ABSTRACT

This latest edition of the biennial Higher Education Fact Book series focuses on significant national, regional, and Southern Regional Education Board (SREB) state trends affecting higher education in the 1990s. This report contains 19 graphic highlights and over 80 tables displaying state, regional, and national statistics covering population and the economy, higher education enrollments and the pool of potential students, degrees earned, tuition levels, student financial aid, faculty salaries, and higher education budgets. The report also contains profiles of the gender and racial/ethnic characteristics of faculty and administrators, faculty salaries by teaching field and type of institution, and administrative salaries. Among the facts revealed are the following: (1) over half of the U.S. population growth in the next two decades will be in the SREB states; (2) college enrollments in the region are growing well above the national rate, but the traditional pool of potential college students (18 to 24 year olds) will shrink through the 1990s, then rebound significantly by 8 percent during the first decade of the next century; and (3) minority students will be at least one-third of the high school graduates in seven SREB states by early in the next century. Rearranging Responsibilities and Resources

- Over half of the United States population growth in the next two decades will be in the SREB states. Four SREB states will each grow by more than one million in the 1990s alone.
- State and local government tax revenues rose almost 46 percent in the last five years. Expenditures for social services and income maintenance, administration, and elementary and secondary education matched or exceeded this growth. By a considerable gap, expenditures for higher education did not.
- At the same time, college enrollments in the region were growing well above the national rate. Decreases in the college-aged population through the 1990s will be followed by growth for 10 years.
- In the almost 30 years since the nation's landmark civil rights legislation, progress toward improving the educational participation and attainment of minorities has been uneven. Minority students are expected to be at least one-third of high school graduates in seven SREB states by early in the next century—and nearly one-half the graduates in two states. Black Americans make up 18 percent of the region's population, 14 percent of the college students, 10 percent of those receiving bachelor's degrees, and 7 percent of college faculty.
- If higher education's share of state and local budgets had not declined in the past five years (while enrollments increased), states in the SREB region would have earmarked over \$2 billion more for higher education—enough to fund the state budgets for public higher education in six SREB states. State funding for colleges and universities declined nationally in the first two budget years of the 1990s, the first such declines in 40 years. Colleges and universities in all but three SREB states have had decreased state funding in at least one of the last three years.
- Costs have shifted to students and their families, who are now assuming unprecedented levels of debt to finance college costs. The annual cost of attending four-year colleges and universities has risen faster than median family income over the last 20 years. It is likely that 10 years from now the cost of one year of college at a private university will be equivalent to half of median family income. The cost of one year at a public university could reach 20 percent of median family income. Half of all undergraduate students now receive financial aid.
- When adjusted for inflation, the salaries of college faculty are \$1,100 below where they were in the early 1970s, while median family income has risen in the nation by more than \$3,000. Last year, college faculty salaries in the SREB region had the lowest one-year increase in 20 years. The decline in the growth of salaries in the last 10 years is reversing the progress the SREB states had made toward reaching national averages.

ACKNOWLEDGMENTS

The cooperation and assistance of the state higher education agencies in the SREB region are appreciated, including their participation in the SREB-State Data Exchange, which provides the most comprehensive, up-to-date information for the Fact Book. Also, acknowledged are several federal agencies, including the Atlanta Regional Office of the U.S. Bureau of the Census, the U.S. Bureau of Economic Analysis, the Department of Health and Human Services, and various offices of the U.S. Department of Education, including the National Center for Education Statistics and the Office of Student Financial Assistance.

The following SREB staff assisted in the research and preparation of the SREB Fact Book on Higher Education, 1992: Eula Aiken, Jennifer D. Burke, Lynn M. Cornett, Joseph D. Creech, David R. Denton, Gale F. Gaines, Anne Li, John C. Norton, Robert E. Stoltz, and Margaret A. Sullivan.

The SREB Fact Book on Higher Education exemplifies our persistent effort to monitor the educational progress of the region and to add perspective to significant trends affecting colleges and universities.

State and local government expenditures per person in the region remain below national levels, even when we adjust for the gap between regional and national income. College enrollments are growing faster than the national average in all but four SREB states. Yet higher education funding has grown less than funding for other government services, and our public colleges are receiving a declining share of state revenues. Costs are shifting from states to students and their families, whose incomes have not grown as fast as the costs. Faculty salaries in the region are falling further behind national averages after years of progress and, when inflation is taken into account, they are below where they were in the early 1970s.

This Fact Book shows that states and colleges are faced with the difficult challenge of rearranging resources and responsibilities while trying to achieve ambitious goals that will have much to do with the quality of life in the 1990s and beyond. With nearly half of the nation's population growth of the 1990s expected to occur in the SREB states, and with the proportion of minorities growing, raising the rates of educational participation and attainment in higher education takes on added importance, and urgency.

Mark D. Musick President

INTRODUCTION AND SREB STATE PROFILES

The SREB Fact Book on Higher Education

Continuing a tradition dating back to the late 1950s, the SREB Fact Book on Higher Education, 1992 provides comparative national and regional data highlighting significant trends affecting colleges and universities in each of the member states. Using the latest information from SREB's extensive data bases, the Fact Book contains detailed national and state profiles on demographics, elementary and secondary education, government revenues and expenditures, college enrollments, student characteristics, degrees granted, tuition and fees, student financial aid, faculty salaries, and college and university revenues and expenditures. Expanded in 1992 to 80 tables, the new edition contains, for the first time, data on the numbers and types of faculty and administrators at public colleges and universities.

In cases where information must be obtained from national sources, the latest information available is sometimes not as current as we would like. For example, the latest detailed nationwide data on higher education finances and degrees conferred by race and ethnic group are for 1989-90. SREB's annual SREB-State Data Exchange provides up-to-date information and can be used by researchers to supplement the biennial *Fact Book* with the most current data available.

The Fact Book exemplifies SREB's approach to comparative data: to compile and evaluate related trends and measures and to encourage the examination of dramatic findings. Comparative information frequently raises more questions than it answers, but the pursuit of those questions often leads to better state policies and better comparative data.

While the degree of reliability and comparability of higher education data has improved over the years, data comparisons among a number of states should always be viewed carefully. The reader should take into account the wide range of interstate differences that can affect the comparability and relative rankings of the data. Readers are encouraged to contact the state higher education agencies for individual state perspectives on higher education trends.

SREB welcomes suggestions and comments concerning the SREB Fact Book.

SREB State Profiles

The SREB State Profiles provide a convenient "at-a-glance" overview of the progress and national position of the SREB region and each of the individual SREB states. Included are selected data from each of the six statistical chapters. The numbers in parentheses above each column refer to the particular tables elsewhere in the SREB Fact Book that contain more complete information and a full citation of sources.

[&]quot;na" indicates that there is no institution of this type in the state.

⁻⁻⁻ indicates data were not available

^{*} Institutional type is determined by highest level of degree offered and degrees conferred. See SREB Definitions of Institutional Categories on page 141

SREB continuously monitors the availability of new comparative data and publishes the SREB Fact Book Bulletin containing updated or expanded information. SREB is also introducing an on-line data center where individuals can download by computer modem complete data bases containing additional detail and the most up-to-date Fact Book information.

