ABSTRACT

This curriculum was developed to fulfill the need for a longitudinal, community-referenced curriculum for students in Kentucky with moderate and severe handicaps that could provide the basis for programming from the elementary level through completion of a student's school career. The curriculum consists of guideline chapters on how to use this curriculum process; a sample local catalog for primary students and one for intermediate/secondary students; and a master curriculum containing a master set of instructional objectives across both the primary and secondary levels and across the four instructional domains. The guideline chapters explain the local catalog curriculum approach and its limitations; discuss selection of priority activities for inclusion on the individualized education program; and offer suggestions on developing programs using basic skills in the context of age-appropriate priority activities. The two local catalogs are then presented, with each listing functional, age-appropriate activities typically engaged in by nonhandicapped peers across the four life domains: domestic, community/school, recreation/leisure, and vocational. Lists of sample short-term objectives are then provided, organized by domain. Appendixes contain a parent interview form, a peer survey form, and checklists of skills and activities. (JDD)

New Services for Children with Special Health Care Needs: Guidelines for Local School Districts (Smith, P. D. & Leatherby, J. L., 1991) - A manual developed for local school districts to provide guidelines on developing and implementing services for students with special or complex health care needs. The manual includes training forms and forms for documenting provision of various health care services. Approximately 120 pages, \$8.00.

New Wheelchair Safety Video and Manual. (Smith, P. D., 1991) - A 20-minute video designed primarily to teach safe wheelchair use to peers, and is also appropriate to use in training paraprofessionals, teachers, and others who work with children with physical disabilities. The manual provides the trainers with a comprehensive outline of the video content, complete with a sample "liscense" for persons who complete the training. Video and manual set, \$10.00.

Quality Program Indicators Manual for Students with Moderate and Severe Handicaps (Kleinert, H., Smith, P. & Hudson, M., 1990) - An assessment instrument used to conduct program evaluations in classrooms serving students with moderate and severe handicaps. The manual is organized around six areas of quality programming, (1) integration, (2) functional curriculum, (3) systematic instruction, (4) community-based instruction, (5) transdisciplinary services and integrated therapy, and (6) vocational instruction and transition plans. 92 pages, \$5.00.

Curriculum Process and Model Local Catalogs for Students with Moderate and Severe Handicaps (Hudson, M. & Kleinert, H., 1991) - A comprehensive curriculum based on the local catalog process for selecting age-appropriate activities for students with moderate and severe handicaps. The curriculum has an elementary section and a section appropriate for middle school and high school-aged students. The curriculum also includes chapters describing how to adapt curriculum to meet the needs of students with severe and multiple handicaps and how to select priority activities for inclusion on the IEP. Sample instructional objectives from the four domains are included in the manual and on software compatible with Apple IIe/Apple II gs and IBM (MS DOS) computers to facilitate computer-generated IEPs. 160 page manual and software program set, \$12.00.

Communication Manual for Students with Severe and Multiple Handicaps (Smith, P. & Kleinert, J., 1991) - A comprehensive manual written for speech/language pathologists and other professionals who work with students with severe and multiple handicaps that focuses on the development and implementation of communication programs. The manual was developed and used for statewide inservice training for speech/language pathologists in Kentucky. 275 pages, \$18.00.

Integrating Related Services into Programs for Students with Severe and Multiple Handicaps (Smith, P., 1990) - A manual developed for administrators, teachers, therapists, and parents that includes administrative and implementation issues and strategies for integrating related services. 60 pages, \$4.00.

PREFACE

This curriculum is the work of many people, most notably Sharon Guiltinan, who developed the original Secondary Level Local Catalog and the original set of instructional objectives that accompanied the catalog. Sharon developed the curriculum to meet the needs of her high school students with moderate and severe handicaps in the Jessamine County, Kentucky Public Schools.

However, considerable revisions have occurred since Sharon's initial work. We have revised the Secondary Level Catalog. A Primary Level Catalog, originally developed by Stacie Meyer, with revisions by Stephanie Godby, has been added for elementary age students. With assistance from Stephanie and Stacie, we have developed additional objectives for both age levels. The most notable revisions since the first Kentucky Systems Change draft of this curriculum in August, 1988 has been the addition of specific social interaction skills with nonhandicapped peers, which we have completed with Stephanie Godby's assistance.

Jeff Wheatley has developed the IEP Printer Program that is compatible with Apple IIe and IIgs and IBM (Pro Dos) software for printing short-term objectives directly onto the student's IEP. His work in developing a simple, yet flexible computer program will enable teachers to develop functional and individualized IEPs more efficiently.

Three major sections have been added in the 1991 revisions. Two chapters have been added that enable teachers to program for more heterogenous groups of students. Chapter 4, "Selecting Priority Activities: What to Include on the IEP", details a 6-step process for determing priority skills and activities using parent, peer, and related service personnel imput. Chapter 5, "Developing Programs For Students with Severe Handicaps Using Basic Skills in the Context of Age-Appropriate Priority Activities", describes how to adapt this curriculum to meet the needs of students with more severe disabilities. Lastly, the primary section has been revisied so that skills, as well as activities, are included in the elementary students' curriculum.

BELIEFS

The following are the beliefs within which the Kentucky Systems Change Project's Model Local Catalogs and Curnculum Process for Students with Moderate and Severe Handicaps is framed.

We believe	
	students are best educated in their home schools, that is, the neighborhood school they would attend if they were not disabled.
	students should be meaningfully included in regular education classes and activities with their peers without handicaps to the greatest extent possible and "pulled out" into self-contained classes only as needed.
	families must have opportunities to participate in the education planning process and be considered full partnesr on the educational team.
	education planning and curriculum development for students is always a team process consisting of students, parents, teachers related service personnel, and administrators

INTRODUCTION Harold Kleinert

INTRODUCTION

Districts throughout Kentucky have indicated the need for a longitudinal, community-referenced curriculum for students with moderate and severe handicaps that could provide the basis for programming from the elementary level through completion of a student's school career. In recognition of this need, the Kentucky Systems Change Project for Students with Severe Handicaps has coordinated the development of the following curriculum, which is available on disks for use with both the Apple IIe and IIgs computers and IBM (Pro Dos) computers.

This curriculum consists of:

- (1) Guideline chapters on how to use this curriculum process,
- (2) Two sample local catalogs (see Wilcox & Bellamy, 1982 and 1987, for a description of the local catalog process) one catalog for primary students and one catalog for intermediate/secondary students. Each catalog is based on functional, age-appropriate activities typically engaged in by nonhandicapped peers across the four life domains: domestic, community/school, recreation/leisure, and vocational,
- (3) A master curriculum containing a master set of instructional objectives across both the primary and secondary levels and across the four instructional domains. Instructional objectives have been developed for each activity identified in the local catalogs. However, these sample objectives must be modified on an individual basis, and for some students, these objectives will not be appropriate.

