ABSTRACT

The 1991 National Community Education Needs Assessment Survey focused on material and training needs. A more than 65 percent return rate on the open-ended survey indicated commitment and concern of community educators; 263 community education contacts completed the 4-page survey. The typical community educator who responded was the director of community education for a local education agency with at least 10 years of experience. The "Community Education Journal," "Community Education Today," and state/regional association newsletters were widely received, well read, and considered useful. Respondents agreed on the need for additional information in the following areas: educational reform; community education professionalism, including training and how-to manuals; and community education as an academic discipline, including research and documentation. They identified educational reform as the prime topical area for additional community education training and the following areas for professional development: community education philosophy and concepts, management skills, funding alternatives, and leadership training. Although governmental and legislative support, program expansion, and identity and recognition were identified as essential to state growth, those who rated their states' level of initiatives as stagnant or weaker identified funding limitations as the key cause. (Appendixes, amounting to over two-thirds of the report, include participant lists, the survey, and detailed survey responses.) (YLB)

This publication is made possible by a grant from the Charles Stewart Mott Foundation. The interpretations and conclusions contained herein represent the views of the author and not necessarily those of the Mott Foundation, its trustees, or officers.

About the Capacity Building Project

The 1991-95 National Networking for State Community Education Capacity Building Project is a comprehensive approach to those strategies that need to be implemented over the next several years to help states build and strengthen their community education capacity. Its multi-faceted approach was designed to meet the developmental needs of states which are at varying stages of community education development, and its longitudinal approach fits the realities of the time consuming activities of network building and capacity development. The Capacity Building Project is made possible by grants from the Charles Stewart Mott Foundation of Flint, Michigan, which has been an advocate for, and financial supporter of, community education throughout the United States since the 1930s.

The Mid-Atlantic Center for Community Education at the University of Virginia and the Stewart Mott Davis Center for Community Education at the University of Florida are working on collateral aspects of the Capacity Building Project.

Since 1987, the Mid-Atlantic Center, with Mott Foundation support, has focused on community education planning and development at the state level. Previous projects have: supported the development/implementation of five-year community education state plans in 47 states; established a database on community education development; provided training sessions for state-level facilitators; and developed and disseminated several products including Community Education Across America (Decker and Romney 1990), a national reference manual of exemplary local community education projects. In its portion of the Capacity Building Project, the Mid-Atlantic Center is focusing on materials development and a continuation of its direct support for state-level activities. During the first project year, the Center conducted a national needs assessment that will serve as a guide for enhancing community education development over the next five years. Two publications focusing on educational restructuring and the community education process have been prepared for national distribution.

The Stewart Mott Davis Center for Community Education at the University of Florida is coordinating the second portion of the Capacity Building Project. The Stewart Mott Davis Center is focusing on the assessment aspects of the Capacity Building Project; specifically it is assessing the impact of the various state projects funded by the Mid-Atlantic Center and conducting a continuing national community education needs assessment that complements data being collected by the Mid-Atlantic Center. The Stewart Mott Davis Center has completed the first phase of its national assessment activities which focused on community education state-level capacity building in each of the states. This phase assessed the existence and status of: state planning; legislation and funding at the state level; state professional associations; college and university training centers; and state education agency involvement in community education development. Results of the assessment will be published in a monograph scheduled for distribution in Summer 1992.

1991 NATIONAL NEEDS ASSESSMENT

Executive Summary

Since 1987, the Mid-Atlantic Center for Community Education at the University of Virginia has focused on community education planning and development at the state level. These efforts, made possible by a series of grants from the Charles Stewart Mott Foundation of Flint, Michigan, moved into a third phase of activities with the 1991-95 National Networking for State Community Education Capacity Building Project. An outgrowth of discussions with community educators across the country, the multi-faceted Capacity Building Project was designed as a comprehensive approach to those strategies that need to be implemented over the next several years to help states build and strengthen their community education capacity.

During the first year of the Capacity Building Project, the Center conducted a national needs assessment that will serve as a guide for enhancing community education development over the next five years. Four hundred community educators across the country were invited to participate. Following is a brief summary of the information provided by the 263 survey respondents.

The Respondent: A Community Educator Profile. The typical, or average, community educator who responded to the survey is the director of community education for a local education agency and has had at least 10 years of experience. He or she has taken two community education classes at a university/community education center and has attended a state community education association workshop. Additionally, in the last three years, he or she has attended one or two National Community Education Association (NCEA) conferences and every annual conference of his/her state association. Our typical respondent identifies him-/herself as a community educator and follows up on that self-identification by belonging to both the state and national community education association to one other professional association. Our community educator rates NCEA and the community education association and university center within his/her state as good sources of information.

Publications. The Community Education Journal, Community Education Today, and state/regional association newsletters are widely received, well read, and considered useful. Community Education Across America was judged to be a useful manual which should be revised every several years. Other "must" readings in community education are Decker's Building Learning Communities, other Decker/Mid-Atlantic Center publications, and Jack Minzey's textbooks. Phi Delta KAPPAN, LERN (Learning Resources Network) Course Trends, Educational Leadership, and national reform reports, including America 2000, were viewed as the most important readings outside the field of community education.

There is broad agreement on the need for additional information in the following areas: educational reform; community education professionalism, including training and how-to manuals; and community education as an academic discipline, including research and documentation.

Training. Educational reform was identified by respondents s the prime topical area for additional community education training. Other training and development needs identified in the survey focus on the practical—funding, management skills, and collaborations—and on the philosophical—a clarification of the discipline, especially the philosophy and concepts of community education.

Priorities and Enhancements. A majority of respondents rated community education initiatives in their own states as having become stronger over the last three years. While governmental and legislative support, program expansion, and identity and recognition were identified as key to state growth, those who rated their states' level of initiatives as stagnant or weaker identified funding limitations as the key cause. Among all community educators,

funding and lack of recognition were regarded as the biggest obstacles to community education development. By far the "best cure" identified was a proactive public relation/marketing and lobbying campaign.

Community educators are currently addressing the following issues: collaboration, literacy, adult basic education, educational reform, and the needs of children and families. With greater resources, they feel that they could address "everything" and "anything," but especially educational reform, child care, and literacy.

