ABSTRACT

Through Assembly Bill (AB) 1725, the California State Legislature provided two goals for staff diversity in the state's community colleges. The near-term goal was to achieve a 30% systemwide hiring rate of ethnic minorities during the 1992-93 fiscal year, and the long-term goal was to have a workforce in the community colleges that mirrored the demographic characteristics of the state's population by the year 2005. Figures on systemwide hires during the period between fall 1990 and fall 1991 indicate that: (1) the system has reached and exceeded a 30% hiring rate of ethnic minorities by the year 1992-93; (2) of the 291 executive, managerial, and administrative jobs, 106 (36.4%) were minorities; (3) of the 1,218 faculty hires, 381 (31.2%) were minorities; (4) of the 115 non-faculty professional hires, 38 (33.0%) were minorities; (5) 327 out of the 983 (33.3%) secretarial hires were minorities; (6) 142 out of 464 (30.6%) technical and paraprofessional hires were minorities; (7) 25 of the 92 (27.2%) skills crafts hires were minorities; and (8) 195 of the 391 (49.9%) service and maintenance hires were minorities. From 1984 through 1991, the percent of women who were full-time faculty increased by 27.3%, so that in 1991 41.4% of full-time faculty members were women. The participation rate of white faculty increased by 2.0%, so that in 1991 81.1% of full-time faculty were white. The total number of faculty grew by 7.9%. Extensive data tables are appended. (MAB)

AFFIRMATIVE ACTION PROGRAMS IN THE CALIFORNIA COMMUNITY COLLEGES, 1991-92:

13

AN ANNUAL REPORT TO THE BOARD OF GOVERNORS AND THE LEGISLATURE

First Reading, Action Scheduled

Background

The benefits derived from a California Community Colleges work force that is reflective of the demographic composition of the state are recognized to be many. The Legislature, in *Education Code* Section 87100, Legislative Findings and Declarations, and the Board of Governors have identified those benefits to include:

- the educationally sound impact of the positive image provided to all community college students by minority representatives in the college work force;
- the institutionally beneficial perception of community colleges being welcoming, comprehensively diverse organizations; and
- the societally rewarding effect of implicit lessons concerning democratic principles and inclusiveness that can be best taught through diverse populations working towards common goals.

Because the current community college full-time work force does not completely reflect the demographics of California, explicit plans and programs have been set in place to move the colleges towards the goal of full work force diversity. In Assembly Bill 1725 (Chapter 973, Statutes of 1988), the Legislature provided two goals toward this end. The near-term goal is to achieve a 30 percent systemwide full-time hiring rate of ethnic minorities during the 1992-93 fiscal year. The long-term goal is to achieve a systemwide, full-time work force that reflects the adult population of the state in the year 2005.

2 Brief

As part of that effort, this report and accompanying data are provided in response to *Education Code* Section 87104, which requires the Board of Governors to "...report to the Legislature regarding the number of districts which have adopted and are maintaining affirmative action programs, including the effectiveness of the programs..." This report is presented to the Board so that it may be responsive to this legislative mandate.

Analysis

This agenda item supports the general conclusion of the Chancellor's Office that the Faculty and Staff Diversity program is effectively working towards the goals of the Legislature. The report reviews the latest full-time work force diversity and affirmative action statistics, including systemwide trends and institutional differences in these efforts, and summarizes efforts that have been undertaken pursuant to diversity goals and some of the intrinsic challenges. The appendices disclose the data sets from which the conclusions are drawn.

Recommended Action

That the Board of Governors adopt this annual report and forward it to the State Legislature as required by *Education Code* Section 87104.

Staff Presentation: Maria C. Sheehan, Vice Chancellor

Affirmative Action Programs in the California Community Colleges, 1991-92

An Annual Report to the Board of Governors and the Legislature

This report is submitted in compliance with *Education Code* Section 87104(a)(2), which provides for a report to the Legislature regarding "the number of [community college] districts maintaining affirmative action programs, including the effectiveness of the programs in meeting the intent of this article."

Affirmative Action Programs: Plans and Goals and Timetables

Provisions of the Community College Reform Act, Assembly Bill 1725 (Chapter 973, Statutes of 1988), made it necessary to revise individual district affirmative action plans in academic year 1989-90. This revision coincided with the triennial revision of goals and timetables required of districts.

