ABSTRACT

This report provides the most detailed state-level financial information in a decade as it presents revenues and expenditures for public elementary and secondary schools for the 1989-90 school year from the U.S. Department of Education's National Center for Education Statistics (NCES). The statistics are based on data provided by state education agencies from their administrative records through the expanded "National Public Education Financial Survey." The survey is one component of the Common Core of Data (CCD) surveys conducted annually by NCES, which provide basic descriptive information about the numbers of students and staff and the financing of public elementary and secondary schools. Contents of this report include information on public elementary-secondary education expenditures, total and current expenditures, core educational expenditures, and instruction-related and noninstruction-related expenditures. For the first time in over a decade, NCES reports on local school district facilities acquisition and construction. Seven figures, 45 tables, and definitions are included. (LMI)

Highlights

The findings in these highlights were drawn from reports by state education agencies of their revenues and expenditures for public elementary/secondary education in the 1989-90 school year (fiscal year 1990). These figures are reported annually to NCES in the National Public Education Financial Survey.

- In 1989-90, state aid for school districts composed 47.2 percent of school district revenues for public elementary and secondary schools. Local support constituted 46.2 percent of the revenues for public elementary and secondary school districts, intermediate aid comprised 0.4 percent and federal aid consisted of 6.1 percent (Figure 1 and Table 5).
- For local support, the property tax remained the overwhelming source of funds, composing 63.4 percent of all local revenues. This percentage understates revenue derived from the property tax, as parent government contributions include both property tax and non-property tax revenues in unknown combination. Parent government contributions collected by other local governments (counties, cities) for school districts comprised 20.7 percent of all local revenues (Figure 2 and Table 9).
- Of total revenue for elementary and secondary education, the share provided by states varied widely. Excluding Hawaii and the District of Columbia, New Mexico provided the most state support for public elementary and secondary education, almost three-quarters of school districts' total revenue. The states of California, Delaware, Kentucky, North Carolina, Washington and West Virginia provide approximately two-thirds of the school districts' revenue. At the opposite extreme, the state of New Hampshire provided less than one-tenth of total revenue for school districts. Nebraska, Michigan, Oregon, and South Dakota similarly provided about one-fourth of the total support for their public schools (Figure 6 and Table 5).
- Instruction still consumes the largest percentage of all categories of current expenditures, 58.2 percent, with the next largest category, operations and maintenance, constituting 10.6 percent (Figure 3 and Table 12).
- When current expenditure categories are combined, 66.4 percent of the expenditures are for instructionally-related expenditures, 30.1 percent are for non-instructionally-related expenditures, and 3.6 percent are for direct program support expenditures (Figure 3 and Table 12).

- Similarly, if total current expenditures are examined by object (salaries, employee benefits, purchased services, supplies), then salaries account for 64.2 percent of current expenditures for public elementary and secondary education. Employee benefits constitute 15.9 percent, and purchased services 8.1 percent. Supplies comprise 5.3 percent (Figure 4 and Tables 21, 24, 27, and 30).
- The U.S. average current expenditure in 1989-90 was \$4,622 per pupil in membership. The District of Columbia had the highest current expenditure at \$7,827, while Utah spent the least, \$2,545 per pupil (Figure 5 and Table 2).
- School administration comprised 5.6 percent, and general administration 2.8 percent of current expenditures (Figure 3 and Table 18).

Foreword

This publication of 1989-90 school year (fiscal year 1990) data is the first to come from the extensive efforts by NCES to redesign its school finance data collection to provide greater financial detail regarding state-level public education revenues and expenditures. E.D. Tabs such as this publication are NCES' means for introducing the findings of a survey in a simple, tabular format. Extensive efforts have been made to make the reporting detail as comparable as possible across differing state accounting systems. State differences from the NCES reporting standard are documented where possible, and national totals have been imputed in all cases in which data were missing for one or more states. Where states combined reported items, NCES distributed the reported amount, and footnoted the actual reported value.

With this publication, NCES also has reinstated the concept of a "core educational expenditure" that comparably presents state educational expenditures for instruction and instruction-related activities, while relegating other expenditures to a non-instructional category.

The majority of the text was written by William Fowler, of NCES. Frank Johnson, of NCES, developed the methodology of allocations and imputations for missing fiscal data. The tables were reviewed by Gary Hoachlander of MPR Associates, Inc. Jason Matlof of MPR Associates, Inc. constructed the tables and graphics that appear in the main text of this publication. Bill O'Leary of the Bureau of the Census edited and error-checked fiscal data.

Acknowledgements

The authors gratefully acknowledge the comments and suggestions of the reviewers: Nancy Protheroe, Education Research Service; Howard Nelson, American Federation of Teachers; and Thomas Smith and Kristin Keough of the National Center for Education Statistics (NCES). In any complex publication, there are a multitude of people without whose help the publication would not have been possible. We give thanks to Mary Rochon, NCES, for keeping track of the state submissions and her earlier work on summary fiscal tabulations; and Marilyn McMillen and Bob Burton of NCES for their technical review of this report. The authors also acknowledge the contributions of Carol L. Rohr of Pinkerton Computer Consultants, Inc. to the graphics in the appendices.

Public School Education Financing for School Year 1989-90

Introduction

This report presents the most detailed state-level financial information in a decade as it presents revenues and expenditures for public elementary and secondary schools for the 1989-90 school year from the U.S. Department of Education's National Center for Education Statistics (NCES). The statistics are based on data provided by state education agencies (SEAs) from their administrative records through the expanded National Public Education Financial Survey. The survey is one component of the Common Core of Data (CCD) surveys conducted annually by NCES, which provide basic descriptive information regarding the numbers of students and staff and the financing of public elementary and secondary schools.

Contents of this report. The financial statistics reported here are for grades pre-kindergarten through grade 12.¹ Unless especially noted, expenditures are only for the operation of public elementary and secondary school districts. This excludes a myriad of expenditures that are peripheral to the operation of public schools, but are not perceived to contribute to their basic function of educating appropriate-age students. Two accounting terms occasionally appear that may not be clear to the general public: function; and object. In accounting parlance, functions describe the activity for which a service is acquired (instruction; student and staff support services; noninstruction). The object is the service or commodity bought (salaries; employee benefits; purchased services; supplies; equipment). Functions and objects may be combined to describe a particular expenditure, for example, instructional salaries. Sub-functions are subdivisions of a function; for example, school administration is a sub-function of student and staff support services.

Public elementary-secondary education expenditures in this publication are current expenditures for pre-kindergarten through grade 12 for regular elementary/secondary programs, special education and vocational education, and summer school (even when students pay tuition to attend), as well as expenditures for student and staff breakfast and lunches, cocurricular and extracurricular activities and athletics. Current expenditures are those for the day-to-day operation of the school.

Total public elementary-secondary education expenditures include both current expenditures and long-term expenditures for equipment, facilities acquisition, and construction. Expenditures not included in these definitions are expenditures for the operation of the SEA, expenditures by local school districts for adult education or junior college instruction or funding (higher than grade 12), expenditures by Head Start providers (when programs are operated by a nonprofit agency instead of a local school

¹Throughout this report, "Pk-12" is used to include ungraded as well as graded settings.

district), community services expenditures (for example, day care, without an explicit education component), and expenditures for students attending private schools (nonpublic expenditures).

Distinguishing Between Total and Current Expenditures

Total expenditures are calculated by adding Current Expenditures and Long-Term Expenditures. Current expenditures include salaries, employee benefits, purchased services, and supplies. Long-term expenditures include capital outlays, debt service, facilities acquisition and construction services, and property expenditures (equipment).

Special note on property expenditures. Although a property item (700) appears in each expenditure category (e.g., instruction, school administration support services), property is not a component of current expenditures. For the survey's purposes, property is synonymous with machinery and equipment. For criteria to assist in making the distinction between supplies and equipment, see "Distinguishing Between Supplies and Equipment" in Financial Accounting for Local and State School Systems, 1990 (NCES, 1990).

COMPONENTS OF TOTAL EXPENDITURES (Types of Expenditures)

Current Expenditures

- Salaries
- Employee Benefits
- Purchased Services
- Supplies
- Tuition
- Other

Long-Term Expenditures

- Capital Outlays
- Debt Service
- Facilities Acquisition and Construction Services
- Property Expenditures

Programs Included in Current Expenditures and Total Expenditures

The 1990 accounting handbook notes that current expenditures include all spending for regular elementary and secondary education programs (prekindergarten through grade 12), special education, vocational education, cocurricular activities and athletics, enterprise operations, ROTC, driver education, and summer school (even when students pay tuition to attend). Programs EXCLUDED from current expenditures, but covered by total expenditures, include direct cost programs such as support for nonpublic school students, adult/continuing education, and community/junior colleges and community services programs such as school-sponsored day care centers, swimming pools, and programs for the elderly.

PROGRAMS INCLUDED IN TOTAL EXPENDITURES	
<p>Programs Included in Current Expenditures</p> <ul style="list-style-type: none">- Regular pre-k through grade 12 curricula- Special Education- Vocational Education- Cocurricular activities (clubs, athletics)- Enterprise Operations- ROTC- Driver Education- Summer School (even if tuition paid)	<p>Other Programs</p> <ul style="list-style-type: none">- Nonpublic School Programs- Adult/Continuing Education Programs- Community/Junior Colleges- Community Services Programs (day care, programs for elderly)

This publication also uses the term "core educational expenditure." Core expenditures are expenditures for instruction, student support services (health, attendance, guidance, speech), and instructional staff support services (curricular development, in-staff training, and educational media, including libraries). Excluded are school administration expenditures, general administration, business functions, operation and maintenance, student transportation, food service, enterprise, and community

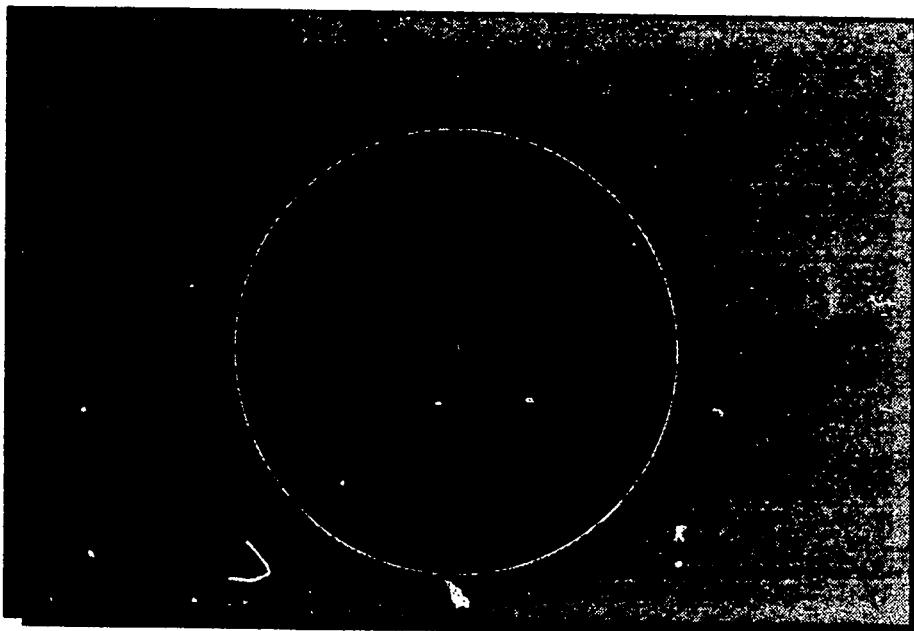

services operations. The use of the term "core" is designed to reflect the central purpose of the local education agency, which is to educate children. The distinction is arbitrary, and readers who differ with this interpretation may wish to add expenditures such as those for student transportation, food service, or school administration, if they believe these functions should be included in the central purpose of the local education agency. The publication makes explicit those expenditures excluded from the core expenditures precisely for this purpose.