Resulting Activities. The Mid-Atlantic Center has begun to address some of the issues raised in this national needs assessment. Three current areas of activity are: (1) adaptation of this survey for state-level use; (2) use of the survey data to plan 1993 and 1994 National Invitational Institutes for State Network Training and Dialogues; and (3) preparation of materials focusing on community education's role in educational reform, both to provide information to community educators and to present community education to the broader education and policy-making communities.

Clearer identity and broader recognition of community education have been identified as the field's most pressing needs. The need to educate others about community education and the obstacles that exist because others don't understand community education are themes that recur over many survey questions. This challenge calls for a proactive response by all community educators.

1991 NATIONAL

NEEDS ASSESSMENT

BACKGROUND

Planning and Implementation Phases

Since 1987, the Mid-Atlantic Center for Community Education at the University of Virginia has focused on community e *-cation planning and development at the state level. These efforts were made possible by a series of grants from the Charles Stewart Mott Foundation of Flint, Michigan, which has been an advocate for, and financial supporter of, community education throughout the United States since the 1930s.

During the first two phases of the project, the Center concentrated on developmental aspects of state-level community education capacity building. During 1987-88, this concentration was on planning for community education growth. The National State Community Education Planning Project enabled the Center to assess the current status of state-level community education development and to identify those factors common to states with successful and comprehensive community education networks and programs. As part of that process, the Center made planning assistance awards available to each state. Representatives of 47 states and the District of Columbia applied for and were awarded assistance grants to help support the development/updating of their state's five-year (1988-93) state community education plan. State grant facilitators also were involved in several Center-sponsored activities designed to provide a broadened perspective on the national community education movement and to explore community education development in other states. These activities included a workshop and follow-up session, cosponsored by the National Center for Community Education, and a national teleconference on community education planning and development, cosponsored by the National Cooperative Extension Center at Virginia Tech.

This direct, state-level assistance had several significant results. One was the successful development of new and/or revised state plans in all but one of the participating states. Another was the establishment of a database on state community education development compiled from information collected during the project. A third result, an important byproduct of the project, was heightened enthusiasm and communications within and among existing state community education networks. These outcomes not only documented the success of the National State Community Education Planning Project, but also provided the rationale for the activities that followed.

The National State Planning and Implementation Project, conducted during 1989-90, focused on implementation. Through a competitive process, 27 states that had been involved in the initial Planning Project were awarded additional funds to assist with specific follow-up and implementation strategies. The implementation grants were awarded to assist with "the next step" in advancing community education in a particular state, especially in the area of statewide networking.

The Mid-Atlantic Center continued its focus on communications by developing and disseminating two products. The first was the Fall 1989 special issue of the Community Education Journal, "Planning Tomorrow: Can Communities Fix American Education?" Larry Decker, Center director, served as guest editor. The issue highlighted information about past and present state-level community education development activities and then looked to the future to delineate activities and expectations in state-level community education planning and capacity building efforts.

The second communications initiative was the development of a national reference manual, Community Education Across America (Decker and Romney 1990), which identified exemplary local community education projects and described the status of statewide community education initiatives and support networks. From discussions with state facilitators and state and local practitioners, the Center had determined that there was a need for this type of "idea source," a place to find out what others were doing, with what level of resources, and to ascertain what might be

replicable. Almost 250 local programs in 45 states were nominated for inclusion, and approximately 140 of them were described in the reference manual.

Although activity at both the state and local levels increased as a result of these two projects, it was clear that community education functioned at widely various levels of development in the different states. Some states are just beginning to learn about community education and to develop community schools and community education programs while others have highly developed community education networks and many comprehensive local projects involved in innovative programming. Between these two extremes, there are states with highly developed, comprehensive local programs and weak state-level networks and states with excellent, comprehensive demonstration projects and sporadic network activity. The diversity among states also includes diversity in the "prime players" in a state-level network, which may include any combination of state education agency, institutions of higher education, state associations, active local projects, and other interested and/or cooperating agencies.

With such divergent situations, states require different types of assistance to further community education development. Some states need assistance to solidify the early steps they have made in establishing their community education plans. Other states are ready to move into training and implementation stages. All states have a need for convening activities that can help establish or reaffirm their legitimacy within the community and in the political and educational arenas. Networks themselves are not static entities. Even the mature and well functioning networks need to be renewed, rebuilt, and adapted to changes in personnel, leadership, and restructuring now taking place in the educational systems of many states.

National Networking Phases 1991-1995

Recognizing that network building and capacity development are time consuming activities that require sustained nurturing over a period of time, the Mid-Atlantic Center for Community Education began a multi-year, multi-faceted project, the 1991-95 National Networking for State Community Education Capacity Building Project. An outgrowth of discussions with community educators across the country, the project was designed as a comprehensive approach to those strategies that need to be implemented over the next several years to best meet the needs of the various states as they build and strengthen their community education capacity.

Because of its longitudinal design, the Capacity Building Project allows for a natural progression of activities within each of its three objective areas.

1. Grant Awards

This objective area continues the project's provision of small grants to assist state-level development. Over the five-year period, approximately \$210,000 in grants will be awarded. Jrants are competitively awarded to support the following activities:

- (1) revision/implementation of the community education state plan;
- (2) documentation/evaluation of the state model or outcomes; and
- (3) provision of state/regional training.

Over the five-year project period, emphasis will shift from state plan development/implementation to documentation and regional training.

2. National Invitational Institutes for State Network Training

These institutes will provide both leadership training and the opportunity for dialogue among practitioners whose states are at varying levels of community education development. The focus is on training state teams, thus broadening the base of leadership within a state $\mathfrak I$ that community education will be less vulnerable to the career changes of a single individual. This is especially important because of the "graying" of many community education leaders who were trained during the 1970s in Mott Foundation-supported degree programs at several universities. The institutes, cosponsored by the National Center for Community Education (NCCE), the National Community Education Association (NCEA), and the Council of Chief State School Officers (CCSSO) will be held in 1993 and 1994.

