ABSTRACT

This report summarizes the finances of major New York school districts during the school year 1990-91, as well as public school expenditures and state aid since 1972-73. A summary of school district expenditures compares various percentiles of operating expenditures per student and describes the magnitude of the disparity in approved operating expenditures per student between districts in the 10th and 90th percentiles for each year. Decile tables ranked by wealth and expenditures per pupil are provided. Five-year trend data are also presented on full value, expenditures, state aid, tax rates, and local revenue. These items are displayed on a per-pupil basis for the state, New York City, and the remaining school districts. A historical perspective of New York school finances is presented in the appendices. Fifteen tables and a glossary are included. (LMI)

The State Education Department does not discriminate on the basis of age, color, region, creed, disability, marital status, veteran status, national origin, race, gender or sexual original origin in the educational programs and activities which it operates. Portions of this publication can be made available in a variety of formats, including braille, large print or audio tape, upon request. Inquiries concerning this policy of equal opportunity and affirmative action should be referred to the Department's Affirmative Action Officer, NYS Education Department, 89 Washington Avenue, Albany, NY 12234.

PREFACE

The "Analysis of School Finances in New York State School Districts" is an annual publication providing a meaningful perspective to staff in the Division of the Budget, the Legislature and the Education Department concerning school expenditures, State aid and local support. This edition of the Analysis summarizes the finances of major school districts in school year 1990-91 as well as public school expenditures and State aid since 1972-73.

In summarizing school district expenditures, the Analysis compares various percentiles of operating expenditures per pupil and describes the magnitude of the disparity in approved operating expenditures per pupil between districts in the 10th and 90th percentiles for each year. Also provided are decile tables ranked by wealth and expenditures per pupil. These decile tables provide comparisons of school districts' expenditures per pupil, tax rates, and wealth per pupil.

Another feature of the Analysis is its presentation of five-year trend data on full value, expenditures, State aid, tax rates, and local revenue. These items are displayed on a per-pupil basis for the entire State, New York City and the Rest of State (school districts outside New York City).

In terms of data collection, total State aid used in the tables from 1980-81 through 1990-91 is the State aid reported on the Annual Financial Report form (ST-3) submitted by school districts. It should be noted that this may include prior year State aid adjustment payments. Data for 1991-92 is based on State aid payments to school districts and does not include some grants, prior year adjustments, and miscellaneous revenues from State sources. Total expenditures for 1991-92 are based on estimates provided by school districts. Other items container in the Analysis are as of August 1992. Data for school years prior to 1982-83 have not been adjusted.

As in past years, an historical perspective of school finances in New York State is presented. Table 1 continues to display State aid and total expenditures since 1972-73 and Appendix B contains data for school years 1940-41 through 1971-72.

To assist the reader less familiar with the technical terms used in the Analysis, a glossary of terms is provided at the end of the report.

THE FINANCING OF PUBLIC EDUCATION IN NEW YORK STATE

Introduction

The New York State commitment to elementary and secondary education has increased State assistance by \$4.1 billion or 84 percent, from \$4.88 billion in 1983-84 to \$8.99 billion in 1990-91. While this was occurring at the State level, school districts increased local tax revenues \$4.2 billion which resulted in a total expenditures increase of \$8.6 billion during the period. The State's percent participation, presently at 42.8 percent for 1990-91, in the expenditures of school districts over the past 22 years has varied from a 1968-69 peak of 48.1 percent to a low of 37.6 percent in 1977-78. Figures such as these compare favorably with the 1944-45 low of 31.5 percent.

New York State's capacity to fund education has fluctuated over the years depending on State or national economic prosperity. Between 1983-84 and 1988-89, the State's economic climate was improving. This resulted in generous increases in State aid; the State aid portion of Total General and Special Aid Fund Expenditures was an estimated 44.2 percent for 1988-89. Due to a restructuring of the New York State Teachers' Retirement System (TRS) payments, this percentage declined to 41.5 percent for 1989-90. Even with a \$257 million give-back (1990-91 State aid to school districts was initially reduced \$67 million due to restructuring of TRS and Employees' Retirement System payments and further reduced \$190 million due to the December 1990 Deficit Reduction Assessment), the 1990-91 percentage rises to 42.8 percent. As a result of the State's \$6 billion budget deficit, the 1991-92 proportionate share of public school expenditures funded from State sources is estimated at 39.2 percent, a drop below 40 percent for the first time since 1983-84.

A review of Table 1 reveals that State aid has paralleled the State's economic climate. In the latter 1970's, the State provided relatively modest aid increases to schools caused in part by the economic adjustment to higher energy costs and inflation. With the decline in energy costs and the surge of economic activity within the State and nation, the State has moved to incorporate new initiatives and continue support for excellence in education. In fact, the State aid portion of total expenditures has increased from a low of 37.6 percent in the 1977-78 school year to 44.2 percent in 1988-89, the highest State share since 1970-71. This percentage remained relatively constant for 1990-91; however, the recent decline in economic activity in New York is reflected in the 39.2 percent figure for 1991-92 and an estimated 38.3 percent for 1992-93.

The proportionately equivalent growth in both total expenditures and State aid over the past two decades is reflected in Table 1. Since 1972-73, State aid payments have increased from \$2.44 billion to \$8.99 billion in 1990-91, a 268 percent increase. During the same period, total expenditures rose from just under \$6 billion to \$21 billion, a 252 percent increase.

1973-74	2,551,036,661	6,675,066,632	38.2
1972-73	2,439,706,794	5,969,276,199	40.9

- For comparisons prior to the 1972-73 school year, the reader is referred to Appendix B of this report.
- ** All revenues from State sources reported on the Annual Financial Report by school districts. Depending on local accounting methods, this may include prior year adjustments.
- *** Total Expenditures include expenditures made from the Federal Aid Fund from 1965-66 to 1973-74 and from the Special Aid Fund since 1974-75. Includes expenditures from the Debt Service Fund, which was established in 1978-79.
- **** Based on State aid payments to school districts in 1991-92; does not include some grants, prior year adjustments, and miscellaneous revenues from State Sources. Total expenditures are based on estimates provided by school districts.
- ***** Annual Financial Report data was used; however, the State aid withheld as a State share of local Teachers' Retirement System and Employees' Retirement System savings, which resulted from the restructuring noted below, was charged against revenues rather than expenditures.
- ****** Legislation for 1989–90 reduced State aid by approximately \$684 million due to a restructuring of Teachers' Retirement System (TRS) payments for 1988–89 salaries. However, differences among districts in both accounting method used and payment schedule for the 1988–89 TRS salaries resulted in a total expenditure amount which includes about \$306 million in TRS expenditures.

