ABSTRACT

The Minnesota Board of Teaching adopted the Pre-Professional Skills Tests (PPST) for initial teacher licensure as required by the State Legislature. A 1987 validation study set qualifying scores for reading, mathematics, and writing. This report evaluates the 4-year administration of the PPST, using data from 1987-91 that were analyzed according to specific variables of gender, in-state or out-of-state preparation, educational level, and racial/ethnic group. Of the 26,861 examinees who took 1 or more PPST tests in 1987-91, most were female. About 85 percent were enrolled or had completed preparation at a Minnesota college or university, and about 72 percent of the examinees were in undergraduate programs during their first attempt at the PPST. Only 2.2 percent of the examinees were minority group members. More Minnesota examinees than projected passed the reading, mathematics, and writing tests on the first attempt. Non-Minnesota examinees had a higher success rate than projected on all three tests. More females passed the test on the first attempt. Minorities were less successful than majority examinees on the initial attempt. Minnesota institutions of higher learning that offer teacher preparation continue to provide candidates who fail the tests with access to opportunities to enhance their skills. Statistical differences among subgroups, although significant, are generally small. An appendix contains 45 tables of study results. (SLD)

ABSTRACT

Test Adoption:

In accordance with Minn. Stat. §125.05, subd. 1, and Minn. Stat. §125.03, subd. 5, the 1985 Minnesota Legislature authorized the Minnesota Board of Teaching to adopt teacher examinations in reading, mathematics, and writing as a requirement for initial teacher licensure. The Board adopted the Pre-Professional Skills Tests (PPST) developed by the Educational Testing Service. This process included the validation, field testing, and administration of a state-wide testing program.

In 1987, Educational Testing Service conducted a validation study that included 1) the review of the PPST questions by representative Minnesota educators to determine the job-relatedness and content appropriateness of the test for use in Minnesota, and 2) the field testing of the PPST at four Minnesota colleges. Based on the findings of the validity study, the Minnesota Board of Teaching set qualifying scores at 173 for reading, 169 for mathematics, and 172 for writing.

The Minnesota validation panel consisted of 30 Minnesota educators. Panelist membership consisted of teacher educators, teachers, principals, and counselors in different school districts across the state. The panelists reflected varied levels of academic achievement, varied lengths of teaching experiences, and varied age groups and ethnic backgrounds.

The Board of Teaching 1) established rules for implementation of policies regarding teacher examinations, requiring that effective April 4, 1988, all applicants for initial teaching licenses must achieve a minimum passing score on each of the examinations before being issued an initial Minnesota teaching license, and 2) required the implementation of an annual evaluation plan for teacher examinations. Rules were later established, effective April 8, 1991, requiring applicants for secondary vocational licensure to meet the examination standard.

Purpose of Study:

This study provides the evaluation of the four-year administration of the Pre-Professional Skills Tests. It provides data and information on the 1987-91 experience in accordance with the Board of Teaching Evaluation Plan requiring 1) analysis of annual data by gender, in-state/out-of-state preparation, educational level, racial/ethnic group, and number of retakes, and 2) feedback from colleges and universities regarding the type of remedial opportunities available to students and the appropriateness of test dates and sites.

Methodology:

In accordance with the Minnesota Board of Teaching Evaluation Plan, Educational Testing Service provided data tapes on the 1987-91 examinations. With assistance from the Minnesota Department of Education, the data were analyzed according to the specified variables (gender, in-state/out-of-state preparation, educational level, and racial/ethnic group).

Analysis of the data was, for the most part, descriptive. Frequency distributions of the testing groups and subgroups were obtained. In addition, further analysis of the data was done on a limited basis. Analysis beyond descriptive statistics included t-tests, analysis of variance, and chi-square procedures. All three of these analytical procedures provided insights into the question of whether differences between various groups are simply chance differences, or real differences, such as better performance on a test by one group than another (e.g., males vs. females).

Findings:

Of the 26,861 examinees who took one or more PPST tests during the 1987-91 period, and who at the time of testing coded their gender, in-state/out-of-state preparation, educational level, and/or racial/ethnic group, the majority were female (74.0 percent). Of the total, 84.8 percent of the examinees were either enrolled in or had completed their undergraduate preparation at a Minnesota college or university, and 72.3

percent of the examinees were matriculating in undergraduate programs at the time of their first attempting the PPST. The majority (57.4 percent) of the examinees were in their junior or senior year. Only 2.2 percent of the examinees were minority, either Asian/Pacific, Black, Hispanic, or Native American.

Based on the results from the 1986 Minnesota field testing study, and the projected percentages for non-qualifying examinees, data indicate that more Minnesota examinees than projected passed the reading, mathematics, and writing tests on their first attempt. Non-Minnesota examinees continue to demonstrate a higher success rate than projected on all three tests.

Overall, a higher proportional percentage of the female examinees passed the writing test on their first attempt compared to male examinees. A higher proportional percentage of male examinees passed the mathematics test than did female examinees. Performance on the reading test was nearly the same for male and female examinees. Minority examinees experienced less success than did majority examinees on the initial attempt at the reading, mathematics, and writing tests. The percentage of minorities failing the reading and writing tests and not retaking the tests was higher than the percentage of majority examinees not retaking those tests.

Post-senior examinees demonstrated a higher level of performance on the reading, mathematics, and writing tests of the PPST than did seniors and pre-seniors. And seniors overall performed higher on all three tests than did pre-senior examinees.

Minority examinees (Asian/Pacific, Black, Hispanic, Native American) demonstrated lower mean scores than did non-minority examinees on the reading, mathematics, and writing tests.

The 26 Minnesota institutions of higher education offering teacher preparation programs continue to provide candidates who failed the examinations access to opportunities to enhance their skills. These services generally were provided through on-campus learning centers, academic skills centers, skill laboratories, etc. Overall, Min-

nesota institutions indicated that the 1987-91 testing schedules met the needs of their candidates. Institutions recommend that continued attention be given to avoiding setting test dates at times when other examinations are occurring on campus and during semester/term breaks.

Limitation:

Although statistical differences were observed between various subgroups of the 1987-91 examinees, reservation is advised in interpretation. It should be noted that differences, although statistically significant, continue to be small. Therefore, it is strongly suggested that judgments be made conservatively and on a broader information base than this study alone provides.