SELECTING PRIORITY ACTIVITIES: WHAT TO INCLUDE ON THE IEP Melissa Hudson

SELECTING PRIORITY ACTIVITIES: WHAT TO INCLUDE ON THE IEP

Identifying and prioritizing age-appropriate and longitudinally relevant skills and activities for a student's IEP is a challenge, especially when programming for students with moderate and severe disabilities. These students often have multiple handicaps and complex instructional needs which may make it difficult for teachers to envision meaningful participation in many age-appropriate and longitudinally relevant activities. The challenge of selecting meaningful skills and activities and then prioritizing these skills and activities for a student's IEP can be met by the use of a simple, yet systematic, six-step process. In preparation for the student's IEP meeting, the teacher completes the following six steps:

Step 1: Identify parent expectations.

Parents can give teachers vital information concerning program planning for their child. One way to obtain this information is through the Family Interview. This structured interview is comprised of questions designed to elicit information about the farnily's needs and expectations for their child v hich can help the family and the teacher target relevant skills and activities. Information specific to the family (e.g., What activities does the family do for fun?) and present and future parental expectations (e.g., Where might the child work after high school graduation?) is collected. Skills and activities that make life easier at home for family members and that increase the child's participation in home routines and his/her active role in the family can be targeted. Since skills and activities that directly relate to home life are identified, the student will practice skills across environments which encourages skill generalization. Meeting face-to-face for the interview is preferable. Convenient times

might be a parent-teacher conference, an early morning time if the parent works, after or before a PTA meeting, or during a home visit. If a meeting is not feasible, a phone interview can be substituted. The family interview should be conducted before the parents fills out the skills and/or activities checklists.

Giangreco, M. F., Cloninger, C. J., and Iverson, V. S. (1990) identified five quality of life indicators from interviews with parents whose children have physical, cognitive, and sensory disabilities that represent the parameters of a "Good Life". These quality of life indicators include (1) having a safe and stable home, (2) maintaining a social network and meaningful relationships, (3) accessing a variety of places, (4) engaging in meaningful activity that is valued by self and others, and (5) living in a state of health and comfort. The parent interview for each of the Quality of Life Indicators (Giangreco, et al, 1990) is included in appendix A.

Step 2a: Identify the Skills Parents Think are Important for Their Child to Learn. (Note: This section of the process should be completed for all primary aged students and may be appropriate for some older learners with the most severe disabilities. For older learners, curriculum emphasis shifts from skill acquisition to the performance of functional activities. If programming for older students who do not need basic skill instruction, please move to 2.b.)

A primary aged student's curriculum should consist of **both** skill-based and activity-based instruction (see Figure 1). A **skill** is a discrete response or behavior, or chain of behaviors. It is comparable to one piece of a puzzle -- it does not stand alone, but rather is one of the building blocks necessary for more complicated chains of behavior. Examples of skills include picking up an object with pincer grasp, using three word

phrases, and biting off hard foods. On the other hand, activities are like the puzzle with all of its pieces. An **activity** is a chain of behaviors or steps usually performed in the same order. It is complete and has a functional outcome. Examples of activities include walking to or from school with a friend, making a snack after school, and going to the library with one's homeroom class.

Elementary school is also the prime period for development of academic skills. While most students with moderate and severe handicaps do not reach the level of "literacy", many experience substantial success in the acquisition of early academic skills, and these skills often have useful applications in adolescent and adult life. The elementary years is thus a time for developmental skill building and acquisition of functional activities.

A skills checklist is used to collect information from parents about the skills they want their child to learn. The skill areas include social, communication, motor, sensory, and applied academics. A sample skills checklist is included in appendix B. Parents should select 5-8 skills they feel are most important for their child to learn during the next school year. It is not necessary to select skills from all five skill areas. The parent then writes those prioritized skills on the IEP Skills Preparation Worksheet. A sample IEP Preparation Worksheet included in appendix B. Directly to the side of each skill the parent describes exactly what they want their child to be able to do. In the example presented, undressing is the skill selected and taking off shoes and socks before a bath is what the parents want their child to do.

Step 2b: Identify the Activities Parents Think are Important for Their Child to Learn

Activities provide the critical "building blocks" or "units of teaching" for middle and high school level students. Independence and/or meaningful participation in activities is the functional outcome, the purpose of education itself. For elementary-age students, activities provide the meaningful contexts in which to practice and generalize learned skills.

An activities checklist is completed by parents to determine the activities they want their child to learn. An activities checklist is made by listing the age-appropriate activities that can be taught in the student's community and is usually organized by the four instructional domains (domestic, community/school, recreational/leisure, and vocational). An example of an activity checklist appropriate for primary age students is included in appendix B. The survey is sent home to parents who select 4-7 activities they want their child to learn in the upcoming year, choosing at least one activity from each curricular area. Once the activities are selected, the parent writes the activities on the IEP Activities Preparation Worksheet and answers additional questions about selected activities. A higher return rate from parents is achieved if teachers discuss the checklists before sending them home. By explaining the purpose of each checklist, how it was developed, how it will be used, and the instructions for completing it, the teacher increases the likelihood that parents will complete and return the checklists.

(Selecting Priority Activities)

Step 3a: Identify student interests and preferences in activities.

The student must have the opportunity to make choices about the activities in which he/she will participate. Activities chosen by parents and professionals which the student dislikes or does not choose regularly will not translate into acquired skills. Students at all age levels should be invited to take part in any decision-making process that focuses on their present or future lives regardless of the perceived severity of the their disability. High school age students should attend any and all meetings concerning them. At the elementary level, a portion of the meeting can be devoted to allowing the child to make decisions about activities.

Determining student preferences may take a variety of forms. Choices should be presented in a form easily understood by the student. They may be presented verbally (e.g. Would you like to go to music or art?), or by presenting pictures or symbols representing the choice using the student's current mode of communication. Should a communication mode not be available; observing the responses of the student as he/she engages in a particular activity will provide information about preferences. The student may exhibit any number of behaviors indicating positive or negative preferences (e.g. orient to the activity or turn away; smile or cry, or make other gestures or movements).

Students may need to engage in an activity at least two or three times before they can express a preference. Everyone has fears of new things. In order to get over the fear and enjoy the activity, one must have sufficient experience with the activity to make the choice. This process allows the integration of new age-appropriate activities into the student's day.

Step 3b: Identify Activities of Interest to the Student's Peers.

In addition to gathering information from the student and family, teachers also must consider a student's peers and friends since they effect the way a student acts, what a

student wears, etc. Therefore, the activities peers participate in at school, at home, and in their community should be identified.

Peer surveys are an efficient way of gathering this information. Younger children can be asked questions orally (e.g., What is your favorite activity to do outside?) while older students can complete surveys which contain open-ended questions (e.g., If you could get any two items for your birthday, what would you want?), short answer questions (e.g., What do you expect to do after you graduate?) or multiple choice questions (e.g., After school, I usually play video games, go to the mall, finish my homework, go to ______ practice, or read).

In a survey designed to target age-appropriate recreation/leisure skills for students with handicaps, (York, Vandercook, and Stave, 1990) peers answered seven openended, short answer questions. The information gathered was used to target activities that had implications for students with handicaps. Popular activities among peers without handicaps were identified as well as the skills necessary to meaningfully participate in these activities. A sample student survey for elementary students is shown in appendix C. Information was gathered by surveying a sampling of students at each grade level. The survey asked questions about recreation/leisure activities, community activities, and popular school clubs and organizations.

