ABSTRACT

The 174 tests in this bibliography measure communication skills for a number of populations, including students and teachers, adults in business, family relationships (including both parent-child and spousal/marital relationships) and special populations entering social or work environments. Areas tested include expressive and receptive abilities, verbal and nonverbal communication, and social or occupational skills. This document is one in a series of topical bibliographies from the Test Collection (TC) at the Educational Testing Service (ETS) containing descriptions of more than 18,000 tests and other measurement devices prepared by commercial publishers, teachers, educational institutions, professional associations, departments of education, counselors, etc. Each description contains the following basic information: TC Accession Number (a six-digit identification number assigned by the Test Collection); the title of the instrument; personal or institutional author; year of publication or copyright; availability source; grade level for which test is suitable; age level for which test is suitable; and abstract. Other information, which is provided when known, includes subtests, number of test items, and time required to complete the test. Information on accessing the Test Collection via Internet concludes the document. (HAC)

INTRODUCTION

Scope of Bibliography

Tests in this bibliography measure communication skills for a number of populations, including students and teachers, adults in business and special populations entering social or work environments. For tests of articulation and diagnostic tests for speaking problems, see a related bibliography, called *Speech Abilities*.

Availability

Copies of the tests described on the following pages must be obtained directly from the publisher, as stated in the AV AVAILABILITY section of each test citation. Generally, the Test Collection does not have distribution rights for its holdings. However, in special instances, the Test Collection has been granted permission from individual authors to distribute their tests, which are primarily research instruments. The AV AVAILABILITY information for these instruments will be Tests in microfiche, Test Collection, Educational Testing Service, Princeton, NJ 08541.

Guide to Citation Elements

The following is a guide to the various elements which may be present in a test citation:

- AN - Six-digit identification number assigned by the Test Collection
- TI - Name of the instrument
- DT - Components within the overall test which assess particular skills or factors
- AU - Personal or institutional author
- YR - Year test was published or copyrighted
- AV - Test publisher or distributor; the organization which sells or distributes the instrument

AB ABSTRACT: Designed as a short and comprehensive self-report measure of basic social communications skills. Assesses global social skill in both verbal and nonverbal areas. To be used with adults who read at the eighth-grade level or above. Developed primarily to assist with research in communication and social interaction processes. Also found useful in counseling, social skills training programs, and screening for individual differences. Has also been used as a supplement to behavioral measures of social skills, with various clinical populations, in industrial and organizational research, and in examining the role that social skills play in health outcomes. Technical information is available in the manual.

AB ABSTRACT: Developed to provide a valid method by which children with known or suspected hearing problems can be screened for educational purposes. Those identified as being at-risk for educational difficulties can be considered for formal assessment procedures. Based on field testing, the instrument is felt to be most representative when used with white children in kindergarten through grade 5 who have a known hearing loss ranging from faint to moderate and who are educated in regular classrooms only.

 AB ABSTRACT: The DANTE'S program is a series of secure tests administered by postsecondary institutions to grant credit by examination for education gained outside the classroom. Examinations may be worth from two to six credit hours in a baccalaureate program, baccalaureate upper division program, or a technical program. A minimum score for credit has been established by the American Council on Education. Individual institutions administer the examinations, as well as set the fees and schedules. These instruments complement the College Board's College Level Examination Program (CLEP) with several instruments in applied technology. They were originally developed for military personnel. Major areas of assessment include mathematics, social science, physical science, business, foreign language, and applied technology. For each test a fact sheet containing the curriculum specifications of the course, a list of texts on which the test is based, and statistical information, is available. Qualified administrators and faculty may borrow sample tests for a period of thirty days. This test covers ethical, historical, and social considerations of public speaking; audience analysis and adaptation, topics and purposes of speeches; organization; supporting materials; research; language and style; delivery; communication apprehension; listening and feedback; criticism and evaluation. Requires the recording of an impromptu speech.