3. National Needs Assessment, Materials Development, and Dissemination

One of the problems of short-term projects is that there is often insufficient time to conduct an assessment of what needs to be done and then do it. The Capacity Building Project's five-year time period allows the Mid-Atlantic Center to do just that. Beginning with an assessment/evaluation phase, each succeeding project year will include development, dissemination, and material/product evaluation aspects. This sequencing assures that assessment, development, dissemination, feedback and evaluation, and revision are part of the evolution of each product. This 1991 National Needs Assessment is the first step in this process.

The Center has received invaluable support and guidance from the National Projects Advisory Committee, which has helped shape the scope and direction of the Center's efforts (Appendix A). The Committee also advises a concurrent, companion project at the University of Florida, Assessing the Impact of the National Networking for State Community Education Capacity Building Project. Funded by the Mott Foundation, the Assessment Project is providing third-party evaluation/documentation of the progress and effects of the Mid-Atlantic Center's Planning and Implementation Projects. Specifically, the Assessment Project will evaluate and document changes in state-level community education capacity over the 1991-95 period and will develop in-depth documentation on model programs.

NATIONAL COMMUNITY EDUCATION NEEDS ASSESSMENT

Development of the Survey Instrument

Recognizing that the results of its 1991 needs assessment would serve as a guide for enhancing community education development over the next five years, the Center worked with several groups in development of the survey form to ensure that it (1) would be comprehensive enough to fill a variety of future planning needs and (2) would be clear and easy to complete in order to encourage a high rate of return and to facilitate analysis.

Initial planning began with the November 28, 1990 National Projects Advisory Committee meeting held in conjunction with the NCEA Conference in San Antonio, Texas. At that time, topical areas to be covered by the survey and planned distribution were provisionally decided. During the meeting, the Committee agreed to work with the Mid-Atlantic Center throughout the process of developing the survey form.

The Center developed a first draft during February and March 1991. This was sent to the Advisory Committee for reactions and recommendations. Following revisions based on the committee's comments, a pilot test was conducted in early April involving the Advisory Committee and selected community educators across the country (Appendix A). The pilot group provided thorough feedback and recommendations, which were incorporated into the next revision. As a final step, the survey form was evaluated by the Instrument Review Panel of the Curry School of Education, University of Virginia. The Panel's recommendations resulted in several format and organizational changes.

The final four-page survey form combined several scaled evaluation questions with numerous open-ended format questions in four categories: the respondent; publications; training; and priorities and enhancement (Appendix B).

Space was provided at the end of the survey for updating the identification and address of those who should be included in the Center's mailing list. Because of the estimated 20 minutes required to complete the survey, there was concern about what the return rate would be, but the need for <u>comprehensive</u> data on publication, training, and state capacity building needs far outweighed this concern.

Survey Distribution and Rate of Return

Beginning May 2, 1991, the "National State Community Education Capacity Building Project 1991 Needs Assessment: Materials and Training" was mailed to 400 community educators, representing all 50 states and the District of Columbia, who had been identified as state and local community education leaders. They included:

- current and former state planning project facilitators;
- community education center network personnel;
- 3. state community education association presidents and NCEA liaisons; and
- 4. all local community education contacts as listed in *Community Education Across America* (Decker and Romney 1990).

No attempt was made to identify equal numbers of potential participants in each state. As would be expected given variations in the level of past community education activity, the number of potential participants varied by state from a high of 20 (Florida) to a low of one (Rhode Island).

The survey's first mailing contained numerous enclosures, and therefore was sent by third class mail. This resulted in delayed deliverier to the western part of the country and to Alaska and Hawaii. A second mailing on June 7, containing no other enclosures, was sent by first class mail.

Seven surveys were returned unanswered either because an individual had moved and the form was undeliverable by the post office, or had left or retired and the form was returned by his/her agency. One hundred eighty-eight (188) community educators, 47.0 percent of those polled, responded to the first mailing. The second mailing produced an additional 75 responses (18.8 percent). In all, 263 community educators, at least one respondent from each state and the District of Columbia, representing 65.8 percent of those invited to participate, provided information for the survey results described in this report (Appendix A).

Data Analysis

The responses from each returned survey were recorded on an individual survey report form. A survey report form was also completed for each survey not returned; these forms included only the identification number and state to which it had been sent. Due to the multiple responses possible for many questions, there were 118 possible variables.

Forced-response questions, primarily Likert scales, were coded in a straightforward, quantitative manner, using an a priori coding guide. Open-ended questions, the majority of those included in the survey, were coded qualitatively, using an emergent design. Unless specifically stated otherwise on the survey form, the first four responses to open-ended questions were coded and included on the survey report form.

To control for consistency, one person completed the coding for all open-ended questions. The coding guide was reviewed after all surveys had been coded to eliminate any duplication of entries. At this point, all survey report forms were sent to the Academic Computing Center, University of Virginia for computer entry using a fixed format for analysis with SPSS' version 4.1.

ħ

Because of the large number of possible response to open-ended questions resulting from use of an emergent coding design, responses were clustered into broad categories to facilitate interpretation and use of results. In general, a five-percent-of-cases criterion was used in determining separate category classifications. For questions related to each other, e.g., questions 24 and 25—what issues are currently being addressed/what issues could be addressed—an attempt was made to provide information on the same categories across questions. Also, where the creation of additional categories was likely to increase clarity and interpretability, this was done.

For each question, frequencies and percents of cases were tabulated. The Multi Response Groups procedure was used to tabulate total frequencies and percents of cases for questions for which more than one answer/response was possible. Unless otherwise specified, "percent of cases" is used to refer to the percent of respondents who indicated that answer to the question, i.e., the frequency of that answer divided by the number of respondents to the question. The percent of cases is not based on the total number of responses to the question, nor does it indicate the percent of total responses that answer represents. Therefore, for questions permitting multiple answers from a respondent, the total percent of cases for all answers exceeds 100 percent. One may use the figure "total percent of cases" to determine the average number of answers per respondent to that ouestion; i.e., a total percent of cases of 327 percent means that those who responded to the question provided an average of 3.27 answers each. Throughout, percents are based on the total number of individuals who answered a particular question, not the total number of individuals involved in the survey. Responses included in the "comments" category are counted in the total number of responses, but that category itself is not included in references to the number of response categories.