In addition to determining age-appropriate activities, surveys can also be used to determine the level of participation required of the student in the targeted activities.

For example, while shopping may be an age-appropriate activity for a seven-year-old, it is not appropriate for that child to shop for 10 items from a picture list. To determine how a child should participate in age-appropriate activities, a survey can be sent to the

parents of nonhandicapped children. An example of a survey sent to parents of children without handicaps is included in appendix D. In this survey, parents detail the level of participation in their home and community by answering yes/no and short answer questions.

Step 4: Identify Enabling Skills and Activities Appropriate for Current and Future Environments.

All of the information gathered throughout the first three steps of the process are important in selecting skills and activities that may be included on the student's IEP. In addition, teachers themselves must consider the child's current and future needs and target relevant skills and activities. Targeted skills and activities should (a) have use in current and future environments, (b) increase interactions with nonhandicapped peers, (c) be fun, (d) result in a more "normal" lifestyle, (e) result in greater independence, (f) increase the child's home participation, and (g) result in meaningful employment or activity after graduation. Sample questions designed to help teachers select a student's critical skills and activities are listed in appendix E.

Step 5: Identify Important Social Interaction Skills. (Note: If step 2.a. has been completed for a student, important social interaction skills may have been identified and it may not be necessary to complete this step. If so, please go on to step 6.)

With critical activities identified, the teacher must determine the social interaction and communication skills of the student. For example, if eating lunch with nonhandicapped peers is a targeted activity, the social skills of smiling at others, greeting classmates, and reciprocating conversation become important. Activities

provide the framework for teachers to embed social skill instruction across the day. If instruction for learning how to greet a peer occurs in the lunchroom when the student is actually meeting peers, the student has a chance to practice the skill in the situation where the skill is actually needed.

Social interaction and communication skills must receive attention on the IEP. If students cannot converse with peers and behave in socially acceptable ways, they will be excluded from activities. The teacher should consider all activities and select the social skills that will most facilitate the development of relationships with typical peers in these activities. A variety of social skills are necessary, including conversing with and greeting others, introducing oneself, being attentive to others, using police expressions, (e.g., "please", "thank you", "no thank you"), and borrowing from others.

Step 6: Prioritize Activities - A Group Activity

The last step in selecting activities for instruction is to prioritize the activities that will be included on the IEF. This activity can be done during the SBARC committee meeting or prior to the meeting. Parents, teachers, therapists, administrators, and related service professionals need to have imput into the prioritization of activities.

The Cayuga-Onondage Assessment for Children with Handicaps (Giangreco, et al, 1990) recommends considering the following criteria when prioritizing activities:

Does/Is the activity/skill? (1) functional (have a direct practical application in daily life), (2) useful in the future, (3) chronologically age-appropriate, (4) provide environmental control, (5) make it easier to care for the person, (6) relate to health or safety, (7) a strength of the learner, (8) an interest of the learner, (9) used frequently, (10) immediately needed, and/or (11) increase access to enhanced or expanded

opportunities. Each person on the team may want to rank order the activities of each domain separately and then compare scores. Activities with the highest scores would be included on the IEP and specific instances of differing priorities would be negotiated among the team members.

A worksheet useful to the SBARC for condensing the gathered information is included in appendix F. The worksheet is used to summarize the information from all six steps in the process. At the top of the worksheet, demographic information is completed. In section I, the skills and activities identified by parents as important during the Family Interview are recorded. In section II, the teacher lists the skills and activities parents identified on the Parent IEP Preparation sheets. Section III includes the activities peers identified as popular. The skills and activities the teacher identified as important are included in section IV. In section V, social interaction and communication skills are listed. Finally, the SBARC members rank the skills and activities from each of the sections and prioritize them in section VI. These skills and activities then become the basis of the IEP.

To prioritize activities for IEP inclusion, teachers must make numerous considerations. The needs and expectations of family members, the skills and activities parents want their child to learn, activities popular with nonhandicapped peers, the level of participation nonhandicapped peers have in those activities, the student's current and future needs, and the critical social interaction skills needed by the students to succeed in the activities must be considered. Once the activities are targeted, the SBARC must prioritize the activities for inclusion on the student's IEP.

DEVELOPING PROGRAMS FOR STUDENTS WITH SEVERE HANDICAPS USING BASIC SKILLS IN THE CONTEXT OF AGE-APPROPRIATE PRIORITY ACTIVITIES

DEVELOPING PROGRAMS FOR STUDENTS WITH SEVERE HANDICAPS USING BASIC SKILLS IN THE CONTEXT OF AGE-APPROPRIATE PRIORITY ACTIVITIES

For both students with and without handicaps, the success of an educational program can be measured across three dimensions: (1) productivity, (2) independence, and (3) participation (Wilcox & Bellamy, 1982). The goal of teachers of students with moderate and severe handicaps is to develop instructional programs that enable students to be productive in their community, to do as many everyday activities as independently as possible, and to participate meaningfully in their communities. Generally accepted best practices for teaching students with moderate and severe handicaps are described in the literature (e.g., Brown, Branston, Hamre-Nietupski, Pumpian, Certo & Gruenewald, 1979; Falvey, 1985; Wilcox & Bellamy, 1982), including teaching age-appropriate activities using functional, real-life materials in natural environments where the skill is likely to be needed, using functional and chronologically age-appropriate assessment and curricula, addressing transition needs throughout the school years, teaching skills that enable students to participate in a number of integrated environments, and using the principal of particial participation and individual adaptations to involve students in priority activities.

Developing an individualized education plan (IEP) for students with severe handicaps and dual sensory impairments is a challenge for teachers. Students with severe handicaps are students who have inconsistent or no motor movement, little or no easily recognizable communication skills, who appear to possess very low IQs (e.g., below 15), or who are described as "medically fragile" (Brown, Helmstetter, & Guess, 1986). "Students with the most severe handicaps" also describes students with dual sensory impairments (i.e., deaf-blindness) or students with severe/profound mental retardation and an additional handicap (i.e., cerebral palsey).

The ecological model has been described in the literature as a model for developing IEP objectives and corresponding programs for students with moderate handicaps (Brown, 1979; Brown, Falvey, Vincent, Kaye, Johnson, Perrara-Parrish & Gruenewald, 1980). By using the ecological model, students are taught the functional skills necessary to participate as independently as possible in their own communities participating in age-appropriatate

22

meaningful activities. Instruction occurs in four integrated domains (e.g., domestic, community/school, recreational/leisure, and vocational). Because the ecological model works from the premise that students will be able to complete all or most of the steps of the activities independently (i.e., crossing the street, taking a bus to the mall, making small purchases at a store), programming for students who cannot complete all, most, or even any of the steps of the activity independently does not easily occur.

