitate "Ear."

Nose Tunes

1. Sing to the tune of "Here We Go 'Round the Mulberry Bush":

Verse 1:

This is the way I touch my nose, etc.

Verse 2:

This is the way I scratch my nose, etc.

Verse 3:

This is the way I wipe my nose, etc.

2. Sing to the tune of "If You're Happy and You Know It";

Verse 1:

Touch your nose.

Verse 2:

Scratch your nose.

Verse 3:

Wiggle your nose.

3. Sing "My Little Nose Goes Wiggle, Wiggle, Wiggle" to the tune of "This is the Way We Wash Our Clothes":

Verse 1:

My little nose goes wiggle, wiggle,

Wiggle, wiggle, Wiggle, wiggle,

My little nose goes, wiggle, wiggle

Wiggle, wiggle, wiggle.

Verse 2:

My little eyes go blink, blink, blink (repeat).

Verse 3:

My little head goes up and down (repeat).

Materials:

(You may wish to add a musical instrument or provide a recording of the songs. Sing with the children, using good eye contact and exaggerated gestures. Children enjoy your enthusiastic participation.)

About Noses

Storytelling About Noses

- 1. Use a flannel board to tell a story of a little girl walking home from school. She smells flowers, hears birds, and sees a friend. It makes her very happy. She comes home and tells her mothe. what she smelled, heard, and saw. Use felt cut-outs of school. girl, mother, flowers, bird, and a boy to illustrate story.
- 2. Talk about elephant's nose:

An elephant goes like this and that.

He's terribly big and terribly fat.

He has no fingers.

He has no toes.

But good gracious, what a NOSE!

Materials:

- flannel board objects

Draw Me

Have each child lie down on long strip of newsprint or butcher paper while teacher traces around the body to get the outline of child. Ask the child to lie face up. Help the child cut out her silhouette.

Additions:

Materials:

• markers

• tape

• butcher paper

• yarn or paper hair

- Paste on yarn or paper strips for hair
- Help child to some degree with coloring in details so they will be proud of exhibit.
- Place on wall until the end of unit.
- (If your entry area will accommodate the big dolls, it is a nice conversation piece for welcome time with parents.)
 (You may have to do a few each day if class is large in size.)

"Fest About People" Songs

Sing to the tune of "The Farmer In the Dell":

Verse 1: The farmer takes a girl (boy).

Verse 2: The farmer takes a daughter (son).

Sing "Going to Dance" to the tune of "Mulberry Bush":

Verse 1: Come along girls, we're going to dance; Going to dance; going to dance; Come along girls, we're going to dance;

Early in the morning.

Verse 2: Don't we look pretty when we're dancing, When we're dancing, when we're dancing, Don't we look pretty when we're dancing, Early in the morning.

Begin the song and motion to girls (and then boys) to join you. Have children hold hands and wilk in a circle as they sing. Eventually, phase out any motions. 1—the children decide if they are boys or girls and if they should be in the circle.

Materials:

large cardboard box

a long sock

paper to cover the box

toothbrush, golf ball)

:30

Target Ages:

Sensational

- 1. The teacher fills a large cardboard box with assorted small objects and covers it with heavy paper, having first made a hole in the paper and attached a long sock.
- 2. Each child in turn reaches into the box through the sock, feels the object one by one, and tries to identify and describe each obtect.
- 3. Teacher and children discuss how the sense of touch helped them learn about the things in the box.

Similar activities can be set up for the other senses. For instance, for smell there can be small bettles filled with liquids to be identified (vinegar, ammonia, peppermint oil, etc.); for hearing, opaque bottles or boxes with one object in each (penny, key, pin, jingle be.) to be identified by shaking the receptacle.

"Concentration" is a good game for sight: Present a tray containing eight to ten small objects; remove one object; present the tray again. Can the children identify the missing object?

various small objects (e.g., pencil, sandpaper, cotton ball, key,

No. of Children:

1-20

Time:

1 hour

Target Ages:

Preschool to Older

Football Activities

Football Player Exercises: Do the following: jump and click heels together, run in place, and jumping jacks.

Football Throw: The inner tube to end of a rope. Suspend from a swing set, clothesline, or tree. Place at eye level. Stand appropriate distance away and throw football through inner tube. Variations:

- a. hike ball through tube
- b. kick ball through tube
- c. throw ball through tube while it is swinging
- d. change heights of tube

Football Relay #1: Form two lines. The first child in each line holds football and runs a specified distance to a line on the floor. He touches the football to the line and runs back, handing the football to the next child. Repeat until everyone in line has completed the drill. Variation: When child reaches the line, he can toss or roll the football to the first child in his line.

Materiais:

- inner tube
- rope
- footballs

Nut Count

1. Together Activity: Provide several varieties of nuts. Have children sort them according to variety and size. Let them arrange the nuts in rows, circles, or patterns. Then have them form a tree gluing nuts on according to variety with the largest variety at the bottom (see figure).

3. Help children sort, count and weigh nuts. Decide whether five acorns are heavier than five chestnuts, etc. Talk about gravity or what happens when one drops a nut.

Make Applesauce

Applesauce: 3 cored, sliced apples, 2 cups water

Place water and apples in electric skillet. Boil until soft. Mash in a rotary food press or food mill with metal paddle.

Variation: Peel apples. Boil until soft. Blend in blender.

Variation: Place peeled apples in microwave for a brief period, until soft, then blend in a blender.

- 1. Plan for earlier boiling and cooling of apples.
- 2. Children love to be involved in preparing and cooking.
- 3. Serve in small paper cups with plastic mini spoons.
- 4. Recipe will serve 6-10 children.

Target Ages:

Block Printing with Fruits and Vegetables

Use foods with natural juices (e.g., beets, pomegranates, tomatoes), or use fall-colored tempera paint. Cut each into a size convenient for child to grasp. Stamp food on to paper towel, newsprint, or other absorbent paper.

Variation: Dip fruits or vegetables which do not have enough natural juices into paint and then stamp them on paper.

Other tips:

Materials:

fall-colored tempera paint

interesting vegetables

- a. Use a cross-section of cabbage. It makes an interesting design!
- b. Use a potato cut in half. Make a pattern by cutting a design approximately 1/8" in depth into the flat surface of the potato with a knife. Remove background by cutting to the design from the outer edge of the potato. Leave top half of potato for child to hold.

Fall Finger Painting

Mix red and yellow paint on paper. Presto! Orange appears. Encourage finger painting in the following ways: zigzags like lightening, mountains, or fire; wiggle lines like a worm, fish, or snake; arcs like waves; circles or loops like sun, moon, or flowers.

Variation: Use different parts of the hands (palm, side, or fingernail). Note: Finger paint can be made by adding soap flakes to liquid tempera and shaking. Increase amount of soap flakes to thicken paint.

(Finger painting reiniorces new concepts using the kinesthetic modality for learning.)

(Choose different color combination each time you choose this

A Group of Fingerplays

Our school is a friendly place.

Each child wears a happy face. (fingers to corners of mouth) There are books, toys, and lots of space. (spread arms out) We sometimes play games or have a race. (move two fingers) We make new friends at school.

We share with them because that's the rule! (shake index finger)

Way up high in the apple tree, (hands above head)
Two little apples smiled at me. (form apples with each hand still raised)

I shook that tree as hard as I could, (shaking motion)
Down came the apples. (drop hands)
Ummmmmmm. Were they good! (rub stomach)

Two little houses all closed up tight. (make fists)
Open up the windows and let in the light. (open fist)
Ten little finger people tall and straight, (ten fingers)
Ready for school at half past eight. (walk with fingers)

Five preschool children in a row. (five fingers)

The first one is wearing a bright red bow. (raise respective fingers)

The second one's hands are in his lap.

The third one has a new blue cap.

The fourth one says, "It's a nice day."

The fifth one met a friend on the way.

Who is that friend so new?

Is that friend you? (point to friend)

A squiggle little worm into my apple bit. (wiggle index finger)
He chomped and chomped until the core he hit. (place index finger in center of fist)

I asked him why he did it,

And though it sounds absurd, (shrug shoulders)

He said, "I love apples." (rub stomach)

Now that is what I heard.

Homemade Peanut Butter with Football Crackers

Shell one pound of peanuts. Chop till fine in blender. Add 1 to 2 teaspoons of cooking oil. Add salt to taste. Spread peanut butter on oval crackers.