POPULATION

POPULATION AND ECONOMY

Population

By the year 2000, 35 percent of the nation's population will live in the SREB states—and by 2010, over 36 percent will live in the region.

Over half of the United States population growth of 33 million persons in the next two decades will be in the SREB states.

Four SREB states (Florida, Georgia, North Carolina, and Virginia) will each grow by over one million persons during the 1990s. Together these states will account for 70 percent of the region's population growth. Florida alone is projected to grow by over three million people and account for one-third of the growth.

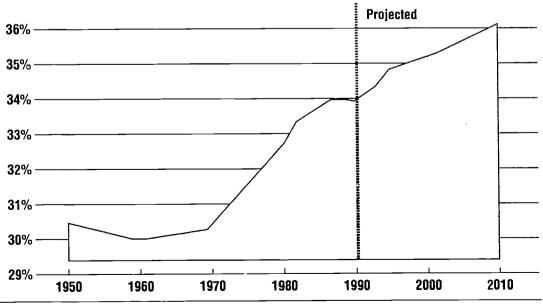

The region's pre-school-age population (under 5 years old) will decline almost 260,000 between now and the turn of the century. Even so, Florida, Georgia, and Mississippi must prepare for more pre-schoolers.

The region's school-age population (5- to 17-year-olds) will grow by almost one-and-ahalf million by 2000-one new school-aged child for every 10 today.

Declines in the numbers of school-age children between 2000 and 2010 are projected for 10 of the 15 SREB states; six will have decreases of at least 10 percent.

The traditional college-age population (18 to 24 years old) will decline by 160,000 by 2000 (2 percent) then rebound fairly dramatically by 8 percent by the year 2010.

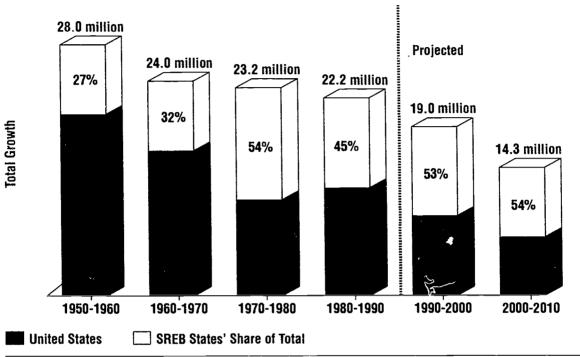

Population of the SREB States As a Percent of the U.S. Total

SOURCE U.S. Bureau of the Census

Population Growth by Decade, 1950 to 2010 United States and SREB States

SOURCE U.S. Bureau of the Census

Almost 70 percent of total population growth in each of the next two decades will be due to increased numbers of persons aged 25 to 64.

Growth in the number of adults aged 65 and over will be the next largest increase—about two million by century's end—two additional older adults for every one today. Another 2.3 million older adults are projected by 2010.

In the 1980s, the white population grew by 11 percent; the black population grew 13 percent. The Hispanic population and other racial/ethnic groups (including Asians) increased most dramatically—by over two million persons each.

Public School Enrollment

The growth surge in school enrollments during the last decade is expected to continue through the 1990s—12 percent nationally and 13 percent in the region.

Public school enrollments between now and 2001 are expected to grow 25 percent in Florida, 22 percent in Georgia, 20 percent in Louisiana, 32 percent in Maryland, 29 percent in North Carolina, and 40 percent in Virginia.

In 1990, the school dropout rate (the percentage of 16- to 19-year-olds not enrolled in school and without a high school credential) was 12 percent—the same for the SREB region as for the nation as a whole.

Minority students account for a larger share of public school enrollments in the SREB region than nationally. As the 1970s began, minority students in the SREB states accounted for 29 percent of school enrollment; by 1989, 37 percent.

High School Graduates

Since 1980, due to demographic changes, the number of high school graduates in the SREB states declined 9 percent—much less than the nationwide decline of 17 percent.

The 1990 high school completion rates (the percentage of an age group with a high school diploma or equal credential) in the SREB region were 83 percent for 19- to 20-year-olds and 82 percent for 23- to 24-year-olds—both below the national average of 85 percent. However, the higher graduation rates among 19- to 20-year olds in nine SREB states are a sign of progress.

Over 9 percent more students will graduate from the region's public high schools by 2002.

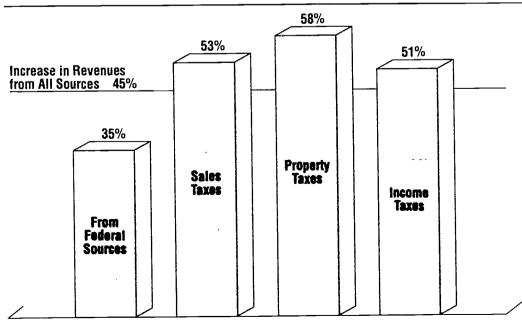

By 2002, minority students are expected to be at least one of every three high school graduates in Alabama, Florida. Georgia, Louisiana, Maryland, North Carolina, and South Carolina. In Mississippi and Texas, the ratio is almost one of every two graduates.

Personal Income and Tax Revenues

From the mid-1980s to the end of the decade, state and local government tax revenues increased faster than personal income.

For the SREB states, total personal income grew almost 38 percent, but property tax revenues grew by 58 percent and sales tax revenues by 53 percent. Income tax revenues rose by 51 percent. Federal funds to state and local governments rose 35 percent..

Percent Increase in Revenues for State and Local Governments SREB States, 1984-85 to 1989-90

SOURCE U.S. Bureau of the Census

The SREB region's per capita income in 1990 was \$17,255-90 percent of the United States average. Maryland and Virginia were above the national average of \$19,092.

Government Expenditures

Across the nation, state and local governments spent an average of \$3,924 per person in 1990—an amount unmatched by any SREB state.

Over the last 20 years, state and local spending per person for government services in the SREB region has moved steadily closer to the national average, increasing from just over 81 percent of the national figure to almost 86 percent in 1990.

Spending by state and local governments for higher education in the region grew less (38 percent) than spending for other government services in the last half of the 1980s. Spending for social services and income maintenance rose 63 percent; funds for the administrative costs of state and local governments increased 58 percent; and spending for elementary and secondary education went up 55 percent.

State and local government expenditures for higher education, while increasing, became a smaller share of total expenditures. Regionally, the higher education share fell from 9.2 percent of total expenditures to 8.4 percent in 1989-90. This less than 1 percent share loss represents a \$2.2 billion shift of funds to other services—enough to equal the state general operating appropriation for the 35 four-year and the 66 two-year public colleges in Texas that year. Or, more than enough to provide the state general operating appropriation for all public colleges and universities in Alabama, Arkansas, Kentucky, Mississippi, Oklahoma, and West Virginia.

Percent Increase in Expenditures by State and Local Governments SREB States, 1984-85 to 1989-90

SOURCES: U.S. Bureau of the Census. Governmental Finances in 1984-85 (GF-85-5, 1986) and 1989-90 (GF-90-5, 1992) (Washington, D.C., U.S. Government Printing Office)

SREB continuously monitors the availability of new comparative data and publishes the SREB Fact Book Bulletin containing updated or expanded information. SREB is also introducing an on-line data center where individuals can download by computer modem complete data bases containing additional detail and the most up-to-date Fact Book information.