Readers should note that while current expenditures include "direct support expenditures", imputations including these direct support expenditures in core expenditures were not made. Direct support expenditures are expenditures made by the state for a local school district, such as the employer's contribution to employee pension funds.

Instruction-related and noninstruction-related expenditures. Readers familiar with the Federal chart of accounts handbook, Financial Accounting for Local and State School Systems, 1990, will notice a subtle change in the tabular displays. The handbook uses the term "non-instruction" to describe only expenditures for food service, community services and enterprise expenditures (run like a private business within the local school district). This has led to confusion about the status of other expenditures related to education. As a result, expenditures have been grouped in this report into two categories in the tabular displays: "instruction-related expenditures" and "noninstruction-related." Instruction-related expenditures include expenditures for instruction (teachers and teachers' aides), student support services (attendance, guidance, speech and health), and instructional staff support services (curriculum development, in-service staff training, supervision of instruction, and educational media, including libraries). Noninstruction-related includes expenditures for school administration, central office, business office and school board administration, operations and maintenance, student transportation, food service and enterprise and other incidental support services. It is hoped that this distinction will make the tables more easily understood and useful to the public.

All readers are urged to turn to the end sections on methodology and definitions. The section on methodology explains changes in the NCES fiscal survey instrument and the effect of these changes upon state reporting practices and reporting comparability. Included is an assessment of the ability of states to respond to the new education financial survey, and the crosswalk mechanism used by NCES to achieve comparability in reporting. Imputation methodology used in this publication also appears in this section. The final section contains financial definitions used in the publication. Readers should note that for the first time in over a decade, NCES reports on local school district facilities acquisition and construction. Readers seeking further clarification of expenditure categories are urged to turn to basic definitions.

Figure 1—Percentage distribution of school revenues for public elementary and secondary schools, by source: School year 1989-90

NOTE: Percentages may not sum to 100 percent due to rounding. Intermediate revenues were combined with local revenues. Data for this figure were taken from table 5.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "National Public Education Financial Survey."

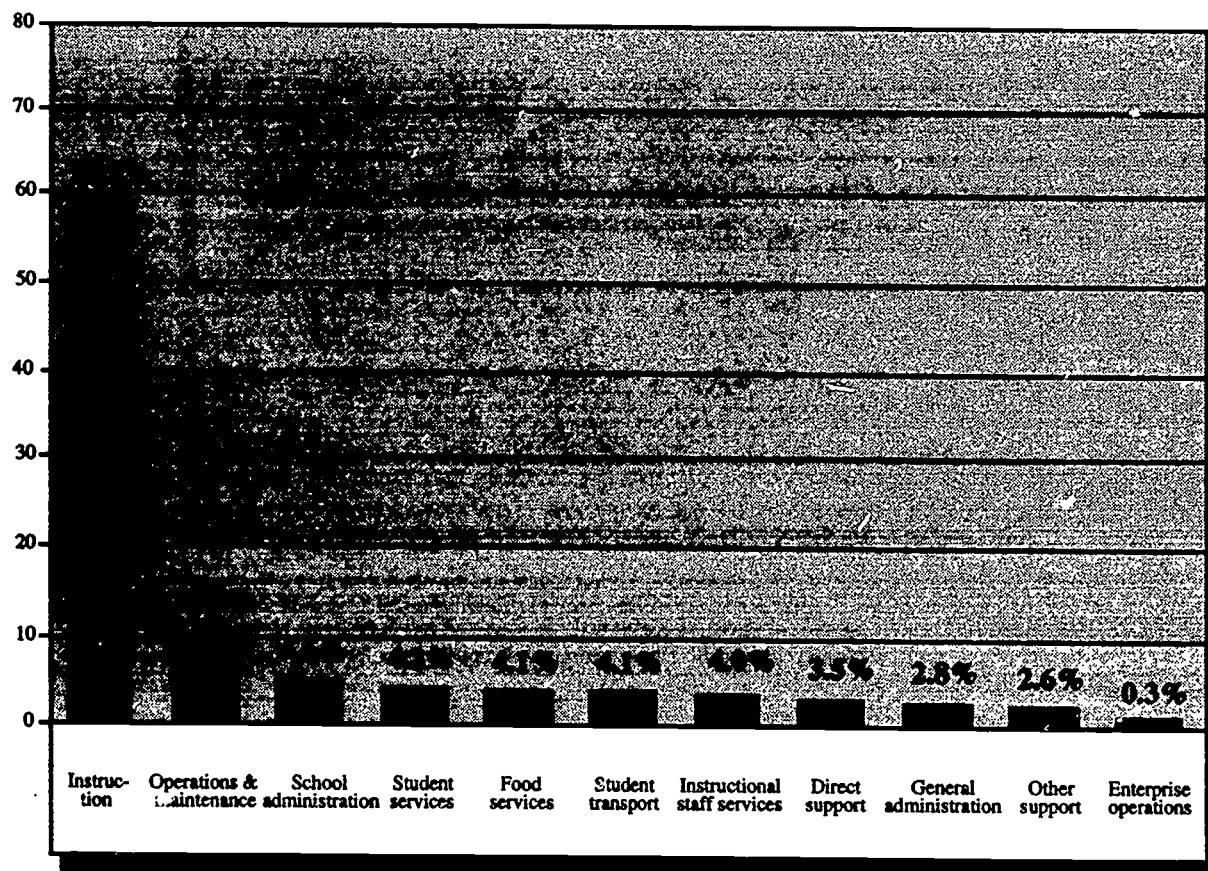

Figure 2—Percentage distribution of local revenues for public elementary and secondary schools, by source: School year 1989-90

NOTE: Percentages may not sum to 100 percent due to rounding. Parent/government contributions included both property tax and non-property tax local revenues in unknown combination. Data for this figure were taken from table 9.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "National Public Education Financial Survey."

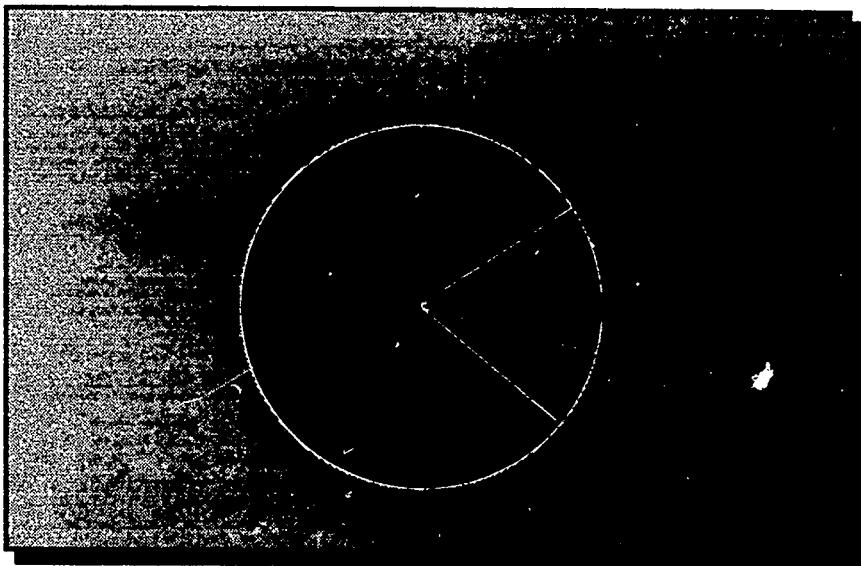

Figure 3—Percentage distribution of total current expenditures for public elementary and secondary education, by subfunction: School year 1989-90

NOTE: Percentages may not sum to 100 percent due to rounding. Other support included business office and research activities that did not appear in general administration. Percentage distribution of total current expenditures reported here may differ from a previously published report of such expenditures due to rounding. The original totals appear in table 9 of the NCES E.D. TABS publication, Public Elementary and Secondary State Aggregate Data for School Year 1990-91 and Fiscal Year 1990.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "National Public Education Financial Survey."