Although final data for 1991-92 will not be available until next Spring, preliminary information in Table 1 shows that Total General and Special Aid Fund Expenditures for public elementary and secondary schools are expected to increase \$0.7 billion for 1991-92 to \$21.7 billion, a 3.4 percent increase over 1990-91. However, State aid in the same period will decrease by about \$477 million (-5.3 percent) to \$8.5 billion.

Table 2 shows the increases in total expenditures per enrolled pupil and State aid per enrolled pupil computed for school years 1972-73 to 1991-92. Changes in per pupil expenditures and aid can be caused by either changes in total expenditures and aid, or changes in the number of pupils served. As Table 2 illustrates, Total General and Special Aid Fund Expenditures per pupil increased from \$1,708 in 1972-73 to \$8,173 in 1990-91, a 379 percent increase over the period; whereas State aid per pupil increased from \$698 in 1972-73 to \$3,501 in 1990-91, a 402 percent increase over the same time span. The percent increase differences on total versus per pupil dollars are the result of a 26 percent enrollment decline statewide over the same time frame.

The district estimated 1991-92 Total General and Special Aid Fund Expenditures per enrolled pupil are \$8,305, an increase of \$132 (1.6 percent) over the 1990-91 school year. During this same period, State aid decreased by \$244 per enrolled pupil to \$3,257, a 7 percent change from the 1990-91 school year.

Table 3 contains a breakdown of total revenues and includes General and Special Aid Fund Revenues by funding source. State aid, Federal aid and local tax and other revenues are listed over the past 20 years. Revenues come primarily from State aid (42.8 percent of total in 1990-91) and local taxes and other sources (53.8 percent in 1990-91); Federal aid was \$714 million in 1990-91, which amounts to only 3.4 percent of total revenues. Table 3 also shows that Total General and Special Aid Fund Revenues increased from \$5.96 billion in 1972-73 to \$21.01 billion in 1990-91, an increase of 252 percent, while State aid increased from \$2.44 billion to \$8.99 billion, or 268 percent over the same period. At the same time, local and other revenues increased from \$3.23 billion to \$11.31 billion, a 250 percent increase; Federal aid increased from \$293 million to \$714 million, a 144 percent increase over this period. Current estimates indicate that Federal aid will be approximately \$720 million in 1991-92, but will only comprise 3.3 percent of total revenues. The proportion of revenues from State sources will have decreased to 39.3 percent for the 1991-92 school year and amount to over \$8.5 billion. Local tax and other revenues are expected to have grown by over 1.1 billion dollars, but their proportionate share of total revenues will have increased by only 3.5 percentage points.

Includes the Debt Service Fund, which was established in 1978-79.

For school years 1961-62 through 1971-72, the reader is referred to the "Analysis of School Finances," 1979-80; however for those earlier years, the base for the percentage calculation is Expenditures, not Revenues.

COMPARISONS OF PER PUPIL EXPENDITURES AND WEALTH BY CONTIGUOUS STANDARD METROPOLITAN STATISTICAL AREAS (SMSAs)

This section covers the variation in expenditures and resources among the contiguous Standard Metropolitan Statistical Areas (SMSAs) of the State. Appendix C shows the counties in each contiguous SMSA.

Table 4 shows that the Long Island-N.Y.C. Metro area has by far the highest average Full Value/TWPU (Total Wealth Pupil Units), AOE/TAPU (Approved Operating Expense/Total Aidable Pupil Units) for Expense, Total Expenditure/TAPU for Expense and Tax Revenue/TAPU for Expense of the contiguous SMSAs. This region also has the highest Income/TWPU and Income/Return and the lowest average Tax Rate per \$1,000 Full Value. The non-SMSA districts are lowest on FV/TWPU, Income/TWPU, Income/Return and Tax Revenue/TAPU for Expense; they have the highest averages among the regions on State Aid/TAPU for Expense and Operating Aid/TAPU for Expense. The Buffalo-Rochester region has the highest average Tax Rate per \$1,000 Full Value. The Binghamton-Elmira region has the lowest average AOE/TAPU for Expense and Total Expenditure/TAPU for Expense.

Table 4 also displays wealth, expenditure, and aid data in another fashion -- on the basis of pupil weighted averages for districts grouped by type. Appendix D explains the district type classification. These type groupings are: 1) All Major Districts; 2) New York City; 3) Other Big 5 City School Districts; 4) Small City School Districts; 5) Suburban Districts; and, 6) Rural School Districts. By comparing individual districts to both the decile groupings in Section III as well as the classification groups listed, a larger picture of the district's relative status can be gained. For example, the mean district AOE/TAPU for Expense for all major districts is \$5,600. New York City spends \$5,121 per pupil. The other Big 5 City School Districts have an average AOE/TAPU for Expense of \$5,084 (two districts spend about \$4,750 and the other two spend about \$5,550 per pupil). The Small City Districts have an average AOE/TAPU for Expense of \$5,273 with the 50 Upstate districts averaging \$4,874 per pupil and the 7 Downstate districts averaging \$7,808 per pupil. The Suburban Districts have an average expenditure of \$6,314 per pupil with the 243 Upstate districts and the 169 Downstate districts spending \$4,993 and \$7,729 per pupil, respectively. The 219 Rural districts have an average AOE/TAPU for Expense of \$4,576.

Table 5 compares contiguous SMSAs on changes from 1986-87 to 1990-91 in Full Value per TWPU, Income per TWPU and Total Wealth Pupil Units (TWPU). The Poughkeepsie-Newburgh SMSA had the largest increase in FV/TWPU. The Long Island-N.Y.C. Metro had the largest percent increase in wealth per pupil as demonstrated by Income/TWPU. Statewide TWPU increased slightly, with the Long Island-N.Y.C. Metro holding steady. The relatively small increase in New York City's TWPU tends to overshadow a decline in TWPU of around 4 percent for the remaining districts in this

Includes Debt Service and Special Aid Fund.