Appendix C lists categorical responses to each question. In qualitative research, the researcher's background, preferences, and biases affect the emergent coding system and, especially, the organization of raw data into a workable number of categorical responses; Appendix D provides a complete listing of the responses that make up each category, so that readers may draw their own conclusions. Where appropriate, both Appendix C and Appendix D contain additional statistical information, such as the number of respondents answering a particular question, the mode (the most commonly given response), and the mean (the mathematically average response).

This report will focus on categorical responses and single-item responses within categories only when they individually meet the five-percent-of-cases criterior or provide additional specificity. Tables are also included for questions involving a scaled evaluation of the response, e.g., question 23—comparative strength of initiatives, scaled much stronger to much weaker, and the open-ended "why," again focusing on categories. In some cases, the evaluation scale has been condensed for clarity and ease of interpretation.

SURVEY RESULTS

Concerning the Respondent

This section, which includes survey questions 1 through 11, was designed to provide background information. From this, a "community educator profile" of respondents and an evaluative database of past and currently available training and information sources can be developed.

Questions 1-4: The Work Situation. The first four survey questions ask where the individual works and his/her length of involvement with community education. Each state and the District of Columbia is represented by at least one (Arkansas, Connecticut, Delaware, Hawaii, Mississippi, Nevada, New Mexico, Rhode Island, and South Dakota) and by as many as 17 (Michigan) respondents. Two respondents indicated that they work in "all states," as they are associated with national organizations. One of these, however, was reclassified as working in a specific state, since the respondent indicated that the responses were specific to that state.

Since most of those who received the survey work for local agencies, it is not surprising that the vast majority of respondents work for local agencies. Although all who received a survey had been identified as communi

education contacts, respondents identified themselves by a variety of titles, 62 percent of which included the term "community education." As expected from the method used to identify survey recipients, the majority of respondents have been involved in community education for many years. More than 64 percent have 10 or more years of experience, while only 9 percent have one to three years experience. Table 1 summarizes the data on the work experience of respondents.

Table 1 Work Experience

Where do you work? [263 cases]	Number	% Cases
Local agency [3] ¹	169	64.3
Local education agency	164	62.4
State agency [2]	30	11.4
State education agency	29	11.0
Higher education institution [1]	42	16.0
National organization/project [1]	8	3.0
Other [6]	14	5.3
What is your present position or job title? [261 cases]	Number	% Cases
Community education titles [20]	162	62, 1
Community education specific [11]	135	51.7
Community school coordinator/director/principal	18	6.9
District coordinator/supervisor/director	83	31.8
Community education with other duties [9]	27	10.3
Administrative titles [10]	45	7.2
Director (various levels)	16	6.1
Adult, continuing, and vocational education	7	2.7
(dean/director/specialist) [6]	•	•
Community specialists (coordinator/director) [3]	9	3.4
Resource/support services (coordinator/director) [13]	14	5.4
Teaching/education specialists [4]	12	4.6
Other [6]	12	4.6

How many years have you been involved in community education? [263 cases]

	Amilia	70 (1)
1-3 years	24	9.1
4-6 years	35	13.3
7-9 years	34	12.9
10+ years	170	64.6

¹Indicates total number of single items that comprise the category.

Question 5: Past Training Experiences. Fully 80.6 percent, or 212 respondents, said that they had had some formal training in community education, usually indicating that they had had more than one training experience. In fact, those who had received training averaged 3.04 training events per person. Only 48 respondents (18.3 percent) said that they had received no formal training, while three (1.1 percent) commented that they had had some type of training without directly answering the question. A variety of types and sources of training were indicated. Most of those who had received formal training had been involved in university or community education center classes and workshops; 142 training events of this type were listed, in addition to 100 degree programs in community education. Other significant sources of training included NCCE (91 events), state and regional community education associations (84 events), NCEA (54 events), state and federal departments of education (43 events), and Mott programs (42 events). In all, 636 training events were reported by 209 respondents. Of this total, 493 events (81.1 percent) were evaluated as being very useful, and only 2 events (0.3 percent) were evaluated as not useful. Table 2 lists training events and Table 3 provides a cross tabulation of type/source of training event by evaluation of usefulness. This cross tabulation includes only those events for which there was also an evaluative response.

Table 2
Past Training Experiences

Type/source of training programs listed	<u> 2. 7</u>	Response	% Cases
Degree program [1]	100	15.7	47.8
University class/workshop [3]	142	22.3	67.9
University/Community Education Center class/workshop	124	19.5	59.3
National Center for Community Education [3]	91	14.3	43.5

Other training [12]	39	6.1	18.7
TOTAL [209 cases]	636	100.0	304.3

²It should be noted that in computing the number of events, five events actually refers to five or more, so that the actual average number of events is higher than computed. In instances in which a respondent specified a type of training event, followed by such words as "many," "10," or other indications of multiple events, it was counted as no more than five training events.

Table 3
Evaluation of Past Training Experiences

Question 6: Conference Attendance. While both NCEA and state association conferences and workshops were listed among training events, attendance at conferences was specifically queried. Of those who responded to each question, 177 (73.1 percent) had attended at least one NCEA conference, and 228 (89.8 percent) had attended at least one state association conference. While many (176 or 69.3 percent) attended state conferences in each of the three years listed, only 76 respondents (31.4 percent) indicated that they attended all three national conferences during this time period. Table 4 delineates responses by the type, number, and year of conference attendance.