A state's costs for higher education depend in part on the types of colleges and universities in the state's system.

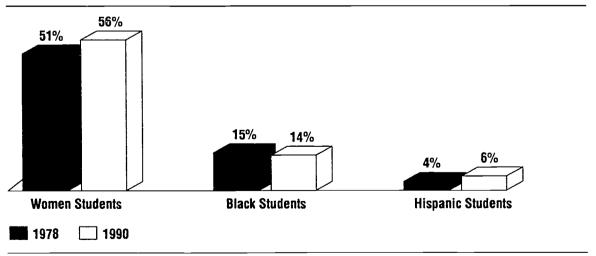

Among SREB states, only in Florida are more than half of the full-time-equivalent students attending public higher education in community colleges. In six SREB states (Arkansas, Georgia, Kentucky, Louisiana, Virginia, and West Virginia) more than two-thirds of the students are enrolled in four-year colleges and universities.

Total Headcount

Almost 14 million students were enrolled in college in 1990—over 4 million of them in the SREB states.

Nearly 1 million more students attend college in the SREB states today than in the late 1970s—enough students to match the enrollment of all public and private colleges in Texas and West Virginia. The region accounted for almost 40 percent of the nation's enrollment growth.

Percent Distribution of Undergraduate College Students SREB States

SCURCE National Center for Education Statistics

This growth is occurring despite a decline in the number of high school graduates (the traditional recruiting pool for colleges and universities). Almost 40 percent of today's college students are at least 25 years old.

The projected increase in high school graduates over the next 10 years indicates continued growth in college enrollments.

Students in the SREB region are more likely to attend public colleges and universities (84 percent) than their peers in other parts of the country (78 percent).

Two-Year College Enrollment

Two-year colleges account for nearly half of the decade's enrollment growth in the SREB states.

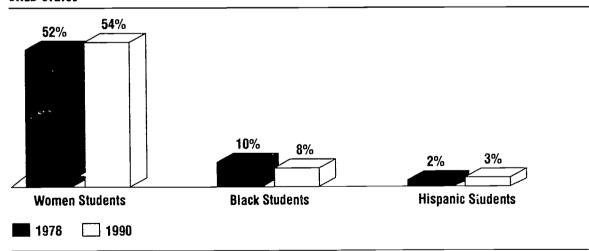

Over 37 percent of all college students now attend two-year colleges. Almost half of all first-time college students enroll at two-year colleges—in Florida and Mississippi almost two-thirds do.

Nearly 60 percent of the two-year college students in the SREB states are women.

Black Students

Almost half of the nation's black college students attend colleges and universities in the SREB states. Compared to the late 1970s, almost 109,000 more black students entered college in the region; they accounted for over 64 percent of the nation's increase in black student enrollment.

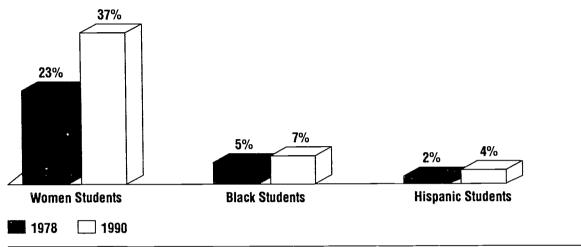

Percent Distribution of Graduate College Students SREB States

SOURCE National Center for Education Statistics

Percent Distribution of First-Professional* Program Students SREB States

[•] Includes students enrolled in chiropractic, denistry, law, medicine optometry, osteopathic medicine, pharmacy podiatry, professional theology, and veterinary medicine programs SOURCE National Center for Education Statistics

In the SREB states, 8 of every 10 black students entering college since the late 1970s were women. Black women now account for over 62 percent of black college students.

Despite these increases, black students are now a smaller share of the region's college enrollments (14 percent) than in the late 1970s (15 percent). Only among first-professional students (for example, those in law and dentistry) do black students represent a larger share of college enrollments.

Hispanic Students

There has been a rapid increase in the number of Hispanic students enrolled in the SREB states. Almost 233,000 Hispanic students are enrolled in the region—nearly nine of 10 of these are in Florida and Texas.

A majority of Hispanic students are enrolled in two-year colleges.

Hispanic students account for less than 2 percent of enrollment in every SREB state except Florida, where they make up almost 11 percent, and Texas. where they are almost 17 percent.

Women Students

Women make up over 55 percent of the region's total college enrollment—up from 50 percent in the late 1970s.

Women account for over 71 percent of the total enrollment growth in the region since the late 1970s.

Nationally, women are now more than 39 percent of the students enrolled in first-professional programs, and over 37 percent in the SREB states.

Undergraduate Students

Since the late 1970s, undergraduate enrollment grew almost 23 percent nationally and over 34 percent in the SREB region. Florida, Georgia, Kentucky, and Texas had increases close to 40 percent.

Nationally and regionally about 43 percent of all undergraduate students attend two-year colleges.

Graduate Students

Enrollment in graduate schools has increased almost 20 percent nationally and nearly 27 percent in the SREB region in the last decade and a half. Graduate students now claim a slightly smaller share of total enrollments.

In the SREB states, a higher percentage of graduate students (79 percent) attend public universities than nationally (64 percent).

Part-Time Students

Almost 29 percent of all four-year college students in the SREB states now attend on a part-time basis. Nearly 60 percent of part-time students are women.

Over 60 percent of the students in two-year colleges attend part-time. Among graduate students, over 63 percent attend part-time.

Health Professions Enrollment

Medical school enrollments fell nationally (2 percent) and regionally (3 percent) from the mid-1980s to the early 1990s. However, the enrollment of women in medical schools increased 17 percent.

The number of students enrolled in programs to become registered nurses in the SREB states grew almost 22 percent in the last half of the 1980s, but by less than 2 percent nationally. This difference may be due to extensive recruiting efforts of nurse educators in the SREB region. Enrollment of registered nurses in master's degree programs in nursing grew almost 57 percent regionally and 34 percent nationally.

[&]quot;na" indicates not applicable. There is no institution of this type in the state

SOURCE SREB-State Data Exchange

[&]quot;---" indicates data were not available

^{*}Institutional type is determined by highest level of degree offered and degrees conferred. See SREB Definitions of Institutional Categories on page 141

NOTES Totals may not equal the sums of columns or rows due to rounding. Full-time-equivalent enrollments (FTE) are calculated according to the following procedure (1) undergraduate credit-hour FTE equals undergraduate credit hours divided by 15, (2) undergraduate contact-hour FTE equals undergraduate weekly contact hours divided by 30; (3) total undergraduate FTE equals the sum of undergraduate credit-hour and contact-hour FTE. (4) graduate FTE (including law students) equals graduate credit hours divided by 12

^{*} States where "--" appears in either year are not included in the regional rates

NOTES This table illustrates one method of estimating college attendance rates based on National Center for Education Statistics and U.S. Bureau of the Census data. "College" includes only two-year or four-year institutions offering an associate or higher degree. The population data upon which these rates are based include all persons residing in a state more than six months a year including college students. The enrollment counts include all students enrolled in a state, regardless of state of origin.