 AB ABSTRACT: Rating scale administered to personnel managers to ascertain the social behaviors they consider important and unimportant when hiring employees. Items are separated into categories of verbal and nonverbal behaviors and include positive and negative aspects of each. On a five-point, Likert-type scale,

respondents indicate the degree of importance of each behavior. Reliability was checked by showing respondents videos of blind individuals during employment interviews. The occurrences of behaviors exhibited which were listed on the scale had been calculated. Respondents then ranked the individuals in terms of employability. Further information on reliability, validity, and data analysis are included.

 AB ABSTRACT: This eight-item rating scale is designed to assess a family's style of being together as a systemic unit, without bias regarding the family's health or competence. It is used with the Family Competence Scale (TC 016533). Interaction is videotaped in a clinical setting. The family is asked to discuss a topic related to family interaction for 15 minutes. Raters are trained via seminars. Norms are available for normal and clinical families. Reliability and validity data are presented.

 AB ABSTRACT: A screening instrument used to assess the nonverbal processing ability of children between the ages of 6 and 10. Works on the theory that nonverbal ability is necessary for successful human interaction. Consists of eight subtests, four in the area of receptive abilities and four in the area of expressive abilities. Receptive abilities are measured by showing children slides of facial expressions, postures and gestures and having them record on an answer sheet the emotion each slide expresses. They are also read a sentence in four different ways and are asked to indicate the emotion of the speaker. Expressive abilities are measured by asking the children to make facial expressions and getures which display certain emotions and videotaping them in the process. They are also aske' to read a sentence in ways which reflect various emotions, and are tape recorded in the process. Finally, they are administered the Comfortable Interpersonal Distance Scale (TC006904) to measure the children's comfortable distance between themselves and various other people. Information on basic statistical analysis is included. Information on construct validity is still being gathered.

 AB ABSTRACT: Developed as a quick diagnostic measure to assess the strengths and weaknesses of applicants for supervisory positions. The pre-instructional test is used with employees who have not had previous supervisory experience. The post-instructional test is used

after the instructional program to test the individual's progress. Inventory is multiple-choice and is divided into ten topical areas. The instruments were standardized on 200 individuals in 3 types of industry over a 1-year period.

AB ABSTRACT: Designed to measure the communication climate of high school or college classrooms by studying students' perceptions of their instructors. Consists of a list of statements concerning the instructors' behavior in the classroom, the responses to which reflect what the instructors are communicating to their students, both verbally and non-verbally. Items may be answered in 2 ways: on a Likert-type scale or as true or false. Contains the original 48-item questionnaire covering 12 climates and an 18-item subset covering supportive climate and defensive climate. Statistics on factor analysis included. May be used by instructors to help them improve their classroom communication.

AB ABSTRACT: Based on the hypothesis that there are universal behaviors or processes that make it possible for individuals to create unusually high quality, original products in a given field or talent area. This collection of instruments allows classroom teachers to observe and evaluate the extent to which observable behaviors, indicative of giftedness, are used and demonstrated by students in six talent areas. Behaviors are rated on a five-point frequency scale on ten dimensions: perceptiveness, active interaction with the environment, reflectiveness, persistence, independence, goal orientation, originality, productivity, self-evaluation, effective communication of ideas.

 AB ABSTRACT: This tool is designed to test the profile of right hemisphere dysfunctioned persons (stroke victims). Tested, retested, and rated are the patient's general behavioral patterns, visual scanning and tracking, tasks for assessment and analysis of writing, pragmatic communication skills, and metaphorical language. Interview questions are provided and are to be used as a guide to probe behavioral functions. Observations are made to determine orientation to the immediate environment and surrounding people. Severity rating is made to describe the patient's condition and is rated on a scale from severe to minimal to normal.

AB ABSTRACT: The Effective Listening Skill Questionnaire (ELSQ) is designed to help supervisors, managers, and other key people measure their perception of listening behaviors. The ELSQ provides feedback on a person's ability to discriminate between interpersonal communication responses which ease the development of a problem-solving conversation, and those which get in the way of such a conversation. The ELSQ is made up of 20 statements. Useful responses are paired with nonuseful responses. The useful responses are acknowledging, probing, and reflecting. The nonuseful responses are judging, being irrelevant, and discounting.