Table 4
Conference Attendance

	<u>NCEA</u>	State Assoc.
Number (%) attending		
All three conferences	76 (31.4)	176 (69.3)
Two conferences	41 (16.9)	22 (8.7)
One conferences	60 (24.8)	30 (11.8)
None of the conferences	65 (26.9)	23 (9.1)
Number (%) attending at least one conference	177 (73.1)	228 (89.8)
Years of conference attendance		
1988	126 (71.5)	194 (85.1)
1989	123 (69.5)	199 (87.3)
1990	12C (67.8)	206 (90.3)

Questions 7-9: Professional Identification. Two important aspects of professional identification are association affiliations and primary area of professional interest or discipline. Not surprisingly, most respondents belong to the state and/or national community education association (Table 5). Respondents averaged 2.5 professional associations per person. Approximately 59 percent of cases claimed NCEA membership, and more than 72 percent of cases, state/regional association membership. This last is an interesting fact. There were 259 individuals responding to both Question 7 and Question 9. Yet, for Question 7, which asked respondents to supply the names of professional affiliations, there were 187 listings of state/regional association membership, while in Question 9, which directly asked about state association membership, 231, 89.2 percent of question respondents, replied positively. Possible explanations include: respondents felt that state association membership was so obvious that they did not list it; respondents did not think of the state association as a professional affiliation; or state association membership was lower on their priority list of memberships so that they did not include it.

Table 5

11

A deliberate decision was made during survey design to limit identification of the primary area of professional interest to one. Simply, we did not wish to know who considered community education one of several professional concerns, but rather wished to know who considered community education their <u>prime</u> area of professional interest. Claimed by 37.4 percent of respondents, community education was the most frequently cited category of primary professional discipline. However, 62.6 percent claimed a variety of other disciplines, ranging from almost 16 percent whose concern was management/administration to a variety of "other" interests claimed by only one respondent each (Table 6).

Table 6

Questions 19 and 11: Sources of Information. Where can community educators find out what is happening in community education? That is the question addressed in these two items. The national and state/regional associations were by far the most frequently cited "best source" of information (Tables 7 and 8). In more than 30 percent of cases, NCEA was listed as the best source. Additionally, Community Education Today was cited in more than 11 percent of cases and the Community Education Journal in 9.5 percent. At the state level, 188 respondents (79 percent) said they had a good internal source of information. The three prime sources within states were the state association, a university/community education center, and the state department of education.

Background Summary: A Community Educator Profile. To help put survey information into better perspective, here is a composite picture of the typical or average respondent upon whom the data are based. He or she is the director of community education for a local education agency with at least 10 years of experience. He or she has taken two community education classes at a university/community education center and has attended a state community education association workshop. Additionally, in the last three years, he or she has attended one or two NCEA conferences and every annual conference of his or her state association. This composite respondent identifies him-/herself as a community educator and follows up on that self-identification by belonging to the state and national association in addition to one other professional association. NCEA, the state community education association, and the university center within his/her state are all good sources of information.

This is a very positive general picture, suggesting that what follows comes from someone who is trained, experienced, involved, and concerned. However, it must again be pointed out that, although respondents most frequently identified themselves as community educators, more than 62 percent identified an area other than, but sometimes related to, community education as their primary area of professional interest.

Concerning Publications

NCEA publishes two periodicals; many state associations have their own newsletters; and the Mid-Atlantic Center recently published a reference manual on state-level networking and local exemplary community education projects. Which materials do respondents currently use? What do they think of them? What information gaps exist in currently available publications? What needs to be done? Survey questions 12 through 20 address these issues.

Questions 11-15: Association Publications. Whereas only 59 percent of respondents specified membership in NCEA, more than 75 percent said that they receive the Community Education Journal (CEJ) and more than 79 percent Community Education Today (CET). This rate is even higher (84 percent) for state association newsletters (SAN) (Table 9). Thus we can say that these publications are readily available to community educators. But are they used and, more importantly, are they useful? The answer to both questions, for all three publications, is yes. More than 72 percent of respondents said they read all or most of the CEJ, more than 83 percent CET, and, astonishingly, more than 94 percent of respondents read all or most of their state association newsletters. No respondents said they read "none" for any of these publications, only two said "very little" for CET, and only three each said "very little" for the CEJ and the state association newsletter. Evaluations of these publications' usefulness are equally impressive. The CEJ is rated as very or somewhat useful by more than 93 percent of respondents, CET by more than 94 percent, and the state association newsletter by more than 90 percent of respondents. In fact, only three respondents stated that the CEJ was not useful, and only two rated CET and their state association newsletter that way.

Although there is apparently a great deal of satisfaction with current publications, they are not meeting all informational needs. Question 15 asks which topics need to be added to, or emphasized in, the topical agenda of these publications (Table 10). One issue stands out: America 2000 and educational reform. More respondents mentioned the need for greater coverage of this single topic than any other. In fact, community education's role in the broader education community, the category that includes educational reform, was the most frequently cited category of informational need. Community education professionalism was the second most frequently cited category, although no one specific item within the category was ranked at or above the five-percent-of-cases criterion level. Other categories of prime interest include: community education as a discipline, with research and

documentation as a highly rated single topic; child, youth, and family issues; public relations and marketing; and funding and resources, with both funding alternatives and grant and proposal development as highly rated single topics. A variety of topics in the format, programming, and issues categories received limited mention, with only innovative and successful programming ideas and publication of practical how-to information receiving significant support.

Question 16: Community Education Across America. The Mid-Atlantic Center distributed copies of this manual to all community education contacts listed in the publication, so it is not surprising that 75 percent of respondents from a mailing list that included those same contacts stated that they had received a copy previous to the survey mailing (Table 11). More than 86 percent of respondents rated the manual very or somewhat useful and only five respondents (2.5 percent) rated it as not useful. Most (68.6 percent) felt that a new edition should be updated and printed. Even some of those who felt that a new edition was not necessary (19 respondents or 9.9 percent) made suggestions for a new edition, usually in terms of "not every year" or "only as needed." The recommendations for improvement from many respondents focused on this issue of timing. Revision on a periodic basis, not annually, was the most common specific recommendation. A change recommended by six respondents (5.2 percent) was to organize the manual by program type, topic, and population served, rather than by state. Positive comment on the publication as a reference and source of ideas was the response most frequently given (42 respondents or 36.2 percent).