BACKGROUND

On April 24, 1987, the Minnesota Board of Teaching adopted the Pre-Professional Skills Tests (PPST) developed by Educational Testing Service (ETS) as the examinations of reading, mathematics, and writing required for initial teacher licensure by Minn. Stat. §125.05, subd. 1, and Minn. Stat. §125.03, subd.5. Minimum qualifying scores were set at 173 for reading, 169 for mathematics, and 172 for writing.

Adopting Teacher Licensure Examinations

During the 1985 special session of the Minnesota Legislature, the Minnesota Board of Teaching was authorized to require persons applying for initial teaching licenses, or for additional fields of licensure, on April 4, 1988, and thereafter to successfully complete an examination of academic knowledge in each field, and for persons applying for initial licensure, an examination of skills in reading, mathematics, and writing.¹

On February 17, 1986, the Minnesota Board of Teaching released a request for proposals (RFP), seeking bidders for the development, validation, field testing and administration of a state-wide testing program for the issuance of teaching licenses. The directive in the RFP stated:

The comprehensive program will include a separate examination for each skill area and a separate academic content knowledge examination for each licensure area....The examination shall be designed to assure that no person is discriminated against on the basis of race, color, national origin, or other factors unrelated to the person's ability to perform as a licensed teacher.

The goal of the RFP was to produce a state-wide examination system to:

-
- 1) Ensure that candidates for licensure demonstrate proficiency in each described skill area of reading, writing, and mathematics.
 - 2) Identify specific areas of performance for individual diagnosis and remediation.
 - 3) Provide test performance data to assist Minnesota institutions of higher education in modifying and strengthening their programs for preparing teachers for licensure in Minnesota.
-

¹The requirement for successful completion of an examination of academic knowledge was repealed during the 1987 legislative session.

Setting Minnesota Qualifying Scores

In the procedures to establish qualifying scores, Educational Testing Service provided comparable data on two primary reference groups. Both populations represent first-time examinees who were tested under standard conditions and fell into one of two populations.

PRIMARY REFERENCE GROUPS	
Population 1	Population 2
Graduating seniors (376) from four Minnesota colleges/universities with teacher education programs (Concordia College--Moorhead, Mankato State University, St. Cloud State University, and the University of Minnesota-Twin Cities) who participated in the PPST field testing in October 1986.	College seniors and graduates (35,751) enrolled in 284 institutions and agencies in 38 states from across the nation who were tested from February 1983 through July 1986.

The study scores from these two primary reference groups provided the data base by which the PPST scores could be interpreted in relation to the performance of appropriate reference groups.

The establishment of state-wide minimum passing scores on the PPST required for Minnesota licensure was completed and reported in the Minnesota Validity/Standard Setting Study: Pre-Professional Skills Tests (PPST) conducted in 1987 by ETS. After the systematic review of summarized standard setting study data, which represented the professional judgments of Minnesota educators from representative educational institutions, at elementary through college/university levels, a decision was made by the Minnesota Board of Teaching to set the qualifying scores at the present standards (Reading 173, Mathematics 169, Writing 172). In establishing the Minnesota qualifying scores on the PPST, the Minnesota Board of Teaching set the cut score -1 standard error of

measurement (SEM). Setting the minimum passing scores lower than the study scores by -1 SEM reduced the probability that examinees with true scores at or above the cut scores would not pass the tests, if on a particular occasion, their scores were lower than their true scores.

Minimum cut scores have not changed during the four-year testing period.

Evaluation Plan for Teacher Examinations

On May 8, 1987, the Minnesota Board of Teaching required the implementation of the following evaluation plan:

- 1) Educational Testing Service will provide data tapes on an annual basis with information needed to determine the number of persons achieving minimum passing scores for each skills area examination. This data tape will provide the capability to analyze the information by gender, in-state/out-of-state preparation, educational level, race/ethnicity, and number of retakes.
- 2) Assistance in analysis of the data will be provided by the Assessment Section of the Minnesota Department of Education.
- 3) Colleges and universities will be requested to provide feedback regarding the type of remedial opportunities available to students and the appropriateness of test dates and sites.
- 4) A summary report of the information will be provided to the Minnesota Board of Teaching on an annual basis.

METHODOLOGY

Purpose of Evaluation

This study provides the evaluation of the four-year administration of the Pre-Professional Skills Tests. It provides data and information on the 1987-91 experience in accordance with the Board of Teaching Evaluation Plan requiring 1) analysis of data by gender, in-state/out-of-state preparation, educational level, race/ethnicity, and number of retakes, and 2) feedback from Minnesota colleges and universities regarding the type of remedial opportunities available to students and the appropriateness of test dates and sites.

Population

The population is defined as all individuals who aspired/sought to meet the requirements for initial standard teaching licensure in Minnesota after April 4, 1988. The group involved in this study is a sample of that population. Thus, the population in this study is drawn from the four-year testing period 1987-91.

Procedures

In accordance with the Minnesota Board of Teaching Evaluation Plan adopted in 1987, and reaffirmed in 1990, Educational Testing Service provided 1987-91 examinee data tapes. With assistance from the assessment staff of the Minnesota Department of Education, the data were analyzed according to the specified variables (gender, in-state/out-of-state preparation, educational level, and race/ethnicity).

Analysis

Analysis of the data was, for the most part, descriptive. Frequency distributions of the testing groups and subgroups were obtained. In addition, further analysis of the data was done on a limited basis. Analysis beyond descriptive statistics included t-tests, analysis of variance, and chi-square procedures. The probability levels were set at the 0.05 level. All three of these analytical procedures provided insights into the question of whether differences between various groups are simply chance differences, or real differences, such as better performance on a test by one group than another (e.g., males vs. females).

Limitations

1. Although statistical differences were observed between various subgroups over the four-year testing period, reservation is advised in interpretation. It should be noted that differences, although statistically significant, were not large. Therefore, it is strongly suggested that judgments be made conservatively and on a broader information base than this study provides.
2. All data reported are specifically descriptive of the 1987-91 examinee population, and findings are not generalizable to other populations.
3. The valid cases from which findings are reported are limited by the completeness and accuracy of the examinees' having provided, at the time of testing, the correct code identifying gender, in-state/out-of-state preparation, educational level, and race/ethnicity. In addition, the number of reported valid cases reflects that not all examinees took all three PPST skills tests.

RESULTS

Report on All 1987-91 Examinees

Following is a performance summary of the 26,861 examinees who took the three skills tests of the PPST during the four year period of state-wide testing in Minnesota. The Minnesota Board of Teaching required in its evaluation plan that data on all examinees be analyzed by gender, in-state/out-of-state preparation, educational level, and racial/ethnic group.