Net State Aid includes the effect of the December 1990 Deficit Reduction Assessment of \$790 million and the \$67 million reduction due to the restructuring 5 of the Teachers' Retirement System and Employees' Retirement System payments. However, Operating Aid is not reflective of these reductions.

contiguous SMSA. Otherwise, the smallest increase in TWPU occurred in the Binghamton-Elmira SMSA while the non-SMSA districts had the greatest increase in TWPU. The Buffalo-Rochester SMSAs had the smallest increase in FV/TWPU and Income/TWPU. It is important to note that the Market Value Standard (used to express assessed value as full value) was advanced five years over the four year period: the 1986 standard was set at January 1982 while the 1990 standard was January 1987.

Table 6 compares contiguous SMSAs on changes in AOE/TAPU for Expense, Tax Revenue/TAPU for Expense and Tax Rate per \$1,000 of Full Value for the 1986-87 to 1990-91 period. The Poughkeepsie-Newburgh SMSAs had the largest percent increase in AOE/TAPU for Expense coupled with the largest percent increase in Tax Revenue/TAPU for Expense. The smallest percent increase in AOE/TAPU and in Tax Revenue/TAPU for Expense was in the Long Island-N.Y.C. Metro SMSAs. The largest percent decline in Tax Rate occurred in the Long Island-N.Y.C. Metro SMSAs but these SMSAs still had the highest average Tax Revenue per pupil. The percent change in Tax Rate was negative for each contiguous SMSA while AOE/TAPU for Expense and Tax Revenue increased over the four year period.

The 1990-91 Full Value/TWPU State average of \$251,500 is higher than the State average of \$234,700 used for 1992-93 State Operating Aid. The latter amount is based on the two year average of the 1989 Full Value and the preliminary 1990 Full Value of the districts.

Table 7 shows the wide range in school district expenditure patterns based on AOE/TAPU for Expense among the contiguous SMSAs when compared to the statewide 25th percentile (\$4,438) and the statewide 75th percentile (\$6,659). The Long Island-N.Y.C. Metro SMSA contains by far the largest number and percent of school districts with AOE/TAPU for Expense above the 75th percentile; 154 of the 178 school districts in the region, or 87 percent, had expenditures above the 75th percentile. This contiguous SMSA had no school districts below the 25th percentile of spending. In most of the other contiguous SMSAs and in non-SMSA districts, the number of districts in excess of the 75th percentile was extremely small. Each of these contiguous SMSAs and the non-SMSA districts had substantially higher numbers of districts with AOE/TAPU for Expense less than the 25th percentile.

Ш

COMPARISONS OF PER PUPIL EXPENDITURES AND WEALTH BY DISTRICT RANK

Section III is designed to highlight the relationship between school district wealth and expenditure per pupil. A useful technique for portraying this relationship is first to rank order all districts by deciles of Approved Operating Expenditures per Total Aidable Pupil Unit for Expense (AOE per TAPU for Expense). Each of the expenditure deciles thus created can also be described in terms of selected measures of district wealth as determined by Full Value per Total Wealth Pupil Unit and Income per Total Wealth Pupil Unit. The resulting decile tables provide a quick comparison of school districts with similar approved operating expenditures per pupil and the degree to which changes in wealth are associated with changes in expenditure per TAPU.

Table 8 provides a comparison of Approved Operating Expenditures per TAPU for Expense, by selected district percentiles. As noted, Weighted Average Daily Attendance (WADA) was used for school year 1972-73; Total Aidable Pupil Units (TAPU) was used for school years 1973-74 through 1979-80; and since 1980-81, TAPU for Expense, which includes handicapped weightings, has been the pupil measure. The percentile values displayed (10th, 25th, 50th, 75th and 90th) are for all major school districts excluding New York City. New York City data are shown separately. Table 8 also displays the difference between the 90th and 10th percentiles; this difference or expenditure gap is expressed as a percent of the 10th percentile value. As the last column of this table indicates, this expenditure gap has continued to grow over the previous two decades, with a few exceptions, although the gap decreased slightly for the 1990-91 school year.

Between the 1989-90 and 1990-91 school years, the median (50th percentile) district AOE per TAPU for Expense increased 5.3 percent or \$251. For the 10th percentile district, the change was 4.3 percent or \$171; for the 90th percentile district, the per pupil change was 3.1 percent or \$255.

Over the 19-year period, the median district operating expenditure per weighted pupil has increased by about 360 percent; however, the expenditure gap over the same period has increased by over 500 percent. When New York City is compared with all major districts, the City's Approved Operating Expenditure per weighted pupil is shown to be slightly above the 75th percentile until the 1979-80 school year when its AOE per weighted pupil was slightly below the 75th percentile. In 1980-81, the method of computing pupil count was changed to include weighted pupils with handicapping conditions. Since there are a relatively large number of handicapped pupils in New York City, this method of calculation has served to inflate New York City's pupil count, thus lowering their AOE per weighted pupil figures. From school year 1980-81 to the present, New York City's AOE per pupil is about halfway between the 50th and the 75th percentile although it has declined to the 55th percentile for 1990-91.

Values shown are the weighted averages for all 69 (or 70) districts with an AOE/TAPU for Exp. less than or equal to the upper limit for the decile.

Includes Debt Service and Special Aid Fund.

Net State Aid includes the effect of the December 1990 Deficit Reduction Assessment of \$190 million and the \$67 million reduction due to the restructuring (1) of the Teachers' Retirement System and Employees' Retirement System payments. However, Operating Aid is not reflective of these reductions. 23 :

For Tables 9 through 11, districts were ranked respectively on Expenditure (AOE/TAPU for Expense), Property Wealth (FV/TWPU) and Income Wealth (Income/TWPU). Based on the ranking value for a given table, the State's 693 major districts (excluding New York City) were divided into ten decile groupings. (A district could conceivably be in a different decile group on each table.) Each table displays the highest value for each decile group on the ranking measure as well as the decile average for the ranking measure and eight other data measures, plus the 1990-91 enrollment (see Glossary for definition). The bottom of each table carries State averages and New York City's values for each data measure. The decile portions of Tables 9, 10 and 11 permit the reader to compare individual school district information in a number of ways; it can be compared to other districts within its decile group, to other decile groups, or to the State average. For example, a district with a 1990-91 AOE/TAPU for Expense of \$4,400 would fall in the third expenditure decile (between \$4,337 and \$4,532). A district at or below \$4,124 would fall in the first decile. The average FV/TWPU for the third AOE/TAPU for Expense decile grouping was \$103,662 and the average Total Expenditure/TAPU for Expense was \$5,713 for this same group of districts.