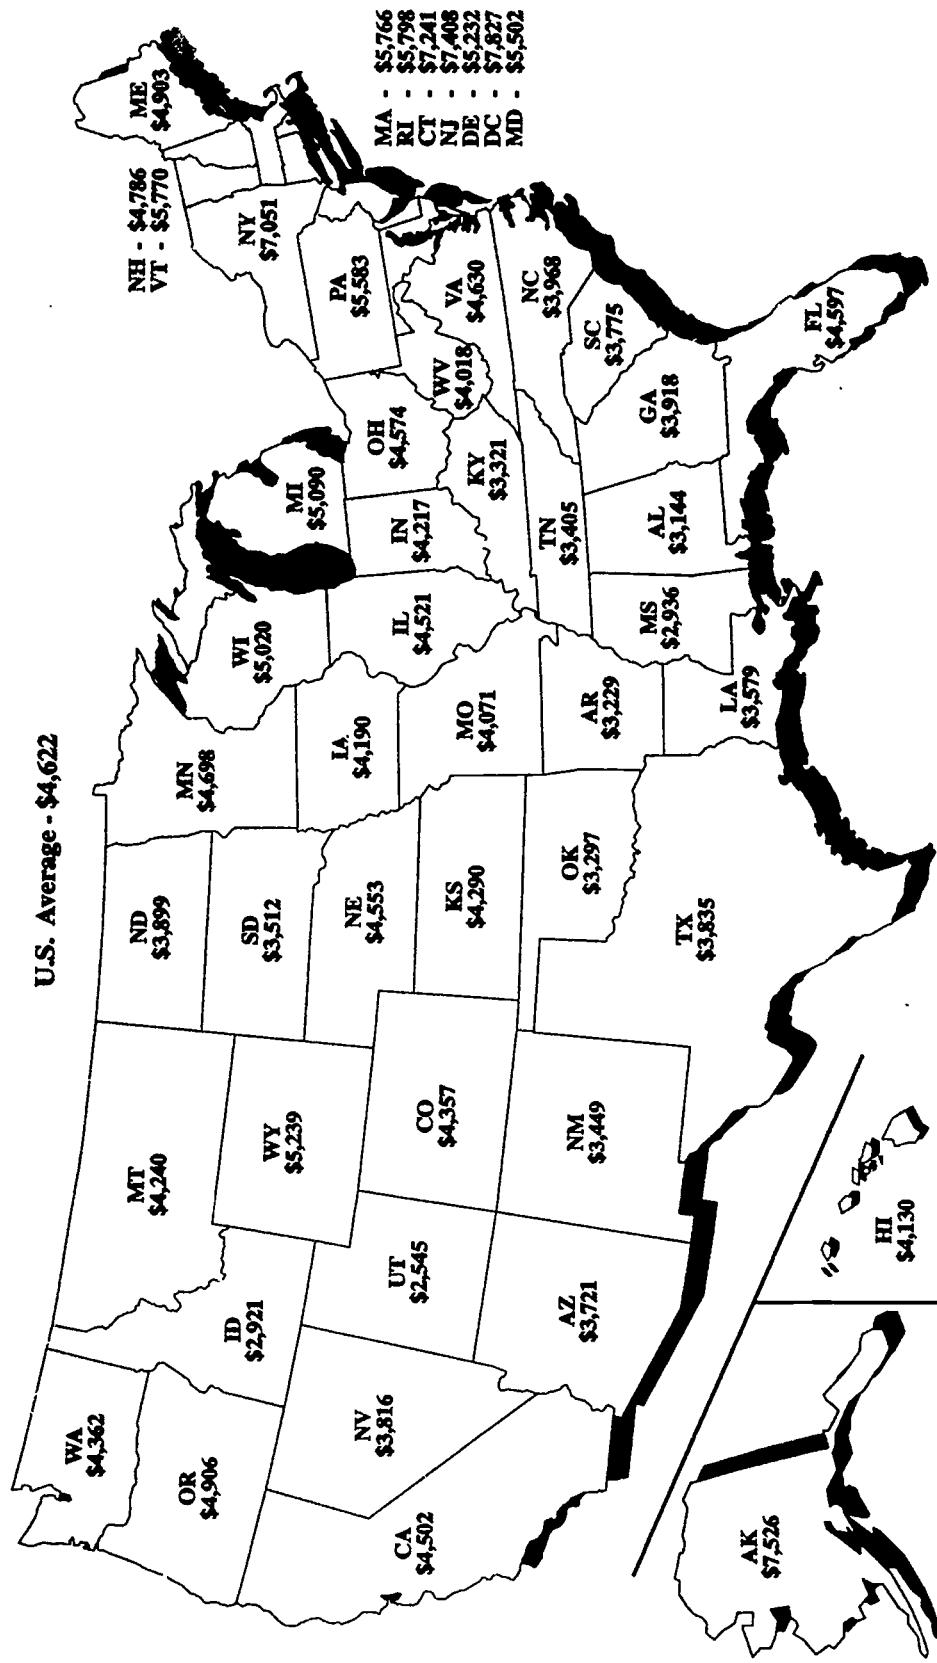

Figure 4—Percentage distribution of total current expenditures for public elementary and secondary education, by object: School year 1989-90

NOTE: Percentages may not sum to 100 due to rounding. Object detail was not available for Food service and enterprise operations or Direct program support; therefore, these types of expenditures, as well as any other miscellaneous expenses, were included within the Other category. Data for this figure were taken from tables 21, 24, 27, and 30.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "National Public Financial Survey."

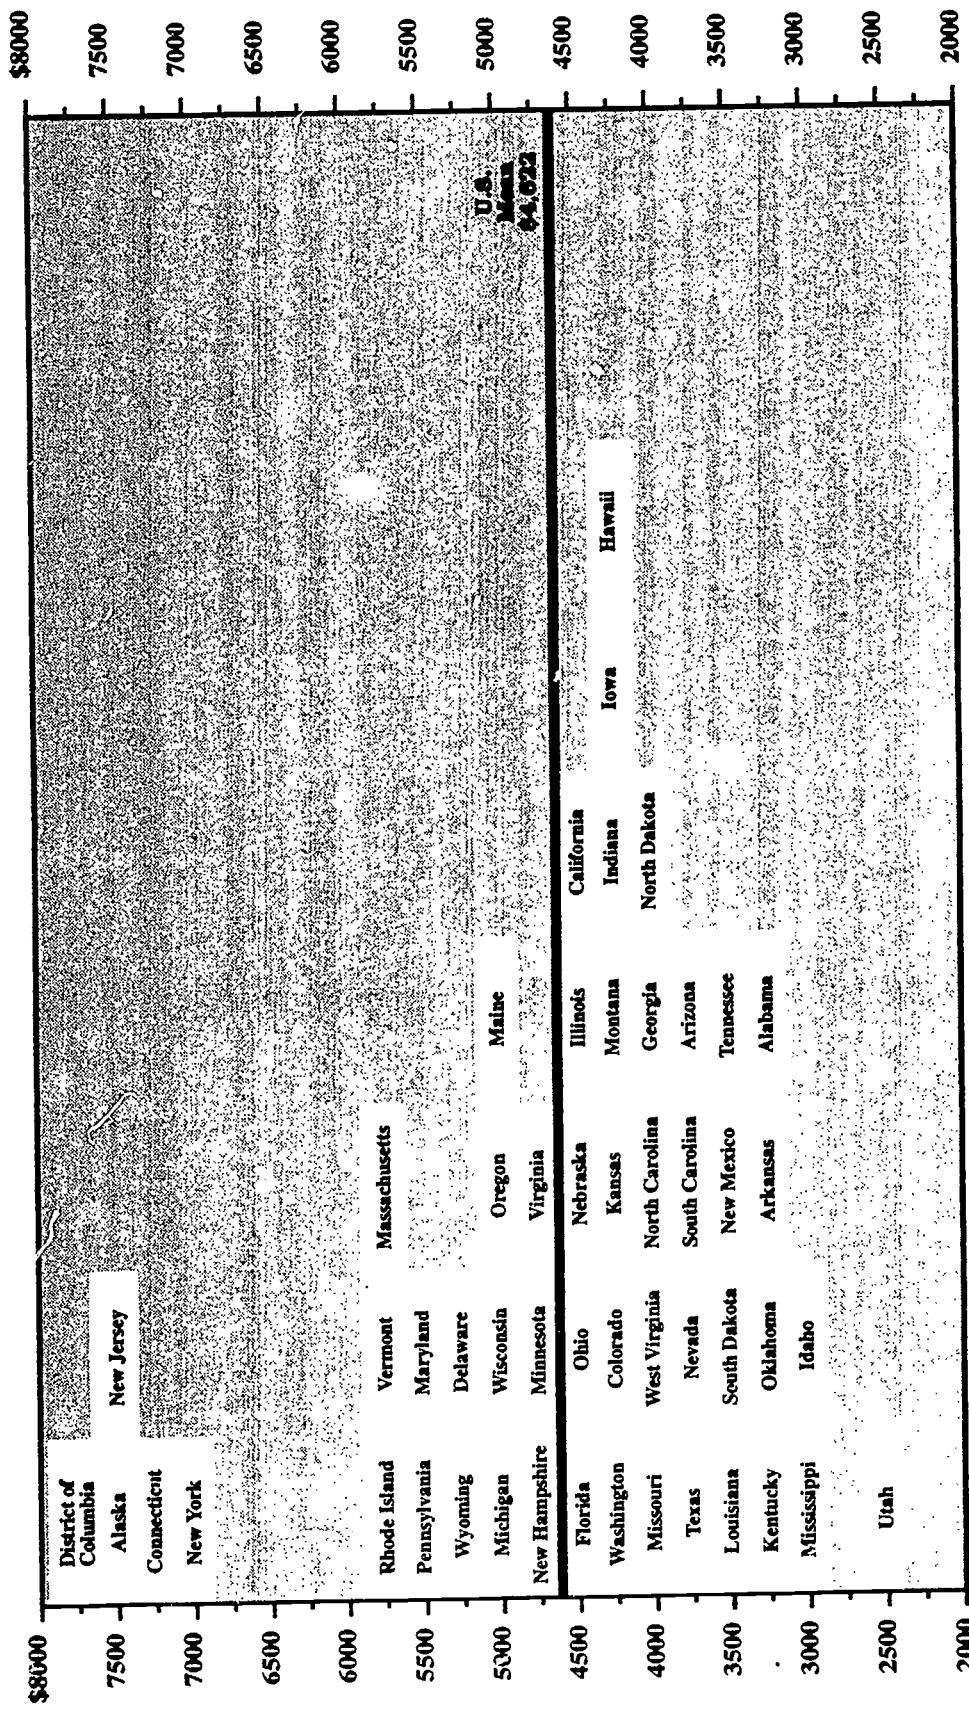

Figure 5 - Current expenditures* per pupil in membership for elementary and secondary schools, by state: School year 1989-90

*Current education expenditures consisted of core educational expenditures plus expenditures for school administration, general administration, operations and maintenance, student transportation, and other support services. Current expenditures also included food service operations, enterprise operations, and direct program support. Current expenditures did not include expenditures for community services, fixed assets, private schools, and programs for students who were not yet enrolled in grades pre-K through 12. Data for this figure were taken from table 11.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "National Public Education Financial Survey."