Who in 1987-91 took the three skills tests of the PPST as a requirement for initial Minnesota teaching licensure?

Table 1 provides a summary by gender, in-state/out-of-state preparation, educational level, and racial/ethnic group for the 26,861 examinees who attempted the three tests of the Pre-Professional Skills Tests during 1987-91 administration period. As indicated, 74.7 percent of the 26,606 valid cases were females. Of the 26,295 examinees who indicated their institution, 84.8 percent either were enrolled in or had completed their undergraduate teacher education program at a Minnesota college or university.

When during their educational career did 1987-91 examinees initially attempt the PPST?

Table 1 further shows the educational level for all 1987-91 examinees at the time of examinees' first attempt at the three tests of the PPST. At the time of their first attempt, 72.3 percent of the 26,830 examinees entering codes for educational level were matriculating at the undergraduate level. Juniors and seniors made up 33.4 percent of the examinees, while seniors alone constituted 29.1 percent of the examinees. Few examinees took the PPST during either their freshman year (1.9 percent) or sophomore year (17.0 percent).

What percentage of the 1987-91 examinees indicated being a member of a minority group (Asian/Pacific, Black, Hispanic, Native American)?

Only 2.2 percent (591) of the 26,559 examinees entered codes indicating being a member of one of four minority groups. Asian/Pacific examinees constituted the largest of the four minority groups, followed by Black examinees, Native American examinees, and Hispanic examinees.

How did the 1987-91 examinees perform on the initial attempt at the three tests of the PPST?

The Minnesota Board of Teaching established minimum qualifying scores for the three tests of the PPST at 173 for reading, 169 for mathematics, and 172 for writing. These study scores were set at -1 SEM below the original study scores. The 1987 Validity Study conducted by Educational Testing Service suggested that if the study scores were adjusted to take into account the SEM (standard error of measurement), then it may be expected that the percent of Minnesota graduating seniors who score -1 SEM below the study score would be approximately 13.6 percent for reading, 7.4 percent for mathematics, and 6.0 percent for writing. These percentages were based on the results from the 1986 Minnesota field testing of the PPST.

Setting the study score -1 SEM below the study scores projected that the percent of Non-Minnesota seniors and graduates who scored -1 SEM below the study score would be approximately 22.0 percent in reading, 13.0 percent in mathematics, and 15.0 percent in writing. These percentages were based on ETS experience with the PPST in 38 states between 1983 and 1986.

Table 2 presents the cumulative percentages for 26,861 first-time attempting examinees who scored below selected PPST scaled scores on the reading, mathematics, and writing tests. Data in Table 2 indicate that overall, fewer examinees than projected failed to obtain a qualifying score on each of the three tests on their first attempt.

In addition, for all examinees considered applying for initial Minnesota licensure (26,861) the mean scores on the reading test (179.9), mathematics test (180.6), and writing test (176.6) were slightly higher than the national reading mean score (178.3), mathematics mean score (178.0), and writing mean score (175.8) reported by Educational Testing Service for July 1986 to June 1989, on 100,941 examinees.

Table 3 presents a comparison of the projected non-qualifying percentages on the three tests according to three selected scaled scores. The Minnesota College Senior Field Test population provided the basis for determining how many Minnesota examinees might be expected not to qualify on each of the three skills tests. Comparing the projected non-qualifying percentages of Minnesota examinees to their reference group of Minnesota Seniors Field Test 1986 shows that fewer Minnesota examinees than projected failed to obtain a passing score on the reading, mathematics, and writing tests on their first attempt; that is, more Minnesota examinees than expected passed all three tests on their first attempt.

Examination of the projected non-qualifying percentages of Non-Minnesota examinees to their reference group of Out-of-State Examinees 1983-86 shows that fewer Non-Minnesota examinees than projected failed to obtain a passing score on all three skills tests.

Report on Gender, In-state/Out-of-state Preparation, Educational Level, and Racial/Ethnic Group

The following section reports the data on first-attempt examinees who coded gender, place of preparation (in-state/out-of-state), educational level, and racial/ethnic group at the time of testing.

Of the 1987-91 examinees (26,606) who entered valid codes for specific variables, 74.7 percent were female, 25.3 percent were male. Furthermore, 84.8 percent of 26,295 validly coded 1987-91 examinees were Minnesota examinees, while 15.2 percent received their undergraduate preparation out-of-state. Of 26,830 validly coded ex-

aminees, 72.3 percent were in undergraduate programs when they first attempted the three skills tests, compared to 27.7 percent who had attained, at minimum, a bachelor's degree. According to race/ethnic group 2.2 percent (591) of the 26,861 examinees indicated identification with one of four minority racial/ethnic groups.

How did the overall performance of female examinees compare to male examinees on the three skills tests of the PPST?

Table 4 presents a comparison of the mean scores of female examinees and male examinees on the three tests of the PPST. Data indicate that overall male examinees had higher mean scores on the reading and mathematics tests than did female examinees. There was a statistically significant difference in mean scores for male examinees compared to female examinees on both the reading and mathematics tests.

On the writing test, the mean score for female examinees (176.9) was higher than the mean score for male examinees (175.8). A statistically significant difference between the means on the writing test existed.

How did the performance of Minnesota female examinees compare to Minnesota male examinees on the three skills tests of the PPST?

Table 5 presents a comparison of the mean scores of Minnesota female examinees and Minnesota male examinees. Mean scores of Minnesota male examinees were higher on the reading and mathematics tests than mean scores of Minnesota female examinees. A statistically significant difference existed.

On the writing test the mean scores of Minnesota female examinees (176.8) were higher than the mean scores of Minnesota male examinees (175.7). A statistically significant difference existed between the writing mean scores.

How did the performance of Non-Minnesota Females Compared with Non-Minnesota Males?

Table 6 indicates that Non-Minnesota male examinees, compared to Non-Minnesota female examinees, demonstrated higher performance in mean scores on the

mathematics test. There was a statistically significant difference in the means on the mathematics test. Non-Minnesota female examinees had a higher mean score on the writing test than did Non-Minnesota males. A statistically significant difference existed between the writing means. On the reading test the mean scores for Non-Minnesota females (180.7) and Non-Minnesota males (180.6) were practically identical.