In a review of the decile tables, attention should be drawn to the fact that, on occasion, relatively high property wealth (FV/TWPU) districts have relatively low AOE/TAPU for Expense and, on occasion, low property wealth districts have AOE/TAPU for Expense considerably above the State average. The State average for all major districts including New York City is listed below the deciles and the decile rank of the average is shown. The State average AOE/TAPU for Expense is \$5,600 and falls in the 7th decile.

IV

FOUR-YEAR CHANGES IN SCHOOL FINANCES 1986-87 to 1990-91

Section IV contains longitudinal information concerning total pupils, key expenditure categories, school district tax and other revenues, full value and personal income. Each of these items of information is presented by Total State, New York City and Rest of State and percent changes for year-to-year as well as over the four-year period are shown. Table 12 contains five pupil counts. Table 13 contains gross financial amounts which are presented on a per pupil basis in Tables 14 and 15. In this fashion, trends can be reviewed; State totals are analyzed including and excluding New York City. Data in Tables 12 through 15 include major districts only.

For the 1986-87 through the 1988-89 school years, State aid to school districts has increased each year as State aid formulas have been adjusted to meet higher costs, with New York City receiving percentage increases larger than those for the State as a whole. For Rest of State in the 1989-90 school year, the smaller than prior years' increase in Total Expenditures and the decrease in State Aid reflected the fact that Teachers' Retirement System (TRS) expenses were lowered and State Aid to all districts but New York City was comparably reduced. The large percent increase in State aid in 1990-91 for Rest of State is predominantly due to the aid reduction in 1989-90. State aid payments in 1990-91 reflect a reduction of \$257 million from aid that would otherwise have been paid. When the nearly \$1 billion State aid increase from 1988-89 to 1990-91 is averaged over two years, the resulting yearly 6 percent increase is still smaller than in the prior two years.

During the 1986-87 to 1990-91 period, school district local tax and other revenues for non-New York City districts increased 37.8 percent, with approximately equal annual increments. Local tax and other revenues in New York City increased by 24.3 percent over the same period.

Over the four-year period, the Total Aidable Pupil Units (TAPU) for Expense displayed in Table 12 have increased, slightly, in the State. The number of enrolled pupils has increased in each of the last two years. New York City's enrollment increased each year except in 1988-89, while the Rest of State mirrors the Total State trend. The changes in the definition of TAPU make year-to-year comparisons of TAPU with enrollment difficult unless the changes in definition and their impact are reviewed (See Glossary for changes in definition). The Resident Weighted Average Daily Attendance (RWADA) in 1988-89 shows a decline greater than the enrollment decline. This is caused mainly by introduction of a new method of calculating RWADA based on all attendance periods rather than on the best 4 of 8 or 5 of 10 attendance periods. The definitional change to Combined Adjusted Average Daily Membership (CAADM) for 1990-91 is responsible for only a small portion of the increase from 1989-90, predominantly in Rest of State.

[•] TAPU for Expense is the one year TAPU with the weights prescribed in law for each year.
• RWADA for 1988-89 and thereafter uses all attendance periods.
•• CAADM, starting in 1990-91, includes resident students attending other public school districts.

Total General and Special Aid Fund Expenditures shown in Table 13 have increased every year for both Rest of State districts and New York City. For 1986-87 through 1988-89 the percentage increase in total expenditures was smaller in New York City than in the Rest of State. In 1989-90, the TRS reduction affected only districts outside New York City; therefore, New York City expenditures increased in an historically consistent manner, while the remainder of the districts show a much lower (3.6 percent) increase than in previous years. In 1990-91, the situation reverses: New York City's expenditures increase by only 4.9 percent, reflecting the deficit reduction assessment, while Rest of State expenditures increase by 10.3 percent, reflecting the deficit reduction and the depressed 1989-90 expenditure level. The expenditure increase from 1988-89 to 1990-91, averaged over the two years, is 7.8 percent for New York City and 7.1 percent for Rest of State. Similar to total expenditures, instructional expenditures increased strongly from 1986-87 to 1988-89 for the State, and in 1989-90 for New York City. The smaller increases in 1990-91 reflect the impact of the deficit reduction assessment.

Approved operating expenditures increased for New York City and the Rest of State annually during the four-year period because, by definition, they were adjusted in 1989-90 to include the TRS expense that would have been incurred without the restructuring; approved operating expenditures increased 29.5 percent in New York City, and 35.1 percent in the Rest of State school districts.

Statewide, debt service has increased in each of the last four years; however, New York City's debt service declined in the first two of the last four years.

Property value and income data form the basis upon which most State aid to school districts is distributed. School districts having increases in full value per pupil or income per pupil in excess of the State average would receive less formula operating aid per pupil. Since 1986-87, the yearly percent increases in full value registered in double digits. This steep increase is due in part to steps taken by the State Board of Equalization and Assessment to reduce the lag between the full value standard date and the assessment roll date. The lag is being reduced incrementally from 62 months to 44 months. There is an additional lag of 34 months between the assessment roll date and the use of valuation date for school aid; for example, 1990 assessment roll data converted to full value on the basis of a 1987 equalization rate standard are the most current numbers used in the calculation of 1992-93 aid. Income data is much more current, with 1990 calendar year income used for 1992-93 school aid.

In 1990-91, full value for the total State increased an average of 15.4 percent for the year, while New York City increased 18.1 percent. New York City personal income increased 1.9 percent during 1990-91 while Rest of State personal income increased 3.4 percent. Over the four-year period, personal income increased by nearly one-third for the State while full value nearly doubled.

Table 14 displays per pupil (Combined Adjusted Average Daily Membership) averages of the first six data elements contained in Table 13. Total General and Special Aid Fund Expenditures per Pupil, Approved Operating Expenditures per Pupil and Instructional Expenditures per Pupil roughly parallel each other since 1986-87 with annual percentage

· Approved Operating Expenses for 1989-90 were adjusted to include the TRS expense that would have been incurred without the restructuring.