SOURCES U.S. Bureau of the Census, Current Population Reports, Series P-25, Nos. 1024 (1988) and 1058 (1990) (Washington, D.C. U.S. Government Printing Office), SREB analysis of National Center for Education Statistics data tapes of fall enrollments in higher education, 1987 and 1989

SOURCE National League for Nursing Nursing Data Review, 1992 (1992) (New York National League for Nursing)

Associate Degrees

The last half of the 1980s saw an increase (4 percent) in the number of associate degrees awarded in the SREB states. Arkansas, Georgia, and Oklahoma had increases of over 25 percent. There was a small decline nationally. Women earned a larger share of associate degrees—over 60 percent of the associate degrees in 11 SREB states.

Black students increased their share of the associate degrees awarded in the SREB states to 12 percent. Nationally, the number of degrees and share declined. Hispanic students received 6 percent of the associate degrees in the region.

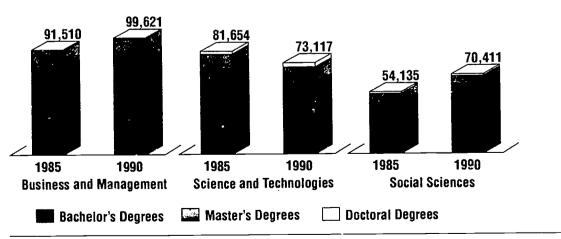

Bachelor's Degrees

Over one million bachelor's degrees are awarded annually in the United States—7 percent more (8 percent in the region) in 1990 than in the mid-1980s. Women earned over 54 percent of bachelor's degrees awarded in the region at the decade's end.

More black students received bachelor's degrees in 1990 than in the mid-1980s nationally and in nine SREB states. However, the share of bachelor's degrees earned by black students has remained essentially unchanged at 10 percent. Forty-six percent of these bachelor's degrees were in predominantly and historically black colleges and universities—down from nearly 50 percent in the mid-1980s.

Fewer bachelor's degrees in the sciences and technologies and in allied health and health sciences were awarded in the late 1980s, reversing years of growth. Degrees in business and management continued to increase, and account for over 26 percent of the bachelor's degrees in the region.

Trends in Degrees Conferred 1984-85 to 1989-90

SOURCE National Center for Education Statistics

Bachelor's degrees in humanities (23 percent), social and behavioral sciences (33 percent), and education (16 percent) reversed long-standing trends and rose in the region from the mid- to late 1980s. For the first time since the early 1980s, over 100,000 bachelor's degrees in education were awarded nationwide.

Master's Degrees

The number of master's degrees continued to grow across the nation in the late 1980s. The growth rate in the SREB region (15 percent) was just below the national growth rate. Women's share of master's degrees continues to rise. Women receive over 55 percent of the master's degrees in the SREB region–53 percent nationally.

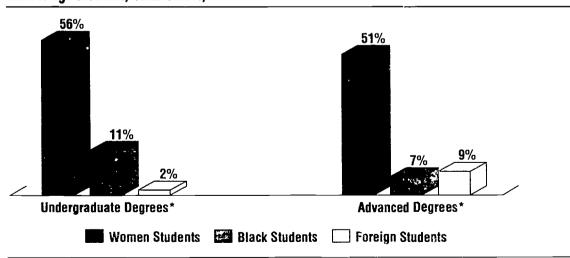

Nationally and regionally, almost 8 percent more black students earned master's degrees in the last half of the 1980s. Increases were reported in eight SREB states. Black students receive 7 percent of the region's master's degrees and nearly 5 percent of those awarded in the United States. These proportions are down from where they were in the mid-1980s. At that time black students received closer to 8 percent of the region's master's degrees.

Master's degrees in humanities, social and behavioral sciences, and education increased in the last half of the 1980s, after declines that began in the late 1970s. Education remains the largest field of study for master's degrees by a significant margin—with over 33 percent of the total in the region.

Doctoral Degrees

More doctoral degrees were awarded in the last half of the 1980s-just over 15 percent more nationally and almost 22 percent more in the SREB region. Women receive a greater share of the doctoral degrees in the SREB states (almost 38 percent) than they do nationwide.

Percent of Degrees Awarded to Women Students, Black Students, and Foreign Students, SREB States, 1989-90

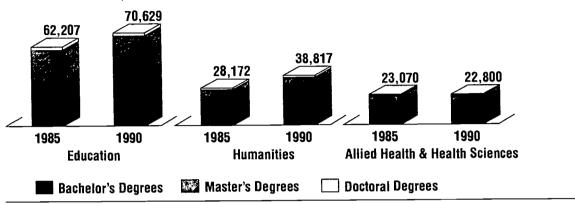

^{*} Undergraduate degrees include associate and bachelor's degrees. Advanced degrees include master's education specialist, doctoral, and professional degrees such as law medicine, and dentistry.

SOURCE National Center for Education Statistics

Trends in Degrees Conferred 1984-85 to 1989-90

SOURCE, National Center for Education Statistics

Fewer black students nationwide (5 percent) received doctorates in 1990 (when 1,100 doctorates were awarded) than in the mid-1980s. The number awarded in the SREB region grew almost 19 percent to over 400, accounting for almost 40 percent of the nation's total.

Foreign nationals receive almost 25 percent of the doctoral degrees earned in the United States; the figure is slightly less in the SREB region—20 percent. In some fields, for example engineering, over half of the doctoral degrees go to foreign nationals. Almost twice as many doctorates were earned by foreign nationals in the region than were earned by black students nationwide.

Doctorates in the humanities and in the social and behavioral sciences rose in the late 1980s, in contrast to the declines early in the decade. Although doctoral degrees awarded in education continued to decline nationwide, there was a 9 percent increase in the SREB region.

Business and management, sciences and technologies, and allied health and health sciences doctorates increased at the fastest pace in the late-1980s, both nationally and regionally, but still make up small shares of total doctoral degrees.

First Professional Degrees

Law, medicine, and other first professional degrees fell almost 6 percent nationally and regionally from the mid- to late 1980s, reversing a long-term trend. Women receive just over 38 percent of first professional degrees nationally and almost 37 percent regionally.

More black students received first professional degrees in the last half of the 1980s-10 percent more nationally and 9 percent more regionally.

TUITION AND STUDENT FINANCIAL AID

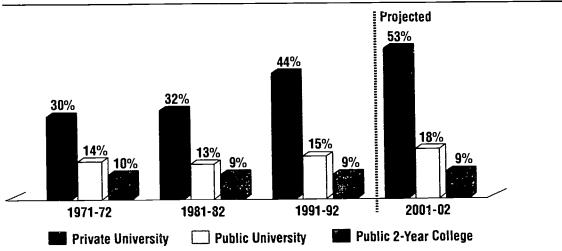

Costs of Attending College

Tuition and Fees: Undergraduate students who attend public doctoral universities full-time in their home SREB state are charged, on average, over \$1,700 a year for tuition and required fees. Students attending public two-year colleges in the region are charged, on average, less than \$800.

In public universities, tuition and fees account for almost 40 percent of the total annual cost, which includes tuition, required fees, housing, meals, and other expenses. In public two-year colleges, tuition and fees are almost 25 percent; in private universities, almost 70 percent.

Comparisons Over 20 Years: In the last two decades, the annual cost of attending the average private university has risen from the equivalent of 30 percent of median family income to 44 percent. Over the same period, public university costs rose from 14 percent to 15 percent; public two-year college costs fell, from 10 percent of median family income to 9 percent. (Adjusted for inflation, median family income rose 7 percent, public university costs rose 15 percent, public two-year college costs rose 3 percent, and private university costs rose 56 percent.)