How did the performance of Minnesota female examinees compare to Non-Minnesota female examinees on the three skills tests of the PPST?

Table 7 compares the mean scores of Minnesota female examinees to Non-Minnesota female examinees on the three skills tests of the PPST. Mean scores for Minnesota females were slightly lower than the mean scores of Non-Minnesota females on all three tests. The mean score on the reading test for Minnesota females was 179.6 compared to 180.7 for Non-Minnesota females. The mean score on the mathematics test for Minnesota females was 179.8 compared to the mean score of Non-Minnesota females of 180.4. The mean score on the writing test for Minnesota females was 176.8 compared to the mean score of Non-Minnesota females of 177.7. There was a statistically significant difference in the reading, writing, and mathematics tests mean scores.

How did the performance of Minnesota male examinees compare to Non-Minnesota male examinees on the three skills tests of the PPST?

Table 8 presents the mean scores of Minnesota male examinees compared to Non-Minnesota male examinees on the three skills tests. On all three skills tests, mean scores for Minnesota males were lower than for Non-Minnesota males. There was a statistically significant difference in the mean scores on all three tests.

How did the performance of Minnesota and Non-Minnesota examinees compare on the three skills tests of the PPST?

Table 9 presents the frequencies, mean scores, and standard deviations for Minnesota and Non-Minnesota examinees on the three skills tests of the PPST. On the three skills tests (reading, mathematics, and writing), the mean scores for Non-Minnesota examinees were slightly higher than the mean scores for Minnesota examinees. For the

three tests, a statistically significant difference existed between the mean scores of Minnesota and Non-Minnesota examinees. The mean score on the reading test for Non-Minnesota examinees was 180.7 compared to the mean score of Minnesota examinees of 179.7. The mean score on the mathematics test for Non-Minnesota examinees was 181.0 compared to the mean score of Minnesota examinees of 180.5. The mean score on the writing test for Non-Minnesota examinees was 177.4 compared to the mean score of Minnesota examinees of 176.5.

When during their educational career did Minnesota examinees and Non-Minnesota examinees first attempt the three skills tests of the PPST?

Table 10 indicates that approximately 83 percent of the Minnesota examinees were in undergraduate programs when they first attempted the three skills tests, compared to 33 percent of the Non-Minnesota examinees.

College seniors made up approximately 31 percent of the 1987-91 Minnesota examinees, compared to 52 percent who were at or below the junior educational level. For Non-Minnesota examinees, 13.0 percent were seniors at their first attempt on the three skills tests, more than 19 percent were juniors or below, and nearly 65 percent were at the post-baccalaureate level.

How did the performance of Minnesota examinees compare with Non-Minnesota examinees according to educational level?

Table 11 presents a comparison of the mean scores on the three skills tests for Minnesota and Non-Minnesota examinees by educational level. The data indicate that for both Minnesota and Non-Minnesota examinees the higher the level of education at the initial time of taking the skills tests of the PPST the higher the level of performance. Although mean scores were nearly the same on all three tests for Minnesota and Non-Minnesota examinees by educational level (example: Minnesota pre-seniors compared with Non-Minnesota pre-seniors), statistically significant differences existed only on the reading and mathematics tests and between performances of seniors and post-senior examinees.

Minnesota post-seniors demonstrated higher levels of performance than did either Minnesota seniors or Minnesota pre-seniors on all three tests. Minnesota seniors demonstrated higher levels of performance than did Minnesota pre-seniors on all three tests. Tables 12-14 show that a statistically significant difference among Minnesota post-senior, senior, and pre-senior mean scores existed.

Non-Minnesota post-seniors demonstrated higher levels of performance than did either Non-Minnesota seniors and Non-Minnesota pre-seniors on all three tests. Non-Minnesota seniors demonstrated higher levels of performance than did Non-Minnesota pre-seniors on all three tests. Tables 15-17 show that a statistically significant difference among Non-Minnesota post-senior, compared with Non-Minnesota senior and Non-Minnesota pre-senior mean scores, existed on all three tests.

How did the performance of examinees compare between non-minority and minority examinees?

Tables 18-19 show that minority examinees compared to non-minority examinees demonstrated lower mean scores on the reading, mathematics, and writing tests. A statistically significant difference existed between the mean scores on all three tests.

Data further show that the mean scores on each of the three tests for each specific minority group (Asian/Pacific, Black, Hispanic, and Native American) were lower than mean scores of White examinees. There was a statistically significant difference in the mean scores of each specific minority group compared to non-minority examinees on the reading, mathematics, and writing tests.

Pass/Fail Patterns

The following section on pass/fail patterns provides a summary of the number of examinees who failed more than one test at the time of their first attempt, along with the examinee success rates on retakes of the three skills tests.

How did 1987-91 examinees as a population perform on the 1st, 2nd, 3rd, 4th, or 5th Attempts?

Table 20 shows that on the first attempt the mean score for all examinees was 179.4 on reading, 180.1 on mathematics, and 176.3 on writing. All three initial mean scores were well above the Minnesota established adjusted qualifying scores (173 for reading, 169 for mathematics, and 172 for writing). However, after the first attempt, mean score performance on retakes decreased substantially. On the second attempt, the mean scores fell to 172.8 on the reading test, 170.2 on the mathematics test, and 172.4 on the writing test. On all three tests, mean scores for the second attempt nearly met or were above the qualifying scores. The mean score on all three tests dropped slightly below the qualifying margin after further attempts.

How did the non-qualifying percentages of Minnesota and Non-Minnesota examinees on their first attempt at the PPST compare to the projected non-qualifying percentages?

Based on the projected non-qualifying percentages established from the results of the 1986 Minnesota field testing of the PPST, it was projected for Minnesota examinees that 13.6 percent of the examinees would not qualify in reading, 7.4 percent of the examinees would not qualify in mathematics, and 6.0 percent of the examinees would not qualify in writing. Based on the ETS collected data of the percent of college seniors and graduates across 38 states, it was projected for Non-Minnesota examinees that 22.0 percent of the examinees would not qualify in reading, 13.0 percent of the examinees would not qualify in mathematics, and 15.0 percent of the examinees would not qualify in writing.

Tables 21-22 show the number and percentage of Minnesota and Non-Minnesota examinees who failed to obtain a qualifying score on one of the three skills tests of the PPST during one or more attempts. As indicated, on the first attempt fewer Minnesota examinees than projected failed to obtain a passing score on the writing test only. On the first attempt fewer Non-Minnesota examinees than projected failed to obtain a pass-

ing score on each of the three tests. In addition, on each of the three skills tests, a higher percentage of Minnesota examinees compared to Non-Minnesota examinees failed to obtain a passing score.