(小

increases in New York City slightly lower than those for the Rest of State except in 1989-90. Debt service per pupil decreased in New York City during the first two years while in the Rest of State, debt service increased each year. Total State aid per pupil increased annually except for 1989-90 with New York City receiving larger increases than the Rest of State during most of the four-year period and also posting an increase in 1989-90. In 1990-91 State aid per pupil increased 2.6 percent for New York City while Rest of State increased 14.2 percent; again, this disparity is a reflection of the TRS adjustment.

Local tax and other revenues per pupil increased each year although the smallest percent increases occurred for 1990-91, both in New York City and Rest of State.

Table 15 displays yearly averages of ratios based on the data elements contained in Table 13. Personal income per TWPU continued to increase by more than 10 percent annually through 1988-89. Since 1989-90 the increases for New York City and Rest of State parallel the increases in personal income. The 1.9 percent increase in TWPU in New York City in 1990-91 contributes to the 0.1 percent decrease in income per TWPU. In each year, New ork City's average income per TWPU is greater than the State average.

In contrast, New York City's average full value per TWPU was lower than the State average in each of the five years. However, New York City's percent increase exceeded Rest of State each year except in 1988-89.

Since 1986-87, local tax and other revenues per TWPU for the total State increased; however, recent large increases in full value, as noted before, resulted in yearly tax rate declines. Over the four year period, the State average tax rate decreased 33.1 percent. The 41.8 percent four-year decline in tax rates in New York City far exceeds the 28.3 percent decline in Rest of State for two reasons: New York City's local tax and other revenues increased less than Rest of State and the City's full value increased more rapidly than Rest of State.

The percent increases in Approved Operating Expense per TAPU for Expense follow the trend in Approved Operating Expense per CAADM shown in Table 14.

GLOSSARY

Definitions Used in This Report

- Adjusted Average Daily Attendance (AADA): Adjusted Average Daily Attendance is the same as Average Daily Attendance (ADA) except half-day kindergarten ADA is weighted at .50 and is an average for the school year. Unadjusted Average Daily Attendance is the unweighted ADA for the school year.
- Approved Operating Expenditures (AOE): Approved Operating Expenditures (AOE) are the operating expenditures for the day-to-day operation of the school as defined in Education Law. Not included are expenditures for building construction, transportation of pupils, some expenditures made to purchase services from a Board of Cooperative Educational Services or County Vocational Education and Extension Board, tuition payments to other districts, and expenditures for programs which do not conform to law or regulation. Money received as Federal aid revenue, proceeds of borrowing, and State aid for special programs are first deducted from total annual expenditures when approved operating expenditures are computed. For 1989-90, AOE was adjusted to include the TRS expense that would have been incurred without restructuring.
- Average Daily Attendance (ADA): This pupil count is the average number of pupils present on each regular school day in a given period, an average determined by dividing the total number of attendance days of all pupils by the number of days school was in session. ADA for a group of classes or schools in session for varying numbers of days is obtained by adding together the ADA for each group. In addition, adjustments are made for the adverse effects of religious holidays on attendance. Equivalent secondary attendance of students under 21 years of age who are not on a regular day school register is added to adjusted ADA in calculating TAPU and TWPU beginning in school year 1984-85. For students 21 years of age and older, refer to the definition of Employment Preparation Education Aid.
- Combined Adjusted Average Daily Membership (CAADM): This pupil count consists of the average number of students receiving their educational program at district expense. It is the sum of: students enrolled in district programs (half-day kindergarten pupil weighted at 0.5); handicapped pupils educated in BOCES full-time; handicapped pupils educated in nonpublic schools including the State schools at Rome and Batavia; equivalent attendance; and prekindergarten enrollment weighted at 0.5. Since 1990-91, it includes resident students attending another public school.
- Contiguous SMSAs: Contain two adjacent SMSAs (See Standard Metropolitan Statistical Areas and Appendix C).
- Debt Service: Debt Service is a combination of principal and interest on approved building projects, transportation issues and other debt instruments, both short- and long-term.
- Deciles: Deciles are composed of 10 percent of the major school districts in New York State or 69 school districts except for deciles 2 and 5 which contain 70 districts each. The deciles exclude New York City. For example, decile 1 would contain the lowest 70 districts in a category; the value listed as the upper limit is the maximum value (10th percentile) for the group.
- Employment Preparation Education (EPE) Aid: Pupils 21 years of age and older who have not received a high school diploma or a high school equivalency diploma and attend employment education programs leading to a high school diploma or high school equivalency are eligible for aid under

- Employment Preparation Education (EPE). Aid is provided on a current year basis and is calculated based on the statewide average per pupil expenditure and a full value aid ratio.
- Enrollment/Enrolled Pupils: The total number of students entered on the roll as of the date in the fall on which data for the Basic Educational Data System are collected for the current year, including equivalent attendance and students attending full time programs for the disabled in BOCES or nonpublic schools. In addition, prekindergarten and half-day kindergarten enrollment is weighted at 0.5.
- Evening School ADA: Evening School ADA was the ADA generated by half-day equivalent attendance in an approved program during the evening hours in school years prior to 1984-85 by individuals who were sixteen years of age or older. Such programs were approved by the Commissioner and lead to a high school diploma or its equivalent. The additional weighting for evening school pupils of .50 was in effect through 1984-85. (See the Average Daily Attendance definition above for attendance not on a regular day school register.)
- Federal Aid: All revenues received from the Federal Government directly or through the State Education Department in the Special Aid Fund and includes Job Training Partnership Act (JTPA) and other federal revenues received in the General Fund.
- Full Valuation of Taxable Real Property (FV): Total assessed valuation of property on the tax rolls within the district adjusted by the State equalization rate determined for such rolls. Data obtained from the NYS Division of Equalization and Assessment, through the Office of the State Comptroller.
- Instructional Expenditures (IE): The calculation of IE, defined in subdivision 11-a of Section 3602 of Education Law and enumerated in Commissioner's Regulations 175.39 (revised 9/92), requires the summation of school district expenses which are identified in the Commissioner's Regulations as instructional plus a prorated share of fringe benefit expenses. Examples of the expenses included are: teachers' salaries, other instructional salaries, fringe benefits related to instruction, tuition expenditures, Special Aid Fund instructional expenditures, and other expenditures related to instruction, including BOCES instructional expenditures.
- Local Tax and Other Revenues: Tax revenues are described below. Other revenues are any local funds other than real property taxes or non-property taxes such as a sales tax or utility tax; they may include interest income, fees, tuition, etc. For 1990-91, Local Tax and Other Revenues were distributed in the following manner: property and non-property taxes, 91.9 percent; tuition, 0.7 percent; and, other, 7.4 percent.
- Major School Districts: Major School Districts are school districts having eight or more teachers, exclusive of institutional (special act) school districts.
- Minor School Districts: Minor School Districts are school districts with fewer than eight teachers, including those districts contracting 100 percent with other districts for the education of all their students, and institutional (special act) districts.
- Net State Aid: For the decile and contiguous SMSA tables, 1990-91 Net State Aid is the State aid computed for districts pursuant to State Education Law (principally Sections 3602, 1950, 701, 711, and 751) and to related portions of unconsolidated law less the amount of State aid withheld due to deficit reduction and restructuring of TRS and ERS payments.