Cost* of Attending One Year of College as a Percent of Median Family Income

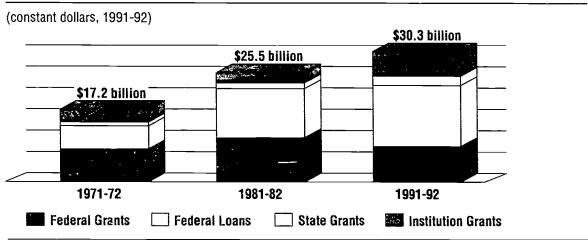

^{*} Cost includes fullion, required fees, room, and board. Projections use the following annual increase assumptions median family income (5%) private university (7.5%) public university (7%), and public two-year college (5%)

SOURCES National Center for Education Statistics, U.S. Bureau of Labor Statistics

Student Aid Dollars, United States

SOURCE The College Board

If these trends continue, it is likely that 10 years from now one year's attendance at a private university will consume the equivalent of 53 percent of the median family income; at a public university, 18 percent; and at a public two-year college, will remain 9 percent.

Student Financial Aid

Over \$30 billion in student financial aid was available in the United States in 1991-92; three-fourths of it came through federally sponsored programs.

The dramatic shift from grants to loans for student financial aid continues. In the early 1970s, loans accounted for just over 30 percent of student aid; by the early 1990s, almost half involved loans.

Adjusted for inflation, the total funds for student aid have risen 76 percent in the last 20 years—aid through federally sponsored loan programs rose 171 percent; state grant aid rose 114 percent; grants institutions award from their own budgets rose 89 percent. Funds for federal grants remain at the same level as 20 years ago.

At the same time, the number of students receiving financial aid has increased. In the last 10 years, the number of Pell Grant recipients increased 49 percent and 23 percent more students were taking out loans in the largest guaranteed student loan program (Stafford Loans).

State Scholarships and Grants: Over \$576 million in state scholarships and grants were available in 1991-92 to students in the SREB states. In the five previous years, state student aid in the region grew 116 percent, two and one-half times the national rate of increase.

Most state scholarships and grants are awarded on the basis of student need; nationally, 83 percent are awarded on that basis, in the region 52 percent.

Federal Pell Grants: More than \$1.8 billion annually in Pell Grant need-based student financial aid was awarded to over 1.2 million students in the SREB states in the early 1990s.

Since 1984-85, total Pell Grant funds have risen just over 124 percent in the SREB region, compared to almost 90 percent nationally. The number of recipients grew almost 47 percent regionally and nearly 25 percent nationwide.

Almost two-thirds of the Pell Grant funds in the SREB region went to students attending public colleges and universities. Those attending private (non-profit) colleges and universities received almost 13 percent, and those attending proprietary (for-profit) institutions received almost 22 percent of these funds.

Federal "Campus-Based" Student Aid: Over \$530 million annually went to students in the SREB states in the early 1990s through the federal College Work Study, Supplemental Educational Opportunity Grant, and the Perkins Loan programs.

Fewer students in the early 1990s received aid through the College Work Study and Perkins Loan programs than in the mid-1980s.

Guaranteed Student Loans: Guaranteed student loan programs use capital supplied primarily by private lenders. The loans are guaranteed by individual state or private non-profit guarantee agencies and are reinsured by the federal government.

Over \$2.5 billion annually was loaned recently to students in the SREB region. The national total was nearly \$13.5 billion a year.

The amount loaned through Stafford Loans has grown over 49 percent in the SREB region since 1985-86. The number of students receiving Stafford Loans grew over 34 percent. Nationally, the increase in loans was almost 62 percent, and the number of recipients grew almost 40 percent.

Two newer programs, the Parent Loans for Undergraduate Students and the Supplemental Loans to Students, had grown tremendously by the early 1990s. Together, however, they provide less than one-fifth the financial aid of the Stafford program.

[&]quot;—" indicates not available. The Higher Education Assistance Foundation (HEAF) became the designated guarantor of Stafford loans for West Virginia in 1987-88. HEAF is a multi-state guarantor of student loan programs. Data are not available for individual states served by this guarantor.

^{*}Effective July 1, 1988. Guaranteed Student Loans were renamed Stafford Loans—PLUS and SLS continue to exist as separate programs. The programs use private loan capital supplied primarily by commercial lenders, but also by other lenders including state agencies and schools. These loans are guaranteed by the individual state or private nonprofit guarantee agencies and reinsured by the federal government. Under the Higher Education Amendments of 1986: (1) all Stafford loan applicants were required to show need—formerly only those with adjusted gross family incomes of \$30,000 a year or higher were subject to needs analysis. (2) eligibility for the PLUS program was confined exclusively to parent borrowers of dependent students, and (3) a new program. SLS, was established which allows independent students to participate.

SREB continuously monitors the availability of new comparative data and publishes the SREB Fact Book Bulletin containing updated or expanded information. SREB is also introducing an on-line data center where individuals can download by computer modem complete data bases containing additional detail and the most up-to-date Fact Book information.

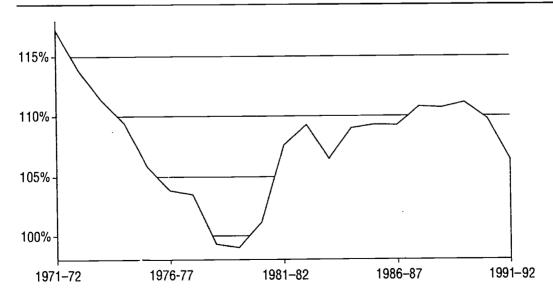

Faculty Salaries

Public Four-Year Colleges and Universities: In 1991-92, salaries of full-time teaching faculty in public four-year colleges and universities were 2 percent above the previous year, the lowest one-year increase in 20 years. Nationwide, the increase was over 3 percent. Only Arkansas, Kentucky, and Louisiana had salary increases above the national rate.

The decline in the growth of regional salaries in the past 10 years reverses the progress SREB states had made toward reaching the national average. The regional average-now over 92 percent of the national average-is below where it stood in 1980. (SREB states reached 94 percent in 1989-90.)

When adjusted for inflation, the average 1991-92 faculty salary of almost \$42,600 in the SREB states is over \$1,100 below the average 20 years ago. Nationally, over the same period, inflation-adjusted median family income in the U.S. (\$40,100) grew by more than \$3,000. The average faculty salary now stands at 106 percent of the U.S. median family income compared to 117 percent in the early 1970s.