Questions 17 and 18: "Must" Readings. A wide variety of titles and types of materials were recommended as required reading both in and outside the field of community education. Forty-two titles and types were recommended as must readings within the field of community education, and 79 outside the field of community education (Table 12). Among community education readings, the CEI and CET are again highly recommended (52 respondents or 31.7 percent and 43 respondents or 26.2 percent, respectively). Decker's Building Learning Communities was the next most frequently cited publication, followed by Decker and Romney's Community Education Across America, other Decker/Mid-Atlantic Center publications, Jack Minzey's textbooks, and state/local publications. Nineteen respondents (11.6 percent) did not suggest any must readings in community education. In the broader education field, Phi Delta KAPPAN was the most frequently cited title, followed by LERN (Learning Resources Network) Course Trends, Educational Leadership, and educational reform reports, including America 2000. Newspapers and news magazines were cited by 12 respondents (7.7 percent), and Hodgkinson and other demographers were cited by 9 respondents (5.8 percent). There was less agreement on the various remaining titles and types of materials, which clustered in seven different areas.

Questions 19 and 20: New Materials. Only 18 respondents (7.6 percent) stated definitely that a new community education textbook was <u>not</u> needed. The remaining respondents fell into two fairly even categories: 118 respondents (49.8 percent) said yes, while 101 (42.6 percent) stated that they did not have an opinion. When asked more generally about the need for new publications, a variety of topics and formats were recommended (Table 13). The single most frequent recommendation was for new how-to manuals that are short and practical; 20 percent of respondents stated the need for such manuals. The next most frequently recommended item was an issues yearbook, called for by 7 respondents (5.6 percent). The remaining recommendations were for specific formats, a compendium of topical areas, training/professional development, and community education as a discipline.

Publications Summary. Past efforts in the area of publications have been both well received and well used. Most community educators receive both NCEA and state association publications, read most if not all of them, and find them quite useful. There is also a cluster of useful readings within and outside the field of community education. Gaps are recognized, however, over a broad spectrum of topical areas both within existing publications and in terms of needed new materials. Community educators want more information on professional development, want greater clarification of community education as a discipline, including greater emphasis on research and documentation, and want more information about community education's role in educational reform and in the broader education community.

Concerning Training

This section of the survey asked community educators to identify their training needs as professionals and the training needs of those outside the field with whom they work.

Question 21: Training Topics for Community Educators. Community education as a process deals with a great number of issues. This is reflected in the number and variety of issues and topics identified as the top three priorities for community education training (Table 14). With more than 150 individual issues and topics identified, five were of such universal concern that they were each listed in more than 10 percent of cases. In these days of limited resources, it is not surprising that the most frequently mentioned area of concern was funding and budgeting, listed as one of the top three priorities in 15 percent of cases (35 responses). Educational reform/America 2000 was also a top priority, listed in 13.7 percent of cases (32 responses). The third topic among the top three priorities deals

directly with the identification of community education as a discipline, a significant categorical issue identified earlier in response to question 15. Specifically, community educators identified the need for training in the philosophy and concepts of community education as one of their top three needs. Two other issues were listed in more than 10 percent of cases: building partnerships and collaborations (10.3 percent) and community outreach and involvement (10.7 percent). Collaborative relationships are clearly a major concern and might even be considered the area of highest concern in that, by combining partnerships and collaborations with interagency cooperation (9.0 percent), it was identified in 19.3 percent of cases. In addition to these issues identified in more than 10 percent of cases, 10 issues were identified in 5 to 10 percent of cases: interagency cooperation; parent/family education and involvement; child care/extended day; leadership training; needs assessment; networking; emerging issues; educating others about community education; public/community relations; and literacy.

IOIAL (MA COMA)			

Question 22: Specific Training Needs for Different Groups. Everyone involved in the development and testing of the survey agreed that there are different training needs for different populations. Therefore, a question was designed to determine the one unique top priority training need for local community education practitioners and for those who are involved with or have an impact on community education and community educators (Table 15).

I WARD WARD	217	219	219	205	80

Among community educators, the most frequently identified training need was for basic training in community education, identified by 20 respondents (9.2 percent). In fact, the category of community education as a discipline, the most frequently identified category (20.7 percent of respondents), included not only this top ranked priority item, but also the item chosen second most frequently, training in the philosophy and concepts of community education (7.4 percent). Leadership training/development and management/administrative skills were each chosen by 12 respondents (5.5 percent). More than 50 other training needs were mentioned by from 1 to 9 respondents each (0.5 percent to 4.1 percent).

The top priority training need identified by community educators for all other groups was the same one they identified for themselves. Community education as a discipline, a one-item category, was given top priority by between 12.1 percent and 47.9 percent of respondents. Specifically, respondents stated that teachers (mentioned by 32.0 percent of respondents), school administrators (47.9 percent), and advisory councils (12.1 percent) all need to be educated about community education and its benefits. For each population group, no other training topic was chosen nearly as frequently as this one. For teachers, two other commonly recognized training needs were identified: working with adult learners (10.5 percent) and basic teaching skills, i.e., methodology and knowledge of subject (8.7 percent). While for administrators there was no significant consensus on any other single training need, for advisory councils there were several areas of agreement about training needs: role and function of councils (8.3 percent of respondents), group dynamics (7.3 percent), about empowerment (6.8 percent).

What other groups need raining? The most often identified were: agencies and organizations (21.6 percent of respondents); business and industry (17.0 percent); school boards (13.8 percent); legislators and state government (9.6 percent); local government (7.4 percent); and parents (6.4 percent). What type of training do they need? Again, educating others about community education and its benefits (32.5 percent of training needs identified) was the single top priority training need most frequently identified for the total population, while collaborations (26.3 percent) was the second most frequently identified training need. There were variations among the different populations identified (Table 16). Training for collaboration was the highest priority for other agencies and organizations, and it was most frequently cited as a training need when the population in question was not identified. However, for all other groups—other community education personnel; business and industry; community and parents; government and policy makers; and the schools—training on community education itself was the top priority.

Training Summary. Educational reform is the one issue of overriding concern. The remaining top priority training areas reflect both practical and philosophical concerns. On a practical level, funding alternatives, the ability to function in spite of frozen or dwindling resources, is a key concern, as are management and administrative skills and learning to work collaboratively, both with other agencies and in business/community partnerships. Philosophically, community educators want to clarify and better understand the basic tenets and concepts of community education. As for those significant others in a community educator's professional world, community educators are very definite about the training those significant others need: learning what community education is, what its benefits are, and how to work with it in a collaborative manner.