**Figure 6—Ranking of current expenditures* per pupil in membership for elementary and secondary schools, by state:
School year 1989–90**

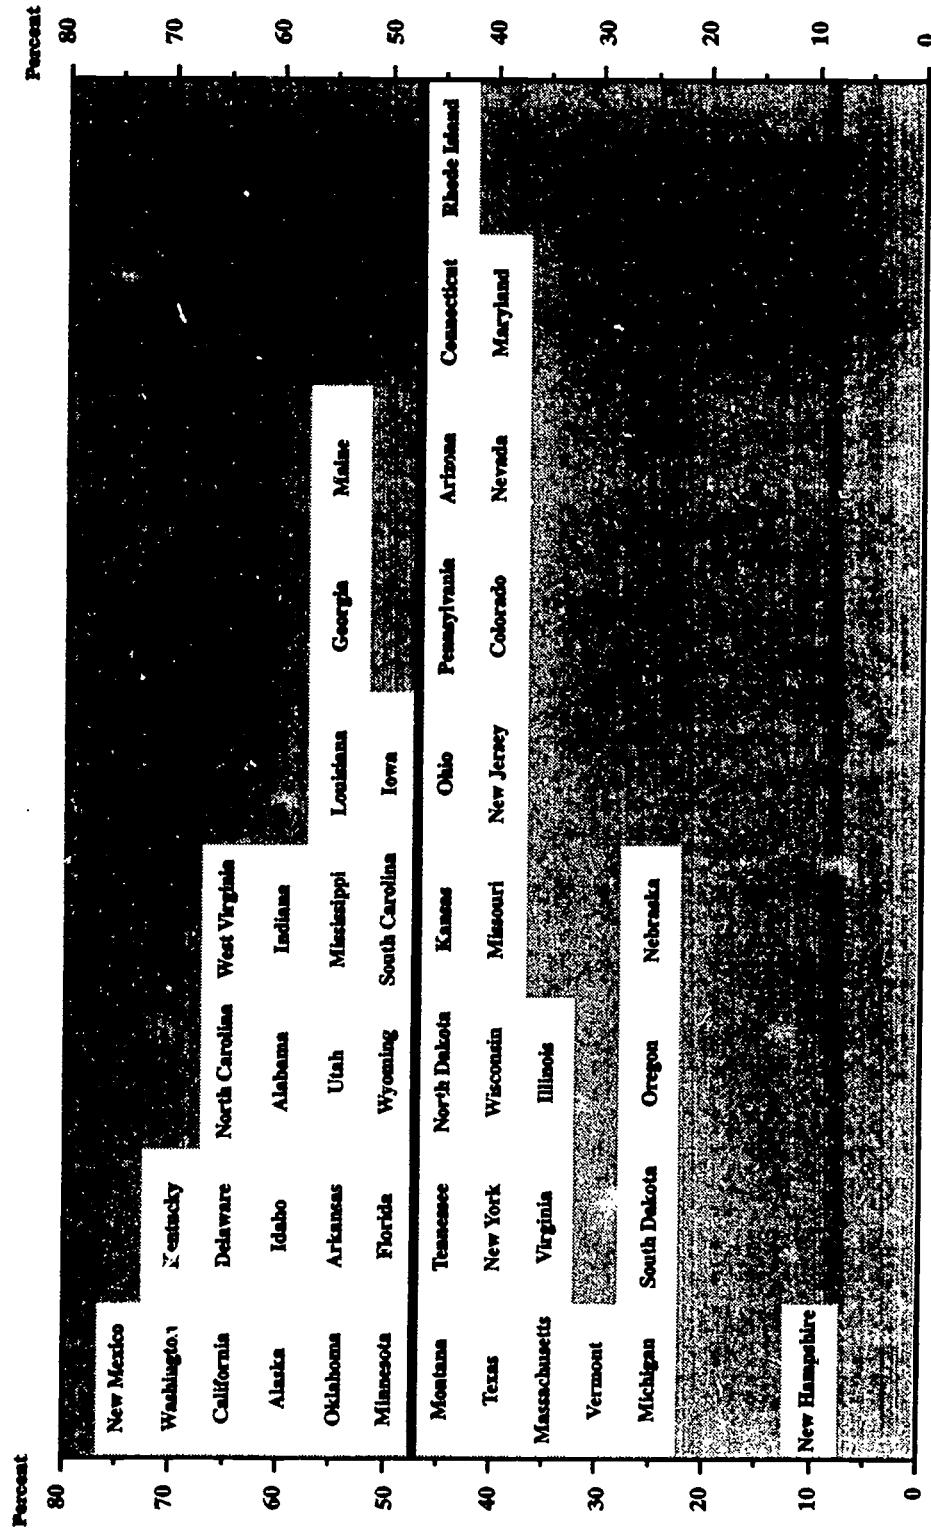

*Current education expenditures consisted of core educational expenditures plus expenditures for school administration, general administration, operations and maintenance, student transportation, and other support services. Current expenditures also included food service operations, enterprise operations, and direct program support. Current expenditures did not include expenditures for community services, fixed assets, private schools, and programs for students who were not yet enrolled in grades pre-K through 12. Data for this figure were taken from table 2.

NOTE: Dollar amounts for states and the District of Columbia were rounded to the nearest \$250.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "National Public Education Financial Survey."

Figure 7—State revenue* as a percentage of total revenue for elementary and secondary education: School year 1989–90

*Percentages for states were rounded to the nearest 5%.

NOTE: The District of Columbia, a city not located within another local government or state, did not have state revenues. Hawaii had one single state-run school district and was predominately state funded. The District of Columbia and Hawaii have been excluded from this figure to prevent distortion from the mean value. Data for this figure were taken from table 5.

a/ Total expenditures included all current expenditures plus expenditures for facilities acquisition and construction services, community services, direct cost programs, and equipment. Total expenditures did not include expenditures to reduce the principal on debts and those for programs that served age groups other than grades pre-K through 12.

The number for total education expenditures differs from a previously published estimate of total current expenditures as the result of the correction of a calculation error. The original number (\$208,037,919 thousand) appears in table 14 of the NCES E.D. Tabo publication, *Public Elementary and Secondary State Aggregate Data for School Year 1990-91 and Fiscal Year 1990*.

b/ Current education expenditures consisted of core educational expenditures plus expenditures for school administration, general administration, operations and maintenance, student transportation, and other support services. Current expenditures also included food service operations, enterprise operations, and direct program support. Current expenditures did not include expenditures for community services, fixed assets, private schools, and programs for students who were not yet enrolled in grades pre-K through 12.

c/ Core educational expenditures consisted of expenditures for instruction, student support services (attendance and health, guidance, social work, psychology, speech pathology, and audiology) and instructional staff support services (supervisors of instruction, curriculum coordinators, inservice training staff, school library staff, audiovisual staff, and staff engaged in multi-media and computer assisted instruction). Core educational expenditures did not include expenditures for direct program support.

a/ Some states either did not use intermediate state units to operate their elementary and secondary education systems or did not grant them independent revenue raising authority.

b/ The District of Columbia, a city not located within another local government or state, did not have intermediate or state revenues. After discussion with D.C. officials, D.C.'s Intermediate and State Revenues were changed from "M" (missing) to 0.

c/ Hawaii had a single state run school district for the entire state.

a/ Student fees included student tuition, student transportation fees, food service fees, student activities revenues, textbooks fees, and summer school fees.

b/ Other local revenues included earnings on investments and other revenue from local sources.

c/ Arizona reported revenues from student activities, ordinarily part of student fees, as part of parent government contributions.

d/ Denoted cases where states initially reported "M" (missing) for these variables, but after discussion with the states, agreed that "0" was the more accurate response.

e/ Connecticut reported student transportation fees, ordinarily part of student fees, as part of parent government contributions.

f/ Hawaii had one single state run school district for the entire state and was predominately state funded.

g/ Illinois reported summer school fees, ordinarily part of student fees, as part of parent government contributions.

h/ New Jersey reported student transportation fees, student activities revenues, and textbooks fees, all of which were ordinarily part of student fees, as part of parent government contributions.

i/ New Jersey had an unspecified number of dependent school districts that did not have independent tax raising authority.

New Jersey reported revenues from property tax and parent government contributions of \$4,671,417 thousand.

NCES distributed this total between property tax and parent government contributions.

j/ Oklahoma reported student activities revenues, ordinarily part of student fees, as part of parent government contributions.

k/ Tennessee's reported total for property tax and non-property tax was combined with the value for parent government contributions.

NOTE: National totals for local revenue from property tax and parent government contributions were imputed based on current year data due to the special case of New Jersey.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "National Public Education Financial Survey."

a/ Instruction-related support services included expenditures for student support services and instructional staff support services.

b/ Noninstruction-related support service expenditures included expenditures for school administration, general administration, operations and maintenance, student transportation, and other support services.

c/ Direct program support expenditures included those made on behalf of the LEA, but not classified elsewhere, such as employee benefits, and supplies such as textbooks.

NOTE: Totals reported here may differ from those reported in tables 13, 16, 34, & 37 due to rounding.

The definition used here for support service categories is different than that used in a previous NCES document; therefore, total support service expenditures reported are not equal to those previously reported. The original data is in table 8 of the

NCES E.D. Tab publication, *Public Elementary and Secondary Aggregate Data for School Year 1990-91 and Fiscal Year 1990*.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "National Public Education Financial Survey."

a/ Instruction-related support services included expenditures for student support services and instructional staff support services.

b/ Noninstruction-related support service expenditures included expenditures for school administration, general administration, operations and maintenance, student transportation, and other support services.

c/ Direct program support expenditures included those made on the behalf of the LEA, but not classified elsewhere, such as employee benefits, and supplies such as textbooks.

NOTE: Totals reported here may differ from those reported in tables 14, 17, 35, & 38 due to rounding.

The definition used here for support service categories is different than that used in a previous NCES document; therefore, total support service expenditures reported are not equal to those previously reported. The original data is in table 8 of the NCES E.D. Tabs publication, *Public Elementary and Secondary Aggregate Data for School Year 1990-91 and Fiscal Year 1990*.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "National Public Education Financial Survey."

a/ Student support services included staff in attendance and social work services, guidance, health, psychology, speech pathology and audiology.

b/ Instructional staff support services included supervisors of instruction (not department chairmen), curriculum coordinators and inservice training staff, school library, audiovisual and educational television staff, and staff engaged in developing computer-assisted instruction.

c/ Arizona reported expenditures of \$321,335 thousand for student support services, and "M" (missing) for instructional staff support services, school administration and other support services. After discussion with Arizona, this total was distributed among these functions. As a result, the amount of \$160,598 thousand was distributed to student support services and instructional staff services in table 13 and the amount of \$160,737 was distributed to noninstruction-related support services in table 16.

d/ Delaware had expenditures of \$346,639 thousand for instruction and instructional staff support services, but reported these as instruction.

... Data missing or not available.

NOTE: Current expenditures for instruction-related subfunctions reported here may differ from those reported in table 10 due to rounding. National totals for student support services and instructional staff support services were imputed based upon current year data due to the special case of Arizona.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "National Public Education Financial Survey".

a/ Student support services included staff in attendance and social work services, guidance, health, psychology, speech pathology and audiology.

b/ Instructional staff support services included supervisors of instruction (not department chairmen), curriculum coordinators and inservice training staff, school library, audiovisual and educational television staff, and staff engaged in developing computer-assisted instruction.

c/ Arizona reported expenditures of \$321,335 thousand for student support services, and "M" (missing) for instructional staff support services, school administration and other support services. After discussion with Arizona, this total was distributed among these functions. As a result, the amount of \$160,598 thousand was distributed to student support services and instructional staff services in table 13 and the amount of \$160,737 was distributed to noninstruction-related support services in table 16.

d/ Delaware had expenditures of \$346,639 thousand for instruction and instructional staff support services, but reported these as instruction.

--- Data missing or not available.