- Pupils with Handicapping Conditions: Pupils resident of the district and attending special class in public schools and BOCES with weightings assigned as follows: pupils attending special class 60 percent of the school day at 1.7 additional; pupils in special class 20 percent per week at .9 additional; and pupils in special class two periods per week at .13 additional. Beginning with school year 1988-89 (aid year), pupils receiving direct and indirect consultant teacher services are assigned an additional .8 weighting.
- Pupils with Special Educational Needs (PSEN): The ADA of Pupils with Special Educational Needs is determined by multiplying the composite percentage of pupils scoring below minimum competence on the third and sixth grade reading and mathematics Pupil Evaluation Program tests by the district's combined adjusted ADA to produce the number of pupils for weighting. Prior to 1978-79, the average was based on the 1971 and 1972 sixth grade reading and mathematics tests. From 1978-79 through 1983-84, the average was based on the 1974 and 1975 third and sixth grade reading and mathematics tests. Beginning in school year 1984-85, the average was based on tests administered in 1977, 1978, 1979 and 1980. Beginning in school year 1986-87, the average was based on tests administered in the Spring of 1983 and 1984. Beginning in school year 1988-89, the average was based on tests administered in the Spring of 1985 and 1986. The weighting for eligible pupils is .25 pupil units.
- Resident Weighted Average Daily Attendance (RWADA): RWADA is calculated by subtracting the WADA of nonresident pupils attending public school in the district from the district's WADA and adding the WADA of pupils resident in the district but attending full time a school operated by a Board of Cooperative Educational Services or a county vocational education and extension board, or another public school district.
- Secondary School Pupil Weighting: Secondary school ADA not otherwise weighted are eligible for an additional weight of .25. Secondary PSEN ADA (pupils with special educational needs) are eligible for an additional weight of .15 beginning in 1978-79 and a weighting of .25 beginning in 1980-81. Beginning in school year 1988-89 (aid year), Big Five occupational education pupils are no longer excluded from the additional .25 weighting for secondary.
- Small City Districts: Small Cities School Districts are fiscally independent school districts located entirely or mainly within a city which had a population of less than 125,000. Prior to 1986-87 these districts had tax limits of 1.25 percent, 1.50 percent, 1.75 percent, or 2.00 percent of the five-year average Full Value. A Constitutional Amendment enacted in 1985 eliminated, as of the 1986-87 school year, the tax limits for school districts in cities with less than 125,000 population.
- Special Aid Fund: Since 1974-75, the total expenditures in this fund are for the majority of a school district's Federal funds for specific programs. Beginning with the 1987-88 school year, it also includes certain State aid programs such as IPP and Categorical Reading.
- Standard Metropolitan Statistical Area (SMSA): A SMSA has one or more central counties containing the area's main population concentration: an urbanized area with at least 50,000 inhabitants. An SMSA may also include outlying counties which have close economic and social relationships with the central counties. The outlying counties must have a specified level of commuting to the central counties and must also meet certain standards regarding metropolitan character, such as population density, urban population and population growth. The SMSA's are designated and defined by the federal government's Office of Management and Budget. (Material obtained from Number of Inhabitants, United States Summary, U.S. Dept. of Commerce, Bureau of the Census, June 1983 page A-4.)

- Summer School ADA: Summer School ADA is the ADA of pupils attending approved programs of instruction operated by the district during the months of July and August of the base year in accordance with the Commissioner's Regulations. The summer school weighting is .12.
- Tax Rate: The tax revenue or local tax and other revenue divided by the full valuation of real property, expressed as a rate per \$1,000 of full valuation.
- Tax Revenues: Local revenues raised by taxation for school purposes, including property and nonproperty tax revenues. For the Big 5 City School Districts in the decile and contiguous SMSA tables, and for New York City in general, tax revenue is Total General Fund Expense minus nontax revenues.
- Total Aidable Pupil Units (TAPU): Total Aidable Pupil Units (TAPU) is the measure on which formula aid is computed. It includes combined adjusted Average Daily Attendance (weighted for half-day kindergarten), weighted pupils with special educational needs, weighted summer school pupils, dual enrollment pupils, and additional pupils weighted for secondary school. Aidable evening school pupils were included in TAPU through the 1984-85 school year.
- Total Aidable Pupil Units for Expense: Total Aidable Pupil Units for Expense (TAPU for Expense) is used to compute the approved operating expense per pupil. This is the same definition as TAPU except it includes weightings for pupils with handicapping conditions.
- Total General and Special Aid Fund Expenditures (Total Expenditures): These are the expenditures and transfers for the total school program from a district's Total General, Debt Service, and Special Aid Funds. For 1990-91, the State aid withheld as a State share of local Teachers' Retirement System and Employees' Retirement System savings was excluded.
- Total Personal Income: The adjusted gross personal income, including results from the income verification process, as reported by the Department of Taxation and Finance.
- Total State Aid: The sum total of all State aid paid to school districts pursuant to State Education Law, principally Sections 3602, 1950, 701, 711, and 751, and to related portions of the unconsolidated laws and reported on the Annual Financial Report (ST-3) by school districts. For 1990-91, the State aid withheld as a State share of local Teachers' Retirement System and Employees' Retirement System savings was included.
- Total Wealth Pupil Units (TWPU): Total Wealth Pupil Units (TWPU) are based upon the adjusted average daily attendance of pupils resident in the district plus weightings for pupils with special educational needs, pupils with handicapping conditions and secondary school pupils.
- Wealth: School district wealth is determined by Full Value and/or Income/TWPU. Relative wealth can be calculated by dividing district Full Value per TWPU by the State average and Income per TWPU by the State average. Wealth for computing Building, BOCES, Hardware and Vocation Education Equipment Aids is based on Full Value per RWADA.
- Weighted Average Daily Attendance: Weighted Average Daily Attendance (WADA) is determined by applying the following weightings to the average daily attendance: half-day kindergarten, .5C; full day kindergarten and grades one through six, 1.00; grades seven through twelve, 1.25. Beginning with 1988-89 data, the selection of best attendance periods (4 of 8, or 5 of 10) was eliminated.