As was stated in the report to the Board of Governors and the Legislature for 1990-91, all 71 districts have submitted acceptable affirmative action plans, including goals and timetables. However, revisions in the *California Code of Regulations*, Title 5, effective late in this reporting academic year (April 1992), have automatically put most plans out of compliance because of technical changes. Districts currently are working to implement these revised standards.

Affirmative Action Programs: Effectiveness

A succinct answer to the question of the effectiveness of community college affirmative action programs may fail to convey the subtleties and on-going challenges of the effort. The best short answer is, "Yes: based on multiple measures delineated in this report, progress is being made and the short-term goal has been achieved." However, this result should not engender complacency, because when the complexities of the situation are portrayed, full realization of the long-term diversity goal may be difficult. Therefore, a fuller response to the issue of effectiveness is presented through the discussion of three elements: (1) efforts toward diversity, (2) obstacles to diversity, and (3) the empirical evidence.

Effectiveness: Efforts Toward Diversity

Many tools are utilized in the quest for a societally representative full-time work force in the California Community Colleges. A fundamental element in this area is the heightened awareness that resulted from clear articulation by the Legislature and Board of Governors of mission, mandates, and goals.

With the first allocation of the Faculty and Staff Diversity Fund in late spring 1989, the system was provided the resources to strengthen full-time faculty and staff diversity efforts. These funds are apportioned to community college districts through a formula that attempts to balance the needs of providing a basic level of support for affirmative action with the need to reward districts both for short-term efforts, as depicted in "hiring rates," and long-term efforts, evidenced through changes in "staffing rates." (Please refer to Appendix, page 11, Table 9, for further discussion of the impact of hiring rates on staffing rates.) These efforts are further complemented by funding provided through the Faculty and Staff Development program, which, as one of its nine purposes, assists training that fosters institutional work force diversity.

Up to 25 percent of the Faculty and Staff Diversity program resources are set aside for statewide activities that support diversity efforts. Primary state-level activities funded are: (1) Technical Assistance Teams (TATs), which visit districts that appear to need special technical assistance; (2) special projects with statewide applicability, which are awarded to districts on a competitive basis; and (3) other special services provided to the system under the aegis of the Chancellor's Office.

Technical assistance reviews were piloted in 1990-91 with visits to Lassen, Lake Tahoe, and Sequoias community college districts. In 1991-92, Yosemite, Shasta-Tehema-Trinity, Redwoods, and Saddleback community college districts were reviewed. After the removal of recently-visited districts from the pool, those districts selected for review are in the bottom quartile of minority faculty hiring rates reported for the prior year. Eight districts will be scheduled for visits in 1992-93.

Special projects with statewide applicability are awarded to districts on a competitive basis. They have included mentoring projects to increase the supply of the under-represented in certain fields, recruiting and outreach projects to promote the hiring of the underrepresented, and projects to provide technical assistance.

Special services for the system, arranged by the Chancellor's Office, have included the creation of training videotapes on affirmative action requirements and techniques; the ongoing, two-way linking of applicants and job vacancies via the Registry (a compilation of potential employees); and the Job List (a compilation of available positions statewide). Other activities encompass the provision of technical data needed to develop affirmative action plans and nationwide advertising campaigns to reach potential employees.

Effectiveness: Obstacles to Diversity

The long-term legislative goal is to have a full-time work force in the community colleges that mirrors the demographic characteristics of the state's adult population by the year 2005. It is difficult to accurately predict what those characteristics will be twelve years from now; therefore, the ultimate effectiveness in achieving the goal remains somewhat of an open question.

The dynamics of the hiring process itself presents obstacles: a college needs to have a vacant position; it must locate appropriate candidates, the candidates must successfully navigate the hiring protocols, and the candidate must accept the position. Several of these elements are hidden in the raw data collected in support of staff diversity. A district's unique characteristics impact the effectiveness of affirmative action. A district with low attrition in the work force and a lack of growth may be severely challenged in changing the demographics of its work force. Locating appropriate candidates for some community college positions—most notably faculty—also can be a hindrance to effective affirmative action. If adequate numbers of underrepresented candidates are simply not available, meeting diversity representation goals will be difficult. Although the colleges are making whatever efforts they can to ensure that adequate numbers of potential candidates are in the "pipeline" for future hiring, they must compete nationally with other institutions and industry in attracting candidates. This issue is particularly relevant to the differences in diversity performance by academic discipline areas.