In order to involve students with severe handicaps in the priority activities, three strategies have been described. Helmstetter (1989) described using the principal of partial participation (Baumgart, Brown, Pumpian, Nisbet, Ford, Sweet, Messina & Schroeder, 1982) and individual adaptations to involve students with severe handicaps in priority activities. The principal of partial participation affirms that it is worthwhile for students with severe handicaps to be particially involved in priority activities by adapting the steps of the activity the student cannot complete independently by changing the rules, changing the sequence, using personal assistance, changing other persons' attitudes, and/or using special equipment. The principal of particial participation is an improvement over past strategies used to determine curriculum for students with severe handicaps. Historically four strategies have been used, including: (1) the all or nothing hypothesis (i.e., students must be able to complete all of the activity before becoming involved); (2) the developmental age hypothesis (i.e., students will learn best using activities and materials appropriate to their developmental age); (3) the independent performance hypothesis (i.e., if a student doesn't have a resonable chance of completing the activity independently, don't teach it); and (4) the prerequisite skill hypothesis (i.e., the student is not ready to learn the skill yet) (Brown, et al., 1982).

The purpose of using the principal of particial participation and individualized adaptations is to involve the student meaningfully in the activity (Brown, et al., 1979). However, there may be a point when partial participation may have a negative effect for the student. Consider the following example. A person is personally assisted to complete nine of ten steps of a ten-step vocational task. Is particial participation resulting in meaningful partici-

23

pation for this person?

Black and Ford (1989) described a slightly different approach for developing curricula for students with the most severe handicaps called the activity-based lesson planning format. After priority activities have been selected from the four instructional domains, the initial assessment is done in the natural environment to determine what to teach, adaptations, instructional cues, and a baseline performance. The activity is then broken into component steps. The degree to which component steps are broken down depends on the needs of the student. For example, a student with severe mental retardation and physical disabilities might need the grocery shopping step of "Locates/obtains basket" broken into more detailed steps (i.e., looks toward basket, reaches toward basket, grasps basket, pulls onto lap, releases grasp). Look, reach, grasp, pull, and release are the tool movements or basic skills the student needs to do in order to complete the component step of "locating the basket". When component steps are broken down into the tool movements or basic skills the student needs to complete the component step, the focus of instruction is on the basic skill rather than on the completion of the component step.

Another strategy for involving students with the most severe handicaps in priority activities is described by Holvoet, Guess, Mulligan, and Brown (1980). Within the individualized curriculum sequencing model, behavioral clusters are taught in the context of age-appropriate, functional activities, rather than teaching skills in isolation. "Loose training" (i.e., selecting a variety of materials, cues, and persons conducting training) is recommended for enhancing generalization (Stokes & Baer, 1977). Distributed trial training (i.e., other tasks are taught in between trials) and concurrent task sequencing (teaching all component parts of the task simutaneously) are used to teach skills. For example, a student may be working on holding his head up, grasping, releasing, and communication (distributed trials) within the functional activities of tying a shoe, going through the lunchline, working in art class, and preparing for home.

The principal of partial participation does not ensure meaningful involvement within priority activities for students with severe disabilities. A strategy for combining the use of

partial participation, individual adaptations, and embedding basic skills is needed when programming for students with severe disabilities. The purpose of this paper is twofold: (1) to describe a process for developing IEP goals and objectives from priority activities that lead teachers to program meaningfully for students with the most severe handicaps and (2) to describe a model in which embedded skill instruction in the context of age-appropriate activities occurs across the day.

Prioritizing activities to teach age-appropriate and longitudinally relevant skills is the first step in developing programs for students with severe handicaps. Teachers cannot identify all the activities that should be considered for each student without input from others. Family needs, parent expectations, peer activities, and critical social interaction skills, in addition to activities identified by the teacher and the activities the student would select if s/he could, must be considered. Refer to chapter 4, "Selecting Priority Activities: What to Include on the IEP", for a description of a six-step process for identifying priority activities. First, the teacher interviews the parent(s) to determine parent expectations and family needs. Second, the skills and activities parents want their child to learn are identified using surveys. Third, activities popular with nonhandicapped peers are identified using a peer questionnaire. Fourth, the activities important for instruction according to the teacher are determined. Fifth, critical social interaction and communication skills needed by the student to be successful in targeted activities are identified. The sixth step in program development for students with the most severe handicaps is to prioritize the activities selected by parents, peers, teachers and the student.

Within the context of priority activities the instructional goal for some students is to complete all steps of the activity independently. For other students, the instructional goal is to complete some steps in the activity independently and partially participate in other steps of the activity through adaptations. For other students, the goal of the activity is to practice basic skills in the context of age-appropriate activities. The priority activities become the framework for teaching basic skills, rather than learning to complete the steps in a task analysis.

For example, participation of a student with a visual impairment, cerebral palsy, and retardation in the steps required to make pudding may seem meaningless. The student is not able to measure ingredients, stir, or pour without hand over hand assistance. The student cannot eat the pudding without assistance, read the recipe, or wash the dishes. Involving this student in the activity of making pudding is watching others make pudding. By focusing on basic skill instruction within age-appropriate activities, the teacher can involve a student meaningfully in priority activities because the completion of the units of behavior (i.e., the steps in the task analysis) is not required. Refer to Appendix G for examples of basic skills.

To identify a student's basic skill needs, the teacher must consult with other professionals involved in the student's education. This helps determine the appropriate basic skills to target for instruction within priority activities. Smith (1990) describes an integrated therapy approach in which traditional therapy objectives (including basic skills) are taught across the day in real-life situations, rather than in isolated situations, allowing the student to meaningfully participate in priority activities.

After priority activities are selected for instruction and basic skill needs are determined, the teacher begins developing the IEP. In the past, teachers summarized a student's strengths and weaknesses on the IEP form. The rationale behind the summary may have been to help teachers target appropriate activities and/or skills (i.e., weaknesses) for instruction. Very little meaningful information to help teachers develop a good program for students can be written in a 2 x 2 inch box on the IEP form. P.L. 94-142 mandates that teachers should summarize the student's *present level of performance* rather than describe strengths and weaknesses. The present level of performance includes:

- (1) the results of student evaluations, including informal evaluations (e.g., peer surveys, parent surveys, social validation evidence),
- (2) a description of the effect of the handicapping conditions on academic and non-academic areas, and
- (3) how the student learns (e.g., effective teaching procedures, (time delay), and effective reinforcement procedures (verbal praise or a walk with a peer).

Categorical labels and related service needs are not described in a student's present level of performance. The present level of performance should show a direct relationship to other components of the IEP (e.g., the goals and objectives) and information should be described in objective, measurable ways. Figure 1 is an example of a present level of performance statement written for a student who has deaf blindness and physical disabilities.

Insert Figure1 about here

The next step is to develop annual goal statements that relate to the needs described in the student's present level of performance. This includes (a) the basic skill (e.g., communication, self-help, cognitive, motor, sensory) and (b) the priority activities across the four instructional domains (i.e., community/school, domestic, recreational/leisure, and vocational). For example, reaching is a basic skill for many students and is included in the following annual goal.