APPENDIX A

HISTORIC CHANGES IN PUPIL UNITS

Pupil Units to Determine Expenditures Per Pupil: Pupil units used to compute expenditures per pupil have changed over the last decade.

Use of WADA Prior to 1974-75: Prior to school year 1974-75 expenditure per pupil was based on Weighted Average Daily Attendance (WADA) computed using full-time attendance in the best 4 of 8 or 5 of 10 attendance periods with half-day kindergarten weighted at .5 and secondary pupils at an additional .25.

TAPU Definitions from 1974-75 Through 1979-80: From 1974-75 to 1977-78, the pupil count was Total Aidable Pupil Units (TAPU) based on full year attendance plus half-day kindergarten weighted at .5; pupils with special educational needs (PSEN) at an additional .25; summer school pupils at an additional .12; evening school at an additional .50; pupils with handicapping conditions weighted at an additional 1.0; and secondary pupils not weighted as PSEN or handicapped pupils at an additional .25. Pupils with special educational needs are determined based on third and sixth grade math and reading PEP tests. (See Glossary for year of test.)

In school years 1978-79 and 1979-80, pupil counts were based on TAPU except secondary school PSEN pupils which had not previously received the secondary weighting including the PSEN, received an additional .15 secondary weighting. The PSEN weightings were based on 1974 and 1975 third and sixth grade math and reading PEP tests.

The 1980-81 school year was the first year of the new and separate formula for providing State aid for pupils with handicapping conditions. Therefore, TAPU for payment of operating aid in school year 1980-81 did not contain a weighting for pupils with handicapping conditions while the newly defined TAPU for Expense equaled TAPU plus the new handicapped weightings. Secondary school PSEN pupils received the PSEN weighting plus an additional .25 for secondary attendance.

Beginning in school year 1988-89, TAPU for payment was computed with occupational education pupils in Big 5 city school districts eligible for .25 secondary weighting.

TAPU For Expense: Used since 1980-81 for measuring expense per pupil, a district's TAPU for Expense equals the sum of TAPU for payment of operating aid (which includes additional weightings as follows: PSEN at .25; secondary at .25; evening school at .5; summer school at .12); plus weighted pupils with handicapping conditions (60% of the day, an additional 1.7; 20% of the week, an additional .9; 2 periods per week, an additional .13). TAPU for Expense is a one year pupil count even though TAPU for payment of operating aid may be a two-year average. For aid payable in 1984-85, TAPU and TAPU for Expense were computed based on PSEN weightings for third and sixth grade reading and mathematics PEP tests in the years 1977 through 1980.

For the 1984-85 school year, the additional .5 evening school weighting was applied to evening school pupils counted as contact hours/1,000. Thereafter, the evening school weighting was eliminated. Beginning with the 1984-85 school year, pupils under age 21 who were not on a regular day school register were counted as secondary pupils in the computation of ADA, based on contact hours/1,000. The contact hours of individuals 21 years old and over attending programs leading to a high school diploma or equivalency diploma would be aided based on the new Employment Preparation Education Aid.

Beginning with school year 1988-89 (aid year), pupils receiving direct and indirect consultant teacher services are assigned an additional .8 weighting.

PSEN weightings for school year 1986-87 and 1987-88 were based on third and sixth grade reading and mathematics PEP Test scores, averaged for the years 1982-83 and 1983-84. These scores were used to determine weightings to be included in TAPU and TAPU for Expense. Beginning in school year 1988-89, the average was based on tests administered in the Spring of 1985 and 1986. The weighting for eligible pupils is .25 additional pupil units.

Pupil Units to Compute District Wealth Per Pupil: The pupil units used to compute school district wealth prior to school year 1978-79 were based on Resident Weighted Average Daily Attendance (RWADA) computed based on the best 4 of 8 or 5 of 10 attendance periods of the district. Beginning with the 1990-91 aid year (1988-89 attendance), all attendance periods are used. This pupil count is based upon resident pupils with half-day kindergarten pupils weighted at .5 and secondary pupils weighted at 1.25. The difference between RWADA and WADA is: RWADA is resident pupils attending public school and WADA is based on attendance of resident and nonresident pupils. RWADA continues to be used to calculate Building, Hardware, Vocational Educational Equipment and BOCES Aids.

In 1978-79, the pupil units used to compute wealth were Resident Total Aidable Pupil Units (RTAPU). This computation was like TAPU except that it was adjusted for residency by adding the full-time equivalent attendance of pupils residing in the district and attending other public schools, and subtracting such attendance for non resident pupils attending district schools. Pupil weightings included were as follows: half-day kindergarten at .5; secondary at .25; PSEN at .25; handicapped at 1.00; and, PSEN secondary at .15. The PSEN weightings were based on third and sixth grade reading and mathematics PEP test score averages for 1974-75 and 1975-76.

In school year 1979-80, the RTAPU was changed to Total Wealth Pupil Units (TWPU) by using the best 7 of 8 or 9 of 10 attendance periods. Pupil weightings used in calculating RTAPU were continued in the calculation of TWPU.