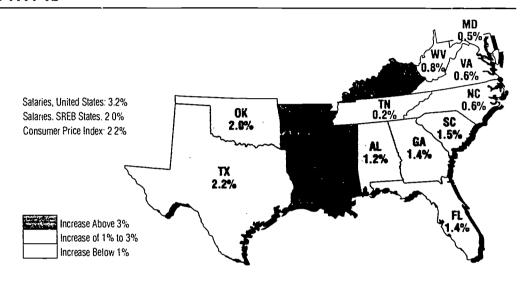

Average Faculty Salaries in Public Four-Year Colleges in SREB States as a Percent of U.S. Median Family Income

SOURCES SREB-State Data Exchange, U.S. Bureau of Labor Statistics

Percent Increase in Average Salaries of Full-Time Instructional Faculty Public Four-Year Colleges and Universities 1990-91 to 1991-92

SOURCES: SREB-State Data Exchange; American Association of University Professors, U.S. Bureau of Labor Statistics

Salaries vary among the different types of four-year colleges and universities. At universities granting doctoral degrees the SREB average of just over \$45,100 is almost \$3,100 below the national average. In colleges and universities granting master's degrees, the average of just over \$38,000 is almost \$4,700 below the national average. In colleges and universities awarding the bachelor's as highest degree, the average of almost \$34,400 is more than \$1,800 below the national average. During the 1980s, the gap between average salaries at doctoral universities and those at master's and baccalaureate institutions widened.

Teaching field and faculty rank also affect salaries. Average salaries for business and management faculty are the highest, followed by sciences and technologies, social and behavioral sciences, education, humanities, and nursing and allied health salaries, in that order.

Assistant professors and instructors in the SREB states tend to have salaries closer to the national average than faculty who are professors and associate professors.

Public Two-Year Colleges: Among public two-year colleges the one-year salary increase (less than 2 percent) raised faculty salaries to just over \$32,000 in 1991-92. The nationwide increase was just under 5 percent. The regional average is now more than \$6,300 below the national average.

During the 1980s, the gap between the SREB salary average in four-year colleges and in two-year colleges widened. Two-year college salaries now stand at 75 percent of four-year college average salaries, compared to 81 percent at the beginning of the decade.

Faculty

There are almost 100,400 full-time faculty in public colleges and universities in the SREB states.

Public Four-Year Colleges and Universities: Three-fourths of full-time faculty in SREB states are at four-year institutions, and seven of 10 are in universities awarding doctoral degrees.

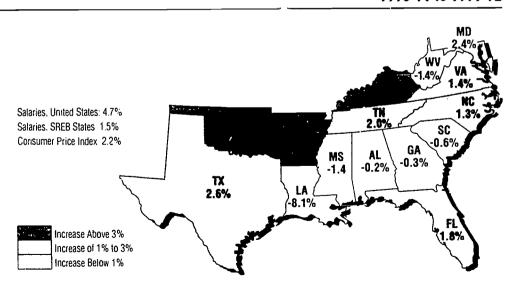

Over 70 percent of the faculty members are men. The percentage of women faculty in most SREB states exceeds the national average, but women are less than one-third of the full-time faculty in all but one SREB state (Louisiana).

Just over 7 percent of the region's faculty are black (over 60 percent at predominantly or historically black colleges and universities), and almost 2 percent are Hispanic. Mississippi has the highest percentage of black faculty—just under 16 percent. Asian and Native American faculty constitute nearly 5 percent of the faculty in the region.

From 20 to nearly 40 percent of the faculty are in sciences or technologies. About 20 percent are in humanities; over 16 percent, in social or behavioral sciences; about 11 percent are in education; and about 10 percent are in business and management.

Doctoral-granting universities have a heavier concentration of sciences and technologies faculty, while master's colleges and universities have a higher concentration of humanities and education faculty.

Percent Change in Average Salaries of Full-Time Instructional Faculty Public Two-Year Colleges 1990-91 to 1991-92

NOTES: Average faculty salaries can decline even when faculty are given raises. It nigher paid faculty retire or leave and are replaced by lower paid faculty, or if positions remain unfilled, the average salary can decline. In Louisiana a large allied health program was taken over by a two-year college between 1990-91 and 1991-92. Faculty in this program were not included in previous data.

Publi: Two-Year Colleges: Higher percentages of women and minorities are faculty in public two-year colleges. Nearly half are women.

Nearly 9 percent of the faculty are black, and over 3 percent are Hispanic. Louisiana has the highest percentage of black faculty—almost 23 percent.

Administrators in Public Four-Year Colleges and Universities

There are almost 19,600 full-time administrators in public four-year colleges and universities in the SREB states.

Two-thirds of these administrators are men. In Texas, almost 40 percent are women.

Almost 11 percent of full-time administrators are black (half are at predominantly or historically black colleges and universities), and close to 2 percent are Hispanic. Blacks account for almost 23 percent of the administrators in Mississippi.

Administrative Salaries in Public Four-Year Colleges and Universities

The 1991-92 average salaries of chief executive officers at public four-year colleges and universities in the SREB states are 1 percent above national averages. Chief executives at Doctoral universities had salaries averaging \$130,100. Among Master's colleges and universities, \$99,300; at Baccalaureate colleges and universities, \$89,900.

Among administrative and academic support officers, national average salaries are typically above the regional averages. Depending on the academic field, the average salaries for academic deans in the SREB region are above and below corresponding national averages.

^{† &}quot;PBI" refers to predominantly black institutions "HBI" refers to historically black institutions. Refer to Table 12 for definitions

^{††} National Center for Education Statistics data for Maryland and West Virginia were not complete at press time. Complete data will be distributed by SREB when available. The national counts in this table are greater than the sum of the doctoral, master's, and baccalaureate counts to follow because classification data were not available for some four-year colleges and universities in states outside the SREB region.

SOURCE: SREB analysis of National Center for Education Statistics preliminary 1989-90 data set based on the Equal Employment Opportunity Commission Office of Civil Rights survey

SOURCES Office of Institutional Research, Oklahoma State University, College and University Personnel Association, unpublished data, 1992

^{*} SREB classifies four-year colleges and universities into three broad categories doctoral, master's, and baccalaureate. See SREB Definitions of Institutional Categories on page 141.

NOTES. The sum of the major sub-fields (humanities, etc.) does not equal 100 percent due to rounding. The regional estimates are based on data for 96 percent of Doctoral I universities. 76 percent of Doctoral II universities, 76 percent of Doctoral II universities, 79 percent of Master's II universities, and 46 percent of Baccalaureate colleges and universities. The national estimates are based on data for 81 percent of Doctoral I universities. 73 percent of Doctoral II universities, 53 percent of Doctoral III universities, 66 percent of Master's 1 universities, 62 percent of Master's II universities; and 42 percent of Baccalaureate colleges and universities.

SREB continuously monitors the availability of new comparative data and publishes the SREB Fact Book Bulletin containing updated or expanded information. SREB is also introducing an on-line data center where individuals can download by computer modem complete data bases containing additional detail and the most up-to-date Fact Book information.

REVENUES AND EXPENDITURES

State Funding for Higher Education

State funding for colleges and universities declined nationally in the first two budget years of the 1990s—the first such declines in 40 years.

All SREB states except Arkansas, Oklahoma, and West Virginia have experienced decreased state funding for higher education in at least one of the last three years. Florida, Maryland, and Virginia have had less state funding for three consecutive years; Mississippi, North Carolina, South Carolina, and Texas for two of the last three.