It is fun to let children shell peanuts to give them knowledge of what peanuts are like. However, you can use mostly pre-shelled peanuts to save time.

Target Ages:

Pattern Play

- 1. The teacher sets out colored straws in a repeating pattern. (These can simply be placed in front of each participating child; or, if a group is participating, they can be glued on a piece of poster paper which is hung or propped up where the children can all see it.)
- 2. The children use their straws to copy the patterns, matching both color and position of the straws.
- 3. Next, each child creates his/her own pattern and then recreates it exactly.

Variations:

Have children work in pairs: one child lays out a pattern and his/her partner reproduces it, then the children reverse roles.

Use objects other than straws; colored blocks, large wooden beads, or buttons are examples.

Follow-up:

Use a combination of objects to make the pattern to be copied (e.g., red bead, two blue straws, yellow block); the children match object, color and position.

Materials:

- colored straws
- glue
- poster board

Blockbuster

- 1. Teacher and five or six children sit in a close circle on the floor, each with a pile of blocks (or there can be a communal pile in the middle). The teacher builds a block tower.
- 2. Starting with the first child on the left, the teacher says, "Build a tower taller than mine." On to the next child: "Build one shorter than Ronny's." And the next: "Build one shorter than Lena's." And so on, around the circle.
- 3. After each child has built his or her tower, the group decides: Is it the height the teacher asked for? They do this before the next child gets his or her "assignment."
- 4. When all the towers are built, the children get to knock them down.
- 5. As a finale, the teacher gives all the children 1 minute, in which each is to build the tallest tower possible. The children work simultaneously, and when the minute is up, they decide which tower is tallest.
- Other activities: Play a "guessing game" with the children. Go around a circle of children with questions like "Name something taller than you are" and "What can you name that's smaller than this book?" Each child answers as quickly as possible. To give children a "feel" for weights, have them hold two objects of very different weights, one in each hand.

Fall Fingerplays

- 1. Pretty leaves are falling down, Green, orange, yellow, and brown. Here comes one colored red. It landed on my head!
- 2. "Come autumn leaves," said the wind one day. "Fly into the sky with me and play. We can dance and twirl Until the days grow cold; Then into a corner you will curl."
- 3. Autumn leaves float quietly down and form a carpet on the ground. But when those leaves are stepped upon, Listen and they will make a crackling sound.

(flutter fingers) (point to colors)

(tap head)

(motion to come) (lift hand upward) (twirl) (shiver) (curl into ball) (flutter fingers & whisper) (move hands just above floor)

(pretend to step on leaves)

(place hand behind ear)

Fall Fingerplays (cont.)

4. Leaves are falling to the ground.
Some are orange, others brown.
Flowers disappear from sight.
Birds fly south in patterned flight.
Fall is here. Warm weather is

gone. Soon the snow will cover the lawn.

5. Five autumn leaves hanging from a tree.

The first one said, "Very soon we'll be free."

The second one said, "I'm falling to the ground."

The third one said, "I'll sail to town."
The fifth one said, "Fall sure is great."

(hold up respective fingers)

(flutter fingers)

(pretend to fly)

(hold up five fingers)

(shiver)

Fall Calendar

1. From paper, cut thirty-one leaves.

construction paper (fall colors)

- 2. Write numbers from 1 to 31, one on each leaf to indicate the dates on the October calendar.
- 3. Place correct number on calendar each day in October.
- 4. Discuss dates, days of week, and holidays.

Variation: Instead of leaves, use footballs, football players, ghosts, pumpkins, or apples. Use cake to signify a birthday celebrated during the month.

(Teacher makes the basic calendar grid ahead of time and may use the September calendar as a model.)

Where We Live Collage

- 1. Stretch out a long piece of butcher paper on the wall.
- 2. Explain to children that they are going to make a marvelous mural of "Where We Live" during the week.
- 3. Divide the paper into five parts (1 block for each day -- as you study -- homes, living rooms, kitchen/dining, bedroom, bath).
- 4. Lay the mural paper down on table (roll up unused portion).
- 5. Have plenty of pictures cut out from home magazines and catalogs of homes, living room, kitchen and dining, bedroom and bath fixtures and furnishings.
- 6. Allow children to choose items and paste them on the paper to build a collage (after adequate discussion).
- 7. This activity will be repeated each day until the children have completed the mural.

(Parents may be involved and invited to cut out and bring pictures to

Target Ages:

House Boxes

- 1. Have several refrigerator and washer/dryer boxes each precut with a door and a couple of windows.
- 2. Explain to the children that they may go into them, but to treat them gently, as they would their own home.
- 3. Define an area for the houses. Have the different size boxes in a row.
- 4. Let the children paint the houses.
- 5. Decorations of added details are next (teachers will want to guide to increase learning and joy).

Suggestions:

- Let children work on outdoor houses throughout the week.
- Have one house for every 4 or 5 children, if at all possible.

Materials:

- large appliance boxes
- paint
- furniture from dramatic play -- for the last part of the week
- details -- curtains, shatter-proof flower boxes

Shoe Box TV Theatre

Have each child bring in a shoe box. Help child cut out one side for a TV screen. Have child wrap pre-cut paper around index finger and tape together to form a cylinder. Draw face on cylinder and add string or yarn to tip for hair. Each child now has a finger puppet to perform on the shoe box TV (see figure).

If preparation time is scarce, several children can share one TV. However, this is a favorite take-home learning toy.

Shoe boxes can be prepared by aides, volunteers or older children the day before.

Have children act out what their parents talk about in the living room.

Turtle Fingerplay

1. I had a little turtle,
I thought that he was dead (balled fist)
I tapped him on the back (with other hand)
And out popped his head. (out points finger)

2. "There Was a Little Turtle," by Rachel Lindsey

There was a little turtle, (make a small circle with hands)
He lived in a box, (make a box with both hands)
He swam in a puddle, (wiggle hand)
He climbed on the rocks. (climb finger of one hand up over the other)

He snapped at a mosquito, (clap hands) He snapped at a flea, (clap hands)

He snapped at a minnow, (clap hands)

He snapped at me. (point to self)

He caught the mosquito, (hold hands up, palms facing forward; quickly bend fingers shut)

He caught the flea, (same motion)

He caught the minnow, (same motion)

But he didn't catch me. (bend fingers only half way shut)

Animal Rhythm Game

Flay a rhythm game. Have the children stand in a circle and play appropriate music so they can "jump like a cat, run like a dog, fly like a bird, swim like a fish and walk like a turtle." This can be played without music by having a child hold up a picture of one of the named animals as a cue of which to imitate.

Dog Songs

Singo "Bingo":

There was a boy who had a dog, And Bingo was his name. Oh! B-I-N-G-O, B-I-N-G-O, And Bingo was his name-O.

Sing "How Much Is that Doggy in the Window?":
How much is that doggy in the window,
The one with the waggily tail?
How much is that doggy in the window?
I wonder if he is for sale?

Sing "I Love My Dog" to the tune of "Down In the Valley":
I love my doggy, my doggy loves me.
I love my doggy, my doggy loves me.
I love my doggy, bow wow, bow wow, bow wow.

Sing "Old MacDonald" with a dog verse. Conclude with "Old MacDonald had some pets."

Go Fishing for Treats!

Use boxes of raisins or other small packaged treats as the fish. Have a paper clip clipped or taped to the treat.

Make a "fishing rod" by tying a string with a large magnet on the end of a vardstick.

The treats are put in a large fishbowl or empty aquarium tank. The children go fishing by lowering the magnet into the bowl. Ask, "What did you catch?"

Materials:

- magnets
- yard sticks
- string
- paper clip
- treats
- tape
- blue cloth or tank

(A blue cloth or designated floor area for lake may be used instead of tank or bowl.)

Halloween Facts and Customs

Select appropriate information to share with children.

Facts:

Material.

- 1. Halloween takes place on October 31.
- 2. Children wear costumes and masks.
- 3. Many go trick-or-treating.

decorations about center

Halloween pictures

sample costumes

4. Parents or teachers may carve Jack-o'-lanterns out of pumpkins.

At Halloween parties, people enjoy fortunetelling, hearing stories about ghosts and witches, and bobbing for apples.

Historically, trick-or-treating is the main Halloween activity. Costumed children go from door to door saying "trick or treat." Neighbors give out treats to prevent children from playing tricks on them. In recent years, communities and schools have held carnivals on Halloween for safety reasons.