In school year 1980-81, TWPU was adjusted by changing the PSEN secondary weighting to .25. Beginning with school year 1981-82, TWPU was further changed by adjusting the weighting for pupils with handicapping conditions based on time in special class as follows: 60 percent of the school day, an additional 1.7; 20 percent of the school week, an additional .9; and, two periods per week, an additional .13. Pupils with handicapping conditions attending private schools were included and weighted at an additional 1.7. Beginning with school year 1988-89 (aid year), pupils receiving direct and indirect consultant teacher services are assigned an additional .8 weighting.

Beginning with school year 1984-85, PSEN weightings were based on third and sixth grade reading and mathematics PEP test scores averaged for the years 1977 through 1980. The definition of TWPU was also changed to include the equivalent secondary attendance of students under age 21 who are not on a regular day school register.

Beginning with the 1985-86 school year, TWPU was based on full year attendance.

For the 1986-87 and 1987-88 school years, PSEN weightings were based on third and sixth grade reading and mathematics PEP test scores, averaged for Spring 1983 and Spring 1984. These scores were used to determine weightings to be included in TWPU.

Beginning with the 1988-89 school year, PSEN weightings are based on third and sixth grade reading and mathematics PEP test scores, averaged for Spring 1985 and Spring 1986. These scores are used to determine weightings to be included in TWPU. Beginning with the 1988-89 school year, Big Five Occupational Education pupils are duplicated for secondary weighting.

APPENDIX B

STATE AID PAYMENTS COMPARED TO TOTAL EXPENDITURES FOR PUBLIC ELEMENTARY AND SECONDARY SCHOOLS 1940–41 TO 1971–72

School	Total State	Total	Percent From
Year	Aid Payments*	Expenditures	State Aid
1971-72	\$2,373,770,523	\$5,571,103,406	42.6 %
1970–71	2,325,327,909	5,253,769,955	44.3
1969-70	2,047,705,263	4,549,830,449	45.0
1968-69	1,997,898,769	4,155,247,592	48.1
1967–68	1,638,346,054 **	3,622,486,588	45.2
1966-67	1,461,332,593	3,285,027,751	44.5
1965-66	1,272,117,831	2,799,355,786	45.4
1964-65	1,078,501,941	2,538,791,834	42.5
1963-64	1,016,065,918	2,333,788,895	43.5
1962–63	953,579,515	2,146,273,214	44.4

1940–41	121,563,209	357,923,285	34.0

Includes aid to New York City on a five-borough basis since 1968-69.

NOTE: Expenditures made from the Federal Aid fund are included in total expenditures from 1965-66 to 1973-74. State aid figures revised to exclude School Lunch and Breakfast aid since 1964-65 when the School Lunch expenditures and revenues were established as a separate fund.

Table 1, "State Aid to New York State School Districts, 1965-66," January 1967. School years 1963-64 through 1966-67 have been updated, and school years since 1966-67 have been added.

SOURCE:

^{••} Includes an additional one-half year's payment of \$51,857,477 to New York City for aid on a five-borough basis.

APPENDIX C

COUNTIES BY CONTIGUOUS STANDARD METROPOLITAN STATISTICAL AREAS (SMSAs)

A district was classified as belonging to a specific SMSA grouping based on the county in which its central office is located. Counties assigned to each regional grouping are shown below.

Albany-Glens Falls

Albany Greene Montgomery Rensselaer Saratoga Schenectady Warren

Washington

Binghamton-Elmira

Broome Chemung Tioga

Poughkeepsie-Newburgh

Dutchess Orange

Buffalo-Rochester

Erie Livingston Monroe Niagara Ontario Orleans Wayne

Long Island-NYC Metro

New York City Nassau Putnam Rockland Suffolk Westchester

Utica-Rome-Syracuse

Herkimer Madison Oneida Onondaga Oswego

Allegany

Non-SMSA

Cattaraugus Cayuga Chautauqua Chenango Clinton Columbia Cortland Delaware Essex Franklin Fulton Genesee Hamilton Jefferson Lewis Otsego St. Lawrence Schoharie Schuyler

Schoharie Schuyler Seneca Steuben Sullivan Tompkins Ulster Wyoming Yates

APPENDIX D DISTRICT TYPE GROUPINGS

One of the aggregation groupings used in this report was District Type. The combined district types were: New York City, Other Big 4 Cities, Small Cities (Upstate and Downstate), Suburbs (Upstate and Downstate), and Rural. Districts were classified as belonging to a specific type, as shown below.

Downstate Small Cities	<u>Upstate Suburbs</u> (Non City districts in the Counties of:)	Rural (Non City districts in the Counties of)
	in the Confides of.)	m the Commission,
Glen Cove	Albany	Allegany
Long Beach	Broome	Cattaraugus
Mount Vernon	Chemung	Cayuga
New Rochelle	Dutchess	Chautauqua
Peekskill	Erie	Chenango
Rye	Greene	Clinton
White Plains	Herkimer	Columbia
	Livingston	Cortland
Downstate Suburbs	Madison	Delaware
(Non City districts	Monroe	Essex
in the Counties of:)	Montgomery	Franklin
··-·	Niagara	Fulton
Nassau	Oneida	Genesee
Putnam	Onondaga	Hamilton
Rockland	Ontario	Jefferson
Suffolk	Orange	Lewis
Westchester	Orleans	Otsego
	Oswego	St. Lawrence
Big Five Cities	Rensselaer	Schoharie
	Saratoga	Schuyler
Buffalo	Schenectady	Seneca
Rochester	Tioga	Steuben
Syracuse	Warren	Sullivan
Yonkers	Washington	Tompkins
New York City	₩ayne	Ulster
•	•	Wyoming
		Yates
	Upstate Small Cities	

Upstate Small Cities

Albany	Tonawanda	Newburgh
Cohoes	Gloversville	Port Jervis
Watervliet	Johnstown	Fulton
Binghamton	Batavia	Oswego
Olean	Little Falls	Oneonta
Salamanca	Watertown	Rensselaer
Auburn	Oneida	Troy
Dunkirk	Amsterdam	Ogdensburg
Jamestown	Lockport	Mechanicville
Elmira	Niagara Falls	Saratoga Springs
Norwich	N. Tonawanda	Schenectady
Plattsburgh	Rome	Corning
Hudson	Sherrill	Hornell
Cortland	Utica	Ithaca
Beacon	Canandaigua	Kingston
Poughkeepsie	Geneva	Glens Falls