What percentage of Minnesota and Non-Minnesota examinees failed to obtain a qualifying score on retaking the reading, mathematics, or writing tests of the PPST?

Overall, it should be noted that the success rate on each of the three PPST skills tests after as many as five attempts (except for male examinees on the mathematics test, and pre-senior examines on the reading and writing tests) was above 92.0 percent on each test for all of the 1987-91 examinees who attempted the tests to meet Minnesota licensure requirements.

For Minnesota examinees, 93.2 percent of the examinees passed the reading test, 96.9 percent passed the mathematics test, and 92.8 percent passed the writing test.

The percentages of Non-Minnesota examinees passing each of the three tests were higher than for Minnesota examinees. For Non-Minnesota examinees, 95.2 percent passed the reading test, 98.6 percent passed the mathematics test, and 95.1 percent passed the writing test.

What percentage of the examinees, by gender, in-state/out-of-state preparation, educational level, and racial/ethnic group attempted one or more of the skills tests more than once?

Tables 23-26 present the attempt and success rates by gender, educational level, and racial/ethnic group for those examinees who attempted one of the three skills tests more than once but fewer than six times.

Gender

As shown on Table 23, 93.7 percent of all female examinees and 92.6 percent of all male examinees successfully passed the reading test. A higher overall percentage of male examinees (98.3 percent) compared to female examinees (96.6 percent) passed the mathematics test. For the writing test, a higher percentage of female examinees (94.4 percent) compared to male examinees (89.3 percent) passed.

A higher proportional percentage of female examinees than male examinees failing one of the three skills tests attempted the test a second time. Of those who failed a test on their initial attempt, percentages for female examinees failing and retaking were 55.7 percent on the reading test, 54.7 percent on the mathematics test, and 53.6 percent on the writing test, compared to percentages for male examinees of 49.9 percent on the reading test, 51.5 percent on the mathematics test, and 51.8 percent on the writing test.

Educational Level

Indicated in Table 24, post-senior examinees demonstrated a higher percentage of success rate than did senior and pre-senior examinees after as many as five attempts. The overall success rate on the three tests for post-seniors was greatest on the writing test (99.7 percent), followed by success on the reading and mathematics tests (99.3 percent). The total percentage of post-senior and senior examinees initially passing was above the projected qualifying percentages for each of the reading and mathematics tests.

Pre-senior examinees demonstrated a higher overall pass rate percentage than projected only on the mathematics test.

Racial/Ethnic Group

Table 25 shows multiple attempt data on the three tests of the PPST by racial/ethnic group. Data indicate that none of the first attempt passing percentages for the four racial/ethnic groups (Asian/Pacific, Black, Hispanic, or Native American) equaled or were above the projected passing rates. Examinees identifying their racial/ethnic group to be either Asian/Pacific, Black, Hispanic, or Native American demonstrated greatest success on the mathematics test, followed by success on the reading test, with least success on the writing test.

Total pass rates for each of the four minority groups on all three tests were below the pass rate of examinees identifying themselves as White.

How many examinees did not retake a test?

From 33.3 percent, to as high as 66.7 percent, of all examinees who on the first attempt failed one of the three PPST tests did not retake the test failed. Table 26 presents data indicating that according to racial/ethnic group, 66.7 percent of the Native Americans who initially failed the mathematics test did not retake the test, while only 33.3 percent of the Hispanic examinees who failed the mathematics test on the initial attempt did not retake the test. Approximately 50.0 percent of the Hispanic examinees who initially failed the reading and writing tests did not retake the tests. The percentage rate for Black examinees failing and not retaking one of three tests ranged between 59.1 to 63.4 percent, and for Asian/Pacific examinees, 56.8 to 60.7 percent who failed one of the three skills test did not retake the test failed.

It should also be noted that for non-minority examinees approximately 44.0 percent failing a test on the first attempt did not retake the test.

On the first attempt, what percentage of the female and male examinees failed one or more skills tests?

Table 27 shows the frequencies and percentages according to gender of examinees who failed one or more skills tests. Of the 26,302 valid cases, a total of 80.2 percent of the 1987-91 examinees passed all three skills tests on the first attempt. On the first attempt, 81.4 percent of the female examinees passed all three skills tests, compared to 76.7 percent of the male examinees. For the 26,302 valid cases, the highest percentage of failure (13.3 percent) occurred for one test. According to gender, 12.4 percent of the female examinees failed one test, compared to 16.0 percent of the male examinees.

On the first attempt, what percentage of the in-state/out-of-state examinees failed one or more skills tests?

Table 28 shows the frequencies and percentages, according to in-state/out-of-state preparation, for examinees who failed one or more skills tests on the first attempt. Of the 25,985 valid cases, 80.2 percent passed all three PPST skills tests on their first attempt. On the first attempt, 79.7 percent of the Minnesota examinees passed all three

PPST skills tests on their first attempt, compared to 82.9 percent of the Non-Minnesota examinees. The number of tests most frequently failed was one. For the 25,985 validly coded examinees 13.3 percent failed one test.

On the first attempt, what percentage of the pre-seniors, seniors, and post-seniors failed one or more skills tests?

Table 29 presents the frequencies and percentages, according to educational level, of examinees who failed one, two, or three skills tests on their first attempt at taking all three tests. On the first attempt, 88.6 percent of the post-senior examinees passed all three skills tests, followed by seniors (80.8 percent), and pre-seniors (75.2 percent). The percentage of examinees to fail one, two, or three skills tests was highest for pre-seniors and lowest for post-seniors. The highest percentage of failure occurring for one test was 16.3 percent for pre-seniors, followed by 13.2 percent for seniors, and 7.9 percent for post-seniors.

On the first attempt, what was the performance level of examinees by racial/ethnic group on one or more skills tests?

Table 30 shows the performance level in percentages for examinees who on the first attempt failed more than one skills test by racial/ethnic group. The percentage reported for examinees taking each of the three skills test and passing all three are Asian\Pacific examinees 44.9 percent, Black Examinees 42.5 percent, Hispanic examinees 56.4 percent, Native American examinees 52.6 percent, and White examinees 80.8 percent.

Which tests were most frequently failed?