AB ABSTRACT: This inventory identifies preschool and elementary age children (ages 4-8) with inadequate or delayed social-verbal communication skills. Speech acts are grouped into four communication function categories: ritualizing, informing, controlling, and feeling. The individual student's oral responses to the examiner's short, lead-in narrative accompanied by a corresponding picture from the separate Picture Manual identify context-appropriate communication. The examiner transcribes the student's response on a separate Record Form. It is recommended that the responses be audiotaped for expediency in administering the test and accuracy in scoring and interpreting the results. The test is individually administered.

AB ABSTRACT: This system is designed to increase the ability to perceive and interpret attitudinal expressions of self and others, to

assess body language, to provide clues concerning inner attitudes, all of which indicate a person's motivations and emotions. This tool assists people in becoming better judges of behavioral styles and shows how to be a more effective nonverbal persuader. It provides information for interpretation through graphs, and assists in translating nonverbal expressions into verbal expressions.

 AB ABSTRACT: This questionnaire is designed for managers' personal assessment and to obtain feedback from one's subordinates, peers, and supervisors. This instrument allows the person to learn about various communication strategies for influencing others. Managers can also gain additional insight into their own influence strategies in order to develop skills in changing strategies to respond to particular situations, and to recognize the special needs of the people one intends to influence.

 AB ABSTRACT: This questionnaire is designed to differentiate superior middle managers and supervisors from others. It will assist management in assessing the degree to which they use superior practices, and to obtain feedback about their practices from subordinates, peers, and supervisors. This instrument has seven clusters to describe management practices. They include action/innovation and problem solving; performance and productivity; contact and interaction; personnel communication and relationships; subordinate motivation and development; team orientation; leadership style and personal characteristics.

 AB ABSTRACT: The TCA is a form or aid by which group process facilitators or individual members of a team can construct two diagrams depicting the flow or direction, frequency, and duration (long vs. short) of communication among team members. This form assists in visually depicting the above aspects of communication. Team members receive feedback on the collected TCA data and diagram for the purpose of team critique and assessment of the extent to which group members are participating in the group task. A sample TCA form is provided for the users to study and construct simulated or practice TCA diagrams before creating their own. This aid may be used in team building, management, and supervisory training, communication analysis, and conference leadership training.

 AB ABSTRACT: This two-part resource instrument considers intercultural business and worker relationships between the manager or supervisor and worker. The respondent is presented, on Form A, with a short, realistic situation related to international commerce to which the individual is asked to respond using a common set of characteristics. These include: verbal and nonverbal communication, diet, clothing, business values and ethics, and work habits and practices. Also included are: work and family customs, beliefs and traditions. Form A helps individuals to assess perceived cultural differences between the American culture and the culture of a foreign country of their choice. The second part, Form B, narrows the focus of the perceived cultural differences between an American manager or supervisor from

an ethnic minority or young worker under 21 years old. The manager or supervisor considers his/her own cultural background and that of the worker according to the same common set of characteristics used in Form A.

AB ABSTRACT: Designed to detect "cognitive slippage" or errors in thinking characterized by making loose associations. Such errors are said to be a sign of one's vulnerability to schizophrenia and to cause subtle errors in verbal communication, since schizophrenic people are unlikely to consider the needs of others who listen to them for information. Password is similar to the television program of the same name. Twenty-four pairs of words are given to a possibly

schizophrenic individual who must then clue another subject as to which of the words in a pair is a target. He or she may select one of two clue words, and one of these is a more useful clue. Schizophrenic patients tend not to select the more useful clue word.

Covers generic leadership competencies based on observation or nonobservation of behaviors indicative of those competencies. To construct the instrument, data were collected from supervisors, subordinates, and the school principals themselves. Behaviors are arranged in hierarchical order. A profile is constructed for each leader to be compared to profiles of other leaders in the system. Results are used for staff development. The 99 behaviors are rated as having been observed or not by the principals' peers, subordinates, and superiors.