Concerning Priorities and Enhancement

Question 23: State-Level Enhancement. Although the majority of respondents (51.6 percent) said that community education initiatives in their states had become stronger or much stronger over the last three years, sizable minorities rated it as weaker or much weaker (31.7 percent) or as not having changed (25.8 percent) over that period of time (Table 17).

TOTAL [209 cases]	188	66	66
(% total responses, i.e., row %)	(59.9)	(21.0)	(19.1)

For those who felt that their states had not experienced a strengthening of initiatives, one causative factor predominated; funding cuts was identified as the single most important cause of stagnation or weakening of community education initiatives. Among this subpopulation of 90 respondents, funding was identified in 55.6 percent of cases and in 39.7 percent of the total number of responses (50 of 126 responses). Other causes for stagnation or weakening received fairly even mention over the remaining 11 cause categories.

Funding was ranked a minor factor by those who reported strengthened initiatives in their states. In fact, eight other factors, out of 12, were ranked higher. For this subpopulation, a variety of factors was identified as important; three factors—governmental/legislative support, program expansion, and identity/recognition—were each identified in more than 20 responses and, taken together, account for 37.8 percent of the responses (71 of 188 responses) provided by this subpopulation.

Questions 24 and 25: Issues To Address. In most states, n...ny issues are being addressed by community education (Table 18). The needs of children and their families are at the center of current activities and are being addressed in a variety of ways: child care/ex-ended day (18.5 percent of cases); at-risk (8.2 percent); early childhood education/preschool (5.6 percent); and parent involvement programs (6.5 percent). Collaboration as a category was listed in 17.2 percent of cases, with collaboration and interagency cooperation listed in 7.3 percent of cases and partnerships and coalitions in 9.9 percent. Literacy is another area of concentration (10.8 percent of cases), as is adult basic education (6.9 percent). An area already identified as being of prime interest—educational reform and America 2000—is being addressed in a number of states, as shown by its listing in 8.6 percent of cases.

What could community educators do if community education were stronger, better organized, or better financed in their states? (Table 18) The most common response to that question was "Everything!" In more than 16 percent of cases, respondents felt that, given sufficient resources, community education was capable of meeting the broad spectrum of community needs. In terms of meeting more specific needs, the list is expansive. Of more than 100 items in 16 categories, the most frequently mentioned was educational reform (10.5 percent of cases). Child care (8.2 percent) and lite acy (6.8 percent) were also high priorities for expanded efforts.

Questions 26 and 27: Challenges To Be Met. Funding was identified as the cause of stagnation or weakening in community education initiatives over the last three years and as the single biggest obstacle the community education advocate must overcome (Table 19). In almost 40 percent of cases, funding limitations due to the weak economy were identified as the major obstacle to growth. In fact, the category of funding and resources was listed 110 times, i.e., in 45.3 percent of cases. Poor marketing/lack of recognition (9.9 percent of cases) and misunderstanding of the field (7.8 percent) were identified as significant obstacles. Unsuccessful interagency agreements (6.6 percent of cases) and apathy and burnout (5.8 percent) complete the list of obstacles upon which there is broad agreement.

TOTAL [221 cases]	290	100.0	131.2

Responding to these obstacles requires concerted efforts (Table 20). The solution most frequently recommended is to increase community education's visibility, to make others aware of the field and its potential. This specific recommendation was listed 55 times (24.9 percent of cases). The recommendation for lobbying and educating significant leaders about community education was listed an additional 24 times (10.9 percent). Taken together, the strategy categories of lobbying and public relations/marketing were identified in 44.8 percent of cases, a remarkably high percentage, especially considering that in a full 10 percent of cases, individuals responded that they had no idea or had tried everything. Only two other suggestions reached a five-percent-of-cases level: documentation of community education effectiveness and identification of funding alternatives, both identified in 5.9 percent of cases.

Question 28: National Community Education Enhancement. Recommendations for national-level efforts continue a theme that emerged over a number of survey questions: public relations/marketing; collaboration; documentation; and educational reform. The call for increased public relations efforts, identified as primary in overcoming obstacles, retained that status at the national level (Table 21). A marketing campaign for awareness and recognition was the single most frequently recommended strategy (18.6 percent of cases). At the national level, collaboration with major education and political groups was suggested in 12.4 percent of cases. Community educators have identified educational reform/America 2000 as a subject on which they want more information, more training, and more state- and local-level involvement. This call for involvement is reiterated as a strategy for national enhancement in 7.2 percent of cases. In fact, even the call for documentation, to prove the effectiveness of community education, was frequently couched in terms of educational reform; there were numerous suggestions that community educators develop a model project to document the effectiveness of community education processes in the area of reform.

Priorities and Enhancement Summary. When a national group is asked about individual state-level changes, activities, possibilities, and challenges, a great variety of responses is expected. Despite the breadth of responses

to this survey, a certain depth of agreement emerges. Programmatically, community educators are currently involved in addressing the needs of children and families and, with more resources, would continue to do so. Funding limitations are viewed as the greatest obstacle to community education, but not as a significant means to community education's enhancement. Solutions lie in recognition by others. Community educators want to bring community education to the forefront of people's awareness by initiating a marketing campaign, by becoming involved in educational reform, by documenting community education's effectiveness, and by working collaboratively with related groups and agencies.

SUMMARY OF DATA

Publications. The Community Education Journal, Community Education Today, and state/regional association newsletters are widely received, well read, and judged useful. Decker and Romney's Community Education Across America is a useful manual and should be updated every several years. These are "must" readings in community education, as are Decker's Building Learning Communities, other Decker/Mid-Atlantic Center publications, and Jack Minzey's textbooks. Phi Delta KAPPAN, LERN Course Trends, Educational Leadership, and reform repor's including America 2000 are viewed as the most important readings outside the field of community education.

There is broad agreement on the need for additional information in the following areas: educational reform; community educational professionalism, including training and how-to manuals; and community education as a discipline, including research and documentation.

Training. Community educators rank educational reform as the prime topical area for community education training. Other training and development needs focus on the practical—funding alternatives, unagement skills, and collaborations—and on the philosophical—a clarification of the discipline, especially the philosophy and concepts of community education.