Annual Goal:

"To improve the basic skill of reaching throughout the domestic, community/school, recreation/leisure, and vocational domains in the following activities: (1) daily arrival routine, (2) enrichment classes: art and music, (3) community-based education, (4) lunch, (5) cooking simple foods and snacks, and (6) recreation activities with nonhandicapped peers."

The priority activities in the annual goal statement must sample the four instructional domains and provide opportunities for interactions with nonhandicapped peers. However, these activities are not the only activities in which the basic skill of "reaching" can be embedded. Other activities in the day are also appropriate. One annual goal should be written for each basic skill targeted for instruction (e.g., if four basic skills are targeted for instruction, the IEP will include four annual goals).

After annual goals are written, instructional objectives are developed. Well-written instructional objectives act as roadmaps, describing for teachers how to embed basic skill instruction in priority activities. An instructional objective includes four elements: (1) the

condition under which the behavior is to be performed, (2) the behavior the student is expected to perform written in measurable terms, (3) the criteria for mastery, and (4) the setting(s) in which the behavior is to occur and the plans for generalization. Figure 2 is an example of how an instructional objective for reaching might look on the IEP.

Insert Figure 2 about here

After describing the priority activities in which reaching will be developed across the day, an effective instructional objective then must detail the supports necessary for the student to be involved in the activities. Supports are numerous and can include adaptations to the normal routine or rules, proper sitting and positioning techniques, feeding techniques, adaptive switches, partial physical assistance, use of high-color contrast materials, or peer assistance. The supports necessary for the student to be successful in priority activities should be described directly on the IEP. The following types of supports might be necessary for a student to developing the basic skill of reaching: (a) partial physical assistance after 15 seconds of no responding, (b) use of materials with high-color contrast, (c) proper positioning in relation to objects, (d) use of adaptive switches, and (e) use of peer assistance to successfully complete some activities.

It should be noted that writing an objective containing the four components described earlier does not necessarily result in an objective that leads to meaningful instruction for the student. For example, "When placed on a roll, the student will have adequate cocontracture of the neck extensers and flexers to maintain her head in an upright position, 3 out of 5 minutes for 3 days," meets the basic requirements of a sound instructional objective. However, it does not guide the teacher to meaningful instruction. If this instructional objective is used as a roadmap, the teacher may place the student over a bolster in one-to-one instructional situation and, using a stopwatch, record the number of minutes out of five she held her head up on request. It is very unlikely that she will learn to hold her head up when the skill is practiced in isolation. A more useful objective would describe how the student could practice head control in the context of age-appropriate activities like reading

group, circle time, in the hallway talking to friends, lunch, etc.

From well-written instructional objectives, the teacher can develop instructional programs and plans for the student with severe disabilities. An activity matrix is one method used by teachers to organize daily instruction. A sample activity matrix is shown in Figure 3. When using a matrix, the basic skills are listed across the top of the page. Daily routines are listed on the left-hand side of the matrix. Routines are assumed to remain somewhat consistant from day to day. However, the activities within a routine will most likely change. For example, during the cooking routine, the class will cook a different snack each day. The boxes in the center of the matrix are used to briefly describe how each basic skill is embedded into each activity. Basic skills should be practiced in all activities. However, it is possible that some basic skills may not be embedded into all activities. At the bottom of the matrix a section describing adaptations is included (e.g., physical assistance, use of adaptive switches, and adaptive positioning equipment).

Insert Figure 3 about here

The activity matrix focuses instruction on basic skills by describing how the basic skill can be practiced in the context of functional activities. However, the use of the matrix should not limit instruction for the student with severe handicaps. For example, the student reaches to hang up his coat during the morning arrival routine and then never reaches again until the next scheduled activity, even though many opportunities to reach occur. Within each activity many opportunities for the student to practice the basic skill may occur. The matrix says the student will practice reaching during the cooking activity by reaching for the cooking materials. But, the student could also practice reaching within this same activity by reaching for a switch to turn on an appliance, reaching for a spoon to eat the snack, and by reaching for a peer to ask for assistance.

The activity matrix can be used by teachers in many ways. The matrix can be used as a daily lesson plan by changing activities. The matrix can convey the daily schedule and programming goals to other professionals working with the student. In addition, the matrix

can be used as a data collection sheet during instruction (i.e., by tallying how many times the basic skill is demonstrated by the student or by recording the amount of assistance required for the student to participate).

Teachers of students with severe handicaps are familiar with teaching students using an ecological approach. Within this model, age-appropriate activities are selected with the goal of teaching the steps of the activity the student can not perform independently, so that ultimately, the student would perform the activity independently. Unfortunately, the ecological approach does not help teachers plan for students who can not complete the steps of the activity. Developing an IEP to meet the many needs of students with severe handicaps and dual sensory impairments is a challenge for teachers. Through the principal of partial participation and by using individual adaptations, basic skill instruction within the context of age-appropriate activities may be useful in developing instructional programs for students with severe handicaps. The steps involved in developing a meaningful program for students with severe handicaps includes (a) identifying age-appropriate and longitudinally relevant activities, (b) prioritizing activities for instruction, (c) developing an IEP that describes a student's present level of performance and related annual goals and instructional objectives, and (d) developing an activity matrix detailing how daily instruction will occur on basic skills across the student's day.

Conclusion.

Figure 1.

Mark is 10 years old and attends a public elementary school. Mark has a moderate hearing impairment and limited use of his arms and hands. According to his eye doctor, Mark is legally blind (vision of 20/800).

Mark enjoys music, especially country music. He can use a switch to start his tape player. Mark smiles when his favorite people are around. He goes to lunch with a friend from the fourth grade every day. Mark will turn to look at someone when they come up to him and he will look at his cup or bowl to tell you he is hungry or thirsty. Sometimes when no one is listening to him, Mark will bite on his hand and scream.

Mark's mother said in an interview with the teacher that they include Mark in most family activities. Mark attends church, goes to the grocery, and occassionally out to eat with his family. Mark's brother (5th grade) likes to push his wheelchair. Mark's family would like to include Mark more on their camping trips (twice a year) and would like for Mark to help dress himself and to wake up without a struggle in the morning.

Mark's nonhandicapped fourth and fifth grade peers said their favorite afterschool activities were playing Nintendo, basketball, and skateboarding with friends. In their spare time they liked to listen to music, watch music, and go to the mall. Around home, most of Mark's peers helped with household chores (e.g., taking out the trash, making their beds, cleaning up the dinner dishes and keeping their room neat). The majority of Mark's peers receive an allowance and they spend their allowance on going to the movies and purchasing clothes.