Affirmative action effectiveness is also contingent upon the candidate's acceptance of the offer of employment. A Faculty and Staff Diversity special project conducted last year for recruiting from out-of-state reported some resistance on the part of potential candidates to accepting community college positions in California. A deterrent appeared to be the much publicized "besieged California lifestyle": the state's fiscal crisis, perceptions of low funding levels for education, underprepared students, urban problems, high costs of living, etc. Combined with the remote geographic locations of some community colleges, recruiting can be problematic.

Therefore, when measuring effectiveness, these variables also need to be taken into consideration.

Effectiveness: The Empirical Evidence

Despite several limitations, as already discussed, numerical tallies of diversity can be very informative. In this section, various arrays of data are presented. The Chancellor's Office believes that each array supports the general contention that efforts toward diversity are succeeding. Taken together, this information presents a convincing case that progress is being made to fulfill diversity goals.

4 Affirmative Action Programs
Annual Report to the Board and the Legislature

Two major categories of data are presented in the appendices: "hiring rates" and "staffing rates." Generally, hiring rates measure incremental changes to the work force, while staffing rates portray the composition of the entire work force. The previously discussed AB 1725 mandates stipulate a near-term goal of a 30 percent hiring rate of underrepresented individuals and a long-term staffing rate (by the year 2005) that is equivalent to the general demographics of California. Appendices one through four provide information about hiring rates, and appendices five through seven supply information about staffing rates. The benchmark for measuring progress toward the 30 percent hiring goal is the fall 1988 to fall 1989 data comparison, since funding to effect change began in spring 1989.

Data presented in the Appendix are of full-time staff and can be summarized as follows:

Table Title

1 Systemwide Full-Time Hiring Rates for Ethnic Minorities by EEO-6 Occupational Category

Contents: Reports minority hiring rates by the Equal Employment Opportunity Commission standard reporting format, the EEO-6 report.

- 2 Full-Time Faculty Hiring Rates for Ethnic Minorities by Quartile Contents: Reports faculty minority hiring rates in ranked quartile order.
- 3 Three-Year Full-Time Faculty Minority Hiring by District

 Contents: Reports district-by-district minority faculty hiring for the three-year period, fall 1988 to fall 1991.
- 4 Full-Time Faculty Hires by Gender, Ethnicity, and Discipline, Fall 1991

 Contents: Reports faculty hires by gender and ethnicity for fall 1991, sorted for academic discipline.
- 5 Long-Term T. ..nds in Systemwide Full-Time Staffing Rates

 Contents: In four separate tables (Faculty; Executive/Administrative/
 Managerial; Professional Non-Faculty; and Classified Staff) reports
 staffing rates and net changes from fall 1984 to fall 1991.
- 6 Current Systemwide Full-Time Staffing Rates by Selected EEO-6 Categories

 *Contents: Reports staffing rates for fall 1991 by selected categories and percent change from fall 1990.
- 7 Full-Time Faculty Staffing Gender and Ethnicity by District

 Contents: Reports district-by-district staffing by gender and ethnicity for fall 1984, fall 1989, and fall 1991.

Conclusion

It is the Chancellor's Office conclusion that the near-term goal of the Legislature in AB 1725 has been met: the system has reached and exceeded a 30 percent hiring rate of ethnic minorities by the year 1992-93.

Hiring data as of the fall 1991 first census indicate systemwide hiring rates for all ethnic minorities as 31.2 percent for faculty, 36.4 percent for administration, 33.0 percent for professional (non-faculty) positions, and 35.7 percent for all classified support staff (see Appendix, Table 1). Each of the classified subcategories, except Skilled Crafts, reached the 30 percent target; Skilled Crafts had reached that goal in each of the two previous reports.

In addition, the results of a special early survey of fall 1992 hiring rates indicate continued improvement, with faculty minority hires at 31.7 percent, administration at 39.9 percent, and professional (non-faculty) at 42.6 percent. The tables presented in the appendices of this report indicate that the Faculty and Staff Diversity program is effectively working toward the goals of the Legislature and the Board.