Pumpkin Patch

Help the children make a pumpkin patch with pumpkin vines. pumpkins and leaves. Make the vines by cutting large spirals from green construction paper. Hang them up and let them run along the edges of the room or on a designated table.

Sponge paint pumpkins and add to the vines. When sponge painting, the paint should be thick and placed in flat containers, a small amount at a time. Show children how to dip the sponge on the flat side, without pressing, and paint on paper with an "up-down" motion rather than a smearing motion. Let the children experiment on newspaper before painting the pumpkins.

Cut large green leaves and let the children glue them to the vine. (See figures.)

Target Ages:

Black Cat Masks

Have children make cat whiskers. Depending on the level of the child, do one of the following:

- a. have child glue pre-cut whiskers in designated place on cat's face; or
- b. have child cut out whiskers from black construction paper and paste on cat's face; or
- c. use pipe cleaners and glue them on for whiskers.

Have yarn for the mask tie.

Let children be creative!

Materials:

- pipe cleaners
- black construction paper
- glue
- brightly colored markers (for eyes)
- hole punch
- yarn

Black Cat Play Time

Gross Motor:

- 1. Have the children creep, walk and jump like a cat.
- 2. Play "Catch the Cat." Put cat mask on one child. Everyone chases the "cat." The child who catches him gets to be the next cat. Let every child have a turn.

Mystery Bag Game

Explain what a mystery is. Put a number of objects having no sharp edges in a large bag. Examples are unsharpened pencils, beads, blocks, and sponges.

One player reaches into bag for an object and after feeling it, tries to describe it without looking. He then guesses (with or without help) what the object is and removes it to see if he is correct. Repeat until all have had a turn.

Variation: Adult describes object in bag, and players try to guess what it is.

Materials:

- safe objects
- bag

Halloween Costume Box

A new twist: an adult activity that can include the children.

Costume Box: Adult and children helpers prepare a box with masks, costumes, and accessories. Allow children to experiment with items. This may ease the fears of some of the children. The following can be made for the costume box.

- A. Basic Cone Hat: Fold 12" x 24" paper in half and cut out quarter circle. Open and roll half-circle into cone. The curved side is the bottom of the cone. Adjust to fit head. Staple or tape together.
- Make into clown hat by adding pompoms, yarn, or paper design.

 B. Witch Hat: Make basic cone hat from black construction paper.

 Cut one large circle for brim. Place cone hat in center and trace around bottom of cone. Draw tabs inside circle and cut out inner circle, leaving tabs. Tape tabs to inside of cone.
- C. Egg Carton Mask: Cut holes in bottom of two adjoining cup sections of egg cartons. Staple elastic string to sides or tie strings to holes punched in sides of mask.

Materials:

Halloween Costume Box (cont.)

- D. Basic Mask: Fold 3" x 8" piece of construction paper in half. Starting at fold, draw half mask. While mask is folded, cut mask from paper and cut holes for eyes. Open mask. The strings through holes punched in sides of mask.
- E. Owl Mask: Fold plastic holder from six-pack cans of pop in half and staple at center. Wrap pipe cleaner around each side of mask. Bend pipe cleaners to fit around ears. Tape construction paper nose to mask.

- F. Paper Bag Wig: Use a large paper bag that fits over head. Cut a large rectangle from front section of bag for face. Fringe bottom of bag. Curl fringe by rolling tightly around pencil.
- G. Mustache: Fold construction paper. Starting at fold, draw half a mustache shape. Cut shape from paper. Tape mustache above upper lip.
- H. Beard: Fold piece of construction paper in half and fringe bottom edges. Curl fringe by rolling tightly. Punch hale in each side and tie string through holes.

"Witch on Halloween"

Sing to the tune of "Farmer in the Dell":

Verse 1: The witch on Halloween, the witch on Halloween,

Heigh ho, lets trick or treat, the witch on Halloween.

Verse 2: The witch chooses a goblin.

Verse 3: The goblin chooses a bat. Verse 4: The bat chooses a cat.

Verse 5: The cat chooses a ghost.
Verse 6: The ghost says, "Boo!".

Verse 7: They all screech and scream.

Stand in circle. Players hold hands and move clockwise while singing first verse. Adult chooses witch who stands in center of circle. At end of second verse, the witch chooses a goblin, who joins her in the center of the circle. Continue until all characters are chosen.

"Hookey Spooky"

Sing to the tune of "Hokey Pokey":

Put your right hand in, take your right hand out. Put your right hand in and shake it all about. Do the Hookey Spooky and everybody shout, "That's what it's all about. BOO!"

Stand in circle. Players do motions for first two lines. As third line is sung, children turn around. As fourth line is sung, players slap thighs twice, clap hands twice, and raise hands above head. Repeat, using other parts of the body.

Variations:

- A. Instead of the last two lines, use: Do the Hookey Spookey and hoot like an owl, "That's what it's all about. HOOT!"
- B. Give each child a black or orange crepe paper streamer.

Materials:

black and orange crepe paper streamers

Trick or Treat Map

Child cuts from paper a small house which he decorates. Adult writes home address above door. Place houses on single map. Adult identifies home address of each child. Use map to indicate route when pretending to go trick or treating. When each child's "house" is reached, he can identify house, address, or numbers in address, depending on his ability.

Variation: Place picture of child in door of his "house."

Remember:

Learning addresses is a difficult concept for young children and needs to be reinforced through repetition.

It is best if the teacher makes a map (not too detailed) and includes the children's streets on the map.

Materials:

- teacher-made map
- little house picture
- markers or crayons

Ghost Take-Homes

- A. Tissue Ghost: Roll a facial tissue or aluminum foil into a ball and place in the center of another tissue. Attach string, twister weal, or rubber band below ball to secure head. Leave ends free. Glue two small black circles on face to make eves.
- B. Ghostly Pop-out Card: Fold a piece of black paper in half for the card. From white paper, cut a ghost almost as tall and half as wide as the card. Fold ghost down the center. Unfold ghost and card. Lay ghost inside card, matching folds. Folds should bend in opposite directions. Tape sides of ghost to card. When card is opened, the ghost pops out.
- C. Clothespin Ghost: Paint round-top clothespin white. Make two dots for eyes with felt-tipped pen. Glue two sleeves cut from paper to body. Note: Prongs of clothespin will fit over side of nut cup filled with treats.
- 3-D Ghost: On dark paper, draw or paint a scene of Halloween night. To create ghost, paste center of white facial tissue to drawing.

Variations: Paint a picture of a pumpkin patch instead of a night scene; or use S-shaped styrofoam packing pieces for ghosts.

Ghost Card Game

Make a set of cards with pictures relating to Halloween. Make a matching set. Spread all cards face down on table. Players take turns turning two cards at a time. The first player to see two matching cards turn over, says "Bool" and takes both cards. Play until all cards are matched.

Variation: Make pairs of cards that are associated (e.g., pumpkin/ jack-o'-lantern, witch/broom, owl/tree, etc.) The first player to recognize association says "Boo!" He then explains how the two are associated.

Target Ages:

Preschool

Haunted House

Decorate an area like a haunted house. Huddle together and tiptoe quietly through the make-believe woods to the house. "Whoo-whoo!" "Who made that srange noise? Don't be afraid. It's only an owl." Slowly open the door to the haunted house. "Creak!" Enter and push away the cobwebs. "Look! There's a staircase. Let's climb the stairs. There's a door at the top. Open it carefully. AH-H-H! There's a GHOST!" Close the door. Run down the stairs. Open the front door. Scamper through the forest. Run home and lock the door. "Whew, safe at last."

Encourage children to act out and improvise imaginatively responding to teacher's narration.

Target Ages:

Preschool

Pass the Pumpkin

Sit in circle. One player sits, with eyes closed, in the center of the circle. When the music starts, remaining players pass a small pumpkin or ball around circle. When the music stops, the player holding the pumpkin conceals it in his hands. Other players pretend to be holding it also. The player in the center is given three turns to guess who has the pumpkin. Child holding pumpkin then goes to center of circle. Repeat.

CHAPTER 4

Some Curriculum Suggestions for Infants, Toddlers, and School-Age Children

The SHAPES curriculum is designed for preschool children being served by SpCCMS. Later phases will address specific curriculum design for infants, toddlers, and school-age children. Meanwhile, a random selection of activities, suggestions and hints that might be of some assistance in working with these other age groups is provided in this chapter.

