ABSTRACT

In April 1991, Enterprise State Junior College and MacArthur State Technical College established a rural workplace literacy demonstration project in partnership with adult basic education, seven employers, and a labor organization. The project served 615 persons in classes offered at the 2 colleges, 4 partner locations, and 3 additional worksites. The industrial partners and worksites included trailer manufacturers, food processors, metal fabricators, and textile/apparel manufacturers. The project consisted of three main components. The Gateway Component provided remediation for workers with basic skills deficiencies. The Pathway Component provided needed educational experiences beyond the basic skills and helped workers improve in such areas as problem solving, critical thinking, and work habits. The Linkway Component provided necessary support services to allow workers to participate fully in the project. Indicators of project success were willingness of partners to allow release time and expand employee training, workers' seeking of additional training after project end, and improved worker self-reliance and self-esteem. (Appendixes include a needs assessment checklist, a list of available curricula, a sample description of curriculum developed for one industry, a 12-item bibliography, a sample individual education plan, and a report to the National Workplace Literacy Programs.) Introduction

In April 1991, Enterprise State Junior College and MacArthur State Technical College established a rural workplace literacy demonstration project in partnership with Adult Basic Education, seven employers, and a labor organization. The project served 615 persons in classes offered at the two colleges, four partner locations, and three additional worksites established with approval of United States Department of Education Workplace Literacy staff. The industrial partners and worksites included trailer manufacturers, food processors, metal fabricators, and textile/apparel manufacturers. Of the 615 project participants, 522 were employed by industrial partners (including worksites), 49 were employed by other businesses and industries, and 44 were unemployed.

The project consisted of three main components. The Gateway Component provided remediation for workers with basic skill deficiencies in the areas of reading, writing, speaking, listening, and computation. The Pathway Component provided needed educational experiences beyond the basic skills and helped workers improve in such areas as problem solving, critical thinking, and work habits. The Linkway Component provided the necessary support services to allow workers to fully participate in the project.

Selected indicators of project success include the following:

- Response to unique needs of a diverse group of industries -- an essential factor in significantly upgrading worker skills in rural areas.
- Realization f value of upgrading worker skills as evidenced by willingness of individual partners to allow release time and to continue and expand employee training.

"We are a supplier to the automotive industry and our problem solving class evolved from the need to meet customer requirements. We have benefitted from having employees involved in quality management, and we expect problem solving to continue to be a part of our training."

Teresa Hall Corporate Secretary Dura-Cast, Inc.

- Acceptance by workers of need and ability to continue upgrading skills as evidenced by willingness of workers to seek additional training after the project ended.
- Evidence of worker self-reliance and self-esteem as indicated by worker and supervisory reports.
- Better understanding of the roles of industry and education resulting in an ongoing positive relationship between the colleges and industries.
- Realization by non-partner industries of the need for training as indicated by requests for workplace literacy training.
- Contributions by other funding sources to provide training beyond the scope of this project.

Comparison of Accomplishments to Objectives

Objective 1: By March 1991, all project personnel will have been employed and given specific job descriptions.

Start-up staff at Enterprise State Junior College consisting of a project director, project counselor and part-time secretary were employed in March and April, 1991. The start-up staff at MacArthur State Technical College consisting of an assistant project director/counselor, instructor and part-time secretary were employed by June 1, 1991. Additional instructors and aides were employed as classes were added throughout the project. Job descriptions are on file for all personnel.

Objective 2: By April of 1991, project personnel will have designed job specific literacy audits in cooperation with industrial personnel.

Project staff reviewed current literature on workplace literacy and job audits to determine appropriate procedures to be used in developing needs assessment forms and conducting literacy audits for industrial partners.

Staff members visited the worksites and met with representatives of the industrial partners such as human relations/personnel directors, employees, union representatives, and upper level management to discuss changes anticipated in their industry, current problems, and training needs. Industrial partners provided job specific materials including employee handbooks, safety manuals, equipment manuals, workplace forms, job descriptions, employment information and employee benefits manuals. Job specific literacy audits forms, titled "Needs Assessments",

"One of my 3 ult learners, Sarah, was approached by her supervisor who was holding a new sign that read, 'Watch Your Step.' Before the supervisor could speak, Sarah gleefully said, 'I can read that for myself!'

All three of my adult learners are delighted to report that they can read their paychecks and know if the figures are correct."

Fran Walters Volunteer Literacy Tutor ConAgra Broilers, Inc.

were developed and approved by the Project Director, appropriate industry representatives, appropriate labor representatives, and project instructors and counselors. (See Appendix A: "Needs Assessment Checklist")

Objective 3: By May of 1991, job literacy audits will be administered to participating workers in cooperation with industrial personnel.