NOTE: Percentage distribution of current expenditures for instruction-related subfunctions reported here may differ from those reported in table 12 due to rounding. National totals for student support services and instructional staff support services were imputed based upon current year data due to the special case of Arizona.

a/ Other support services included business office and research activities that did not appear in general administration.

b/ Arizona reported expenditures of \$94,518 thousand for general administration and "M" (missing) for school administration and other support services. After discussion with Arizona, this amount was distributed among these two functions. Additionally, Arizona reported expenditures of \$321,335 thousand for student support services, and "M" (missing) for instructional staff support services, school administration and other support services. After discussion with Arizona, this total was distributed among these functions. As a result, the amount of \$160,598 thousand was distributed to instruction-related subfunctions in table 13 and the amount of \$160,737 was distributed to school administration and other support services in table 16.

c/ Delaware reported expenditures of \$24,992 thousand for other support services, and "M" (missing) for general administration.

d/ After discussion with Delaware, this amount was distributed between these functions.

e/ The District of Columbia could not report noninstruction-related support services for student transportation. In the District of Columbia, public school students used public transportation, and free public school busing comparable to practices in other states was not provided except for transportation of the disabled.

f/ New Mexico reported expenditures of \$43,471 thousand for general administration, and "M" (missing) for other support services. After discussion with New Mexico, this amount was distributed between these functions.

NOTE: Current expenditures for noninstruction-related subfunctions reported here may differ from those reported in table 10 due to rounding. National totals for total noninstruction-related support services, school administration, general administration, and other support services were imputed based on current year data due to special cases in Arizona, Delaware, and New Mexico.

a/ Other support services included business office and research activities that did not appear in general administration.

b/ Arizona reported expenditures of \$94,518 thousand for general administration and "M" (missing) for school administration and other support services. After discussion with Arizona, this amount was distributed among these two functions. Additionally, Arizona reported expenditures of \$321,335 thousand for student support services, and "M" (missing) for instructional staff support services, school administration and other support services. After discussion with Arizona, this total was distributed among these functions. As a result, the amount of \$160,598 thousand was distributed to instruction-related subfunctions in table 13 and the amount of \$160,737 was distributed to school administration and other support services in table 16.

c/ Delaware reported expenditures of \$24,992 thousand for other support services, and "M" (missing) for general administration. After discussion with Delaware, this amount was distributed between these functions.

d/ The District of Columbia could not report noninstruction-related support services for student transportation. In the District of Columbia, public school students used public transportation, and free public school busing comparable to practices in other states was not provided except for transportation of the disabled.

e/ New Mexico reported expenditures of \$43,471 thousand for general administration, and "M" (missing) for other support services. After discussion with New Mexico, this amount was distributed between these functions.

NOTE: Percentage distribution of noninstruction-related expenditures as a percentage of total current expenditures reported here may differ from those reported in table 12 due to rounding. National totals for noninstruction-related support services, school administration, general administration, and other support services were imputed based on current year data due to special cases in Arizona, Delaware, and New Mexico.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "National Public Education Financial Survey."

a/ Student support services included staff in attendance and social work services, guidance, health, psychology, speech pathology, and audiology.

b/ Instructional staff support services included only supervisions of instruction (not department chairman), curriculum coordinators and inservice training staff, school library staff, audiovisual staff, educational television staff, and staff engaged in the development of computer-assisted instruction.

c/ Other support services included business office and research activities that did not appear in general administration.

d/ Alaska reported expenditures of \$21,197 thousand for instructional staff support services, \$21,197 thousand for school administration, and \$0 for student transportation and other support services. These amounts were distributed among these four functions.

e/ Arizona reported expenditures of \$247,185 thousand for salaries for student support services, instructional staff support services, school administration, and other support services. This amount was distributed among these functions.

f/ Connecticut reported expenditures of \$1,833,643 thousand for all instructional objects and expenditures of \$1,021,465 thousand for all instruction-related and noninstruction-related support service functions. NCES distributed these amounts among these functions using a raking procedure.

g/ Delaware reported expenditures of \$25,782 thousand for salaries for instructional staff support services, school administration, and general administration.

h/ The District of Columbia could not report noninstruction-related support services for student transportation. In the District of Columbia, public school students used public transportation, and free public school busing comparable to practices in other states was not provided except for transportation of the disabled.

i/ New Jersey reported expenditures of \$214,389 thousand for salaries for general administration, business and central support services, and other support services. This amount was distributed among these functions.

j/ New Mexico reported expenditures of \$22,579 thousand for salaries for general administration and other support services. This total was distributed between these functions.

NOTE: National totals for salary expenditure, instruction, student support services, instructional staff support services, school administration, general administration, operations and maintenance, student transportation, and other support services were imputed based on current year data due to special cases in Alaska, Arizona, Connecticut, Delaware, New Jersey and New Mexico.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "National Public Education Financial Survey."

a/ Student support services included staff in attendance and social work services, guidance, health, psychology, speech pathology and audiology.

b/ Instructional staff support services included only supervisors of instruction (not department chairmen), curriculum coordinators and inservice training staff, school library staff, audiovisual staff, educational television staff, and staff engaged in the development of computer-assisted instruction.

c/ Other support services included business office and research activities that did not appear in general administration.

d/ Alaska reported expenditures of \$21,197 thousand for instructional staff support services, \$21,197 thousand for school administration, and \$0 for student transportation and other support services. These amounts were distributed among these four functions.

e/ Connecticut reported expenditures of \$247,185 thousand for salaries for student support services. This amount was distributed among these four functions.

f/ Connecticut reported expenditures of \$1,833,643 thousand for all instructional objects and expenditures of \$1,021,465 thousand for all instruction-related and noninstruction-related support service functions. NCES distributed these amounts among these functions using a raking procedure.

g/ Delaware reported expenditures of \$25,782 thousand for salaries for instructional staff support services, school administration, and general administration.

h/ The District of Columbia could not report noninstruction-related support services for student transportation. In the District of Columbia, public school students used public transportation, and free public school busing comparable to practices in other states was not provided except for transportation of the disabled.

i/ New Jersey reported expenditures of \$214,389 thousand for salaries for general administration, business and central support services, and other support services.

j/ This amount was distributed among these functions.

k/ New Mexico reported expenditures of \$22,579 thousand for salaries for general administration and other support services. This total was distributed between these functions. National totals for salary expenditure, instruction, student support services, instructional staff support services, school administration, general administration, operations and maintenance, student transportation, and other support services were imputed based on current year data due to special cases in Alaska, Arizona, Connecticut, Delaware, New Jersey and New Mexico.

a/ Student support services included staff in attendance and social work services, guidance, health, pathology, speech pathology and audiology.

b/ Instructional staff support services included supervisors of instruction (not department chairman), curriculum coordinators and instructional training staff, school library, audiovisual and educational television staff, and staff engaged in developing computer-assisted instruction.

c/ Other support services included business office and research activities that did not appear in general administration.

d/ This category included expenditures for employee benefits by the state for or on behalf of the local education agency for instruction-related and noninstruction-related support services.

e/ Alaska reported expenditures of \$10,598 thousand for employee benefits for instructional staff support services, school administration, student transportation, and other support services.

f/ Connecticut reported expenditures of \$38,432 thousand for employee benefits for student support services, instructional staff support services, school administration, and other support services. This amount was distributed among these functions.

g/ Delaware reported expenditures of \$7,914 thousand for employee benefits for instructional staff support services, school administration, and general administration. This amount was distributed among these functions.

h/ The District of Columbia could not report noninstruction-related support services for student transportation. In the District of Columbia, public school students used public transportation, and free public school busing comparable to practices in other states was not provided except for transportation of the disabled.

i/ Hawaii did not provide employee benefits for staff providing school transportation.

j/ Kentucky reported expenditures of \$6,505 thousand for employee benefits for instruction, instructional staff support services, and other support services. This total was distributed among these functions.

k/ New Jersey reported all employee benefits other than instruction benefits as direct support by the state for and on behalf of local agencies.

l/ New Mexico reported expenditures of \$5,167 thousand for employee benefits for general administration and other support services. This total was distributed between these functions.

m/ National totals for total employee benefits, instruction, student support services, instructional staff support services, school administration, general administration, student transportation, and other support services have been imputed based upon current year data due to special cases in Alaska, Arizona, Delaware, Kentucky, and New Mexico.

a/ Student support services included staff in attendance and social work services, guidance, health, pathology and audiology, instructional staff support services, included supervision of instruction (not department chairman), curriculum coordinator, and instructional staff, school library, audiovisual and educational television staff, and staff engaged in developing computer-assisted instruction.

b/ Other support services included business office and research activities that did not appear in general administration.

c/ This category included expenditures for employee benefits by the state for or on the behalf of the local education agency for instruction-related and noninstruction-related support services. Alaska reported expenditures of \$10,598 thousand for employee benefits for instructional staff support services, school administration, student transportation, and other support services. This amount was distributed between these functions.

f/ Arizona reported expenditures of \$38,432 thousand for employee benefits for student support services, instructional staff support services, school administration, and other support services. The amount was distributed among these functions.

g/ Connecticut reported all employee benefits as direct support by the state for or on behalf of local agencies. Delaware reported expenditures of \$7,914 thousand for employee benefits for instructional staff support services, school administration, and general administration. This amount was distributed among these functions.

i/ The District of Columbia could not report noninstruction-related support services for student transportation. In the District of Columbia, public school students used public transportation, and free public school busing comparable to practices in other states was not provided except for transportation of the disabled.

j/ Hawaii did not provide employee benefits for staff providing school transportation.

k/ Kentucky reported expenditures of \$6,595 thousand for employee benefits as direct support by the state for and on behalf of local agencies. New Jersey reported all employee benefits other than instruction benefits as direct support by the state for general administration and other support services. This total was distributed between these functions.

l/ New Mexico reported expenditures of \$5,167 thousand for employee benefits for general administration and other support services. This total was distributed between these functions.

m/ National totals for total employee benefits, instruction, student support services, instructional staff support services, school administration, general administration, student transportation, and other support services have been imputed based upon current year data due to special cases in Alaska, Arizona, Delaware, Kentucky, and New Mexico.