These selected activities have been categorized by development area (emotional, cognitive, physical, and social) and by level (infants, toddlers, and school-age) into easy-access charts. These charts represent six major play activities: dramatic, blocks, toys, art, books, and music.

DRAMATIC PLAY FOR INFANTS

EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
As you change an unhappy infant's diaper, play peek-a-boo or "fly" the infant in the air like an airplane to cheer him. Infants learn to associate routines with happy times with you. Encourage an active infant to flap her arms like a bird. Soothe quiet infants with stories about family life. When you respond to children as individuals, they learn that they are special.	Give infants a variety of dramatic play props that can be picked up and explored but not swallowed. Infants need lots of sensory expertences to learn. Provide infants with props such as a radio or a kitchen timer that illustrate cause and effect. Let the infants see what happens when the radio is turned onor the kitchen timer rings. Children learn through discovery. Talk with infants on play telephones, encouraging them to talk or make noises with you. Children learn land age by observing you and trying a mimic what you do.	Allow infants to crawl throughout the dramatic play area, pull themselves up on furniture, and explore things. Let infants play with dramatic play props on their own, trying out hats, banging pot lids together, standing up to be admired in a mirror, etc. Children can develop their muscle skills at the same time that they are learning about dramatic play. As children learn about these props, they also develop small motor skills and improve their coordination and balance.	Encourage infants to act out things the two of you do together, such as eating breakfast, riding in a car, walking in the park. Infants develop social skills when they observe and interact with older children.

DRAMATIC PLAY FOR TODDLERS

71.507101111	GOOLIMA		
EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
Give toddlers real props that adults use: dress-up clothes, briefcases, old telephones. Toddlers feel more grown-up when they can use the same things you and their parents use. Introduce only a few dramatic play props at a time. Too many props at once become overwhelming. Toddlers have an opportunity to shine when they can perform an activity well and show it to you over and over again. Encourage toddlers to act out stories featuring family members or people at the family child care home: "What do you think your daddy would do if he were in this kitchen?" You help strengthen the bond between children and parents, and between children and providers when you remind children of all the things done together.	Encourage toddlers who are learning to pour juice for snack to serve you "tea" when they are playing make-believe. This repetition of sidils in different settings helps children learn. Ask toddlers to describe their actions for you: "Where are you taking your baby doil? or "Is your baby sad?" This will help children develop language skills naturally. Keep on hand, prop boxes such as grocery store, hospital, and baby, so that toddlers can try something new when they are ready. Children like to be in charge of their own learning. Prop boxes allow them to choose their next learning activities.	Provide enough space in the dramatic play area so that children have room to move about freely while play-acting. Toddlers learn when their bodies and minds work together. They also enjoy the experience more. Encourage toddlers to use props that develop physical skills, such as silverware, an eyedropper, or a stethoscope. As toddlers have fun and play, they develop small muscle skills at the same time.	Let a child who doesn't want to be involved in dramatic play watch from a safe distance. Gently encourage the child to join in: "What do you think we should do with this stethoscope?" Some toddlers need help in developing social skills. They'll feel "safer" with your guidance. Provide lots of familiar props and encourage children to imitate activities they've seen adults engage in, such as washing dishes, reading a magazine, mowing the lawn, etc. Children learn through imitation. Because they admire adults, acting like grown-ups makes dramatic play fun as well as educational.

DRAMATIC PLAY FOR SCHOOL-AGE

EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
Encourage school-age children to use dramatic play costumes and props on their own without having to ask you for permission first. Older children need to feel independent. They are more likely to want to do dramatic play if it's their choice, not yours. Let school-age children know that it's all right to play dress-up if they want to. Have special props, such as a magician's hat and wand, just for them. If you have props on hand that appeal exclusively to the older children, you send them the message that they are welcome to play with the dramatic play materials. Some older children may need help in understanding that dramatic play isn't just for babtes.	Ask school-age children to help you assemble particular prop boxes such as ones for playing school or office. School-age children enjoy special assignments, especially those that lead to a product everyone can admire. Check out a book of plays for children from the library. Encourage the school-age children to stage a short play for the younger children or their parents. School-age children are natural performers; they love being directors and stars. You can tap into this motivation by making the stage production a learning experience. Have the children act out a favorite TV game show. This gives children an opportunity to play act, to direct, to show their knowledge and skills as contestants, and to carry out rules they've seen on TV in a "real life" enactment. Ask the children to write a play, puppet show scene, or a skit that could be performed either by the children or by the family child care children. Children will learn to appreciate the uses of drama when they get to decide how it should be enacted. As authors, they can make their voices heard.	Set up a puppet theater in which school-age children can perform. Introduce marionettes as well, if appropriate. Puppetry demands skills of coordination, balance, and muscle control. While having fun, school-age children can improve their physical skills, too. If a child shows interest in acting or puppetry, get information from the drama department at the local high school or the public library on how to prepare for this work physically. By encouraging children's special interests early on, you can truly enrich a child's life.	Suggest that school-age children work together with friends from school to develop a skit about a topical subject, such as how to say "no" to drugs. Skits not only give children a chance to work and play together but provide a forum for dealing with issues that may be problematic. A group skit on dealing with peer pressure serves both functions. Encourage children to express their opinions on subjects such as school life, politics, or rock and roll as dialog for a puppet show or a skit. Older children need socially acceptable ways of expressing their opinions and feelings about their world. Ask a school-age child to serve as the director of a skit involving younger children. Some schoolage children love being the boss; younger children look up to the older ones. You can help them understand the abilities and interests of the younger children.

BLOCK PLAY FOR INFANTS

EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
While changing diapers or putting children down to nap, give them soft, washable blocks to play with. By giving children something fun to do while you are attending to their basic needs, you show them that you want them to be comfortable and content. This makes them feel more secure about you and their world. Introduce infants to block play in ways that suit their personalities. Some infants will want to sit on your lap and watch block play; others will enjoy crawling around blocks that they can grab. Children will be more likely to enjoy playing with blocks if you adjust your approach to match each child's personality.	Give crawling infants soft, washable blocks that can be banged, punched, mouthed, and cuddled. Infants need to learn what blocks are like so that they will know how to manipulate them during play. For infants, this learning takes place through all their senses. Build a tower of soft blocks with infants. Let them knock the tower down. Keep doing this together for as long as the activity interests them. Children will learn about cause and effect when they have an opportunity to observe firsthand that certain activities (swalting at a tower of blocks) causes certain effects (the blocks topple). Repetition reinforces the concept. Drop a soft block to the floor from the air. As it lands, make a crashing sound such as "boom!" Language stems from sounds and noises that infants utter aloud. They learn to associate the sound with the activity.	Hold out a large soft block and beckon a child to crawl toward you for the block. You can encourage infants' physical development by using a favorite block as a "carrot."	Stay close to infants when you're first introducing blocks. Let children know that this is an activity you can do together. Infants will learn to associate block-building times with being with you. They will grow to be more independent in their play once they feel secure enough to venture off on their own. Let infants watch older children play blocks. Discuss what's going or and involve infants in the play, but don't allow them to disrupt the older children's activities. Infants enjoy group experiences. Older children, though, also have a right not to have their block towers knocked over by curious infants.

BLOCK PLAY FOR TODDLERS

The composition		DIRECTOAL	COCIAI
EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
Encourage children to take out and return blocks and block props on their own. Children will learn about responsibility and become more independent when you trust them to play with blocks on their own. Introduce toddlers to hardwood blocks before letting them play alone. Show how to stack blocks, match them, and so on. Learning takes place in steps. Toddlers need to feel competent with early tasks before they turn to more difficult ones. Provide wood or plastic people figures for block play. Ask a toddler, "Where do you think this Mommy and Daddy are going?" When you talk about the toddler's parents with them, you strengthen the link in their minds between home life and family child care life.	Give toddlers many opportunities to play with blocks on their own. Toddlers need lots of practice using skills. Block building allows children to reinforce these skills as they build. Ask questions as the children play: "How do you think we should move the blocks to get around this stop sign?" You can use the children's block play as a natural vehicle for extending their language. Regularly add new props and materials to the block play to maintain toddlers' interest. A variety of props will keep toddlers steadily involved with block play. With each new prop, the children can add a new dimension to their play.	Provide a clear, unobstructed space for block play where toddlers can move about freely as they build. Toddlers need space to interact physically with blocks so that they can fully enjoy the experience. Show toddlers how to even a stack of blocks to keep it from toppling over. Not only will stacking increase the children's enjoyment of block play, it will also improve their coordination and small muscle skills at the same time.	Bring toddlers together for block play: "Let's see what we can make from all these blocks. Sharon and Brian, could you both help me, please?" Toddlers may need your help in learning to share and play cooperatively. Show a toddler how to make simple towers and bridges similar to the ones older children make. Young children want to do the things they see older children do. If you help them, they can build simple structures successfully. However, be careful to avoid taking over; the toddler should always be the primary engineer.