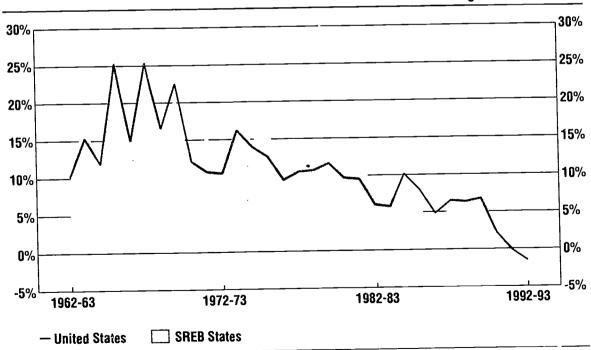

SREB states spend almost \$13.6 billion on operating expenses related to higher education and devote a larger share of state tax revenues to higher education than do states nationwide. Since the mid-1980s, however, higher education's share of state taxes in the region has fallen from 17 percent to 15 percent.

Sources of Revenue

In the 1980s, college students and their families paid a rising share of the costs of public higher education. Tuition revenues (not including tuition paid with student financial aid from states) were slightly more than 20 percent of the unrestricted revenues nationally and regionally, and are now over 25 percent.

The share of higher education funding that comes from state governments fell by over 5 percentage points in the SREB region. Each percentage point equals \$140 million.

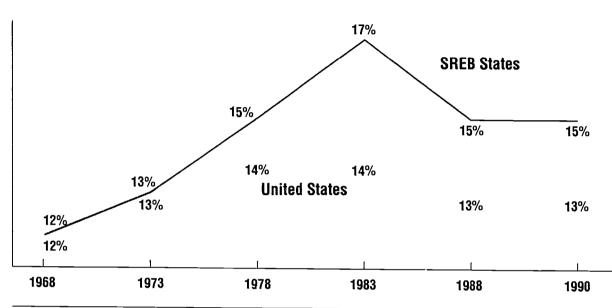

Annual Percent Change in State Tax Funds for Colleges and Universities

SOURCE Center for Higher Education, Illinois State University

Changes in State Appropriations for Colleges as a Percent of State Taxes

SOURCE: National Association of State Universities and Land-Grant Colleges and State Higher Education Executive Officers

State and Local Funds Per Student

In 1991-92 in the SREB region, the average amount of general operating funds spent per full-time-equivalent student ranged from almost \$3,200 per student in community colleges to almost \$5,200 per student in doctoral-granting universities.

Federal Funds

The federal government provides almost \$4.5 billion to public and private colleges and universities in the SREB states for student aid, research, health services, and institutional development; a ratio of \$1 for every \$3 of state funds.

The United States Department of Education and the Department of Health and Human Services account for almost two-thirds of these federal funds in the SREB region. Funds for higher education from the Department of Health and Human Services and the National Science Foundation grew faster than funding from other federal agencies in the late 1980s.

Federal support for research and development in colleges and universities in the SREB states exceeds \$2.4 billion. Twenty-eight public and private universities in the region are among the nation's top 100 recipients of federal support for research and development.

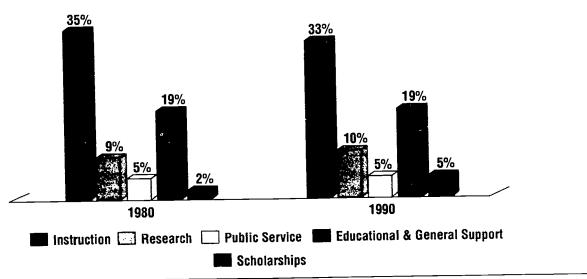

Revenues and Expenditures

Public higher education is a "billion dollar business" in 13 of the SREB states. The combined budgets of the region's public and private colleges and universities amount to nearly \$40 billion.

Over the last 10 years, total revenues for private higher education, tuition in particular, increased more than those for public higher education.

Expenses for instruction fell from 35 percent to 33 percent of public higher education budgets in the 1980s. Student financial aid provided by colleges from their own budgets increased from 2 percent to 5 percent of total expenses.

[&]quot;na" indicates not applicable. There is no institution of this type in the state

^{*} These figures represent operating appropriations of state and local tax funds for educational and general purposes including staff benefits Local tax funds are provided only to Two-Year II institutions in Maryland, Mississippi, North Carolina, Oklahoma, Texas, South Carolina, and Virginia, and to Two-Year II institutions in Georgia. Excluded are dollars appropriated for capital outlay and debt service, non-instructional community service activities, cooperative extension and experiment stations, medicine and health professions education programs including leaching hospitals and schools of veterinary medicine, statewide student financial aid programs, amounts for statewide coordinating and governing boards, and funds for private higher education institutions. Tennessee appropriations include amounts for Centers of Excellence. Centers of Emphasis. Vocational Improvements, Instruction and Research Equipment, and interest incume from the Chairs of Excellence program. The data for Texas include general revenue funds used to match employee contributions to the state retirement plans, the available "university fund" amounts used for current operations at three universities, overhead on sponsored research, and exclude "higher education assistance fund" amounts not used for current operations. In West Virginia approximately one-fourth of regular student fees (\$33 million) are dedicated by law to capital improvements. In South Carolina, a portion of furtion and fees revenues are dedicated to debt retirement. The inability to use these revenues for operating expenses, as is the case in most states, results in higher levels of state appropriations, and, to some extent, may overstate state support per student.

^{*} See SREB Definitions of Institutional Categories on page 141 Total full-time-equivalent (FTE) enrollment is the sum of undergraduale credit-hour FTE, undergraduate contact-hour FTE and graduate credit-hour FTE Undergraduate credit-hour FTE equals undergraduate credit-hours divided by 15 Undergraduate contact-hour FTE equals weekly contact hours divided by 30 Graduate FTE equals graduate credit hours (including law) divided by 12

^{*} Beginning with the 1986-87 finance survey, the amounts for gifts, grants, appropriations, research revenues, and endowment income used for hospitals, previously reported under "State Appropriations," began to be reported under "Hospitals"

NOTES: "Auxiliary Enterprises" include those essentially self-supporting operations which exist to furnish a service to students, faculty, or staff, and which charge a fee that is directly related to, although not necessarily equal to, the cost of the service. Examples are residence halls, food services, college stores, and intercollegiate athletics. Note that not all states support teaching hospitals through higher education budgets (North Carolina, for example). "All Other" includes federal appropriations (other than contracts and grants), private gitts, grants and contracts; endowment income; sales and services of educational activities, independent operations, and other sources.

SOURCES Association of Research Libraries, ARL Statistics, 1980-81 (1981), and 1990-91 (1991) (Washington, DC, Association of Research Libraries)

The purpose of this set of institutional categories is to group institutions on factors believed to be the most relevant to determining resource requirements. Differences in institutional size (numbers of degrees), role (types of degrees), breadth of program offerings (number of program areas in which degrees are granted), and comprehensiveness (distribution of degrees across program areas) are the factors upon which institutions are classified. Institutions are assigned to categories using the previous academic year's data on program completions.

Doctoral I	Institutions awarding at least 100 doctoral degrees which are distributed among at least 10 CIP** categories (two-digit classification) with no more
	among at least 10 GP Categories (two-digit classification) with no more
	than 50 percent of the degrees in any one category.

Doctoral II	Institutions awarding at least 30 doctoral degrees, which are distributed				
	among at least five CIP** categories (two-digit classification).				

Doctoral III	Institutions awarding at least one doctoral degree
Master's I	Institutions awarding at least 100 master's, education specialist, or post- master's certificates and degrees distributed among at least 10 CIP**

ast 10 CIP** master's certificates and degrees distributed among categories (two-digit classification), excluding post-baccalaureate certificates.