APPENDIX

Systemwide EEO-6 Categories Full-Time Minority Hiring Rates

Minority hiring rates are reported by EEO-6 categories. The EEO-6 is a standard report required of all colleges by the Equal Employment Opportunity Commission. Each position is placed in one of seven categories: Executive/Administrative/Managerial; Faculty; Professional (non-faculty); Secretarial/Clerical; Technical/ Paraprofessional; Skilled Crafts; and Service/Maintenance.

The systemwide rates for each EEO-6 category are provided in Table 1.

Table 1
Systemwide Full-Time Hiring Rates for Ethnic Minorities
by EEO-6 Occupational Category

		Fall 1	988 to Fal	1989	Fall	Fall 1990 to Fall 1991

Source: Management Information System, Separation/Hiring/Promotions Special Report.

Hiring rates are computed for the period between the first census week of the fall term of one year and the same period of the fall term of the following year. Most hires in this calculation are new employees for the fall term of the following year. It should be noted that hiring rates include promotions, since such transactions usually have the same competitive characteristics as those positions filled from the outside.

As the table indicates, ethnic minorities continued to be hired at a rate in excess of 30 percent for the total system. Each of the categories, except Skilled Crafts, reached

the 30 percent target established by the Legislature in the 1990-91 period. Skilled Crafts had reached that goal in each of the two previous reports.

To ascertain if the data for professional positions would continue into the Legislative target year of 1992-93, a special survey was attached to the annual assessment report from the districts. The results of this survey are a good estimate of what the staff data report for fall 1992 will show, although minor variations are expected due to problems of interpretation of the definitions provided. This survey showed a hiring rate of 31.7 percent for faculty, 39.9 percent for administration, and 42.6 percent for professional (non-faculty). These results are consistent with those of the previous year, reported above.

Systemwide Full-Time Faculty Minority Hiring Rates

As Table 2 and Table 3 illustrate, individual district contribution to the positive results is uneven. In the 1989-90 report to the Board of Governors and the Legislature, it was noted that the provision of monetary, technical assistance, and support resources to the districts came too late for a major impact on hiring rates for that period, particularly for smaller districts. For the 1990-91 recruiting period, these assets were provided in a timely manner for district use and, with district commitment to the task, did provide increases in the number of districts reporting substantial progress in their faculty diversity efforts, particularly in the lower two quartiles. When districts are ranked according to hiring rates, interesting patterns emerge. The foilowing table ranks districts into quartiles based on minority hiring rate.

Table 2
Full-Time Faculty Hiring Rates for Ethnic Minorities
by Quartile

Quar- tile	Fall	1988 to Fa	ll 1989	Fall	1989 to Fa	11 1990	Fall 1996 to Fall 1991			
	Total Hires	Min. Hires	Rate (%)	Total Hires	Min. Hires	Rate (%)	Total Hires	Min. Hires	Rate (%)	
1	430	158	36.7	357	128	35.9	435	169	3º 8	
2	452	118	26.1	474	153	32.3	362	104	28.7	
3	188	38	20.2	245	53	21.6	240	66	27.5	
4	193	24	12.4	262	47	17.9	181	42	23.2	
Totals	1,263	331	26.7	1,338	381	28.5	1,218	381	31.2	

Source: Management Information System, Separation/Hiring/Promotions Special Report.

There are 18 districts in the first quartile (Q1), 18 in the second (Q2), 17 in the third (Q3), and 18 in the fourth (Q4) (based on the fall 1988 to fall 1989 distribution).

Table 2 shows that the Q1 and Q2 hire more individuals than the lower half (Q3 and Q4) and, taken together, hire ethnic minorities at a greater rate than the AB 1725 goal. Q3 and Q4 hire significantly fewer faculty, with initially lower rates of ethnic minority hires than the other quartiles. Q4 contains most of the small districts with low numbers of positions and fewer ethnic minority hires.

However, it is Q4 that has shown considerable growth in its hiring rate over the table period, hiring ethnic minorities at a rate of 23.2 percent in 1990-91 compared to 12.4 percent in the base year. Q3 has made significant progress between the 1989-90 and 1990-91 reports, increasing the ethnic minority hiring rate by 7.3 percentage points. These gains can be attributed to the previously discussed effort elements.