AB ABSTRACT: Designed to provide information on job performance of first-line supervisors. Feedback is gathered from supervisor, peers, and subordinates. Scoring is done by the publisher. The resulting printout gives suggestions for improvement and a list of the test taker's strengths and weaknesses. Ratings are made twice for each statement of behavior on two seven-point scales. The first rating is made of the supervisor's degree of effectiveness from ineffective to extremely effective. The second rating is made of that behavior's importance to the staff member's overall effectiveness on the job.

AB ABSTRACT: Designed to measure emotional, social, sexual, intellectual, and recreational intimacy. Intimacy is defined, for the purposes of this instrument, as "the experience of sharing and being close." Scores can be compared to an "ideal" score which is the degree of intimacy most desired. A measure of conventionality provides information on the tendency to make a socially desirable response. Can be used to describe a variety of relationships from friendship to marriage. Developed for early diagnosis of couple's problem areas and strengths, to provide feedback in workshops, as an educational tool in the classroom. Said to be reliable and valid. Norms are available for a nonclinical sample of 192 married couples. See Journal of Marital and Family Therapy; v7 n1 p47-60, 1981.

AB ABSTRACT: A valid and reliable observation instrument developed to help researchers study different aspects of children's play, especially the relationship between play behaviors and cognitive development. Four play areas are examined: physical, block, manipulative, and dramatic play. For each of these areas, four types of behaviors are recorded on a Likert-type scale: frequency of play, ability and creativity to communicate ideas, social levels of participation, and leadership. In addition to being available from the author, this scale is also contained in "Construction and Validation of the Play Rating Scale" by Olivia N. Saracho, in Early Child Development and Care; v17 p199-230, 1984.

 AB ABSTRACT: Designed to measure children's perceptions of their own ability to use prosocial, verbal skills to persuade others in situations involving other children. Items depict six categories of children's persuasive behavior: explanations, imperatives, rules, requests, negotiation, verbal aggression. Items form two major clusters: those involving conflict and those not involving conflict. Each item consists of a statement describing a social situation followed by an incomplete statement requiring the child to say whether the verbal persuasive skill required in the situation would be easy or hard to do. Data on reliability, validity and norms for two middle-class samples from New York State and Indiana are provided.

AB ABSTRACT: This standardized instrument is designed to measure skills and abilities necessary for functioning in everyday living activities, performing goal-directed and task-oriented activities as well as maintaining social relations with others. For use in occupational therapy or other rehabilitation and treatment programs. The TOA covers cognitive, affective, and performance areas of functioning evaluated in the context of completing five specific tasks. The Social Interaction Scale (SIS) evaluates seven parameters of social behavior observed in five social settings: one-to-one, mealtime, instructional group, structured task, or structured verbal group. Norms are available for males and females as patients in a psychiatric hospital. May be used with psychiatric patients, neurological patients, and mentally retarded adults. Norms are not included for these groups at this time.

Appropriate for use with mentally retarded students from ages 6 through 18 and with students of normal or better intelligence from ages 5 through 18. Is used to evaluate student's day-to-day ability to take care of himself/herself, communicate with others, interact socially, perform academic tasks, and perform work-related prevocational tasks. The evaluator or respondent is the classroom teacher or other professional who has regular, relevant contact with the student being assessed. The ABI is meant to supplement or complement other data, including intelligence quotients, that are gathered in the course of clinical assessment. There is also a 50-item short form which can be used by professionals to conduct a primary screening to reevaluate students already in special education programs, or to investigate overall adaptive behavior in research studies.