Tables 31-33 present the number and percentages for examinees who failed either the reading, mathematics, or writing tests on their first attempt. For all three skills tests and according to the three variables (gender, in-state/out-of-state preparation, and educational level), the skills test most frequently failed was the writing test (12.1 percent). The mathematics test was the least frequently failed (5.2 percent).

Based on the analysis by gender, there was a statistically significant difference in the percentage of male and female examinees who passed/failed the mathematics or writing tests on their first attempt.

According to in-state/out-of-state preparation, there was a statistically significant difference in the proportional percentage of pass/fail on the reading, mathematics, and writing tests.

According to educational level, the data indicate that for all three tests (reading, mathematics, and writing), the percentages of examinees who failed were higher for examinees at the pre-senior level, followed by the seniors, and lowest for post-senior examinees. There was a statistically significant difference on each test in the percentages of pre-seniors, seniors, and post-seniors who failed each test.

Table 34 shows overall a higher percentage of minority examinees most frequently failed the writing test (38.3 percent), followed by the reading test (32.3 percent), and the mathematics test (18.5 percent). The percentages of minorities failing the writing tests were lower for minorities prepared in Minnesota (37.2 percent) compared to Non-Minnesota (41.9 percent) examinees. The percentage of minorities failing the reading and mathematics tests was nearly the same for Non-Minnesota minorities compared to Minnesota minority examinees.

Tables 35-37 provide further analysis of the data according to Minnesota/Non-Minnesota, educational level, and racial/ethnic group. Overall, the failing percentages of Minnesota Black examinees and Native American examinees on the reading and writing tests were generally lowest for post-seniors, followed by seniors, and greatest for pre-seniors. On the reading, mathematics, and writing tests, Minnesota Asian senior examinees demonstrated a higher success percentage than did post-senior and pre-senior examinees.

Report on Performance Comparing First-Year and Fourth-Year Examinees

Data were analyzed and compared for the first and fourth year testing periods. Data presented in Tables 38-45 indicate that there were several cases showing statistically significant differences in the performance of first-year and fourth-year examinees according to gender, in-state/out-of-state preparation, educational level, and racial/ethnic group.

Mean scores for first-year examinees were higher overall than fourth-year examinees on the reading, mathematics, and writing tests. A statistically significant difference at the 0.05 level existed between mean scores of several subgroups.

Table 44 indicates that a statistically significant difference in mean scores existed among first-year and fourth-year minority examinees on the reading and writing tests.

An analysis of first-year and fourth-year examinees according to the specific racial/ethnic group identification showed that on each of the three skills tests first-year mean scores were generally higher than fourth-year mean scores.

Table 45 indicates that for the specific racial/ethnic analysis of performance, statistically significant differences between first-year and fourth-year minority examinees existed on the reading test for Asian/Pacific examinees, Hispanic examinees, and Native American examinees, and on the writing test for Asian/Pacific and Native American examinees.

Report on Feedback From Institutions

Test Administration Sites/Dates 1987-91

During the 1987-91 Pre-Professional Skills Tests administration period, the following 23 Minnesota institutions served as test center sites:

University of Minnesota-Twin Cities	Winona State University
University of Minnesota-Duluth	Concordia College-Moorhead
University of Minnesota-Morris	Concordia College-St. Paul
Bemidji State University	Gustavus Adolphus College
Mankato State University	Hamline University
Moorhead State University	St. John's University
St. Cloud State University	St. Olaf College
Southwest State University	University of St. Thomas

The following community colleges were added to the authorized test centers:

1988 (added)	1989 (added)
Itasca Community College	Lakewood Community College
Mesabi Community College	Normandale Community College
Rainy River Community College	
Rochester Community College	
Willmar Community College	

Deans and chairpersons of colleges and departments of education at each of the 26 Minnesota colleges and universities offering teacher education programs and designated community college administrators were contacted in efforts to identify appropriate and desirable testing dates for the 1990-91 test administration period. Each institution was asked to identify a maximum of five potential testing dates from eight possible national testing dates provided by Educational Testing Service (ETS). Feedback was reviewed in selecting the below listed 1990-91 Minnesota test dates.

In the review of institutional selected dates, consideration was given to a multitude of factors including starting dates, quarter/semester breaks, interim sessions, time between dates, out-of-state applicants, etc.

1990-91 Minnesota Test Dates

Saturday, October 27, 1990	Saturday, May 4, 1991
Saturday, January 26, 1991	Saturday, August 3, 1991
Saturday, March 2, 1991	

The 16 colleges and universities offering teacher education programs and serving as test centers were requested to test on each of the five specified dates. Community colleges offered the test on one to three dates, depending on the individual needs of each campus.

Minnesota Board of Teaching Required Evaluation

The Minnesota Board of Teaching included in its recommended evaluation plan of the PPST administration that the 26 Minnesota colleges and universities and the 7 community colleges designated as testing sites provide feedback regarding the type of remedial opportunities available to students and the appropriateness of test dates and sites.

Institutional Responses to Providing Remedial Assistance and Services

In accordance with Minnesota Rules, part 8700.0210, colleges and universities must provide candidates who fail the examinations access to opportunities to enhance their skills. What assistance and services are provided by your institution to satisfy this requirement?

Minnesota colleges and universities continue to provide candidates who failed the examinations access to opportunities to enhance their skills. Assistance programs and services vary in the types of opportunities afforded candidates. Institutions indicated that they had no major problem in providing students with guidance/help in order that they might be successful on another attempt.

Each institution provided assistance in the area of skill improvement. These services generally were provided through on-campus learning centers, academic skills centers, skill laboratories, etc., in the areas of reading, mathematics, and writing. Colleges not providing on-campus services of this nature promoted the attendance at study sessions at other institutions.

Study guides for the PPST are available at numerous locations on campuses including college bookstores and main offices of the college of education, as well as being placed on reserve at college libraries and made available at skills centers and laboratories.

Early advisement of students continues to be central to most of the institutional service programs. College advisors often meet with students, individually and in groups, to assess possible difficulties and to prescribe and identify appropriate tutorial services, test-taking seminars, and study materials to help better prepare candidates to take examinations.

SUMMARY

The following findings are based on the 1987-91 data for 26,861 examinees who attempted the three skills tests of the Pre-Professional Skills Tests and who entered valid codes for identification according to gender, in-state/out-of-state preparation, educational level, and racial/ethnic group variables.