Three-Year Full-Time Faculty Minority Hiring by District

Table 3 reports districts' experiences in working towards the systemwide goal of a 30 percent hiring rate of minority faculty. The three-year combination is used because of variability in hiring opportunities from year-to-year for smaller districts. A district that may have done quite well two years ago may have only one hiring opportunity this year. If that opportunity was not filled by a minority hire, the district would appear to be not doing well when, in fact, it had a reasonable diversity record.

Source: Management Information System, Separation/Hiring/Promotions Special Report.

This table shows that some districts have hired minority full-time faculty in excess of the 30 percent statewide goal and how close others are to this goal, often but a single minority hire away. Analysis of this information with the long-term staffing rates information (Table 7) reveals that, as a system, districts generally are making the diversity effort necessary to fulfill the goals established by the Legislature and the Board.

Fall 1991 Full-Time Faculty Hires by Academic Discipline

Another issue of concern relates to differences in diversity levels by academic discipline areas. Table 4 provides currently available systemwide staffing data by discipline, at the two-digit TOPS code level.

Table 4

Full-Time Faculty Hires by Gender, Ethnicity, and Discipline

Note: Total does not equal reported sum of parts because of miscodes and unknowns.

Long-Term Trends in Systemwide Full-Time Staffing Rates

There has been progress made in staffing rates for faculty as shown in Table 6. Looking at the past eight Management Information System reports on this area, the upward trend in minority and women in the faculty is apparent. In one or two instances where district data for a given year were not reported, data in the tables have been adjusted by interpolation or use of an alternative data source for "missing district reports."

Table 5A

Two columns in Table 5A indicate the movement through this period. First, the participation rate of women in faculties has increased 6.3 percentage points, from 35.1 percent to 41.4 percent. During the period, the number of women increased by 27.3 percent, from 5,477 to 6,970. Second, the participation rate in the case go v "White" has decreased by 4.6 percentage points, from 85.7 percent to 81.1 percent. The number of "White" faculty increased by 2.0 percent, from 13,373 to 13,639. The total number of faculty grew by 7.9 percent (1,231 positions, from 15,604 to 16,835) during the period, with 78.4 percent of these new positions being filled by ethnic minorities.

The following tables provide similar data for Executive/Administrative/ Managerial, Professional (non-faculty), and Classified staff.

Current Systemwide Full-Time Staffing Rates by Selected EEO-6 Categories

For fall 1991, the system's full-time staff percentage distribution by gender and ethnicity was as shown in the following table.

Table 6

Systemwide Full-Time Staff by Gender and Ethnicity by Selected EEO-6 Categories Fall 1991 and Percentage Change from Fall 1990

Category	Total	Female	White	Ethnic Minority
Executive/Administration/Manager	2,641	37.8	73.4	26.6
Fall 1990-91	-1.7	2.8	-4.3	6.2
Faculty	16,835	41.4	81.1	18.9
Fall 1990-91	1.1	6.3	-0.7	9.7
Professional (non-faculty)	2,070	59.2	61.8	38.2
Fall 1990-91	-3.3	-1.0	-3.5	-2.9
Classified	16,422	61.2	62.3	37.7
Fall 1990-91	2.8	2.8	1.3	5.3
Total Staff	37,968	50.7	71.4	28.6
Fall 1990-91	1.4	3.8	-0.4	5.9

Source: Management Information System, Staff Data File.

As expected, the proportion of ethnic minorities on staff is lower than the hiring rates for ethnic minorities. In career categories, such as faculty, the distribution is heavily influenced by the hiring practices of one-to-two decades ago. As those hired prior to 1975 move into retirement, the replacement through hiring practices attuned to ethnic and gender diversity should bring the staffing rates into line with the availability of those groups in the relevant work force.

Even though the first goal—to have a 30 percent systemwide hiring rate of ethnic minorities for 1992-93—has been achieved, the second goal—to have the work place reflective of the adult population by the year 2005—may be more difficult to reach. It will take years of 30 percent ethnic minority hiring rates to achieve this second goal because of the incremental nature of the effect of hiring rates on the overall composition of the system work force.

Full-Time Staffing Gender and Ethnicity by District Fall 1984, 1989, and 1991

District staffing patterns for full-time faculty over a seven-year period are provided in Table 7. These data indicate that most districts are making gains in their faculty diversity efforts.