BLOCK PLAY FOR SCHOOL-AGE

EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
Give school-age children free time to use blocks in whatever ways they want. Refrain from always assigning children a specific project. School-age children respond positively to being granted free choice. Praise children frequently but sincerely. Compliment the child's efforts, not just the finished product. School-age children often seem so poised in their playing that they don't need encouragement. However, a coolexterior often hides self-doubts.	Invite school-age children to assist you in a project to make blocks from milk cartons. Many older children enjoy working on craft projects. Seeing them being used by the other children becomes an added source of satisfaction. Ask school-age children to sketch a construction before building it. This challenge helps children learn to think abstractly. Show children pictures of bridges and buildings and challenge them to make similar constructions using hardwood blocks. This encourages children to develop problemsolving skills in a game-like setting. Cive school-age children a building challenge to think through and discuss: "Can you make a bridge that the younger children could use to drive their cars over?" When they have explained their plans, have the children carry them out. By asking children to explain their approach to you aread of time, you help them put their ideas into words and plan through their actions.	Encourage children to develop increasingly elaborate structures. Find drawings in magazines that will inspire the children. Advanced building techniques require manual dexterity. This activity encourages physical skill development at the same time that it promotes creativity. Offer children a variety of special blocks to test their skills with: a selection of small pattern blocks for making designs and large hollow blocks, for example. Children have different strengths. If you give them a variety of materials to experiment with, most will find at least one type of block they can excel at using.	Encourage a school-age child to work with a peer on a special construction project. Older children are more apt to want to play with blocks if you approach the play as a social activity. Let children decide what a building or construction should look like, even if it goes against your own opinions. Children need to have their ideas respected if they are to be creative. You may be surprised at how well the children's ideas work out! Encourage school-age children to work with preschoolers on block building projects. Show the children how to offer assistance without taking over. Tutoring of younger children by older children serves both age groups well.

TOYS PLAY FOR INFANTS

EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
During daily routines, talk about the bears in a mobile over the changing table or wind up a music box to lull a child to sleep. Infants feel more secure when the routines in their lives are associated with pleasant experience. Match toys to infants' personalities. An active infant might enjoy shaking a rattle and throwing bean bags; a quiet infant may prefer cuddling up with a cloth doll. When you give infants toys that match their personalities, you also give them the message that they are respected as individuals.	Provide toys for infants to explore and manipulate, such as stacking rings, shape blocks, balls, and rubber animals. Children learn through all their senses. Toys that can be mouthed, punched, shaken, and easily grabbed are best for promoting learning. Give children toys that make noise when squeezed, wound, or shaken: squeezing doils, chime balls, clocks, music boxes, and mobiles. Infants can learn about cause and effect by shaking or squeezing toys that make noises. Wind up a musical mobile. Humor sing along with the tune and encourage the infant to croon along with you. Singing and imitating sounds lay a foundation for talking.	Place toys of interest to children just slightly out of reach so that they will have to crawl and reach for them. Monitor a child's frustration level during this time. You can promote large muscle skills by using infants' natural desire for play. Provide toys that will help infants practice skills such as nesting blocks for eye-hand coordination and push toys and trucks for muscle control. Toys can develop small motor skills in addition to teaching social and cognitive skills. As infants manipulate push-and-pull toys, they strengthen eye-hand coordination and the small muscles in their hands.	If infants have a hard time separating from parents, suggest bringing a special toy from home. By encouraging an insecure child to bring treasured things form home, you strengthen the link between the two places. Join infants in watching older children playing Lotto or another board game and comment on what is going on. This arrangement lets an infant who does not have the skills to join in, still feel a part of the group.

TOYS PLAY FOR TODDLERS

EMOTIONAL	COGNITIVE	PHYSICAL PHYSICAL	SOCIAL
Encourage toddlers to work with some of the simpler self-help boards, such as those with velcro fasteners. Learning self-help skills will enable toddlers todress themselves and become more independent from adults. Choose age-appropriate toys for toddlers (e.g., five-piece puzzles, not ten-piece ones). Toys should challenge toddlers but not frustrate them. By carefully observing what a toddler can and cannot do, you can provide just the right toys. Have dolls on hand that toddlers can use for acting out family relationships during dramatic play. Make sure you have dolls that reflect the ethnicity of all the children in your care. Dolls that children can identify with strengthen the children's self-concepts and make them feel more secure about themselves and their families.	Have lots of toys on hand that toddlers can use independently: a busy box, activity center, shape sorters, and so on. This will allow children to play independently and use and reuse those they enjoy. Ask open-ended questions. Of a child playing with a toy bus, you might ask, "Who's on your bus today? Where is the bus going?" When you talk with children during their play, you promote thinking and language skills. Keep a variety of toys on hand. Puzzles, dramatic play items, trucks, wagons, and matching games appeal to toddlers at different times. Children need variety. You should have enough different materials to meet the toddlers' shifting needs and interests.	Provide materials that promote large muscle development, such as ride-on trucks, balls, or hula hoops. Toys and games are a natural way of helping children use and develop their large muscle skills. Throwing a ball through a large hoop helps children develop arm and leg muscles - in addition to being fun. Select toys that strengthen small muscle skills, such as stacking toys, nesting cubes, and sorting boxes. Nearly every table toy, game, or puzzle will help toddlers refine their powers of coordination, balance, and hand control. Even if you are using table toys to teach children a skill such as classification, you'll still be helping them physically.	Provide duplicates of the children's favorite toys. When toddlers do share, reinforce this behavior. Because sharing is a developmental skill, some toddlers will know how to share and others won't. You need to prepare the play situation to avoid fights over toys for those toddlers who can't yet share well. Provide toys that imitate adults in action, such as a doctor's kit, sewing card, or fire engines. Children love acting like ar is. Toys that allow children to act grown-up are instant favorites—and ones from which children readily learn.

TOYS PLAY FOR SCHOOL-AGE

EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
Designate a particular drawer or shelf for toys, games, and puzzles that are specifically for the use of school-age children. This will send children the message that their independence and interest are valued by you. Reassure school-age children to build up their confidence: "I really like the type of design you made on the sketch board. The zigzags give the drawing energy." Eventhough they are older, schoolage children still need frequent, sincere praise.	Ask the children to help you make Lotto games that can be used by younger children to learn shapes, colors, or practice classification. Many children enjoy taking on a teaching role with the younger children. By helping you make learning materials, they can also take pride in their efforts. Introduce a rew board game by reading the directions out loud with the children. Then play the game together, frequently checking with the children to see if you're following the rules correctly. Part of the fun for children in playing a board game is making sure that the rules are enforced exactly. They'll love being the judge for you. Stock up on lots of board games such as Monopoly, checkers, and Boggle for school-age children to play with friends or with you. Schoolage childrencanderive hours of pleasure from board games. You'll keep them busy, happy, and learning if you have challenging games on hand. Challenge school-age children to invent their own board game, complete with a set of written rules. By encouraging children to write down the rules, you'll et them know that you think their ideas are worth preserving.	Provide toys, games, and puzzles that encourage school-age children to exhibit their skills of coordination, such as pick-up sticks, Legos with intricate props, and dominoes. Older children can show real creativity and flatr with toys. Schoolage children who arrange hundreds of dominoes in intricate designs develop physical prowess as well as creativity and problem-solving capabilities. Encourage children to develop special skills. For example, if a child enjoys building with Legos, show the child some advanced techniques for working with these materials. Check out books from he library or write to Legoland in Sweden for instructions for making Lego designs. When you encourage children to develop special talents, you enhance their self-image. At the same time, by developing more refined physical abilities, children become more competent in general.	Ask school-age children for suggestions of popular games they'd like you to have at your family child care home. By so doing, you let children know that you respect their interests. You're also helping children become adept at games they're likely to want to play with their peers. Let the children know it's normal to act excited during a board game - but that rules still prevail. Children need guidance to gain a firm understanding of when it is and isn't permissible to vent their emotions through action. Ask the children to help you show the younger children how to play Lotto or a simple board game. Help them understand the abilities and limitations of the younger children. Older children enjoy leadership roles, and younger children enjoy learning from the older ones.