- a/ Student support services included staff in attendance and social work services, guidance, health, psychology, speech pathology and audiology, instructional staff support services included only supervisors of instruction (not department chairman), curriculum coordinators and instructional and instructional staff, school library staff, audiovisual staff, educational television staff, and staff engaged in the development of computer-assisted instruction.
- b/ Other support services included business office and research activities that did not appear in general administration.
- c/ Alabama reported expenditures of \$12,349 thousand for purchased services for instruction, student support services, instructional staff support services and other support services.
- d/ This amount was distributed among these functions.
- e/ Alaska could not report expenditures for purchased services for instruction, instructional staff support services, school administration, and general administration.
- f/ NECES imputed values for these functions.
- g/ Arizona could not report any expenditures for purchased services. NECES imputed values for all functions of purchased services.
- h/ Connecticut reported expenditures of \$1,832,643 thousand for all instructional objects and expenditures of \$1,021,465 for all instruction-related and noninstruction-related support service functions. This amount was distributed among these functions using a raking procedure.
- i/ Delaware reported expenditures of \$10,061 thousand for purchased services for instruction, instructional staff support services, school administration, general administration, and other support services. This amount was distributed among these functions.
- j/ The District of Columbia could not report noninstruction-related support services for student transportation. In the District of Columbia, public school students used public transportation, and free public school busking comparable to practice in other states was not provided except for transportation of the disabled.
- k/ Nebraska reported expenditures of \$2,882 thousand for purchased services for school administration and general administration. This amount was distributed among these functions.
- l/ New Jersey reported expenditures of \$83,441 thousand for purchased services for instruction, student support services, instructional staff support services, school administration, general administration, and other support services. This amount was distributed among these functions.
- m/ New Mexico reported expenditures of \$14,307 thousand for purchased services for student support services, instructional staff support services, school administration, general administration, and other support services. This amount was distributed among these functions.
- n/ Oklahoma reported expenditures of \$20,433 thousand for purchased services for instruction and school administration. This amount was distributed among these functions.
- o/ National totals for total purchased services, instruction, student support services, instructional staff support services, school administration, general administration, and other operations and maintenance, student transportation, and other support services were imputed based on current year data due to special cases in Alabama, Alaska, Arizona, Connecticut, Delaware, Nebraska, New Jersey, New Mexico, and Oklahoma.

a/ Student support services included staff in attendance and social work services, guidance, health, psychology, speech pathology and audiology.

b/ Instructional staff support services included only supervisions of instruction (not department chairmen), curriculum coordinators and incentive training staff, school library staff, audiovisual staff, educational television staff, and staff engaged in the development of computer-assisted instruction.

c/ Other support services included business office and research activities that did not appear in general administration.

d/ Alaska could not report expenditures for supplies for instruction, instructional staff support services, school administration, general administration, operations and maintenance, and other support services. NCES imputed value for these functions.

e/ Arizona reported expenditures of \$7,765 thousand for supplies for student support services, instructional staff support services, school administration, and other support services.

f/ Connecticut reported expenditures of \$1,833,643 thousand for all instructional objects and expenditures of \$1,021,465 for all instruction-related and noninstruction-related This amount was distributed among these functions.

g/ Delaware reported expenditures of \$15,096 thousand for supplies for instruction, student support services, instructional staff support services, school administration, general administration, and other support services. This amount was distributed among these functions.

h/ The District of Columbia could not report non-instructional support services for student transportation. In the District of Columbia, public school students used public transportation, and free public school busing comparable to practices in other states was not provided except for transportation of the disabled.

i/ Kentucky reported expenditures of \$39,210 thousand for supplies for instruction, instructional staff support services, school administration and other support services. This amount was distributed among these functions.

j/ Massachusetts reported expenditures of \$23,988 thousand for all functions of supplies. This amount was distributed among all functions.

k/ New Jersey reported expenditures of \$207,765 thousand for supplies for instruction, student support services, instructional staff support services, school administration, general administration, student transportation, and other support services. This amount was distributed among these functions.

l/ New Mexico reported expenditures of \$1,418 thousand for supplies for school administration, general administration, operations and maintenance, student transportation, Tennessee could not report supplies for general administration, NCES imputed the value for supplies for the function.

m/ Tennessee totals for total supplies, instruction, student support services, instructional staff services, school administration, general administration, operations and maintenance, student transportation, and other support services were imputed based on current year data due to special cases in Alaska, Arizona, Connecticut, Delaware, Kentucky, Massachusetts, New Jersey, New Mexico, and Tennessee.

NOTE: National totals for total supplies, instruction, student support services, instructional staff services, school administration, general administration, operations and maintenance, student transportation, and other support services were imputed based on current year data due to special cases in Alaska, Arizona, Connecticut, Delaware, Kentucky, Massachusetts, New Jersey, New Mexico, and Tennessee.

West Virginia	5.2	2.6	0.0	0.3	0.0	0.1	1.0	1.1	0.1
Wisconsin	6.3	2.4	0.1	0.6	0.1	0.1	2.7	0.2	0.1
Wyoming	6.8	4.1	0.1	0.5	0.1	0.1	1.0	0.7	0.2

- a/ Student support services included staff in attendance and social work services, guidance, health, psychology, speech pathology and audiology.
- b/ Instructional staff support services included only supervisors of instruction (not department chairmen), curriculum coordinators and inservice training staff, school library staff, audiovisual staff, educational television staff, and staff engaged in the development of computer-assisted instruction.
- c/ Other support services included business office and research activities that did not appear in general administration.
- d/ Alaska could not report expenditures for supplies for instruction, instructional staff support services, school administration, general administration, operations and maintenance, and other support services. NCES imputed values for these functions.
- e/ Arizona reported expenditures of \$7,765 thousand for supplies for student support services, instructional staff support services, school administration, and other support services. This amount was distributed among these functions.
- f/ Connecticut reported expenditures of \$1,833,643 thousand for all instructional objects and expenditures of \$1,021,465 for all instruction-related and noninstruction-related support service functions. These amounts were distributed among these functions using a ranking procedure.
- g/ Delaware reported expenditures of \$15,096 thousand for supplies for instruction, student support services, instructional staff support services, school administration, general administration, and other support services. This amount was distributed among these functions.
- h/ The District of Columbia could not report non-instructional support services for student transportation. In the District of Columbia, public school students used public transportation, and free public school busing comparable to practices in other states was not provided except for transportation of the disabled.
- i/ Kentucky reported expenditures of \$39,210 thousand for supplies for instruction, instructional staff support services, school administration and other support services. This amount was distributed among these functions.
- j/ Massachusetts reported expenditures of \$23,988 thousand for all functions of supplies. This amount was distributed among all functions.
- k/ New Jersey reported expenditures of \$207,765 thousand for supplies for instruction, student support services, instructional staff support services, school administration, general administration, student transportation, and other support services. This amount was distributed among these functions.
- l/ New Mexico reported expenditures of \$1,418 thousand for supplies for school administration, general administration, and other support services. This amount was distributed among these functions.
- m/ Tennessee could not report supplies for general administration. NCES imputed the value for supplies for this function.
- NOTE: National totals for total supplies, instruction, student support services, instructional staff services, school administration, general administration, operations and maintenance, student transportation, and other support services were imputed based on current year data due to special cases in Alaska, Arizona, Connecticut, Delaware, Kentucky, Massachusetts, New Jersey, New Mexico, and Tennessee.

Wisconsin	4,251,234	182,181	105,879	33,357	710	7,934	3,639	3,617	14,271	7,275
Wyoming	546,729	33,473	17,478	5,306	210	844	429	365	4,331	4,062

a/ This number differs from a previously published estimate of total current expenditure as the result of the correction of a calculation error. The original number (\$209,037,919 thousand) appears in table 14 of the NCES E.D. Tabs publication, *Public Elementary and Secondary State Aggregate Data for School Year 1990-91 and Fiscal Year 1990*.

b/ Other expenditures included food service, enterprise operations, direct program support, construction, community services, and direct cost programs.

c/ Student support services included staff in attendance and social work services, guidance, health, psychology, speech pathology and audiology.

d/ Instructional staff support services included only supervisors of instruction (not department chairmen), curriculum coordinators and inservice training staff, school library staff, audiovisual staff, educational television staff, and staff engaged in the development of computer-assisted instruction.

e/ Other support services included business office and research activities that did not appear in general administration.

f/ Alabama reported expenditures of \$250,169 thousand for other equipment expenditures, instruction, students support services, instructional staff support services, and other support services.

g/ Alaska could not report expenditures for equipment by function. NCES imputed values for all functions of equipment.

h/ Arizona reported expenditures of \$96,494 thousand for equipment for instruction, student support services, instructional staff support services, school administration, general administration, operations and maintenance, and other support services. This amount was distributed among these functions.

i/ Connecticut could not report expenditures for equipment by function, except for instruction and other equipment expenditures. NCES imputed values for missing functions of equipment.

j/ Delaware reported expenditures of \$9,155 thousand for equipment for instruction, students support services, instructional staff support services, school administration, general administration, operations and maintenance, student transportation, and other support services. This amount was distributed among these functions.

k/ The District of Columbia could not report noninstruction-related support services for student transportation. In the District of Columbia, public school students used public transportation, and free public school busing comparable to practices in other states was not provided except for transportation of the disabled.

l/ Florida reported expenditures of \$1,413,673 thousand for other equipment expenditures, instruction, students support services, instructional staff support services, school administration, general administration, operations and maintenance, and student transportation. This amount was distributed among these functions.

m/ Kentucky reported expenditures of \$27,562 thousand for equipment for all instruction-related functions. This amount was distributed among these functions.

n/ Massachusetts reported expenditures of \$75,069 thousand for all equipment. This amount was distributed among all functions of equipment.

o/ New Jersey reported expenditures of \$13,854 thousand for all equipment. This amount was distributed among all functions of equipment.

p/ New Mexico reported expenditures of \$3,609 thousand for other equipment expenditures, instruction, students support services, instructional staff support services, school administration, general administration, operations and maintenance, and other support services. This amount was distributed among these functions.

q/ Oklahoma reported expenditures of \$2,479 thousand for equipment for instructional staff support services and school administration. This amount was distributed among these functions.

r/ Tennessee reported expenditures of \$14,767 thousand for equipment for instruction, instructional staff support services, and school administration. This amount was distributed among these functions.

NOTE: National totals for total equipment, other, instruction, student support services, instructional staff services, school administration, general administration, operations and maintenance, student transportation, and other support services were imputed based on current year data due to special cases in Alabama, Alaska, Arizona, Connecticut, Delaware, Florida, Kentucky, Massachusetts, New Jersey, New Mexico, Oklahoma, and Tennessee.

a/ Other expenditures included food services, enterprise operations, direct program support, construction, community services, and direct cost programs.
 b/ Student support services included staff in attendance and social work services, guidance, health, psychology, speech pathology and audiology.
 c/ Instructional staff support services included only supervisions of instruction (not department chairmen), curriculum coordination and inservice training.
 d/ Other support services included business office and research activities that did not appear in general administration.
 e/ Alabama reported expenditures of \$250,168 thousand for other equipment expenditures, instruction, students support services, instructional staff support services, and other support services.

f/ Alaska could not report expenditures for equipment by function. NCES imputed values for all functions of equipment.
 g/ Arizona reported expenditures of \$86,494 thousand for equipment for instruction, student support services, instructional staff support services, school administration, general administration, operations and maintenance, and other support services. This amount was distributed among these functions.
 h/ Connecticut could not report expenditures for equipment by function, except for instruction and other equipment expenditures. I ES imputed values for missing functions of equipment.
 i/ Delaware reported expenditures of \$9,155 thousand for equipment for instruction, students support services, instructional staff & sport services, school administration, general administration, operations and maintenance, student transportation, and other support services. This amount was distributed among these functions.
 j/ The District of Columbia could not report noninstruction-related support services for student transportation. In the District of Columbia, public school students used public transportation, and free public school busing comparable to practices in other states was not provided except for transportation of the disabled.
 k/ Florida reported expenditures of \$1,413,673 thousand for other equipment expenditures, instruction, students support services, instructional staff support services, school administration, general administration, operations and maintenance, and student transportation. The amount was distributed among all functions of equipment.
 l/ Kentucky reported expenditures of \$27,562 thousand for equipment for all instruction-related and noninstruction-related functions. The amount was distributed among these functions.
 m/ Massachusetts reported expenditures of \$75,069 thousand for all equipment. This amount was distributed among all functions of equipment.
 n/ New Jersey reported expenditures of \$190,854 thousand for all equipment. The amount was distributed among all functions of equipment.
 o/ New Mexico reported expenditures of \$13,609 thousand for other equipment expenditures, instruction, students support services, instructional staff support services, school administration, general administration, operations and maintenance, and other support services. This amount was distributed among these functions.

p/ Oklahoma reported expenditures of \$2,478 thousand for equipment for instructional staff support services and school administration. This amount was distributed among these functions.
 q/ Tennessee reported expenditures of \$14,767 thousand for equipment for instruction, instructional staff support services, and school administration. The amount was distributed among these functions.