When involved in an activity (described below) and given a verbal cue to "reach for" and when the item is placed 2-4" in front of Mark, Mark will extend his right forearm from the elbow to make contact with the item within 15 seconds, 4 of 5 opportunities (for 3 consecutive days.) Examples of activities in which Mark will practice reaching are: (1) cooking snack (domestic domain) (2) playing video games (recreation/leisure domain) (3) hanging up coat (school.domain) (4) grocery shopping (community domain)	*Partial physical assistance after 15 seconds of no responding. *Use of materials with high-color contrast *Proper positioning in relation to objects for which Mark has to reach *Use of adaptive switches *Peer assistance to successfully complete some activities such as hanging up coat

D08.03: WHEN GIVEN A LIST OF "AVAILABLE" FOODS, THE STUDENT WILL USI THOSE FOOD ITEMS TO PLAN A NUTRITIOUS BREAKFAST, LUNCH AND DINNER CONTAINING FOODS FROM EACH OF THE FOUR FOOD GROUPS FOR ONE DAY. CRITERIA: AT LEAST% OF THE FOOD ITEMS CORRECT FOR EACH MEAL
D08.34: THE STUDENT WILL NEATLY, CORRECTLY, AND INDEPENDENTLY OPEN FCOD CONTAINERS NEEDED FOR COOKING, COMPLETING AT LEAST
D08.05: THE STUDENT WILL PREPARE AND SHARE WITH PEERS AT LEAST DIFFERENT SNACKS WHICH REQUIRE NO COOKING, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER COOKING SESSIONS.

D08.06: THE STUDENT WILL PREPARE AT LEAST 3 BEVERAGES, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY.
CRITERIA: OVER CONSECUTIVE SESSIONS FOR EACH DRINK.
D08.07: THE STUDENT WILL PREPARE AT LEAST 3 DIFFERENT BREAKFASTS WHICH REQUIRE NO COOKING, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS FOR EACH BREAKFAST CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS FOR EACH BREAKFAST.
D08.08: THE STUDENT WILL PREPARE AT LEAST 3 DIFFERENT NO-COOK LUNCHES COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS FOR EACH LUNCH CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS FOR EACH LUNCH.
D08.09: THE STUDENT WILL PREPARE AT LEAST 3 DIFFERENT LUNCHES WHICH REQUIRE SOME COOKING, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS FOR EACH LUNCH CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS FOR EACH LUNCH.
D08.10: THE STUDENT WILL PREPARE AT LEAST 3 DIFFERENT DINNERS WHICH REQUIRE SOME COOKING, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS FOR EACH DINNER CORRECTLY AND INDEPENDENTLY.
CRITERIA: OVER CONSECUTIVE SESSIONS FOR EACH DINNER. D08.11: WHEN GIVEN A MENU FOR BREAKFAST, LUNCH OR DINNER, THE STUDENT WILL PLAN AN APPROPRIATE AMOUNT OF FOOD FOR 2 TO 4 PERSONS.
CRITERIA: AT LEAST/CORRECT AND INDEPENDENT TRIALS
D08.12: THE STUDENT WILL READ AND FOLLOW SIMPLE COOKING DIRECTIONS ON PACKAGED FOODS, PREFORMING% OF THE TASK ANALYZED STEPS. CRITERIA:/ PROBES ACROSS NON-TRAINED PACKAGES.
D08.13: GIVEN A PICTURE RECIPE THAT ILLUS TRATES THE KEY STEPS, THE STUDENT WILL FOLLOW THAT PICTURE RECIPE TO PREPARE (SPECIFY FOOD): 1)/ PROBES ACROSS A TRAINED RECIPE 2)/ PROBES ACROSS A NON-TRAINED RECIPE.
D08.14: THE STUDENT WILL USE MEASURING CUPS/SPOONS TO MEASURE LIQUIDS AND SOLIDS TO 1, 1/2, 1/4, 3/4, 1/3, 2/3 CUPS; 1 TBL., 1 TSP., 1/2 TSP. 1/4 TSP.
CRITERIA:/ TRIALS INTERMIXED OVER 3 CONSECUTIVE SESSIONS.

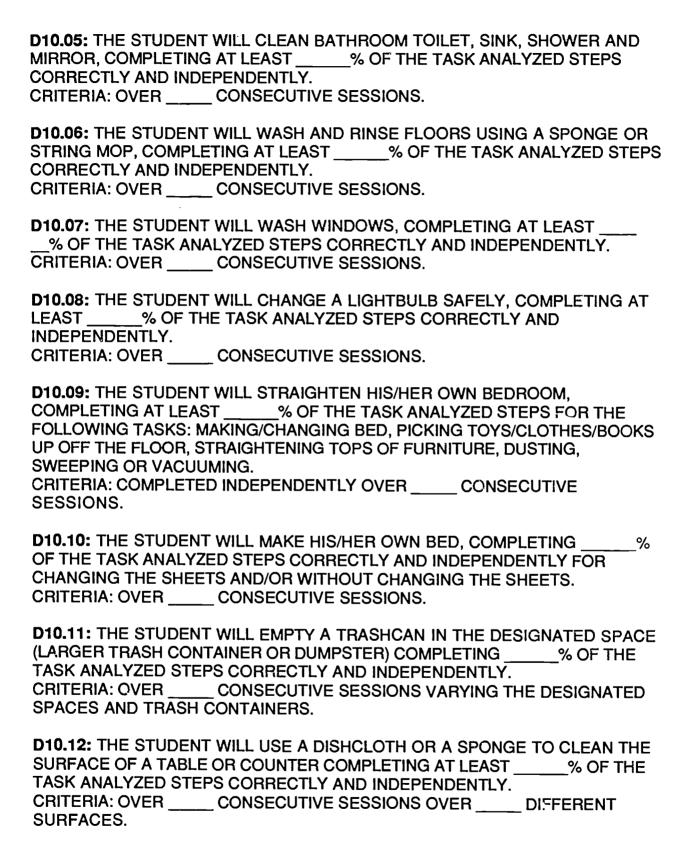

D08.15: THE STUDENT WILL SET THE TABLE CORRECTLY USING UTENSILS, DISHES AND NAPKINS, SELECTING THE CORRECT NUMBER OF ITEMS FOR NUMBER OF PERSONS EATING AND COMPLETING AT LEAST _____% OF THE TASK ANALYZED STEPS. CRITERIA: OVER ____ CONSECUTIVE SESSIONS. D08.16: THE STUDENT WILL CLEAN UP AFTER MEALS (CLEARING THE TABLE, WASHING AND DRYING DISHES, STORING FOOD PROPERLY, WIPING TABLE AND CHAIRS, AND SWEEPING FLOORS) COMPLETING AT _% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER ____ CONSECUTIVE SESSIONS D09.01: THE STUDENT WILL SORT CLOTHES ACCORDING TO COLOR AND FABRIC (IF APPROPRIATE) AND STATE THE WATER TEMPERATURE APPROPRIATE FOR WHITE, LIGHT, AND DARK COLORS, COMPLETING AT LEAST % OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER ____ CONSECUTIVE SESSIONS. D09.02: THE STUDENT WILL WASH SORTED CLOTHING IN AN AUTOMATIC WASHING MACHINE COMPLETING AT LEAST ______% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER ____ CONSECUTIVE SESSIONS. D09.03: THE STUDENT WILL DRY CLOTHING IN AN AUTOMATIC DRYER COMPLETING AT LEAST ______% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER ____ CONSECUTIVE SESSIONS. D09.04: THE STUDENT WILL FOLD CLEANED CLOTHES, COMPLETING AT LEAST % OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER ____ CONSECUTIVE SESSIONS. D09.05: THE STUDENT WILL HANG CLEANED CLOTHES, INCLUDING SHIRTS, PANTS AND COATS, ON A HANGER OR HOOKS, COMPLETING AT LEAST % OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER ____ CONSECUTIVE SESSIONS. D09.06: THE STUDENT WILL MATCH SOCKS ACCORDING TO COLOR AND SIZE, COMPLETING AT LEAST ______ % OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER ____ CONSECUTIVE SESSIONS.