ART ACTIVITIES FOR INFANTS

EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
Point out pictures on the wall as you attend to a child's daily needs. Discuss the colors in a picture and how the drawing makes you fee! when you look at it. Infants will learn to have pleasant, comforting associations with these routines. Let infants interact with art materials in their own ways. A child who touches finger paint only with one finger should be praised and encouraged as much as one who dives in with her entire arm. Infants will learn that there is no right or wrong way to approach art. They also learn that you value them as individuals when you respect their actions.	Provide infants with lots of art materials that can be explored safely: swatches of fabric, (edible) playdough, pudding paint, etc. Infants learn about art through all five senses. Encourage infants to play with a wad of clay that can be easily pulled, punched, and poked. Children learn through direct manipulation of objects. Encourage infants to echo the sounds of splattering paint or crumpled foil. Give them opportunities to repeat both actions and sounds. Art can stimulate language development.	Let infants work with art materials in a well-protected space where they can move about without causing problems. Infants learn about art by interacting physically with art materials. They need to be free to learn how paper tears and what cotton balls feel like. Once infants have discovered how to poke a hole in playdough, give them lots of opportunities to do this. Infants learn by repeating actions. At the same time that they are poking at playdough, they are improving their small muscie skills.	Plan an art activity that you can do with an infant sitting in your lap. For example, give the infant some playdough to play with. Children will feel secure knowing that you are close by. Out of secure attachments grows the independence to venture off and do art on their own. If older children are making potato prints, let infants join in by giving them potato shapes to play with. Infants need to feel part of a group. This arrangement allows children to join in without disrupting the older children's efforts.

ART ACTIVITIES FOR TODDLERS

EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
Let toddlers use and return non-messy art supplies on their own. Children learn best when they are in charge of their own learning. By being allowed to draw on their own, for example, they become both independent and motivated to use art materials. Planage appropriate activities for toddlers. For example, show them how to tear paper for a collage if they are not yet ready for scissors. Because art projects are fun, we sometimes forget that many art skills are too advanced for toddlers. However, if you choose activities that match the children's skills, you'll keep them eager to do art. Ask toddlers which of their pieces of art they would like to take home with them. Most parents and most children are proud and admiring of children's art. By letting children select, they get an opportunity to preserve the creations they like best and most want to share with their parents.	Provide opportunities for tod/lers to draw or paint every day. Tod-dlers never tire of art. It's a perfect learning opportunity because mottvation is built-in. Encourage toddlers to talk with you daily by asking open-ended questions: "Tell me about your picture" or "How did you make the clay do that?" Art is an excellent forum for helping toddlers develop language skills. Focus on questions that deal with the process of art, not the products created. Let toddlers have a say in their art projects. Even if you've carefully planned a group activity such as making puppets, don't force toddlers to participate if they prefer to do something else. Children learn best when they're responsible for their own learning, so it makes no sense to force a reluctant child to join in. Lettoddlers focus on what's exciting to them.	Take art outside. Let toddlers paint a fence with water or draw a mural on butcher paper taped to the side of the house. Outdoors, toddlers can move freely as they create. This helps themuse pent-up energy effectively and also enables toddlers to improve their large muscle skills as they paint with broad strokes.	Set up a two-sided easel for painting so that children can play together but not have to share. This is a perfect solution for toddlers who want to share company but not art materials. Invite toddlers to join older children for group projects such as painting a mural or making costumes for a play. Young children can benefit from both the guidance and the social experience of working with older children on a project.

ART ACTIVITIES FOR SCHOOL-AGE

EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
Let the children undertake art projects on their own, without assistance from you. By giving children permission to do art on their own, you help them assert their independence. Stress the children's efforts and creativity. Art can be a great opportunity for building children's self-esteem. You want them to feel that they are valued for who they are, not what they do.	Ask the children to assist you in making a bubble frame or a loom that can be used by other children. School-age children enjoy helping out, especially in doing things about which they are able to feel a sense of accomplishment. Check out some craft books from the local library. Point out activities that the children could do on their own by following the instructions. Macrame and papier-mache are good choices. One reason why school-age children enjoy craft projects so much is that they like following directions that lead to an end result. They can take great pride in making a macrame plant holder themselves. Suggest that the children make up a board game and design the materials for playing it. Children love board games and may enjoy the challenge of creating their own. Provide some biographies of famous artists for the children's reading pleasure. Biographies are popular with school-age children who think a lot about what they want to be when they grow up. Linking art to reading helps children think about art as well as create it.	Suggest craft activities that you think children might enjoy trying-sewing costumes for dolls or doing embroidery, crewel, or needle work. If you have a special skill, share it with the children. By providing children with opportunities for doing specialized art work, you also help them develop more refined physical capabilities. If a child shows a particular interest in a specific artistic area, work with that child to determine what physical skills are most helpful for becoming proficient in this area. Develop some exercises for the child. You can helpchildren see the relationship between the body and the creative mind by assisting them in pinpointing and developing physical skills that will help them in their art.	Find out what types of crafts are popular with the children's peer group and arrange a craft-making session. When you undertake a popular craft project, you let children know you vo'ue their preference. You also inelp children gain acceptance with their peer group. Encourage the children to tell you what they like or dislike about particular paintings, sculptures, or other works of the Encourage children to open, which there is no right or wrong. Ask the children to help you set up a group art activity such as finger painting or making molds of plaster of paris. Older children like both doing crafts and taking on leadership roles.

BOOK ACTIVITIES FOR INFANTS

EMOCIONAL	COCNEDIE	DUNCIOAL	COCIAI
EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
Read to infants regularly throughout the day especially before naptime. A bedtime story or poem is soothing to most children. Infants will soon learn to associate routines such as naptime with close times with you. Read to infants for as long as you have their attention. If a child likes cuddling, nestle him or her in your lap as you read. By responding to a child's particular likes and dislikes, infants learn early on that they are respected as individuals.	Provide infants with cloth and laminated books. Books that let them feel textures, such as Pat the Bunny by Dorothy Kuhnhardt, are good selections. Infants learn through all their senses. Their reading experiences should involve more than looking at pictures and listening to words. Encourage infants to turn the pages of a book as you read aloud. Let them see what happens when the pages are turned fast or the book is slapped shut. To understand cause and effect, infants need to be involved actively in experimenting with books. Encourage infants to repeat rhymes and sounds from stories. Animal picture books are especially good for echoing sounds. Talking begins with sounds and babbles. By encouraging infants to repeat sounds, you help stimulate their language development.	Put "babyproof" cloth and laminated books on a low shelf. As infants reach up to a shelf to grab a book, they also develop physical strength. Give infants books with laminated pages and let them practice opening and shutting the book and turning pages. When infants put books in their mouths or turn pages, they are also improving their coordination and small muscle skills.	Read many stories to infants about their world. Naming books that have pictures of mommies and daddies are good choices. Talking to infants about their parents makes them feel more secure while at family day care. Try to schedule a group reading time for all the children. Right after lunch, before naptime, is often ideal. Infants learn to be part of a group when you encourage them to join in.

BOOK ACTIVITIES FOR TODDLERS

D) (OTTO) (A)	COCAMPINE	PHYSICAL	SOCIAL
EMOTIONAL	COGNITIVE	PHISICAL	SOCIAL
Let a toddler be responsible for turning the pages of a book you are reading together. Because toddlers need you to help with the reading, they enjoy being in charge of the page-turning. Ask the librarian for suggestions for books that deal with typical frustrations felt by toddlers, such as I'm Telling You Now by Judy Delton. Reading toddlers books about frustrations lets them know that all children their age share these same feelings. Toddlers love to hear books about families like theirs. If a toddler is going through a family crisis, reading a book such as Dinosaurs Divorce by Marc Brown and Laurane Krasny can be very helpful. Toddlers identify strongly with the characters in books. Seeing other families like their own dealing with problems like their own can be very reassuring.	Be prepared to read a favorite story to toddlers repeatedly; encourage their participation as you read together. It may seem like endless repetition, but children learn something new from a book each time it is read. Take time to discuss each story you read with a toddler. Ask questions such as this: "How would you have felt if you had lost your dog like the boy in the story did?" Books provide a wonderful opportunity to promote language development. They also enable children to reflect on what's been read and relate it to their own lives. Take regular trips to the library so that toddlers can select books of interest to them. Children learn best when they take charge of their own learning. New books from the library keep them excited and eager to learn.	Don't make toddlers sit still for long periods of time to hear a story. If they seem restless, suggest that they act out a role from a book you are reading together. Let them make themselves comfortable as they listen to books by stretching out or lying down. You may need to let toddlers incorporate physical activities into reading times to keep them engaged. Encourage toddlers to point things out in the illustrations as you read books to them. At the same time that you are assisting children in understanding the story, you are helping them refine their powers of eye-hand coordination	Take time every day to read to the group. This brings children of all ages together in a noncompetitive setting. Group reading allows toddlers to socialize without having to test sharing skills. If you're trying to get toddlers to adopt appropriate social behaviors, books such as Going to the Potty by Fred Rogers can be helpful. Toddlers love to imitate adults. Books that show adults acting appropriately can serve as strong role models for toddlers.