Institutions awarding at least one master's, education specialist, or post-

Master's II master's certificate or degree, excluding post-baccalaureate certificates.

Baccalaureate Institutions that award the baccalaureate degree as the highest degree.

Institutions awarding associate degrees and offering college transfer Two-Year I courses; some certificates and diplomas may also be awarded.

Institutions awarding vocational-technical certificates and diplomas, some Two-Year II vocational-technical associate degrees may also be awarded.

Special purpose institutions with specialized degree programs, which Specialized may include medical or health science centers and, in some instances, stand-alone law schools, fine arts schools, or engineering schools, etc.

^{*} Used in SREB State Profiles and Tables 11, 47, 56, 59-66, 69, and 70

CIP stands for the National Center for Education Statistics "Classification of Instructional Programs". This is a stundard set of definitions and code numbers for instructional programs Broad program areas are designated with two-digit codes. For example, all education program codes begin with the two digits "13," all engineering programs, with "15" Within broad areas programs are distinguished at a four-digit level (CIP *13.04* is Education Administration and Supervision) and at a six-digit level (CIP *13.0406* is Higher Education Administration)

SREB continuously monitors the availability of new comparative data and publishes the *SREB Fact Book Bulletin* containing updated or expanded information. SREB is also introducing an on-line data center where individuals can download by computer modem complete data bases containing additional detail and the most up-to-date *Fact Book* information.

STATEWIDE HIGHER EDUCATION AGENCIES

This list includes the state agency or agencies responsible for the statewide governance or coordination of higher education institutions. Included are those responsible for two-year college systems and two-year vocational-technical systems where this function is a separate or shared responsibility.

Alabama

Henry J. Hector, Executive Director Commission on Higher Education One Court Square, Suite 221 Montgomery, Alabama 36104-3584 (205) 269-2700

Fred J. Gainous, Chancellor State Department of Postsecondary Education 401 Adams Avenue Montgomery, Alabama 36130-2130 (205) 242-2900

Arkansas

Diane S. Gilleland, Director Department of Higher Education 114 East Capitol Avenue Little Rock, Arkansas 72201-3818 (501) 324-9300

Lonnie McNatt, Director Division of Vocational and Technical Education Education Building, West Little Rock, Arkansas 72201 (501) 682-4475

Florida

Charles B. Reed, Chancellor Board of Regents State University System 1514 Florida Education Center Tallahassee, Florida 32399-0400 (904) 488-4234 Clark Maxwell, Jr., Executive Director State Board of Community Colleges 1314 Florida Education Center Tallahassee, Florida 32399-0400 (904) 488-1721

William B. Proctor, Executive Director Postsecondary Education Planning Commission c/o Florida Education Center Tallahassee, Florida 32399-0400 (904) 488-7894

Betty Castor, Commissioner*
State Department of Education
Plaza Level, Room 8
The Capitol
Tallahassee, Florida 32399
(904) 487-1785

Georgia

H. Dean Propst, Chancellor Board of Regents of the University System 244 Washington Street, S.W. Atlanta, Georgia 30334 (404) 656-2200

Kenneth Breeden, Commissioner
Department of Technical and Adult
Education
Suite 660, South Tower
One CNN Center
Atlanta, Georgia 30303-2705
(404) 656-5845

Kentucky

Gary S. Cox, Executive Director Council on Higher Education 1050 U.S. 127 South, Suite 101 Frankfort, Kentucky 40601-4395 (502) 564-3553

Thomas C. Boysen, Commissioner*
Department of Education
Capitol Plaza Tower
Frankfort, Kentucky 40601
(502) 564-4770

Louisiana

Sammie W. Cosper, Commissioner Board of Regents 150 Riverside Mall, Suite 129 Baton Rouge, Louisiana 70801-1389 (504) 342-4253

Raymond G. Arveson, Superintendent* Department of Education P.O. Box 94064
Baton Rouge, Louisiana 70804-9064 (504) 342-3602

Maryland

Shaila R. Aery, Secretary Higher Education Commission 16 Francis Street Annapolis, Maryland 21401 (410) 974-2971

Mississippi

W. Ray Cleere, Commissioner
Board of Trustees of State Institutions of Higher Learning
3825 Ridgewood Road
Jackson, Mississippi 39211-6453
(601) 982-6611 Olon E. Ray, Executive Director State Board for Community and Junior Colleges 3825 Ridgewood Road Jackson, Mississippi 39211-6453 (601) 982-6518

North Carolina

C.D. Spangler, Jr., President University of North Carolina General Administration P.O. Box 2668 Chapel Hill, North Carolina 27515-2688 (919) 962-6981

Robert W. Scott, State President State Board of Community Colleges 200 W. Jones Street Raleigh, North Carolina 27603-1337 (919) 733-7051

Oklahoma

Hans Brisch, Chancellor State Regents for Higher Education 500 Education Building State Capitol Complex Oklahoma City, Oklahoma 73105-4503 (405) 524-9100

South Carolina

Fred R. Sheheen, Commissioner Commission on Higher Education 1333 Main Street, Suite 300 Columbia, South Carolina 29201 (803) 253-6260

James R. Morris, Jr., Executive Director State Board of Technical and Comprehensive Education 111 Executive Center Drive Columbia, South Carolina 29210 (803) 758-6919

Tennessee

Arliss L. Roaden, Executive Director Higher Education Commission Suite 1900, Parkway Towers 404 James Robertson Parkway Nashville, Tennessee 37219-5380 (615) 741-3605

Otis Floyd, Chancellor State University and Community College System 1415 Murfreesboro Road Nashville, Tennessee 37217 (615) 366-4400

Texas

Kenneth H. Ashworth, Commissioner Higher Education Coordinating Board P.O. Box 12788, Capitol Station Austin, Texas 78711-1278 (512) 483-6101

Virginia

Gordon K. Davies, Director State Council of Higher Education James Monroe Building i01 North Fourteenth Street Richmond, Virginia 23219 (804) 225-2600 Arnold R. Oliver, Chancellor State Community College System James Monroe Building 101 North Fourteenth Street Richmond, Virginia 23219 (804) 225-2118

West Virginia

Charles W. Manning, Chancellor University of West Virginia System 1018 Kanawha Boulevard East, Suite 700 Charleston, West Virginia 25301 (304) 558-0267

Paul Marion, Chancellor State College System of West Virginia 1018 Kanawha Boulevard East, Suite 700 Charleston, West Virginia 25301 (304) 558-0699

^{*}These individuals are heads of agencies with responsibility for postsecondary vocational-technical institutions as well as for elementary and secondary education

Conunuing a tradition dating back to the late 1950s, the *SREB Fact Book on Higher Education*. 1992 provides comparative national and regional data highlighting significant trends affecting colleges and universities in each of the 15 SREB states.

Using the latest information from JREB's extensive data bases, it contains detailed national and state profiles on demographics, elementary and secondary education, government revenues and expenditures, college enrollments, student characteristics, degrees granted, tuition and fees, student financial aid, faculty salaries, and college and university revenues and expenditures.

Expanded in 1992 to 80 tables, the new edition contains, for the first time, data on the numbers and types of faculty and administrators at public colleges and universities.