Females make up 74.7 percent of the total examinees. An increase in the percentage of Non-Minnesota examinees was indicated, from 7.2 percent in the first year to 15.2 percent for the total four year period. Nearly 29.1 percent of the four year examinees were educationally at the baccalaureate/post-baccalaureate level. This was an increase from 18.1 percent during the first year of testing.

The number of 1987-88 minority examinees (61) increased to 591 examinees over the four year period. However, throughout the four year testing period, minority examinees made up only 2.2 percent of the total four year population of 26,861.

Passing rates for Minnesota examinees on the first attempt on the three PPST skills tests were reading 88.6 percent, mathematics 94.8 percent, and writing 87.6 percent. Overall, the success rate on each of the three PPST skills tests after as many as five attempts was above 92.0 percent on each of the tests. Passing rates after retaking tests were reading 93.2 percent, mathematics 96.9 percent, and writing 92.8 percent.

Findings: First-Year and Fourth-Year Comparison:

An analysis of data for first-year and fourth-year examinees according to each of the four variables (gender, in-state/out-of-state preparation, educational level, and racial/ethnic group) indicated that comparisons of subgroups showed a number of statistically significant differences in performance. Mean scores for first-year examinees were higher overall than fourth-year examinees on the reading, mathematics, and writing tests. A statistically significant difference at the 0.05 level existed between mean scores of several subgroups.

Four-Year Data Summary

The following findings are based on the 1987-91 data on examinees who attempted the three skills tests of the Pre-Professional Skills Tests and who entered valid codes for identification according to gender, in-state/out-of-state preparation, educational level, and racial/ethnic group variables.

Male examinees overall demonstrated a higher level of performance on the reading and mathematics tests of the Pre-Professional Skills Tests than did female examinees. Female examinees demonstrated a higher level of performance on the writing test of the Pre-Professional Skills Tests than did male examinees.

Non-Minnesota examinees continue to demonstrate higher performance than Minnesota examinees on all three tests. However, for the fourth consecutive year there is little difference in the mean scores.

The data indicate that for both Minnesota and Non-Minnesota examinees the higher the level of education at the initial time of taking the skills tests of the PPST the higher the level of performance.

For all examinees, analyzed by gender, in-state/out-of-state preparation, educational level, and racial/ethnic group, initial attempt success was highest on mathematics test, followed by performance on the reading test, and then writing performance.

Female compared to Male

1. Male examinees demonstrated a higher level of performance on the reading and mathematics tests of the Pre-Professional Skills Tests than did female examinees.
2. Female examinees demonstrated a higher level of performance on the writing test of the Pre-Professional Skills Tests than did male examinees.

Minnesota: Gender

3. Minnesota male examinees demonstrated a higher level of performance on the reading and mathematics tests of the Pre-Professional Skills Tests than did Minnesota female examinees.
4. Minnesota female examinees demonstrated a higher level of performance on the writing test of the Pre-Professional Skills Tests than did Minnesota male examinees.

Non-Minnesota: Gender

5. Non-Minnesota male examinees demonstrated a higher level of performance on the mathematics test of the Pre-Professional Skills Tests than did Non-Minnesota female examinees.
6. Non-Minnesota female examinees demonstrated a higher level of performance on the writing test of the Pre-Professional Skills Tests than did Non-Minnesota male examinees.

Minnesota compared to Non-Minnesota: Gender

7. Non-Minnesota female examinees demonstrated a higher level of performance on the reading, mathematics, and writing tests of the Pre-Professional Skills Tests than did Minnesota female examinees.
8. Non-Minnesota male examinees demonstrated a higher level of performance on the reading and mathematics tests of the Pre-Professional Skills Tests than did Minnesota male examinees.

Minnesota compared to Non-Minnesota

9. Non-Minnesota (prepared out-of-state) examinees demonstrated a higher level of performance on the reading, mathematics, and writing tests of the Pre-Professional Skills Tests than did Minnesota examinees.

Pre-Senior, Senior, Post-Senior

10. Minnesota post-senior examinees demonstrated a higher level of performance on the reading, mathematics, and writing tests of the Pre-Professional Skills Tests than did Minnesota senior and/or pre-senior examinees.
11. Non-Minnesota post-senior examinees demonstrated a higher level of performance on the reading, mathematics, and writing tests of the Pre-Professional Skills Tests than did Non-Minnesota senior and/or pre-senior examinees.
12. Minnesota senior examinees demonstrated a higher level of performance on the reading, mathematics, and writing tests of the Pre-Professional Skills Tests than did Minnesota pre-senior examinees.
13. Non-Minnesota senior examinees demonstrated a higher level of performance on the reading test of the Pre-Professional Skills Tests than did Non-Minnesota pre-senior examinees.
14. Minnesota post-senior examinees demonstrated a higher level of performance on reading and mathematics tests of the Pre-Professional Skills Tests than did Non-Minnesota post-senior examinees.
15. Minnesota senior examinees demonstrated a higher level of performance of the mathematics and writing tests of the Pre-Professional Skills Tests than did Non-Minnesota senior examinees.

Racial/Ethnic Group

16. Asian/Pacific, Black, Hispanic, and Native American examinees demonstrated a lower level of performance on the reading, mathematics, and writing tests of the Pre-Professional Skills Tests than did non-minority examinees.

Pass Fail Rates

17. A higher proportional percentage of Non-Minnesota examinees than Minnesota examinees passed the reading, mathematics, and writing tests.
18. A higher proportional percentage of female examinees than male examinees passed the writing test.
19. A higher proportional percentage of male examinees than female examinees passed the mathematics tests.
20. A higher proportional percentage of post-senior examinees passed all three tests compared to senior and pre-senior examinees.
21. A higher proportional percentage of senior examinees passed all three tests compared to pre-senior examinees.
22. A lower proportional percentage of minority examinees passed the reading, mathematics, and writing tests compared to non-minority examinees:

Total Percentages Passing

	Minority	Non-Minority
Reading	73.1	93.9
Mathematics	85.2	97.3
Writing	70.4	93.6

23. Nearly 50.0 percent of all examinees who failed one or more of the three tests on the first attempt did not retake the test(s) they had failed.

Institutional Responses

Feedback on Remediation Activities

24. Each of the 26 Minnesota institutions of higher education offering teacher preparation programs continue to provide enrolled and/or graduating candidates who failed the examinations access to remedial services including, but not limited to, on-campus learning centers, academic skills centers, skill laboratories, etc.