NOTE: National totals for total equipment, other, instruction, student support services, instructional staff services, school administration, general administration, operations and maintenance, student transportation, and other support services were imputed based on current year data to special cases in Alabama, Alaska, Arizona, Connecticut, Delaware, Florida, Kentucky,

Massachusetts, New Jersey, New Mexico, Oklahoma, and Tennessee.

- a/ Other expenditures included food service, enterprise operations, direct program support, construction, community services, and direct cost programs.
- b/ Student support services included staff in attendance and social work services, guidance, health, psychology, speech pathology and audiology.
- c/ Instructional staff support services included only supervisions of instruction (not department chairman), curriculum coordinators and inservice training staff, school library staff, audiovisual staff, educational television staff, and staff engaged in the development of computer-assisted instruction.
- d/ Other support services included business office and research activities that did not appear in general administration.
- e/ Alabama reported expenditures of \$250,168 thousand for other equipment expenditures, instruction, student support services, instructional staff support services, and other support services. This amount was distributed among these functions.
- f/ Alaska could not report expenditures for equipment by function. NCES imputed values for all functions of equipment.
- g/ Arizona reported expenditures of \$98,494 thousand for equipment for instruction, student support services, instructional staff support services, school administration, general administration, operations and maintenance, and other support services. This amount was distributed among these functions.
- h/ Connecticut could not report expenditures for equipment by function, except for instruction and other equipment expenditures. NCES imputed values for missing functions of equipment.
- i/ Delaware reported expenditures of \$9,155 thousand for equipment for instruction, students support services, instructional staff support services, school administration, general administration, operations and maintenance, student transportation, and other support services. This amount was distributed among these functions.
- j/ The District of Columbia could not report noninstruction-related support services for student transportation. In the District of Columbia, public school students used public transportation, and free public school busing comparable to practices in other states was not provided except for transportation of the disabled.
- k/ Florida reported expenditures of \$1,413,673 thousand for other equipment expenditures, instruction, students support services, instructional staff support services, school administration, general administration, operations and maintenance, and student transportation. This amount was distributed among these functions.
- l/ Kentucky reported expenditures of \$27,562 thousand for equipment for all instruction-related and noninstruction-related functions. This amount was distributed among all functions of equipment.
- m/ Massachusetts reported expenditures of \$75,069 thousand for all equipment. This amount was distributed among all functions of equipment.
- n/ New Jersey reported expenditures of \$190,854 thousand for other equipment expenditures, instruction, students support services, instructional staff support services, school administration, general administration, operations and maintenance, and other support services. This amount was distributed among these functions.
- o/ New Mexico reported expenditures of \$13,609 thousand for other equipment expenditures, instruction, instructional staff support services, and school administration. This amount was distributed among these functions.
- p/ Oklahoma reported expenditures of \$2,479 thousand for equipment for instructional staff support services and school administration. This amount was distributed among these functions.
- q/ Tennessee reported expenditures of \$14,767 thousand for equipment for instruction, instructional staff support services, and school administration. This amount was distributed among these functions.
- NOTE: National totals for total equipment, other, instruction, student support services, instructional staff services, school administration, general administration, operations and maintenance, student transportation, and other support services were imputed based on current year data due to special cases in Alabama, Alaska, Arizona, Connecticut, Delaware, Florida, Kentucky, Massachusetts, New Jersey, New Mexico, Oklahoma, and Tennessee.

a/ California reported expenditures of \$337,723 thousand for debt service of both long-term interest and redemption of principal. NCES distributed this total between long-term interest and redemption of principal.

b/ The District of Columbia's expenditures for facilities acquisition and construction services for education were inseparable from other city service expenditures for the same purpose. Only non-property expenditures, that is, expenditures for the school system operations and maintenance staff to perform renovations and repairs were reported. The District of Columbia could not report property expenditures, equipment, long-term interest, or redemption of principal. NCES imputed values for the debt service functions.

c/ Washington reported expenditures of \$467,272 thousand for facilities acquisition and construction for both property and non-property expenditures. NCES distributed this total to property and non-property expenditures.

... Data missing or not available.

NOTE: National totals for non-property expenditures, long-term interest, and redemption of principal were imputed based on current year data.

a/ California reported expenditures of \$337,723 thousand for debt service of both long-term interest and redemption of principal. NCES distributed this total between long-term interest and redemption of principal.

b/ The District of Columbia's expenditures for facilities acquisition and construction services for education were inseparable from other city service expenditures for the same purpose. Only non-property expenditures, that is, expenditures for the school system operations and maintenance staff to perform renovations and repairs were reported. The District of Columbia could not report property expenditures, equipment, long-term interest, or redemption of principal. NCES imputed values for the debt service functions.

c/ Washington reported expenditures of \$467,272 thousand for facilities acquisition and construction for both property and non-property expenditures. NCES distributed this total to property and non-property expenditures.

--- Data missing or not available.

NOTE: National totals for non-property expenditures, long-term interest, and redemption of principal were imputed based on current year data.

Methodology

The source of data for this report is "The National Public Education Financial Survey" of the CCD series. The survey is one component of the Common Core of Data (CCD) surveys conducted annually by NCES, which provide basic descriptive information regarding the numbers of students and staff and the financing of public elementary and secondary schools. In compiling these fiscal data from administrative record systems, each state education agency (SEA) obtains data from the local education agencies (LEAs) that operate public schools. Each SEA may edit or examine the individual LEA reports before computing state totals. The reporting of fiscal data a year after the school year permits state administrative agencies to obtain audited fiscal LEA data. Responses to these surveys were due to NCES March 15, 1991, from SEAs in the 50 states, the District of Columbia, and the five outlying areas under U.S. jurisdiction. The data reported to NCES were edited, corrected if necessary, and incorporated into the file as of September 4, 1991.

Variation in state reports. The CCSSO publication, in November, 1987, of Recommendations for Improving the National Education Fiscal Database, demonstrated that states differed widely in which Federal accounting handbook (1957, 1973, 1980) was in use in reporting expenditures to NCES. The differences in these handbooks are by no means trivial. For example, the 1957 handbook instructs states to report all school administration expenditures with instructional expenditures while these are explicitly separated in later handbooks. Exhibit 1 demonstrates the diversity of accounting practices in states in 1987. NCES republished Financial Accounting for Local and State School Systems in 1990, updating sections to bring the 1980 handbook to current GAAP (generally accepted accounting principles) standards, and to clarify such definitions as current expenditures. It is important to note that several states (Oklahoma, Iowa, Virginia and New Jersey) either have changed their chart of accounts to correspond to the 1990 Federal accounting handbook, or are in the process of doing so.

Crosswalks. In its fiscal redesign effort, NCES proposed an accounting mechanism that would serve two functions: it would permit some states to report according to the most recent Federal accounting handbook, while not changing their existing state accounting system; and for other states, it would identify the differences between the state accounting system and the Federal handbook, create prorations (imputations) for these items, and provide a transition period for a state which wishes to modify its collection practices so that it could more accurately report according to the most recent Federal accounting handbook, rather than utilizing prorations.

Two examples may explain how the crosswalk works. Suppose that a state education agency knows the total expenditure for all employee benefits by school districts in the state for all employees, but cannot separate those benefit expenditures into the Federal accounting handbook functions of instruction, school administration, central administration, operation and maintenance, etc. The crosswalk mechanism allocates portions of the expenditure for all employee benefits to instruction, school administration, and the other categories in the Federal accounting handbook, based upon an estimate of the percentages in some other category, such as instruction, that the state does collect the detail for. NCES would note in its publications that these detailed expenditures had been imputed. The accuracy of the total expenditures would not be affected by this procedure, as the total expenditures for employee benefits are already known, however, NCES would create detail where none was reported.

A Crosswalk Example

State Accounting System

Instruction (1000) ----->

Salaries (100) ----->

Benefits (200) ----->

Purchased Services (300-500) ----->

School Buses (600) ----->

Federal Handbook

Instruction (1000)

Salaries (100)

Benefits (200)

Purchased Services (300-500)

Student Transportation (2700)
property (700)

In the above example, the state accounting system matches the Federal accounting handbook except for expenditures for school buses, which the state includes as a current expenditure in instruction. The crosswalk mechanism moves expenditures for this purpose to student transportation, property, correctly categorizing the expenditure for NCES purposes.

Exhibit 2

A second crosswalk example, shown in Exhibit 2, may have an effect upon state reporting. Here the state accounting system permits the purchase of school buses to be included in current expenditures for instruction. However, in the Federal accounting handbook, it is not appropriate to treat property (equipment) expenditures as current expenditures. The crosswalk moves this item from instruction to transportation, and from current expenditure instructional expenditures to property expenditures (total expenditures).

The crosswalk contractor, using FY1987 through FY1989 fiscal data, was able to construct computer crosswalks for about 37 states, which were delivered to NCES in December, 1990. Four states chose to create their own crosswalk: California; Hawaii; Minnesota; and Missouri. Eight states had state accounting systems so different from the Federal accounting handbook that the contractor was unable to complete computer crosswalking programs for them. These "uncrosswalkable" states were: Alaska; Arizona; Connecticut; Delaware; District of Columbia; New Jersey; New Mexico; Tennessee.

Imputed data. In cases in which a state reporting system combined subfunctions or objects, national totals were imputed by distributing the aggregate across combined categories proportional to the distribution based on data from all reporting states and the District of Columbia. In other cases, where the missing fiscal data resulted from a particular subfunction being supported by another government agency, expenditures were imputed based on the current year data. The imputation was based on data from only those states that supported the expenditure subfunction through public education funds. States with no such expenditures, such as those in which facilities acquisition is the responsibility of parent governments, were considered qualitatively different from those that reported some public education expenditure greater than zero for facilities acquisition. For example, the total ratio of facilities acquisition to total current expenditures for states reporting facilities acquisition greater than zero was determined. Imputed amounts for states reporting missing values for facilities acquisition were derived by multiplying this ratio by total current expenditures for those states.