Priorities and Enhancements. The majority of respondents perceive community education initiatives in their own states as being stronger than formerly. Governmental/legislative support, program expansion, and identity/recognition were identified as key to state growth, but among those who rated their states' initiatives as stagnant or weak, funding limitations were identified as the key cause. Funding and lack of recognition were regarded as the biggest obstacles to community education development. By far the "best cure" identified was a proactive public relation/marketing and lobbying campaign.

Community educators are currently addressing the following issues: collaboration, literacy, adult basic education, educational reform, and the needs of children and families. With greater resources, they feel they could address "everything," but especially educational reform, child care, and literacy.

CONCLUSIONS AND RECOMMENDATIONS

The 1991 Community Education Needs Assessment Survey, which focused on material and training needs, was widely distributed throughout the country. Two-hundred sixty-three community education contacts completed the four-page survey form; their responses were the basis for the results reported here. A more than 65 percent return rate on this type of open-ended survey is a positive indication of their commitment and concern. Our composite community educator is a trained professional who wants to improve his/her skills and meet the challenges not only of today, but of tomorrow. The data in this report show the direction for future activities.

The survey explored the broad concerns that need to be addressed nationally. Still, as states are at different levels of community education development, the particular set of interests, needs, and issues that can be addressed may vary from state to state. Therefore, the Mid-Atlantic Center will develop an adaptation of this survey for state-level

28

use. Recognizing that few state associations or institutions have the time and personnel to conduct such extensive or time consuming data collection and analysis, emphasis in developing the adaptation will be placed on providing an efficient and simple system of assessment.

Nationally, this survey has identified the following areas for professional development community education philosophy and concepts; management skills; funding alternatives; and leadership training. In 1992, the Mid-Atlantic Center, in cooperation with NCCE, NCEA, and CCSSO will begin planning for 1993 and 1994 National Invitational Institutes for State Network Training and Dialogues. Topical areas identified in the survey will provide a focus for these planning efforts. Discussions will be initiated, both among these three organizations and with other community education leaders, to identify ways to best meet the identified training needs. Practical and concise how-to manuals were identified as the preferred format for community education materials. Therefore, that format will be explored as a method of presentation.

Identity and recognition of community education by persons outside the field are community educators' most pressing concerns. The need to educate others about community education and the obstacles that exist because others do not understand community education are themes that recur over many survey questions. Even among those who have been identified as community education contacts, more than 60 percent do not identify themselves as primarily community educators.

The need to address the question, "What is community education?" and to disseminate the answer widely will be community education's greatest challenge over the next five years. It is a challenge of self-identity, of public relations and marketing, of lobbying, and of gaining recognition. It calls for a proactive response from a wide variety of respondents. It is a challenge the National Community Education Association, every state association, every community educator must meet.

The challenge and the opportunity are both identified in this survey. Educational reform as it is being discussed today is community education without the name, and most well-informed community educators recognize that. Many of the ideas—the jargon, if you will—of today's reform reports have been in the vocabulary of community educators for many years. Parent involvement, community involvement, collaboration — these were part of community education's basic foundation long before today's calls for restructuring. It should be no surprise, therefore, that educational reform is the one concern among community educators that overrides all others.

Community educators want to be involved in educational reform. In some states, they are an integral part of the reform movement, a fact not well recognized on the national scene.

Even as these survey forms were being coded, it became obvious that community educators wanted to know more about educational reform. As preliminary data became available, the depth of that interest and the desire to be involved in that movement became even more apparent. This interest paralleled discussions at the National Coalition of Community Education Leaders (NATCO) and on the Community Education Computer Network (CENET).

As a first response to the call for information on educatio al reform, the January 1992 issue of the Community Education Journal was devoted to this topic. "Restructuring Schools: Community Education's Role in the Educational Reform Movement" included interviews with nationally recognized education leaders, as well as articles from community education practitioners, representatives of state departments of education, and others. This special theme issue, guest edited by Decker and Romney, will receive wider than normal distribution to reach beyond the community education field.

With NATCO support, an expanded monograph based on the CEI material will be published to further disseminate information about community education's current and potential role in educational reform. These two publications will not only address community educators' need for information about reform, but will begin to address the lack of recognition and understanding of the full scope of community education in the broader educational and policy-

making communities at local, state, and national levels by discussing community education in relation to the pressing issue of educational reform.

Participants in the 1991 National Needs Assessment were assured that the information gathered would guide community education development over the next five years. Participants provided their considered opinions as to the status and needs of the field. In response, the Mid-Atlantic Center, in conjunction with other community education organizations, is beginning to address their concerns both in terms of materials development and planning for training. Many more steps must be taken, and now is the time for all sectors of the community education field to address proactively the challenges and solutions community educators have identified for themselves.

May 2, 1991

To:

State and Local Community Education Leaders

From:

Larry Decker and Valerie Romney

Re:

National Needs Assessment

The Mid-Atlantic Center for Community Education, with support from the C. S. Mott Foundation, has initiated a planned 5-year National State Community Education Capacity Building Project. This is the third phase of a series of projects that began in 1987 in which the Center has supported the developmental growth process of Community Education at the state level. In addition to its continuing financial support of state-level projects, this year the Mid-Atlantic Center is conducting a national assessment of publication, training, and state capacity building needs. The information from this needs assessment will serve as the guideline for enhancing Community Education development over the next five years.

The survey is being sent to the following Community Education leaders:

- 1) Current and Previous State Planning Facilitators
- 2) Community Education Center Network Personnel
- 3) State Community Education Association Presidents and NCEA Liaisons
- 4) All local Community Education contacts as listed in the enclosed publication, Community Education Across America.

As a Community Educator who has been ident. In previous project activities, we ask your assistance. The national population being sampled is small, so we need your response. It will take approximately 20 minutes to complete the survey. The final report will summarize group responses; no individual names will be identified or disseminated. All individuals responding to this request will receive a copy of the Needs Assessment Report.

We also ask that you check the address label. If changes or corrections in the name and/or address are required, please indicate these changes on the survey form.

We look forward to receiving your response and ask that you return the survey within <u>five</u> days.