Project staff used the following procedures to administer literacy audits at five partner locations:

- 1. Observed employees to determine the skills used to perform the jobs effectively.
 - Recorded instances of reading, writing and arithmetic calculations
 - Determined the purposes of observed tasks
- 2. Collected materials written and read on the job.
- 3. Interviewed employees and their supervisors to determine frequency and priority of tasks and the skills needed to do the jobs.
- 4. Determined discrepancies between the employees' skill levels and those needed to perform the job.

Instructors analyzed job materials to determine reading levels and essential vocabulary and used deficiencies identified by the job audits to develop curricula for basic and higher order skills training. (See Appendix B: "Sample Descriptions of Curricula")

Objective 4: Beginning in April of 1991, project personnel will develop and implement ongoing outreach activities in cooperation with industry and labor representatives which will result in the recruitment, intake, screening, Individual Education Plan development, and program participation of at least 600 eligible worker applicants by August 1992.

Staff members designed and disseminated flyers, brochures, and news releases describing the project. Press conferences and open house activities were held at each institution to familiarize the partners, the community and the employees with project activities. Speeches were given to various civic and professional organizations. Registration activities were conducted at the worksites.

"This chemistry study helped me understand the purpose for keeping track of the pH factor of water released into the system. Now I know why it's so important to be accurate. If I make a mistake the whole system for my community will be polluted. I have to live here!"

Kenneth Fulford Water Treatment Operator's Helper Reliable Products

Counselors and instructors developed a form for the Individual Education Plan (IEP) which identified goals of the participant, assessment of current skills, need for support services, and curriculum to be used. Staff members worked with each employee to complete the IEP. (See Appendix C: "IEP Sample")

Records on file indicate a total of 615 participants in project activities. Project files verify names, demographic data, attendance, outcomes and support services.

Objective 5: Project personnel will provide instructional activities which will result in new employment, continued employment, career advancement, or increased productivity of industries, and/or upgrade or update basic skills required by changes in the workplace; and improved competencies in speaking, listening, reasoning, and problem solving for at least 90 percent of project participants.

Project staff and industry representatives prioritized training needs related to basic and higher order skills. Based on these priorities, instructors developed curricula for basic skills training in selected job classifications within each industry for higher order skills training in areas such as problem solving, communication skills, decision making, critical thinking, etc. These workplace-specific curricula included instructional objectives, pre- and post-tests, learning activities (some locally developed and some selected from commercially prepared materials), and job simulations. (See Appendix B for samples) Over 500 participants altended more than one program offering or attended classes for more than one quarter.

Volunteer tutors were trained in the whole language approach to reading to allow project participants to incorporate work-related experiences into the tutoring process. Computer ssisted instruction and other commercially developed literacy materials were also utilized by participants.

Of the 522 participants who were employed by partners, 94 percent continued employment, advanced in their careers or obtained new employment. A total of 21 participants had passed the GED test by the end of the grant period. Based on instructor made pre- and post-tests, tutor reports and commercial tests, project data indicate that 91 percent increased basic skills and 73 percent increased higher order skills. (See Appendix D: "Report to the National Workplace Literacy Programs" and "Table of Employee Outcomes", page 8)

"Thanks so much for taking time to come and present the class on Presentation Skills to Reliable's safety committee members. I've heard many favorable comments thus far. The knowledge gained from your program will be especially helpful to the safety committee members when presenting department safety meetings."

George W. Helms Director of Human Resources Reliable Products

Supervisors completed evaluations on 313 project participants. Based on supervisor perceptions, the following employee outcomes were attained:

22% increased attendance at work

54% improved job attitude

41% increased quantity of work

38% achieved high accuracy in work quality

52% need less supervision

77% would be recommended for advancement

Objective 6: Project staff, in cooperation with industry, volunteer organizations, other College personnel, and appropriate governmental agencies will provide on-going needed support services for project participants. These services shall include, but not be limited to, tutorial services, transportation services, child care services, counseling services, and referral to mental health services.

Counselors and instructors provided support to all project participants. Counselors trained 48 volunteer tutors and placed 51 participants with tutors. Although transportation and child care services were offered, only a limited number of participants utilized these services. Individual counseling was provided by counselors and instructors. Referrals were made to other local agencies and organizations who provided eyeglasses, financial aid information, and other education and training programs. Project records document these activities.

Objective 7: Project personnel will devise a Dissemination Plan which will result in project activities and outcomes being disseminated throughout the region and allow the project to serve as a demonstration site for rural workplace literacy programs. The plan will include the development and publication of a booklet on project goals, activities, and results which will be publicized nationally and disseminated to those who request it.