 AB ABSTRACT: Designed to assess the communicative behaviors of

verbally limited or non-speaking persons. Usually client's functional communication deficit is secondary to other impairments, such as mental retardation, cerebral palsy, or other neurological problems. Serves as a tool for the speech language pathologist to use to evaluate non-speaking clients. Includes tasks which evaluate client's neurological, motoric, cognitive, and social-communicative behaviors in relation to his or her's potential for developing a functional communication system. Three major areas are assessed. The Oral Skills Battery consists of three subtests: pre-speech and oral awareness, pre-articulatory and articulatory skills, and auditory awareness. The Manual Skills Battery includes subtests for manual training prerequisites, movement patterning, and cognitive correlates for manual communication. The Pictographic Skills Battery also has three subtests: visual training prerequisites, attending behavior and accuracy of movement, and cognitive correlates for pictographic skills.

 AB ABSTRACT: Three-part, self-scored assessment of word preferences used to describe language representational systems in the NLP model of Bandler and Grinder. Basic premise of NLP model is that people perceive the world through information filtered through their sensory systems. Distinctions people make concerning both internal and external environments are represented by three sensory systems: visual, auditory, and kinesthetic. Items in each part of the inventory measure respondent's preference for categories of words with the visual, auditory, or kinesthetic dimension. The inventory is intended for professional development work and is not intended for in-depth personal growth or therapeutic work. The instrument is contained in The 1986 Annual: Developing Human Resources available from University Associates, 8517 Production Avenue, San Diego, CA 92121.

 AB ABSTRACT: The Educational Administrator Effectiveness Profile (EAEP) is a self-diagnostic instrument designed to assist elementary, secondary, and central office public school administrators in assessing eleven key skill/behavior areas which are essential to their effectiveness. The eleven areas are: setting goals and objectives, planning, making decisions and solving problems, managing business and fiscal affairs, assessing progress, delegating responsibilities, communicating, building and maintaining relationships, demonstrating professional commitment, improving instruction, and developing staff. In addition to the questionnaire for the administrator, there are five instruments which assess the same skill/behavior areas to be completed by individuals chosen by the administrator who know his/her administrative role. Based on the feedback, a self-improvement program can be designed to strengthen weak areas. A 7-point rating scale is used, ranging from almost never to always. The development of this instrument was sponsored by the Danforth Foundation.

 AB ABSTRACT: Standardized individually administered assessment battery of key developmental skills in children up to age 8. Primarily for use by infant, preschool, and primary teachers and special education teachers. May also be used by speech pathologists, psychologists, and other clinicians to assess functional abilities in young handicapped and non-handicapped children. BDI is behaviorally based and provides a method to determine in which areas of development a child needs to be comprehensively assessed. Data are collected by structured test format, interviews with parents, caregivers or teachers, and observation of the child in a natural setting. Serves four specific purposes: assessment and identification of the handicapped child, assessment of the non-handicapped child, planning and providing instruction, and evaluation of groups of handicapped children. Within each of the five domains assessed, items are grouped by specific skill areas. Useful in developing individualized education programs.

AB ABSTRACT: The Wisconsin Administrative Practice Scale: Special Education (WAPS) is a self-administering survey instrument designed to measure implementation of 162 selected administrative practices and policies used to coordinate diagnostic units for handicapped children. Originally developed to measure the implementation of Wisconsin Ch. 115 relating to the education of children with exceptional educational needs, WAPS was subsequently refined to measure 162 general items associated with the development of a quality school-level multidisciplinary diagnostic unit. One hundred thirty-five items are grouped into seven subscales each consisting of 20 items, they are: informal communication, responsibility delegation, parent involvement, systems development, organizational change, child centeredness, and administrative control. The WAPS takes approximately 45 minutes to complete.

 AB ABSTRACT: Assesses communicative egocentrism using a 3x3 matrix board and colored, geometric shapes. The child is asked to dictate instructions that would enable a hypothetical other child who is

unable to see the subject's board to replicate a design that the subject has made on his matrix board. Scoring of these instructions provides a measure of the child's cognitive-developmental level in an area of functioning significant to Piagetian theory.

AN ACCESSION NUMBER: TC008019 ETS 8206.

TI TITLE: Task Scale.