BOOK ACTIVITIES FOR SCHOOL-AGE

EMOTIONAL	COGNITIVE	PHYSICAL	COCIAI
Encourage school-age children to get library cards in their own names (if allowed) and to visit the library and check out books of their own choosing. Regular library use not only instills a love of reading but promotes independence as well. Keep books on hand that deel with self-esteem. Tales of a Fourth-Grade Nothing by Judy Blume is one good choice. Many school-age children struggle with insecurities. Books are a terrifically of helping them deal with problems and letting them know how universal their fears are.	Use books inconjunction with other activities. Have school-age children make up their own stories and then record them on tape. Or see a magic show and then use library books to help the children put on their own show. Storytelling lets older children put into words the ideas and feelings they are grappling with. By encouraging them to produce these stories, you send them the message that you value their efforts. Check out "how to" books from the library on topics of interest to the children, such as building model airplanes or doing science experiments. You can help older children turn their curiosity into hobbies or projects by steering them to appropriate books. Check with the librarian, or consider purchasing or borrowing some of the newer mystery book/jigsaw puzzle combinations that children can solve together. Older children enjoy solving mysteries, following elaborate board games, and working on projects together. You can promote both cognitive and social growth through group projects. Ask the children to write a poem or limerick that they then might read to the younger children. Through this activity you let children know that you value what they have to write and say.	Have older children put together books of their own photographs or artwork. Not only does this activity preserve the children's efforts and let them know their work is valued, it also gives children practice in refining their physical skills as they paste the pages, sew the bindings, and decorate the book. Encourage the children to check out books from the library on their favorite sports. You can promote children's interests invarious sports through books. You can also help them learn techniques that will improve their skills by reading books by experts.	SOCIAL Suggest that school-age children form a reading club with friends so that they can swap popular titles. Reading clubs serve the dual purpose of promoting reading and allowing children to participate in group activities, which are very important at this age. Encourage the children to write reviews of books they've read in which they can express their likes and dislikes. School-age children enjoy airing their viewpoints. Book eviews are a socially acceptable forum for such self-expression. Encourage the children to occasionally read storybooks to the younger children. Many older children like reading storybooks aloud to younger children and "hamming up" the roles. Younger children love the attention from the older children.

MUSIC ACTIVITIES FOR INFANTS

EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
Try singing or humming while changing infants' diapers, rocking them to sleep, or burping them after feeding. The melodious sound of your voice calms children and strengthens the bond between you. Respond to the infants' moods with songs that reflect their feelings. For example, when an infant is quiet or uncomfortable, sing lullables and folk songs. During active moods, play "Itsy Bitsy Spider" on the child's body. Children will appreciate having their moods respected. They will learn to associate music with comfort.	Point out familiar sounds to infants: "Do you hear the clock ticking?" or "Let's listen to the bird singing." Listening and hearing are critical components of musical learning for infants. Give infants wooden spoons and pot lids to bang or beanbags to shake. Let the children discover what happens when they bang and shake these objects. Children learn best when they are in charge of their own learning. They'll discover cause and effect on their own if you give them tools for experimentation. Respond to infants' cooing sounds with songlike conversation. Language stems from infants' coos and babbles.	Encourage infants to dance with you to music. If they can stand, hold their hands and sway together. Children will discover more about music when they respond to it physically. Give infants a homemade maraca or drum to experiment with. When children hit a drum or shake a maraca, they not only make music but also stimulate their own physical development.	Play records or tapes about children and families. Sing songs that tell of babies and parents, such as "Shortnin' Bread." Songs about families make infants feel secure in their family child care home. Encourage children of all ages to form an impromptu marching band. Even a crawling infant can hold onto a band of bells or bang a pot-lid to music. Babies love the company of older children. An activity like this lets them be part of the group music experience.

MUSIC ACTIVITIES FOR TODDLERS

EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
Have toddle's take out and put away musical equipment on their own during free play. Giving toddlers this responsibility encourages independence. Encourage toddlers to become proficient with rhythm instruments before introducing them to woodwinds. Because toddlers frustrate easily, you don't want to overwhelm them with instruments that are complex. play. They'll enjoy music more when they can master what's required. Teach older toddlers finger plays that focus on families. For example, "These are Grandmother's glasses/This is Grandmother's cap/This is the way she folds her hands/And lays them in her lap." Finger plays are fun and serve the purpose of keeping families in mind during family child care.	Provide children with time to practice playing an instrument. As toddlers gain skills and begin to make music, their creative play is reinforced. Label feelings and movements for toddlers so they can learn to put words to what they are experiencing: "This music makes me feel happy" or "Swing your arms high and low." Describing what they are doing strengthens toddlers' language and thinking skills. Have a variety of instruments and music on hand to tap toddlers' varying interests. Toddlers have short attention spans and need a variety of appropriate materials to turn to during music time.	Take music and movement activities outside when the weather permits. Play background music that reflects the mood of the day's weather, and encourage children to dance or run to this music. Outdoor movement activities are a great way of helping children burn offenergy, learn to appreciate music, gain a sense of their bodies, and develop large music skills. Encourage older toddlers to do fingerplays on their own. "Open Shut Them" or "This is the Way We Wash Our Clothes" are good choices. Fingerplay helps toddlers develop eye-hand coordination in a fun context.	Have children form a mariachi band in which every member of the band can play whatever he or she likes. By doing their own thing, children can be together without getting into fights over instruments. During movement activities, have children pretend to be a ballet dancer, a tightrope walker, a rodeo rider, etc. Children love to imitate adults and adultlike actions.

MUSIC ACTIVITIES FOR SCHOOL-AGE

			_
EMOTIONAL	COGNITIVE	PHYSICAL	SOCIAL
Allowschool-age children to take out and put away records and tapes on their own. Most children of this age love music. By giving them permission to do music-related activities on their own, you encourage independence. Suggest calisthenics or aerobic dancing activities to promote a good body image. Fitness activities are both popular and healthful. Children who participate in these activities gain both peer approval and self-assurance.	Suggest that school-age children help you make some homemade instruments that the younger children can use — kazoos, drums, and tambourines, for example. Older children can find satisfaction in seeing a project through from beginning to end. In this case they have the added benefit of seeing their efforts used musically. Ask the children to invent some ways of making instruments using objects and materials you have at home. This request demands that children think abstractly and solve problems. Most children love a challenge of this sort. Encourage the children to make up a musical game they could play with friends, such as a variation on "Name That Tune." Because children love playing games and following rules, you can enrich their musical play by combining the two. Suggest to the children that they write their own lyrics to popular songs. Coming up with lyrics that rhyme with the original ones is a challenge but all the more fun for creative children.	Encourage school-age children to develop an interest in musical instruments they could play in their school's band or orchestra. By so doing you occomplish several things: you increase the children's appreciation for music, you assist them in gaining peer acceptance (especially if being in the school band is destrable), and you encourage the development of physical skills as the children practice playing their instruments. Encourage children who show ability and interest in dancing or gymnastics to pursue these activities. Most older children like to develop special talents. Movement-related specialities have the added advantages of promoting physical abilities and improving body images.	Encourage school-age children to practice the latest dance steps. When you do this, you let older children know that you respect them and their need to be "in tune" with their peers. Respect the children's taste in music even if it's not your own. (This is why headphones were invented.) Older children are working on developiny an aesthetic sense and need to feel free to experiment. Ask the children to lead the younger children in musical games such as "Hokey Pokey." Many older children enjoy the leadership role and will delight in exaggerating their actions for the younger children.