D09.07: THE STUDENT WILL IRON FLAT ITEMS (PILLOW CASES) COMPLETING AT LEAST % OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS. D09.08: THE STUDENT WILL IRON COMPLEX CLOTHING ITEMS (SHIRT, PANTS, SKIRT. DRESS) COMPLETING AT LEAST _____ % OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER ____ CONSECUTIVE SESSIONS D09.09: THE STUDENT WILL SEW ON BUTTONS MISSING FROM CLOTHING COMPLETING AT LEAST _____% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS. **D09.10:** THE STUDENT WILL MEND SIMPLE TEARS IN SEAMS OR HEMS ON CLOTHING, COMPLETING AT LEAST % OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS. **D09.11:** THE STUDENT WILL PUT CLEAN LAUNDRY IN ITS DESIGNATED SPOT (I.E. CLOSET, DRAWER, OR CABINET CONTAINING SIMILAR ITEMS). CRITERIA: OVER CONSECUTIVE SESSIONS D10.01: THE STUDENT WILL USE A RAG AND POLISH AND DUST FURNITURE. COMPLETING AT LEAST ______% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS. D10.02: THE STUDENT WILL USE A BROOM AND DUSTPAN TO SWEEP FLOORS. COMPLETING AT LEAST _____% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER ____ CONSECUTIVE SESSIONS. D10.03: THE STUDENT WILL USE A CANISTER OR UPRIGHT VACUUM TO VACUUM RUGS, COMPLETING AT LEAST ____ % OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER ____ CONSECUTIVE SESSIONS. D10.04: THE STUDENT WILL WASH AND DRY DISHES, UTENSILS, GLASSES AND PANS, COMPLETING AT LEAST % OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER ____ CONSECUTIVE SESSIONS.

COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY CRITERIA: OVER CONSECUTIVE SESSIONS.
D10.14: THE STUDENT WILL USE A MOP OR RAG TO CLEAN A MESS MADE BY SOMETHING BEING SPILLED ON THE FLOOR, COUNTER OR TABLE, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS ON VARYING SPILLS AND SURFACES.
D10.15: THE STUDENT WILL WASH THE OUTSIDE OF AN AUTOMOBILE (CAR, TRUCK, VAN, ETC.) COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS VARYING AUTOS.
D10.16: THE STUDENT WILL CLEAN THE INSIDE OF THE AUTOMOBILE BY CLEANING OUT TRASH, SWEEPING AND/OR VACUUMING THE FLOORS, USING A CLOTH TO WIPE VINYL DASHBOARD, AND WASHING THE WINDOWS, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS.
D10.17: WHEN REQUESTED TO CLEAN SPECIFY ROOM, THE STUDENT WILL FOLLOW A LOGICAL SEQUENCE FOR CLEANING THE ROOM, I.E., PICKING UP ARTICLES OFF THE FLOOR FIRST, THEN STRAIGHTENING, DUSTING, AND VACCUUMING. CRITERIA:% OF THE TASK ANALYZED STEPS CORRECT AND INDEPENDENT,/ PROBES.
D10.18: WHEN ASSIGNED JOBS TO DO AT HOME AND OR IN THE CLASSROOM, THE STUDENT WILL DEVELOP A ROUTINE TO COMPLETE THOSE JOBS AND THEN COMPLETE THE JOBS ON A DAILY/WEEKLY (SPECIFY ONE) BASIS. CRITERIA: % OF TASK ANALYZED STEPS COMPLETED CORRECTLY AND INDEPENDENTLY,/ PROBES.
D11.01: THE STUDENT WILL USE A RAKE TO RAKE LEAVES/GRASS, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS.
D11.02: THE STUDENT WILL DIFFERENTIATE WEEDS FROM FLOWERS/GRASS AND PULL OR DIG WEEDS, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS.

D11.03: THE STUDENT WILL READ AN OUTDOOR THERMOMETER AND BE ACCURATE TO +/ DEGREES.
CRITERIA:/CORRECT AND INDEPENDENT PROBES.
D11.04: AFTER READING AN OUTDOOR THERMOMETER OR AFTER CALLING THE TIME AND TEMPERATURE NUMBER AND FINDING OUT THE TEMPERATURE, THE STUDENT WILL DRESS APPROPRIATELY FOR OUTDOOR ACTIVITIES. CRITERIA:/CORRECT AND INDEPENDENT PROBES.
D12.01: IN ROLE-PLAY SITUATIONS AT SCHOOL, THE STUDENT WILL DEMONSTRATE HOME SAFETY BY LOCKING AND UNLOCKING DOORS AND WINDOWS TO MAINTAIN APPROPRIATE SECURITY FOR SELF AND HOME. CRITERIA:/CORRECT AND INDEPENDENT ROLE-PLAYED SITUATIONS. GENERALIZATION PLAN FOR HOME
D12.02: IN ROLE-PLAY SITUATIONS AT SCHOOL, THE STUDENT WILL DEMONSTRATE HOME SAFETY BY DISCRIMINATING WHICH PERSONS SHOULD BE ADMITTED INTO THE HOME TO MAINTAIN APPROPRIATE SECURITY FOR SELF AND HOME. CRITERIA:/CORRECT AND INDEPENDENT ROLE-PLAYED SITUATIONS. GENERALIZATION PLAN FOR HOME
D12.03: IN ROLE-PLAY SITUATIONS AT SCHOOL, THE STUDENT WILL DEMONSTRATE HOME SAFETY BY IDENTIFYING DANGEROUS AND/OR POISONOUS SUBSTANCES COMMONLY KEPT IN THE HOME THAT SHOULD NOT BE TOUCHED TO MAINTAIN APPROPRIATE SAFETY FOR SELF AND HOME. CRITERIA:/CORRECT AND INDEPENDENT ROLE-PLAYED SITUATIONS. GENERALIZATION PLAN FOR HOME
D12.04: IN ROLE-PLAY SITUATIONS AT SCHOOL, THE STUDENT WILL DEMONSTRATE HOME SAFETY BY DEMONSTRATING THE SAFE USE, CARE, AND STORAGE OF SHARP TOOLS TO MAINTAIN APPROPRIATE SAFETY FOR SELF AND HOME. CRITERIA:/CORRECT AND INDEPENDENT ROLE-PLAYED SITUATIONS. GENERALIZATION PLAN FOR HOME:
D12.05: IN ROLE-PLAY SITUATIONS AT SCHOOL, THE STUDENT WILL DEMONSTRATE HOME SAFETY BY DISCRIMINATING BETWEEN SAFE AND DEFECTIVE ELECTRICAL CORDS TO MAINTAIN APPROPRIATE SAFETY FOR SELF AND HOME. CRITERIA:/ CORRECT AND INDEPENDENT ROLE-PLAYED SITUATIONS.
GENERALIZATION PLAN FOR HOME