AU AUTHOR: White-Burton-L; Kaban-Barbara.

YR YEAR: 71.

AV AVAILABILITY: Tests in Microfiche; Test Collection, Educational Testing Service, Princeton, NJ 08541.

TG TARGET AUDIENCE: AGE 1-6.

ETS TEST COLLECTION VIA INTERNET

The ERIC Clearinghouse on Assessment and Evaluation has mounted on its gopher site a database to help locate tests. This database can be used by accessing the gopher at the address: GOPHER.CUA.EDU The ERIC/ETS Test Collection is located under: Special Resources/ ERIC Clearinghouse on Assessment and Evaluation/ Test Locator/

To search the database, enter keywords from the title or descriptors. For example, if you would like to search for tests on oral language proficiency, you could type in all three words, or oral and proficiency. You may get slightly different results, but you will have information on a lot of tests to look at. If you know the title of the test, the best way to search is to use the main words in the title, not necessarily all of the words in the title. If you are looking for the Wechsler Intelligence Scale for Children-Revised, the most efficient way to search is with the words Wechsler, intelligence, and children.

INTRODUCTION TO THE ETS TEST COLLECTION

The Educational Testing Service (ETS) Test Collection database contains records on over 9,500 tests and research instruments. These records describe the instruments and provide availability information. The Test Collection encompasses virtually all fields from vocational interest inventories for adults to instruments that measure shyness or predict recidivism in released criminal offenders, to assessment of managerial style, as well as education-related achievement and aptitude tests. The test descriptions are indexed with ERIC Thesaurus terms for subject accessibility.

This is a joint project of ETS and ERIC AE. ETS Library and Reference Services Division prepares the descriptions. ERIC AE maintains the database and hosts the Search System. ERIC AE has also begun to put ETS prepared test descriptions into the ERIC Resources in Education database. About 15 descriptions are added each month.

You may download individual and small groups of test descriptions and you may point to this service from any Gopher Site.

WHAT KIND OF TEST ARE DESCRIBED?

The Test Collection database collects a variety of instruments: achievement tests, aptitude tests, personality measures, attitude measures, career/vocational interest measures, occupational tests such as nursing or sales skills inventories. Many research instruments are collected as well as tests from commercial publishers.

WHAT INFORMATION IS AVAILABLE ABOUT THE TESTS?

The title, author, publication date and source appear in the record. An abstract describing the instrument, intended population, and uses accompanies the record. Subject terms give the age and grade level information as well as ERIC Thesaurus terms that describe the test.

DOES THE TEST COLLECTION DATABASE REVIEW THE TESTS?

No, other reference guides such as Mental Measurements Yearbooks,

Tests: A Comprehensive Reference for Assessments in Psychology, Education, and Business, and Test Critiques distributed by Pro-Ed fill that role. You can search the tables of contents for the MMY and Test Critiques through the ERIC_AE Gopher Site.

ARE ALL THE TESTS IN THE DATABASE CURRENTLY IN PRINT?

No, some of the items are out of print. We suggest contacting the publisher for permission to use out-of-print materials. Phone numbers can be located using another menu option on the ERIC_AE Gopher Site.

WHERE CAN I SEE THE ACTUAL TEST INSTRUMENTS?

Availability information is provided in the records. Many colleges and universities have test collections in their libraries. Talk to you local librarian for more information.

WHAT IS TESTS IN MICROFICHE?

Tests in Microfiche is a subcollection of unpublished research instruments that are available for purchase in microfiche from the ETS Test Collection. The collection includes instruments appropriate for diverse populations (infants, learning disabled, adults, etc.) Each set spans a wide range of topics such as job satisfaction and attitudes towards school. More than 800 tests are available.

DOES THE TEST COLLECTION PROVIDE REFERENCE SERVICES?

No, the descriptive information in the database should help answer most questions people may have. And the publisher of the particular test is the most competent source of information. You can, however, route general inquiries to ERIC_AE@CUA.EDU.