There were two basic imputation procedures: distribution, in which a value reported for one item was distributed among one or more other items; and imputation, where a number was imputed without any change to other reported values. While distribution is common throughout the tables, imputation was implemented for only three fiscal items, none of which affected total current expenditures: other sources of revenue (6 states), facilities acquisition and construction (1 state) and debt service (2 states). Unless otherwise specified, all distributions were based on the mean distribution from states that reported all items involved in the distribution operation.

Connecticut fiscal data posed a unique reporting problem. The state education agency was unable to provide NCES with object-level (salaries, fringe benefits, purchased services, supplies, equipment) detail, reporting only function-level (instruction) aggregates. These function totals were distributed across their objects based on the

mean distribution of all 50 states (and D.C.) after the other distributions had taken place.

Effects of Survey Change. The FY 1990 fiscal data reflect two major changes in SEA reports. The first is the introduction of the expanded fiscal instrument, "The National Public Education Financial Survey", which collects more detailed information than did its predecessor, "Revenues and Current Expenditures for Public Elementary and Secondary Education," used from 1982 through 1988. The second innovation is individualized "crosswalk" procedures that convert a state's existing accounting reports to the federal standard, as indicated in Financial Accounting for Local and State School Systems, 1990."

Because of these substantial changes in detail and comparability, readers are cautioned not to compare revenue and expenditure numbers appearing in tables in this publication for fiscal year 1990 with earlier NCES publications.

Definitions

The following list defines the key terms used in this report:

Community services expenditures--

Expenditures for community services to students, staff, and community residents. Examples are community swimming pools, day care centers, or recreation or transportation programs for the elderly. These are provided by a governmental entity as services, and are not run as businesses. Property expenditures (vehicles, equipment, furniture, etc.) are not included.

Core educational expenditure--

Current expenditures for instruction, student support services (health, attendance, guidance, speech), and instructional staff support services (curricular development, in-staff training, and educational media, including libraries). Excluded are school administration expenditures, general administration, business functions, operation and maintenance, student transportation, food service, enterprise, and community services operations. The use of the term "core" is designed to reflect the central purpose of the local education agency, which is to educate children. Some readers who philosophically differ with this interpretation may wish to add expenditures for student transportation, or food service, or school administration, if they believe these functions should be included in the central purpose of the local education agency. The publication makes explicit expenditures excluded from the core expenditures precisely for this purpose.

Current expenditures--

Current expenditures are those for the day-to-day operation of the school. Expenditures for the categories of instruction, support services, and noninstructional expenditures for salaries, employee benefits, purchased services, and supplies. Also included are payments by the state made for or on behalf of school systems. This does not include expenditures for debt service, capital outlay, or property (i.e., equipment). Direct cost (Head Start, adult education, community colleges, etc.) and community services expenditures are not included.

Debt service expenditures--

Expenditures paid (principal and interest) for local education agency long-term (exceeding one year) loan obligations.

Dependent school system--

A dependent school system that cannot to be identified as a separate government entity, because it is not administratively and fiscally independent of a parent government.

Direct cost expenditures--

Expenditures made by LEAs for programs that are not considered part of public pre-K through 12 educational programs. Examples are expenditures for: adult education, community colleges, and nonpublic school programs such as compensatory education programs for both public and private students.

Direct support expenditures--

Expenditures made by a state for the benefit of the LEA, or contributions of equipment or supplies. Such expenditures include those for the employer's contribution to LEA staff state pension funds, and contributions of property (equipment) and supplies such as school buses and textbooks.

Employee benefits--

Amounts paid by the school district on behalf of employees; these amounts are not included in gross salary, but are in addition to that amount. Such payments are fringe benefit payments and, while not paid directly to employees, nevertheless are part of the cost of personal services. Employee benefits include: group insurance; social security contributions; retirement contributions; tuition reimbursement; unemployment compensation; workmen's compensation; and other employee benefits, such as accrued amounts for "unused sick leave."

Enterprise operations--

Activities that are financed and operated in a manner similar to private business enterprises - where the stated intent is that the costs are financed or recovered primarily through user charges.

Equipment expenditures--

Expenditures for the initial and additional purchase and replacement of equipment, such as machinery, furniture and fixtures, and vehicles; for all functions: instruction, support services, noninstruction, direct program support, facilities acquisition, community services and direct cost programs.

Expenditures by the state for/on behalf of school districts--

Payments made by a state for the benefit of the LEA, or contributions of equipment or supplies. Such expenditures include the payment of a pension fund by the state on behalf of an LEA employee for services rendered to the LEA; contributions of fixed assets (property, plant, and equipment) such as school buses and textbooks.

Facilities acquisition and construction (nonproperty expenditures)--

Buildings built and alterations performed by the LEA's own staff. Does NOT include expenditures for land and improvements, or for acquiring existing buildings, or for equipment.

Facilities acquisition and construction (property expenditures)--

Expenditures for equipment for facilities, facilities acquisition and constructions services for property only. This includes expenditures for: a)buildings built and alterations performed by contractors, b) the purchase of land and land improvements, also assessments against LEAs for capital improvements, c) acquiring existing buildings, such as installment and lease payments, and d) the initial, additional, and replacement items of equipment, such as machinery, furniture and fixtures, and vehicles.

Fiscal year--

The 12 -month period beginning July 1 and ending June 30. States that are on a different fiscal year either adjust their data submissions to correspond to the NCES definition or report data as is and note in a cover letter that the data represent transactions occurring during a defined fiscal year.

Food services--

Activities concerned with providing food to students and staff in a school or school district. This service area includes preparing and serving regular and incidental meals, lunches, or snacks in connection with school activities and food delivery.

Fiscal year--

For most SEAs and LEAs, the 12-month period beginning July 1 and ending June 30.

Interest on debt--

Debt services payments for interest on bonds and notes for obligations exceeding one year. This does not include payments on the redemption of principal.

Instructional expenditures--

Expenditures for activities dealing directly with the interaction between students and teachers (salaries, including sabbatical leave, employee benefits, purchased instructional services and supplies).

Instruction-related expenditures--

Instruction-related expenditures include expenditures for instruction (teachers and teachers' aides), student support services (attendance, guidance, speech and health), and instructional staff support services (curricular development, in-staff training, supervisors of instruction, and educational media, including libraries).

K--

Kindergarten.

Membership--

The count of students on the current roll taken on the school day closest to October 1 by using either 1) the sum of original entries and reentries minus total withdrawals, or 2) the sum of the total present and the total absent.

Noninstruction-related expenditures--

Readers intimately acquainted with the Federal chart of accounts handbook, Financial Accounting for Local and State School Systems, 1990, will also notice a subtle change in the tabular displays. The handbook uses the term "non-instruction" to describe only expenditures for food service, community services and enterprise expenditures (run like a private business within the local school district). This has been a source of confusion to the public in NCES published financial reports. As a result, expenditures have been grouped into two categories in the tabular displays: "instruction-related expenditures" and "non-instruction-related". Non-instruction-related includes expenditures for school administration, central office, business office and school board administration, operations and maintenance, student transportation, food service and enterprise and other incidental support services. It is hoped that this will eliminate confusion by the public in reading the tables. Expenditures for food service operations and other auxiliary enterprise operations (bookstore and interscholastic athletics), excluding community services (e.g., child care or swimming pool).

Parent government--

A county, municipal, township, or state government to a dependent school system. A dependent school system lacks sufficient autonomy to be identified as a separate government entity.

PK--

Prekindergarten.

Prekindergarten students--

Those students who are enrolled in a group or class that is part of a public school program taught during the year or years preceding kindergarten, excluding Head Start students.

Public elementary-secondary education expenditures--

Current expenditures for pre-kindergarten through grade 12 for regular elementary/secondary programs, special education and vocational education, and summer school (even when students pay tuition to attend), as well as expenditures for student and staff breakfast and lunches, cocurricular activities and athletics. Head Start, adult education, community colleges and community services expenditures are not included.

Purchased services--

Services which by their nature can be performed only by persons or firms with specialized skills and knowledge. While a product may or may not result from the transaction, the primary reason for the purchase is the service provided. Included are the professional and technical services of architects, engineers, auditors, dentists, medical doctors, lawyers, consultants, teachers, accountants, etc.

Revenues--

Increases in the net current assets of a government fund type from other than expenditure refunds and residual equity transfers. Reported as revenues from local, intermediate, state and federal sources.

Revenues from federal sources--

Includes direct grants-in-aid from the federal government; federal grants-in-aid through the state or an intermediate agency; and other revenue such as that received in lieu of taxes because the tax base was not subject to taxation.

Revenues from intermediate sources--

Revenues from an educational government agency, which should have independent fund-raising capability, that is not a local education or state agency (e.g., New York's Board of Cooperative Educational Services, or BOCES).

Revenues from local sources--

Revenues from local government or other or other local sources, including local property and non-property tax revenues; tuition; transportation; revenues from food services, student activities, and textbook sales; donations; and property rentals.

Revenues from state sources--

Revenues from a state government source, including those that can be used without restriction; those for categorical purposes; revenues in lieu of taxation.

Revenues from the state for/on behalf of school districts--

Payments or contributions of equipment or supplies made by a state for the benefit of the LEA. Such revenues include the payment of a pension fund by the state on behalf of an LEA employee for services rendered to the LEA; contributions of fixed assets (property, plant, and equipment) such as school buses and textbooks.

Salaries--

Amounts paid to both permanent and temporary school district employees, including personnel substituting for those in permanent positions. This includes gross salary for personal services rendered while on the payroll of the school district.

Salaries for instruction--

Includes gross salary of regular and part-time teachers, teachers' aides, homebound teachers, hospital-based teachers, substitute teachers, and teachers on sabbatical leave who are on LEA payrolls (see instructional expenditures above).

Salaries for support services--

Includes salaries for all LEA employees providing administrative, technical (such as guidance and health), operation, maintenance, and transportation services that facilitate and enhance instruction (see support services expenditures below).

State education agency--

The agency of the state charged with primary responsibility for coordinating and supervising public instruction including the setting of standards for elementary and secondary instructional programs.

Supplies--

Amounts paid for items that are consumed, worn out, or deteriorated through use; or items that lose their identity through fabrication or incorporation into different or more complex units or substances. NCES has proposed a set of criteria for distinguishing equipment from supply items, which appears in Financial Accounting for Local and State School Systems, 1990, p. 144b. Energy (natural gas, electricity, bottled gas, oil, coal, gasoline), food, and books and periodicals are considered supplies.

Support services expenditures--

Expenditures for student support services (attendance, guidance, health, speech, and psychological), staff support services (improvement of instruction, and educational media, including librarians), general administration (board of education and central office), school administration (principal), business (fiscal services, purchasing, warehousing, and printing), operation and maintenance of plant, student transportation services, and central expenditures (research, information services, and data processing).

Total public elementary-secondary education expenditures--

Current expenditures and long-term expenditures for equipment, facilities acquisition, and construction.