Staff members devised a Dissemination Plan that resulted in project activities and outcomes being disseminated throughout the region and allowed the project to serve as a demonstration site for rural workplace literacy programs. To implement the plan, project staff

- conducted periodic press conferences;
- held open house activities at both educational institutions;

"I didn't think the measurements on blueprints had to be followed exactly. Now I understand how the entire construction can be so far off when I make a 1/8" mistake."

Steven Sasser Welder Alfab, Inc.

- wrote news releases and human interest stories that were published in local newspapers; industrial partners' newsletters and trade journals; and state and national education journals
- met with union representatives where available;
- appeared on a local television news program;
- spoke to civic groups, professional organizations, area economic development councils, the Alabama College Association, and the Adult Education Regional Conference;
- provided workplace literacy curricula including learning objectives, job simulations, pre- and post-tests, and suggested supplementary activities in commercially prepared materials to the workplace literacy project at Central Alabama Community College, Alexander City, Alabama;
- hosted visitors from other organizations including the Alabama Power Foundation and Economic Development Partnership; Wallace Community College, Selma, Alabama; and the workplace literacy project at Central Alabama Community College; and
- published a booklet on project goals, activities, and results which was submitted to the ERIC Clearinghouse on Adult, Career, and Vocational Education; Alabama State Department of Education, Adult Education Section; and Alabama De, artment of Postsecondary Education. This booklet, as well as samples of workplace-specific curricula, will continue to be provided to other organizations upon request.

Objective 8: By May of 1991, project personnel will develop a detailed formative evaluation plan to monitor implementation of project activities. Summative evaluation will be performed by an experienced, qualified external evaluator to be contracted from project funds.

The formative evaluation plan utilized to monitor implementation of project activities included:

- monitoring project activities through the management plan;
- developing data collection methods and designing a data base:

"The hourly employees recently requested a meeting with management to discuss changes and improvements they had identified using the problem solving skills learned in the workplace literacy project. These employees established a professional atmosphere that led to genuine two-way communication that will produce lasting effects. I was proud of them!"

Bruner Dicus Vice President Alfab, Inc.

- developing, administering, and analyzing results of job audits, pre- and post-tests, participant evaluations, and supervisor evaluations; and obtaining and analyzing quarterly reports. The Table of Employee Outcomes below indicates specific measures used to assess employee outcomes.

An external evaluator performed a summative evaluation of the project.

TABLE OF EMPLOYEE OUTCOMES

Instrument Name	Outcome Measured	Type of Measurement
TABE	General literacy level	Commercial test
Preview	Mastery of learning module contents*	Instructor-developed test
Review	Mastery of learning module contents	Instructor-developed test
Employee Training Surveys	Satisfaction with training	Instructor-developed survey
Supervisor's Rating of Post-Program Participants	Job performance	Instructor-developed survey
GED and ASSET Test	Mastery of academic curriculum/readiness for additional education	Commercial test
Laubach & Challenger Placement tests	Reading level	Commercial tests

^{*}Learning Modules contain pre- and post-tests, learning activities and job simulations.

"I could not have passed the GED tests without the help of this program. Being able to attend classes at work and to set my own pace made the difference for me. I'm going to keep learning to I'll start studying Industrial Electronics at the technical college soon."

Ricky Potter Card Operator Opp-Micolas Mills

Schedule of Accomplishments and Target Dates

Because of late receipt of the grant award document, the College was unable to employ all project personnel by the target date of March 1991. All other objectives were accomplished as scheduled.

Number and Characteristics of Project Participants and Outcomes Achieved

A total of 615 persons participated in the project. Of these, 522 were employed by the industrial partners, 49 were employed by other businesses or industries, and 44 were unemployed. The average age was 37 years; there were 369 males and 246 females. Seventy-nine percent were white; 12 percent were black, and 6 percent were hispanic. Thirty-seven percent had less than a high school education; 35 percent had completed high school, and 27 percent had some education or training beyond high school. Forty-four percent had been employed less than five years and 23 percent had been employed sixteen years or more.

Outcomes achieved by project participants are described on pages four and five.

Dissemination Activities

See page six.

Evaluation Activities

See pages seven and eight.

Changes in Key Personnel

One change in the Assistant Director position occurred early in the grant period. This resulted in an extension of the start-up period at MacArthur State Technical College.

"Prior to taking this class I was very uncomfortable - and slow! - about writing business letters. I feel confident now that my ideas are expressed clearly and correctly."

Dennis Hall Buyer Utility Trailers, Inc.