Feedback on Test Dates

25. Overall, Minnesota institutions indicated that the testing schedules met the needs of their candidates. It was suggested that greater attention be given to avoiding setting test dates at times when other examinations are occurring on campus and during semester/term breaks.

Feedback on ETS Services

26. Feedback from the majority of the Minnesota colleges and universities indicated that to their knowledge ETS continues to respond expediently and accurately to inquiries from their students.

RULE CHANGE AND ADMINISTRATIVE ACCOMMODATION

The following rule change did impact the 1990-91 administration year of the four year administration of the Pre-Professional Skills Tests. During the four year testing period in Minnesota, the Board of Teaching has discussed issues related to the administration of the Pre-Professional Skills Tests. Two notable responses to administration of the PPST are as follows:

Rule Change

Rule 8700.0210 [Examinations For Teacher Licenses] - April, 1991

Accommodations for examinees with visual and hearing impairments:

Subpart 1. Examination requirement. An applicant described in Minnesota Statutes, section 125.03, subdivision 5, for an initial license, shall provide official evidence of having successfully completed examinations of skills in reading, writing, and mathematics before being issued an initial Minnesota teaching license. The examinations must have been adopted by the Board of Teaching. An applicant who is deaf must fulfill the mathematics requirement of this part by successfully completing the mathematics examination, and must fulfill the reading and writing requirements of this part either by successfully completing the reading and writing examinations or by evaluation by board approved colleges and universities of demonstrated proficiency (Intermediate Plus) in the expressive and receptive use of alternative communication systems including sign language and fingerspelling as measured by the Sign Communication Proficiency Inventory (SCPI). This inventory is published by the National Technical Institute for the Deaf in Rochester, New York, and is administered through the College of Education at the University of Minnesota on at least an annual basis. A description of this inventory is available through the Minitex interlibrary loan system in the Journal of Sign Language Studies and American Annals for the Deaf. The inventory is incorporated by reference. Before the 1991 amendment to this part was adopted, the inventory was last published in 1989. It may be periodically changed. An applicant who is blind shall be required to fulfill requirements of this part by successfully completing the examinations with an opportunity to select a reader, to use adaptive visual aids or technology aids, and to complete the testing under adaptive conditions.

Rule Change

Rule 8750.3010 [Examinations for Secondary Vocational Teacher Licenses]

Required that applicants for initial secondary vocational teaching licenses after April 8, 1991, successfully complete an examination of skills in reading, writing, and mathematics, as required by Minnesota Statutes, section 125.05, subdivision 1.

Special Administration for Examinees with Limited English Proficiency

Recommendations adopted by the Board of Teaching in 1991, on the Evaluation Plan for the PPST included the continued close contact with ETS to ensure that tests acknowledge the multicultural and multiethnic nature of our society and reflect a thoughtful and fair consideration to all potential Minnesota examinees. Following extensive dialogue with the Teacher Programs Services of Educational Testing Service, the Minnesota Board of Teaching arranged with Teacher Program Services (ETS) for a special administration of the PPST for teacher licensure applicants with limited English proficiency. The testing time at the special administration offered on June 13, 1992, was increased by 50 percent for each of the three tests.

An analysis of the performance data for the 83 participating examinees is presented in the research report compiled by Educational Testing Service for the Board of Teaching entitled, Pre-Professional Skills Tests Limited English Proficiency Study, November 1992.

APPENDIX

TABLE 1

Frequency Distributions and Percentages on Three Selected Variables
for All PPST Examinees During 1987-91
Statewide Testing for Minnesota Initial Licensure

<u>VARIABLE</u>	<u>FREQUENCY</u>	<u>ADJUSTED PERCENTAGE</u>	<u>CUMULATIVE PERCENTAGE</u>
<u>Gender</u>			
Female	19,866	74.7	
Male	6,740	25.3	
Total:	26,606	100.0	
<i>Missing</i>	255		
<u>Undergraduate Institution</u>			
Minnesota	22,286	84.8	
Non-Minnesota	4,009	15.2	
Total:	26,295	100.0	
<i>Missing</i>	566		
<u>Education Level</u>			
Freshman	501	1.9	1.9
Sophomore	4,562	17.0	18.9
Junior	6,507	24.3	43.2
Senior	7,800	29.1	72.3

183	63.8	61.8	96.6
184	71.5	67.8	96.1
185	80.5	72.6	97.7
186	87.1	78.3	98.9
187	93.4	83.8	99.6
188	97.4	89.1	99.9
189	99.3	93.3	100.0
190	99.9		100.0

In calculating the study values in scaled scores adjusted for tolerance of SEMs, the SEM for each test was subtracted from the decimal value of the study score and the result was rounded to a whole number (.5 always rounded up to maintain consistency with the PPST scoring reports). The SEM is 2.4 for Reading, 2.5 for Writing, and 2.5 for Mathematics.

TABLE 3
Selected Group Reading, Mathematics, and Writing PPST Test
Failure Rates Relative to Varying Scaled Cut Scores
1987-91

SELECTED GROUP	READING		MATHEMATICS		WRITING	
	SS 175* (-1SEM)	SS 171 (-2SEM)	SS 171* (-1SEM)	SS 169 (-1SEM)	SS 175* (-1SEM)	SS 170 (-2SEM)
ALL 1987-91 Examinees	11.9	4.0	7.7	3.7	18.8	2.1
In-State Examinees Minnesota Institutions (1987-91)	16.6	4.9	7.8	3.7	32.5	3.1
Out-of-State Examinees (1987-91)	11.2	3.9	6.5	3.1	24.2	2.7
Minnesota College Seniors Field Test-1986	22.9	9.3	9.3	7.4	27.6	2.2
All Seniors 1987-91	15.1	3.9	6.4	2.8	33.4	3.0
Out-of-State Examinees 38 States 1983-86	29.0	16.0	18.0	13.0	32.0	8.0

*The original mean study values in scaled scores were READING 175.3, MATHEMATICS 171.46, and WRITING 174.6. The study values were obtained by rounding the original scaled scores calculated in decimal values to the nearest whole numbers (.5 always rounded up to maintain consistency with the PPST scoring reports).

NOTE: In calculating the study values in scaled scores adjusted for tolerance of SEMs, the SEM for each test was subtracted from the decimal value of the study score and the result was rounded to a whole number. The SEM is 2.4 for Reading, 2.5 for Mathematics, and 2.5 for Writing.