CHAPTER 5

Special Tips for Curriculum Development

The Basic Ingredients of Planning Supplemental Curriculum

In addition to activities that provide for health and safety of the children and help them understand and value life, there are other activities designed specifically for five definable aspects of every child. These aspects are the physical, emotional, social, creative, and cognitive selves. Activities for the physical self that should be included in the preschool child care lesson plans involve:

- movement and locomotion.
- balance.
- body and space awareness.
- rebound and airborne movements.
- rhythm and temporal awareness,
- throwing and catching.
- daily motor skills, and
- relaxation and tension-release.

A curriculum that promotes the development of *emotional health* in children provides opportunities for them to learn to:

- separate comfortably from their families;
- achieve basic attitudes of trust, autonomy, utilative:
- remain in contact with their feelings while maintaining emotional control;
- use dramatic play and other self-expressive materials to come to terms with emotional problems;
- face reality; and
- begin to understand other people and feel empathy for them.

Learnings for development of children's social selves should encompass the following:

- learning to control antisocia impulses;
- acquiring socially acceptable strategies for getting what they want;
- learning to function successfully as a member of a group;
- finding satisfaction in helping one another;

- finding pleasure in accomplishing meaningful work; and
- understanding their place in the world, and feeling good about their sexual roles and ethnic heritages.

Opportunities for children to develop their creative selves should allow for:

- using a wide range of self-expressive activities;
- participating in imaginative dramatic play; and
- engaging in creative thinking and problem solving.

Finally, the children's cognitive selves should be enhanced.

- Foster verbal ability by encouraging them to:
 - put their ideas into words throughout the day and enjoy communicating with other people, and
 - participate in carefully planned group times.
- Develope cognitive skills by allowing them to:
 - discover answers for themselves, and
 - use specific mental abilities such as:
 matching,
 perceiving common relations,
 grouping,
 temporal ordering,
 graduated ordering (seriation), and
 determining simple cause-and-effect relationships.

Four Steps in Developing the Lesson Plan

A lesson plan may be developed by dividing the process into these four steps.

The First Step: Choose a topic drawn from the children's interests.

Apparently most inexperienced teachers begin planning a day or week by choosing a topic or theme first and then listing many possible activities related to that topic. This is a sensible way to begin as long as the topic is drawn from some concern already expressed by the children or from something that happened the previous week. Such a connection assures the children's interest in the subject. Perhaps a house is being torn down nearby, so knowledge of construction equipment would be appealing; or a mother rat may be due to have babies; or one of the children has a pet garter snake she could bring to school.

Any of these would make good topics, but for the sake of discussion, let us suppose the teacher chooses the mother rat. Knowing that the rat is about to produce a litter and that children are always intrigued by baby animals, the teacher could begin listing many ideas related to pregnancy and baby animals. At this stage, it is best for the teacher not to criticize her ideas or eliminate possibilities because this tends to inhibit the flow of other ideas that might be developed into good activities. These possibilities might include some in the following list.

- observe how the mother rat cares for her babies, then follow a comparison of this and the way other mothers care for their babies
- enjoy a visit of kittens or pupples
- visit a farm to see baby animals such as chicks and calves
- observe eggs hatching in an incubator
- use various books about baby animals and their mothers at group time
- see pictures of elephant mothers and their babies, then use stuffed toy elephants in the dramatic play area
- talk about how animals give birth
- measure the mother rat to see how her abdomen is expanding
- handle special nesting materials and discuss what she and other animals do to prepare for their babies
- study the series of pictures of baby animals and their mothers from the picture file
- keep track of how quickly the baby rats grow by measuring them and taking pictures; then turn these into a temporal ordering activity at the flannel board
- let someone bring a baby animal to school
- go to the zoo to see the recently born lion cubs
- play with the relationship cards and link mother animals with their babies
- show pictures at group time of different ways animals carry their young

The Second Step: Face the reality of what is possible and what is not.

In the second step of curriculum design, teachers must consider various realities as they evaluate each of the possibilities they have brainstormed.

Reality One. How appropriate is the idea for the children in the group? Older four-year-olds would greatly enjoy a trip to the children's zoo (providing no attempt is made to visit the entire zoo in one afternoon). The two-year-olds might benefit more from a simpler experience, such as having some baby ducks visit, watching the seat, comparing them with an adult duck, and watching them all paddle about in the wading pool.

Reality Two. How feasible is an idea? For example, does the teacher know where to locate some fertile eggs? If the topic now is baby animals, will the children still be interested after three weeks when the eggs are ready to hatch? Will someone be available to turn the eggs regularly so that the chick embryos develop properly?

243

Reality Three. Are activities reasonably connected to the topic and somehow related to one another? Is the activity focused enough, or does it cover too wide an area? Are there some wonderful but extraneous ideas that could best be used another week? For example, perhaps the ideas about human babies would work better as an extension, rather than in combination with the topic of animal babies this week.

Reality Four. Does this topic provide curriculum that develops all five aspects of the children's selves? This is unlikely, since topics usually focus on one aspect; however, additional activities should be added so that the topic becomes more comprehensive. For example, the topic of baby animals offers many possibilities for the development of the cognitive self, such as practicing common relationships by linking pictures of mother animals with their babies and discussing whether the visiting kittens are all the same or not (a matching activity) and how they are similar to, and different from, puppies (same/different grouping). The children could be encouraged to develop their creative problem-solving ideas by thinking of ways to protect the baby rats while their cage is cleaned or ways to corral the little goat when she visits. They could also learn some facts about procreation and develop wholesome attitudes about pregnancy and birth events, thereby adding to their understanding of the cycle of life.

Reality Five. Can the topic be presented so that it is not too stimulating or overwhelming for the children? Student teachers, in particular, are sometimes so excited (and worried) about their curriculum that they plan too much in one day or even in one week. This can result in cranky, fatigued, confused children who are in no condition to learn well or retain learnings. Therefore, it is necessary to caution beginning teachers to practice moderation in their planning, while at the same time hoping that, as they become more experienced, they will retain their sense of enthusiasm every time they plan a week's curriculum.

Reality Six. Does the curriculum take the needs of individual children into consideration? For example, the teacher could ask the shy child to bring the puppies to school. Or the unpopular youngster who tends to buily the weaker children can contribute positively to the group by inviting them to visit his family's dove cage to see the newly hatched chicks. Is there some way a particularly intelligent little girl can pursue an interest related to the topic in more depth? Perhaps the teacher could suggest a family trip to see the dinosaur egg at a nearby museum.

Reality Seven. Does the list include anything that can be used to promote a multi-ethnic or nonsexist approach? Teaching about the role of both parents in conception, for example, would

answer the nonsexist aspect. Discussing pictures during group time of African children playing with their baby goat, for instance, would satisfy the multi-ethnic requirement.

The Third Step: Block in activities throughout the week.

In this step of curriculum design, teachers must block in the thematic activities over a week's time. The simplest way to do this is to prepare a chart to insure that something particular has been planned for each of the children's selves each day. Such a chart does not need to be elaborate. It is merely a shorthand way of making certain that the program is comprehensive and balanced.

Generally, experienced teachers more clearly see the primary purpose for each activity plan, while beginning teachers often do not have a clear perception. The chart should pinpoint the purpose for offering this activity by providing a simple objective or an explanation or reason for its inclusion in the lesson plan. If the teacher cannot supply a worthwhile reason for including an activity, he should consider selecting another activity for the children that will be more beneficial. Such an analysis has the additional benefit of making it easier for teachers to justify particular activities to parents who often want to know what their children are learning and why.

The Fourth (and Final) Step: Fit specific activities into the daily schedule.

In the fourth step of good lesson planning, teachers must fit specific activities into the daily schedule. Such schedules help children and teachers know what comes next and contribute to the feeling of security such knowledge produces. However, they may become a burden if they are allowed to dominate the day in a rigid, minute-by-minute fashion that ignores children's needs and prevents teachers from exercising good judgment. Awell-designed schedule not only allows for orderly planning, but it provides for flexibility so that time periods can be extended or shortened depending on whether the children are deeply occupied or particularly restless.

Try some of the following sample lesson plans found in the appendices, adding, subtracting, and changing as necessary. Devise the daily schedule to fit the children's needs.