DT3.UT: WHEN SHOWN A VARIETY OF PRESCRIPTION AND NON-PRESCRIPTION DRUGS, THE STUDENT WILL INDICATE WHICH HE/SHE CAN BUY WITHOUT A DOCTOR'S PRESCRIPTION.
CRITERIA:/TRIALS (DIFFERENT DRUGS EACH TRIAL) OVER CONSECUTIVE SESSIONS.
D13.02: WHEN A VARIETY OF ILLNESSES ARE DESCRIBED TO THE STUDENT IN VARYING DEGREES OF SERIOUSNESS, THE STUDENT WILL IDENTIFY THOSE SITUATIONS WHICH WARRANT MEDICAL ATTENTION. CRITERIA:/DIFFERENT SITUATIONS DESCRIBED OVER CONSECUTIVE SESSIONS.
D13.03: WHEN SITUATIONS OF VARYING DEGREES OF SERIOUSNESS WHICH REQUIRE MEDICAL TREATMENT ARE DESCRIBED AND/OR ROLE PLAYED, THE STUDENT WILL INDICATE WHICH SITUATIONS REQUIRE EMERGENCY MEDICAL ATTENTION.
CRITERIA:/DIFFERENT SITUATIONS DESCRIBED OVERCONSECUTIVE SESSIONS.
D13.04: THE STUDENT WILL INDICATE (VERBALLY, SIGNING, GESTURALLY OR POINTING TO PICTURES) AT LEASTCOMMONLY ACCEPTED MEASURES TO AVOID SPREADING GERMS. CRITERIA: OVER CONSECUTIVE SESSIONS.
D13.05: DURING ROLE PLAY SITUATIONS, THE STUDENT WILL TREAT MINOR CUTS, BRUISES, AND BURNS, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS.
D13.06: AS THE OCCASION ARISES OR DURING ROLE-PLAY SITUATIONS IN THE CLASSROOM, THE STUDENT WILL TREAT COMMON AILMENTS SUCH AS COLDS, INSECT BITES, AND NOSEBLEEDS, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS OR OCCASIONS.
D13.07: DURING ROLE PLAY SITUATIONS, THE STUDENT WILL TREAT A SPRAINED OR TWISTED ANKLE, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS.
D13.08: WHEN SHOWN AN APPLIANCE/MACHINE, THE STUDENT WILL COMMUNICATE (VERBALLY, WITH SIGN, GESTURES, OR OTHER AUGMENTATIVE COMMUNICATION DEVICE) HOW ONE COULD MISUSE THE ITEM AND GET HURT OR HURT OTHERS. CRITERIA:/ TRIALS WITH ITEMS/SITUATIONS INTERMIXED OVER
CONSECUTIVE SESSIONS.

D13.09: GIVEN A VARIETY OF TOXIC/NON-TOXIC SUBSTANCES, THE STUDENT WILL SAY OR SIGN WHICH SUBSTANCE COULD BE DANGEROUS AND DEMONSTRATE OR TELL ONE WAY TO USE THE SUBSTANCE SAFELY. CRITERIA:/ TRIALS WITH SUBSTANCES INTERMIXED OVER CONSECUTIVE SESSIONS.
D13.10: THE STUDENT WILL USE MATCHES TO LIGHT A CANDLE, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY. CRITERIA: OVER CONSECUTIVE SESSIONS.
D14.01: THE STUDENT WILL ANSWER THE TELEPHONE, SPEAKING IN A FRIENDLY TONE, IDENTIFY HIMSELF/HERSELF, AND RESPOND TO THE CALLER AS NEEDED, COMPLETING AT LEAST% OF THE TASK ANALYZED STEPS CORRECTLY AND INDEPENDENTLY.
D14.02: WHEN NEEDING TO RELAY A MESSAGE TO A SPECIFIC PERSON, THE STUDENT WILL DIAL THE NUMBER, ASK FOR THE PERSON, WAIT FOR THEM TO COME ON THE LINE AND RELAY THE MESSAGE TO THEM, COMPLETELY AT LEAST OF THE TASK ANALYZED STEPS,/ CORRECT AND UNASSISTED PROBES.
D14.03: THE STUDENT WILL DIAL AT LEAST TELEPHONE NUMBERS CORRECTLY AND INDEPENDENTLY WHEN NUMBERS ARE WRITTEN OR DICTATED. CRITERIA: / TRIALS, NUMBERS VARYING, OVER CONSECUTIVE SESSIONS.

Parent Interview - Quality of Life Indicators*

Quality of Life Indicator #1 - Having a Safe, Stable Home

- 1. Where does (student's name) live currently (e.g., at home with family, foster home, community residence)? (Note: Since this information may already be known, the answer may be recorded and restated to the family, e.g., "OK, we know that Tom lives with you and his sister"; then move on to question 2.)
- 2. If everything goes as you hope, do you anticipate that (student's name) will continue to live where she/he is throughout the school years? If not, where would be a desirable place?
- 3. Would you like to talk about where a desirable place would be for (student's name) to live as an adult, or is that too far in the future to discuss at this time? If yes, where?
- 4. Is there any place you would like to avoid having (student's name) live in the future?

Quality of Life Indicator #2 - Maintaining a Social Network and Meaningful Relationships

- 1. With whom does (student's name) have personal relationships other than with his/her immediate family (e.g., relative, classmates, friends)?
- 2. Would you like to see these relationships change or expand in the near future, and if so how?

Quality of Life Indicator# 3 - Accessing a Variety of Places

- 1. Where does (student's name) spend time regularly that makes his/her life full and interesting (e.g., school, work, community recreation, follows family routine)?
- 2. Would you like to see these places change or expand in the near future? If so, how?

Quality of Life Indicator #4 - Engaging in Meaningful Activity

- 1. What kind of activities does (student's name) do on a regular basis that are interests, preferences, or make him/her feel good about himself/herself?
- 2. Would you like to see these activities change or expand in the near future? If so, how?
- 3. ONLY ASK THIS QUESTION IF THE STUDENT IS 13 OR OLDER. Have you give any thought to what kinds of meaningful activities (student's name) might do as a your adult? For example, how might (student's name) spend his/her time in the future that is now spent in school (e.g., competitive work, supported work, volunteering, continuing education)?

Quality of Life Indicator #5 - Living in a State of Health and Comfort

1. What, if anything, would you like to see change in terms of (student's name) current health or comfort that would enable him/her to pursue a more enjoyable life?

^{*}The skills checklist is relevant for primary students. It may also be relevant for older students with the most severe disabilities and who require instruction on basic skills in the context of age-appropriate activities.

^{**}Note: If the parent has completed the skills section of step I in preparation for the IEP, important communication and social interaction skills should have been identified and it may not be necessary to complete this step.
